

THE ENCYCLOPAEDIA OF ISLAM

THE ENCYCLOPAEDIA OF ISLAM

NEW EDITION

PREPARED BY A NUMBER OF
LEADING ORIENTALISTS

EDITED BY

C. E. BOSWORTH, E. VAN DONZEL, B. LEWIS AND CH. PELLAT

ASSISTED BY F. TH. DIJKEMA AND M^{me} S. NURIT

UNDER THE PATRONAGE OF
THE INTERNATIONAL UNION OF ACADEMIES

VOLUME V

KHE—MAHI

LEIDEN
E. J. BRILL
1986

EXECUTIVE COMMITTEE:

Members: C. C. BERO, C. E. BOEWORTH, J. T. P. DE BRUIJN, CL. CAHEN, A. DIAS FARINHA, B. VAN DONZEL, J. VAN ESS, F. GABRIELI, E. GARCÍA GÓMEZ, A. K. S. LAMETON, G. LECOMTE, T. LEWICKI, B. LEWIS, FR. MEIER, CH. PELLAT, F. ROSENTHAL, F. RUNDGREN, A. L. UDOVITCH, F. C. WIEDER.

Associated members: NAJF AL-ASHI, A. S. BAZMEY ANSARI, HALIL İNALCIK, İBRAHİM MADKOUR, S. H. NASE, M. TALBI, E. TVAN.

The preparation of this volume of the *Encyclopaedia of Islam* was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government, and from Mr. Gerald L. Parsky.

The articles in this volume were published in double fascicles of 128 pages, the dates of publication being:

1979: Fascs. 79-80, p. 1-128
1980: Fascs. 81-84, p. 129-384
1981: Fascs. 85-86, p. 385-512
1982: Fascs. 87-88, p. 513-640

1983: Fascs. 89-92, p. 641-896
1984: Fascs. 93-94, p. 897-1044
1985: Fascs. 95-98, p. 1045-1263

ISBN 90 04 07819 3

PRINTED IN THE NETHERLANDS

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

ADDENDA AND CORRIGENDA

VOLUME 1

- P. 972^b, AL-BALĀDHURĪ, add to Bibliography: Khalīl Athamīna, *The sources of al-Balādhurī's Ansāb al-ashraf*, in *ISIA* v (1984), 237-62.

VOLUME 11

- P. 1^a, **ČAGHĀNIYĀN**, add to Bibliography. C. E. Bosworth, *The rulers of Chaghāniyān in early Islamic times, in Iran, Jnal. of the Brit. Inst. of Pers. Studies*, xix (1981), 1-29.
- P. 75^b, **DADALOĞHLU**, add to Bibliography. K. D. Wannig, *Der Dichter Karaca Oğlan. Studien zur türkischen Literatur*, Freiburg i.Br. 1980. (Studien zur Sprache, Gesch. und Kultur d. Türkvolker, 1).
- P. 371^{bi}, **DJUDJA**, see now G. R. Hawling, *The origin of Jadda and the problem of al-Shu'ayba, in Arabica*, xxxi (1984), 318-26, who finds no sound evidence that Djudda existed in pre-Islamic times or that the exact location of its predecessor as the port of Makkah, al-Shu'ayba, can be pinpointed with any certainty.
- P. 585^a, **DJUGHRAFIYĀ**, l. 5, instead of 36/1166 read 561/1166
- P. 721^a, **EXISTENCE**, to reference add and ANHIYYA.
- P. 840^c, **FATHPŪR-SIKRĪ**, add to Bibliography S. A. A. Rizvi and V. J. A. Flynn, *Fathpur-Sikri*, Bombay 1975.

VOLUME III

- P 679^a, **IBN ʿABD al-ẒĀHIR**, ll. 10-14 from bottom, instead of the sentence beginning **He** composed the genealogy of al-Ḥākim . . . read **He** composed the genealogy of al-Ḥākim, which was confirmed by the **khāf**, and read it in the assembly of dignitaries; he also composed the **ʿabd** of al-Nāṣir Kaṭlūwīn (q.v.), see Kalkashandī, *Subḥ al-ʿAshā*, s. 116 ff.

VOLUME IV

- P. vth l. 24, instead of J. W. ALLEN ... 2105 read [J]. ALLAN, London, 2105
l. 19 from below, instead of Princeton University read Hebrew University, Jerusalem
- P. 22, instead of Taeschner, . . . Cotha 1926 read Taeschner, *Wegenitz* = Franz Taeschner, *Das anatolische Wegenitz nach osmanischen Quellen*, 2 vols., Leipzig 1924-6.
- P. 118^b, **ISHBILIYA**, add to Bibliography: *Crónica del Moro Rasis*, ed. D. Catalán and María Soledad de Andrés, Madrid 1974, 91-6, 345-6; Ibn Haazim, *ʿUjamharat al-anasib*, Cairo 1962, index; Ibn al-Khatib, *Al-maʿāif*, index.
- P. 137^b, **AL-ISKANDARIYYA**, add to Bibliography. Numerous pieces of information about the working of the port of Alexandria are given in the *Mināhāj* of al-Maḥmūdī, in the parts translated and commented upon by G. Cohen, *Commerce et commerce dans les ports méditerranéens de l'Égypte médievale*, in *JESHO* (1965), reproduced in idem, *Makhsūmūyyāt*, Leiden 1978. Furthermore, the author called al-Nuwayrī, Muhammad b. Kāsim, author of the *Imām al-aʿlām*, should be clearly distinguished from his homonym, the celebrated author of the *Nihāya*. The *Imām*, written in regard to the attack on Alexandria by Peter of Cyprus in 1267 and from which come the extracts studied in the articles of Combes cited in the *Bibl.*, has now been edited by A.S. Aḍya in 4 vols. in the Haydarābād Series, 1968-72.
- P. 322^a, **K'A'BA**, add to Bibliography: G. R. Hawting, "He was not ordered with entering it but only with circumambulating it" Hadith and fiqh on entering the Ka'ba, in *BSOAS* xlviii (1984), 228-42.
- P. 471^a, **KALAM**, add to Bibliography: C. E. Bosworth, *A medieval Islamic prototype of the fountain-pen?*, in *JSS* xxvi (1981), 229-34.
- P. 501^b, **AL-KĀLĪ**, l. 1, instead of 289 read 289
ll. 10-12, instead of from memory . . . into account read from memory in his new home, or he made critical observations and commentaries, following the ʿIrākī tradition which he knew, upon l. 25 from below, after 1394/1972 add (cl. *MMMF* 4 xx/2 (18974), 49-139)
- P. 546^b, **KANNANOR**, add to Bibliography: G. Bouchon, *Mamale de Camanor, un adversaire de l'Inde portugaise* [1507-1528], *Hautes études islamiques et orientales d'histoire comparée* 7, Paris 1975
- P. 599^a, **KARADJA OCHLAN**, add to Bibliography: K.-D. Wanning, *Der Dichter Karaca Oglan. Studien zur türkischen Luthesizistik*, Freiburg i.Br. 1980. (Studien zur Sprache, Gesch. und Kultur d. Türk-völker, 1).
- P. 733^a, **KASRAWĪ TABRIZĪ**, add to Bibliography: E. Jung, *Ahmad Kasrawī. Ein Beitrag zur Ideen-geschichte Persiens im 20. Jahrhundert*, Diss. phil. Freiburg i.Br. 1976.
- P. 757^a, **KATIE**, l. 24, instead of M. Kunter read M. Carter
- P. 772^b, **KĀṬRAN**, l. 35 from below, instead of κῆλῖα, read κῆλῖα; instead of καταρῖα read καταρῖα
- P. 814^a, **KAY KĀC'US** v. **ISKANDAR**, last para and *Bibl.* Five completely independent Old Ottoman versions of the *Kāhūs-nāma* have in fact survived, the best known of which is that of Merdümek Ahmed [s.v.]. The version at Kazan in 1882, 1889, etc. (and not in 1298/1880-1) is not by this last Ottoman author, but is a version in what is called by H. F. Hofman (*Turkish literature, a bio-bibliographical survey*, Section III, Part x v 6, p. 63) "Old Tatar", possibly via an Ottoman intermediary.

- P. 870^b, **KEMĀKH** add to Bibliography: R. H. Ünal, *Monuments saffâvides de Kemah (Anatolie orientale)*, in *REI*, xxiv (1967), 149-72.
- P. 902^b, **al-KHADIR**, add to Bibliography: H. Schwartzbaum, in *Fabula*, lii (1959), 51 ff.
- P. 910^a, **KH'ĀF**, add to Bibliography: J. Aubin, *Un sainton qhâsikân de l'époque ilkhânide*, in *REI*, xxxv (1967), 183-216.
- P. 914^a, **KHAFD**, add to signature and O. MEINHARDUS.
- P. 962^a, **al-KHALLĪ** & **AHMAD**, l. 39 from below, instead of **al-FARĀHIDĪ** read **al-FARĀHIDĪ**
- P. 17 from below, instead of *Fakherululterior* read *Fakherululterior*
- P. 962^a, l. 36, instead of *ibn Aḥmad* read *ibn-Aḥmad*
- l. 37, instead of *Sibunayh* read *Sibunayh*
- l. 38 from below, instead of 266 read 366
- l. 14 from below, instead of 4075 ff. read 4075 L
- P. 963^b, l. 32 instead of *Fāḥid* read *Fāḥid*
- l. 18 from below, after author add, a pseudo-al-Khallī,
- P. 963^a, l. 10, instead of 303 read 304
- l. 22, after 67-80 add: A. Spitaler, in *DLZ* 81 (1960), 612-16; cf. J. Fück, in *ZDMG* 111 (1961), 464-69, Arabic tr. in *MML'A* (Cairo) 18 (1964), 33-47
- ll. 34 and 37, instead of ff. read f.
- l. 22 from below, instead of 37-9 read 37-42
- l. 17 from below, after 1960; add H. Fleisch, *Traité de philologie arabe*, Beirut 1961, I, index; 'A. al-Zuhaydī, *al-Khallī al-musīkār*, in *al-Mawrid* iv/4 (1975), 23-29;
- l. 2 from below, after 1373/1954 add, 43-7
- P. 964^a, **KHALLĪ** & **ISHĀK**, l. 14, instead of born in Cairo read died in Cairo
- P. 1034^b, **al-KHARĀDĪ**, l. 32, add: R. S. Cooper, *The assessment and collection of khara'ax in medieval Egypt*, in *JAOIS* 95 (1976), 365-82, (important).
- P. 1090^a, **KHĀSĪ**, last line, after 123 add; this belief has been affirmed by Muslim law; see R. Brunschvig, *Averroës juriste*, in *Études d'orientalisme... Lévi-Provençal*, Paris 1962, I, 65, n. 79 = *Études d'islamologie*, Paris 1976, II, 197, n. 79.
- P. 1099^b, **al-KHĀSSA** wa 'l-**ĀMMA**, l. 30 from below, after *mischievous makers*, add (It should be noted, however, that the Ghiljīs applied the term *khassa* disparagingly to the Sunnites; see R. Brunschvig, *Fiḥḥ fatwāwa et histoire de l'Ifrīqiya*, in *Mélanges... G. Marçais*, Algiers 1957, II, 13 = *Études d'islamologie*, Paris 1976, I, 64.)
- P. 1111^a, **al-KHATĪB** **al-BAGHDĀDĪ**, l. 18 from below, after *ḥadīth* add (*ibid.*, I, 417)
- l. 17 from below, after *Kūfa* add (*Yākut*, *Uḍabā'*, I, 246)
- l. 14 from below, after *Nishāpūr* add (*Ta'rikh Baghdad*, v, 67; x, 383)
- l. 12 from below, after *Rayy* add (*ibid.*, xi, 113)
- l. 8 from below, instead of 1922 read 1911.
- l. 6 from below, after *Dīnawar* add (*Subḥī*, *Tabaḥḥat*, iii, 12; 'iv, 29)
- P. 1111^b, l. 20, instead of *Uḍabā'* l. read *Uḍabā'*, l.
- l. 25, instead of 210-17 read 210-27.
- l. 25 from below, instead of 1974, I, 69-73 read 1976, I, 70-74
- l. 17 from below, after *Baghdād* add a year later
- P. 1112^a, l. 22, instead of *Ilāhiyat* read *Ilāhiyat*
- l. 27, after 1971; add Beirut 1974;
- l. 23 from below, instead of 69-73 read 70-74
- l. 22 from below, after 'l-*tafrik*, add a work about traditioners with similar names and their identification,
- l. 18 from below, after 175 ff. add; printed Beirut 1975
- l. 17 from below, after *al-ʿamal* add, a small paraenetic book concerning 201 *shādīkh* *ahyāl* and *ahwāl* by well-known individuals, named and anonymous poets, prophets and sages (e.g. quotations from the Torah), on both concepts *ʿilm* and *ʿamal*, always introduced by *ṣawids*
- after by al-Albānī, add Beirut 1386/1966, 1389/1969,
- P. 1112^b, l. 12, after 13 add; liv, 33
- P. 1155^a, **KHAYR** **al-DĪN** **PAŠHA**, l. 13-14 from below, instead of G. S. van Kieken read idem
- l. 11 from below, instead of idem read G. S. van Kieken
- P. 1162^a, **al-KHAYYĀT**, **ABŪ 'L-HUSAYN**, l. 14 from below, instead of **Abū** read **Abū**
- P. 1162^b, l. 9, delete about
- P. 1163^b, l. 6, instead of 7 read -7
- l. 29, instead of 6 read -6
- l. 19 from below, instead of 5 read -5
- l. 14 from below, instead of 4 read -4
- last line, instead of 6 ff., 85, II, 5 ff. read -6 ff., 85, II, 5 ff.
- Plate XLVII, **KHAZAF**, caption No. 1 belongs to the left-hand photograph, caption No. 2 to the right-hand photograph
- P. 1171^a, Add to Bibliography, section 'General': E. J. Grube, *Islamic pottery of the 8th to the 15th century in the Kerr collection*, London 1976; G. Ōgaki, *Islamic tile art*, Osaka 1976; J. Zickel-Nissen, *Islamische Keramik*, Katalog, Düsseldorf 1973; *Keramos*, No. 64, Berlin, April 1974 (in conjunction with the preceding reference). — Section 'Technique': J. C. Gardin, *Code pour l'analyse des formes de poteries*, CNRS Paris 1976. — Section 'China and Islam': Y. Crowe, *Certain types et techniques de la céramique de Suze*, in *Atti del VII Convegno Internazionale della ceramica*, Albisola 1974. — Section 'Turkey': W. B. Denny, *The ceramic revivements of the mosque of Rustem Pasha and the environment of change*, New York 1977; M. Meinecke, *Fayence Dekorationen seldschukischer Sakralbauten in Kleinasien*,

VOLUME V

- P. 84^b, **KİBLA**, l. 9: al-*Ḥağmūdī* lived ca 618/1221-22, since, according to *Ḥağmūdī Khaffa* (though not in the printed version of the *Kaḥf al-panānī*), this was the date of composition of his treatise on astronomy.
- P. 85^a, and formula from bottom: the quantity $\cos \varphi_m$ is to be multiplied by the preceding quotient and the product is to be added to $\sin \varphi_m \sin \varphi$.
- P. 85^b, l. 8, before $\frac{\cos \varphi_m \cos \Delta L}{R}$ insert —
- l. 1a, before $\frac{\sin \varphi_m \sin \varphi}{R}$ insert —
- l. 15, before $\frac{\cos \varphi_m \cos \Delta L}{R}$ insert —
- ll. 16 and 17, instead of *OMI* read *OM₂*.
- P. 86^b, l. 4, after $\sin \theta_1$ insert —
- 1st and 2nd equations beneath Fig. 5, insert —
- P. 87, Table 2, instead of *ij* read *q*.
- P. 87^b, ll. 2 and 9, instead of *f_q* and *g_q* read *f_q* and *g_q*.
- P. 88^b, add to Bibliography: On the problems of mosque orientation see D. A. King, *Astronomical alignments in medieval Islamic religious architecture*, in *Annals of the New York Academy of Sciences*, 1982.
- P. 106^a, **KUWA**, l. 10 from below, instead of *Kivimye* read *Kivimye*.
- l. 6 from below, instead of *Dar es Salam* read *Dar es Salaam*, the official spelling.
- P. 142-3, **KIRIM**, add to Bibliography: *Le khanat de Crimée dans les archives du Musée du Palais de Topkapı*, prés. par A. Bennigsen, P. Boratav et autres, Paris/Den Haag 1978; M. Berindol and G. Veinstein, *La présence ottomane au sud de la Crimée et en Mer d'Azov dans la première moitié du XVI^e siècle* in *Cahiers du Monde russe et soviétique* 22 (1979), 389-456; G. Veinstein, *La population au sud de la Crimée au début de la domination ottomane*, dans *Mémorial Omer Lütfi Barkan*, Paris 1980, 227-49 (Bibl. de l'Inst. Français d'Archéol. d'Istanbul, xxviii); *Catalogue des microfilms des ouvrages intéressant les musulmans de l'U.R.S.S.* . . . , iii: *Crimée*, Paris 1963 (stencilled).
- P. 243^a, **KİZ**, 3rd paragraph: *Ewilyā Çelebi* and, following him, *Mamboury* are wrong when saying that the *Kiz-taşlı*, i.e. the Byzantine "Maiden's stone" (cf porphyry), was incorporated into the Süleymaniyye Mosque. The older books (1550-7) of the Süleymaniyye mention the transportation of a column from the *Klatashl* Mahallesi to the mosque, but that one was from granite. See C. Maogo, *Antique statuary and the Byzantine beholder*, in *Dumbarton Oaks Papers* xvii, Washington 1963, 61; O. L. Barkan, *Süleymaniye Camii ve inşaatı*, Ankara 1972-9, I, 344-6, II, 23-4, Nos. 44-5; J. M. Rogers, *The state and the arts in Ottoman Turkey*, I, *The stones of the Süleymaniye*, in *IJMES* xiv (1982), 79.
- P. 268^a, **KORDOS**. The correct name in Ottoman Turkish of the city of Corinth emerges rather as *Kördes* or *Gördes* in the pages of *Ewilyā Çelebi*, where it is consistently spelt with *kāff*/*gāf* and not with *kāf*, confirmed by such European renderings as *Courdese* (Bernard Randolph, 1689) and *Ghiurdos* (W. M. Leake, ca 1803). Add to the Bibliography: P. A. MacKay, *The journey at Hadys Mustafa*, in *Hesperia*, *Journal of the American School of Classical Studies at Athens*, xxvii (1967), 193-5; idem, *Acrocorinth in 1668, a Turkish account*, in *op. cit.*, xxxvii (1968), 386-97, with map, plan and photographs.
- P. 428^b, **KUR'ÂN**, add to Bibliography, section "General studies": A. Neuwirth, *Studien zur Komposition der mekkanischen Sureen*, Berlin 1981.
- P. 507^a, **KURSAN**, l. 12, instead of *Khārk* I Island read *Khārk* Island.
- P. 508^a, l. 7, instead of *Malcom's* read *Malcolm's*.
- P. 552, **KUTB MINAR**, place Plates XXVIII-XXIX between pp. 548 and 549.
- P. 557^a, **KUTB**, l. 24 from bottom: instead of *Bondeghan* read *Bordoghan*.
- l. 23 from bottom: instead of *Callighu* read *Callighu*.
- P. 558^a, l. 19 from bottom: instead of *Eluçay* read *Uluçay*.
- P. 599^a, l. 8 from bottom: instead of *muslim* read *muslin*.
- P. 560^a, l. 26 from bottom: instead of *of* read *or*.
- P. 562^a, l. 10: instead of *873/1470* read *873/1470*.
- l. 39: instead of *muslims* read *muslime*.
- P. 563^a, l. 5: instead of *Starrhemberg* read *Starhemberg*.
- P. 564^a, l. 7: instead of *Morcmex* read *Morimer*.
- P. 565^a, l. 20 from bottom: instead of *1241/1225* read *1241/1225*.
- l. 12 from bottom: instead of *journalist* read *journalists*.
- P. 565^a, l. 25 from bottom: instead of *hayat* read *hayat*.
- P. 566^a, l. 14: instead of *Edsedy* read *Ecsedy*.
- P. 570^b, **AL KUTUBI**, l. 7 from bottom: A part of the *ʿUyūn*, edited by Fayṣal al-Sāmīr and Nabīla ʿAbd al-Munʿim Dāʿūd, has been published in Baghdad in 1397/1977. Following an unconfirmed report another part has been published in Cairo in 1980 and further parts are planned.
- P. 604, **LĀHAWR**, place Plates XXX-XXXI between pp. 600 and 601.
- P. 878^b, **MĀʾ**, section 7: Irrigation in North Africa and Muslim Spain, add to Bibliography: R. Brunschwig, *Hafsiden*, II, 210-13 and the bibliography given there.

- P. 1027^a, **MAQJĀZ** l. 4, *instead of more read mere*
l. 31 from below, *after mund insert to*
- P. 1056^b, **MADILIS**, *add to bibliography of section on Jordan: R. G. Khoury, Jordan Assembly meets, clears way for elections, in International Herald Tribune, 10 January 1984, p. 1.*
- P. 1059^a, *Add to bibliography of section on 'Uman: D. F. Eickelman, Kings and people: Oman's state consultative council, in MEJ 38/1 (Winter 1984), 51-72.*
- P. 1077^a, *Add to bibliography of section on Israel: J. M. Landau, The Arab vote, in D. Carpi, A. Diskin, E. Guttman (eds.), The roots of Begin's success, London 1984, 169-189.*
- P. 1103^b, **MADINUN LAYLA**, l. 7 from below, *after his love add of*
- P. 1164^a, **AL-MAGHĀZĪ**, *add to Bibliography: Maghāzī rasūl allāh b. al-Zubayr b. al-rumayl Abī 'l-Aswad 'anhu (al-nuskhā al-muttaḥḥarajja), ed. M. M. al-Aḥḡāmī, al-Riyāḡ 1401/1981 (extracted from later compilations); A. A. Duri, The rise of historical writing among the Arabs, ed. and tr. L. I. Conrad, Princeton 1983 (being an annotated trans. of al-Duri, Baḥṡ ..., referred to above).*
- P. 1166^a, **AL-MAGHILĪ**, l. 3 from below, *add: J. O. Hunwick, Al-Maghilī and the Jews of Tawāt: the demise of a community, in SJ lxiiv (1984).*
- P. 1166^b, l. 5 f., *instead of Critical text and tr. in Hunwick, Al-Maghilī: Replies read Critical text and trans. in J. O. Hunwick, Sharī'a in Songhay. The replies of al-Maghilī to the questions of Ashīa al-Hājj Muhammad, Oxford 1984 (Fontes Historiae Africae, Series Arabica, v)*
- P. 1171^a, **MAGHNISA**, *add to Bibliography: Yuzo Nagata, 26. yüzyılda Mamsa köyleri, in Tarih Dergisi 33/1 (1979) (= Ord. Prof. İ. Hakkı Uzunçarşılı hâtıra sayısından), 731-58.*
- P. 1231^b, **AL MAHDĪ**, l. 12 from below, *add to end of paragraph: The Companion 'Abd Allāh b. Busr al-Kaylī, who died in Hims between 88/707 and 96/715, attributed the following tradition to Ka'b al-Ahbār: "The Mahdī will send [an army] to fight the Rūm, will be given the knowledge (fiḡh) of ten and will bring forth the Ark of the Divine Presence (ṭābūt al-sakīna) from a cave in Antioch in which are the Torah which God sent down to Moses and the Gospel which he sent down to Jesus; and he will rule among the People of the Torah according to their Torah and among the People of the Gospel according to their Gospel."*
- P. 1232^b, ll. 8-19, *replace by: The theme was evidently adopted from the tradition ascribed to Ka'b by 'Abd Allāh b. Busr in Hims.*
- P. 1258^a, *add to Bibliography: W. Maderlung, The Sufyānī between tradition and history (forthcoming).*

SUPPLEMENT

- P. 343^b, **AL-ḤĀKIM AL-DJUSHAMĪ**, *add to Bibliography: 'Adnān Zarzūr, al-Ḥākim al-Djushamī wa-manḥajuh fi tafsīr al-Kur'ān, Beirut 1972.*
- P. 393^b, **IBN MIQSAM**, *add to Bibliography: A. Jeffery, The Qur'ān readings of Ibn Miqsam, in Ignaz Goldziher memorial volume, i, Budapest 1948, 1-38.*

KHEMSHIL [see **KHEMSHIN**].

KHEMSHIN (other designation, *Khemshili*), a numerically small group of Muslim (Sunni) Armenians who had been converted from Christianity in the beginning of the 18th century. In the U.S.S.R. (population 529, according to the 1926 Soviet census), they now inhabit the Black Sea coast near the Turkish border. In Turkey they live in compact settlements along the Firtin and Karadere rivers (*Baş Khemshin*) and in the mountains not far from Hope (Hope *Khemshin*). The traditional economy is based on sheep and goat herding, and related activities. The *Khemshin* dialect (like the Erzurum, Cilicia and Istanbul dialects) is part of the western dialect group of the Armenian language. The *Khemshin* have been, to a great extent, assimilated by the Turks, nor have they been listed in either the 1959 or 1970 Soviet censuses). (R. WICKMAN)

KHERLA, a fortress of mediaeval India, lying to the south of Málwa and east of *Khāndesh* (q.v.), and in the extreme northern part of Berār (q.v.), just to the south of the headwaters of the Tapti River. It is in fact some 50 miles west of modern Deogad; in British India it fell within the Central Provinces, now Madhya Pradesh.

The foundation of the fortress is attributed to a Rājput *rājā*, the last of whose line is said to have been killed by a commander of the Dhilli Sultans, perhaps in the time of 'Alī' al-Dīn *Khaljī*; but the fortress as it stands today is Islamic in construction. During the revolt of the Deccan in the latter years of Muhammad b. Tughluq, it fell into the hands of a local Gond dynasty. In the early 9th/15th century, the Gond ruler Narsingh was made subject to the ruler of Málwa, Hushang b. Dilāwar *Khan Ghūr* (808-38/1405-35), appointed to Málwa by the Tughluqs. It now became a subject of discord and covetousness between the rulers of Málwa and the Bahmani sultans of the northern Deccan (see *BAHMANIS*); thus in 837/1428 Hushang suffered a crushing defeat at *Kherla* at the hands of Ahmad Shāh Bahmanī. Forty years later, in 871/1467, there was again fighting over possession of *Kherla* between Mahmūd Shāh *Khaljī* of Málwa (840-73/1436-69) and the Bahmani Muhammad Shāh III Iʿshāqī, but Mahmūd managed to retain *Kherla* and possibly northern Berār as far as Ellīpur (q.v. in Suppl.). In 904/1586 the Mughal governor of Málwa, Aʿzam *Khan*, attempted to take over Berār; he failed to capture *Kherla*, but plundered the capital Ellīpur before being repelled by the combined forces of *Khāndesh* and the Nizām Shāhs of Ahmadnagar (q.v. and NIZĀM SHĀHS). Berār subsequently came under Mughal rule, and the *Aʿzam Alāwarī*, tr. Blochmann and Jarrett), Calcutta

1939-48, II, 237, lists *Kherla* as a *shāh* of the *shāh* of Berār with a revenue of 17½ million *daṁs*.

Bibliography. Sir Wolsley Haig, in *Camb. Hist. of India*, III, index. (C. E. BOSWORTH)

KHIḌĀB (A.), a term denoting the dyeing of certain parts of the body (and especially, in regard to men, the beard and hair) by means of henna [see *YENNA*] or some similar substance. It is still used in this sense today, but is used moreover for the items of make-up and cosmetics employed by modern women; the reader may find under *MARʾA* information about those items of cosmetics used by women attached to the traditional usages. (E.N.)

KHIḌĀSH (or *Knaddash*, cf. Wellhausen, 509; his real name was probably 'Ammār or 'Umāra b. Yazīd) one of the leaders of the early Hāshimīyya movement in Khurāsān. Having played a part unacceptable to the 'Abbāsids in the formative stages of their *daʿwa* in Khurāsān, the official 'Abbāsid propaganda later obliterated as much as possible of his memory, minimised his part in the *daʿwa* and presented him as a heretic. This propaganda succeeded to such a degree that his life and achievements are hardly mentioned in the Arabic sources and doubt was even cast as to his real name. Consequently, orientalist scholarship, in those few cases when it mentions him, is highly influenced by this. Wellhausen, with his unusual historical instinct, was the first to understand his significance in the 'Abbāsid *daʿwa*, and B. Lewis also mentions his role as one of the first emissaries of the Hāshimīyya in Khurāsān (see *ARABISTS*). Cf. Cohen and Lewis both tend to accept at least some of the accusations of the 'Abbāsid propaganda, namely that he was a *Khurramī*, and they raise doubts as to whether *Khiḍāsh* was an 'Abbāsid emissary at all (Cohen, *Point de vue sur la révolution 'Abbāsīde*, 324 f.). However, with the discovery and publication of the anonymous source *Akhbār al-Abbās* (ed. Dūrī and Nuṭtālī) under the title *Akhbār al-dawla al-'abbāsiyya*, a fresh study is possible, based on new material which permits a reconsideration of the already-known traditions about him.

According to the 'Abbāsid tradition, *Khiḍāsh* was a nickname derived from *kh-ḍ-sh* "to tear apart", "to scratch" because "he has torn religion to pieces" (*khaddash al-dīn*) (Tabarī, II, 1503; Balādhurī, *Ansāb*, f. 292b). This is a clear indication of the efforts made on the part of the 'Abbāsids to blacken his name, especially after his death. In another tradition, however, Tabarī says that it was *Khiḍāsh* who adopted this name whereas his real name was 'Ammār or 'Umāra b. Yazīd (ib. 1588, cf. *Ansāb*, f. 292a, *inf.*; Ibn al-Athīr, *Kāmil*, Beirut 1965, v, 144). As far as the

name is concerned, *Khudāsh* is not an uncommon name in Arabic, derived from the third form of the verb *khāḍa* (cf. Lane's *Lexicon* and *L.A.*, s.v. and *Aghāni*, xix, 52 and index). It is quite possible that the 'Abbāsids added their interpretation to the name later, when already there existed a tradition according to which the Prophet disliked the name *Khudāsh* (Ibn Waḥb, *Diwān*, Cairo 1939, 97, cf. Kister, "Call yourselves by graceful names", in *Lectures in memory of Prof. Martin M. Plessner*, Jerusalem 1975, 12). However, whether *Khudāsh* was his name or not, it does not make much difference to the fact that his activities in *Khurāsān* for over eight years as head of the *Hāshimīyya* [q.v.], caused so much trouble to the 'Abbāsids that his memory was almost completely obliterated from the records of the 'Abbāsid *da'wa*.

In order to understand the enigmatic personality of *Khudāsh*, one must remember that in the early phases of the *da'wa* the contacts between the centre of its activity in *Khurāsān* and the parallel centre in *Kūfa* were, for security reasons, very weak. The same considerations necessitated extreme caution in the contacts between the *Khurāsānīs* and the 'Abbāsid *Imām* in *Humayma*. Although the sources say that the propagandists in *Khurāsān* acted in the name of the 'Abbāsids, it is highly improbable that Umayyad intelligence failed to uncover this connection or to discover the identity of the *Imām* until the very end. The contents of the *da'wa* teachings were extremely ambiguous throughout, and its propagandists spoke in general terms about the rights of *Alī al-bayt* (cf. al-*Imārāt*, *al-Imān*, ed. Samar'al, Leiden 1973, 574 l. 18) a term which was accepted to mean the family of the Prophet (cf. M. Sharon, *The 'Abbāsid da'wa re-examined*, 9, n. 23). Thus through most of its phases, the *da'wa* in *Khurāsān* was, in fact, nothing but an extension of the *Hāshimīyya* of *Kūfa*. It is thus highly possible that even the leaders did not know what exactly were the essential ideas that differentiated their activities from those of the other *Shī'īs* in *Khurāsān*, and especially those in *Nishāpūr* and its environs.

The only information about *Khudāsh* supplied by Tabari and Balādhuri is as follows. After Asad b. 'Abd Allāh al-Kaḥrī had killed several of the first propagandists of the *da'wa* in *Khurāsān*, headed by Abū 'Ukrima, and had severely punished some of the others, another leader was sent from *Kūfa* to *Khurāsān*. The new leader was Abū 'Uḥayyān Kaḥrī b. Sa'd. As he was an uneducated man (if the term *ummi* in Tabari's account is to be understood thus), *Khudāsh* was able to overcome him and assume the leadership (Tabari, ii, 1503, *Anasib*, i, 292a).

In another tradition there is some more and rather different information about *Khudāsh*. According to this tradition, it was Bukayr b. Māhīn, one of the veteran adherents of the *Hāshimīyya* who, in 118/736 sent 'Ammār b. Yazīd to *Khurāsān* as a "leader of the *Shī'a* of Banu 'I-Abbās" (*Waliyyan 'alī ghāri bani 'I-Abbās*). He resided in Marw and changed his name to *Khudāsh* (a custom common to the early adherents of the *da'wa*, who for reasons of secrecy, used to adopt new *anonymi* once initiated into the movement (see KARTTUNEN). He began making propaganda for Muḥammad b. 'Alī, in which he was very successful. According to another tradition in the *Anasib*, it was Muḥammad b. 'Alī who nominated him. Sometime later, however, *Khudāsh* changed his original propaganda and "turned away from the *Imām's* instructions and began to teach improper and disgraceful ideas. Therefore, the adherents of Muḥammad b. 'Alī fell upon him and killed him. Some say

that it was Asad b. 'Abd Allāh al-Kaḥrī that killed and crucified him" (Balādhuri, *Anasib*, i, 292a). The "disgraceful ideas" according to Tabari (loc. cit.) were those of the *Khurramīyya* [q.v.]. His execution by Asad took place, according to Tabari, in 118, during the governor's second term of office (ii, 1508-9; Wellhausen, 510). Although these traditions reflect clearly the later 'Abbāsid distortion of the information about *Khudāsh*, it is possible, however, to build the following picture, from the combination of the above narrations with the information transmitted in the *Akhḥār*. *Khudāsh's* predecessor as the leader of the *Hāshimīyya* in *Khurāsān*, Kaḥrī b. Sa'd, led the movement in Marw from ca. 108/726 for three years until ca. 111/729. It was probably in that year that *Khudāsh* arrived from *Nishāpūr*, a centre of *Hāshimī* activity, and took over. For at least seven years, until his execution in 118/736, he was the leader (*imām*) of the *Hāshimīyya* there (Tabari, ii, 1509, l. 4) and the one responsible for creating its sound organisation, as Wellhausen rightly observes. He was the first to achieve a real and enduring success and to gain wide support among both Arabs and *mawali*. The lists of the leaders of the *da'wa* in his time show people from Tamīm, Rabī'a, Azd and other Arab tribes, including Sulaymān b. Kaḥrī of *Khuzā'a*, who was later to replace him (Wellhausen, 514, Tabari, ii, 1506-7, *Akhḥār*, 216-22). There is no neutral evidence whatsoever that he was *Khurramī*, though Wellhausen, Cohen and Lewis tend to accept 'Abbāsid traditions which attributed to him *Khurramī* and Mazdakite theories (this tradition is presented in its complete form by al-Nāshpūrī al-Akḥar, ed. J. van Els, Beirut 1971, 32-5, cf. Wellhausen, 515-18; Cohen, *Point de vue*, ... 324-5). Cohen, however, points out that many people who fell out of favour were accused of *zandāqā*, and this is clearly true of *Khudāsh*; a tradition which presents him as a Christian from *Khira* should be understood also as representing the same trend (*Anasib*, loc. cit.). From a unique tradition in the *Akhḥār*, we know exactly the nature and content of his propaganda, and this also explains why the 'Abbāsids later hated him. This tradition speaks of a group of *Khudāsh's* adherents in *Nishāpūr*, called the *Khudāshīyya* after its leader, a certain Abū *Khudāsh*. The group acted against the 'Abbāsids from the very beginning of their reign, and in the time of Abū Dja'far al-Manṣūr changed its name and became the *Fātimīyya*. They argued that, since after the death of Ibrāhīm al-*Imām* [q.v.] a new *imām* was not nominated in the way of *wasayya*, the *imāma* must return to the 'Alids, now already represented by the descendants of Fātima (*Akhḥār*, 405-4).

From the statement that the *Khudāshīyya*-*Fātimīyya* continued the former *Khudāshīyya*, it is clear that *Khudāsh* as a *Hāshimī* leader furthered the cause of the 'Alids.

Having worked for a while in *Nishāpūr*, *Khudāsh* seized the opportunity of the growing activity of the *Hāshimīyya* in Marw in order to move there in 111/730, and being intellectually superior to Kaḥrī b. Sa'd, he was able to depose him and take over the leadership of the movement there. For the *Hāshimīyya* of Marw, both his leadership and ideology were congenial. After the death of Abū *Hāshim*, the original *Hāshimīyya* continued in general terms to support the cause of the House of the Prophet, which became more and more identified with the *Fātimī* 'Alids. This development disturbed Muḥammad b. 'Alī, and on one occasion he is said to have warned one of his early exiles to *Khurāsān*, the *Kūfān* leader Abū 'Ukrima, about the 'Alid leaders in *Nishāpūr*.

pūr, whose names include one Abū Khālid al-Djawālikī (Aghār, 204, of Ibn Khaldūn, *ʿIṣar*, ed. Bulāq, II, 101). His influence in Khurāsān, however, was too slight to act against Khidāsh, and he may have had to give his tacit approval to the latter's position. Khidāsh built a strong centre in Khurāsān which was completely independent and detached from both Kūfa and Hamaṣna.

During the seven years of his activity, the 'Alid cause gained wide support there, while the 'Abbāsid *Imām* was kept completely in the shade. Khidāsh spoke in favour of *al-Raḥī min ʿAlī Muhammad* or *al-Kā'im min ahl al-bayt*, slogans which were common to all the 'Alid adherents in Khurāsān and the early *da'wa*.

Khidāsh's independent ideas, which were inconsistent with the aims and aspirations of the 'Abbāsid *Imām*, are explicitly indicated in *Ta'rif al-Khulafā'*, ed. Glaznevitch, ff. 252b. 1. 18-253a. 1. 6, and especially in a unique note on the margin of the manuscript, f. 253a, which is the key for an understanding of the whole problem. It runs as follows: *Khidāsh, raḍīyallāhu ʿanhu, ʿan al-Imām al-ḥaḍrat bi-Khurāsān wa-ʿan al-ḥaḍrat bi-Kā'im min ahl al-bayt raḍīyallāhu ʿanhu fa-ḥuḍrat al-ʿalī l-ḥaḍrat amrūhu*.

Muhammad b. 'Alī understood that the new independent centre in Khurāsān had to be connected directly with him and not through Kūfa, but as long as Khidāsh was alive this was impossible, and it was difficult even after Khidāsh's death in 126/736.

The new leader, Sulaymān b. Kaḥr, went to see the *Imām* in Hamaṣna in 120/730, but this meeting led to a crisis. Muhammad b. 'Alī tried to reproach the Khurāsānī for accepting Khidāsh's wrong ideas, but Sulaymān and the Khurāsānī could not see what was wrong in pure 'Alid-*ḥishmī* ideology, and for over five years the relations between Khurāsān and the 'Abbāsid *Imām* were almost non-existent (Tabarī, II, 1640, 1727, 1769, Balāḥūri, f. 292b).

Only in 126/744 were relations restored, and the centre in Khurāsān acknowledged the leadership of the new *Imām*, Ibrāhīm b. Muhammad (Muhammad died in 125/743). Sulaymān welcomed Bukayr b. Māhān in Marw and sent money with him to the *Imām* (Tabarī, II, 1809, Balāḥūri, loc. cit.). This improvement in the atmosphere was due to the great crisis in the *Shī'a* that followed in the wake of the collapse of Zayd b. 'Alī's revolt in Kūfa in 122/740 and the execution of his son Yahyā in 125/743. The messianic expectations of the *Shī'a* which were connected with these two were replaced by the usual feelings of sorrow and repentance after their death. This feeling was especially acute in Khurāsān, where black garments were worn everywhere as a sign of mourning for the dead 'Alids and where newborn children were named Zayd and Yahyā after them (Mas'ūdī, *Murūj*, Beirut 1905, III, 212-13). This was also the moment when a new leader was needed to avenge their blood. The circumstances were, therefore, ripe for coming to terms with the 'Abbāsid *Imām* and for turning the *da'wa* into an 'Abbāsid one. Even so, this change was not easily accepted. Not only did the pro-'Alid Khidāshīyya continue to exist under a new leader, but also (as Balāḥūri reports, *Ansāb*, f. 305a), Muhammad the son of Sulaymān b. Kaḥr was himself an adherent of the Khidāshīyya who was opposed to the transference of the movement in Khurāsān to Abū Muslim. Because of the activities of Khidāsh we can now understand that it was not until 126/744 that the *da'wa* in Khurāsān was changed from a purely 'Alid one to an 'Abbāsid one. But the 'Abbāsids, even after reaching power, knew, as al-

Manṣūr is reported once to have said, that "the love for the 'Alī Abī Tālib in the hearts of the people of Khurāsān is mixed with the love for us" (*Fragments*, ed. De Goeje, 246).

KHIDĀSH b. ZUHAYR AL-AṢḤAR or **RABĪ'a** or **AMR** or **ʿAMIR** b. **Ṣā'ḥa** or **al-ʿAMR**, *muḥaddram* poet who is said to have attacked Kuraysh because his father had been killed in the War of Tījār (q.v.); it is possible that he himself took part in this struggle, and it is precisely in the chapter devoted to this war that the *Aghāni* (ed. Beirut, xlii, 70 ff., cf. lii, 271) cites him at greatest length, since several pieces of his are given there, one of them considered as a *ḥaṣṣa mansufa* (see Ch. Pellat, in *Mélanges Marcel Cohen*, 279-80), but he boasts there of a victory of the Hawāzin over Kuraysh which seems to be an invention. All the same, it is not impossible that these verses, and also a *ḥaṣṣa* in praise of Kuraysh (*Aghāni*, xlii, 70), where allusion is made to Muhammad's presence amongst the combatants, were written at a later date and by another poet. Khidāsh was still a pagan at the Battle of Hunayn (q.v.). Ibn Sa'llam (*Tabaṭṭā'i*, 119-20) classes him in the fifth *ḥaṣṣa* and cites a certain number of his verses. An edition of his *diwān* has been put together and is being prepared in Baghdad.

KHIDHLĀN (a), noun actionism from the root *kh-dh-l*, "to leave in the lurch", a technical term in Islamic theology, applied exclusively to Allāh when He withdraws His grace or help from man. The disputes regarding it first appear in connection with the quarrel over *qadar* (q.v.). A starting point is found in *Sūra III*, 154/260: "But if He abandon you to yourselves (*yaḥḍiruhū-kum*), who will help you after Him? Let the faithful therefore trust in God". On this al-Rāzi observes: "The Companions deduce from this verse that belief is exclusively a result of Allāh's help (cf. John, vi, 63), while unbelief is a result of His *khidhlān*. This is obvious, as the verse points out that the matter is entirely in God's hands".

A more detailed exposition is given by Ibn Ḥazm (ibid., 50 f.). "Right guidance and assistance consist in God's preparing (*ḥayyir*) the believer for the good for

which He has created him; while *khidhlân* consists in His preparing the *fâsiq* for the evil for which He has created him. Linguistic usage, the *kur'ân*, the force of logic, and the attitude of the *fukahâ* and those in the past who handed down traditions and of the Companions and Successors as well as of those who came after them and of the whole body of Muslims with the exception of those whom God has led astray as regards their intelligence, namely such as belong to the followers of slanderers and outcasts, like al-Nazzâm, *Thumâma*, al-'Alîf and al-Dîbîs, are all unanimous". Then follows this reasoning: Allâh has given man two forces, hostile and opposed to one another, *amysir* (power of discrimination) and *hamâ* (passion, desire). When Allâh protects the soul, *amysir* prevails by His help and power. But when He leaves the soul to itself (*âghâqia*), He strengthens the *hamâ* with a strength which amounts to leading astray (*âghâl*).

Khidhlân is therefore, according to Ibn Hâzim, the opposite of *hukâ* and *lawfâ* and the conception approaches that of *âghâl*. The Mûteallîs (as already indicated by Ibn Hâzim's words) see in it a contradiction to Allâh's justness: according to them, Allâh does not urge a man to evil. In their terminology, *khidhlân* therefore means the refusal of divine grace (*man' al-layl*), while, according to the Ash'arîs, *khidhlân* is "the creation of the ability to disobey".

KHIḌW, KHEDW, KHEDWA, title of the rulers of Egypt in the later 19th and early 20th centuries, deriving from Persian *khudwâ*, *khudwâ* "lord, prince, ruler". The use of the Arabic form of the title *khudwâ* "khedwâ" is associated with Ismâ'îl Pasha (g.v.), wâlî or viceroy of Egypt 1863-79, even though his predecessors, 'Abbâs I Pasha (1848-54) and Sa'îd Pasha (1854-63) used it unofficially on occasion. Certain government departments, in particular the Department of the Interior, even under Ismâ'îl's grandfather, Muḥammad 'Alî the Great (1805-49), founder of the dynasty, were known as *dimîn al-khidwâ*. In a way, it was a unique title among the vassals of the Ottoman Sultan, which the ambitious viceroy of Egypt sought precisely in order to set himself apart and above so many other governors and viceroys of Ottoman dominions. Closely related to his efforts to render his rule more secure within his family was Ismâ'îl's ambition to acquire the more formal accoutrements of sovereignty in relation to his master in Istanbul and the European powers. After lavish gifts in Istanbul, the distribution of outright bribes to influential courtiers and vast expenditure in supplying troops to help his sovereign suppress a rebellion in Crete, the title of *khidwâ* was formally conferred by the Sultan upon Ismâ'îl in a *fermân* issued on 8 Juma 1267, two years before the formal opening of the Suez Canal. From a mere wâlî, viceroy of the Sultan in Egypt, Ismâ'îl assumed a rank which elevated his standing to a position closer to royalty. A more important concession which Ismâ'îl received along with this title was the virtual independence of Egypt and her right to enter into special treaties and agreements governing posts, customs and trade transit. These provisions were to give Ismâ'îl freedom in the financial, administrative and judicial arrangements of the country. The title remained in use until 1914, and was assumed by

Ismâ'îl's son Tawfîq Pasha (1879-99), and Tawfîq's son 'Abbâs II Kâmil (1892-1914) [g.v.]. When soon after the outbreak of the Great War Egypt was declared a British Protectorate and 'Abbâs II was deposed, his successor, his uncle Husayn Kâmil, assumed the title of Sultan of Egypt.

KHIḌR BEG, Ottoman scholar and poet of the 9th/15th century, and the first *kaḡî* of Istanbul. The unique source for his biography is the Arabic original of al-*Ṣaghâ'ir al-aw'amaniyya* by Taşköprüzâde who, however, distorts the chronology of an otherwise convincing account of his career by an implausible anecdote which would place his first important appointment as late as the beginning of the reign of Mehmed II (ca. 855/1451). Disregarding this, and an equally suspect interpolation made by Mejdîl in his translation of the work in which his mother is identified as the daughter of the legendary Turkish jester, Naşî al-Dîn Kh'wâjâ (Nasreddin Hoca), the details of his life are as follows: He was born in Sivrihisâr, where his father, Dîlâlî al-Dîn, was *kaḡî*—though the fact that the latter was, also, known as Amir 'Arîf would suggest that he was a dervish rather than a member of the learned profession—and a source used by Brockelmann dates the birth to 1 Rabi' al-Awwal 820/6 August 1407. He completed his studies in Bursa under the famous scholar Molâ Yegân, whose daughter he married, and is then said to have returned to Sivrihisâr as a teacher. He acquired such a reputation for learning that he was appointed to the *madrasa* of Muḥammad I in Bursa with an increase in stipend, and certain of his pupils here were subsequently to become scholars of great eminence. Next he taught at the *madrasa* of Bâyezîd I in Bursa, again with an increased stipend, and in addition was appointed *kaḡî* of Inegöl. From here he moved to the newel of his two *madrasas* in the Üç Şerefeli mosque in Edirne, and thence to Yanbolu (in present-day Bulgaria) as *kaḡî*. After the conquest of Istanbul in 857/1453, he was appointed its first *kaḡî*, in which post he remained until his death in 863/1458-9. He is buried in the Zeyrek quarter of Istanbul (Ölümünde mübâfâf, I, 304), where he also built the mosque later attributed to a certain Hâdîdî Kâdlâ (*Hadiyat al-Ghawwâ*, I, 26). His three sons, Ya'qûb Pasha, Muḥî Ahmad Pasha and Sinân Pasha, were also notable scholars, the latter being the author of the famous *Taḡarrûḡ*.

Although *Khidr Beg* is reputed to have introduced the versified chronogram into Ottoman literature, very few of his Turkish poems have survived (Sehi, 39) and his reputation rests on three poems in Arabic. The first, a didactic *ḡaṣida* in the *basîf* metre on the creed, is known as the *Nûniyya* and has been the subject of several commentaries, most notably that by his pupil Khayyâl (*Hadiyat al-Khalifa*, II, 334; Brockelmann, II, 229, S II, 321). Another *ḡaṣida*, also a *nûniyya* dealing with the creed, but in the *waḡîf* metre, is usually known as the *Uḡḡâla layla aw laylayn* (Brockelmann is incorrect in saying that he translated this into Persian). Finally, there is a *mushaddad*, in a Persian variety of the *hazaj* metre, which was greatly admired and attracted imitations for over a century ('Alî, *Kûkâ*, v, 230-2; Ahmed Pasha, *Divân* ed. Ali Nihat Tarian, Istanbul 1966, 357). Bursal

Mehmed Tâhir mentions a translation into Persian of the *Mağâhî* which he made at the request of Sültân Mehmed II, the work in question probably being the *Mağâhî al-amâr*, on logic, by Sirâğî al-Dîn Mahmûd al-Urmawî (Hüdâîî Khâfir, ii, 1715).

Bibliography: Tashköprüzâde, *al-Shâhîk al-nu'mânîyya*, Arabic text in margins of fbn Khalkhal, *Wafayât al-a'yân*, Bâsik 1299, i, 151-5; Neğdî's Turkish translation (İstanbul 1269, 111-4) omits many important details. Bursalî Mehmed Tâhir, *Öğrânîlî müvâzîfî*, İstanbul 1333, i, 402; Husayn Ayyânîsârîyî, *Hadîkât al-djâudî*, İstanbul 1283, i, 86; Edirnelî Sehl, *Hagîr bîhîgî*, İstanbul 1325, 39; Mustafâ Âll, *Kûnk al-ahkâr*, İstanbul 1285, v, 229-32; Süheyl Ünver, *Hisar Bey Çelebî, hayatı ve eserî*, İstanbul 1945. The biography given in the entry for Khîdîr Beğ in von Hammer's *Geschichte der osmanischen Dichtkunst*, Pest 1836, i, 122, is actually that of his son, Sülejm Paşa.

(J. R. WALSH)

AL-KHİDİR HUSAYN [see AL-KHADİR B. AL-MURAYN].

KHİDİR-İLYÂS (in Turkish, Hıdırellez), is the name, in Turkish tradition, of a popular festival in the spring and celebrated on the 5-6 May, this date being considered as marking the beginning of the season of summer, extending from then till 7 November (*Kasım*). The two dates correspond respectively with the feastdays of St. George (23 April) and St. Demetrius (26 October).

Khîdîr (Tûch, Hızır) also symbolises in Turkish tradition the renewal of vegetation in the spring. It is believed that, when this personage shows himself upon the face of the earth, the dry vegetation becomes green again as he passes; that he leaves a green impression on the hands which he touches; and that he brings abundance, fertility and happiness. Another feature of his legendary personality is that he comes to the aid of beings in distress, and in particular, of those in danger of drowning in the sea or lost in the desert. In regard to Ilyâs, beliefs and traditions are somewhat rare. In the written literary texts and in oral tradition they are limited to allusions to his supernatural aid to beings in distress on land or sea, a power which he shares with Hızır; according to certain beliefs, Ilyâs is the master of the seas, and Hızır that of the land, but others hold the inverse of these attributions (see *Halk bilgisi haberleri* = *HBH*, i (1930), 182; *Gedâ*, No. 73 (1944); O. Bayındı, *Bergama'da efencer, dedeler*, İstanbul 1942, 34; Ewhyl Çelebî, *Seyidat-nâmâ*, iii, 90; Yazılıloglu, *Muhammedîyye*, Ith. İstanbul 1312/1894-5, 77; Saadetin Nûhet, *Türk şairleri*, i, 57; in one poem the popular poet of the 17th century Karagöçhan calls him "guardian of the seas, mounted upon a grey horse"; in the *Oghuz* epic *Dele Körkud* he is likewise described as a horseman. Ilyâs is further mentioned in beliefs which explain the name *Hıdırellez*. It is generally held that each year, on the night of 3 May, these two beings, both of them immortal after having drunk from the "Water of Life", come to meet together on the earth. Their meeting place is often pictured as a spot by the sea shore. According to a local belief of Balıkesir (*HBH*, i, 181), they are two brothers. A legend recorded at Halkah near İstanbul tells how they were two lovers. Hıdır a youth and Elîz a girl; for long they were unable to come together again, but at last met on the night of 3 May, and then both died of joy from their reunion (Ali İmce, *Halkah'da Hıdırellez*, in *Türk folklor araştırmaları*, No. 96 (1957)).

Hıdırellez is a festival the greater part of whose ceremonies are reserved for women and girls. They

comprise three main sequences: (1) On the night of 5 May, various practices are performed and rites observed in order to ensure the fulfilment of divers vows, such as abundance, prosperity, happiness in general, or more specifically, the acquisition of a house, the birth of a child, etc. (2) Early the next morning, there takes place the "drawing from the divinatory pitcher". The previous evening, there are placed in the pitcher, to the accompaniment of appropriate rites, various small objects belonging to women and girls who wish to ask Fate about their future destiny; the pitcher is then placed under a rosebush during all the night. In the morning, a young girl draws out the objects in the pitcher one after the other, and woman recites the "divinatory quatrain", which is interpreted in regard to the future fate of the owner of the corresponding object. (3) On 6 May, there is an outing to go and eat, in groups of relatives, neighbours and friends, in the countryside, usually by some sanctuary. Games and amusements, including swings, the preferred pastime for this festival, are organised.

The festival and its attendant ceremonies are normally limited to two days only. Nevertheless, they form a sequence of seven weeks in the 'Alawî villages of a mountainous region in the province of Kırklareli. During the month which precedes the day of Hıdırellez, the ceremony of "drawing from the divinatory pitcher" takes place every Thursday evening. The seventh Thursday is called "the day of Nazari", when a communal meal is eaten, prepared from the meat of sacrificed animals. On this same day, the children, carrying flowers and willow branches, search out, and organise for themselves, communal meals by a sanctuary; they also carry out other rites which are, moreover, to be connected with those aimed at summoning rain (see 1957a). On returning to the village, they throw their crowns of flowers and leaves into the river (Etem Utık, *Yukarı Kanara köyünde Nazari şenlikleri*, in *Türk folklor araştırmaları*, No. 167 (1971)).

KHİDİR KHÂN, founder of the "Sayyid" dynasty which ruled at Dihl from 817/1414 to 853/1451. His designation as a sayyid is traced in the near-contemporary *Ta'rikh-i Muḥarrir* Ṣadâi firstly to a remark hagiologically attributed to the Şâh Djalâl al-Dîn Bukhârî, and secondly to his own excellent character, and has been accepted by later historians like Nigâm al-Dîn Aḥmad, Badâ'uni and Firîhtî; but this has been regarded as dubious by modern British and South Asian historians. The other near-contemporary source, Behâmâd Khân's *Ta'rikh-i Muḥammadi* (compiled or revised in 842/1438-9) is silent on the point. While false genealogies are quite common in Indo-Muslim history, Khîdîr Khân's selection by Timûr [q.v.] as his "deputy" in Dihl suggests that he may have been regarded as sayyid in his lifetime, since Timûr's regard for sayyids is well documented.

Khîdîr Khân was the son of Malik Sulaymân, an adopted son of Nâḥid Dawlat, the *ikhtâ'dâr* of Multân under Sültân Fîrûz Tughlûk [q.v.]. Sulaymân Malik succeeded to it in 817 after the death of Malik Shaykh, Mardân's son, and Khîdîr Khân was assigned the *ikhtâ'dâr* in succession to his father. In 908/1506 he lost the *ikhtâ'dâr* during his strife with Şâragh Khân,

When Tīmūr invaded India in 801/1398-99, he took refuge in Mēwāt, but later entered Tīmūr's service, and was appointed governor of Dīhlī and *shāh-dār* of Multān and Deopālpūr. However, it was not until 817/1414 that he finally took possession of Dīhlī. He regarded himself a vassal of Tīmūr, and later of the latter's son Shāh Rukh (q.v.), whose names were recited in the *dhikr* and inscribed on the coinage. He obtained Shāh Rukh's permission in 820/1417 to affix his own name also on the coinage; he chose for himself not the title of *sultān*, but that of *shāh-i aḥī*, suggesting presumably that he was a standard-bearer of the Tīmūrids.

His reign of seven years, until his death in 827/1427, was full of campaigns undertaken by himself and by his able and loyal *wasir* Tāqī al-Mulk which extended the frontiers of his authority and re-united Panjāb with Dīhlī. Punitive expeditions were organised against rebellious nobles, especially the Tūrk-bāzās; there were also several expeditions against Hindu *rājās* such as those of Ketāb and Gwāliyūr (q.v.) in order to collect taxes and tribute. Near-contemporary chronicles regard him as a kind and benevolent ruler who brought to Dīhlī and the other areas which he governed relief from the economic sufferings and insecurity which had continued since the invasion of Tīmūr.

KHIL'Ā (pl. *khil'ā'*), "robe of honour," also called *taḡīyāt* (pl. *taḡīyāt* and *taḡīyāt*). Throughout much of the Middle Ages, the term *khil'ā'* did not designate a single item of clothing, but rather a variety of fine garments and ensembles (*hulās* or *badīs*) which were presented by rulers to subjects whom they wished to reward or to single out for distinction (hence the alternate name *taḡīyāt* "honouring"). These robes, the most common of which was the *ḥabā'* (see 1184s), were normally embellished with embroidered bands with inscriptions known as *shīrās* (q.v.) and were produced in the royal factories (*dar al-ḥirās*).

(i) *Origin of the custom.*

The custom of bestowing garments of honour in the Near East is very ancient. The Patriarch Jacob

singled out his favourite son Joseph from amongst his brothers by giving him a *ketonet paschim* (Gen. xxxvii, 3) which was a ceremonial or royal robe (see commentary of E. A. Speiser, *Genesis*, Anchor Bible, Garden City 1964, 290). Joseph was later similarly honoured by Pharaoh, who had him dressed in garments of linen (Gen. xli, 42). Herodotus reports that the Egyptian king Amasis sent to Croesus of Lydia as a royal gift a *corselet* of linen embroidered with gold thread and cotton with the figures of animals woven into the fabric (*Hist.*, iii, 47).

This custom had a most important precedent in Islam with Muḥammad's gift of the *burda* (q.v.) which he was wearing to the poet Ka'b b. Zuhayr (Ibn al-Aṭhīr, *Kāmil*, Cairo 1902, ii, 133-4). The very word *khil'ā'* denotes the action of removing one's garment (A. *Khil'ā'*) in order to give it to someone (TA, v, 322). L. A. Mayer has suggested that this was "originally more a promise of personal security (*amān*) than a token of distinction" (*Mamluk costume*, 56), but this is an overstatement.

(ii) *Development of the custom in Islam.*

The term *khil'ā'* does not appear until 'Abbāsīd times, when the practice became so institutionalised that the bestowal of garments of honour was an almost daily occurrence. Members of the caliphate on tour came to be known as *ashāb al-khil'ā'* "those who wear the *khil'ā'*". The presentation of a robe of honour was a standard mark of investiture. Such was the case for an heir apparent (see e.g. Maḥdīfī, *Murūḡī*, vi, 395), a vizier (e.g. Hāli al-Shāhī, *Tārīkh al-Wazīr*, ed. Amédour, Beirut 1904, 176), or a provincial governor (e.g. Tabarī, iii, 2194). The bestowal of *khil'ā'* and other gifts to favourites was an occasion for poetical compositions and was noted by historians (e.g. Ibn al-Fuwaṭī, *al-Ḥawādith al-dīnīya*, ed. M. Diwānī, Baghdad 1337).

In the heyday of Fāṭimid rule in Egypt, the new *haute bourgeoisie* found itself with the means to emulate—after a fashion—many of the luxurious practices of the aristocracy. Among these was the custom of bestowing *khil'ā'* upon friends and relations (Y. K. Stillman, *The importance of the Cairo Geniza manuscripts for the history of medieval female attire*, in *IJMES*, vii (1976), 382).

The Mamlūks with their strong military psychology and a marked penchant for heraldic symbolism, standardized the *khil'ā'* in accordance with the class of the wearer and his rank within that class. The three major classes of *khil'ā'* wearers were the military (*arḥāb al-sayyās*), the civil service (*arḥāb al-ashām*), and the religious scholars (*al-ḥalām*). Makrīzī, drawing upon the *Masālik al-ashāb* of al-Umari, describes in detail the great variety of *khil'ā'* worn by these three important classes of Mamlūk society (*Khil'ā'*, ii, 227-8; tr. by Mayer, in *Mamluk costume*, 58-60). A special official, the *Nāzir al-Khāṣṣ* (Keeper of the Privy Purse) oversaw the *khil'ā'* in the Great Treasury (*al-ḥizāna al-ḥubra*) which contained only robes of honour (*shūd*). In addition to garments, the Mamlūk military *taḡīyāt* could consist of arms, such as gold ornamented swords, and a horse from the sultān's own stable (*imn al-ḥubb*), fully outfitted with saddle, bridle, and caparison (*ḥanḥāḥ*).

Money or other valuables were also given as part of the *khil'ā'* (*taḡīyāt*) (e.g. Abu 'l-Fudā', *al-Maḥājar min Tārīkh al-baḥār* [Annuaire *Moslim*], v, ed. J. J. Reiske, Copenhagen 1794, 294). In the Ottoman Empire, a sum of money was sometimes given in place of the robe of honour. This monetary gift was called *khil'at deḥḥ* ("the price of a *khil'ā'*"). It specifically referred to money distributed to Janissary

officers upon the accession of a sultān (C. Barbier de Meynard, *Dictionnaire turco-français*, Paris 1881, I, 709), so that this term is to a large extent synonymous with that of *ghulāt al-hakīm* "accession payment".

Robes of honour were given on all sorts of occasions and for a variety of reasons. Thus, there was the *khil'at al-niyāba* or *kh. al-intiqār* (robe of appointment), the *kh. al-walāya* (robe of viceroyship), the *kh. al-ridā* or *kh. al-ridā* (robe of pardon), and the *kh. al-ʿad* (robe of dismissal—with honour of course). The *kh. al-jūdīm* was given to a guest from afar, while the *kh. al-safar* was given upon his departure. A sultān might give a *kh. al-ʿafiya* (robe of health) to a favourite who had recovered from an illness (Mayer, *Mamlūk costume*, 61-2, and the sources cited there).

The custom of bestowing robes of honour remained widespread throughout the Muslim world until recent times. In 19th century India a *khil'at* (also *khil'at*, *khil'at*, *khil'at*) might consist of anywhere from a minimum of five articles to as many as one hundred and one (Mrs. Meer Hassan Ali, *Observations on the Muslim customs of India*, London 1927; repr. Karachi 1974, 148-50; see also Yule and Burnell, *Hobson-Jobson*, a glossary of Anglo-Indian colloquial words and phrases, London 1903, repr. London 1968, 483-4).

Stillman, *Penale attire of medieval Egypt*, unpublished diss., University of Pennsylvania, Philadelphia 1972, 16-8, 93-6. The most detailed survey of *khil'at* is to be found in L. A. Mayer, *Mamlūk costume*, Geneva 1952, 56-64 et passim.

[N. A. STILLMAN]

KHILĀFA [see KHALIFA]

KHILĀFA, KHILĀFAT MOVEMENT, a politico-religious movement in British India, manifesting itself in the years after the First World War. On the one hand, it had its roots in Pan-Islamism, which came to the fore about 1900. On the other hand, it was stimulated by nationalism [see GAWMIYYA, in Muslim India and Pakistan]. Turkey's defeat in the First World War spelt serious danger to the position of the Ottoman Sultān-Khālifa. Would his power remain great enough to protect Islam? Would the Holy Places of Islam remain under his sovereignty (or at least suzerainty)? Arab nationalism posed a threat, and Greece, France and Italy wanted to rob him of extensive territories in Thrace and Asia Minor.

In September 1919, when rumour of the coming treaty of Sèvres was rife, the Khilāfa movement was organised. Khilāfa conferences met in several cities in Northern India, and a Central Khilāfa Committee constituted itself at Bombay. Seth Choteni, a wealthy merchant, became its president. Prominent leaders were Mahammad and Shawkat 'Alī (the "All brothers"), Abū T. Kālim Azād, Dr. Anṣārī and Haṣrat Mohanī. An important part was played by the 'alawīd', organising themselves in the *Diyā'īyyat al-'Ulamā'* i Hind. Their most influential leaders were 'Abd al-Bāqī (of Farangī Mahādī) and Maḥmūd al-Ḥasan (of Deccan). In January 1920, a Khilāfa deputation presented an address to the Viceroy. It stated that "the preservation of the Khilāfa as a temporal no less than a spiritual institution" was "the very essence" of their faith, and that this meant full Muslim control over the Arabian peninsula, the

Khilāfa's wardenship over the Holy Places and the integrity of the Ottoman Empire—claims which, by the way, constituted a check on Arab nationalism and the ambitions of the Sharif Ḥusayn of Mecca. Another deputation, headed by Muḥammad 'Alī, went to Europe and had two (unnecessary) interviews with members of the British Government in March 1920.

The Khilāfa movement started as a communal movement and met with mass approval within the Indian Muslim community (only among upper-class Muslims was there a marked tendency to hold aloof from it). Large funds were collected, partly by petty contributions. But it also got the support of the Indian National Congress. Thereby the Khilāfatists became more and more involved in the nationalist movement, which entered upon its first non-cooperation campaign (1920-2). Gandhi became a member of the Central Khilāfa Committee and issued a Khilāfa Manifesto in March 1920. The Khilāfatists, however, accepted Gandhi's creed of non-violence only conditionally: if it did not bring success, they would have to resort to *ghilāt* and *hiḡra*. The former seemed possible in connection with an Afghan invasion; the latter was actually performed in the summer of 1920. Some 30,000 *muhājirīn*, most of them coming from ʿAnd or the Panjāb, crossed the Afghan border, but about 75% of them came back, disillusioned by their reception in Afghanistan. These aspects of the Khilāfa movement had an adverse effect upon Hindu-Muslim relations, which were vital to its nationalist character. Gandhi's suspension of non-cooperation in February 1922, constituted a severe blow in this respect; Indian Muslims felt betrayed by the Hindus after bearing the brunt of the nationalist battle.

No less deadly blows came from the Turks. The nationalist government at Ankara succeeded in restoring Turkey's position. The Khilāfatists supposed that Kemal Pasha was acting on behalf of the Sultān-Khālifa, but this proved to be an error. In November 1922, the Sultanate in Turkey was abolished and the Khālifa lost all temporal power; he was "Vaticanised" (a condition which the Khilāfatists had declared to be incompatible with his office). Khilāfa leaders tried to explain away the fact, but their followers left them. The movement wholly collapsed when in March 1924 the Ottoman Khālifa was abolished. Some leaders, like Abū T. Kālim Azād and Dr. Anṣārī, remained in the Congress; others found their way back to the Muslim League, which up to 1919 had been the political organisation of Indian Muslims. Other leaders again, like the 'Alī brothers, tried to save the Khilāfa organisation, but to direct it towards communalist goals. It grew into an instrument to further Muslim interests as opposed to Hindu ones, but even in this form, the organisation had lost all significance by 1928.

Bibliography: Among the contemporary accounts the most important is P. C. Bamford, *Histories of the non-co-operation and Khilāfat movements*, Delhi 1925 (confidential publication of the Govt. of India). Materials concerning the movement can be found in Atzāl ṭibāl, ed., *Select writings and speeches of Maulana Mahomed Ali*, Lahore 1944 (containing among other things an unfinished autobiography of the author). In many books, the movement is treated as an episode in the nationalist struggle, e.g. A. Aziz, *Discourse of Pakistan*, Lahore 1964, and R. C. Majumdar, *History of the Freedom movement in India*, iii, Calcutta 1963. The most recent monograph is A. C. Nienmeijer, *The Khilāfat movement in India, 1917-1924*, The Hague 1972.

KHILĀT (see **ANĪLĀT**).

KHILUJĪ (see **KHALUJĪ**).

KHINALUG (self designation: Kattettardur, Russian, *Khinalug* [from the *Khinalug*], a people of the eastern Caucasus. *Khinalug* is a numerically small ethnical group, which forms an independent branch of the Northeastern Ibero-Caucasian language group. According to the 1926 Soviet census, there were (ethnically) 105 *Khinalugs*, and linguistically 1,540. The *Khinalugs* are Sunni Moslems of the *Shafi'i* rite.

The *Khinalugs* inhabit the *and* *Khinalug* on the upper right arm of the Kudat-chay, in the Mount Shakhdagh area of Konakikend rayon (Azerbaijan S.S.R.). The *Khinalug* traditional economy was based on sheep-raising (transhumance system) and horticulture.

The *Khinalug* language is purely a vernacular, and Azeri is used as the literary language; the *Khinalug* are in fact being culturally and linguistically assimilated by the Azeris.

C. d'Encausse, *Une république sovétique musulmane: le Daghestan, aperçu démographique*, in *REI*, xxlii (1955), 7-56; Geiger, Halak-Kun, Kuipers, Menges, *Peoples and languages of the Caucasus*, The Hague 1939; S. A. Tokarev, *Etnografiya narodov SSSR*, Moscow 1958. (R. WEXMAN)

KHINZĪR (A., fem. *khinzira*, pl. *khinzir*) or *khinzir barī* designates, amongst the pichyderms, all *suidae* or porcines belonging to the palaearctic zone, without any distinction between the pig (*khinzir aālī*), domesticated since farthest antiquity, and the wild boar, *Sus scrofa* (*khinzir wāhshī*), its feral relative, frequenter of wooded slopes and dense scrub in the valley bottoms.

The word *khinzir* (Hebrew *khinzir*) is to be attached to the root *kh-z-r* with the idea of "having small eyes", and has no link with the root *kh-n-z-r* which implies the idea of bulk, mass; this at least is the general opinion amongst philologists, but a coming-together of both ideas is not to be excluded. Without being everywhere in current usage, *khinzir* is known to all arabophone populations; however, the term *khalfī* (pl. *khalfī*, *khalfī*, cf. Berber *if*, pl. *ifan*) is preferred to it in the Maghrib, whilst the *Touaregs* keep for the animal its name *anbara* / *ayubani* (pl. *ayubani* / *ayubani*). Even within the porcine species, whilst the sow and the wild sow have no special name except for the feminine derived normally from the masculine (*khinzira*, *khalfī*), the boar is called *khinzurūda* and the wild boar, whether under three years old, a three-year old, a four-year old or an old boar, is called *rafi* (pl. *rafīf*) and *ufr* / *if* (pls. *ufat*, *afat*). In the Maghrib, where the wild boar is common in the mountain massifs, it is differentiated from the pig which is freely raised by some Berber groups by the expressions *khinzir djabali* "mountain pig" and *khalfī al-ghāba* "forest pig"; an old boar is called, according to the places, *ghāfi* / *ghāfi*, *ghāfi*, *bi ghāra* and *ba ghāra*. The young of *suidae*, piglets or young wild boars, have retained almost everywhere in the Islamic world their classical name of *khinnawā* (pl. *khinnawīn*) in the form of dialectal deformations *khinnawā*, *khannawā*, *khannawā* and *khannawā*; in the Maghrib we have also the diminutive *khalfī*. From the anatomical point of view, the *suidae* are distinguished by a long muzzle, a snout in the case of the pig and a shaggy head in the case of the wild boar, and Arabic underlines these features by a series of evocative terms like *khurūm*, *khannāra*, *sanfara* / *sanfara*, *khannāfa* / *khannāfa*; in the wild

boar, its defensive tusks, the snout's powerful weapon, are called *alshim* / *alshim* and *khannāfa* (pl. *khannāfi*), a probable deformation of *khannāfa* "dagger", i.e. having a curved blade.

In Kur'ānic law, *suidae* are included in the same divine anathema as monkeys (V, 65/66) (see *ṭamr*), and since their flesh involves the major impurity (*maḥṣa* al-'ayn), no Muslim can eat it (Kur'ān, II, 168/173, V, 3/4, XVI, 115/116). This food prohibition inherited from the Old Testament (Lev. xi, 17; Deut., xiv, 8) was abolished by Christ for Christians (Matt. xv, 17-20; Mark, vii, 15-23). In Islam, the prohibition of eating pig meat implies *ipso facto* the illegality of buying it or of raising the animal, whose presence near a person praying renders void the prayer; only the use of its bristles for mauling footwear is tolerated. These bristles are provided by Christian pig breeders who obtain them by scalding the beasts in boiling water after they have been slaughtered, whence the saying *akrah min khinzir al-ḥinzi* is 'b-mā' al-maḥṣar "showing more aversion than the pig for boiling water".

Al-Jāhiz, although admitting the excellence of the pig's flesh, which had pride of place on the tables of the Caesars and the Persian Emperors (*ḥayawān*, I, 234, iv, 40), is careful to point out, in regard to the animal and its behaviour, its most unattractive habits, aiming perhaps at justifying the strict terms of the Kur'ānic prohibition. It is omnivorous, though not really coprophagous (*ḥāḥḥā*), but it devours on occasion excrement. It consumes snakes, like the porcupine, certain raptors, the cat and the Purple Gallinule (*ḥāḥḥā*). Its zeal to prolong the act of copulation (*ḥayawān*, II, 32, III, 186, 334, 400, 496, 525, IV, 50) suggested scornful sayings like *ayash min 'ufr* "more flighty than a boar" and *afshar min khinzir* "more vile than a pig". The sight of a pig squealing in the mire or a wild boar wallowing in mud (*was-ḥa'a*), present in everyone's mind, did not lessen the obloquy heaped on the species, without even having to recall the legend current about its base origin. This legend (*ḥayawān*, v, 347-8, vii, 204) stated that Noah, distressed when in the Ark by the pestilence left by the evacuations of the pair of cats which Jehovah had created out of the lion's sneeze in order to end the great spreading of rats in the ship, appealed once again to the Almighty, who sent down to him, out of an act of deference of the elephant, a pair of pigs (or wild boars), who soon set to work gorging on the filth; from this hardly credible mode of generation arose the Arabic definition of the *suidae*, *al-fil abu 'l-khinzir* "the elephant is parent to the pig". Like the monkey, a popular belief the hog was considered to be the metamorphosis of an impious person expiating the divine punishment; according to al-Damiri (*ḥayawān*, I, 304), there was a tradition current that Christ himself had changed a group of hostile Jews into swine. The comparison of the pig, as of the monkey, with a hated person or persons, has always been one of the sharpest insults, and one which the Spanish Muslims used for the Christians, who, as elsewhere in Islam, raised pigs for food consumption.

At the side of this generally unfavourable view of the *suidae*, some Arabic writers were able to note and observe the qualities peculiar to the species, by way of rehabilitation: the mother's attachment for its young, its endurance of bad weather, the ease of keeping and raising it, the speed by which it grew fat and its sociable temperament; al-Kalkashandī (*ṣubḥ*, II, 48-9) goes so far as to say that, by way of emulation, horses put on flesh when one keeps them

in the neighbourhood of pigs. The fact was noted by E. Reclus (*Noctuides géographiques universelle*, Paris 1884, ix, 190) that in many stables in Furs there was the custom of keeping horses in the company of piglets and that a most close affection grew up between the two very different creatures. On the Christians' farms, the pig rivalled the cock in the role of waking people in the morning, since its cries for its food allowance could be heard from the earliest hours of the day (*Hayasdu*, ii, 291-5).

The ancient empirical forms of medicine attributed curative virtues to various organs of the pig. Thus its liver was an antidote against the venom of reptiles and soothed colics; its dried and powdered gall sprinkled on haemorrhoids made them go down; inserted in the nostrils, this last soothed coryza; a bone carried as a talisman secured against the quarian ague; and an ointment of its lard rubbed on the body gave protection against all evil and against maleficent spirits. Numerous other beneficial properties were attributed to its blood, urine and dung, as well as to the wild boar's tusks (see al-Damiri, *op. cit.*, i, 306, and in the margins, al-Karwini, *ʿAdḍāʾib*, ii, 224-6).

Arabic cynegagical literature is poor in material relating to hunting the wild boar in particular and to the dangers involved in this. It was considered to be a dangerous beast because of its bad temper and its depredations, so that battues for its destruction were held by local rulers and officers; it was hunted with the lance, hunting spear, bow and sabre on these occasions. In Syria, the farmers preferred to let the lion roam on the fringes of their lands rather than try to exterminate it, since it was a sure protection against the possible nocturnal ravages of herds of pachyderms through their crops (*Hayasdu*, iv, 49). Kushāḍḍin [q.v.] simply recommends that a person on foot charged by a wild boar should feign death, face downwards on the ground (*Naṣṣ*, 225). In the 6th/12th century, the valiant lord of Shayzar, Ḥusām b. Munqidh, tells in a realistic fashion of his perilous encounters with the black beast which, in his time, abounded in the Orontes lowlands (*K. al-ʿIḍḍar*, Princeton 1930, 202, 223-4). ʿIṣā al-ʿAsadi (7th/13th century), in his encyclopaedia of hunting al-Djāmhara fi ʿulūm al-bayṣara (Kisrāʾi ras., Ar. 903, l. 1622), advises hunters that, in order to ward off the depredations of wild boars, they should cause to boom out in the middle of the night a big cauldron, emptied and placed upside down, and with a drum skin stretched over its mouth; a bunch of hairs should then be flicked between the fingers with an alternating movement of the two hands. He also gives directions for making a trap (*ḥukma*), roofing over the mouth of a conical hole dug in the normally-used pathway of the animals (*op. cit.*, ii, 303b-304a). Finally, a century later, the Maṣūfī Ibn Maṣūfī, completing al-ʿAsadi, brings to bear the fruit of his experience for anyone wishing to measure his strength against the savage beast, whether on foot or mounted (*ʿUṣṣ al-malaʾ bi-nawāḥ al-faʾid*, B. N. Paris ms. Ar. 2832, li. 17b-18b, and annotated tr. P. Viré, in the press). The arms which he recommends for fighting with it are the double-edged sabre (*ḥilḥ*) and the arrow with a flat-edged head (*ḥusāḍ*), which the attacker should plunge right into the animal's forehead or pierce with them its paws. If the hunter is thrown to the ground by the beast's charge (*ḥamla*), he should flatten himself on the ground and strike upwards with a slashing motion in order to cut the tendons of one of the beast's limbs. He should also lie in wait for the moment when the beast turns

round in order to split it with a backwards action and rip it open. Another secret of success is perfect mastery of one's mount, which must not take the hit and bolt when it sees the attacking beast. With a lance or hunting spear, the best way is to gouge out one of the beast's eyes, which cannot then survive this wound. Finally, Ibn Maṣūfī records that, according to the ancients, the best talisman against the wild boar's viciousness is to carry a crab's claw hung on the arm.

At the present time, in the mountainous regions of the Maghrib, where the wild boar is sometimes abundant, hunting it is used as a tactical means of training for troops practising firing in the countryside, and the dead victims are left on the ground for wild carnivores.

The term *ḥinẓir* plus other terms is also used to designate several other wild animals which have a long muzzle: the potamocheirus (*Potamocheirus porcus*) of Africa is therefore called *ḥinẓir al-naḥr* ("wild boar of the river") or *ḥinẓir al-māʾ*, wrongly identified by Kāsimirski with the hippopotamus (see PARAS AL-MĀʾ in Suppl.); the two other African suidae, the phacocheirus (*Phacocheirus aethiopicus*) and the byloecheirus (*Byloecheirus meirethageni*) are lumped together under the name *ḥinẓir al-baḥr* because of their highly-developed defensive tusks; with its long snout for grubbing up ant-hills, the cyclocheirus (*Cyclocheirus afer*) is called *ḥinẓir al-arḍ*; whilst the dolphin and the porpoise are called *ḥinẓir al-baḥr* "sea pig". Finally, in pathology, the plural *ḥamāḥir* denotes scrofulous growths on the neck.

(F. Viré)

AL-KHIRAKI, ʿUMAR b. AL-HUSAYN AL-BAGHDADI (d. 334/946), better known under the name of Abū ʿI-Kāsim al-Khīrakī, was one of the first and most celebrated of Hanbali jurisconsults. He was first guided into the *madhāhab* of the *Imām* Ahmad by his father Abū ʿAlī al-Khīrakī (d. 299/912), who was himself a pupil of Abū Bakr al-Marwāḥī (d. 275/890). He also knew Ahmad's two sons, ʿSāḥb (d. 266/880) and the *shaykh* ʿAbd Allāh (d. 300/903).

On the eve of the arrival of the *Shīʿī* Būyids in Baghdad, al-Khīrakī left the ʿIrāqī capital as a *muḥājir* seeking refuge in Damascus, where a Hanbali school was already taking root. He died there soon after his arrival there, in 334/945, although the exact date of his death is not known. He was buried in the cemetery of the Bāb Saḡhir, at the side of the martyr's tomb (*Kuṭūb al-shukadāʾ*), and his tomb became a place of pilgrimage. Ibn Battāʾi visited it when he passed through Damascus, and it still existed in Ibn Kaṭhīr's time (*Bidāya*, xi, 214).

Shams al-Dīn al-Nābulusī (d. 797/1394-5), in his résumé of the *ḥadīth* Abū ʿI-Husayn's *Tawḥīd al-ḥandābiya*, 332, tells us, on the basis of a report going back to Muwaffak al-Dīn Ibn Kudāma, that al-Khīrakī had denounced publicly in Damascus a "reprehensible practice" (*munkar*), whose nature is not otherwise specified, because of this, he was condemned to be flogged and died as a result of his wounds. However, this version of his death does not seem to be given by his other biographers.

Al-Khīrakī's only work which has come down to us is his famous *Mughṭaṣar*, the first précis of Hanbali *fiqh*, which was to enjoy a considerable success and to contribute to the education and formation of numerous generations of legal scholars.

It is said that he wrote numerous other works whose titles are not specified and which have all

been lost. He had left his personal library in Baghdad in the care of a friend in the Darb Sulaymān, before leaving for Syria. A fire there destroyed it (*Biddāya*, II, 274).

Ibn Kadhūr remarks, *loc. cit.*, that the *Muḥḥiṣar* was written when the Black Stone was in the hands of the Carmathians. In fact, al-Khiraḳī tells us in the *Muḥḥiṣar*, III, 383, when describing the Pūgrimage rites, that "The pilgrim must kiss the Black Stone if it is in its proper place". It is well-known that this last was carried off in 327/930 and restored in 339/950; one may accordingly conclude that the *Muḥḥiṣar* was put together between 317/930 and 334/945, after the death of Abū Bakr al-Qhālī (d. 313/923).

Abū Bakr 'Abd al-'Azīz b. Qaṣr (d. 363/974), called Ghulām al-Qhālī, gave out that he did not follow the views of the *Muḥḥiṣar* on 60 questions (*mas'ala*). The ḥafīz Abū 'Iḥsān, in his *Tabaḥḥiṣ*, II, 76-118, returns to this problem and enumerates 98 points of divergence between the two scholars, whilst defending that doctrine which he deems the best.

A large number of commentaries were written on the *Muḥḥiṣar*, of which three became especially celebrated, *sc.* those of Ibn Ḥāmid (d. 403/1011), of the ḥafīz Abū Ya'qūb (d. 458/1066) and of Muwaffaq al-Dīn Ibn Qudāma (d. 602/1223). The first two have been lost, but the third, known under the title of *al-Muḥḥiṣ*, has been published in Cairo by Rashīd Riḍā (12 vols., 1341-8/1922-30). But there were also many other commentaries, and no text of Hanbālism was so much commented upon. The ḥafīz Badrān, in his *Madḥḥal*, 274, states that 300 commentaries still existed in the time of Yūsuf b. 'Abd al-Ḥādī (d. 909/1503), a Hanbālī known as a historian of Damascus.

Various disciples are known to us of al-Khiraḳī, including the following: (1) 'Abd al-'Azīz b. al-Ḥārith Abū 'Iḥsān al-Tamīmī (d. 371/981), prolific author and founder of a famous line of legal scholars (*ḥafīz*, 342); (2) Abū 'Iḥsān Sum'ūn (d. 387/998), one of the most famous preachers of his generation and a Ṣūfī master (*ibid.*, 350-3); (3) 'Abd Allāh b. Baṭṭa (d. 387/998), even though he does not mention al-Khiraḳī amongst the authorities upon whom he based his credo (*ibid.*, 346); and (4) Abū Ḥafṣ al-'Ukbarī (d. 387/998), considered one of the best-informed scholars of Hanbālism.

KHIRBAT AL-BAYDĀ', an early Arab structure in the Syrian Desert. Khirbat al-Baydā' or Qayr al-Abyad is situated about 100 km. southeast of Damascus, looking out to the east over the Rubba, a fertile depression in the middle of the southeastern Syrian *harrāt*. It is a structure set out as a square, 60 m. x 60 m. At every angle and in the centre of each side, except for the eastern one, there are circular towers. The eastern side contains the gate, giving on to a courtyard of ca. 43 m. x 43 m. This courtyard is surrounded on the other sides by ranges of rooms, 7.6 m. deep and ca. 5.0 m. (type a), 6.5 m. (type b), 7.6 m. (type c), and 5.8 m. (type T) wide, forming the schema c-a-b-a-T-a-b-a-c. All these rooms were living quarters. On the eastern side there were two small rooms flanking the entrance and four long rooms, which must have served as store-rooms. On the southern and northern sides the rooms were artic-

ulated into two groups with the schema c-a-b-a and a-b-a-c respectively. Entrance from the courtyard was given by doors in the b-rooms, whence doors led to the a-rooms and further doors led from there to the c-rooms. On the western side were two groups of rooms following the schema a-b-a which were also accessible through doors in the b-rooms. Thus we have on three sides of the courtyard two groups of rooms separated by isolated room of the T-type. The residential character of the building is attested by the organisation of the rooms, together with the abundant mural decoration especially on the linteis. First impression suggests that Khirbat al-Baydā' was another example of the genre of Umayyad palaces. Closer investigation, however, reveals this identification to be impossible. It lacks many elements shared by Umayyad palaces, principally the hypocaustation of the rooms, the peristyle, brick and vaulted construction, and stucco decoration. Both the decoration and the technique of construction demonstrate an ambitious local Syrian craftsmanship. The decoration shows this craftsmanship to be working with occasional patterns of the 5th and 6th centuries A.D. The relations of this local craftsmanship can be more closely determined. Masonry comparable with that of Khirbat al-Baydā' is found in northeastern Syria, not in the neighbouring Hawrān. Equally, the decoration is not Hawrānian in type, but resembles closely the ornament found in the region northeast of Hama. This suggests that Khirbat al-Baydā' is not an Umayyad structure but was built in the 5th and 6th century by one of the Arab rulers, clients to the Byzantine state.

KHIRBAT AL-MAFDJAR, popularly known as Qayr Ḥiḡām, is the modern name for the ruins of an unfinished Umayyad mansion in the Wādī 'l-Nuway'ima, north of Jericho. The ruins comprise three separate buildings: a palace proper, a mosque and a bath attached to a hall. On the east side of this complex stood a colonnaded forecourt with an ornamental pool at its centre. Additional architectural remains lie north of these buildings, but have not yet been excavated. Foundations of a wall, found north of the site, suggest that the buildings were originally surrounded by a walled estate, comprising cultivated land, agricultural settlements and perhaps a game preserve. A complex irrigation system, developed already in Roman times and based on three neighbouring springs—'Ayn al-Sūltān, 'Ayn al-Nuway'ima and 'Ayn al-Duyūk, provided the water for the residential buildings as well as for the cultivation of the land. The modern name of the site, meaning "a place where water springs from the earth", attests to the abundance of water in this area.

The site, which has not yet been identified with any place mentioned in written sources, was first visited and described by Captain Ch. Warren and Mr. F. J. Bliss on behalf of the Palestine Exploration Fund (*Survey of Western Palestine*, III, 1883, 229-12).

Fig. A Khirbat al-Mayjar Plan (after Haultot)

PEFQS, 1894, 177-81). Our main knowledge, however, derives from the excavations conducted between 1935 and 1948 by the Department of Antiquities of Palestine, under the direction of R. W. Hamilton with D. C. Baramki as field director. Their finds which appeared first as preliminary reports in the *Quarterly of the Department of Antiquities of Palestine*, were later published by Hamilton (*Khirebat al-Mafjar, an Arabian mansion in the Jordan valley. With a contribution by Dr. Oleg Grabar*, Oxford 1959).

1. *Architecture*.—A glance at the plan of Khirebat al-Mafjar reveals some remarkable irregularities and a somewhat awkward relation between the main units of the building complex (Fig. A). The walls of the square, two storeyed palace, which was by far the largest part of the whole complex, are of uneven length (the south and west walls, 67.28 m. externally; the north wall, 67.21 m.; the east wall, 63.86 m.), its façade is asymmetrical, and there are further oddities in its inner division. However, the plan of the palace conforms to those of other Umayyad castles. A three-quarter round buttress-tower stood at each of the four corners and a semi-circular one in the middle of the west and north walls. In the middle of the southern wall only there was a square tower—presumably the base of a minaret—and another rectangular porch-tower faced the entrance in the east. The rooms of the palace were arranged around a central porticoed court. They were generally not connected, although along the west side of the palace

they were arranged in communicating pairs, one behind the other, with a group of five intercommunicating rooms in the centre. The central room in the south was provided with a niche, probably a *mihrab*, flanked by two colonnades. The northern wall had a single elongated hall with a row of six piers down the centre. Six pairs of parallel wall piers suggest that this hall was divided by lateral arches into two times seven bays. In the centre of the western portion, but not aligned with the axis of the central room, three flights of stairs descended to a small forecourt preceding a *sindās*, a small room supplied with cold water and intended for refreshment. A balustrade around the top of the staircase clearly blocked the direct access to the central room.

At a distance of about seven metres from the north-east corner of the palace and aligned with its eastern wall stood a mosque (23.6 m. \times 17.1 m.). It could be reached in two ways: either by a staircase which descended from the first floor of the palace and led to a door in the *šibā* wall, or by three doors in its northern wall. The door in the *šibā* wall, next to the *mihrab*, was probably used by the owner of the palace and his close attendants exclusively, while the openings in the northern wall were presumably used by the public.

The mosque was preceded by a small courtyard or vestibule, which had three additional openings in its northern wall. The *mihrab* was flanked by two cylindrical columns and was covered with white plas-

Fig. B "Bath Hall". Revised isometric reconstruction (after Hamilton).

ter which remained undecorated. In front of the *mihrab* the excavators found the fallen remains of two arcades composed originally of three arches each. These arcades must have sheltered a strip of slightly more than 10 m. of the enclosure. The construction of the mosque was probably never finished, for the walls nowhere stood more than three courses high, and the excavators found no traces of a floor.

About 40 m. north of the palace are the ruins of a second large building complex which was separated from the palace by an open area. A wall and a buttress tower enclosed the area on the side aligned with the western palace wall, and the mosque bordered it on the east. A paved and originally covered passage crossed the open space, connecting the palace with the northern buildings. The dominant feature of this complex was a square hall (north wall, 30.28 m.; south wall, 30.33 m.; west wall, 30.42 m.; east wall, 29.79 m.). The north, south and west sides each had three horse-shoe shaped exedrae, while a stately entrance porch, flanked by similar exedrae, occupied the eastern wall. Two additional entrances were found at either end of this wall. Each of the eleven exedrae was flanked by a pair of engaged columns, whose bases stood about a metre above the floor. Between and inside these exedrae were small rectangular niches which stood about 1.20 m. above floor-level and were covered by arched heads. Squash pilasters with three-quarter round shafts at their corners supported the roof and divided the hall into nine central bays and an ambulatory. The piers were interconnected by stone-built arches carrying intersecting walls which rose high enough to provide room for windows. According to Hamilton's reconstruction (Fig. B) (*Mafjar*, 67-71, Pl. CV and *Levant*, 63 and Fig. 1 for revised isometric restoration), the four corner bays were square and had cross-vaults, while the axial naves were rectangular and barrel-vaulted. The central bay was raised above the rest and carried a dome over a cylindrical drum which was also pierced with windows. Except for the four compartments at the corners, the bays of the ambulatory were barrel-vaulted. The spacing of the piers was such that the central nave, connecting the porch with the central apse in the west, like the main north-south axis, was wider than the other passages (5.30 m. to 5.60 m. as against 4.40 m. to 4.60 m. for the flanking aisles and 2.30 m. to 3.36 m. for the aisles closest to the walls).

Along the southern wall of the hall, and including its three exedrae, there was a pool. It was bordered by a barrier built between the four southern piers of the hall and continued at either end in a right angle towards the wall. This pool, the floor of which was at about the same level as the rest of the hall, was apparently not included in the original plan of the hall and only added subsequently.

The main entrance into the hall was by way of a monumental porch (8.45 m. wide) in its eastern façade. This porch was entered by an arched opening with stepped and undercut crenellations at the top edge. It was covered by a dome resting on pendentives carrying its high drum. Within the porch was a pair of arched recesses, and there was another pair of niches in the jambs of the entrance arch. A doorway connected the porch with the main hall.

Attached to the hall at the north-west corner was a small, originally domed, room with a semi-circular apse, the *Diwan*, used apparently for private audiences. There were extensive latrines at the north-eastern corner (F). In the centre of the northern wall there was the bath proper, comprising two rectangular rooms (A, B) with benches along the walls (and two

tanks in room B), and two additional rooms (C, D). Their floors, built over hypocausts, were heated by a furnace in the stove-hole (E). The first room (C) was nearly square with a single niche in the east, while the other, a circular originally domed chamber, was surrounded with eight horse-shoe shaped niches, one containing the door to room (C). These two were the more temperate and the hotter *calidaria* respectively, while the first two chambers may have served as waiting rooms or vestuary (A) and *frigidarium* (B).

The rooms of the *hammam* are remarkably small and could be reached from the large hall through chamber (A) only. There was no direct connection between the bath and the disproportionately large latrines.

2. *Decoration*.—Apart from the mosque, which was never finished, and the ground floor of the palace, the buildings at Khirbat al-Mafjar were lavishly decorated. There were mosaic floors at the *shikh*, the hall adjoining the bath, and the *diwan*. The façade, the porches and the walls of the hall and the *diwan* were covered with stone and stucco panels respectively. The walls of the upper floor of the eastern wing of the palace, and of the bath hall, showed remains of paintings; figural sculptures, many of their nearly life size, were placed in niches or arcades at different parts of the buildings. The mosaics were of natural stone in a rich colour scale of red, brown or yellow, bluish, grey and white shades. While those in the *shikh* are technically of mediocre quality, the mosaics in the hall and *diwan* are extremely fine. There are forty-two carpets altogether (thirty-eight in the hall and four in the *diwan*). They are partly adapted in size and pattern to the architectural superstructure, and their placement appears to have been guided by the purpose and function of these buildings (Pl. Ib). The majority of these patterns show geometric or abstract designs and interlacings which are enriched by stylised floral devices. In the centre of the Hall a radiating rosette pattern accentuates the main axis and 'reflects' the central dome above it (Panel 17 in Hamilton's chart, *Mafjar*, 328, Fig. 258). Roundels containing concentric interlacings decorate the floors of the four corner bays which were apparently cross-vaulted. There is a continuous mosaic panel in each of the outer corridors (Nos. 1, 2, 3 in Hamilton's chart). The rectangular panel between the entrance porch and the central rosette, in its composition and ornament, leads towards the central axis of the Hall. Finally, the design in the central apse (No. V in Hamilton's chart) is distinguished from the other apses by a large rosette in its interior and a semi-rosette at its base (Pl. IIa). The pavement includes only two figural designs: one at the base of the central apse, representing a citrus fruit, a branch and a knife; and the other in the dais of the *diwan* showing a fruit-bearing tree flanked to the right by a pair of gazelles and to the left by a lion attacking a gazelle (Pl. IIb).

Together with Kayr al-Hayr al-Qharbi (q.v.), Khirbat al-Mafjar provides the richest accumulation of early Islamic architectural decoration so far known. Apart from stone—and occasionally marble—the artists made abundant use of plaster for elaborating the interior and exterior of the mansion. This technique, not used in Syrian architecture until later Umayyad times, had the advantage of being comparatively cheap, and its flexibility allowed it to be used for life-size sculpture. Moreover, it could be painted, and since it lent itself to modelling in a wide variety of forms, these stucco carvings must have contributed to the impression of richness and sumptuousness of the buildings.

Generally speaking, two groups of motifs predominate in the architectural surface decoration of Khirbat al-Mafdjar. The first, and largest one consists of vegetal elements, such as acanthus leaves, full and half palmoties, vine garlands, flowers and fruit. The other comprises geometric elements and various abstract designs. Pure geometric compositions, however, are comparatively rare. In general they appear together and interwoven with vegetal designs, such as interlaced roundels, or roundels alternating with rectangles filled with rosettes, or diamond-shaped units filled with rosettes and palmette leaves respectively (Hamilton, *Mafjar*, Pl. XLIII, 2). In most of the plaster ornaments the geometric units are interrupted and combined in such a way that the resulting patterns completely conceal their original rigid construction (Palustrade panels from Palace, Hamilton, *Mafjar*, Pl. LIX, 13, 14 and pp. 245-61, Figs. 185-210. The same principle was used in the mosaic pattern).

Wall paintings were found in two areas only: in the rooms of the east wing on the first floor of the Palace, and in the "Bath Hall". Painted on plaster, in both fresco and tempera, hardly any of these paintings were found *in situ*, and all that has remained are fragments. Since we know so little about Umayyad painting, this situation is all the more deplorable. Professor Oleg Grabar has studied these fragments and found that in subject matter, style and iconography the fragments in the Palace differed from those in the "Bath Hall". In the north part of the eastern wing of the Palace Sasanian textile motifs predominated. In addition to floral ornaments, such as heart-shaped leaves, rosettes, lotus and palmette designs, a pattern of interlacing circles with a sinuig painted within each of the roundels could be reconstructed. In the rooms to the south the excavators found architectural and figural remains as well as painted imitations of marble. The style is less homogeneous than in the north part; yet the Roman-Byzantine tradition is most conspicuous. The paintings in the "Bath Hall", which originally decorated the walls and piers above the level of the window-sills, were less spectacular and more limited in subject matter. Their main purpose was to emphasise the architectural setting of the construction; in particular, the groups of three niches in the clerestory were richly painted (Hamilton, *Mafjar*, Pl. XIII and p. 73, Fig. 33, for restored sketch). At the floor level all the spaces were plastered white. The only exception was apse V in the centre of the western wall, whose archivolt was decorated with meandering bands which enclosed panels with various fruits (including pomegranates), vegetables in a bowl, etc. Another panel with painted fruit and rosettes covered an arch which had spanned a western aisle of the northern ambulatory, south of the *Diwān*. The importance of this fragment lies in the affinities of its rosettes to the type of rosette which is repeatedly depicted in the mosaic floor of the same Hall, particularly in front of the main apse, in the ambulatory and in the main panel between the entrance porch and the large central medallion (Pl. Ib).

Khirbat al-Mafdjar abounded in monumental sculpture of various human and animal forms. Although none of the statues were found *in situ*, they were evidently concentrated in three areas: the Palace porch and entrance, the porch leading to the "Bath Hall", and the *Diwān*. The human statues included an almost life-size princely figure, generally interpreted as a caliph, which came from a niche surmounting the entrance to the "Bath Hall" (Fig. C and Pl. Va), male and female entertainers (Pl. Vb) and miscellaneous

figures connected with courtly pleasures. A quick glance at these statues reveals that they were sculptured in a remarkably homogeneous style: they are rendered frontally, in nearly identical conventionalised postures, and thus; rigidity and lack of movement gives them an impressive monumentality. The men and women are plump and heavily built, and the semi-nude female bodies show folds of abundant flesh on the thorax and above the girdle. The caliph is clad in a long coat trimmed with Iranian-type pearls, worn over wide trousers, and holds a short sword; the girls wear pleated skirts that close from right to left and are held on the hips by a twisted cord. With slight variations the hair of the figures is identically modelled: parted in the centre and rendered in parallel grooves (caliph and some of the busts), or rows of small curls. The hair of the women is dressed in three heavy twists which are covered with a rosette in the centre, and on the forehead forms small ringlets which descend at either side and terminate in cock-screw curls (Pl. IIb). The rendering of the faces is generally identical. The brow forms one plane with the forehead and the flattened bridge of the nose, and abuts at a sharp angle on the plane of the eye sockets. The pupil of the eye is pierced or drilled, and the mouth curves downward slightly and has a drilled hole in each corner. There is little, if any, modelling in the faces.

The eyes of the figures from the Palace entrance, like those of the caliph, are modelled in a different style from those of the women from the bath porch of the *Diwān*. In the first group the eyes are encircled by a heavy unbroken band representing the eyelids, and the brows are marked by a grooved line; the eyelids of the other figures are more smoothly sculptured, and the brows are painted (Pl. IIb).

There were various animal figures at the Palace entrance. Rams or mountain sheep decorated the front of the "Bath" porch and the bottom of its drum, and about a hundred partridges (Pl. IIIa) were found in the *Diwān* and the "Bath" porch. On the whole the animals were more delicately modelled than the human figures.

3. *Interpretation of structures and decorations.*—Our knowledge of the purpose for which Khirbat al-Mafdjar was built, and of the actual function of its different units, is based primarily on interpretations of its architectural features and decorations. The irregular plan of the whole complex seems to imply that it was not conceived as a single unit and was built in consecutive stages. The function of most of the rooms of the Palace, except the little mosque, or *masjid*, and the underground *sirdāb*, is uncertain. The discovery of numerous wall paintings in the upper story, in contrast to the lack of decoration observed in the ground floor rooms, is generally explained by the fact that the upper floor was reserved for the living quarters and private rooms of the owner of the mansion. This seems to be confirmed by the only painting which could be fully reconstructed, the textile pattern with the sinuig and the interstitial heart-shaped four-petaled rosettes, which came from a room in the northern part of the east wing. This pattern would have been appropriate for a princely dwelling, as its Sasanian prototype figures on the garb of Khusrāw II at the bas-reliefs of Tak-i Bostān and in similar royal Sasanian representations.

Scholarly opinions vary as to the purpose and function of the "Bath Hall". In relating it to the bath-rooms proper and the Roman tradition of public baths in Palestine and other provinces of the Roman empire, Creswell and Hamilton interpreted the Hall as

Fig C "Bath Hall". Porch façade (after Hamilton).

a *frigidarium* which, according to Hamilton, served also as a vestuary or *apoditerium*. He saw an indication of these functions in the niches along the walls, which he interpreted as a repository for the bathers' clothes. Hamilton was aware of the abnormal size of the Hall, which he believed to represent an "architectural response to some specialized requirements" (Mafjar, 47). A more specific function was suggested by Grabar, who suggested that the Hall should be related to the Roman *tridiana* and considered as a place for ceremonial entertainment, and for other customary Arab and Sasanian activities, such as dancing or banqueting (*Islamic art and Byzantium*, in *Dumbarton Oaks Papers*, xviii (1964), 76-7). A fresh study of the architectural peculiarities, decorative features and iconography of the Hall and a re-evaluation of these ideas has led Professor R. Ettinghausen to point out that in contrast to the more private character of the Palace, the "Bath" Hall was conceived as the representational part of the mansion. First, it could be entered from the outside by a distinctively ornamented monumental porch and two additional doors next to it. Aside from the caliphal statue, the front and inside of the porch carried figural sculptures of definite princely associations particularly appropriate for a princely abode, such as male and female entertainers, as well as animals alluding to the royal hunt. Secondly, the official character of this building becomes further evident if one follows Ettinghausen's discussion of the central axis of the Hall. This axis, which connects the porch with the western wall opposite, focuses on a central apse which in its artistic rendering differs from the remaining exedrae of the ambulatory. Originally attached to a cross-shaped vault, there was a stone chain ending in a cylindrical device hanging from the apex of its semi-dome. There were seven, and not five niches in the lower wall of the apse, and a pair, instead of a single niche, decorated the upper level of the exedrae. The arched heads of these niches had a horse-shoe and not a semi-circular profile, and were supported by colonnettes missing in the other recesses. Moreover, while all the exedrae in the ambulatory were plastered white, the archivolts of the central apse was painted with a meander pattern with perspective frets and different vegetal designs.

The exceptional rendering of the central apse, which must have been viewed by every visitor entering from the main porch, is explained by Ettinghausen in relation to its function. According to his interpretation it served as a throne recess or place of honour where the owner of the mansion sat at official occasions and in compliance with royal Sasanian practices, with his royal headgear suspended over his head.

Aside from the symbolic "hanging crown"—in Umayyad times transformed into a "banging" *balansun*—the royal character of the throne recess is further brought out by the huge half rosette in the pavement at the base of the apse, a motif which in Sasanian iconography had royal connotations. According to Ettinghausen it was not selected at random but rather in conformity with the Sasanian iconographic tradition, in order to emphasise the princely sections of the mansion.

By applying the principle that a "given imagery is related to the situation or activity that took place in or near the particular spot" (*From Byzantium*, 35-6), Ettinghausen further uses the mosaic panel with the knife, citrus fruit and leafy branch in front of the main apse (Hamilton, *Mafjar*, 336-7) to explain one of the other functions of the "Bath" Hall. First,

since Khirbat al-Mafjar was an agricultural estate, this picture may be interpreted as an offering or present to the owner of the estate, or possibly as a symbol for a tax paid in the form of a highly-esteemed fruit grown in the plantations. Second, the fact that the only figural mosaic in this Hall depicts a fruit which had to be peeled with a knife in order to be eaten, appears to indicate that one of the purposes of this Hall was feasting and banqueting.

Assuming that the "Bath" Hall was built for public audiences, the *Dihna* or small apsidal room in its north-western corner (Fig. 1) was probably built as a private audience chamber. The interpretation of its function has again been based on the iconography of its decoration—the figural mosaic pavement on the raised dakh (Pl. 11b), and the stucco ornaments of the dome in front of it (Pl. 1c). Accordingly, it has been pointed out that the lion preying upon a gazelle to the right of the fruit-bearing tree was probably meant to demonstrate the caliphal power, while the two eating gazelles to the left alluded to a peaceful caliphal reign—the *Dar al-Islam* versus the *Dar al-Harb*, the Abode (or Realm) of Islam versus the Abode of War (*From Byzantium*, 45-6).

The mosaics in the *Dihna* are based on ancient oriental concepts and symbolism. The winged horses and the pendentives of the cupola (Pl. 11c), on the other hand, represent an Iranian, particularly Sasanian, motif. They are beasts which figure on seals, textiles and silver vessels as the royal mount of ascension and symbolise the semi-divinity of the Sasanian king. Their representation on the cupola provides additional proof of the princely character of the chamber which, like in other parts of the mansion, is expressed in the iconographic language of Sasanian Iran.

4. *Who built Khirbat al-Mafjar?*—So far it has not been possible to connect the buildings at Khirbat al-Mafjar with one single prototype. The combination of a villa, a private bath and a multifunctional hall is Roman. The buildings reflect primarily Byzantine tradition, while the mosaics and most of the paintings in the palace are rooted foremost in the local Syro-Palestinian tradition. The remaining decoration—particularly the stucco sculpture and ornament—is inspired in style and technique by Eastern, Iranian and probably Central Asian prototypes. The imagery in particular is applied in accordance with Sasanian concepts of princely dwellings. It represents an apparently conscious adaptation of royal Sasanian art which was combined with architectural elements of Roman and Byzantine derivation in order to meet best the demands and aspirations of the Umayyad owner of the mansion.

The identity of the owner and builder of Khirbat al-Mafjar has not yet been established conclusively. On the basis of certain graffiti with the name of Hisham which were found in the debris of the palace, it has been assumed that Khirbat al-Mafjar was built during the caliphate of Hisham, between the years 703-15/724-43. More recently, however, Hamilton tried to prove that although the mansion was built at the time of Hisham, it was owned and occupied by his nephew, al-Walid b. Yazid. Hamilton's arguments are rather intricate. Yet it is true that in its architectural concept the palace, and particularly the Throne and Banqueting Hall, would have suited the taste of a personality like al-Walid II.

KHIRBAT AL-MINYA, in mediaeval times known as Minya or 'Ayn Minyat Hishām, is the name for the ruins of an apparently unfinished Umayyad mansion about 230 m. west of the northern end of Lake Tiberias. The ruins were excavated in 1932 by A. E. Mader and between 1936-9 by A. M. Schneider and O. Puttrich-Reignard. During July-August 1959 the western section of the palace was excavated by O. Grabar in collaboration with the Israel Department of Antiquities.

The building consists of an irregular rectangular enclosure (66.40 m. x 73 m. x 72.30 m.) facing the four cardinal points. Like other Umayyad castles it has round towers at the corners, a semi-circular

Khirbat al-Minya. Ground plan.

tower in the centre of three of the walls, and a gateway sabbat about 3.70 m. north of the centre of the eastern wall. The rooms which surrounded the originally partitioned court differ in size and arrangement. They comprise a mosque in the south-east corner, a three-aisled basilical hall flanked by a unit of five rooms in the south, and residential quarters in the north.

As against the simple unpretentious decoration of the mosque, the domed gateway chamber and the southern rooms must have been richly decorated. Marble panels covered the dadoes of the walls. Coloured and gilt glass mosaics decorated the summit of the dome, and stone mosaics combined with glass cubes and set in geometric carpet-like patterns on the floor of the five southern rooms indicate the official, representational character of this section.

Another well-preserved floor mosaic was discovered in 1959 in the western part of the mansion.

A fragmentary inscription with the name of al-Walid on a marble slab which had been used as a sill when the gateway was rebuilt centuries later supports an attribution of Minya to al-Walid I (86-96/705-13). However, the palace was apparently used throughout the Umayyad period. Moreover, the stratification established in the western part of the site, and the ceramics found in the excavation in 1959, have shown that the site was settled in the later Mamlūk period when it served as an important commercial post between Damascus and Cairo. It was abandoned at an uncertain date, but later temporarily resettled.

KHIRKA, 'rough cloak, scapular, coarse gown'. The assumption of such a cloak as symbol of embarking on the mystical path is mentioned as early as the 3rd/8th century (by Ibn Harb and al-Muhāsibī; see Massignon, *Lexique*). It is the equivalent of the handclasp (*muḥāsib*) by means of which the spiritual director (*murīd*) transmits to the initiate (*murīd*) the blessing inherited from the Prophet. It can also be replaced, or accompanied, by other rites with the same significance: the handing-over of a rosary (*subhā*), of the text of a litany (*waḥid* [g.v.]) belonging to the mystical order (*ṭarīqa* [g.v.]) which is receiving the novice. Its value as "the garment of piety", external and internal (according to Kur'an, VII, 26), this latter implying humility and detachment from worldly standards, is further stressed when the *khirka* becomes, as with the Darqāwīya [g.v.], a cloak made up of pieces sewn together (*muḥāsib*).

Starting from its original technical sense, the word *khirka* has been broadened to designate the initiation as such, becoming a synonym for "transmission" (*tanazzul*), "embarkation on the way" (*al-ḥalq al-farīd*) and "covenant" (*al-lāh, bay'at*). Thus the Sūfīs came to speak of the *khirka* *khudriyya* "investiture by al-Khudr" (see *al-ḥudra*) to describe those cases, numerous in the history of Muslim mysticism, in which some contemplatives are said to have received spiritual direction directly from the powerful and mysterious person who, in the Kur'an (XVIII, 64-82), shows a wisdom superior to the prophetic law.

In fact, the two methods of spiritual transmission, so attachment to the chain (*silā*) of spiritual masters and spontaneous illumination coming from the bestowal of a special grace, existed side-by-side at all stages of the history of Sūfism. Abū 'l-Abbās al-Murshī, the disciple of the *imām* al-Shādhilī (d. 656/1258), was to derive his arguments for demonstrating the superiority of the *ṭarīqa* founded by his master, from the fact that the latter did not rest on the transmission of the *khirka*, but on "a spiritual direction (*khudra*) in which God was able to attach certain of his disciples directly to Muḥammad His prophet" (cited by P. Nuriya, in *lōn 'Alāqat Allah et la naissance de la confrérie Idrīsiya*, Beirut 1972, 31).

may serve to define various categories or degrees of initiation to the mystical path. Thus *Khirkat al-irada* "the robe of free-will" means, according to al-Suhrawardi, "he whom one asks personally, of his own free-will, from the *ghayb*, having full knowledge . . . of counting on passive obedience to whatever thing he will be condemned to by accepting", whilst the *Khirkat al-tabaruk* "cloak of blessing", is that which is "given officially by the *ghayb* to those whom it seems to him useful to introduce to or guide along the mystical path, without their giving an exact accounting of the significance of the act of investiture" (*Awali*, quoted by E. Blochet, in *L'Esotisme musulman*, Louvain 1910, 153). Other authors speak, in more general terms, of the "cloak of Sûfism", *Khirkat al-lugawus*, always insisting on the close connection created by this act of investiture between the disciple and his spiritual master, who penetrates the most intimate thoughts and needs of the initiate and becomes "his real father" (Ahmad Diyâ' al-Din al-Nalghabandi al-Mudjaddidi al-Khâssî, *Muṣṣimāt Ḥikmat al-ṣūfī wa-karamat al-amlīya*, Cairo 1328, 200). Finally, the act of investiture with the "cloak of nobility", *Khirkat al-jumma*, originally conferred by the Abbâsîd caliphs and then later by the Ayyûbîd sultans of Syria and Egypt, was one of the features marking out the chivalric orders of the Islamic world before they spread into Christendom.

KHIRKA-YI SHERIF, one of the mantles attributed to the Prophet Muhammad, called *KHIRKA-YI SHERIF* or *KHIRKA-YI SA'ADAT* was preserved at the Topkapı Palace in Istanbul. It was brought to Istanbul by Muhammad Abū Numayy, son of the *Sharif* of Mecca, together with the key of Mecca and other Islamic relics, after the conquest of Egypt in 923/1517 by the Ottoman ruler Selim I.

This black mantle, 2.24 cm. long with wide sleeves and a cream-coloured woolen lining, was kept in a throne made for Murād IV by the father of Ewliyâ Celibî, Derwish Zillî Mehmed, the head jeweller of the palace. The throne, which resembled a canopied tent, lost its function in Mahmūd II's time when lattice work doors were made. Today the *Khirkat*-yi *Sharif* is protected by being wrapped in seven silk velvet cloths, embroidered with gold thread; these in turn are protected by a gold box with a double lid, which is given further protection by being placed in a gold casket that was made in the era of 'Abd al-'Azîz. This is then placed on a silver table in the silver throne.

The *Khirkat*-yi *Sharif* had a special function in Ottoman customs and ceremonies. In one of the late Ottoman chronicles ('Atâ, *Ta'rikh*, i, 93 cf. *Khirkat*-i *Sharif*, in *Id.*, by K. Kufrah) the author refers to the *Khirkat*-yi *Sharif* and says that a room was built named the *Khâss Oda* [91] to protect the sacred relics when Selim I brought them to the palace. It is not really possible to accept this statement as fact, because there is no other source of the same century or subsequent ones that mentions it until the 19th century. In fact, this room is most probably the *Khâss Oda* built by Mehmed II. No information about the mantle is known before Ahmed I's time; his *imâm*, Mustafa Şâfi Efendi, refers in his *Zühdet al-tawârih* (Topkapı Sarayı, R. 1304, i, 128a) to the mantle, and says that Ahmed I had a shelf made

above his throne in the *Khâss Oda* and had the mantle put on it. We also learn that Ahmed I started the ceremony of dipping a part of the mantle into water, thus making the latter holy; this custom was later changed into dipping the fastenings and then in Mahmūd II's reign, to placing scarfs on it. We also learn from the *Zühdet al-tawârih* that the *Khâss Oda* did not contain all the relics in Ahmed I's time. This room, with its 10th/16th century tiles, was repaired by Mahmūd II, when a new fireplace was built, the decorations of the dome and upper parts of the walls were redone, and the whole apartment assigned to the keeping of the relics.

There were forty *Khâss Odâs*—the men in charge of the Privy Chamber—who did the work of guarding the *Khirkat*-yi *Sharif*. The duties of the *Khâss Odâs* were to sweep the area, dust the Kur'ân and other books, burn incense on special nights, sprinkle rose water, clean and polish the gold and silver objects, etc. (İ. H. Uzunçarşılı, *Osmanlı saray teşkilâtı*, Ankara 1945, 325). The "silver" water carriers, thus named because they carried the water in silver containers, washed the floors of the building (*idem*, 455). In the corner of the wall, where there was a gate that opened into the third courtyard, there was a pounding stone used to grind up incense; on the other side of the same wall was a well where the sweepings were disposed of. Four of the *Khâss Odâs* stayed on duty at night and read the Kur'ân (*ibid.*, 32). The guarding of the *Khâss Oda* was the duty of *Aghas*, whose spell of duty lasted for a period of 24 hours before being relieved.

All the Ottoman Sultans believed firmly in the sanctity of the *Khirkat*-yi *Sharif* and tried to remain near it; Ahmed I took it with him wherever he went (*ibid.*, 256). Findiklî Mehmed Agha, a *Khâss Odâs* of the reigns of Mustafa II and Ahmed III, speaks at length about the *Khirkat*-yi *Sharif*. According to him, Mustafa II took the mantle with him in a private wagon to Catalca where he went for Ramadân, had it kept in a special room and visited it ceremoniously on the 15th of Ramadân. He also took it with him when he went to Edirne (*Nusret-nâme*, ed. İ. Parmaksızoglu, Istanbul 1966, ii, 45), and when the revolt that ended his reign took place, he tried to escape to Edirne with the mantle (*ibid.*, i, 183). Ahmed III was also keen on keeping the mantle with him. When he went to the Tersâne Bâghçealî to spend the summer of 1127/1715, or to the Wâlide Sultan's seaside palace to spend the winter, and when he held a circumcision festivity for one of his sons, the mantle always figured prominently in what had to be taken with him (*idem*, 213, 338-9, 397).

Ewliyâ Celibî writes about Murād IV's sword-girding ceremony, after which he went to the *Khirkat*-yi *Sharif* at the *Khâss Oda*, paid humble respect to the mantle and then prayed (Ewliyâ Celibî, *Seyâhat-nâme*, i, 227). We also learn from Findiklî Mehmed Agha that, when Mustafa II learned that he was going to succeed to the throne, he went to the *Tahtî Odâs* (*Khâss Oda*), prayed in front of the *Khirkat*-yi *Sharif*, and then put on suitable robes in order to take the oath of allegiance (*Nusret-nâme*, i, 4). Subsequently, he visited the *Khirkat*-yi *Sharif* every Friday (*ibid.*, i, 32). Ahmed III's eldest son, Süleyman, after he finished reciting the Kur'ân, held a ceremonial session in the *Tersâne Bâghçealî* in front of the *Khirkat*-yi *Sharif*, according to Findiklî (*ibid.*, i, 388). It had an even greater importance in war time. A good example of this is the Eğri campaign of Mehmed III, which was

going very badly, but was finally turned into victory when Sa'ad al-Din addressed his people and Mehmed III put on the mantle. The spirit of battle was kindled, and this turned the tide of the war (Orkan Şaik Ökay, *Katip Celebiden sonralar*, İstanbul 1968, 59). Mustafâ II took the *Khirka-yi Sherif* on all of his campaigns in order to reinforce the courage of the army (*Nusret-nâme*, I, 143, 166, 187, 174, 183, 186, 190, 199; II, 280, 300). We know from this same source that Ahmed III took the *Khirka-yi Sherif* and the *Sandjak-i Sherif*—the flag of the Prophet which was only unfurled for a holy war—with his army in order to raise the morale of the men (*Nusret-nâme*, II, 290).

When the sultan took his oath of allegiance, the *Khirka-yi Sherif* was not forgotten. When a sultan died, the *Dar al-Sa'ade Aghasi* carried the news to the crown prince and took him to the deceased. He was then joined by the *Silâhdâr Ağa*, who took him to the *Kılıç Oda* (*Djwâdet Paşa, Ta'rihi*, I, 236; *Usunçarâh, op. cit.*, 186). The oath of allegiance of the *Şadr-i A'zam* or Grand Vizier, the *Şeykh al-Islâm*, the *Dar al-Sa'ade Aghasi*, and the high officials of the Enderûn, was also taken there (*Djwâdet*, IV, 237; *Usunçarâh*, 187; *Nusret-nâme*, II, 187-9).

During the third week of Ramadân, a visit to the *Khirka-yi Sherif* was also customary. Even after the sultans ceased to reside in the Topkapı Palace, the *Khirka-yi Sherif* remained on the Palace premises, either in its own room or at the *Sofa Köşkü*. On such visits as these on the 15th of Ramadân, the sultan would open the silver throne, the seven wrappings and the gold casket with a golden key, take the mantle out, dip its fastening into a bowl of water and then put drops of this water into vessels filled again with water, which in turn would be given away as presents. This custom was abolished by Mahmûd II, who chose to touch the mantle with some specially-prepared scarves with poems inscribed on them, and these were then distributed as gifts for his guests. At the end of the visit, during which the *Kur'ân* was recited continuously, the mantle was put away by the sultan himself. This custom had however been abolished by the end of the sultanate.

One other mantle of the Prophet was brought in 1027/1617-18 by Şükr Alih Efendi. It was believed that this mantle was sent to Uwâys al-Karâni by the Prophet. Presumably it was preserved by Şükr Alih Efendi and his son at his house in the Fâci 'Alî Paşa quarter of İstanbul. Their mansion was rebuilt by Mahmûd II, and a mosque was built opposite it in 1831 by 'Abd al-Medjid. In this mosque, named that of the *Khirka-yi Sherif*, the mantle was displayed to the public every year by the Queen Mother on the 15th of Ramadân. Today, it is possible to visit it there between the 15th of Ramadân and the *Laylat al-Kade*.

AL-KHIRRIT b. Râğib al-Nâğî, partisan of 'Alî b. Abî Tâlib who fought in his ranks at Siffin (s.v.), but who rebelled against him when the first results of the arbitration were known after having accepted, it appears, the principle of arbitration. He was chief of the Band 'Abd al-Bayt b. al-Kharîth b. Sama b. Lu'ayy (most usually called the B. Nâğiya, after the name of 'Abd al-Bayt's mother), who had only recently been converted to Islam, where they had not kept their original Christianity. He informed 'Alî of his intention to disregard the results of the arbitration, which implied the caliph's deposition; 'Alî advised him to reflect a while before taking action, but al-Kharrit, oblivious to the arguments raised, withdrew with his followers into the Sawd of Kûfa; al-Mas'ûdî even accuses him, together with 300 of his fellow tribesmen, of abjuring Islam. It is difficult to establish the chronology of events, but these events probably took place after the battle of al-Nabrawân (s.v.), in which the rebel took no part, contrary to what certain coincidences might lead one to expect; it is certainly tempting to compare and to assimilate al-Kharrit's action to that of the Kharridjites when one takes into account, in particular, the tradition according to which his group killed in the Sawd a Persian convert to Islam but spared the life of a Jew, circumstances which are analogous to those of the *isâ'irâs* (s.v.) of the Azârika (s.v.).

'Alî sent after him Ziyâd b. Kharafa, who finally caught up with him at al-Madâ'in, where, after vainly trying to reason with him, he gave battle. The rebels fled in the course of the following night and headed for al-Ahwâz, where their ranks were swollen by a certain number of malcontents from Kûfa and of local people, who doubtless discerned here a way of avoiding taxation. At this point, in order to bring them to reason, 'Alî sent Ma'qil b. Kays al-Rihâbi at the head of a more numerous force, and gave orders to 'Abd Allâh b. 'Abbâs, the then governor of Bağra, to send as reinforcements a substantial contingent under the leadership of Khalid b. Ma'dân al-Tâ'i. The rebels were soon put to flight by the government troops, who pursued them to the Persian Gulf shores. In a decisive battle, al-Kharrit was killed fighting, and his companions made prisoner. These events probably took place in the early months of 38/658.

According to the accounts given, Ma'qil b. Kays freed the captive Muslims and also the apostates, who for a second time abjured the Christianity to which they had returned; only one refused, it is recorded, and had his head chopped off. The Band Nâğiya who remained Christian, numbering 500, were on the other hand led into captivity. Mas'ûdî b. Hubayra, 'Alî's 'âmil in the *Amra* of Adnashir Khurra, whose centre was at Sirâf, now intervened. Affected by the entreaties of the captive men, women and children, he purchased them for a sum of 300,000 *dirhams* (al-Mas'ûdî) or 200,000 only (al-Tabarî), of which he sent only part to 'Alî. He freed the prisoners without having asked them to contribute to the purchase money, and then, when pressed by the caliph to hand over all the money, he thought it more expedient to take refuge with Mu'âwiya, who entrusted to him important official posts.

Bibliography: Tabarî, I, 3478-41; Ibn al-Kalbi, *Casak*, tables 29 and Register, 123 (s.v. 'Abd al-Bayt); Zubayr, *Nasab Quraysh*, 440; Mas'ûdî,

Hedemte who still cling to their native customs, circumcise their children on the 40th day after birth (Snouck Hurgronje, *Mecca*, II, 141 ff.).

In Egypt, boys are circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and his attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The karchief is used to cover a part of his face in order to avert the evil eye. As in Mecca he is preceded by musicians. The foremost person of the procession is usually the servant of the barber (who performs the operation), who bears his *hami*, a case of wood of a semi-cylindrical form, with four short legs; its front is covered with pieces of looking-glass and brass, and its back with a curtain. It is to be noted that the Copts also circumcise their boys (Lars, *Manners and customs of the modern Egyptians*, ch. on Infancy and Education).

D'Osson in his *Tableaux de l'empire ottoman*, Paris 1787, I, 232 ff., describes circumcision as practised in Turkey under the heading "Circumcision, *sunneth*", a designation which is also reflected in the word *sunnethi* for the barber who performs the operation. It takes or took place in the presence of the *imam* of a mosque who accompanies the ceremony with prayers for the preservation of the child, who is usually 7 years old when he is circumcised. Plate 20 of d'Osson's work shows children dressed for the ceremony, and plate 21 adorned victims which are slaughtered at this occasion. Parties for relatives, friends and poor people as well as the procession are also mentioned.

The circumcision of the imperial princes used to give occasion to the displaying of great pomp. Long before the appointed day intimation was sent to the high dignitaries of the empire, sometimes even to the other courts of Europe. D'Osson gives a translation of Mirkat's III letter of invitation to the dignitaries on the occasion of the circumcision of the crown-prince.

In North Africa children are circumcised at ages varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Dan, as cited by Doutte, *Merrakech*, 551, at Algiers a stone knife was used for the operation. It reminds us of Joshua v. 2 ff. where it is said that the Israelites at their entering the Holy Land were circumcised by means of stone swords or knives; some populations of the Dutch Indies also use a stone knife for the operation (Wilken, 212). In North Africa as well as in Egypt often several boys are circumcised together, the father of the richest bearing the expenses of the ceremony. A. Janssen (*Coutumes des Arabes au pays de Moab*, 363-4) has observed that the Bedouins organise collective circumcisions every two years, as an economy measure; hence the children's ages vary considerably (see also al-'Uzayri, *Kāmas al-'iddat*, Amman 1973-4, II, 232, s.v. *h-h*). It should be noted here that in most Arabic dialects, the term for circumcision and its accompanying rites is taken from the root *h-h-r*, implying the idea of purity; this practice is therefore popularly felt as a purificatory rite.

On Java, circumcision of boys is often combined with the *halalan*- or *halaman*-ceremony. On the different designations of circumcision used in this part of the Archipelago, cf. Snouck Hurgronje, *Verspreide Geschriften*, IV/1, 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is higher (14-15 years)

than in circles which are in closer touch with Muslim law (10 years or younger). Before the preparations begin, the boy is taken to the tomb of his father or ancestors, where flowers and incense are offered and prayer is performed. Then a portico (*teras*) is made before the house or *pendopo*, and a small room (*kobongon*) is prepared where the operation is to take place. In or before this room several objects and dishes are placed which have a symbolical or ritual meaning. These preparations are concluded by a religious meal at which several dishes are offered to several categories of awe-inspiring beings. Festivities such as *wayang*, *layuban*, *degongan* precede or follow the ceremony. The *degongan* always takes place in the preceding night and follows upon *halaman*, the recitation of some chapters of the Kur'an by the boy. On the day preceding circumcision, a procession is held to which the boys are either conducted by their relatives, or are placed in a kind of cars which have the forms of *nagas* or other animals. They wear the bridegroom's dress, and are hung with gold and diamond ornaments, the visible parts of the body being besmeared with *bedih*. It occurs also that the boy wears the *bedih*'s dress. Just as in North Africa, poor parents have their sons circumcised together with those of well-to-do people, who bear the expenses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered to be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then he is placed on the lap of an elderly person, usually a *santia* who has many children, a circumstance which is expected to exercise a wholesome influence on the boy's marriage. For further details see Snouck Hurgronje, *Verspreide Geschriften*, IV/1, 205 ff.

In Atcheh, boys are usually circumcised by the *mudem* (probably = *mu'adhdhifin*) at the age of 9 or 10 years, immediately after finishing their Kur'an study. The operation (for details see Snouck Hurgronje, *The Achéneses*, I, 399-400) consists in a complete circumcision; in some parts of Java it is rather an incision. The boy here also has to diet himself. In Atcheh the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with circumcision. The father of the boy vows, e.g., to arrange a *Rapa'i*-performance or to visit a sacred tomb. In this case the boy, dressed as a bridegroom, is conducted to the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Circumcision is a rite practised by many peoples, primitive peoples of the present time as well as those mentioned in ancient literatures, the Egyptians, the Arabs, the Israelites, the Edomites, Moabites and Ammonites (see Jeremias, II, 25).

In the Indonesian Archipelago it was already practised before the rise of Islam in that part of the world (cf. G. A. Wilken, *De benijdingen bij de volken van den indischen Archipel*, in *BTIV*, Ser. IV, vol. X, 166, 180-1 = *Verspreide Geschriften van G. A. Wilken*, IV, 206, 220). The facts mentioned above may be arranged in certain groups.

a. Among many peoples females as well as males are circumcised. We must consequently start from the view that the rite was not originally applied to one of these classes to the exclusion of the other.

b. The rite is sometimes repeated (Wilken, *op. cit.*, 207). In the Muslim world we have the in-

stances of Malaysians who in their country were not circumcised in the way prescribed by religious law and who submit to the operation a second time when arriving at *Mekka* for the pilgrimage (Snouck Hurgronje, *Mekka*, II, 322).

c. Children are circumcised at ages varying between the 7th day after birth and the 15th year. It is consequently a rite which may take place in any period of childhood and which is often indeed combined with other rites peculiar to childhood such as the first cutting of the hair (*ʿaṣṣa*, cf. Doutté, *Morékhach*, 351), the filing of teeth, the conclusion of the study of the *Qurʾān*. As we have seen above, there are linguistic features pointing to a relation between circumcision and marriage. These features, valuable as matter-of-fact evidence, are supplemented by reports of travellers. In Central Arabia, it is said (e.g. Batanūnī, *Rihla*, 213), there are tribes among which the operation is applied to adult young men, in a painful and dangerous way; the bride of the patient stands opposite him during the operation; if he utters a cry of pain the projected marriage is abandoned (Snouck Hurgronje, *Mekka*, II, 141). In spite of doubts about the authenticity of such information, the relation between circumcision and marriage appears also from the Javanese custom of placing the boy who is operated, on the lap of a *santri* who has many children (see above and Wilken, *op. cit.*, 225).

d. Another group of characteristics is evidence of a relation between circumcision and the transition into a tribal or religious community, e.g.: the boy's being conducted to the tomb of his father or of one of his ancestors (see above); the circumcision of several boys at one time (cf. also Wilken, *op. cit.*, 220); the value attached to circumcision as the ceremony of reception into the Muslim community; cf. the Old Testament designation of circumcision as the "token of the covenant" (Genesis xviii, see also Wilken, *op. cit.*, 227).

e. Many accessory rites express the intention to avert danger: the boy's being dressed as a girl, the use of the handkerchief, the burning of charcoal and salt; the drums and *duffs*; the recitation of *dhikr*s and prayers; possibly the displaying of charity and the slaughtering of victims may also be viewed in this light.

Ethnologists put forward various interpretations for the phenomena of circumcision: as a surgical operation meant to prevent phimosis and to help fecundity; as a religious rite connected with fertility or reception into the community; and as a rite of passage. The viewpoint expressed by Van Gennep in his *Rites de passage*, Paris 1909, seems to account for many of the features of circumcision mentioned above. It accounts for the fact that children are submitted to the operation at ages varying between the seventh day after birth and the beginning of the manly age or the time of marriage; that females as well as males are circumcised; that the rite is sometimes repealed; that it shows a deeply-rooted connection with marriage; that it is considered as the act of reception into a religious community; that it is sometimes preceded by a bath; that processions take place, which show a striking similarity with bridal processions; and so on.

Massé, *Notes d'ethnographie persane, in Revue d'ethn. et des traditions populaires*, viii (1947), 24-39; idem, *Croyances et coutumes persanes*, Paris 1938, I, 50-3. There is a general bibli-

ography on the topic in C. M. Kieffer, *A propos de la circoncision à Caboul et dans le Logar, in Festschrift für Wilhelm Eilers*, Wiesbaden 1967, 191 ff. (A. J. Wensink).

KHITAT (A.), pl. of *khita*, the various quarters of the newly-founded Arab-Islamic towns which the Arab-Islamic chiefs laid out (root *kh-t*) for the population groups which they attracted thither or for their respective leaders. Historical-administrative concerns led fairly quickly to the appearance of a literary genre which consisted of a description of the historical topography of these *khita*. This happened in regards to Baghdad, and one finds chapters of this nature in the "geographical" works of Ibn al-Fakih al-Hamadani, and also in the introduction to the biographical history of the city by al-Khatib al-Baghdadi. However, the genre developed most of all in Egypt, aided by its strong particularist feeling. It is already discernible for al-Fuṣṭāṭ in two chapters of the *Futūḥ* of Ibn 'Abd al-Hakam, and is expanded in the History of the *Kādis* of Egypt and in a separate opusculum, now lost, of al-Kindi and also, a generation later, in another lost opusculum by Ibn Zālik. The foundation of Cairo caused an expansion of these studies, as is apparently already discernible with Ibn Zālik's work and with a treatise from the mid-Fatimid period, now lost, by al-Kudāʿi. An apparently much more important work was written two centuries later by Ibn 'Abd al-Zāhir, the biographer of Baybars, Kalāwūn, and al-Ashraf. All this literature culminated in the monumental work, the only one of its kind preserved for us (apart from the citations from the earlier works included within it), of al-Maḥḍī, *al-Maḥḍī wa 'l-Futūḥ fi Khitāt Miṣr wa 'l-Nāḥiya*. In fact, the contents are arranged not according to quarters but by categories of buildings, at the same time comprising a description and history of everything connected with them. The title of Maḥḍī's book was utilised later, because of its fame, in the survey conducted in the same spirit but adapted to modern Egypt, by 'Alī Pasha Muḥḍar, and in a more flexible form, in the geographical-historical description of the whole of Syria by Kurd 'Alī.

(CL. CAHEN)

KHITĀY [see *al-ghā*].

KHITRA (A.), "demand in marriage", whence "betrothal", i.e. the mutual promise of marriage which in certain legal systems can form the first stage of marriage proper (cf. the *sponsalia* of ancient Roman law). But is this promise considered as entailing an obligation in Islamic law? In other words, does betrothal give rise to legal consequences?

According to Muslim authorities, the *khitba* does not involve a contract. It is true that it involves an offer and an acceptance, but before the acceptance is made, it is merely a demand in marriage and does not form a legal act.

The *Mālikis*, apparently uniquely, give more importance to the betrothal than the *Ḥanafis* or even the *Shāfiʿis*, but the principle remains that the act of betrothal does not involve a legal obligation. However, betrothal can only take place when there are no nullifying factors present which would prevent a valid marriage; every impediment to marriage is an impediment to betrothal. The parties to a *khitba* are on the one hand, the man making the demand in marriage, and on the other, the woman, who may be represented by her *wālī* (see *nikāḥ*). Yet if betrothal does not in principle involve any legal obli-

gation and is not a legal act, certain effects nevertheless follow from it:

1. The right of seising the woman. Certain authorities state that the fiancé has this right, even if looking at her is accompanied by sexual desire. Ibn Rushd specifies that this right should be limited to seising the lace and hands only (*Bidāya*, II, 3); others extend the right, but they never go so far as to admit the possibility of the couple being left alone (*khāṭa*), which is the right to be alone with each other away from all indiscreet looks.

2. The right of priority. Betrothal gives the fiancé a right of priority, in that once a woman is betrothed to a man, that woman cannot be sought in marriage by another man; but this right is only sanctioned by the *Mālikīs*.

Dissolving of a betrothal. Either of the two parties can and the state of betrothal unilaterally. The only problem is that of disposal of presents which have been exchanged, and which are subject to the rules of donation. However, in various Islamic countries, part of the dowry is paid over at the time of betrothal, and this must in all cases be given back. Finally, there remains one problem: can one award damages to the victim of an unjustifiable breaking off of betrothal? Although certain modern Islamic authorities are endeavouring to introduce an obligation to pay an indemnity for damages in the case of an ill-founded breaking-off, the action for damages is not an absolute right. Even so, many Islamic countries have been compelled to adopt the solutions of western law, since on the plane of practical law, betrothal is of no legal concern except in case of its being dissolved.

(A. M. DEUCANNE)

KHITTA ("piece of land marked out for building upon"), a term used of the lands allotted to tribal groups and individuals in the garrison cities founded by the Arabs at the time of the conquests. The lay-out of these cities everywhere followed the kinship organisation of the conquerors, who were distributed in tribal quarters around a centre housing the Friday mosque and the *dar al-imra*. The smallest unit of the *khittas* was the *dār*, in the case of prominent individuals often a sizable estate (usually known as *ḥaṭṭa*), otherwise a modest plot of land occupied by one or several families. Next came the quarter based on the smallest political unit of the tribe (what is often known as the *ashīra* in Arabic sources, "clan" or "subtribe" in modern literature); these quarters usually had their own mosque, and how small the unit in question tended to be is indicated by the fact that the tribe Kinda, which was strongly represented in Fustāt, Damascus and Hama in addition to Kufa, had at least twelve such mosques in the latter city. Finally, there was a larger quarter reflecting the tribe proper, often endowed with its own *ḡabbasa*, a piece of unbuilt land serving, *inter alia*, as a meeting place and a cemetery. In Syria, where the Arabs settled in existing cities, the tribal quarters were less self-contained and possessed neither mosques nor *ḡabbasas* of their own.

The *khittas* served as military and administrative units from the start, but their small size was impractical and amalgamation of the tribal groups began already with the foundation of Kufa, which was divided into *sevenths*, to be continued under Muṭawīya when Basra was divided into *fifths*, and other settlements into quarters. Every such new division

was placed under an officially appointed leader, the *ra's al-rub'* or *ra's al-ḡhuma*, who was selected from among the chiefs of the larger tribal groups represented in the division, and who was responsible for the command of the division in war and the maintenance of law and order within it in peacetime. The lesser groups continued to serve as military and administrative subdivisions under their own leaders. The entire range of tribal chiefs (the *ashāraf* of the Umayyad period) served as the link between government and subjects in the Sulaymī system of indirect rule, *ashāraf* and governor coming together in the latter's *maḡlis* where information, orders and requests were exchanged, accompanied by a traditional display of generosity. The *ra's al-rub'* / *ra's al-ḡhuma* in turn passed on information, orders and gifts in his own *maḡlis*, and the process was repeated in the *maḡlis* of the lesser chiefs until we reach the smallest political unit reflected in the *khittas*.

The erosion of the tribal ties in the Marwānid period rendered the system obsolete; the *ashāraf* disappeared from the political scene, while the *khittas* survived only as place-names. The larger quarters and *fifths*, on the other hand, persisted until the end of the Umayyad period, physically as military divisions, now housing regiments rather than tribal groups, and mostly as categories for the definition of factional loyalties. When the 'Abbāsids came to power these too disappeared, and the allotments in Baghdad (known as *ḥaṭṭa's* rather than *khittas*) were made on the basis of geographical provenance, not tribal affiliation.

KHİWA, on the western bank of the Amu Daryā, site of the last capital of the khānate of Khwārazm, subsequently called the khānate of Khīwa. Its origins are bound up in the history of Khwārazm (q.v.).

Khīwa was the third capital, after Gurgānj (385-515/995-1222) and Kāh (q.v.); the latter was the capital during the 8th/14th century, in which period, with Khīwa, it was governed by the Čaghatai, and Gurgānj (subsequently called Urgenč) by the Golden Horde. After the restoration of unity (under the rule of the Shaybanids) in the 9th/15th century, the capital was again established at Urgenč, but neither this dynasty, nor the Djuḡi branch of the Özbek dynasty that succeeded it, was in a position to restore stability in the region; brigandage increased, and the closure of the commercial routes which crossed the land hastened, at the same time, its economic decline and its relative isolation.

During the second half of the reign of 'Arab Muhammad (1013-36/1603-23), which perhaps coincided with the drying up of the left branch of the Amu Darya, the capital was transferred to Khiva, and it was then that the khānate of Khwārazm began to be called the khānate of Khiva. Little is known of the early history of this town; archaeological remains enable us to date its foundation between the 6th and 8th centuries of the Christian era; it is mentioned by the Arab geographer al-Istakhri in the 4th/10th century. The inhabitants of Khiva were distinguished from the other Khwārazmians by the fact that they were Shāfi'is rather than Hanafis.

The khānate was composed of various feudal districts (*beziks*) somewhat loosely linked together, and their chiefs (*bēkims*) recognised the sovereignty of the khān of Khiva. The degree of unity of the khānate depended on the personal power of the khān; it is relevant, in this regard, to make special mention of 'Abd al-Ghāfi Bahāddūr Khān (1054-73/1643-61) whose *History of Khiva* has survived and is available to us. After the conquest of Merv by Anūshīr, at the end of the 11th/17th century, the sovereigns of Khiva took the title of ghāns.

The dynasty of the Ōzbeks was followed by that of the Čingizids, which occupied the throne of Khiva until 1804, but real power was concentrated in the hands of the *Isaks* (tribal chiefs) of the tribe of the Kungrat (q.v.). The 18th century saw an acceleration in the process of disintegration, when to the effects of internal strife there were added the fruitless attempts at conquest made by Peter the Great in 1717, and by Nādir Shāh in 1752/1740, while invasions by nomads and attacks from the Turcoman Yomuts were particularly violent between 1733 and 1834/1740-70; however, in 1784/1770, the *Isak* Muhammad Amin defeated the Turcomans, restored relative prosperity to the region and undertook the construction of a new city on the foundations of the old. In the course of this reconstruction, which lasted seventy years, a number of remarkable architectural monuments were erected, including the palace of Taghkalā (1832), the mausoleum of Fakhravān Shāhshāh (1835) and the madrasa of Allāh Kull Khān (1835), which are still standing to-day.

Under the *Isak* Ittīz, who became the first Kungrat ghān in 1804, the khānate attained its greatest territorial extent of the modern period, stretching from the mouth of the Sir Darya on the Aral Sea as far as Kai'ā I Mawr on the Kūshk; this sovereign frustrated an attempt by Bukhārā at annexing the oasis of Merv, and he improved his relations with the Turcomans who became the first line of defence of the khānate. His successor, Muhammad Rahīm Khān, who was the most powerful ghān of the 19th century, made a number of successful forays into the territory of the Kazaks, subdued the Sārk Kāipaks and ravaged Khurāsān.

Although it had repelled an attack by the Russians in 1839-40, Khiva was forced to accept their economic and diplomatic demands, which had the result of reinforcing the Russian presence which was already showing itself in Central Asia. The conflict which broke out with Bukhārā and the Turcomans further enfeebled the already divided State, and in 1873 the Russians were able to take possession of the entire territory without striking a single blow. The peace treaty gave them the right bank of the Amu Darya and made the khān of Khiva a vassal of the Tsar.

The Turcomans continued their struggle against the khānate and in 1918, the ghān Isfandiyr (1910-18) was assassinated at the instigation of Džunayd

Khān, the Turcoman chieftain, who reduced the new sovereign, Sa'īd 'Abd Allāh (1918-20) to the status of a puppet. After an initial failure in 1918, the Soviets waited until 1920 before putting an end to the khānate of Khiva and on the 26 April 1920, the People's Republic of Khwārazm was proclaimed, with a government of young Khivans. On 3 September 1921, this was replaced by the Soviet Socialist Republic of Khwārazm, controlled by the Bolsheviks, and in November 1924, it became the *oblast'* of Khwārazm in the Soviet Socialist Republic of Uzbekistan, with Khiva as provincial capital (*rayon*), between 1918 and 1924, there was a considerable movement of resistance to the Soviets, led by Džunayd and supported by the deposed khān.

The Soviets did nothing to assist the development of the town. Although it is a centre for cotton-growing and has brickworks, dairies and a carpet-weaving industry, modern Khiva no longer plays a vital role in the economic or political life of the Uzbek S.S.R.

(W. BARTHOLOMEW — [M. L. BRILL])

KHĪYĀBĀNĪ, SHAYKH MUHAMMAD (1879-1920), Persian religious scholar and political leader. Born in Khāmma, Āgharbayjān, the son of a merchant, Khīyābānī received his early education there and then moved to Dāghlīstān in the Caucasus, where his father lived. After returning to Tabriz, he studied *fiqh*, *usūl*, and Ptolemaic astronomy, and soon became a *muftīkhān* leading public prayers in two central mosques. Responding to the Iranian constitutionalists, Khīyābānī joined the Social Democratic Party and also became a leading member of the Āgharbayjān Provincial Council which played a decisive role in the deposition of the anti-constitutionalist Shāh Muhammad 'Alī (1907-9). Khīyābānī was then elected to the second Parliament, where he rejected the 1911 Russian ultimatum and condemned the Persian government which, on the British recommendation, was willing to compromise. The Parliament rejected the ultimatum but the Regent, Nāṣir al-Mulk, dissolved Parliament and accepted the ultimatum, leading Khīyābānī to denounce this action in a long speech before the people of Tehran. He then fled to Russia, and later on returned to Tabriz secretly. After the two Anglo-Russian treaties (1907 and 1915) there remained little room for the existence of Khīyābānī and his party. Suddenly, however, the 1917 Russian Revolution broke out and the Soviets withdrew the claims the Tsars had made against Iran. At this point, Khīyābānī and his friends re-established the Democratic Party and founded *Taghdad*, a newspaper which published Khīyābānī's speeches and articles. Among Khīyābānī's targets of attack were the British South Persia Rifles and the existing Persian régime as being submissive to foreigners. Before the end of the War, Ottoman troops invaded Tabriz, arrested Khīyābānī, and imprisoned him in Ridā'iyya, but after the War he returned to Tabriz. In 1919 the British signed an agreement with the Wūthūk al-Dawla which gave them control of the Iranian army, finances, and customs. Under the influence of Khīyābānī and others, the treaty was not passed in Parliament. The Wūthūk al-Dawla then suppressed Khīyābānī's party and resigned. Khīyābānī rose against the government (now in the hands of Mushir al-Dawla) and in April 1920 he declared his province Azadistān ("home of freedom"). Mushir al-Dawla appointed Muḥṣib al-Sā'ima (Mahdi Kull Hidayat) governor of Āgharbayjān, and the latter put an end both to the six-month old movement and to Khīyābānī's life.

Khiyābānī has been described as a rebel, and his movement as a separatist one. Khiyābānī's attachment to the Soviets has also been a matter of controversy. However, he has been widely recognised as a national hero, whose murder was lamented by poets such as Babār, Ārīf, Safwat, and Aghā.

(ABDUL HADI HAJRI)

KHIVĀLA (see KHAVI).

KHIVĀR (A.), a legal term meaning the option or right of withdrawal, i.e. the right for the parties involved to terminate the legal act unilaterally. This option is always included in the legal act, and in this case, the act does not irrevocably bind its authors. The word *khivār* implies a choice on the part of the holder of the right of option, who may either confirm the act or render it void; the legal act containing an option is not void in origin, but its validity is nevertheless precarious and subject to confirmation. The act giving rise to an option corresponds in western law to an act liable to a suspensory or resolutive condition, according to the nature of the option.

Options (*khivār*) may be either conventional or legal in nature.

a. Conventional options. Included amongst these, there is first of all the conditional option, *khivār al-ḡarḡ*, which is extremely important. This is the clause by means of which, in certain legal acts (in particular, contracts), one of the parties, or both of them, reserves the right to annul or to confirm, within a specified time, the legal act which they have just drawn up. This clause is undeniably equivalent to a purely potestative suspensory condition. The

decision of the one confirming or rejecting the act does not have to be justified. The lawyers of the four schools adopted this institution without difficulty. The other conventional option is the one called by the jurists *thal* of designation (*khivār al-ḡayn*). It can only be inserted into alternative obligations, and allows the one making the stipulation to make his final choice between the different objects of one and the same obligation. Thus there are only two conventional options, one common to all four schools and the other peculiar to the Hanafis and Malikis.

2. Legal options. On the other hand, legal options, in which the law automatically grants the options without the parties having to stipulate them, are very numerous. Some Muslim authors number them at seventeen. Fraud, injury, hidden defects, eviction, and many other deeds, are only to be sanctioned in Islamic law by means of option. In the *fiqh* treatises, only a brief allusion is made to legal options, apart from the option in the case of a latent defect making the agreement void (*khivār al-ḡayb* or *khivār al-nahīya*). The option of sight (*khivār al-ra'y*) presents a problem. It is rejected by the Shāfi'is, and there exists concerning it as many different doctrines as schools of legal opinion; see Ibn Ruḡḡd, *Bidāya*, Cairo 1952, II, 254. Some countries have introduced the principle of the option of sight into their new civil codes: Egypt (art. 410), Iraq (arts. 517-23), Syria (art. 386) and Libya (art. 408). *Khivār* is also to be found in Imānī law (Persian civil code arts. 396-457). In the *fiqh* treatises, there is no systematic exposition of the idea of option, although certain modern jurists have tried to remedy this.

It should finally be noted that the system of options is not peculiar to patrimonial law. There exist also options in family law, e.g. in the case of incompatible marriages, or when a minor still below the age of puberty has been married by a man other than her own father or grandfather; when the minor reaches his majority, he can choose between maintaining the marriage in being or dissolving it.

KHIVĀR (in theology) [see *ḤIVĀLA*].

KHIZĀNA [see *MAKTABA*].

KHIZĀNEH 'AMIRE [see *AMIR*].

KHLOT [see *KHUT*].

KHŌDJĀ in the strict sense is the name of an Indian caste consisting mostly of Nizārī Ismā'īlīs and some Sunnis and Twelver Shī'īs split off the Ismā'īlī community. In a looser sense the name is commonly used to refer to the Indian Nizārī Ismā'īlīs in general including some minor communities like the Shamsīs in the area of Multan and some Mōmmas in northern Guḡarāt. The history of Nizārī Ismā'īlism on the Indian subcontinent, especially in the early centuries, is largely obscure because of a lack of reliable sources. The *Khōdjā* religious literature (see *SATPARNA*) contains some highly legendary accounts of the activity of Nizārī 44's, mostly unreliable chronological data, and bare lists and genealogies of the *pīrs* and their descendants. On the basis of this material a few comprehensive historical accounts have been written since the 19th century by *Khōdjās* and members of the related Imām Shāhī community.

It is unknown if any of the Ismā'īlī communities existing in India before the split into the Nizārī and Nusta'awī branches in 487/1094 subsequently joined

the *Nizārī*. *Khōdja* tradition makes one *Satgur Nūr*, also called *Nūr al-Dīn*, the first *āfā* who, coming from *Daylamān*, was active in *Pāfān*, *Gūjārāt*. Dates ascribed to his activity vary widely. According to one version he was sent by the *īmām al-Mustanṣir* (427-87/1036-94) in order to preach for his son *Nizār*; according to another, by the *īmām al-Ḥasan* 'alā *dhikrhi* 'Ismā'īl (357-61/1164-6). He is alleged to have converted the Hindu king *Siddhārājā Dvāj-sinha* (d. ca. 1143). Yet his place in the lists of *pīrs* would seem to put him in the first two centuries of Islam, and he is even identified with the *īmām* Muhammad b. Ismā'īl. His shrine at *Navasār* appears to date from about the end of the 18th century. His historicity has been doubted. Evidence for the presence of *Nizārīs* in *Gūjārāt* in the first half of the 7th/13th century is too vague to be trusted. Most early *Nizārī* activity rather appears to have been centred on *Sīnd*.

The beginnings of the *Nizārī* *āfās* in *Sīnd* are connected by tradition with the *pīr* *Shams al-Dīn*, though the previous *pīr*, *Ṣāḥib al-Dīn*, who is also called the father of *Shams al-Dīn*, is mentioned to have already been sent from *Alamūt* to *Indiā*. Legend, on the other hand, identifies *Shams al-Dīn* variously with *Shams-i Tabrizī*, the spiritual guide of *Djalāl al-Dīn Rūmī*, or with the first post-*Alamūt* *īmām* *Shams al-Dīn Muhammad* who, it is alleged, turned the imamate over to his son *Kāsim-Shāh* in order to come to *Indiā*. While most of the religious poetry ascribed to him names *Kāsim-Shāh* as the contemporary *īmām* and thus would place him around the turn of the 7th/13th century, several dates mentioned in the poetry for his activity are in the first half of the 6th/12th century. A legendary account of his meeting with the *Sūfī* saint *Bahā' al-Dīn Zakariyyā* of *Multān* (d. 665/1266) appears to be without historical foundation. His lifetime thus cannot be dated with any degree of certainty. He is described as having been active in *Multān* and *Uṭch* in *Sīnd* and his shrine is located in *Multān*. The community of the *Shemshīs* claims to have been converted by him to *Nizārī Ismā'īlism*. They live in *Multān*, *Rāwalpindī* and elsewhere in *Pandjēb* and are mostly goldsmiths.

The next two *pīrs* on the traditional lists, *Nasir al-Dīn* and *Shihāb* (also *Sahib*) *al-Dīn*, are said to be the son and grandson of *Shams al-Dīn*. It is likely, however, that some minor figures were omitted. There is no information on their activity except that they worked clandestinely. *Shihāb al-Dīn* was succeeded by his son *Sadr al-Dīn* who is credited with the conversion of the *Khōdjās* from the *Lohanas*, a Hindu caste. He is also said to have given them the name *Khōdjā*, derived from the Persian *khōzda*, master, which corresponds to the Hindu term *śāstras* used in addressing *Lohanas* and *Khōdjās*, as the *Lohanas* are considered *Kshatriyas*. Death dates given for him range from 770/1369 to 819/1416. The latter date seems more reasonable. *Sadr al-Dīn*, according to tradition, also laid the foundation for the communal organisation of the *Khōdjās* by building the first three *djama'at-khanas* (assembly and prayer halls) and appointing their *suḥāsīs* (leaders). The centre of his activity was *Uṭch* and his shrine is not far from it near *Dietur*.

Sadr al-Dīn was succeeded as *pīr* by his son *Ḥasan Kabir al-Dīn* of whom a short vita was included by 'Abd al-Ḥakīm Dihlawī (d. 1052/1642) in his hagiographical work *Akḥḥār al-akḥyār*. His appearance in a list of *shaykhīs* of the *Suhrawardī* order reflects the close links of *Nizārī Ismā'īlism* with organised *Sūfism* throughout this period. According to the *Akḥḥār*

al-akḥyār he traveled widely before settling down in *Uṭch* and converted many Hindus. The death dates mentioned for him range from 853/1449 to 895/1490. Most accurate are probably those giving 875/1470 or 896/1477. His shrine is outside *Uṭch*. As *Kabir al-Dīn's* successor, his brother *Tājī al-Dīn* was appointed by the *īmām*. He was opposed by some of the numerous sons of *Kabir al-Dīn* who were also quarrelling among themselves. After *Tājī al-Dīn's* return from a visit to the *īmām*, they accused him of embezzling the tithes for the *īmām* and he is said either to have died of the shock or to have committed suicide, probably not very long after his brother's death. His grave is in *Jhūn* in *Sīnd*. After his death *Imām Shāh* (q.v.), son of *Kabir al-Dīn*, vainly tried to gain the allegiance of the *Khōdjās* in *Sīnd*. After a visit to the *īmām* in *Persia* he settled in *Gūjārāt*, where he succeeded in converting numerous Hindus, mostly of peasant communities. Legend maintains that he converted *Mahmūd Berqā*, sultan of *Gūjārāt*, who gave his daughter in marriage to *Imām Shāh's* son *Nar Muhammad*. *Imām Shāh* died in 919/1513 in *Frāna*, a town founded by him, where his shrine is located. Although he is not recognised as a *pīr* by *Khōdjā* tradition and according to some accounts succeeded from the *Ismā'īlī* community, it appears more likely that the schism occurred only under his son and successor *Nar* (*Nūr*) *Muhammad Shāh*. The letter of an unknown date demanded that the *īmām's* title should no longer be sent to *Persia* but be turned over to himself, claiming that his father *Imām Shāh* had been the *īmām* and that he was his successor. The majority of his followers accepted his orders and came to form the separate *Imām-Shāhī* community while a minority remained faithful to the *Ismā'īlī* *īmams*.

The *Khōdjā* lists of *pīrs* name after the *pīr* *Tājī al-Dīn* the *Pandiyāt-i farḥamānī*, a book of religious admonitions attributed to *Imām al-Mustanṣir II*, in place of a person. According to tradition, the *īmām* decided in view of the dissension in the *pīr's* family after *Tājī al-Dīn's* death not to appoint any *pīr*, but instead to send the book as guidance for the faithful. There is, however, reason to assume that the book reached *Indiā* only around the middle of the 10th/16th century, probably after the *Imām-Shāhī* accession. It may have been sent at that time with a view to easing the leadership crisis resulting from the schism. Only one *pīr* mentioned in some of the lists after the book was active in *Indiā*, sc. *pīr* *Dādā*. He is said to have been sent by the *īmām* from *Persia* to *Sīnd* with the mission of stopping the conversion of *Ismā'īlīs* to *Sunnism*. He was forced to leave and settled first with some followers from *Sīnd* in *Navanagar* (*Dhamnagar*) in *Gūjārāt*. In 1584 he moved to *Rhūdī* where he died in 1593. An important role in reorganising the community and the prayer is ascribed to him.

After the end of the line of *pīrs* the *imams* came to be represented at the local level in *Indiā* by *wakīls* and *Māwīs*. This development evidently reflects an attempt of the *imams* to gain more direct control over the Indian communities. However, some local families of *sayyids*, i.e. descendants of the *pīr* *Kabir al-Dīn*, retained much influence. Most important among these were the *Kadiwālā sayyids* of *Sīnd*. Their ancestor, *Sayyid Faḡl Shāh*, was active in *Kadi* around the middle of the 17th century. In *Sīnd* the family resided in *Rall* and after 1780 in *Tando Muhammad Khān*. Shrines of early members of the family are located near these two places. Other members are known as authors of extant gnans. Two sons of *Faḡl Shāh*, *pīr* *Maghāyikhā* and *Ḥasan pīr*, played a

major role among the Mōmnas in northern Gujjarāt. Maṣṣayikh (d. 1104/1507 in Ahmadābād) actively endeavoured to suppress Hindu practices in the community and cur its allegiance to the Ismāʿīlī imāms. His extant works espouse strictly Islamic practices and reflect Sunnī and Iḡnāʾi Ashʿarī tendencies. He is said to have cooperated with Aḡrānīb in his wars against the Shīʿī rulers of Bīdāpūr. His followers later quarreled whether he was a Sunnī or a Shīʿī. His brother Ḥasan remained loyal to Ismāʿīlīsm and became the saint of the Nizārī Mōmnas. In addition to his mausoleum in Thanapūr near Dhrānāgadh, Khōdjas and Nizārī Mōmnas in 1777 built a shrine in his honour in Ganod in Gujjarāt.

The Khōdjas were active in the commerce between India and East Africa at least since the 17th century, and in the 19th century, especially after the ʿUmāid sultan Sayyid Saʿd transferred his capital to Zanzibar in 1840, they came to settle in large numbers on the island and later in mainland East Africa. The coming of the Agha Khān [q.v.] Ḥasan ʿAlī Shāh to India in 1840 led to an aggravation of earlier conflicts in the Khōdja community about the rights of the imām. In 1866 the judgment of Sir Joseph Arnould in a law suit brought against the Agha Khān by ex-communicated members of the Bārbhai party fully upheld his rights and authority, and the dissidents definitely separated from the community as Sunnī Khōdjas. Later dissidents seceding in 1877 and 1902, formed Iḡnāʾi Ashʿarī Khōdja communities in Bombay and East Africa.

For Khōdja religious doctrine see ISMĀʿĪLIYVA AND SATPANTH.

(W. MADRLUNG)

KHODJA EFENDI, Saʿd al-Dīn b. Ḥasan Dīlān b. Ḥafīz MUHAMMAD ISPAKĀNĪ (1536-99), a famous Ottoman shaykh al-Islām, statesman, and historian.

Life. He was born in 943/1536-7 in Istanbul, and died there on 12 Rabiʿ I 1008/2 October 1599. His grandfather, one of the notables who had joined Sultan Selīm I after the battle of Çaldıran, had served Selīm I as *naṣıf*, and his father Ḥasan Dīlān had been an intimate counsellor to the same sultan. Saʿd al-Dīn studied under prominent scholars, entered the ʿulamāʾ career and became assistant (*mudīrrin*) to the *mufti* Ebū ʿI-Suʿād [see Aḡ ʿI-Suʿād] at the early age of twenty (963/1553-6). Soon after, he was appointed, with a salary of 30 aspers, to the Murād Paṣṣa madrasa in Istanbul. In Shawwāl 971/May-June 1564 he was appointed, "with forty", to the madrasa of Yildirim Khān in Bursa, and one year later was promoted to the *khāṣṣ* rank. After another promotion in Dhū'l-Hijja 977/May 1570 he rose, in Ramaḍān 979/January-February 1572, to the rank of professor

at one of the eight courtyards (*sahn*) attached to the Fatih Mosque in Istanbul. When the preceptor (khōja) of Prince Murād died, Saʿd al-Dīn was appointed in his place (Muharrar 981/May 1573) and went to Manisa. This was the beginning of a long period of prosperity and influence for Saʿd al-Dīn, who was henceforth known as Khōdja or Khōdja Efendi. When his pupil became sultan as Murād III, he followed him to Istanbul as *khōdja-i suḡdāʾ* (8 Ramaḍān 982/22 December 1574). As the sultan's trusted adviser, he soon became influential in politics, even in foreign affairs such as the establishment of relations with England. When Meḥmed III succeeded to the throne in 1595, it was to Saʿd al-Dīn that he was expressly referred to for advice, the decree saying that "consultation (*meḥwarrat*) should be held with Khōdja Saʿd al-Dīn in all matters of appointing viziers and religious officials". Although Saʿd al-Dīn, in Murād III's special *meḥwarrat meḥwarrat*, had strongly advised against the "Long War" with Austria begun in 1593, it was he who backed up the wavering sultan Meḥmed III, especially in the Eğri (Erzurum) campaign. In the great *meḥwarrat* on 20 October 1596 it was Saʿd al-Dīn who with his courage carried all with him, prevailing on the timid sultan to stand fast and eventually win the battle of Hāṣ Ovel (Mezid Kermates). After this triumph, Saʿd al-Dīn fell into disgrace over the appointment of the next Grand Vizier; on 9 Dhimāda II 1005/28 January 1597 his opponents at court brought about his dismissal from the office of preceptor. Expressly ordered to refrain from intervention in state affairs, Saʿd al-Dīn remained in disgrace for 14 months. As soon as he could, in March 1598, the sultan fully rehabilitated Saʿd al-Dīn and raised him, against some resistance, to the office of *shaykh al-Islām*, together with that of sultan's preceptor. This earned him the title *ḡhāmī* of *Riyāṣat*. At this time Saʿd al-Dīn took the inefficiency of Sadrul Meḥmed Paṣṣa as *senior* on the Hungarian front as an opportunity to state his views; he drew up a memorandum, outwardly directed to the Commander, but obviously meant for his opponents at court and later circulated as a piece of *inṣāʾ* (it was published by Naʿṣūk in his official history). It voiced the sense of impending misfortunes that threatened the Ottomans, and justified, in the matter of *meḥwarrat*, what Saʿd al-Dīn had done and was considering his duty: not to "meddle" with matters of state, but to render services to it. In 1599 this meant persuading both the sultan and his mother to pay out of their treasuries the funds needed for the next campaign. After a successful term of office as *mufti*, he died during prayer in the Aya Sofya Mosque.

As an eminent *ʿālim*, Saʿd al-Dīn distinguished himself, even more than for his learning, for his practical ability and political far-sightedness. Between 1579 and 1599 the preceptor of two sultans, the hero of Hāṣ Ovel "was the main voice directing the state's domestic and foreign policies" (H. İnalcık, *The Ottoman empire*, London 1973, 97). When the new Head Astronomer, Taḡī al-Dīn, had convinced him of the necessity of reviving Uluḡ Beg's Tables, Saʿd al-Dīn at once persuaded the sultan to issue the *fermans* necessary to establish an observatory in Galata (1577). This project was short-lived; the *shaykh al-Islām* Nāṣṣṣṣṣ Ahmed Shams al-Dīn, an enemy of Saʿd al-Dīn, managed to have it destroyed already in 1580 (A. Adnan-Adver, *Osmanlı tarihlerinde ilim*, Ankara 1943, 84-6; A. Süheyl Över, *Istanbul nasihatları*, Ankara 1969, 35, 51-4, 61-2). But Taḡī al-Dīn's attachment to Saʿd al-Dīn is apparent in the grateful

dedications to him of several of his astronomical works. The Khōdja attracted writers and younger scholars of growing fame, some of whom worked as his assistants (Nishāngīslāde, Nādirī) or were his protégés (Lokmān); even Muṣṭafā 'Alī, his severest critic, dedicated a book to him. The charge of nepotism and favouritism which was brought against him, especially by 'Alī, does perhaps deserve closer inspection within the framework of the times. Of his five sons one died before him; two became ḡayḡh al-Islām and two were ḡāḡ 'ashkars; three of his grandsons were ḡayḡh al-Islām (Ṣ. Turan, art. Sa'd al-Dīn in *IA*; I. H. Danismend, *Osmānī devlet erkânı*, 119).

Works. Although he did write poetry, he was essentially a prose writer. He translated Arabic and Persian works into Turkish (see Turan's article in *IA*). His fame as a writer rests on his *Tāḡī al-tawārīkh* begun under Selīm II and dedicated to Murād III in 983/1575. As a carefully-written history, based on critical examination of a number of named sources, the work rightfully superseded the older chronicles. It deals with the history of the Ottomans from their beginnings to the death of Selīm I. In it Khōdja Sa'd al-Dīn displayed his celebrated powers of eloquence, but he was not showy or pompous, as has sometimes been alleged; indeed, the clarity of his exposition was not lost on contemporaries and later writers. While it is true that his *Tāḡī* abounds in Arabisms and Persianisms, he could often be simplicity itself: indeed, the contrasts are great and have only been disregarded to some extent because Sa'd al-Dīn is habitually classed among the writers of "ornate prose". On the many MSS. of the *Tāḡī*, see F. Babinger, *Die Geschichtsschreiber der Osmanen und ihre Werke*, Leipzig 1917, 125-6; M. Aktepe, *Hece Sa'd al-Dīn Efendi'nin Tāḡī-i-tawārīkh'e ve bunun asyih hakkinda*, in *TM* xiii, 106-10; Turan, art. in *IA*; B. Flemming, *Türkische Handschriften*, I, Wiesbaden 1968, 205-6. The work was printed in two volumes at Istanbul in 1279/1882. Based on this edition, a modernised version in Latin script by I. Parmaksızoglu has begun to appear in 1974. The book found early recognition in the West, and parts of it have been translated; see Babinger, *GOW*, 126. A continuation of the *Tāḡī al-tawārīkh* is Muṣṭafā Sā'il's (d. 1025/1616) *Zuhd al-tawārīkh*. An abridgement is the first part of Hasan Bey-Zāde's (q.v.) *History*. Ṣotāḡzāde (d. 1067/1637) and Dīyeddārīslāde (d. 1208/1794) made extensive use of the *Tāḡī*.

Sa'd al-Dīn's *Selīm-nāma*, a collection of anecdotes based on the recollections of his father Hasan Dīn, was printed together with the *Tāḡī al-tawārīkh* (ii, 221-401).

Bibliography: 'Aṣḡā, *ḡhayal al-ḡayḡh* 1/2, Istanbul 1266/1851-2, 429-31; F. Babinger, *EP*, s.v.; of the works cited above, Turan's article has the fullest bibliography. (B. FLEMMING)

KHODJA ELI (see KODJA ELI)

KHODJAEV (FAIZULLAH KHODJA) (1896-1938), Bukhāran revolutionary and nationalist, was born in Bukhārā the son of a wealthy merchant. In 1907 he went with his father to Moscow, where he received a Russian education. In 1913 he joined the so-called Dīādī Muslim reformist movement (see *NAJAF*), which was opposed to the feudal regime of the Amir. In 1917 he became a member of the newly formed Young Bukhāran Party and in December left for Tashkent with the avowed object of working for the overthrow of the Amir. By 1920 he had become leader of the Young Bukhārans. He declared himself in favour of the *Shār'is* remaining the basis of the new republic of Bukhārā, at the foundation of which he aimed, but this was, and still is, pronounced a mistake

by the Communist Party of Russia. On the final overthrow of the Amir's régime in September 1920, Khodjaev became a member of the Communist Party and was constituted head of the newly created Peoples' Soviet Republic of Bukhārā. He vigorously opposed the counter-revolutionary Basmāḡī movement led by Enver Paṣha, the Turkish ex-Minister for War. For this and other services to the Bukhāran people, he was awarded in 1922 the Order of the Red Banner. Visiting Berlin in 1924, Khodjaev became active in trying to establish economic relations with European countries. This policy was seen as aiming at the economic independence of Bukhārā and in 1933 incurred the serious disapproval of the Central Asian Bureau of the Communist Party, to the setting up of which Khodjaev had always been opposed. In the same year, however, he took part in the 13th Party Congress in Moscow as delegate of the Bukhāran Communist Party. On the delimitation of the Central Asian Republics in 1924, the greater part of the former Khānate of Bukhārā was embodied in the Uzbek SSR, of which Khodjaev was in 1925 appointed President of the Council of Peoples' Commissars, a post which he retained until his downfall in 1937, when he was dismissed from office and arrested. He was later indicted on a number of charges which included those of plotting against the Soviet state for the independence of Turkestan, of secretly aiding the Basmāḡīs, and of being a British agent. While much of the indictment was probably based on fabricated evidence, there is little doubt that, as he himself admitted during the trial, Khodjaev was aiming at the national independence of Turkestan. He insisted, however, that he was not actuated by anti-Russian or anti-Bolshevik feelings. He was executed in 1938. Excluded from the list of other Central Asian personalities posthumously rehabilitated between 1955 and 1957, Khodjaev was not rehabilitated until 1966 on the occasion of the 70th anniversary of his birth. Although he was then said to have made "errors of a nationalist character", he was described as "a prominent revolutionary". The long biographical introduction to the edition of his selected works published in 1970 is wholly laudatory, refers only briefly to his differences with the Party authorities and makes no mention of his downfall, trial and execution.

KHODJAND (see KHODJAND).

KHÖI, KHÖV, Iranian town (population in 1951 49,000), situated in long. 45° 02' E., lat. 38° 32' N., in the *ghōrīstān* of the same name in the west of West Ādharbāydzān; the Kurdish district of Qutūr is included in the *ghōrīstān* of Khöi.

The town lies at an elevation of 1040 m./3444 ft., in a plain known locally as *Khōi fukārī* ("the Khōi depression"), because all the surrounding areas are at a higher elevation. The mountains surrounding the Khōi plain protect the city from the cold winter winds (the *Harāvī* range along the Turkish frontier to the north-west averages over 12,000 feet), and consequently Khōi has a warmer climate than either Tabriz or Rīdā'īyya. Minimum winter temperature is -14° C./5.8° F.; summers are very hot with hot southerly winds. The economy of the region is partly pastoral, partly agricultural; crops include grain, pulses, tobacco, sprouts and cotton. The region has a mixed population of Sunnis and *Shi'īs* whose first language is either Turkish or Kurdish (the name Khōi is said

to mean "salt" in Kurdish, and certainly salt-mines are still worked in the area). In the *ḥāṭṭ* of Shāhpūr there are several Christian villages.

In ancient times, Khōi acquired commercial importance by virtue of its location on the silk-route. In Sāfawid times, the proximity of Khōi to the Ottoman frontier made it a town of great strategic importance; in 902/1514 Shāh Ismā'īl I suffered a decisive defeat at the hands of the Ottoman sultan Selīm I on the plain of Chaldīrān (q.v.), some 70 miles north-west of Khōi. In Kājār times the strategic value of the town continued because of its proximity to the Russian frontier; the ruins of the walls built by General Gardane early in the 13th/19th century at the request of Fatḥ 'Aḥ Shāh are still visible. More recently, Khōi saw fierce fighting between nationalist and royalist forces prior to World War I.

Etymology: 'All Razmārā (ed.), *Farhang-i dīghrāfīyā-yi Irān (Intikshār-i dā'ira-yi dīghrāfīyā-yi sīdā-i artish)*, iv, Tabrān 1330sh/1951, 200-1; Ḥamad Allāh Mustawī, *Nuṣṣat al-ḥulāḥ*, 86-7; Le Strange, *Lands*, 166; Māhdi Akāsh, *Ta'rikh-i Khōi*, Tabrān 1330sh/1951. (R. M. SAVORY)

KHOŠAND, Arabic orthography, Kh'āškand, later written Khokand (which is given a popular etymology, *khōsh + kand* = town of the boat), a town in Fārgāna (q.v.), where see also for the other spellings and the foundation of an independent Özbeg kingdom with Khokand as capital in the 12th/18th century. The accession of the first ruler of this Mīlī dynasty, Shāhrukh, was followed by the building of a citadel; another citadel later called Eski Uda was built by his son, 'Abd al-Karīm (d. 1746). 'Abd al-Karīm and his nephew and successor Irdānā Bī were several times mentioned in the history of the Atalīk Muḥammad Rāḥim, afterwards Khān of Bukhārā (d. 1759, see *supra*); Muḥammad Wafī Karīmīnī, *Tuḥfat al-Khāṣṣ*, Asiatic Museum M. o. 53B, especially tols. 53b, 145b). When the Kaimuk empire was destroyed and the frontiers of the Chinese empire advanced up to Fārgāna (1758), Irdānā also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter are cited by J. Klaproth, *Magasin asiatique*, 1 (1825), 82 ff. from the *Tai ts'ing yi P'ung* ff. Irdānā later was a member of a coalition of Muslim rulers of Central Asia, which applied to Aḥmad Shāh Durrānī (q.v.), the ruler of Afghānistān, for help against China. The alliance had no further results, although Aḥmad Shāh in 1765 appeared in Turkestan at the head of an army and occupied the territory between Khokand and Tashkent (at the same time an invasion of the land of the Karā-Kurgis was made from Khokand, Klaproth, *op. cit.*, 83), but he had soon to retire again on account of the claims of his enterprises in other directions. 'Abd al-Karīm's grandson, Nār Būta Beg (probably reigned 1188-1213/1774-98, cf. L. Ziaian in *Protokoll Turk Aruika lyub. arkhologii*, sv. 11, 102, and Waddow, *ibid.*, 22, 113 f.), was also nominally under Chinese suzerainty. To the early years of this reign belongs the journey of the Russian sergeant, Filipp Yefremov, who was taken prisoner by the Kurgis in 1774 and sold in Bukhārā and 1782 returned to Russia via India and England. According to his *Travels* (F. Yefremov, *Sirovostrenniye v Bukhārā, Khirya, Persii u Indii*, St. Petersburg 1794, 55 f.), Nār Būta was already entitled Khān "by the Chinese", was allied with China and at enmity with Bukhārā. No mention is made of prominent buildings in the capital (the Madrese Mir was built in the reign of Nār Būta); on the other hand, a high pillar (apparently a minaret), said to be over 280 feet high in the market-place in Marghāna, is

described. According to Filipp Nazarov (see below), this "tower" was visible for a distance of 30 verstas (over 30 miles).

Nār Būta's two sons, 'Alīm and 'Umar, are the real founders of the state and city of Khokand as we later know it. The chronology of these reigns (1212-1237/1798-1822) is not sufficiently established; even the year in which 'Alīm was assassinated and 'Umar raised to the throne is variously given in the sources. According to the *Ta'rikh-i Shāhrukhī* (ed. Pantusov, 106) 'Umar died in the year 1237/1822 (in the cyclic reckoning the year of the horse = 1822 is given); according to Nelliukin (Russ. orig. 101; French tr. 124), which here follows another source (the *Muntahab al-Tawarikh* of Hekim Khān), 'Alīm was not murdered till the spring of 1232 (i.e. 1827, not 1825, as in Nelliukin); on the other hand Nelliukin himself in another passage (Russ. orig. 105; French tr. 128) puts the building of the chief mosque of Khokand by 'Umar Khān in 1231/1826. The Russian interpreter Filipp Nazarov, who was in Khokand in the winter of 1813/14, calls the ruler of Khokand Amir Wallimā (*Zapiski o nykoraikh narodakh Sredney Asii*, St. Petersburg 1822, 50 ff. This is probably for *Wafī al-Nafā*, not *Wafī Afyān*, as in Klaproth, *op. cit.*, 43. The ruler at this time was only 33 years of age; this statement can only refer to 'Umar, not to the much older 'Alīm; according to 'Abd al-Karīm al-Bukhārī also (ed. Scherfer, 102), this embassy and the cause of it (the murder of the Khokand envoy by a Russian soldier in Petropavlovsk) both took place in the reign of 'Umar Khān. According to 'Abd al-Karīm, 99, 'Alīm had already been killed in 1221/1809, which cannot be right, as we have a document of his dated Dhu'l-ḥijja 1, 1225/June 1810 (*Protokoll Turk Aruika, lyub. arkh.*, iii, 163 f.). The change of ruler must therefore have taken place between 1810 and 1813.

In the oldest known document of his reign, dated 1223/1798-9, 'Alīm still regards himself as the representative of an unnamed Khān; later he appears as an independent ruler with the title *Khān* or *Amir*; after the conquest of Tashkent, his power was as great as that of the Amir of Bukhārā. In 'Umar's reign in 1814 (so Nazarov; not so late as 1819, as in Nelliukin, Russ. orig. 110 f.; French tr. 134 f.), the town of Turkistān with the parts of the Kirgis steppes belonging to it was incorporated in the kingdom of Khokand. 'Umar thereupon took the title of *Amir al-Muslimin*. There were several wars with Bukhārā regarding the possession of Ura Tube in the reigns of both 'Alīm and 'Umar, and the town indeed remained a bone of contention between the two states right down to the Russian conquest.

'Umar's domestic policy was quite different from that of his predecessor. Like many other Central Asian rulers, 'Alīm had made up his mind to break the power of the Özbeg families and therefore surrounded himself with mercenary troops from the highlanders of Karāṭigin, Darwāz and other lands (*Ta'rikh-i Shāhrukhī*, 42 f.). The war against the nobles was, as frequently elsewhere, combined with a war on the religious classes, especially the dervish orders. The historians on this account describe 'Alīm as a godless tyrant (*zālim*); on the other hand they praise the piety and justice of 'Umar, who was put on the throne by 'Alīm's murderers. 'Umar built the present chief mosque of Khokand, which was also used as a *madrasa* and therefore is known as the *Madrasa-yi Dīmi*. 'Umar was also fond of poetry and wrote poems himself under the pseudonym (*shāhshāh*) of *Amir*, whereas by the Khān himself, his official

and favourites were collected in a special anthology (afterwards printed) entitled *Madīḡat al-shu'arā'* by M. Hartmann in *MSOS*, vii, Westas. Stud., 87 ff. It was probably 'Umar who founded the town of *Shahr-i Khān* (west of Andījān); the great canal, led to it from the *Karā Daryā*, *Shahr-i Khān Sāy*, completely altered the irrigation of Farghāna.

'Umar's son and successor, Madall (properly Mubammad 'Alī), was 12 at his accession (according to others 14). During the first half of his reign, the khānate of Khokand reached its greatest power and extent. In the south the districts of Karatigin, Darwāz, and Kulāb, which now belonged to Bukhārā, were all conquered; in the north-east taxes were levied on the *Karā Kīrgīz*, on the Great and on a part of the Central Horde of Kazak Kīrgīz; the Khān's representatives even appeared among the tribes of the Great Horde which led a nomadic life on the other side of the Ili [q.v.]. The rebellion of *Khudja Dīshangir* in Kāshgharia (1826), which received support from Khokand, met with no success; nevertheless, the officers of the Khān were allowed by the Chinese government to collect taxes in the "six towns" (*alī shahr*): Aksh, *Ush*, Turfan, Kāshghar, Yangishahr, Yārḡand and *Khotan*. Like Khokand, where one of the largest madrasas bears the name of Madall Khān, Tāshkend attained considerable prosperity; from 1835 the *Beglerbegi* of Tāshkend was given the administration of all the northern provinces of the kingdom, and a memorial of this period is the great *Beglerbegi* Madrasa. The excavation of the great Khān Harik canal in the region of Tāshkend also belongs to this period (*Protokoll Turk krutika, Izhv. arkh.*, iii, 175).

In spite of the great extent of his kingdom, the authority of the Khān was not firmly established; his vicious life and cruel rule had aroused general discontent. Naṣr Allāh, *amir* of Bukhārā, is said to have been misled by people in Khokand itself to put an end to his rule. The Khokand army was completely defeated; the capital itself was taken by the enemy (for the first time since the foundation of the kingdom); Madall was killed while trying to escape (1858/1859). The conquerors were driven out again in the same year and *Shīr 'Alī*, a cousin of 'Alīm and 'Umar, was placed on the throne; but down to the Russian conquest, domestic peace was never restored for any length of time. The reigns of *Shīr 'Alī* (1842-45) and his sons *Khudāyār* (1845-58 and 1869-75) and *Malik* (1858-62) and several short-lived rulers were a period of continual confusion and bloody fighting, notably between the *Özbeḡs* of the Kīpčak tribe and the "Sarts", i.e. the native population. *Khudāyār*, who was still a minor, was raised to the throne by *Musulmān Kul*, the chief of the Kīpčak; the Kīpčak drove the Sarts out of their houses in the capital and took possession of the canals in the country; the Sarts were only allowed the water necessary for their fields on payment of a fixed sum. In 1869/1870 *Musulmān Kul* was overthrown by *Khudāyār* and put to death; the land again passed to the Sarts. *Malik* then relied on the support of the Kīpčak and restored to them the lands taken by the Sarts. All this warfare, internal and external was waged with great ferocity; after *Khudāyār's* capture of *Ura Tūbe* in 1864/1865, a tower of skulls (*Kelle minār*) was built from the heads of the slain enemy. Baniṣad pretenders usually took refuge in Bukhārā, and taking advantage of these dissensions, the Mangit Khān of Bukhārā *Naṣr Allāh* was able to advance as far as *Khudjand* [q.v.] in 1875/1876.

In spite of all this, the khānate retained its former extent down to the Russian conquest at the later 19th

century. Russian forces had been in contact with troops from Khokand since 1830 on the upper *Syr Daryā*, and in the north-east of the khānate between the *Ču* and *Ilī* rivers since 1860. All these regions were under the *Beglerbegi* or governor appointed by the Khān for Tāshkend (see above), who was also responsible for the maintenance of agriculture; the governor *Mīrzā Akmad* (1853-8) is said to have organised irrigation works from the town of Turkestan or *Akset* to the *Ču* valley. In 1864 Tāshkend fought off a Russian attack, and immediately afterwards, a Khokandi force attacked the town of Turkistan, by then Russian-held. Subsequent Russian intervention was facilitated by the conflicting interests of the Iranian townspeople or Sarts and the nomadic Kīpčak elements of the rural areas, mentioned above, and also by the discord between the Central Asian khānates. The ruler of Bukhārā *Muḡaffar al-Dīn b. Naṣr Allāh* was invited to secure Tāshkend for himself, when that town seemed likely to fall to the Russians; but in 1865 the Russians captured Tāshkend, whereupon the Khān of Bukhārā marched on Khokand, occupying *Khudjand* and *Khokand* and forcing *Khudāyār* of Khokand to acknowledge the suzerainty of Bukhārā. In 1866, as part of the operations against both Khokand and Bukhārā, General Romanovski advanced up the *Syr Daryā*, thereby driving a wedge between the two khānates. After the fall of *Khudjand*, *Khudāyār* came to terms and agreed to become a Russian vassal and to pay an indemnity.

Thus began the last phase of the khānate's nominal independent existence. Despite all the internal dissensions and intrigues, the economic condition of the khānate seems to have been prosperous enough, with flourishing local textile, carpet-weaving and other crafts; according to a Russian observer in 1867, the town had a population of 30,000, with 15 madrasas and several hundred mosques. Traditional Muslim learning was, indeed, far from moribund in all three of the Central Asian khānates in this last phase of their existence. During this period, several buildings were erected in the town of Khokand, including the palace or *urda* of the Khān, and the madrasas of *Hakīm Ayn* and *Sulṭān Murād Beg*, built by the Khān's mother and brother.

Until 1875, it seems to have been the Imperial Russian government's intention to retain the khānate in a similar status to those of Bukhārā and *Khiva*. But disturbances within the khānate, and attacks on Russian-held territory, continued, and in 1875 there was a popular rising against *Khudāyār Khān* led by his kinsman *Polād Khān*, and the former regions of the khānate then annexed by Russia, such as *Khudjand* and *Kuraminsk*, joined the revolt. A Russian invasion inevitably led to the capture of Khokand by General Von Kaufman. The Treaty of Marghilān was made with the new Khān, *Naṣr al-Dīn b. Khudāyār*, by which all the territory of Khokand on the right bank of the *Syr Daryā* was ceded to Russia. But fighting nevertheless continued in the eastern part of the khānate, until Russia finally occupied the whole of the khānate, deposed the line of the *Mīr Khāns* and annexed all their lands to Russia. The imposition of direct rule over the khānate was especially important to Russia at this time, because Khokand's eastern frontier marched with Kāshgharia or Chinese Turkestan, then controlled by the rebel *Ya'qūb Beg* [q.v.], himself a Khokandi who had fought against the Russians at the capture of *Al-Masgid* (*Kyzyl-Orda*) on the middle *Syr Daryā* in 1853, and was not surprisingly hostile to Russia. As part of the Governor-Generalship of Russian Turkestan, Khokand now

became an oblast under the ancient name of Farghāna. In the 1898 administrative re-organisation, Khokand became a *wālad* of the oblast of Farghāna. The town of Khokand itself continued to be the chief town of the region, with 11,636 inhabitants in 1911, but with the newly-founded town of New Marghilān, later Skobolev, as the governor's seat.

The Muslim peoples of the former khānate played a major rôle in the anti-Russian rebellions of 1916, when the Imperial government attempted to call up non-Russians for labour service in the war. In the following year, it was the focus of the Muslim movement for the autonomy of Turkestan as the Tsarist régime broke up, and in December 1917, the Fourth Extraordinary Regional Muslim Congress met in the town of Khokand and declared the autonomy of Turkestan. Early in 1918, however, the Tashkent Soviet declared the government set up in Khokand under Muṣṭafā Çakayev to be counter-revolutionary, and in February 1918 Red Army forces attacked the town of Khokand, which was defended only by a hastily-raised Muslim militia, captured it, and conducted a savage massacre in which several thousands of the inhabitants were killed. After this, Muslim desires for self-determination in the region were expressed by the guerrilla activities of the Basmachi (q.v.).

Under the Soviets, Khokand forms a *rayon* or district of the Farghāna oblast of the Uzbek SSR. It is now an important centre for light industry, in which silk and linen manufactures are prominent. The palace of Khudāyār is now the town's museum. The population in 1970 was 133,000.

(W. BARTHOLD - [C. E. BOSWORTH])

KHOKARS, a powerful hill-tribe inhabiting the Jahlum area in the north-west of the undivided Panjab. The Khokars were a dominant race of the province at the time of the first Muslim invasion of the Indian sub-continent; their origins are as shrouded in mystery as those of any other Panjab tribe, but that they were originally Hindus seems hardly open to question.

The earliest mention of the Khokars occurs in Hasan Nizāmī's *Tadhkirat al-mulūk* which refers to an insurrection of the tribe under their chiefs named Balan and Sarli. The next contemporary chronicle to contain a reference to the Khokars is Miḥāj-ī Sirāj's *Tabaqāt-i Nāyiri*, which says that they were encouraged by Malik Khusrāw, the last Ghaznavid ruler of Lahaur, to rise against their Dīlmanī overlords. History also records a military contact near Lahaur between the Khokars and a force of the fugitive Dīlālī al-Dīn Khwārazmī in 609/1223.

Extending their sway beyond their traditional stronghold in the country between the Jehlum and the Chenab, the Khokars held a considerable area east of the Beas. In 647/1250 they were masters of most of the upper part of the Panjab, but they are no more heard of until the reign of Sulṭān Muḥammad Tughlq in when they again created disturbance. Yahyā Sirhindī's *Tārīkh-i Muḥarrak* describes the seizure of Lahaur in 797/1394 by the Khokar chief Shāykhā and his long-standing feud with Shārang Khān, governor of Dipalpur, resulting in the former's defeat.

The Khokars played a significant rôle in offering resistance to the invading hordes of Tīmūr in India. After Shāykhā's arrest by Tīmūr in 801/1398, the Khokars disappear from history, but his son Dīlrasat, who escaped from Samarkand, whither Tīmūr had taken him as a prisoner, emerges later in 823/1420 as a force to reckon with. For more than twenty years, this indefatigable Khokar warrior proved to be the cause of constant worry to the Sultans of Dīhlī. In 843/1441, Sulṭān Mahmūd Shāh conferred Dipalpur and Lahaur on Bahlul Lōdī and charged him to chastise Dīlrasat, but the wily Khokar came to terms with Bahlul and urged him to oust the Sayyids and occupy Dīhlī. However, Dīlrasat was murdered in 846/1442 by his queen, a daughter of Bhīm Deo, Rājā of Dīlmanī, because her father had been put to death by him. After Dīlrasat, the Khokars were left leaderless, and coupled with the rise of the Lōdī power in the Panjab, the Khokar ambitions finally came to naught.

Scholars and historians have often confused the Khokars with the Gakkhars, a totally distinct tribe, settled in the same province. Fright at all probability means Khokars when he describes the Gakkhars as a race of wild barbarians, devoid of religion or morality, practising polyandry and female infanticide. Similarly, in his article, *A history of the Gakkhars*, in *JASB*, xlii (1871), I. G. Delmonck has attributed the achievements of the Khokars to the Gakkhars. As a matter of fact, the Khokars were spread all over the central districts of the Panjab centuries before the Gakkhars acquired a foothold in the Salt Range, to which they remained traditionally confined (cf. H. A. Rose, *The Khokars and the Gakkhars in the Panjab history*, in *The Indian Antiquary*, xxxvi (1907), 1-9).

KHOMAYR (see KHUMAYR).

KHOSRAW (see KHOSRAW, KHUSRAW, KUSA).

KHOSREW BEG, 32nd ak beg of Bosnia, was born in Seres (Macedonia) ca. 885/1480. His mother, the princess Seldjök, was a daughter of Sulṭān Bīyazīd II (q.v.), his father Ferhād being a South Slav

from Herzegovina (C. Truhelka has shown that "Radivoj, the brother of the Sultan's son-in-law", to whom the people of Ragusa [d.u.] sent gifts, was Ferhad's brother). Taking part in Sultan Süleyman's campaign against Belgrade (927/1521), Khosrew Beg was appointed *sandjak beg* of Bosnia on 13 Shawwāl/13 September of the same year, a fortnight after the conquest of the city. Having stayed four years in Sarajevo, he was removed from office because he failed at the siege of Yayeč. Some six months later he returned to his post, which he kept until he died, over sixty years old, in 948/1542, except for an interruption of a few years (1533-6), during which he was at Belgrade *sandjak beg* of Semendria.

Distinguishing himself by his successful campaign, Khosrew Beg was nick-named *Ghâsi*; even today he is well-known among the Bosnian Muslims by the name of *Gazi Husrev-beg*. Due to his military activities, Turkish power spread widely in Bosnia, Dalmatia and Slavonia (Obrovac, Yayeč, Banjaluka, Polog, Kila, Gorjan).

His campaign brought Khosrew Beg great riches which he spent on enlarging Sarajevo. During his governorship, the city grew into an important centre. Three charters of foundation (*waḥḥiyye*) attest his activities: two (938/1531 and 941/1537) for the Khosrew Beg mosque (*Begova džamija*) next to which was erected the mausoleum (*türbe*) in which he was buried, and one (943/1537) for the *Kurdušija medrese*. The *Begova džamija* is one of the most outstanding specimens of Islamic architecture in Yugoslavia, and an imposing monument of the Turkish period in Sarajevo. The *waḥḥ* founded by Khosrew Beg has been of great importance for the city of Sarajevo and for the cultural life of the Muslims in Bosnia and Herzegovina in general. Up to the 20th century, many public buildings were erected with its revenues. It still exists, but much property was lost in the 12th/17th century, especially at the great fire in 1697 when Prince Eugene of Savoy made his breakthrough at Sarajevo. In course of time, many estates belonging to the *waḥḥ* were lost, including recently at the land-reform in Yugoslavia after 1918.

In the charter of foundation of the *medrese*, Khosrew Beg ordered a library to be attached to the school. During the governorship of Topal Othman Pasha in Bosnia (1861-9), the library was separated from the school, and the books were transferred in 1864. After 1867 books and documents from other libraries and institutions were brought to this library, known as *Gazi Husrev-begova biblioteka*. In 1903 it held 6,456 Arabic, Persian and Turkish manuscripts, and many have been added since. There are also ca. 3,500 documents of the Turkish period, 400 charters of foundation and 84 registers (*ḥudūd*) of the *ḥâḍiḡ*s of Sarajevo.

Other monuments in the town for which Khosrew Beg was responsible include a *ḥammâm*, a *bedestan* of 90 stalls and the *Taşlı Khân*, a care vanseral provided with 60 lodgings.

Dobrača, *Gazi Husrev-begova biblioteka u Sarajevu—Katalog arapskih, turskih i perzijskih rukopisa*, Svezak prvi, Sarajevo 1963. There are numerous references to Ghâsi Khosrew's military activities in the *Diarr* of Marino Sanuto, where he appears under the name of "Usref Beg".

(B. DJURJEV and J.-L. BACQUE-GRAMMONT)

KHOSREW, MOLLA, a famous Ottoman jurist, whose real name was Mehmed b. Farisnurz b. 'Alî. According to one statement he was of Turkoman (tribe of Warsaw) descent and born in the village of Karghin (half way between Sivas and Tokat); according to others, however, he was of "Frankish" descent and the son of a "French" nobleman who had adopted Islam. According to Sa'd al-Din his father was of Romale (Râm) descent. Khosrew became a pupil of the famous disciple of Taftazânî, Burhân al-Din Haydar of Herât (cf. *IA*, XI, 81 and Sa'd al-Din, *Taḡlî al-tawḥîd*, II, 430), and received a teaching post in the *Shâh Malik medrese* in Adrianople; in 848/1444 he became *hâḍi* of Adrianople and later *hâḍi* of Rummeli. On the death of Khidr Beg (d.u.), the first *hâḍi* of Constantinople, he succeeded him and was at the same time *miderris* at the Aya Sofya. Feeling hurt at Mollâ Kurân (d.u.) being pronounced over him, he went to Bursa in 867/1462 and built a *medrese* there. In 874/1469 he returned to Istanbul by command of the Sultan, became *Shaykh al-Islâm* and died there in 883/1480. His body was taken to Bursa and buried in the court of the mosque founded by him. He also founded a mosque in Istanbul, which bears his name (cf. *Hâḍiḡ Husrev, Hadîḡat al-giawân*, I, 201; J. von Hammer, *GOR*, IX, 87, No. 428).

Mollâ Khosrew was a celebrated jurist, many of whose pupils became famous in after life. He also attained a wide reputation as an author. His two most important works are the often annotated *Durur al-ḥukhm fi sharḥ Qhurar al-ahkam* on the principles of legal practice, written in 877/1473-7 (printed at Cairo 1294 and 1303), also a dogmatic work *Mirâḥ al-usul fi 'Im al-usul* (printed at Cairo 1262 and Istanbul 1304). On other works by him, cf. von Hammer, *GOR*, II, 580 ff. and Brockelmann, II, 226-7.

(F. BAHICHA)

KHOSREW PASHA, BOENIAK (?-1047/1632), Ottoman Grand Vizier. Bosnian in origin, Khosrew was taken into the palace service and rose to the office of *sâḡḡir*. When, in Muḡarram 1033/October-November 1623, the dissident (*ḡḡe*) *ada* *bagh* of the Janissaries demanded the replacement of their *agha* by someone not of the corps, Khosrew passed out of the *enderûn-i ḡḡḡḡḡ* to become *Yâḡḡerî agha*.

The state was at this time going through a critical period: the dominance of the Janissaries in internal affairs had reached new heights with the execution of 'Oḡḡmân II (Rudjâh 1033/May 1622); Abâḡ (Meh-

med) Pasha [g.u.] was in revolt in Erzurum; and the Safawid Shah 'Abbās I was soon to take Baghdad (Rabī' I 1033/January 1624). In Shābān 1033/May 1624 Khosrew Agha, as *agha* of the Janissaries, left Istanbul with the *hazfînî* soldiery in the train of the Grand Vizier Çerkes Mehmed Pasha [see MEYAMAD PASHA ÇERKES], who had been given the command against Abāza Pasha. Khosrew is mentioned as having fought courageously in the victory over Abāza's forces near Kayseri in Dhū 'l-Ka'da 1033/September 1624. When Çerkes Mehmed died in winter quarters in Tokat (Rabī' II 1034/January 1625), Khosrew and the *bahāğftrāde*, Hāfīz Pasha, wrote to the capital urging the appointment of the *beglerbegi* of Diyarbekir, Hāfīz Ahmed Pasha [g.u.] as his successor, an action Khosrew came to regret on learning that he himself might have been considered for the office. Though he was soon after given the rank of vizier, he is said by Pešewi, then with the army, not to have been able to overcome his disappointment and to have hoped that Hāfīz Ahmed might fail in the subsequent campaign against Baghdad (Pešewi, *Ta'rikh*, II, 403, 405).

In Ramaḍān 1034/June 1625 Khosrew and the forces which had wintered in Tokat joined the army under Hāfīz Ahmed to march against Baghdad. The ensuing siege of that city, which lasted for nearly eight months (Safar-Shawwāl 1035/November 1625-July 1626), was unsuccessful, but Khosrew again distinguished himself by his bravery, especially when the Ottomans were near to rout in the third of the battles (Ramaḍān 1035/June 1626) with a relieving force of some 30,000 soldiers under Shāh 'Abbās himself. (For an undated imperial decree sent to Khosrew during this siege, see Feridūn Beg, *Mungha'zi al-salāḥ*, Istanbul 1264-5, II, 89-90).

Following the failure of Baghdad, both Hāfīz Ahmed Pasha and Khosrew Agha were dismissed (Rabī' I 1036/December 1626), though neither was disgraced. Summoned to the capital by the sultan, Murād IV, Khosrew arrived in Rajab 1036/March-April 1627 and was made a *ḥubbe* vizier (and thus Pasha). The inability of the new Grand Vizier, Khalīl Pasha, to counter the renewed threat from Abāza Pasha in 1627 led to the former's dismissal. The sultan is said to have placed great trust in Khosrew Pasha's courage and in his ability to control the army (Pešewi, II, 409); and in the consultation over the choice of a new Grand Vizier the arguments of the *Shaykh al-Islām* Yahyā Efendi that it was time to try a new face and that Khosrew's unparalleled reputation for valour made him the best man for the post silenced the other ministers. Because there were viziers senior to him, notably the *hāḥim* muḥim Raḡab Pasha [g.u.], he was not made Grand Vizier immediately but was first appointed governor of Diyarbekir and sent to Iznik, where the imperial seal was delivered to him on 1 Shābān 1037/6 April 1628. In his letter of appointment he was charged first with subduing Abāza Pasha, then with marching against the Safawids; and he was also given wide discretion in the making of appointments and the administration of affairs generally (see Feridūn Beg, II, 90-5, for the *berāt*).

Having made careful preparations for the campaign against Abāza, Khosrew moved towards Tokat. Through harsh measures against wrongdoers and those whom he regarded as having failed in their duty, he succeeded in establishing strict discipline in the army. He reached Tokat on 28 Ramaḍān 1037/1 June 1628, where he remained for some seven weeks before a report that Abāza, concerned by desertions from his forces, was seeking aid from Shāh 'Abbās

spurred him to move quickly against Erzurum. His considerable reputation for bravery persuaded increasing numbers of Abāza's followers to desert to him, a tendency which he further encouraged by treating the deserters well. Abāza had laid siege to Hasanakale but returned to Erzurum on hearing of Khosrew's advance. At the suggestion of the governor of Hasanakale, Khosrew advanced on Erzurum at great speed with a picked force, arriving before Abāza could complete his preparations (29 Dhū 'l-Hiǧǧa 1037/30 August 1628). During the siege which followed, Khosrew again encouraged desertions by promises of pardon and employment in the army. Recognising the impossibility of resistance, Abāza surrendered on terms on 23 Maḥarram 1038/22 September 1628, and Khosrew thus brought to an end a problem which had bedevilled the state for some six years. A Safawid force coming to Abāza's aid was surprised and defeated by the governor of Ħars, its commander, Shamsī Khān, being captured and sent to Khosrew. Having decided not to winter in the field, Khosrew returned to Istanbul with both Abāza and Shamsī Khān in his train and made a triumphal entry into the city on 12 Rabī' II/9 December. Abāza, pardoned in accordance with the terms of the surrender, was appointed governor of Bosnia.

Though Khosrew fell ill in the spring of 1629, he recovered and was appointed commander for the campaign to retake Baghdad. He left Üsküdar on 18 Dhū 'l-Ka'da 1038/9 July 1629 and arrived in Mosul on 1 Dhuḥada 1 1039/17 December 1629. An unusually hard winter, with continuous heavy rains and even snow, caused severe flooding over a large area and created great difficulties for the army. On 13 Dhuḥada 11/28 January 1630 the army left Mosul for Baghdad. Having suffered considerable losses of men and matériel in the crossing of the flooded river Zab, Khosrew convened a *divān* in which it was decided that to besiege Baghdad in the present conditions was impossible and that the time would be better spent in a pre-emptive attack on the ruler of Ardabil [g.u.], Khān Ahmad, who might otherwise threaten their rear. As the army advanced, many of the Kurdish *begs* submitted to Khosrew. Reaching the district of Shahruzir, Khosrew was persuaded to rebuild the fortress at Gul'anbar, built by Sulaymān I and subsequently destroyed by Shāh 'Abbās. The work was begun on 1 Shābān 1039/16 March 1630 and took some fifty days to complete. During the stay at Gul'anbar, Khosrew sent a force to take the fortress of Nūrbān, on the road to Hamadān. The garrison surrendered, but the Ottoman force was then attacked by a Safawid army under the *āgha*-4 *khān*, Zaynal Khān. In the ensuing battle the Ottomans, with some difficulty, won the day (22 Ramaḍān/5 May). Moving further east, the Ottomans sacked the palace of Khān Ahmad at Hasanabad and, on 27 Shawwāl/9 June, reached Hamadān, which had been evacuated by the Safawids. They laid waste the city, and, with the intention of marching on Ħarzin, advanced to Darguzin, which they also sacked. It was there decided that an attack on Ħarzin would prove both difficult and ultimately pointless and that it was past time to return to the main aim of the campaign, the recovery of Baghdad which was now some sixty stages distant. The army departed from Darguzin on 10 Dhū 'l-Ka'da 1039/22 June 1630 and marched towards Baghdad, meeting serious resistance only from the ruler of Luristan, sent against them by Shāh Sefi, whom they overcame on the plain of Camkhāl, near Nihāwand, on 3 Dhū 'l-Hiǧǧa/24 July. Reaching the environs of Baghdad in early Septem-

ber, Khosrew began on 28 Şafar 1040/6 October 1630 what proved to be a fruitless siege of the city. Five days after an unsuccessful full-scale assault on 3 Rabi' II/9 November it was decided to withdraw. During the course of the siege Khosrew had been persuaded by the local Arabs to garrison the fortress at Hilla, and leaving a sizeable force there, he departed with the army for Mosul, where he arrived on 7 Dhu'l-hi'dja/1/15 December. While the army dispersed for the winter, Khosrew, in ill-health, prepared to winter in Mosul.

When the news that the Ottomans had abandoned the siege of Baghdad reached Kurdistan and the Şahh, an army under Khân Aḥmad attacked the Ottoman garrison at Dertsek. The defenders fled to the newly built fortress at Şahrisrûr (Gul'anbar) which was subsequently attacked by a large army under Khân Aḥmad and the Şafawid Ḥāṣe-i Ḥisnān; news of their advance caused the Kurdish legs to switch their allegiance to the Şafawids. The garrison at Şahrisrûr evacuated the fortress, but subsequently engaged the Kurdish Şafawid army in battle, only to be heavily defeated; three of the Ottoman commanders reached Mosul on 28 Dhu'l-hi'dja/1/3 December and were put to death by Khosrew. The victors meanwhile destroyed Gul'anbar. A Şafawid army under Şahh Şafi then laid siege to Hilla, which they succeeded in taking despite stout resistance. The loss of Şahrisrûr and the siege of Hilla persuaded Khosrew to retire to the relative safety of Mardin. Having made arrangements for the repair of the fortifications at Mosul, he left on 28 Dhu'l-hi'dja/1/22 January 1632 and arrived in Mardin on the 29th/2 February. (For further details of the Hamadân/Baghdad campaign from the Şafawid side, see Iskandar Beg Munshî, *Dihl-i Ta'vîḥ-i 'Alam-ārd-i 'Abbāsî*, ed. Sulaylî Khānssârî, Tehran 1938, 39 ff.)

From Mardin a request was sent to the capital for men (in particular a large force of Tatars), money and supplies for another campaign against Baghdad in 1632. In Dhu 'l-Ka'da 1040/June 1632 Khosrew moved to Kerkisâr, a short distance to the south-west of Mardin, where he spent the summer months awaiting the arrival of the Tatars, several thousand of whom had set out in the spring, and trying to decide on his course of action. When he finally determined to move towards Mosul (Şafar 1041/September 1632), heat, fatigue and disease had so affected the army that it was urged that the campaign be abandoned until the following year. Khosrew had little choice but to agree and retired toward Diyârbelkîr where he entered winter quarters on 3 Rabi' II/29 October.

By this time, however, he had already been replaced as Grand Vizier by Hâfîz Aḥmad Paşa, the decision to do so having been taken in Istanbul on 26 Rabi' I 1042/25 October 1632. Na'ima (Ta'vîḥ, III, 76-9) lists a number of underlying reasons for his dismissal, chief among them his excessive dependence upon, and consequent currying of favour with, the troublesome elements in the army (*şorbas*), this in turn leading to instances of oppression and maltreatment (see also II, 441-3, where Na'ima gives details of Khosrew's securing the dismissal of a *Yâsî-lâs* *Asîbî* who had been appointed with specific instructions from the sultan to end the abuses in the enrolment of Janissaries and to prevent improper entries in the registers of the corps). The decisive factor, however, appears to have been his failure to retake Baghdad despite a substantial investment of men and resources. When the news of his dismissal reached Diyârbelkîr (22 Rabi' II/16 November), the army immediately protested, threatening to kill the messenger who had brought the news and urging

Khosrew to remain until they could make representations to the capital on his behalf. Khosrew calmed them, however, accepted his dismissal and left Diyârbelkîr (26 Rabi' II/21 November), surrendering the imperial seal in the vicinity of Malatya. A recurrence of gout forced him to halt in Tokat, where he was to remain until his death.

Khosrew Paşa's dismissal became the focus of a serious rebellion in the capital, incited, it is said, by the vizier Radjab Paşa, who covered the Grand Vizierate. Those involved were the *şapîḥs* who had been recalled from Diyârbelkîr for the winter and a number of individual *şorbas* who, having built up their own followings and made themselves virtually independent in various parts of Anadolâ and Rûmîlî, had agreed to attempt to restore Khosrew to the Grand Vizierate and had converged on the capital. Demanding the deaths of seventeen leading men identified as those who had brought about Khosrew's dismissal, the rebels succeeded in assassinating Hâfîz Aḥmad Paşa, who was replaced by Radjab Paşa (19 Radjab 1042/20 February 1632; Peñewî, II, 420, wrongly cites the execution, not the dismissal, of Khosrew as the cause of this rebellion). Deeply angered by these events, Murâd IV held Khosrew to be the cause and determined on his execution. Appointing Murâd Paşa to the governorship of Diyârbelkîr, he charged him secretly with putting Khosrew to death. Despite opposition from the people of Tokat as well as Khosrew's followers, this end was accomplished when Khosrew ordered an end to resistance and accepted his fate. The news of his death, which became public knowledge in the capital on 29 Şahbân 1042/11 March 1632, provoked yet another serious rebellion, forming part of the general disorder which obtained until Murâd IV was able decisively to assert his authority in June of the same year.

Though Khosrew Paşa is credited in the sources with considerable personal bravery and with taking great pains in the preparation of his campaigns, these qualities are overshadowed by what is regarded as his excessive severity, even bloodthirstiness, to demonstrate which numerous examples are given. On this aspect of his character Na'ima remarks: "He had no hesitation in putting to death men whose execution neither the *şar'* nor reason required, who perhaps did not deserve so much as a rebuke" (III, 77). His success over Abdâza Paşa, a considerable achievement, is seen as having made him arrogant and headstrong, qualities which flitted ill with his relative inexperience. In the accounts of the Hamadân/Baghdad campaign he is faulted from the military point of view for having allowed himself to be persuaded by the Kurds to rebuild Gul'anbar and by the Arabs to garrison Hilla, since neither was defensible unless Baghdad were taken, and both projects, though each in a different way, were distractions from that basic aim. In contrast to the generally unfavourable impression of him, and especially of his character, which emerges from the sources, however, one might note the apparently spontaneous protest by the army at his dismissal; the attempt by the people of Tokat to defend him; and, while allowing for the selfish ends of some of those involved, the strong reactions aroused in Istanbul first by his dismissal and then by his execution. These events suggest that he was, perhaps, more widely admired, even at the end, than the sources, and particularly Na'ima, would lead one to believe.

Inalcik) (H. Inalcik · R. C. Repp).

KHOSREW PASHA, DIVANE OF DELI, Ottoman governor and vizier, and elder brother of Lala Mustafa Paşa [q.v.]. He was a Janissary of Bosnian origin, but became a deserter at the outset of his career, and for several years lived an adventurous life, as evoked by 'Alî in his *Kunûs al-âkâher*. He returned to grace at an unknown date, and then became food-taster (*şahinîr*) at the Palace, intendant of the corps of guards (*kapuçulu*) and then equester to the sultan. His conduct during the Çaldıran campaign gained him the governorship (*beglerbeglik*) of Karaman on 25 August 1524. He took part in the conquest of Diyarbakır in 1525, in the Egyptian campaign of 1516-17, and in the suppression of the Kizilbaş revolt of Şahîh Welî in 1520 and that of Dîndîrîdî Ghazâlî [q.v.] in the following year.

At the beginning of 1521 he became *beglerbeg* of Anatolia, and then of Diyarbakır at the death of the son of that same year of Bîyîkîl Mehmed Paşa [q.v.]; he was to remain for ten years in this post at Amîd, with responsibility for watching over the security of the frontiers with Safawid Persia and for consolidating Ottoman authority in the Kurdish principalities which had recently rallied to the Porte. During the winter of 1521-2, his disputes with Ulama Paşa, a Safawid refugee who had been made commander-in-chief of the troops in eastern Anatolia and was at that time in favour with the Grand Vizier Ibrahim Paşa, led to his dismissal. In 1532 he became governor of Anatolia for a second time, and took part in the 'German' campaign of that same year. Traced to the south of him until he turns up as *sandjak begi* of Aleppo and then *beglerbeg* of Damascus in 1534, and charged with various military duties during the 'campaign of the two 'Irâqla'. Whilst the Ottoman army was wintering at Baghdad in 1534-5, the sultan nominated him as *beglerbeg* of Egypt in place of Khâdim Süleyman Paşa [q.v.].

Khosrew Paşa's brief tenure of office in Cairo (February 1535-December 1536) was marked by such an enormous increase in the revenue from Egypt (*irsâdiyya* [q.v.]) that the Porte had suspicions about the legality of the means used to collect it. A commission of enquiry was unable to prove his guilt, but he was nevertheless dismissed from his office. In fact, the evidence on his administration in Diyarbakır and in Egypt reveals a brutal, largely unscrupulous and highly mendacious official, but also a remarkably efficient one. The Ottoman chroniclers of Egypt (Yûsuf, Mahmud b. Yûsuf al-Khalîkî and 'Abd al-Karîm b. 'Abd al-Rahmân) stress moreover the unusual prosperity and security which the land enjoyed under his rule.

He was replaced at Cairo by the powerful vizier Khâdim Süleyman Paşa, whose previous ten years' tenure of the governorship he had endeavoured to denigrate in the eyes of the Porte, evoking in Khâdim Süleyman Paşa a tenacious hatred against him. For the third time, Khosrew Paşa became *beglerbeg* of Anatolia at the beginning of 1537, and then of Rumelia in June 1538. His services during his tenure

of these offices (the Moldavian campaign of 1538 and the capture of Castelnuovo in 1539) led the sultan to appoint him as fourth vizier in 1541, Khâdim Süleyman Paşa being Grand Vizier and Rüstem Paşa [q.v.] second vizier. It seems very probable that the latter's ambitions were the cause of the ruin of the other two. As the sultan's son-in-law and enjoying the support of his influential mother-in-law Khürrum Sültân, Rüstem was able to rouse against each other very skilfully the old enemies Khâdim Süleyman and Khosrew in such a way that they came to blows in the sultan's presence in 1544 and were both deprived of office for this affair. Rüstem Paşa then became Grand Vizier. In despair at having lost his offices and powers, Khosrew Paşa allowed himself to starve to death in this year, one of the very rare cases of suicide amongst Ottoman officials of this period.

(J.-L. BACQUÉ-GRAMMONT)

KHOSREW PASHA, MUHAMMED (?-1277/1855), Ottoman Grand Vizier, educated in the Palace and raised to the post of head *Şukûkâr* on the accession of Selim III [q.v.] in 1203/1789. He entered the service of Kûdik Hüseyin Paşa, a protagonist of military and naval reform, who became Admiral (*Kapudan-ı deryâ*) in 1206/1792. In 1215/1801 Khosrew sailed with the fleet to Egypt, where he commanded a force of 6,000 and co-operated with the British in the recapture of Rashîd and the defeat of French forces. In recognition of his services he was soon afterwards appointed *wâlî* of Egypt.

In Egypt he attempted to establish the *nişân-ı dîrdî* [q.v.] army and disband the irregular *bağlî* bands troops imported from Rumelia for the war against the French. When he attempted to stop their pay, the *bağlî* bands forces rose in revolt and defeated Khosrew's own troops. Then Tâhir Paşa attacked Khosrew, forcing him to withdraw to Damietta and declared himself *wâlî* of Egypt. Shortly afterwards, Tâhir was murdered, leaving Muhammad 'Alî [q.v.] and the Mamlûks real masters of Egypt. In Rabi' al-Awwal 1218/July 1803, the Mamlûks defeated Khosrew near Damietta and threw him into prison. On his release by Muhammad 'Alî 6 months later, he was removed from the governorship of Egypt.

His next appointment was as *wâlî* of Diyarbakır (1218-19/1803-4), followed by various governorships in Rumelia. He was active in the Russo-Turkish war which broke out in 1221/1806 as *wâlî* of Silistra and military commander on the Danube front. In recognition of his services, he was appointed *Kapudan-ı deryâ* in Dhu'l-Hijja 1222/January 1812 and commanded the Ottoman fleet in the Black Sea until the conclusion of a peace in Ramaçân 1227/September 1812. He was dismissed in 1233/1818, and afterwards served in a number of provincial governorships. As *wâlî* of Erzurum he was appointed military commander (*sar-ı asker*) in the east, with instructions to pacify rebellious Kurdish tribes whose activities had led to a clash with Persia. However, his mishandling of the affair led to a rebellion by the former *mutasarrıf* of Bayezîd, while the Persians, taking advantage of the situation, captured Bayezîd, Erzurum and Bitlis. The Porte transferred him to the governorship of Trabzon, and in Salâr 1257/September 1821 appointed in his place the former Grand Vizier Mehmed Emin Ra'îs Paşa.

With the outbreak of rebellion in the Morea, Khosrew Paşa was again appointed *Kapudan-ı deryâ* (Rabi' al-Akhir 1238/December 1822) and detailed to

pursue the rebels in the Aegean. For this purpose, he constructed a fleet of shallow-draught vessels, suitable for pursuit in shallow waters, and attempted to cut off sea communications between Morea and the islands, at the same time victualling Ottoman troops on the Greek mainland. However, during the siege of Missolonghi (1240-1282/5-6), rivalry often broke out between Khosrew and Muhammad Ali's son Ibrahim Pasha [q.v.], who was commanding an Egyptian force on the Sultan's behalf. Ibrahim and Muhammad Ali sought Khosrew's dismissal from the admiralty and were eventually successful. He was instead appointed *wilāy* of Anadolu (Anatolia).

Khosrew, however, retained the confidence of Mahmūd II, who recognised him as a protagonist of military reforms and as being instrumental in introducing European tactics to the fleet. In 1242/1827 the Sultan therefore appointed him *ser'asker* of the newly formed army, the *‘ashkir-i mansûre-yi muhammadiyahye*, where he also began to introduce European tactics and training techniques. His influence in the capital increased after the outbreak of war with Russia in 1243/1828, when he engineered the dismissal of the Grand Vizier Selim Mehmed Pasha and the appointment of his own former slave and nominee, Rashid Mehmed Pasha. He also secured a commandship on the front for his former slave Khalil Rifa'at Pasha, and the dismissal of the *ser'asker* on the Russian front, Agha Hüseyin Pasha. Meanwhile, the Russians crossed the Balkans and advanced on Edirne. Khosrew advised the Sultan to seek a peace, at the same time taking extraordinary measures to prevent panic in Istanbul, to the extent even of executing certain advocates of surrender. This, and the unpopularity of his westernising measures in the army, almost provoked a popular revolt. He was present at the peace negotiations in the presence of the French, English and Prussian ambassadors. His influence was now at a height, and he used it to remove his rivals from positions in the government, replacing them with his own slaves, and to have the former Grand Vizier, Selim Mehmed Pasha, dismissed from the governorship of Rumelia.

During the Russo-Turkish war, Muhammad Ali had made excessive demands to the Sultan and was now threatening Akkö. At this point, Mahmūd placed the matter in the hands of Khosrew who, in Dhu l-Ka'da 1247/April 1832 appointed Agha Hüseyin commander of the army in Anatolia. After Muhammad Ali's victory and advance on Istanbul, Khosrew invited military instructors from Europe, among them the famous Von Moltke. During this period he had the complete confidence of the Sultan, and his responsibility for the security of the capital and the fact that he advanced many of his numerous personal slaves to positions in the government, further increased his influence. By marrying his own men to the Sultan's daughters, he insinuated his way into Palatine circles.

However, in Shawwāl 1258/January 1837, two of his own protégés, Khalil and Sa'ad Pasha, secured his dismissal as *ser'asker*, while in Rabī' al-Awwal 1253/June 1837, his great rival Mustafa Rashid Pasha became Foreign Minister. Khosrew was retired on a pension. His absence from public affairs did not last long. In Dhu l-Hijja 1254/March 1838, he received the chairmanship of the Reform Committee (*medjalis-wilāy*) and presided over the councils which met in his villa to discuss the Egyptian question.

A further deterioration of affairs in Egypt and the death of Mahmūd II in 1255/1839 caused a grave crisis in the empire. It was at this juncture that Khosrew literally seized power, by grabbing the Im-

perial Seal from the Grand Vizier, Ra'uf Pasha, during the funeral of Mahmūd II, and declaring himself Grand Vizier. This led to the defection of his rival, the *Kapudan-i derya*, Ahmed Fovz Pasha, who sailed with the fleet to Muhammad Ali in Egypt, with the intention of returning with Egyptian troops and deposing Khosrew. Muhammad Ali for his part, demanded Egypt and Syria for himself and the dismissal of Khosrew. Neither plan succeeded. Khosrew remained in his post, but the Foreign Minister, Mustafa Rashid Pasha, seized the initiative and, partly no doubt to win the sympathies of the European powers over the Egyptian question, had the famous *Khōst-i Sherif* of Gülkhāne proclaimed, marking the beginning of the *Tanzimat* [q.v.] era. Khosrew was still Grand Vizier, but Mustafa Rashid Pasha now had the sympathies of the Palace and was able to press for his dismissal and the reinstatement of Ra'uf Pasha. He then had Khosrew tried and convicted for bribery by the Supreme Council of Judicial Ordinances (*medjlis-i milli-yi ahkām-i ‘adliyye*) and exiled in Djumādā l-Ulā 1256/July 1840 to Takirdāg.

In the following year, the Sultan ‘Abd al-Medjid permitted his return to Istanbul, where a change in government permitted his return to power. In Şafar 1262/January 1846, he was appointed *ser'asker*, in which position he removed his predecessor Rifa' Pasha's nominees and replaced them with his own men. During this period of office, he opened the Military School at Küçük Taşim. However, later in the same year, he was removed from office, and the new Grand Vizier, Mustafa Rashid Pasha, took care to prevent his further rise to power. He died, at the age of more than ninety, on 13 Djumādā l-Akhirā 1271/3 March 1855.

Bibliography: see article *Husrev Paşa* by Halil İncelik in *IA*, of which the foregoing is a summary. (Eo.)

KHÖST, Arabic spellings *Kh-w-st* or *Kh-wist*, the names of various places in Afghanistan. The most likely etymology for the name is that given by G. Morgenstierne in his *An etymological vocabulary of Pashto*, Oslo 1928, 98: that it is an Iranised form *awisth, cf. Skr. *suwisth* "good site" (which became the place-name Swāt [q.v.] in the North-West frontier region of Pakistan).

The mediaeval Arabic and Persian geographers mention what appear to be two places of this name in northern Afghanistan. Those of the 4th/10th century mention *Khāst* as a town on the upper Heri Rūd on the borders of Ghūr and Ghazni (cf. Ibn Hawkal, 457, tr. 411, and Mukaddasī, 349), and this is apparently the Khōst mentioned three centuries or so later by Kāzwini, *Aḥsā al-bilād*, ed. Wustenfeld, 244, as a town of Ghūr; see Le Strange, *Lands of the eastern Caliphate*, 470, 417.

Distinct from this seems to be the Khōst further north near Andarāb and on the borders of Badakhshān, the district which the *Hudūd al-Shām* (end of the 4th/10th century) refers to as (7) Yūn, cf. tr. Minorsky, 109, 340-1, perhaps the *Khūwāst* of Yāqūt, *Buldān*, ed. Beirut, II, 398, and the *K'wat-it* to of Hsüan-Tsang, see Marquart, *Erdenšahr*, 241. It is frequently referred to in Timurid and early Mughal times. In 864/1479 we hear of one Mir ‘Abd al-Kuddās being given the governorship of Khōst, "one of the most important districts in Badakhshān and Kunduz" (*Tārīkh-i Rashidī*, ed. and tr. Elias and Ross, tr. 103). One of Bābur's wives, Māham, apparently came from here; his daughter Gul-rang was born here, and he visited it on various occasions, see the *Bābur-nāma*, tr. Beveridge, index.

In modern times, the most important region bearing the name Khöst is that comprised within the modern Afghan province of Paktia, lying to the south of the Sefid Kūh range in the basin of the Kaitu, an affluent of the Kurram river which drains eastwards to the Indus; hence the ethnic and tribal connections of Khöst with the regions of Kurram, Kohat and northern Waziristan on the modern Pakistan side of the Durand Line have always been close. Khöst now forms an important forestry region of Afghanistan, and in the southern, sub-tropical zone, dates, citrus fruits, etc. are grown; recent Afghan governments have made considerable agricultural investment here (see J. Humlum *et alii*, *La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 101, 105, and J. C. Griffiths, *Afghanistan*, London 1967, 119-20). In the 1930s, Khöst was the epicentre of a conservative, traditionalist Pathan rebellion against the tentative reforms of King Amīn Allāh, which seriously weakened the ruler's position and damaged the economic health of the country (March 1924-January 1925) (see W. K. Fraser-Tytler, *Afghanistan*, London 1967, 204-6; V. Gregorian, *The emergence of modern Afghanistan, politics of reform and modernisation, 1850-1946*, Stanford 1969, 282-4; L. Dupree, *Afghanistan*, Princeton 1973, 449, 459, 479).

Finally, the *Imperial gazetteer of India*, iii, 133, vi, 306, mentions a Khöst in Balūkhistan, the site of a small coalfield, 35 miles east of Quetta.

(C. E. Bosworth)

KHOTAN, a town of the People's Republic of China, in the autonomous region of the Uygurs. The town, and the territory which depends on its resources as an oasis, lie between the desert of Takla-makhan and the massif of Kuen-lun on the one hand, and the Kera-Kash and Yürling-Kash rivers on the other. The kingdom of Khotan became known to the Chinese world in about 125 B.C., following the mission of Khang K'ien, under the name Yu-t'ien. The name represented by this transcription seems to have had no connection with the town of Yotkan. Although numerous archaeological relics have been found at that site, Yotkan cannot correspond to Yu-t'ien. In fact, according to Pelliot (*Notes on Marco Polo*, 412, s.v. "Cotan"), Yu-t'ien corresponds to *Odan, with the variant *Odon arising from the transcription Yu-t'ien given by Hsuan-tsang (ibid., 409); the name encountered in the Khotanese texts is just a transcription of the Chinese Yu-t'ien under the form Yü-t'ina, while documents of the 4th century in Kharoshthi script give the form Khotana (L. G. Gerssenberg, *Khotanisches Sakya yarkh*, 10). Yotkan is a ruined pre-Islamic cemetery, approximately 8 km. west of the town itself.

In fact, the kingdom of Khotan was not really known to the Chinese until after the conquest of the Tarim basin, carried out by Hsiao Wu-ti (140-87 B.C.), in the years following 120 B.C. and through the reconquest by the later Han between 73 B.C. and ca. 170 A.D. Little is known of the history of the ruling dynasty and the name of the town is always transcribed Yu-t'ien in the Chinese sources. From the latter we learn that the population of the kingdom reached a total of 50,000. All that we can say is that this population spoke a language of Iranian type, which has become known as a result of discovery made at the beginning of the 20th century and which has been deciphered principally by Lüders, Steen Konow and H. W. Bailey. It now seems that the Khotanese spoke a dialect of the Saka language.

It was in the course of the first centuries A.D.

that the kingdom of Khotan received Buddhism. According to the Tibetan tradition, which agrees in some points with the account given by Hsuan-tsang, Buddhism was introduced to Khotan by a Kashmiri monk called Vairocana, during the reign, almost certainly legendary, of king Vijayasambhava (E. Zürcher, *The Buddhist conquest of China, in Sinica Leidensis*, xi, Leiden 1972, 340-1). This assessment is confirmed by the fact that one of the oldest dated Buddhist monuments is from 269 A.D. (A. Stein, *Sand-buried ruins of Khotan, 1908*, 405).

In the 7th century, Hsuan-tsang writes in his *Memoirs* (Watters, *On Yüan Chwang's Travels*, ii, 299): "We arrive in the kingdom of K'iu-sha-na-na. (Note!) In Chinese, this signifies 'Breast of the Earth'; it is the formal name used in the region. The local language uses the expression 'Kingdom of Huan-ne'. The Hiong-nou call it Yu-toen; the Hsu (Iranians), Ho-tan, the Indians, K'iu-tan. Formerly they (the Chinese) called it Yu-Pien; it is an incorrect form". (On this passage, cf. Pelliot, *Notes on Marco Polo*, 409-17).

Thus, in the T'ang period, the polite and literary form is "Costana" or "Gaustana", difficult to interpret according to Pelliot; the local language used the expression Xuān-ná (Hsuan?), this name faithfully rendering the name which appears in the Khotanese texts under the form Hvātina, Hvama, and Hvam; the nomads of the north would have pronounced it *Odea or *Odon, a name which is found much later in Syriac, translated from Persian, in the story "The History of the Patriarch Mar Yaballaha and the monk Rabban Sāmūd", published by Chabot (Paris 1895, 22), where the latter identifies the town of "Lōtōn" with Khotan. In fact "Lōtōn" is an erroneous form from the Persian original, where the *lām* has appeared as a result of confusion with the initial *dh*, whence we deduce the correct form "Odon" proposed by Pelliot fifty years ago, while Budge (*The monks of Kābidī Khān*, London 1928, 138) and Montgomery (*The history of Yaballaha III*, New York 1927) have retained the term "Lōtōn". This form appears in the works of Kāshghari (Brockelmann, 231), with "Odon" and "Khōtan". Finally, the Iranian would have pronounced it Ho-tan (Kul-tan) which assumes an original *Hvatan, precursor of the Khotan of the Muslims, while the Indians would have pronounced it K'iu-tan (*K'iu-tan) which presupposes a form Khutan or Khōtan. The land was known to the Tibetans under the name of Li-yul, "land of Li", although they knew the town under the name of Hu-tan, which is just a transcription.

In the T'ang period, the kingdom of Khotan was bounded to the south by the Kuen-lun, while in the east its territory touched that of Kroraina (Niya, Certen and the Lo-Nor region), and in the west that of Kāshghar (Khvesa) which stretched from the Pamirs and T'ien-shan to Mervabagh and beyond. The language used throughout the Khotan region was Saka-Khotanese, which was related to the Tadjik vernacular of the Pamirs, of which no ancient evidence has yet been recovered, to the language of Kāshghar in the west and north, of which some traces have been recovered at Turmshuk (the Turkish name of a site whose ancient name has disappeared), and in the east to the language spoken in Khorasān, of which apparently no relics remain.

The kingdom of Khotan at that time had a large population which had, no doubt under the influence of Buddhism, lost all interest in expansion and showed an extreme aversion to matters of war; Hsuan-tsang noted that the Khotanese were remarkable

craftsmen with a considerable taste for literary pursuits, also for music and dance. The region was the centre of a considerable commercial activity, being placed on the southern branch of the Silk Route, which was in use throughout antiquity and the Middle Ages; through the Khotanese texts we possess accounts of the travels of officials to Keshmir and Kan-su, which permit us to gain an acquaintance with the geography of Central Asia, in particular the names of towns; thus we find that Kāshghar is Kyesa, Niya is Nihā, Čerdēn is Yeshādā parvām, Urumtī is Yürdm-clā, Turfan is Turpanā, Lou-lan is Raurata, Yumen kouan is Kviykys, etc.

The dynasty of the kings of Khotan in the T'ang period (7th-10th centuries), the family name of which was apparently *Vijā* (preferable from *Vīśā*) was in existence before that time, for the history of the Sui (83, 56) mentions, according to Pelliot (op. *loc.*, 419) a king called *Vijayavikrama*; under the T'ang, the dynasty is known to us from a list which can be reconstructed from the texts of the History of the T'ang and which can be partially cross-checked by reference to the names preserved in the Khotanese texts; a certain number contained in the latter cannot be placed with certainty in this list; these are: *Vijānshān*, *Vijākirti*, *Vijāvikram* and *Vijāsagrama*. On the other hand, there are some that can be dated, in particular the last kings of the dynasty: *Vijāsambhava* (922-966), *Vijādura* (967-977) and *Vijādarma* (978-982) (Gerkenberg, op. cit., 12). It was shortly afterwards that the kingdom of Khotan was conquered by recently-converted Muslim Turks; the kingdom of Khotan was henceforward to be one of the collection of Turkish states in the region which constituted Turkestan.

The town of Khotan, unlike Kāshghar and the northern part of the Tarim basin, is not mentioned by the *Hudūd al-'Ālam* in the description of the Turkish tribes (§ 13, p. 56) in the section of the *Yaghma* of eastern Turkestan, but in that of China (§ 9, p. 85). As the *Hudūd al-'Ālam* dates from the year 372/983-3, it may be supposed that in about the year 980, when king *Vijādarma* was alive, Khotan and its territory formed a sort of enclave between the region of Kāshghar which was occupied by the descendants of *Saluk Bughrā Khān* (died 344/955-6) and the territories belonging to China and Tibet; the king of Khotan, according to this source (p. 85), styled himself "Ruler of the Turks and the Tibetans" (*'alim al-Turk wa l-'Arab*).

A little later, Gardizī, who was writing after 431/1040, reports (according to Barthold, *Ottol o pōissāshir v Srokhayay Ahiya*, 94) that even the town of Kai (?), situated at fifteen days' march from Khotan in the direction of China, was under the domination of *Toghuzghuz* Turks (cf. *Hudūd al-'Ālam*, 255). According to Gardizī, the inhabitants of Khotan were Buddhists, but he mentions a Muslim cemetery to the north of the town (*ibid.*, 255, n. 3), and in the town itself two Christian churches, although no documentary evidence of this has been found. As regards the Muslim world, Gardizī shows us that in the first half of the 5th/11th century, Muslim proselytism was already actively exercised in Buddhist circles, and it is possible that the implanting of this group was a contributory cause of subsequent events.

At the beginning of the 5th/11th century, the Turkish rulers of Kāshghar had become very powerful (Barthold, *22 Vorlesungen*, Berlin 1935, 79 ff., particularly 88-90), and had founded the dynasty of the *Karakhānids* (see *ИЛЕК-КХАНЫ*). The son of *Bughrā Khān Hārūn*, himself the grandson of *Saluk Bughrā*

Khān, who called himself *Kadir Khān Yūsuf* and reigned in Kāshghar from about 401/1010, decided, for reasons unknown to us, to conquer the territory of Khotan. Seeing that he died in 423/1032 (Ibn al-Athīr s.a.), it is likely that the conquest of Khotan was accomplished sometime between the years 1013 and 1032, for we possess money struck in his name at Kāshghar and at Yarkand from 404/1013-14 onwards (A. Markov, *Issledovaniya*, etc., 192 ff.). On the conquests of Khotan, cf. Barthold, *Turkestan*, 281, n. 2.

Later, Khotan, like Kāshghar, passed under the authority of the *Ilek-Khāns* (22.), and subsequently under that of the *Karā-Khitāy* (42.). After these events, the crises arising in Central Asia as a result of the expansion of the Mongol empire led the *Kharizm-Shāh* to make an agreement with *Kütlüg*, who had deposed and expelled his father-in-law, the *Gür-Khān* of the *Karā-Khitāy*, and a partition of the western sector of the *Karā-Khitāy* empire took place, between the two rulers, giving to the *Kh'arizm-Shāh* the territory to the east of the *Syr-Darya* as far as the heights of Kāshghar and of Khotan (Barthold, *Turkestan*, 356-7); after his accession to the throne, *Kütlüg*, who had married the daughter of the *Gür-Khān*, a Buddhist fanatic, undertook a fierce persecution of Islam in the regions under his authority, particularly in Khotan, after his agreement with the *Kh'arizm-Shāhs* (42.). According to *Djuywayn* (tr. Boyle, 63-6, 70-3), *Kütlüg* persecuted the Muslims cruelly and crucified the *Imām 'Alā'* al-Dīn *Khōtant* at the door of his *madrasa* in Khotan. In the time of *Haydar Mirzā* (42.), nothing more was known of this martyr; even his tomb was unknown (*Tārīkh-i Rashidī*, tr. E. D. Ross, 228, and ch. alii). Thus there was no indigenous historical tradition at Khotan, or if there was, the texts have been lost, Arabic and Persian geographical literature provides us with only the most meagre of information; the real situation is misrepresented by al-Sam'ānī (f. 189b) and by *Yāqūt*, who followed al-Sam'ānī in his own writing (II, 403).

Under the reign of *Ogeidey*, *Djuywayn* (tr. Boyle, 517) reports that "the lands between the banks of the *Amū-Darya* and the frontiers of *Khitāy* were placed under the orders of the Chief Minister *Mahmūd Yalavač* and of his son *Mas'ūd Beg*; those included Transoxania, Turkestan, Otrār, the land of the *Uyghurs*, Khotan, Kāshghar, *Djand*, *Kh'arizm* and *Farghāna*". *Rashid al-Dīn* (*Djūmā' al-tawārīkh*, tr. J. A. Boyle, *The successors of Genghis Khan*, New York-London 1977, 94), also writes as follows: "The *Kāpan* (*Ogeidey*) placed all the lands of *Khitāy* under the orders of *Mahmūd Yalavač*, and (the region of) *Besh-Balk* and *Karā Khodjo*, with the territory of *Uyghuristan*, Khotan, Kāshghar, *Almalik*, *Qayaliq*, *Samarqand* and *Bukhārā* as far as the banks of the *Oxus* under (the orders of) *Mas'ūd Beg*, the son of *Yalavač*". In the remainder of his work, he makes no further mention of Khotan; nevertheless, under the year 1253, Barthold (*22 Vorlesungen*, 284) writes as follows: "After the re-establishment of order, the frontiers of his government (sc. of *Mas'ūd Beg*) were extended further: to him were subjected Transoxania, Turkestan, Otrār, the land of the *Uyghurs*, Khotan, Kāshghar, *Djand*, *Kh'arizm* and *Farghāna*". After the death of *Mengü* (*Möngke*) in 1259, a conflict arose between *Kublay* (42.) and his younger brother *Arik-böge* in the course of which a cousin of *Arik-böge*, the *Čaghatayid* *Aluğu*, took to himself the entire area entrusted to the authority of *Mas'ūd Beg*; the latter appealed to *Arik-böge* who gave him full authority to dispossess *Aluğu*, but in the course of his mission he

went over to the side of Alghu who died ca. 1266. As Arık-bégh had been eliminated during this period, Kubilay appointed in his place another Caghataid, Barak, who took possession of part of the former possessions of his grandfather Caghatai, but Barak was compelled to his turn to submit to Kayda, grandson of Ögedey, who sought to reconstitute the territory given to him by Chingiz Khān. (Barthold, *22 Vorlesungen*, 184-6). Finally, a more or less stable equilibrium was established between Kubilay and Kayda, so much so that according to a passage of Marco Polo (ed. Yule-Cordier, I, 188; ed. Hambis, Paris 1955, 62-3). It is reported that in the 1270s Khotan was under the authority of the Emperor of China, while Yarkand depended on Kayda.

While Central Asia was the object of partition between great powers, it is nevertheless certain (Barthold, *22 Vorlesungen*, 188-9) that a number of indigenous dynasties survived as vassals, especially at Khotan. In reference to these last, Barthold mentions some Persian verses of which the date is unknown, which were composed in honour of the sultan of Khotan, Nuamish Tegia, the last words being quoted in Turkish (*elâmdin bîst ey şâh kigüydî Türk "yâmaş her bolmaş Nuamish Tegia"*). Barthold (*op. cit.*, 195) also mentions the fact that Djamī Karahī, in the appendices (*Muḥabbāt*) to his translation of an Arabic dictionary of the 4th/10th century, devotes considerable space to the town of Khotan, giving a brief description and a list of some persons native to the place. Again according to Barthold (*op. cit.*, 195), Muḥammad Haydar (*op. cit.*, tr. Ross, 301) writing in Kāshgharia, distinguished according to his own terms, four classes at Kāshghar and at Khotan; first—*himen*, the peasantry; second—*haufin*, the army; third—*oymak*, the nomads (who were entitled to a certain quantity of grain, textile goods, etc.); and fourth—the class of the officials and the *frānāp*.

Much later, it seems that Khotan shared the fate of other towns in the Tarim basin, in particular of Kāshghar and other towns in the same region; in the 18th century it was a part of the state established by the Khōdjas, who defeated the descendants of Caghatai, and were compelled to submit to the domination of the Dzungar, and later, in ca. 1760, to that of the Manchus who eliminated the Dzungar. Later still, in the seventh decade of the 19th century, Khotan was obliged to accept temporary domination by Ya'qub Beg and after the death of the latter in 1877 to submit once again to the Manchus. With regard to a historical work completed on 12 Šahbān 1312/24 February 1894 in Khotan and dealing with events subsequent to 1280/1865, cf. *Bull. de l'Acad.* (1921), 209; cf. also the chapter on the Khōdjas of Khotan in *Tārīkh-i emmīyye*, ed. Pantusov, 161 ff. The principal sources for the history of this region is provided by reference in the Chinese dynastic histories and in other works concerning the autonomous region of the Uyghurs itself, which have appeared in Chinese from the 18th century to the present day. It is there that the documentation concerning the town of Khotan is found.

The town itself, like all those in the Tarim basin, has known a variety of activities, but the silk industry which has continued from the Han period to the present day is the principal activity. At the time of writing, the industrialisation of the region is being developed by the People's Republic of China, although it is not possible to assess what progress is being made; it seems that the Chinese government is concentrating these on the search for raw materials. There is no certainty about the population figures; according to Kornilov, *Kashgariya*, Tashkent 1903,

273, the population amounted to only 15,000; according to E. and P. Sykes, *Through deserts and oases of Central Asia*, London 1920, 216, the population was 50,000.

Hartmann, *Chinesisch-Turkistan*, Halle 1908, 93 ff.; on the state of the Khōdjas and their connections with Khotan, cf. *id.*, *Der islamische Orient*, I, Berlin 1905, 195 ff. and the index. These sources may be completed by numerous works in Chinese.

(L. HAMRIS)

KHOTIN (in Ottoman Turkish usage *Khotin*; in modern Turkish and in Romanian, Hotin; Polish Chocim and variants; German Hwthyn (15th century), Chotim, Chotin, Chotcyn, etc.; Italian (18th century) Cocio; and other forms): a fortress and town on the right (formerly Moldavian) bank of the Dniestr (Turla), 20 km. south of Kameneț Podolsk (Kameniec [see KAMENEC]). Khotin is now (since the end of World War II) in the Ukrainian S.S.R., and forms the administrative centre of the rayon of the same name in the oblast of Chernovits (Chernauti, Czernowitz).

Khotin, which occupied an easily-defensible site at the point where the important mediaeval trade route from the Baltic to Constantinople crossed the Dniestr, was from the mid-14th to the late 18th century a military stronghold and commercial entrepôt of some importance. The region of Khotin, which was, in the 15th and 17th centuries, disputed between Poland and Moldavia, had attracted Ottoman attention as early as the reign of Mohammed II, and in the 16th century Muslim merchants frequented the route via Khotin to Poland. Khotin was besieged unsuccessfully by Ottoman II in 1530/1562; thereafter it was restored to Moldavian control, and is so described by Evliya Çelebi, who visited it in the retinue of Melek Ahmed Pasha in 1658 (*Seyahat-nâme*, v, 124-5). In 1684/1693 Khotin was occupied by the Poles, but it was regained by the Ottomans in the following campaign season (Sulhādā, *Tārīkh*, Istanbul 1928, I, 628 ff.). The Ottoman occupation of Podolia in 1683/1692 carried the frontiers of the Empire beyond the Dniestr, but with the retrocession to Poland of Podolia, and the evacuation of Kameneț in 1710/1699, Khotin became the most important Ottoman fortress in the region of the upper Dniestr; this importance was to increase in the course of the 18th century, as the conflict with Russia became ever more acute.

Khotin was occupied by the Russians in 1713; on its return to the Ottomans in 1723/1714, the old fortifications were rebuilt and increased in height by more than a half, as part of a general strengthening and rebuilding programme, which was supervised by a special commission sent from Istanbul. The contemporary Moldavian historian Cantemir described the Khotin of this period as the most elegant and well-fortified town of Moldavia, praise which is echoed in an Ottoman description of the town written at the same time. Also in 1723/1714, Khotin and its surrounding districts were removed from the jurisdiction of Moldavia and reorganised as an *eyālet*, as part of the strengthened Ottoman frontier defences along the right bank of the Dniestr, becoming, in the words of a German observer, "die einzige Vornauer der Moldau".

The 18th century stronghold of Khotin consisted of the mediaeval *ihāle* and the more extensive new outer works encircling the old fortress on three sides.

In the outer walls were four gates: their names are variously given as the Istanbul (or Jassy) gate, the Temesvár gate, the Water Gate and the Ukraine or Bender gate. Within the outer fortress were two baths, two principal mosques and, near the Istanbul gate, a *hessâm*. Inside the Istanbul gate, on the right, lay the barracks of the artillery and the supply-train, the residences of their *aghas*, and the headquarters of the *defender*. On the left was a large and well-constructed reserve granary. Further towards the *hessâm* were situated another bath, the office of the *schêrî aghas*, and the barracks of the Janissaries of the fortress. Higher up, towards the old fortress, was situated the *errâ* of the *pagha* of Khotin, and the mosque of the *valide sultân*. Khotin was, however, yet again occupied several times by Russian forces in the course of the 18th century: in 1753/1759 (by Münnich) and again in 1783/1769 (by Galitsin). In 1788 Khotin was occupied by an Austrian force; later, after the conclusion of the Peace of Jassy, Khotin was restored for the last time to Ottoman rule. After 1806 it remained in Russian hands, except for the period 1918-47 when the territories south of the Dniestr formed part of Romania.

(C. J. Heywood)

al-KHUBAR, a town on Saudi Arabia's Persian Gulf coast (26° 17' N, 50° 12' 45" E). The name is most likely a colloquial plural derived from the word *khubra*, meaning "a small pond formed by rain".

The first permanent settlers on the spot were members of the tribe of al-Dawasir who landed in 1321/1903 after fleeing the island of al-Bahrain in fear of British reprisal following clashes with *Shi'î* elements. 'Isâ b. Ahmad al-Dawasir is generally regarded as the first settler of al-Khubar. Other tribesmen who landed at nearby al-Dammâm a few weeks earlier subsequently moved to al-Khubar. Prominent among the early inhabitants were Muḥammad b. Raḥîd and his brother 'Isâ, Ḥusayn Bû Surayb, Khâlid b. Nihâr and his brother Nâjir, Sa'îd b. Muḥammad and Sâlih b. Dhum'a (author's father). The settlers built huts of palm fronds along the sea shore. For two decades the village depended on small-scale pearling and

fishing for its survival. No more than 20 boats left the village each pearling season; the crews came partly from the village, but mostly from nearby oases. In the early 1930s 'Isâ b. Ahmad returned to al-Bahrain with a group of the villagers, mostly crew members of his pearling fleet.

Al-Khubar remained a small fishing and pearling village covering an area of less than 0.5 km.² until 1935. In that year the California Arabian Standard Oil Company (later the Arabian American Oil Company) built a pier at al-Khubar to support the early oil well-drilling at nearby al-Zahrân. In 1937/1938 a storage and shipping terminal was built at al-Khubar, and barges started carrying Saudi Arabian oil to the refinery of the Bahrain Petroleum Company (Bapoc); this marked the beginning of the export of Saudi Arabian oil. The importance of al-Khubar port has diminished since 1969/1970, when a deep-water pier began operating in al-Dammâm; the al-Khubar harbour facilities now accommodate only fishing fleets and coastal ships. The city itself, however, now covering an area of 8 km.², thrives as one of the most active business centres on the Kingdom's Gulf coast, second only to al-Dammâm. Commercial enterprises that were given their original impetus by the oil industry now flourish independently, supported by both the public and private sectors of the economy. With modern office buildings and living quarters, with stores displaying merchandise from all over the world, and with substantial job opportunity, al-Khubar attracts foreign communities of various nationalities.

(¹ARDALLAN S. JUM'AH)

KHUBAYB a. 'Abî al-Anṣārî, one of the first martyrs of Islam. The main features of his story common to all versions are as follows: After the battle of Uḡud [s.v.] (on the chronology of which, see below) a small body of ten of the Prophet's followers was discovered and surrounded between Mecca and 'Usfân by 100 (or 200) Libyâns who belonged to the Hudhayl. The leader of the hard-pressed little band, 'Āsim b. Thābit al-Anṣārî (according to others, the leader was al-Marḥad), proudly refused to yield. He and six others were killed whereupon Khubayb, Zaid b. al-Daghla and a third surrendered; the latter fell a victim to his stubbornness and the two former were taken to Mecca and sold. Khubayb fell into the hands of the Banu 'l-Hārith b. 'Amir b. Nawfal b. 'Abd Manāf, who on the expiry of the sacred period, took him out of the Haram to al-Tan'ûn, bound him to a stake and killed him with lances (*ṣabā'a*) in revenge for al-Hārith, whom Khubayb had killed in the battle of Badr. Before he was tied to the stake, Khubayb asked for time to perform two *sakā'at*, which became a *sunna* for martyrs, comparable to the last prayer of Christian martyrs. Khubayb is said to have recited two verses at the stake to the effect that he as a Muslim martyr cared nothing about the treatment of his body as Allāh was able to bestow his blessing even upon his severed members. *Kunūf* formulae uttered by him besides these verses have also been handed down in which he appealed to Allāh for vengeance on his enemies. Those present are said to have shown great trepidation at this curse of the dying man; it is related that Abū Sufyan hurriedly pressed the little Mu'awīya to the ground to protect him from the consequences of the ill-omened words; and Sa'îd b. 'Amir used to fall into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death 'Āsim prayed to Allāh asking him to communicate news of the event to his Prophet in Medina, which actually happened.

His corpse was protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain. According to al-Wāḳidī, 155, however, Muḥammad received news of the event at the same time as that of Bīr Ma'ūna; and according to Ibn Hishām, 647, it was not 'Āṣim, but Khubayb, who prayed to Allāh asking him to cause Muḥammad to be informed. According to al-Zuhri and 'Urwā (see the latter's brief account in al-Wāḳidī, 156) the ten men were sent out as a *sariyya* to spy upon the Meccans; according to Ibn Hishām, 638, al-Wāḳidī, 157 and Ibn Sa'd, *ii*, 39-40, *iii*, 33-4, ten teachers of religion, who were on their way to a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides. This story is too much like that which has been woven round the drama of Bīr Ma'ūna, which happened at the same time. Al-Wāḳidī, 227, tells us under the year 628 that Khubayb was not yet at that time a prisoner among the Meccans. The only certain chronological statement that can be made is that the event took place after the battle of Uhūd, as 'Āṣim fought there. In the official *Sīra*, the incident is recorded under the name *Yaws al-Raḡīf* and put by Ibn Hishām to the year 3 and by al-Wāḳidī in the year 4.

The figure of the protomartyr Khubayb lent itself readily to embellishment. The daughter of al-Hārith (according to others Māwiyā, a client of Ḥudayf b. Abī Lihāb), in whose house he was kept a prisoner, saw him one day eating grapes, although these could not possibly be obtained in Mecca. When his martyrdom approached, he asked for a knife with which to remove the hair on his privy parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought of his possible revenge; when Khubayb noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. The verses above mentioned, which he is said to have uttered at the stake, have grown in Ibn Hishām to a whole poem. The same author (644 ff.) gives the elegies uttered over him. For how his corpse was taken from the Kuraysh and swallowed up by the earth, see Tabari, *i*, 2436-7 — *Isṭiḥā*, *i*, 862.

Bibliography: al-Zuhri's or Abū Hurayr's tradition in Abū Ḥadīd, *Muḥad*, *ii*, 294 ff., 310-11, and in al-Bulḥārī, *Ḍiḥā*, bāb 170; Ibn Ishāq's version, 638 ff., goes back to 'Āṣim b. 'Umar b. Ka'b; al-Wāḳidī, tr. Wellhausen, 256 ff. (cf. 226-7) compiled the whole story from various sources; Ibn Sa'd, *ii*, 33-4; al-Diyārī, *Ta'rikh al-Khams*, Cairo 1203, *i*, 454 ff.; Ibn Hishām, *Isṭiḥā*, *i*, 860 ff.; Ibn al-Athīr, *Usd al-Ghāba*, *ii*, 111 ff.; Caetani, *Annali dell' Islam*, Anno 4, § 7, 8; Anno 6, § 2; Tabari, *i*, 1431 ff., who gives the two main versions; Ibn al-Kalbi-Cashe, tab. 77, on his genealogy. (A. J. WARBURG)

KHUBMESTHIS, the members of an obscure heretical movement in 17th/18th century Istanbul that preached the superiority of Jesus to the Prophet Muḥammad. The term derives from Persian *khūsh* "good, virtuous", and *mesīh* = "Messiah". Some description of their tenets is to be found in Paul Rycant's *The present state of the Ottoman Empire*, London 1688, 129. Rycant attributes to the Khūbmesthis a belief in Jesus as "God and Redeemer of the World", and says that it is "principally maintained amongst the gallants of the Seraglio". Although adherence to the doctrine was liable to bring death, and its followers commonly practised secrecy, they might be recognised by the white turbans they wore.

According to Rycant, in addition to designating a member of the movement, the term *Khūbmesthi* entered general usage as a description for anyone of mild and affable disposition. The accuracy of this information in all its points is not to be assumed; many of the statements of Rycant on religious matters are demonstrably erroneous. The *Khūbmesthi* movement presumably found its inspiration in the teaching of Kābid, executed in Istanbul in 934/1527, after some delay, for alleging that the spiritual rank of Jesus was superior to that of the Prophet. Rycant makes no mention of Kābid, however, nor do any of the sources on Kābid (e.g. Ibrāhīm Pelewī, *Ta'rikh Istanbul* 1283/1866, *i*, 124-6) attribute to him the foundation of the *Khūbmesthi* movement.

Bibliography: Given in the text.

(HAMID ALGAR)

KHUBZ (A.) generic term (nomen univocum: *khūbz*) meaning bread, whatever the cereal employed, e.g. corn [see *KAWS*], barley [see *BAR*], rice [see *RUZZ*] etc., and whatever the quality, the shape and the method of preparation. There exists nevertheless, in literary Arabic and, to a greater degree in the various dialects, a certain number of metaphors and of specific terms which cannot all be mentioned in this brief article, and the ellipsis of the word *khūbz*, in expressions denoting a particular type, causes the semantic range of the fundamental notion to be appreciably enlarged; thus *khūbz* for *khūbz* = *khūbz* = "leavened bread", *faḥīr* for *khūbz* = *faḥīr* = "unleavened bread" etc. The baker is called *khūzbār* (but in Morocco this is known only in its feminine form *khūzbāra*; see below), or *farrān* "oven-worker" (which however in Morocco means a communal oven), and a bakery is called *maḥḥāz* or simply *fuṣṣ* "communal oven" (in technical usage corresponding to *āḥḥā* "lime-kiln" etc.). All these terms apply to precise cases which will be summarised later.

The economy of ancient Arabia was such that the Arabs could not make bread the basis of their diet (see *CHUMBA*), i.e. so that the expression *khūbz* al-*khūbz* "bread eater" was a laudatory epithet implying considerable affluence (al-Djāzī, *Bukhārā*, ed. Hāḡirī, 211). Nevertheless, the nomads occasionally ate a *ḥulma* ("flat bread", for *khūbz* = *ḥulma*), that is a kind of pancake cooked on a heated stone, or a *malīḥ* ("hot ash", for *khūbz* = *malīḥ*) also called *malīḥ*, a thicker loaf cooked under ash according to a process similar to that described by A. Jaussen (*Coutumes des Arabes au pays de Moab*, Paris 1928, 63) in talking of *ḥorpa* on arrival at the halting place, the Bedouin kneads flour with water and salt (if he has got it), but without adding yeast, and makes a sort of pie which he cooks in ash, turning it frequently to prevent burning. E. Lacoust (*Mots et choses berbères*, Paris 1920, 89-90) has collected in Berber (where bread is called *aghram*) a text which refers to some very similar practices.

For their part, the sedentary people, who were familiar with the whitest flour (*ḥawwār*) and bread of the finest quality which they cooked in an oven (*fannār*), did not eat it regularly. They used to crumble it, however, to make a broth (*ḥarka*) which the Prophet placed above all other foods (al-Bukhārī, *khūbz* al-*ḥarka*, bāb 27) and it is known that, according to the tradition, Hishām (p. 2) owes his name to the fact that he crumbled (*ḥakama*) bread to make broth; this economical dish was highly thought of for a long period after Islam.

The conquest of several nations which produced corn in abundance increased in the various classes of society, and in varying degrees, the consumption of

bread, which was from that time considered, with bananas, "the subsistence of the find-dwellers, the basis of nourishment and the prices of foods" (al-Djithri, *Bughāla*, 114) and city-dwellers who did not offer it to their guest unwittingly are taken to task (*ibid.*, 115). The *Kitāb al-Bughāla*? (see index, s.v. *bugra*) provides interesting details regarding wheat-bread and its use, but in general it gives a picture of an affluent class, whose members were in a position to own a slave charged with the functions of a waiter or of a majordomo rather than a baker, but called *ḥabbāz* because of the importance attached to bread (*ibid.*, 48).

The same work (106), while giving valuable information on the refined standard of cuisine then practised, shows that bread was never eaten alone, and that it was incorrect to offer it dry, (*ḥabḥabān fa fāra*). In the more affluent circles, it did not constitute the most substantial part of the diet and was rather used for dipping or was eaten from side-plates, while in poorer families and from a very ancient period, it was always accompanied by some condiment (*ḥam*) designed to make it palatable; in the present day, a term taken from the root 'd w: *ḥada*, or *ḥi* w: *ḥā* "to fan": *ḥuda*, *ḥada*, *ḥāḥ*, clearly expresses this idea; however, the interested parties probably do not take into account the imbalance which they create in thus adding lipids to the proteins and glucoses contained in bread. It should be stressed however that not everyone was in a position to eat it regularly, and even today, it still constitutes a rare luxury for certain particularly impoverished populations; for the more affluent, the basis of the diet is often, in many regions, boiled rice, ground corn (*burghān*) or kuskus (see *kuskus*).

Since the classical period end, to a large extent, to the present day, there have existed various categories of bread which can be reduced to the following, while it may be noted that the dialectical vocabulary, extremely variable and rich, deserves to be the object of a linguistic geographical study, whose ethnological results could yield useful information:

— In Iraq, rice cultivated in the region of Basra was used probably by a limited number of bakers (among whom a popular poet, al-Khubz²arusi [s.v.] was to become famous) to make a bread which was quite cheap and accessible to the poorer classes, as well as to those who lived an ascetic life-style (cf. Ibn Baṭṭūṭa, II, 5); in the other regions where it was cultivated, notably in Palestine and Egypt, rice was more often consumed in other forms (see M. Canard, *Le riz dans le Proche-Orient, in Arabica*, viii (1959), 122 ff.);

— white bread, made with pure wheat-flour (*ḥamḥam*) was in general confined to the more affluent families, but it seems to have been in widespread use in a number of countries, such as Palestine and Egypt; physicians actively recommended it, although it was less nutritious than

— bread of coarse ground flour (*ḥabḥabān* and *vars*), which was consumed by people of less means;

— bread made from common wheat, perhaps mixed with a little barley-flour;

— semolina bread (*ḥamḥabḥam*);

— barley bread, more coarse, mention of which appears frequently in the *ḥadīth*; ascetics judged it to be sufficient, but many poor families even today, must be content with it; in North Africa, *ḥara*, and in the Near-East, *ḥura*, are often nothing more than pancakes of barley-flour, pure or mixed with a little wheat-flour;

— to this list it is appropriate to add the bread

manufactured, in times of hardship, with flour of maize, millet or sorghum (*ḥara*) or even of some wild plant, such as *ḥara* in Jordan.

Apert from various pastries based on wheat-flour, bread was presented, with variations on which we cannot dwell here, in two principal forms;

— *ruḥāḥ*, very thin, was cooked on a slab of iron (or later, of stone) heated on a hearth or a brazier. This slab, called *ḥabḥabḥab* in the Middle Ages, is still in use in the Near East where it is convex and bears the name *ḥabḥab*; in the Maghrib, similar baking is not unknown, but a type of earthenware casserole is more often used, and bread thus prepared is called *maḥḥab* or *maḥḥab* (cf. E. Laoust, *op. laud.*, 89 for the Berber world);

— *raḥḥāḥ*, or (from Persian) *ḥarāḥḥarāḥ* is a round bread (*maḥḥab*) quite thick and cooked in an oven. But there is a distinction there between the domestic and the communal oven. The former (*ḥamḥab*; currently *ḥabḥabḥab*) has the form of an upturned jar without a base or of the frustum of a cone open in the upper part; it is heated by means of embers placed inside and the raw dough is spread on the sides, on the outside (see Beaussier and Dozy, *Suppl.*, s.v. *ḥabḥab*). In certain regions there is also still to be found a *ḥamḥab* dug into the earth, while in Jordan (Janssen, *Moab*, 63) *ḥabḥab* refers to a small construction in which is placed a sort of cooking pot, surrounded by embers to cook the dough in the interior. In encampments the oven is replaced by a pottery plate (*ḥamḥab* or *ḥamḥab* in Tunisia) which is heated on a brazier (*ḥamḥab*) or even, on occasion, by heated stones.

As for the communal oven (*furn*, *ḥabḥab*) it is found in various parts of the towns as well as in the villages, and it is there that individuals normally cook their bread for consumption at home. Until recently, in the Maghrib at least, it was considered dishonourable to buy one's bread outside, and the kneading of the dough, an essentially feminine occupation, was the duty of the mistress of the house or of a servant. On a large wooden tray (*ḥabḥabḥab*), the housewife put, sometimes with a little bran, flour of corn or of barley or of both, or even of semolina, in quantities sufficient to provide food for several days, added yeast and salt, then poured in hot water and kneaded the dough which she then cut into pieces and left to rise on a tray in a warm place. A journeyman baker (*ḥamḥab* in Morocco) went round the houses, took the trays, imprinted on each piece a distinctive mark and took it all to the bakehouse.

The baking done, the baker came and banded over to each family the tray and the bread belonging to it. The wages of the baker consisted of a piece of bread which he baked and sold to his profit; in al-Andalus, this bread was called *ḥamḥab* (and *vars*), and this term has survived under the form *ḥamḥabḥab* *bāḥ*, in some regions of Morocco and of Algeria to designate the salary of the baker, even after it became the practice to pay him in cash (see W. Marçais, *Textes arabes de Tanger*, Paris 1911, 248-3; this work contains, pp. 2-39, 127-51, an extremely vivid text relating to the journeymen and the bakers, notes and a bibliography.)

Thus there were no real bakeries, and there was no *ḥabḥab* reserved for the making and the sale of bread. However, foreigners, individuals and bachelors were able to obtain it, either from certain women who kneaded extra pastry in order to sell the surplus bread in the streets, at a price fixed by the *maḥḥab*, or from bakers or retailers; in fact the *farrān* sold not only the small amounts of bread that they had

received in wages (for they were in principle forbidden to mix the pieces of dough to make large loaves; cf. E. Lévi-Provençal, *Séjules musulmans*, §§ 115, 148), but also the bread which they made on their own account. The authors of works of *ḥabṣ* [q.v.] especially al-Sakāṭi (G. S. Colin and E. Lévi-Provençal, *Un manuel hispanique de ḥabṣ*, Paris 1931, 26-32 and *passim*; Spanish tr. P. Chalmers, in *al-And.* [1968 ff.], §§ 53-67 and *passim*), enumerated in detail the frauds committed by these bakers, in such matters as the mixing of flours of different qualities (and even the addition of white earth), as well as malpractices in the baking and in the weighing of the bread, and also the rules of hygiene which were to be observed by the bakers and the tradesmen who, in particular, were not allowed to work at professions such as those of the butcher or the fishmonger. (cf. Ibn 'Abd al-Rūf, ed. E. Lévi-Provençal, *Trois traités hispaniques de ḥabṣ*, Cairo 1955, 89-90; French tr. R. Aré, in *Hesperis-Tamuda*, li, 2 (1960), 202-2). In spite of these precautions, the quality was not always high, and bread sometimes contained gravel and other impurities (cf. M. Taibl, in *Arabica*, li, 3 (1954), 299).

The price of bread, sold by weight and not by the loaf, was fixed by the *mekātib*, but it varied enormously, and it is the price of corn which provides the most convenient basis for estimating the cost of living; we confine ourselves to referring to E. Ashtor's fundamental work, *Histoire des prix et des salaires dans l'Orient médiéval*, Paris 1959, and to the article *TAKNIN* for all matters relating to the different types of loaf.

As in other civilisations, bread is treated with great respect. It is always broken and it should never be cut with a knife. A crumb which falls to the ground is picked up, raised to the lips and swallowed; a piece of bread found on the road is put, for the benefit of some destitute person, in a place where it will not be trodden on and soiled. And even though it does not constitute, strictly speaking, the basis of the diet, it is given in the Arabic dialects names which refer to life and to subsistence: *'ayḥ* 'ish, *ma'ṣhe*, *ḥāḥ*, etc. And it is not absolutely certain that the magical purposes that it served have totally disappeared.

However, the situation described above has now been perceptively modified in the sense that, in the towns at least, it is from the bakeries that the population buys the bread that it needs; but if the making of bread has borrowed from the West certain modern processes, anyone can still easily obtain *ḥubz* 'arabī prepared and presented as in ancient times. Also, in the countryside the tradition is still alive.

AL-KHUBZA'ARUZZI (many possible vocalisations), ABU 'L-KĀSIM NAṢR B. AḤMAD B. AL-MANṢŪR,

popular poet of Bayra, who probably died in 327/938. He made rice bread (*ḥubz ariz*) in a shop at the Miḥad (q.v.), where his biographers show him as surrounded by a circle of admirers who were especially attracted by his *ghazal* verses on boys, these being his speciality. It does not seem that he should be included in the list of those poets whose belligerence involved them in contests and controversies, nor does he seem to have been inclined, like so many of his contemporaries, to attack the honour of others; because of this last fact, al-Nas'adī's information that he had to flee into Arabia in order to avoid the vengeance of one of the Baridīs (q.v.) is dubious. This same author states that his verses, set to music, were sung everywhere, but except in error, the *Aghāni* cites none of them. At all events, his *Dihān*, put together by his friend Ibn Lankā (q.v.), must have spread considerably beyond the confines of his native town and even of Baghdad, where he lived for some time. This is confirmed by the fact that this illiterate (ammi) poet was highly appreciated by a person who held fast to the classical tradition like Ibn Sharaf (q.v.), who attributes to him "ingenious shafts of wit and subtle inventions, in a closely-knit form and a chaste style, with no superfluities". The judgments of the biographers and anthologists confirm this appreciation, which the extant fragments of his work do not however seem entirely to justify; but the complete *Dihān* must have been much richer and must have had enough originality to have stimulated the jealousy of a certain "great poet", thus referred to briefly by Ibn Sharaf.

KHUḌĀ BAKHSH, a notable bibliophile of Muslim India, the founder of the celebrated Oriental Public Library, at Patna, Bihar, India. He was born in 1824 at Chapra, and received his education in the University of Calcutta. After obtaining his degree in law, he began to practise as a lawyer at Patna at the age of twenty-six. He soon achieved considerable success in his profession, and was appointed a public prosecutor, which post he held for many years. In 1894, he was invited to serve as the Chief Justice of the High Court at Hyderabad, Deccan. On his retirement in 1898, he lived a quiet life at Patna, where he died in 1908 and was buried in the precincts of the library he had founded. In recognition of his public services, the order of C.I.E. was conferred on him in 1903 by the British Government of India.

Khudā Baksh had inherited his passion for collecting rare Arabic and Persian manuscripts from his father. When his father died in 1876, he left him a collection of 1,400 manuscripts, with the behest to make it into a *waḥf* as soon as circumstances should permit him to do so. He continued to make substantial additions to it, till the number of manuscripts had reached 4,000 in 1891, when the collection, along with the building which accommodated it, was made into a public trust. The *waḥf*-deed was duly executed on 29 October 1891, and the library was formally opened by the Lieutenant-Governor of Bengal and Bihar. It was given the name of the "Oriental Public Library", though the people have

often persisted in calling it the "Khudā Bakhsh Library" after the name of the generous donor.

A new era in the history of the Library opened in 1901, when it was visited by Lord Curzon, then Governor-General and Viceroy of India. He was deeply impressed by its literary treasures, and ordered that a suitable new building be erected to accommodate them. He also discussed plans for the proper preservation and sale-keeping of the manuscripts; and at the same time he directed Dr. E. Denison Ross, then Principal of the Calcutta Madrasa, to make suitable arrangements for the proper cataloguing of the manuscripts.

Twenty-eight volumes of the catalogue have so far (1970) been published, in addition to two Supplements and an Index. The work of cataloguing is still in progress. The library at present contains 4,322 Arabic and 4,238 Persian manuscripts, in addition to a number of printed books in Arabic, Persian, Urdu, Hindi, English, French, German, Latin and other languages.

Khudā Bakhsh was survived by his son Salāh al-Dīn Khudā Bakhsh, Barrister-at-Law. Like his father, he too was a legal practitioner, but found time to write a number of essays and papers on Islamic history and civilisation, which have been collected in book form. He also translated into English some of the works of Alfred von Kremer and Joseph Hall, and was accordingly characterised by D. S. Margoliouth as an "interpreter of Indian Islam to Europe and of European Orientalism to India". He was a liberal and a modernist in his social and religious views.

Bibliography: V. C. Scott O'Connor, *An eastern library*, Glasgow 1920; Salāh-ud-Dīn Khudā Bakhsh, *My father, his life and reminiscences*, Calcutta 1909; information supplied by the present Librarian. (Dr. INAYATULLAH)

KHUDĀBENDE (see ULGAYATU)

KHUDĀWAND (n), God, lord, master. There is no established etymology for this word and no Middle or Old Persian antecedent. It is used in Ghaznavid times in the sense of lord or master (cf. Abu'l-Faḍl Muḥammad b. Husayn Bayhaqi, *Tārīkh-i Bayhaqi*, ed. 'Ali Akbar Fayyāḍ, Mughhad 1971, 23, 435, and *passim*). In documents and letters belonging to the Saljuqs and Kh-warazmshāhs it is used as a term of address to the sultan, usually with some qualifying word or phrase such as *Khudāwand-i 'ālam* "lord of the world" (cf. Muntajab al-Dīn al-Djawayni, *Atabai al-kutaba*, ed. Muḥammad Karzvinī and 'Abdāh Iqbāl, Tehran 1950, 4; Bahā' al-Dīn Muḥammad b. Ma'ṣūm Baghdādī, *al-Tawassul ilā 'l-taṣawwuf*, ed. Ahmad Bahrmanīyār, Tehran 1937, 159, 341). *Khudāyagūn-i 'ālam* and other similar combinations are also found in the same sense. *Khudāwand*, with or without a qualifying phrase such as *waḥīd nī'am*, is also used as a form of address to government officials (civil and military) and to patrons in general. Muḥammad b. 'Abd al-Raḥīm al-Naybardi in his manual on the art of the secretary, *Dastūr-i Dabirī*, written in 575/1180, mentions *Khudāwand-i 'ālam*, *Khudāwand-i ghāib*, *Khudāyagūn-i ghāib* and *Khudāwand-i waḥīd-nī'am* among the forms of address accorded to the sultan (ed. Adnan Erzi, Ankara 1962, 13, 15). He also includes *Khudāwand* among the titles of the waṣīr (*ibid.*, 16).

The terms *Khudāwand-i 'ālam*, *Khudāyagūn-i 'ālam* and similar combinations are common in Jalālīdī, Ak Koyunlu and Karā Koyunlu documents. The derivative term *Khudāwandigār* is common as an honorific for waṣīrs and commanders under the Saljuqs of Rūm (A. Z. V. Togan, *Umumi şark tarihine giriş*,

Istanbul 1946, 309) and in Ottoman usage (I. Belidzeann-Steinberg, *Recherches sur les actes des règnes des sultans Osman, Orkhan et Murad I*, Munich 1907; H. Inalcik, *IA*, art. *Pādīgāh*). See also E. Quatremère, *Histoire des sultans Mamelouks de l'Égypte*, Paris 1837-45, I, 64 ff., and F. Taeschner, *Die Werke der Familie Dai Qaraḡai Beg in Brussa*, in *Isl. xix* (1932), 175).

(A. K. S. LAMITON)

KHUDĀWENDIGĀR (n), "lord, owner, master"; in Ottoman usage, it was used as (1) the title of Murād I, and (2) the name of the *sandīgār* and province of Bursa.

1. The title *Khudāwendigār* was used for commanders and viziers during the Saljuq period (Hasan b. 'Abd al-Mu'min al-Khūfī, *Ḥamāyat al-ḥaṣṣ wa-munayal al-faḥṣ fi ruṣṣat al-raṣād'ul ma-nāḡim'ul al-faḥṣ'ul*, ed. N. Lugal-Adnan S. Erzi, Ankara 1963, 4-5; M. C. Şahabettin Tekindağ, *İst. Koyunluoğlu Kâtibhanesinde bulunan Türkçe yazmalar*, in *TM*, xvi 1972, 134-5). As an attribute, the term was used for mystics like Jalāl al-Dīn Rumi and Hādīdī Bektaşī (Elīlāh), *Manāḡib al-ḡarīfīn*, ed. Tahsin Yavuz, Ankara 1959, 2-II, index). The word became widely used, especially after its usage as a title for the Ottoman sultan Murād I (761-91/1360-89) (Ferīdūn, *Mawḡib'ul al-salṭīn*, Istanbul 1274, I, 100, 203-4, 105-9, 112, 163, 166; M. Tayyib Gökbilgin, *XV-XVI asırlarda Edirne ve Paşaeli hük.*, Istanbul 1952, 179), but the early Ottomans historians (e.g. 'Ashūkpasha-zāde, Nehrī, Orūḡ, Bihīştī) do not mention this title. In 9th/15th century documents, when referring to the reign of Murād I, the phrase *Khudāwendigār zamanında* is used without mentioning the Sultan's name (H. Inalcik, *Hicri 835 tarihli Şeref-i defter-i sancak: Arvanid*, Ankara 1954, 154; *Kānūn-nāme-i Sulṭān bey mülk-i 'Orf-i 'Oḡmānī*, ed. H. Inalcik and R. Anhegger, Ankara 1956, 77, 81; Çatayat Uluçay, *Saruhanogulları ve asırlarına dair vesikalar*, Istanbul 1946, II, 44, 48). The 10th/16th century historians accord Murād I the title of *Khudāwendigār*. Also, Murād I was sometimes addressed as *Ḥāḡīf Khudāhūr* (Gökbilgin, *op. cit.*, 175) and it has been argued that the word *Khudāhūr* is a variant form of *Khudāwendigār* (for the term *Khudāhūr* used in a document of 848/1444, see Halil Inalcik, *Arvanid İktisā*, 9). On the evidence of the documents, the term *Khudāwendigār* was used for the successors of Murād I from Bāyezīd I to Selīm I (Ferīdūn, *op. cit.*, I, 118, 124, 149, 151-2, 154, 165, 187, 290, 304, 373, 377; A. Nimeh Kurat, *Tophkapı Sarayı Müzesinde bulunan Altınordu, Karam ve Türkistan hamamları ile yazık ve bishler*, Istanbul 1940, 49-50). As applied to these Sultans, it had the same meaning as the terms *pādīgāh* and *Khudāwend* (*Kānūn-nāme*, Veliyüddin Efendi Library, no. 1970, ff. 15b, 16a; Tekindağ, *op. cit.*, 235, n. 9); but in the 11th/17th century, it was applied to Murād I exclusively (Ewliyā Celebi, *Seyḡhat-nāme*, Istanbul 1314, 24).

2. The use of *Khudāwendigār* as a name for the province of Bursa started after its conquest when Orkhan gave the town, together with its surrounding lands, to his son Murād as a *sandīgār* (Nehrī, *Djāhān-nūmā*, ed. F. Taeschner, Leipzig 1951, 36; 'Ashūkpasha-zāde, *Tārīkh*, Istanbul 1925, 43). However, there is no record in the contemporary sources that this name was used during the reign of Murād I (cf. Kâtib Celebi, *Djāhān-nūmā*, Istanbul 1143/1732, 650). At this early period, Bursa was the capital of the Ottoman leader, himself called the *emīr-i ḥabir*, and the province was therefore called after him *beg sandīgārī* (see H. Inalcik, *Bursa priyis açillerinde Fatih Sultan Mehmet'in فرمانları*, in *Bellefren*, IV,

698, 702; M. Akdağ, *Türkiye'nin iktisadi ve idari tarihi* (1958-1959), Ankara 1971, II, 284, 309. The oldest document relating to the region and calling it *Khudāwendġār* is the *Khudāwendġār hīvali tabiri defteri* dated 991/1497 (Bağbakanlık Arşiv Genel Müdürlüğü Tapu Defteri no. 23). From this date onwards, the term *Khudāwendġār sandġāhı* was sometimes used instead of "the sandġāh of Bursa" (M. Akdağ, *op. cit.*, II, 310; H. T. Dağlıoğlu, *xvi asrda Bursa* (1958-1959), Bursa 1960, 31, 41 and *passim*). The *Khudāwendġār sandġāhı* in the *eyâlet* of Anatolia was organised as a separate province in the 15th century. This province consisted of the sandġāhs of Karahisar: Sahib, Kütahya, Bilecek, Erdek, and Biga in 1846-7; it was reduced to a mere *mudarriflik* in 1860, but restored to the status of a province again in 1862-3. *Khudāwendġār*, according to the provincial organisation regulation of 1884, consisted of Kütahya, Kocaeli, Karesi, Karahisar-i Sahib and the central sandġāh of *Khudāwendġār* itself (Vecihi Tânik, *Türkiye'de idari teşkilat*, Ankara 1945, 110, 128, 130, 164).

KHUĐJĀND(A), a town and district in Central Asia, now the town and oblast of Leninabad in the Tadzhik SSR, the town lying in 40° 17' lat. N, and 69° 37' long. E. The mediaeval town was sprung out along the left bank of the middle Sīr Daryā at the southernmost bend of its course and at the entrance to the Farghāna valley. It lay in the ill-defined borderlands between the Transoxanian districts of Hākh [s.v. in Suppl.] and Ughrūsana [s.v.], and was generally reckoned as being connected administratively with one or other of these two in the early middle ages. Its destinies were, however, frequently linked with those of the region of Farghāna [s.v.] to the east, the frontier between the two districts being marked, according to the *Hadid al-Islām* (370/982), tr. 115-16, by the town of Wāhkhāh or Wān Khāh.

At the time of the Arab invasions of Transoxania, there was a local ruler or *mukāh* of *Khudjānd*, apparently dependent on the ruler of Farghāna. The town was captured by the Arabs in 103-4/722, when anti-Arab elements of the Soghdians who had retreated thither were dislodged by Sa'īd b. 'Amr al-Harāshī's troops, with a savage massacre of the besieged (Tobert, II, 1439 ff.; Barthold, *Turkestan down to the Mongol invasion*, 189; H. A. R. Gibb, *The Arab conquests in Central Asia*, London 1923, 58-3). It must nevertheless have been speedily lost to the Arabs shortly afterwards when the local rulers of Soghdia were joined by the *Kaghan* of the Western Turks or Türgesh, Su-lu, and the Arabs temporarily expelled from most of Transoxania. Not surprisingly, the people of *Khudjānd* joined those of Farghāna, Ughrūsana, Čaghāniyān, etc. in supporting the rebellion of Rāfi' b. al-Layth during the years 190-3/606-9, according to Ya'qūbī.

The geographers of the 3rd-4th/9th-10th centuries now describe *Khudjānd* and its district as a fertile

and prosperous one, with many orchards and vineyards, although the town had to import grain from Farghāna and elsewhere. Ibn Hawkal states that *Khudjānd* had a *ḥukūmat* or citadel with a prison; a *madīna* or inner city; and a *raḥaḥ* or outer city, where the local ruler's palace, the *dār al-imāra*, lay. As befitted a frontier region, the inhabitants were warlike and generous. Furthermore, the town was an important centre for river navigation along the Sīr Daryā. This same author describes the district of *Khudjānd* as extending southwards towards Waḡḡīrd and Čaghāniyān, so to the Buttāmān Mts. separating the basins of the upper Sīr Daryā and the upper Oxus. The only other town of the *Khudjānd* district was Kand or Kand-i Bādhām "Kand of the almonds", so called for a local product, almonds; this was presumably on the site of the modern village of Kan-i Badam, some 40 miles from *Khudjānd*. Leninabad, visited by the American traveller E. Schuyler in the mid-1890s en route for *Khujand* (see Ibn Hawkal, tr. Kramers-Wiet, II, 457, 489; Le Strange, *The lands of the Eastern Caliphate*, 479; Barthold, *Turkestan*, 157-8, 164-5; Schuyler, *Turkistan. Notes of a journey in Russian Turkistan, Khokand, Bukhara, and Kuldja*, London 1876, II, 3-4). A considerable number of "ulama" bearing the *nisba* of "al-Khudjandī" are mentioned by e.g. Sam'ānī, *An-sāb*, ed. Hyderabad, v, 53-6, and Yāqūt, *Buldān*, ed. Beirut, II, 348; most notable of these is the mathematician and astronomer Abū Maḥmūd Hāmid al-Khudjandī, d. 390/1000 [s.v.].

Khudjānd was a place of importance under the Karā-Khānids or Ilak Khāns [s.v.], and in the early years of the 5th/11th century, from 406/1015-6 onwards, Amīn Khān Muḥammad b. 'Alī, originally ruler in Tashkent, minted coins there (see R. Vassmer, *Zur Münzkunde der Qaraḡhāniden*, in *MSOS*, Wentas. Studien, xxxiii [1939], 90-1, and E. von Zambaur, *Die Münzprägungen des Islams, arabisch und türkisch geordnet*, I, Wiesbaden 1958, 120). In the mid-5th/11th century it was the frontier town between the eastern Khānate of Kāghghat and Balāsaghūn under the sons of Qādīr Khān Yūsuf and the western one of Transoxania under Shāms al-Mulk Nuḥ b. Tanghān Khān Ibrāhīm. It was also at *Khudjānd* that in 532/1137 the Karā-Khānīy invaders won a victory over the Karā-Khānīd Maḥmūd b. Muḥammad.

During the period of the Mongol invasions, *Khudjānd* was in 627/1220 stubbornly defended after the fall of Samarḳand by the governor Temūr Malik against a besieging force of 20,000 Mongol troops and 50,000 pressed levies, and after abandoning the citadel, he sailed away down the river and eventually reached Kh'īrazm (E. Bretschneider, *Mughal researches from eastern Asiatic sources*, London 1910, I, 277-8; Duwayni Boyle, II, 92-4). In the next century, under the Čaghatayids, the *ulus* of the important Djalāyir tribe in the Khāns' following was the district around *Khudjānd*, until in 776/1376, after the revolt of the Djalāyirs, they were disbanded by Timūr and dispersed from the region (Barthold, *Four studies on the history of Central Asia*, II, *Uluḡ Beg*, 9, 26). Bābur, in the period of his struggles in Farghāna against the kinsmen who were his rivals for power, used *Khudjānd* as a centre for operations in 903/1497-8; he has given an enthusiastic description of the walled town or *ḥurghān* of *Khudjānd* and its many amenities (*Bābur-nāma*, tr. Beveridge, 7-8, 89-92).

It was the connections of the Mongols and their epigoni in Central Asia with their kinsmen in northern China which stimulated mentions of *Khudjānd* in the Chinese annals of the 14th century, e.g. as Hu-ch'an

in the Yüan-shi, and an early 14th century Chinese map shows it as Hu-jan; mediaeval Chinese travellers call the Sir Daryā the Ho-ch'an or Hu-k'ien "river of Khujand", following Arabic usage of such terms as *Nahr Khujand* or *Nahr al-Shāh* for that river (cf. Bretschneider, *op. cit.*, II, 54-5).

After being under Özbek rule, Khujand became part of the Khānate of Khokand at the beginning of the 15th century, but in 1842 was captured by the Mangit Khān of Bukhārā, Naṣr Allāh b. Faydar (see F. H. Skrine and E. D. Ross, *The heart of Asia, a history of Russian Turkestan and the Central Asian khānates*, London 1899, 215-16). In May 1866 Khujand fell to the Russian armies of General Romanovski after a bloody siege of eight days, in which 2,500 of the defending Khokandi force were killed, and the town was then used as a base for the final reduction of the Khānate of Khokand (see *ibid.*, 251-2; Scheyler, *op. cit.*, I, 312 ff., 339, 354; R. A. Pince, *Russian Central Asia 1867-1927, a study in colonial rule*, Berkeley and Los Angeles 1960, 23-5, 34-5). In 1875 the Russian garrison in Khujand was for a while besieged there by a rebellious faction in the Khānate of Khokand, and it was this revolt in Khokand which led to the final annexation of the Khānate by Russia (see KHOKAND). Under Tsarist rule, Khujand eventually became part of the Samarkand oblast of the Governor-Generalship of Turkestan.

Under the Soviets, Khujand was in 1936 re-named Leninabad, and this name was also given to the northern oblast of the Tadzhik SSR. It is now the second most important industrial and cultural centre of the Republic after Dushanbe (the Stalınabad of 1929-61), with manufactures of cotton, silk and toys, food processing, and with orchards and vineyards outside the town. The population in 1970 was 103,000 (see *USEU*, xxiv, 513-5).

Bibliography: Given in the article.

(C. E. BOSWORTH)

AL-KHUJANDI, Abū Maḥmūd Ḥamīd b. AL-KHŪR, astronomer and mathematician, originally from Khujand in Transoxania. He lived under the protection of the Buwayhid Fakhr al-Dawla (366-82/976-97) and died in 390/1000.

From amongst his mathematical works, there has survived in Cairo the manuscript of a treatise on geometry. We know that he was concerned with the resolution of equations of the third degree by geometrical methods and that he demonstrated, in an imperfect manner, that the sum of two cubed numbers cannot be another cube. Naṣr al-Dīn al-Ṭūsī (K. *Shukh al-jawāb*), Istanbul 1891, 108-20 affirms that Abū 'l-Wafā' al-Būzjānī (q.v.), Abū Naṣr Maṣṣār b. 'Alī h. 'l-Ma' (q.v.) and al-Khujandī are the three authors to whom are attributed the discovery of the sine law called by the latter the "astronomical law" (*ḥānīn al-hay'a*), because of its frequent use in astronomy, and he gives the proof which he offered of this law (cf. C. Schöy, *Behandlung einiger geometrischen Fragepunkte durch muslimische Mathematiker*, in *Ist.*, viii (1926), 260-3). However, P. Luckey, in his *Zur Entwicklung der Kugeldreiecksrechnung*, in *Deutsche Mathematik*, v (1940 1), 416, 418 9, rejects al-Khujandī's part in this principle, because we are concerned here with a person whose outstanding work was in the field of practical astronomy.

Al-Bīrūnī, in his *Taḥḍīb nūḥayl al-aḥkām*, in *RTM*, viii (1962), 107, states that al-Khujandī was "unique in his age" (*ṣawāḥid samānīn*) for the construction of astrolabes and other astronomical instruments. Some manuscripts have been preserved of his treatise *Fi 'amal al-dīa al-'ammā*, in which is des-

cribed a universal instrument (*al-dīa al-'ammā* or *al-ḥānīn*) to be used in place of the astrolabe or quadrant. He constructed an armillary sphere and other instruments, and must have worked on theoretical questions concerning the laying out of the plan of an astrolabe, since Abū Naṣr Maṣṣār gives two methods of al-Khujandī's for determining the position of the circles of the azimuth on the astrolabe by the intersection of the equator and the *muḥanḥarāt* (*Risāla fi maḡdālāt dawḍir al-samā' fi 'l-asturlāb*, in *Rasā'il ilā 'l-Bīrūnī*, Hyderabad 1947, 3-9). His most important work in the sphere of astronomical instruments was the sextant called *al-sūd al-fakhrī* (sc. dedicated to Fakhr al-Dawla) which he made in order to determine the obliquity of the ecliptic. He described this instrument and the observations which he was able to make with it in his *Risāla fi 'l-mayl wa-'arḍ al-balad* (ed. L. Chelkho, in *Machriq*, xi (1908), 60-8). Al-Bīrūnī gave a detailed analysis of this in his *Taḥḍīb*, 101-8, which is said to be based on the *Maḡdālāt* *fi 'l-ḥay'at al-mayl* of al-Khujandī (probably to be identified with the R. *fi 'l-mayl* cited above). This sextant had a diameter of 40 *ḡirā's* or cubits (al-Bīrūnī: 80 cubits) constructed at Tabrīk near Rayy and set down on the plan of the meridian; it was surrounded by walls and covered over by a roof, part of which was vaulted (*ḡub*) and with an aperture 3 spans (*ḡub*) in diameter (al-Bīrūnī: one span) coinciding with the centre of the sextant. With this instrument it was possible to take the height of the sun; the sun's light threw a circle on to the sextant and, in order to determine the centre, al-Khujandī used a circle of the same radius which had two perpendicular diameters which he placed on the circle thereby fit up. Al-Khujandī asserted that the sextant was his own invention, and he boasted that, by using it, he could make calculations down to the very second. Similar instruments seem to have been employed in the observatories of Marāgha (founded before 660/1262) and at Samarqand (built in 823/1420).

With this *sūd al-fakhrī*, al-Khujandī observed the meridian height of the sun at the summer and winter solstices of the year 384/994; the procedure involved consisted in making observations on two consecutive days at the time of the solstice and in determining, by interpolation, the exact moment of the passing of the sun into the solstice. He was able to do this in the month of June, but clouds prevented him from repeating the procedure in December, so that the exactness of the whole operation was somewhat affected. His observations were made in the presence of a group of leading scholars who drew up a report. The result was: $\epsilon = 23^{\circ} 32' 19''$ (21" according to al-Bīrūnī in *al-Kānūn al-Mas'ūdī*, Hyderabad 1954, I, 364), a value which, compared to those worked out by the Indian astronomers (24") and Ptolemy (23' 51") justified al-Khujandī's belief in a progressive reduction in the obliquity of the ecliptic. Al-Bīrūnī, who believed that ϵ was a constant (*Taḡhīb*, 107-8, 116; *Kānūn*, I, 364) emphasises that al-Khujandī told him verbally that the aperture of the vault by which the sun's rays came in had been displaced downwards by a span before the observations regarding the winter solstice were made, so that it did not coincide exactly with the sextant's centre. This fact may explain the decrease in the value of ϵ in relation to other determinations made roughly around the same time.

Al-Khujandī made other observations; he fixed the latitude of Rayy at $35^{\circ} 34' 39''$ (al-Bīrūnī, *Taḡhīb*, 86-7, 99, 238; *Kānūn*, II, 612), and he asserted that he had observed the planets for Fakhr al-Dawla by

means of armillary spheres and other instruments (R. J. 2-may, 62). The final result of this work was the compiling of *al-Zīj al-fakhrī*. An incomplete copy in Persian of a *zīj*, preserved in the Majlis Library in Tehran (ms. 181) may be based on al-Khudjandi's observations; the period of the tables of average movements is 600 of the Yandagird era, i.e. about two centuries after al-Khudjandi's death (see E. S. Kennedy, *A survey of Islamic astronomical tables*, in *Trans. Amer. Philos. Soc.*, N.S., xiv (1906), 113, No. 60).

KHUDJISTĀN, a small town or village of mediaeval Islamic Bāghdādis (q.v.), lying to the northeast of Harāt in modern Afghanistan, and described by the mediaeval geographers as being mountainous, possessing agricultural lands and having warlike inhabitants (Istakhri, 268-9; Ibn Hawqal, 441, tr. Wint. 426; *ʿUdud al-ʿUlum*, 104, 327; Yāqūt, ii, 404; Barbier de Meynard, *Dict. géogr., hist. et litt. de la Perse*, 197). Although within a Sunni region, Khudjistan itself was one of the last centres for the Khawārij in eastern Iran, and the population are described as Khārijī and extremists (*ghulāt wa ghulāt*).

Its main claim to fame is that it gave birth in the 3rd/9th century to ʿAlī b. ʿAbd Allāh al-Khudjistanī. He was a commander in Muḥammad b. Tāhir's army, but after the fall of the Tāhirid capital Nišāpūr to Yaʿqūb b. Layth in 259/873, he made a bid for independent power in Khudjistan, with a base of power in Harāt and Tākhīstān, against the Saffārids, until he was killed by one of his own *ghulāma* in 268/882. Worthy of note is the detail that Khudjistan was allegedly launched on his career as a condottieri through hearing the martial poetry of a local author, *Ḥanzala* of Bāghdādis, who must have been one of the very earliest writers of verse in New Persian (Niẓāmī 'Arūdī, *Ḥikāh waḥḥā*, ed. Browne, 26-7, revised tr. 27-9, cf. G. Lazard, *Les premiers poètes persans* [IX-X^e siècles], Tehran-Paris 1964, I, 17-8, 53).

KHULDĀBĀD, a town in the northwestern part of the former Haydarābād state, now in Maharashtra state of the Indian Union, and situated in lat. 20° 1' N.

and long. 75° 12' E; it is also known as Rauza (sc. Rawda). It is 14 miles from Awrangābād and 8 from Dawlatābād (q.v.), and a particularly holy spot for Deccani Muslims, since it contains the tombs of several Muslim saints and great men, including the Niẓām-Shāhī minister Malik 'Anbar (q.v.); Niẓām al-Mulk Ḥafṣ al-Jīlāh, founder of Haydarābād state (q.v.); and above all, of the Mughal Emperor Awrangāz (q.v.), who died at Ahmadnagar in Dhū'l-Ḥiǧga 1118/ March 1707 and was buried at the rauza or shrine of Shāykh Zayn al-Hakik, and of his son 'Aẓam Shāh. After Awrangāz's burial, the place was called Khuldābād, the monarch's posthumous name being *Khuld-makām* 'He whose abode is eternity' (see *Cambridge hist. of India*, iv, 302).

KHUL' (see *ṬARĀK*).

KHULM' (see *AKHULAK*).

KHULM, a town of northern Afghanistan lying in the lowland region to the south of the upper Oxus at an altitude of 2,400 ft./450 m. and in lat. 36° 42' N. and long. 67° 41' E.; it is situated some 30 miles/50 km. to the east of modern Maṣār al-Sharīf and, according to the mediaeval Islamic geographers, two *marḥalas* or to *farṣakhs* to the east of Balḫ (q.v.). It further lies on the Khulm River which flows down a narrow valley from the Hindu Kush past the town of Haybak and then Khulm itself until it peters out short of the Oxus. It is possible that this river is the Artakus of the Greek geographers.

The mediaeval geographers describe Khulm as the centre of a flourishing agricultural district, with luscious fruits, and as enjoying a healthy climate, the *ḥaraj* or land-tax was levied on the extent of irrigated land. The grapes and other fruits of Khulm were still the subject of much praise by the Scottish traveller Alexander Burnes in the early 19th century. The road from Balḫ eastwards into Badakhshān and to Andarāb and the silver mines of Pandjīr also passed through Khulm (see Le Strange, *The lands of the Eastern Caliphate*, 427, 430; *ʿUdud al-ʿUlum*, 208).

Regarding the pre-Islamic history of Khulm, it has been conjectured that Khulm is the *Acones* mentioned by Arrian as conquered by Alexander the Great in the winter of 330-329 BC (cf. Pauly-Wissowa, *i/s*, 2639). The Buddhist Chinese traveller of the early 7th century, Hsuan-Tsang, seems, however, to mention it as the kingdom of Hu-lin, whose chief town had over 20 Buddhist monasteries with more than 500 monks (see T. Watters, *On Yuan Chwang's travels in India*, London 1904, i, 106, 109). In the period of the Islamic conquests in Central Asia, it is mentioned at various times in the course of warfare, e.g. in 90/708-9 when Kutayba b. Muslim (q.v.) made his final attack on the Hephthalite leader Ṭarḫān Nīrak (Tabari, ii, 1205-6, 1210, with mention of the shī'b Khulm 'defile or valley of Khulm'), and in 119/737 when Asad b. 'Abd Allāh al-Khulmī was endeavouring to expel from Tūkhānistān the united forces of the Turkish Khākān Su-lu of the Western Tūghesh, the rebel al-Hārīth b. Surayḡ and the local princes of the Oxus valley principalities and of Soghdia, and the Khākān endeavoured in vain to take the town (Tabari, ii, 1603, 1613). Once pacified, the district was settled by Arabs of Tamīm, Kays, Aḥd and Bakr (Sam'ānī, *Kutub al-Ansāb*, ed. Hyderabad 1380/1962-6, v, 180). Khulm also figures in the tax-assessment for Tūkhānistān in the time of 'Abd Allāh b. Tāhir's governor-

ship (years 211-12/826-8) under the sum of 12,300 dirhams per annum (Ibn Khuradādhbih, 36, cf. Marquart, *Ertefak*, 228); and in the fighting around Khulm in the later 3rd/9th century between the Saffārids and other contenders for power in Khurāsān, the condottieri Ahmad b. 'Abd Allāh al-Khudīstānī [see *ghuzguzān*] in 268/881-2 defeated 'Amr b. Layth's sly Abū Talba Maṣṣūr b. Sharrak near the town (Ibn al-Athīr, vii, 209). Culturally, Khulm was of sufficient note to produce, according to Sam'ānī, *Asnād*, v, 120-3, a well-known poet, Ka'b b. Aḥmad, and several legal and theological scholars.

We hear little of Khulm under the rule of the successive Turkish and other dynasties of eastern Iran like the Seldjūqs and Tīmūrids, but it was clearly within these centuries that the Turkification of these lands south of the Oxus took place, so that in modern Afghānistān, the population of the region is largely Uzbek.

In the period after Nādir Shāh, ac. in the later 12th/18th century, the region came under the control of a local ruler of Uzbek stock, Kūllij 'Alī Beg of Khulm. He held, according to Elphinstone, the title of *Atāk* from the Durānī kings of Kābul and paid deference to them, but was left virtually independent in return for protecting the northern borders of Afghānistān against Uzbek incursions from beyond the Oxus. It was because of these depredations that the seat of government for the Khulm region was in the early 19th century transferred from Khulm to Tash Kurghan 4 miles/6 km. to the south, and this has become the site of the modern town of Khulm. Various British travellers visited it at this time. W. Moorcroft (1824) mentions that the tyrannical Mahammad Murād Beg, ruler of Kunduz and much of the region north of the Hindu Kush, had compelled the inhabitants of Khulm proper to transfer to his own capital of Kunduz. Old Khulm certainly now fell into decay, whilst New Khulm or Tash Kurghan flourished. Concerning population, Elphinstone (1809) estimated that Old Khulm contained about 8,000 houses, and Burnes (1832) that New Khulm had some 10,000 inhabitants. Subsequently, the sons of Kūllij 'Alī Beg reigned from Khulm over an area comprising Khulm, Haybak, Jalālān, Andarīb and Mazār-i Sharīf as vassals of Muḥammad Murād Beg, but in the early 1850s Dōst Muḥammad of Kābul (s.v.) succeeded in bringing Radakhsān and the Uzbek principality of the Khulm district under his own control, and henceforth it formed part of the dominions of the kings of Kābul.

Present-day New Khulm-Tash Kurghan forms part of the Afghān province of Samangān, within which it and Haybak are the main towns. Khulm, however, being the more populous of the two (population estimated by Humlum at 30,000 in ca. 1950); both towns benefit by being on the main road from Kābul to Mazār-i Sharīf and the Russian frontier.

KHULT, the classical form of the name of a tribe of north-western Morocco pronounced Khloj (but ethnic, Khulij). The Khloj came into North Africa with the invasions of the Banū Hūlāl in the 5th/11th century, and formed part of the "mixed" Arab people known as the Djuḡham; according to Ibn Khaldūn and other historians, the Khloj allegedly belonged to the Banū 'I-Mustalīk. The Djuḡham spread throughout the central Maghrib, settled there and took part in all the wars which desolated Barbary. After the Almohad conquest, they vainly tried to rebel, and not long afterwards, the Banū Ghāniya [see *ian ghāniya*] had little trouble in engaging them as their auxiliaries after the capture of Bougie (see *Biḡāya*). The Almohad caliph al-Ma'mūn, once victorious over his enemies, punished their allies and accordingly transported to the oceanic shores of Morocco the Djuḡham and Rlyāb Arabs. The latter were established in the Hibt and the Ḡarb, and the first group in the Tāmesnā (Shāwīya), depopulated since the extermination of its Berghawīta (s.v.) by the Almoravids.

Under al-Ma'mūn's successors, the intrigues of the Almohad *ghayās* found excellent support in the two component groups of the Djuḡham, the Khloj and the Sufyān, whose jealousies yet further aggravated the internecine conflicts. In 621/1224 the Khloj espoused the cause of the pretender al-Ma'mūn against the caliph al-'Adīl, who was supported by the Sufyān. In 629/1230, al-Ma'mūn was proclaimed caliph; in 630/1233 his son al-Raḡhib succeeded him, but because of their misdeeds and violence, he was obliged to take strong measures against the Khloj chiefs, who then rebelled and took the side of the pretender Yahyā b. al-Nāṣir. The Sufyān, now reconciled with al-Raḡhib, attacked the Khloj on the banks of the Umm al-Rabī' and a frightful carnage ensued. The Khloj sought vengeance by proclaiming as caliph the Andalusian pretender Ibn Hūd, but al-Raḡhib pursued them, drove them back, and captured and then executed their chiefs (652/1257-8). Much weakened and browbeaten into obedience, they took part in the caliphs' expeditions, but their rivalry with the Sufyān was in an way extinguished and proved fatal to the Almohads. In 646/1248, at the siege of Tāmesnā against the Zaynīd pretender Yaḡmorāsen, this rivalry brought about the caliph al-Sa'id's death and the Almohad's defeat.

The Marinīd sultan Abū Thābit treated the Khloj harshly for their violence (709/1308), but he took advantage of their assistance in order to destroy the power of the Rlyāb. They were then settled on the former's lands, in the Asḡhar and the Hibt, and formed part of the *maḡāḡim* (s.v.) of the Moroccan sultans, made marriage alliances with these rulers and provided for them provincial governors, ambassadors and advisers. They subsequently passed into the service of the Banū Wsiṭān and gave no support to the Sa'āda, who at first held them at arm's length despite the importance of the tribe which, according to Leo Africanus, could put 20,000 cavalry and 50,000 infantry into the field. However, the Khloj's important part in the Moroccan victory of Wādī 'I-Maḡhāzin against the Portuguese gave them entry in part at least to the *maḡāḡim* of the Sa'āda. At the time of the latter's decadence, the marabout pretender al-'Ayyūghī (s.v.), who sought to compel them to march against the Christians of Larache, was unable to bring them to obedience and was assassinated by them (1043/1638-9). Under the 'Alawids, the Khloj took the side of the petty princelings of northern Morocco who had made themselves in-

dependent under the cover of waging holy war. Mawḥib Ismā'īl and his successors, after first reducing them to submission, deprived the Khilaf of their status as a *mashā'ir* tribe and favoured the establishment in their region of heterogeneous elements, the Tili and Badawā groups, who inevitably afflicted and reduced the power of the former occupants of the land.

Bibliography: Michaux-Bellaire and Salmon have provided the most complete information about the habitat, ethnography, administrative organisation, political position and the splits among the Khilaf in their article *Tribe arabes de la vallée du Lekkous*, in *A.M.* iv-vi (1905-7). (A. Coua)

KHUMĀRAWAYH b. AHMAD b. TULŪN, second Tūlūnid ruler of Egypt and Syria. He was born in Samarra in 250/864 and, after the abortive rebellion of his brother 'Abbās (q.v. in Suppl.) against Ahmad b. Tulūn (q.v.), was designated heir-apparent as early as 269/882. In an unprecedented act in the history of Muslim Egypt, the popular Khumārawayh came to power upon the death of his father on 10 Dhū Ḥiḥḥa 270/10 May 884 without the caliph's sanction, but rather with the general approval of the military and civil authorities of the Tūlūnid régime. His brother 'Abbās was forced to pay homage to his rule, and was assassinated under obscure circumstances only a few days after Khumārawayh's accession. Khumārawayh reigned for twelve years; on 28 Dhū Ḥiḥḥa 282/18 January 896 he was killed, a victim to a palace cabal, by one of his own slaves.

Khumārawayh inherited both a stable and wealthy polity from his father—the treasury is said to have contained ten million dinars, thanks to Ibn Tulūn's far-sighted internal and external economic policy—and also an unresolved struggle with the court of Baghdad. Since he had come to power only through his father or rather through his father's generals, the caliph regarded him as an usurper. Immediately upon receiving the news of Ibn Tulūn's death, al-Muwaffak, the ruler of the eastern half of the 'Abbāsid empire and strong man in the Baghdad court, broke off the negotiations which had led to the *de facto* recognition of Ibn Tulūn as governor of Egypt and Syria. One of Ibn Tulūn's foremost generals, Ahmad b. Muhammad al-Wāsiṭī, then changed sides and urged al-Muwaffak to attack Khumārawayh and reconquer Egypt, exploiting Khumārawayh's lack of political and military experience (al-Kundī, 234, ii, 4-5). Two generals of the caliph with al-Muwaffak's sanction now invaded Tūlūnid Syria: Ishāk b. Kundaḡ, the governor of Mosul whom al-Muwaffak had appointed 'legal' governor of Egypt and Syria in 269/882-3, and Muhammad b. Dīwād al-Ḥiḡḡ, of Anbar. The defection of the Tūlūnid governor of Damascus and the appearance of Ahmad b. al-Muwaffak (the future caliph al-Mu'tadid) leading an 'Irāki army challenged Khumārawayh's control over Syria even further. In Shawwāl 271/February-March 885 (Grabar, 68) Ahmad's troops met the Egyptians under Khumārawayh's command in the tragicomic Battle of the Mills (al-Tawāḡin) in southern Palestine. Both Ahmad and Khumārawayh ignominiously fled from the battlefield; the military decision in Khumārawayh's favour was secured by the capable and courageous Tūlūnid general Sa'd al-Ayyar. After his victory he went to Damascus and rebelled, though unsuccessfully, against the humiliated Khumārawayh. Khumārawayh's long-term strategy of achieving a rapprochement with the 'Abbāsid court is reflected in the exceptional clemency with which he treated his 'Irāki prisoners of war. In the following years his realm was considerably extended. He beat decisively,

though with inferior forces, Ibn Kundaḡ, who submitted to him and brought areas as far east as Harrān (Grabar, 75) under Khumārawayh's control. The *Djazīra* became part of the Tūlūnid lands when its governor Ibn Abi 'I-Sāḡ sought Khumārawayh's protection. On Khumārawayh's own initiative, Yazmān of Tarsūs finally accepted Tūlūnid sovereignty over Cilicia.

In Rajab 273/December 885 al-Muwaffak and Khumārawayh eventually came to terms. Khumārawayh discontinued the public slandering of al-Muwaffak in the sermons of Egypt and formally acknowledged 'Abbāsid sovereignty. In return he was granted the *de jure* governorship of both Egypt and the lands of Syria (al-Sha'māt) for thirty years for himself and his progeny (*waliduhū*). Thus not only his own succession, but also the dignity of his family, were recognised by the caliph. The time limit imposed, however, clearly shows that the caliph regarded the Tūlūnid rule over Egypt and Syria to be temporary and revocable, unlike the privileges granted to the Aghlabids (q.v.) of Ifrīkiya. Unfortunately, the financial provisions of this first treaty between Khumārawayh and al-Muwaffak are not recorded in the sources. Syria now became an integral part of the Tūlūnid domains; in the provincial capitals of the Sha'māt, Ramla/Filastīn, Hims, Ḥalab and Antākīya, new mints were set up.

In Rajab 279/October 892 al-Mu'tadid, the son of al-Muwaffak, succeeded al-Mu'tamid as caliph. In a new treaty he readily confirmed these arrangements with Khumārawayh. The annual tribute to be paid by Khumārawayh as vassal to al-Mu'tadid was fixed at a rate of presumably 300,000 dinars, supplemented by 200,000 dinars to be paid for each preceding year of his rule. The sources are vague and inconsistent on these crucial figures. Khumārawayh lost the territories east of the Euphrates, Mawṣil, Diyar Rabi'a and Diyar Muḡar around al-Rāfiqa, where coins had been struck on his behalf before 279/892. The important and prestigious *ḥiḡḡ*-manufactures of Fustāt and Alexandria remained under the control of the caliph. Tūlūnid coins bore his along with Khumārawayh's name.

Khumārawayh's limited autonomy made him susceptible to honours bestowed upon him by the caliph, the most exalted and highest sovereign of the Muslim community. In 279/892, through the mediation of his closest adviser, al-Ḥusayn Ibn al-Djāḡḡ al-Djāwḡarī, he arranged for one of the great political marriages of medieval Islamic history. He offered his daughter Kaṭr al-Nadā to the caliph al-Mu'tadid's son 'Alī, but the caliph took her as a bride for himself. It remains unclear whether or not this marriage, which entailed an exorbitant dowry of one million dinars, was a calculated device on the part of the caliph to wreck the finances of his dangerously wealthy and powerful vassal. The splendid nuptials of Kaṭr al-Nadā lived on in the memory of the Egyptians well into the Ottoman period, as is recorded in the chronicles and the folk-literature.

Khumārawayh's frivolity and generosity are well attested in the sources. He had sumptuous palaces and gardens built for himself and his favourites. To his contemporaries, his awesome blue-eyed palace lion epitomised his prodigality. He was said to ride no horse more than once. Becker (*Beiträge*, ii, 192) connects his addiction to luxury and debauchery with his status as heir to the capable and successful founder of a dynasty. "Rule was something self-evident to him, something given. He liked to exercise it, but shied from the burdens which were indispensable for

It". When Khumārawayh was murdered in 282/896, the treasury was empty. All the wealth Ibn Tūlūn had amassed had been squandered within a few years. In Khumārawayh's rule the *diwān*'s worth sank to one third of its former value (Hassan, 245). Under Khumārawayh's sons Dījāyū and Hārūn who succeeded him in rapid sequence, the political and financial demise of the Tūlūnid state was still further accelerated. In 292/905 'Abbāsid troops sacked Ibn Tūlūn's new city of al-Kaṭā'ī and brought back for thirty years direct 'Abbāsid rule to Egypt.

Khumārawayh's military prowess was notable. After the disaster of al-Tawīlīn he showed strategic skills and astounding personal bravery; he is said to have killed the rebellious Sa'īd al-Aynar with his own hands. He could rely on the multi-racial army of his father, composed mainly of Turkish, Greek and Sudanese military slaves and some, mainly Greek, mercenaries; he strengthened his force with numerous fresh soldiers from Turkestan. Yet in contrast to his father, he lacked undisputed authority over the military. He tried to compensate for this with overly-generous special distributions that further undermined the precarious finances of the state.

Possibly under 'Abbāsid influence (al-Mu'taḍid had his own élite body of military slaves, *al-muḥāsira*), Khumārawayh established a corps d'élite, *al-muḥāsira*, composed of unruly Egyptian Bedouins of the Eastern delta, on whom he bestowed various privileges. By converting these tribesmen into a loyal and efficient bodyguard he reasserted control and brought back peace to this strategic region between the centres of Egypt and Syria. Significantly enough, there seem to have been no Turks among Khumārawayh's *muḥāsira* soldiers; he seems rather to have used them to offset the predominant influence of his own Turkish entourage. One thousand Negroes formed a less highly privileged special contingent within the *muḥāsira*.

Already under Khumārawayh, the civil administration of Egypt passed gradually into the hands of the Madhārā'i family who later, during the 'Abbāsid intermezzo and under the Ikhshīdids, directed the finances of the country. 'Alī b. Ahmad al-Madhārā'i began his illustrious career by bringing under his control the *hama*, the intelligence and communications services. Khumārawayh's relations with the religious establishment of Egypt were strained; his libertinism and frivolity made him the target of harsh attacks both in contemporary and later historiography.

Khumārawayh's prodigal rule encouraged a rich life. Few traces of his splendid architectural and cultural monuments and the minor arts are preserved. His patronage of scholarship and poetry is well known; the grammarian Muḥammad b. 'Abd al-Līb b. Muḥammad b. Muslim (d. 329/944) was his protégé and the teacher of his son. Al-Kāsim b. Yahyā al-Maryamī (d. 317/929) wrote encomia to celebrate Khumārawayh's triumphs on the battlefield.

Bibliography: See *EP* s.v. (Sobornheim). Among the Arabic sources the contemporary historian Ibn al-Dīnār (s.v.) must be ranked first; fragments of his chronicle of the Tūlūnids are preserved in Ibn Sa'īd's *al-Muḥāsira fī ḥukūmat al-Muḥāsira*; as far as Khumārawayh is concerned, this important text unfortunately only contains a few remarks on his appointment as heir-apparent; see Ibn Sa'īd, *Fragmente aus dem Muḥāsira*, ed. K. Vollers, in *Semitische Studien*, I (1894), 74 ff. 4 ff.; al-Kinādi, K. al-Walīd, ed. R. Guest, Leiden/London 1972, 233-41; C. H. Becker, *Beiträge zur Geschichte Ägyptens unter dem Islam*, Strassburg 1902-3, II, 180-98; Z. M. Hassan, *Les Tulunides, Étude de*

l'Égypte Musulmane à la fin du IX^e siècle 868-903, Paris 1933, 207-33 and *passim*; O. Grabar, *The Coinage of the Tulunids*, New York 1937, 59-76; Rainer Glagow, *Das Kalifat des al-Mu'taḍid biḥillāh (896-903)*, Diss. phil. Bonn 1968, 21-3, 62-7, 70-3. (U. HAARMANN)

KHUMAYR (pronounced locally Khmr, in French Kroumir), an element of the population which has given its name to a mountainous massif extending along the north-west littoral of Tunisia. The Djebel Khmr, or Kroumirie, forms part of the administrative district of Djenouba, which covers an area of 3,000 square km. and has a population of 255,000, of whom 225,000 are peasants (census of May 1966).

The massif of the Khumays, a Tunisian extension of the Atlas range, consists of a series of contrasting sandstone flexures running along a south-west-north-east axis. The two extremities of the massif, separated by the cultivated limestone depression of Ghaswān, present palpable differences in spite of the overall unity. The western Kroumirie has its highest point at Djebel Gherrā in an altitude of 2,202 m., and the eastern Kroumirie, very difficult of access in spite of its modest altitudes, reaches a height of 1,014 m. at Djebel Btr which dominates Ain Drahām. Everywhere the contrasting forms of rockstrata, deeply furrowed anticlinals and sheer synclinals, give a wild aspect to a landscape covered by a forest 47,000 hectares in area. Of the trees 70% are cork-oak, 20% are zeaa oak, and 10% other species, including the wild olive. Often the undergrowth consists of fern. Other species have recently been introduced, notably the parasol pine (*Widdad*). The level of rainfall in Kroumirie is the highest in Tunisia, with an average of 1 m. per year and a maximum of 1,575 m. at Ain Drahām. In spite of the abundant rain and relatively plentiful falls of snow, the massif suffers from shortage of water. Springs are certainly numerous, but they are dispersed over a wide area and their output is feeble. Some springs even dry up in summer.

In ancient times, the massif of the Khumays did not escape penetration by the Romans. Three routes crossed it: in the longitudinal axis, the road from Carthage to Hippo Regius (Bône, now called Annaba) via Hippo Diarrhytus (Bizerta), in the transverse axis the road from Sumitta (Chemtou) to Thabraca (Tabarka), of which numerous traces have been discovered, and the road from Vaga (Béja) leading in the same destination via Trisipa. Thabraca, originally a Carthaginian market-town, and from the 4th century one of the richest dioceses in Africa, was the centre for the export to Rome of the products of the massif, timber for building and wild animals, as well as oil, wheat and minerals. "A city of luxury, where art has its place alongside commerce" (P. Gaulier, *Mosaïques*, 155). Thabraca has given us some very fine mosaics.

It is curious that throughout the mediæval period, the massif of the Khumays has gone unnoticed by the historian. The silence of our sources is complete. It is only in modern times, and in contemporary times in particular, that it has begun to play a historical rôle, appraising at the same time as a place of refuge and of resistance, escaping almost completely the power of the Tunisian authorities.

The Khumays had cordial and profitable relations with the colony of Genoese fishermen established since 947/1540 on a rocky island of 40 hectares in area separated from Tabarka by a channel 500 metres wide. They were acutely affected when this island was unexpectedly attacked and forcibly recovered by

'Alī Faṣṣa in 1553/1740 (Ibn Abī 'l-Dīyāl, *ibid.*, ii, 124). In 1583/1769-70, the Khumayr gave asylum to the pretender Ṭḥmān al-Haddād, who was ultimately captured and executed (*ibid.*, ii, 665). In 1260/1844 they gave their support to another pretender, who claimed to be a descendant of Ṭḥmān Bey. The latter also was captured through a trick and beheaded (*ibid.*, iv, 78-9, ed. A. Abdesslem, 116-7). In 1282/1865, 'Alī Bey, at the head of the military mission (*maḥalla*) responsible for the levying of taxes, bled the region of Béja white, but did not dare venture into the massif, which was subject to tax only within agreed limits (Ibn Abī al-Dīyāl, *op. cit.*, vi, 55, 65). However, the mountain people were not involved in the insurrection of 1864—they did not feel that it concerned them—nor in the troubles of 1867-8.

It was in 1881 that they came abruptly to the fore. The Khumayr were in the habit of pillaging their neighbours, including those in Algeria. Seeing that the Caïd of Tabarka, to whom they were theoretically answerable, had no control over them, the French authorities, in the context of a complex policy which had the effect of setting various powers in competition with one another, decided to act. They set in motion the process which culminated in the establishment of the protectorate over Tunisia. On 24 April 1881, the French Army of Algeria marched into Tunisia; two days later they occupied Kef without a battle; on 13 May it was the turn of Ain Draham, and the following day the French routed the Khumayr at Ban Mitr after a number of fierce skirmishes.

Regarding the origins of the inhabitants of the massif, we have no precise and reliable information. The name Khumayr does not appear in any mediaeval text. In the period when Ibn Khaldūn was writing, that is to say, the 8th/14th century, the region between Béja and the sea was inhabited by Hawwāza Berbers, by that time completely arabised, with whom there had been blended various elements of Arab descent, notably the Hudhayl ('Iḥar, vi, 288-9; tr. de Slane, *Berbers*, I, 279).

The Khumayr pose an insoluble puzzle to the historian. They only make their appearance in the 19th century, and even for this period there are only scraps of information in the archives, when they pillage their neighbours, or when the *maḥallas* try in vain to force them to pay taxes. Who are they? They themselves say that they are Arabs, and it is true that there is an oasis in the Yemen called Khumayr (Yāqūt, ii, 390, iii, 406) and there is a Kabiliid tribe which bears the name Banū Khumar (Balkhshandī, *Nāṣya*, 247), of which Khumayr could be a diminutive. Legend would also have us believe that they are the descendants of a certain Khumayr b. 'Umar, an eminent companion of the conqueror of the Maghrib, 'Ukba b. Nāfi'. A descendant of Khumayr, Sidi 'Abd al-Rah Abu 'l-Djīmāl, is supposed to have died, worn out by *ghāḍa*, in the heart of the massif, on a small plateau about 5 km. south-west of Ain Draham. The *maḥalle* raised to him in this place perpetuates the legend and unites the Khumayr in an almost total veneration for their patron saint and presumed ancestor. According to another tradition, the Khumayr originally lived in the south of Tunisia and were ruled by the Shābiyya of al-Kayrawān. In the 18th century they were forced to emigrate towards the north, occupying the massif to which they gave their name.

The Khumayr are divided into a number of segments. The most important in the eastern Kroumirie are the Awlād 'Umar, the Hwāndiyya, the Awlād

Ibn Sa'īd, the Sa'īdiyya, the Urkhāiyya, and the Twāḡiniyya in the region of Tabarka; the Saḥū, the Hudhayl, the Awlād Muallim, the Khāysiyya, the Djāydiyya, the Hwābiyya, the Māyāiyya, the Awlād Māḥ, the Awlād Hūāl, the Hmarān, the Dabābina, and in particular the 'Aṭāṭifa in the region of Ain Draham; the Gwādiyya, the Thāniyya, and the Shābiyya in the region of Ferana. In the western Kroumirie, there are found the Banū Māsin, the Awlād 'Alī, the Khāra, the Māsin, and the Weḡlāta. It would be futile to attempt to distinguish between Berbers and Arabs among these tribes. The population of the massif is in fact the result of an immense and long-term ethnic fusion, dating back to the mediaeval period if not further, a fusion which was doubtless accelerated by the infiltration of the Banū Hākil in the mid 5th/11th century, and of the Sulaym at the start of the 7th/13th century. Let it be stated explicitly that the local Arabic dialect contains no traces of Berber, and that sometimes the nomadic tent is found incongruously pitched on the mountain itself.

The geographers of the Middle Ages show little interest in the massif of Kroumirie in its own right. Their main concern is to describe the itineraries. The first, Ibn Hawkal, who visited the Maghrib in the mid 4th/10th century, tells us that the main highway (al-ḥaddā) from Tunis to Tabarka passed through Béja (*Sarāt al-aṣṣ*, 76). Al-Bakrī, who was writing in the mid 5th/11th century, tells us that from Béja one would reach Tabarka in three stages, passing through Blāf and Darna (*Masāḥib*, 56-7/120-1). Al-Idrīsī (mid-6th/12th century) mentions two routes from Tunis to Tabarka, the one passing through Buarta, and the other branching off after Béja. (*Nuḥḥa*, 84-5). It is clear that this road system follows the routes inherited from ancient times.

We have no precise information regarding urban settlement in the massif during the Middle Ages. It is only just possible to follow the evolution of Tabarka. We have seen that it was a very prosperous place in ancient times. In the 4th/10th century, according to Ibn Hawkal it was nothing more than "an unhealthy village" (*ḥarya wabī'a*), infested by scorpions, its only claims to importance being the movement of ships between it and Muslim Spain and its status as a customs station (*op. cit.*, 76). In the 5th/11th century al-Bakrī noted that impressive ruins of ancient monuments were still to be seen at Tabarka, and that the place enjoyed a certain prosperity on account of the activity of its port. In the 6th/12th century, according to al-Idrīsī, it was nothing more than a fortress (*ḥiṣn*), thinly populated and surrounded by gangs of Arab bandits, men with respect for neither law nor religion. Finally, at the start of the 12th century (Leo Africanus, *Description de l'Afrique*, 549) it was nothing more than "an abandoned port".

Today, Tabarka (population 4,000), is a port of modest size whose primary function is the export of cork from the massif of Kroumirie, 3,400 tons per year. There is also fishing and the limited exploitation of coral, and the town has profited, albeit on a relatively minor scale by comparison with other regions, from the growth of tourism in Tunisia. The most important settlement on the massif is Ain Draham, at an altitude of 200 m., a summer resort and a centre for boar-hunting; Ferana, at 275 m., is principally a market-centre; Babouche is little more than a frontier-station controlling the border-crossing into Algeria; at Oued El-Lū, near the hamlet of Ban Mitr, there was constructed in 1955 a dam with a capacity

of 73 million cubic m. to produce Hydro-electric power and to provide Tunis with water. Another dam, at Oued El-Kebir, is in the process of construction. In spite of efforts at re-organisation, settlements continue in the main to be scattered, according to the location of wells and agricultural small-holdings. Huts and shacks built of branches have not yet disappeared.

In fact, the massif of the Kroumike, dependant on a silvo-pastoral economy, is impoverished. The standard of living of the inhabitants is the lowest in Tunisia. The most important source of income is provided by the extraction of cork. The cultivation of tobacco is also moderately profitable. The breeding of cattle, sheep and goats, in which the methods used have not evolved at all in the course of time, provides only a mediocre income. Attempts at improving the cultivation of trees, by introducing apple, pear, and cherry-trees to the area, have yielded only very limited results. Products of local craftsmanship—Kroumike carpets in white, black and beige; wooden kitchen-utensils; embroidery—are not much in demand outside the region and provide employment for a very small number. Finally, let it be added that the hot and sulphurous springs of Bouj al-Hammam, much appreciated from the earliest times for their medicinal properties, have led to the establishment in 1966 of a modern spa resort, built presumably alongside the ruins of the ancient baths and given the name Hammam Bourguie. Enlarged in 1973, this resort is attracting an ever-growing Tunisian clientele.

KHUMBARADJI, bombardier, grenadier (Persian *Khumbara* "explosive projectile, grenade, mortar bomb", etc.), a term used in the Ottoman military organisation. The bombardiers in the Janissary corps and the *Khumbaradji* unit in the Djebedji corps are thought to have been first introduced in the 9th/15th century. The *Khumbaradjis* were of two types, the *ulufeli* ones, who were paid, and the *hındr*-holders, who formed the majority of them and who served in the fortresses. The *Khumbaradjis* were neglected until the beginning of the 12th/18th century. *Khumbaradji* Ahmed Paşa (see AHMED PAŞA AOMNEVAL) was appointed by Mahmūd I in 1144/1731 to reorganise the *Khumbaradjis*; under his reorganisation, 301 soldiers from Bosnia were registered as paid *ulufelis*, and thus a separate corps of bombardiers was formed. Each 100 soldiers became an *oda*, and each *oda* was to have 2 captain (*yıldızbaşı*), 4 *efendi*, and 2 corporals (*onbaşı*) (*Ta'rikh-i Sāmi-Sāhīr* Sübhi, Istanbul 1198, 58 a-b). In the Ayaşma palace at Uskudar, there were constructed a barracks and a factory for the *Khumbaradji* corps, and later, their numbers increased to 601, half of whom were *ulufelis* and the other half *hındr*-holders (for the activities of *Khumbaradji* Ahmad Paşa, see also Başbakanlık Arşiv Genel Müdürlüğü, *Cevdet tasnifi*, Askeri kısıım, no. 45137; for the number of *Khumbaradjis* on the strength at 8 Ramadān 1154/December 1739, see *Cevdet tasnifi-Askeri kısıım*, no. 37415). The *Khumbaradji* corps, which expanded until 1160/1747, was neglected thereafter, but in 1197/1783, during the reign of ʿAbd al-Hamīd I, there were attempts to improve it again (*ʿIzvedet*, *Ta'rikh-i*, Istanbul 1309, III, 85; I. H. Uzunçaplı, *Kapıkulu ocakları*, Istanbul 1944, II, 125-6). During the reign of Selīm III, when the army was organised on western lines, the *Khumbaradji* corps was also included in the plan of reform. According to the decree of 1206/1792, the *Khumbaradji* corps, whether paid or *hındr*-holders, were to be concentrated on Istanbul and the names of those absent were struck from the pay rolls. Also, there were to be 10 *Khumbaradji* soldiers and five assistants (*müdafin*) for each *Khumbara*, so that the whole corps would comprise 300 *Khumbaradji* soldiers and 250 assistants. Out of every 10 soldiers, one was to be considered as the *hıfale*, and the other 9 as his aides (*yamaşı*); out of every 5 *Khumbaradji* one was to be an officer with the title of *ser-hıfale*, and the most notable among the officers was to be *oğak kethidhisi*, another *şimşak*, and another *şalender* or standard-bearer; beside the chief bombardier (*Khumbaradji-başı*), who was responsible for the soldiers' discipline, there was to be appointed a superintendent (*naıf*) from among the state officials (Enver Ziya Karal, *Selīm III'ün hatt-ı humāyuncuları Nezām-ı cedid* [1789-1807], Ankara 1946, 45-6; for the text of the regulation relating to the bombardiers' corps, see *ʿIzvedet*, *Ta'rikh-i*, VI, 356-8). The barracks for their training were built at Hasköy on the Golden Horn shores in Istanbul. A more detailed ordinance for the *Khumbaradjis* was prepared and put into effect in 1211/1797 (*Cevdet tasnifi*, Askeri kısıım, no. 40587). In the move-

ment to dethrone Selīm II, the *Khumbaradji* sided with the rebels, but when the Janissary corps was abolished in 1247/1826 during the reign of Mehmed II, they supported the government action (Djeweid, *op. cit.*, xli, 257; Es'ad, *Uss-i safer*, Istanbul 1293, passim). When a new army was established under the title of the *Asakir-i Mansûra*, the *Khumbaradji* corps was reorganised and retained within it (Lufti, *Ta'rih*, Istanbul 1290, I, 159), but was included in the artillery division and was to be headed by the *Topkapu-bağlı* (later by the *Topkâhane-i 'âmire mühtarlığı*). There was one *Khumbara* regiment (*alay*), with two battalions (*taburs*) in existence in 1248/1832 (Bap-bakanlık Arşiv Genel Müdürlüğü, Kâmil Kepecî tasnifi, no. 6744), and four years later, 209 cavalrymen and 229 foot soldiers, a total of 338 soldiers (Kâmil Kepecî tasnifi, no. 6750).

KHUMM (see قُحْمُ al-KHUMM)

KHUNĀSĪRA, an ancient fortified settlement situated some 60 km. to the south-east of Aleppo and 200 km. to the north-east of Hamât, on a route through the desert—on the fringes of which it lies—connecting Aleppo with Bagdad. The foundation of the place is attributed to Khumbar(a) b. 'Amr of the Banu Kināsa (Ibn al-Kalbi-Casak, Tab. 290 and II, 349), but it is probably older than this. Yāqūt (s.v.), who cites also al-Khunāṣir b. 'Amr, the representative of Abrahā al-Aṣṣam, may be echoing a later legend. In the Umayyad period, this chief-lieu of the *khura* of al-Aḥṣāṣ owed its name to the fact that 'Umar b. 'Abd al-'Aziz had a stronghold constructed there in which he frequently resided (al-Mas'ūdi, *Murūj*, v, 343 = I 2186; Ibn Shaddād, *al-A'ṣāk al-ḥafira*, ed. D. Sourdel, Damascus 1953, I/1, 25; Ibn al-'Adīm, *Zubdat al-ḥulab*, ed. S. Dabbāh, Damascus 1952, I, 42, 45). Ibn Hawqal (*K. Sāma al-ard*, 279, tr. R. Kramers-Wiel, Beirut-Paris 1964, 176), describes the role played by al-Khunāṣira at a time when the state's power had become relaxed and the routes to the interior of Syria were uncertain, so that travellers from Aleppo to Bagdad preferred to journey through the desert where they could enjoy, for a price, the protection of the Bedouins. In 515/1121 it was captured and destroyed by Baldwin II, who carried off to Antioch the gates of the citadel (Ibn al-'Adīm, II, 201), after which the place was abandoned (N. Elisséeff, *Nūr al-dīn*, Damascus 1967, I, 379). Nevertheless, there still exists a place there called today *Khunāṣir*.

KHUNĀTHA MINT BAKĀS b. 'Alī b. 'Aḥd ALLĀH AT-MAGHĀRIKĪ, wife of Mawlay Ismā'īl, sultan of Morocco (1082-1239/1672-1727). She was highly versed in literature and the religious sciences and acted as an adviser to her royal spouse. In 1143/1721, during the reign of her sons Mawlay 'Abd Allāh, she performed the Pilgrimage; and at Mecca, she bought buildings and established them as *awṣāf*, in particular, a house in the Bāb al-'Umra, one of the gates of the Holy Home, which she placed at the disposal of students. The memory of her sumptuous pilgrimage was commemorated by the *ghayṭ* Abū 'Abd Allāh Muḥammad b. 'Alī al-Husaynī al-Shāfi' al-Jabirī, *unius* of the Makām fārshim, in a splendid poem. She died at Fās in Jumādā I 1259/May-June 1746 and was buried in the mausoleum of the *Shorfa* in Fās al-Djādīd.

Her writings include a letter addressed to the people to calm their fears over the neighbouring Turks, and a commentary on the *Isḥāḥ* of Ibn Ḥaǧǧar al-'Asqalānī.

KHUNDJĪ, PAḌL ALLĀH b. RUṢḤĪHĀN (860-927/1455-1521), Persian religious scholar and political writer, who as a staunch Sunni fiercely opposed *Shāh* Ismā'īl, left Iran and fled to Uzbek Transoxania.

Khundjī's background, both on the side of his father (of the famous Rūṣḥiḥān family, cf. Rūṣḥiḥān al-Bakrī) and of his mother (of the Šāfi'ī family), made him a member of the wealthy and influential 'ulama' of Fārs who were important as *sayyid* holders and who enjoyed the high esteem and the protection of the Ak-Koynulu rulers. Khundjī received an exceptional scholarly training, in his native *Shīrāz* he studied under the great *Shāfi'ī* Djalāl al-Dīn Dawānī (s.v.), the author of the *Akhḥār-i Djalālī*. Dawānī's preoccupation with political thought is likely to have influenced Khundjī's own interest in a practical application of the norms of the *shari'a* in a post-Mongol, Sunni state, as his sophisticated manual of government, *Sulūk al-mulūk*—which he wrote shortly before his death on the suggestion of the Uzbek ruler 'Ubayd Allāh *Khan* in Bukhārā—attests. He was introduced to Šīrāz by Djalāl al-Dīn al-Ardabīlāzī, a follower of the Suhrawardīyya *ṭarīqa*. With him he travelled to Egypt and Palestine and he devoted a *muṣṣaf* biography to him which has not, however, come down to us. Khundjī himself joined the Dīsh-rīyya order, an offshoot of the Nakshbandīyya, possibly only after he had left Aḥḥār-bāydjān and Iran and had settled at the Uzbek court. Khundjī represents the typical intellectual *ṣūfi* of his time, for whom *laqawwaf* is an indispensable item in the academic curriculum. He wrote a commentary on the *Wassiyat-nāma* of 'Abd al-Khāliq al-Ghūdīwānī (s.v.), one of the great precursors of the Central Asian Nakshbandīyya. Khundjī eulogised *Khawāḍir Bahā'* al-Dīn Nakshband and extensively quoted his doctrines; he sought and cherished the friendship of the disciples of the famous *Nakshbandī* popular leader

Kh'adja 'Ubayd Allāh Ahrār (q.a.), who had dominated religious and political life in Transoxania in the second half of the 9th/15th century. At the same time, Khundji fiercely opposed any excess and abuse in mysticism, particularly the doctrine that men can acquire divine attributes through *fanā*?. For him, such exaggerated mysticism was as much *irāḍā*, apostasy, as the pernicious *ghulūṣ* of Shāh Ismā'īl. Khundji's paramount concern in all his writings is the protection of the revealed *sharī'a* from any infringements. In his sharp differentiation between types of mysticism, one is reminded of Ibn Khaldūn's *Shi'at al-sūfi ilā takhḍiṣ al-mawḍi'*; an influence from Ibn Khaldūn on Khundji cannot be ruled out. Khundji also severely attacked the semi-pagan religious practices of the nomadic Uzbeks, such as the institutionalised pilgrimage to the tombs of local saints; however, he does not seem to have been very successful with these admonitions.

It was from the well-known Mamlūk historiographer and polyhistorian al-Sakhāwī (q.n.) that Khundji owed his initiation into the sciences of *ḥadīth*, i.e. the discipline for which he acquired particular fame in his century. In Uzbek Central Asia, he became known as the "paragon of the traditionalists" (*ṭamad al-muḥaddithin*). He studied law, theology, the Arabic sciences and *ḥadīth* with al-Sakhāwī in Medina; his proficiency is attested by the very complimentary *targhama* which al-Sakhāwī, who was normally very critical of his students and contemporaries, included in his biographical dictionary of 9th/15th century celebrities. Among Khundji's writings on tradition, one might mention an Arabic *raṣāla* on the big fire in Medina in 886/1483, *Ḥidāyat al-taqwā ilā ḥikmat al-karīf* (ed. Muhammad Dānishpazhūh, in *Yādnāma-yi Irān-yi Minorsky*, Tehran 1969, 77-113), which is a methodically exemplary study based on *ḥadīth*.

Khundji began his public career at the court of the Ak Koyunlu Ya'qūb b. Urūn Hasan, whose attention he had attracted in 892/1487 with a copy of his (most-possibly panegyric)—work *Baḍī' al-amāl fī ḥayāt Ḥayy b. Yaqūb*. He served as a *kātib* in Ya'qūb's *diwān*, and dedicated to him and his unfortunate son Baysonkor his chronicle of the Ak Koyunlu house, the carefully-composed *Tārīkh-i 'Ālam-nāma-yi amīn* (partial translation by V. Minorsky, *Persia in A.D. 1478-1490—An abridged translation of Fakhruddīn b. Rūshdīn Khundji's Tārīkh-i 'Ālam-nāma-yi Amīn*, London 1957; full edition under preparation by John Woods, Chicago). In this work, which is the most important single narrative source on the history of the later Ak Koyunlu rulers, Khundji presents himself as an active courtier, who probably participated in the cabal to overthrow Ya'qūb's first minister Qas of Sāva who had tried to re-Islamise the fiscal system of the state, thus endangering the *soyurghals* of Khundji's affluent '*akasa*' relatives. The most significant passages of this chronicle are his diatribes against Ismā'īl's grandfather and father, Shaykh Dīnaway and Haydar (q.n.), whose self-styled religious authority he reviled in vitriolic language.

After Ismā'īl's accession to power in 907/1502, he fled in 909/1503 to Kāshghar, where he wrote his refutation of Ibo al-Muḥabbab al-Hillī's treatise *Kashf al-ḥakā' wa-naḥāj al-zāhid wa-'l-sāhid*, entitled *Ḥafā' naḥāj al-bāḥī wa-ḥimāi kashf al-'āḥī* (partial edn. and German tr. by I. Goldtner, *Beiträge zur Literaturgeschichte der Sūfīa und der sunnītischen Polemik*, in *SBZAW*, lxxvii (1874), 479-86). There he questions the originality and consistency of Ismā'īl's *fiḥḥ* and *uṣūl al-fīḥḥ*, and disqualifies Shī'ī dogmatics as a bad reproduction of Mu'tazilī (that is, in itself reprehend-

sible) *kalam*. A hundred years later, the Shī'ī Kāḍī Nur Allāh Shughartī (d. 1019/1610), a victim of Dīnaway's anti-Shī'ī religious policy, again wrote a refutation of Khundji's treatise. Khundji's book has had a lasting influence on Shī'ī-Sunni polemics in the Arab lands, even in the 20th century. Khundji, who himself held the *shī' al-bayt* in high esteem and wrote poems in praise of the twelve *imāms* (see the text in Muhammad Amin Khundji, *Faḍl Allāh b. Rūshdīn Khundji*, in *Furkān-i Irān-nāma*, iv (1335/1956), 178-9) and, on the occasion of a pilgrimage to Mashhad in the company of Shaybānī Khān (q.n.), of the eighth *Imām* 'Alī Ridā (see Khundji, *Mikmāt-nāma-yi Buḥārā*, ed. Manūchār Sutūdeh, Tehran 1341/1966, 336-8), accused the *ṭhān*-'Ashārī theologians of placing more emphasis on the slander and cursing of the Prophet's Companions, and the *shaykhān* Abū Bakr and 'Umar in particular, than on the due veneration of the immaculate family.

On his flight to the east, which also took him to Timūrid and later Uzbek Herāt, Khundji passed through Tūs, where he was inspired, as he describes in a touchingly impressionistic and intimate account, by the decaying ruins of al-Ghazālī's tomb in the solitude of the steppe (*Mikmāt-nāma* 352). Al-Ghazālī was Khundji's revered model whom he quotes extensively. On this occasion Khundji pledged that he would make an effort to emulate the great master and bring to the land of Khurāsān, in this age of great calamity, a revival of the orthodox religious sciences. He came to Buḥārā, to the court of Shaybānī Khān, the successful Uzbek ruler, who had ended Timūrid rule in Transoxania and Herāt and had conquered most of western Khurāsān. He gained access to and was to dominate the scholarly *madāris* in which the Khān, himself a cultured man, had scholars discussing questions on religion, particularly on the compatibility of certain policies with the *sharī'a*, e.g. the issue whether it was permissible for the Muslim Uzbeks to eat the meat of animals slaughtered by their semi-pagan Kazak enemies. Khundji compiled at the court before 916/1510, perhaps at the suggestion of the ruler himself, the unique "guest-book of Buḥārā" (*Mikmāt-nāma-yi Buḥārā*, see above; partial German tr. by Ursula Ott, *Transoxanien und Turkestan zu Beginn des 16. Jahrhunderts—Das Mikmāt-nāma-yi Buḥārā des Fakhruddīn b. Rūshdīn Khundji—Übersetzung und Kommentar*, Freiburg 1973) as a token of gratitude to his host and friend Shaybānī Khān. This work defies any formal classification. Its beautiful language and style evidences his literary talent. We find here, in a loose, more or less chronological sequel, passages on tradition, refreshingly natural descriptions of the scenery of Turkestan in spring and winter, surprisingly personal and autobiographical sketches (Khundji tells us, unusually, much about himself, e.g. his fits of hypochondria), and straightforward narrative passages. In the latter he e.g. gives an account of the manners of the Kazaks, the cousins and at the same time the most dangerous enemies of the Uzbeks to their north. He devotes special attention to Shaybānī Khān and to his nephew 'Ubayd Allāh Khān, who much later was to lead the Uzbek federation back to political power.

The impelling idea of the *Mikmāt-nāma* was the effort to drive Shaybānī Khān into attacking and exterminating the Shī'ī heresy from Iran and reviving the legal order of the *sunna* in Iranian homeland. He unsuccessfully opposed the scheme of defeating the Kazaks in the rear of the Uzbeks first, before marching against the Safavids, whose deeds Khundji denounced—in a familiar *topos*—as even more abomi-

nabla than the unbelief of the Franks, who were *kuffār ab origine*. He expatiates on the apocryphal *hadīth* of Kharrīth, both in the *Mishmār-nāma* (95-107) and in a separate *risāla*: Kharrīth, the prototype of Shaybānī Khān, saved the true doctrine of Islam from a heretic tribe which slandered and vilified the companions of the prophet and the four orthodox caliphs, an unconcealed allusion to Shīh Ismāʿīl, the too, and his dāwana creatures, the Kīrībāsh [q.v.]. Khundjī's concept of history is remarkable. He regards the Uzbeks as another manifestation of the nomadic migrations from Inner Asia to the Muslim East, destined to overwhelm Iran and Irāk and to bring back justice to these lands, just as the Sakāyūks had done. He praises the legendary past of the Uzbeks and predicts a glorious future for them. He elevates Shaybānī Khān, beyond the bounds of conventional encomium, to appear as a *wajiddid* of his age.

The catastrophe of Marw in 916/1510, when Shaybānī Khān was slain in battle by the Safawid army, shattered Khundjī's dreams. His advice had proved fatal for his protector and sovereign. Taking into account the vulnerable personality of the author, which shines through so often in the autobiographical passages of the *Mishmār-nāma*, this turn of events must have had drastic effects on Khundjī. He passed the following two years in hiding in Samarkand which had returned to the rule of the Timurid Bābur, Ismāʿīl's half-hearted ally. In 918/1512 Khundjī suddenly re-appears delivering an eloquent sermon in Samarkand (cf. Zayn al-Dīn Mahmūd Wāsiḥ, *Bādīʿ al-makātib*, ed. A. N. Boldyrev, Moscow 1967, I, 451.), which had been recaptured by the Uzbeks under ʿUbayd Allāh Khān.

Fulfilling a vow made at the tomb of Shaykh Ahmad Yasawi in the hour of greatest affliction, ʿUbayd Allāh commissioned Khundjī to compile, as a guide for a righteous Sunni ruler, the *Sulūk al-mulūk* (ed. Muḥammad Nigāmuddīn, Hyderabad/Dn. 1386/1966). In form this didactic work displays features of the *Mirror for Princes* books; in its topics and in the arrangement however, it belongs to the tradition of the manuals of government, such as al-Nawwardī's *al-Aḥkām al-sulṭāniyya*. It represents a highly intelligent attempt to harmonise the norms of the *sharīʿa*, as developed in the first centuries of Islam, with the realities of a tribal confederation, the body-politic of which is nomadic and Turkish, and not Islamic. Khundjī gives the prescriptions and legal interpretations both according to the Hanafī *maḥāḥab* of the Turkish Uzbeks and his own, Persian, Shāfiʿi *maḥāḥab*. He carefully juxtaposes lengthy passages on the legal norms, with numerous quotations from the *hadīth* and the canonical textbooks, with highly realistic and sober opinions on the present state of affairs. This can be observed in his treatment of taxation; he appears to equate certain aspects of the canonical *ṣakāt*-duties with the prevailing Mongol *jamʿiyya*-imposts. Even more significant is his chapter on the *ḡhīṣād*. He took his lesson from the catastrophe of Marw. No longer does he call for *ḡhīṣād* against the Safawids at all costs, lest the blood of innocent subjects of Ismāʿīl be shed. He even concedes (and thereby joins the mainstream of traditional Sunni polemics) that the Twelve Shīʿī doctrine does allow for the observance of the precepts of the *sharīʿa*, such as legal marriage contracts, the call to prayer etc. We do not know to what degree Khundjī's enlightened doctrines were taken up by ʿUbayd Allāh, an energetic and pious ruler, who despite the bitter polemics on both sides, kept religious issues largely

out of his long controversy with the Safawids over the possession of Khurāsān. His fame lived on at least in Central Asia; the increasing isolation of Transoxania from the Sunni central lands probably accounts for the little influence which his writings—particularly the *Sulūk al-mulūk*, which was explicitly directed to a broad audience of Sunni rulers—exercised outside the Uzbek domains. An effect on political thought in Mughal India is more likely, yet remains to be investigated.

(U. HAARMANN)
KHUNZAL (self designation, Khunzami; Russian designation, Khunzali, Gunḍālī, Gunsebi, Gunzibtd, Ensebi, Nakhad; other designations, Khunzeb, Gunzebi), a numerically small people of the eastern Caucasus. Khunzal forms with Bezhta, Dido, Ginkh and Khvarshi [q.v.], the Dido division of the Avur-Andi-Dido group, of the north eastern Ibero-Caucasian languages.

According to the Soviet census, in 1926 there were, ethnically, 106 Khunzals, and 129 claiming Khunzal as their mother tongue; in 1933 (estimation by Grande) there were 605 Khunzals. The Khunzals inhabit four awls on the upper course of the Avur Koyu in the Tlarata district of the Dagestān A.S.S.R. They live in the highest and most inaccessible part of mountainous Dagestān. This isolated position has protected the Khunzals from exterior influences, and they have maintained to a great degree many of the patriarchal customs. The Khunzals are Sunni Muslims of the Shāfiʿī rite. The economy has remained traditional; raising sheep with a transhumance system, agriculture on terraces, and handicrafts (especially leather work).

Khunzal is a purely vernacular language, and the Khunzals use Avur as their first literary and second spoken (sometimes first) language, having Avur as the language in primary education. Russian is the second literary language. They are in fact being culturally and linguistically assimilated by the Avars.

(R. WIZMAN)
KHURĀSĀN, today the north-easternmost *ustān* or province of Persia, with its administrative capital at Mashhad [q.v.]. But in pre-Islamic and early Islamic times, the term "Khurāsān" frequently had a much wider denotation, covering also parts of what

are now Soviet Central Asia and Afghanistan; early Islamic usage often regarded everywhere east of western Persia, so, *Djibāl* or what was subsequently termed *ʿIrāq ʿAǧami*, as being included in a vast and ill-defined region of Khurāsān, which might even extend to the Indus Valley and Sindh. Thus the Armenian geography traditionally attributed to Moses of Khorene depicts Khurāsān as stretching from Gurgān and Kūmis in the southeastern Caspian region to Badakhshān and Tukhārīstān on the upper Oxus and Bāmiyān in the Hindu Kush (see J. Marquart, *Erān-shahr*, 47 ff.).

Topographically, Khurāsān in the modern, restricted sense is dominated by a zone of mountain ranges running roughly NW-SE, a continuation of the Alburz chain, and connecting that chain with the Paropamisus and Hindu Kush ranges of northern Afghanistan; in a district such as that of the Kūh-i Bālūdd to the north of Nishāpūr, these mountains rise to 11,200 feet. To the north, open steppes and deserts run down through the Soviet Turkmenistan SSR to the Caspian Sea and the Amu-Daryā basin. To the south, there lies an extensive region of landlocked deserts and salt flats, such as the Dasht-i Kawir, the Dasht-i Lūt and the Hilmand basin of Sistān, but within this region is situated an important upland zone, that of Kāzvin and Bīrdjān, the early Islamic province of Kūhīstān [q.v.], one mass of which, the Kūh-i Mūmīnābād, rises to 9,100 feet. There is thus considerable topographical diversity, but only in the more northerly mountain zone do adequate rainfall, perennial streams and accessible wells permit a relatively flourishing agricultural and pastoral economy; here, the population is quite dense for Persia. Elsewhere, and especially in the more southerly parts, there is usually an oasis pattern of life, with much dependence on wells and on *ābīrs* or *šenās*. Also, until the time of Rūḍā Shāh Pahlawī at least, there was a substantial minority of nomads in Khurāsān, composed mainly of Gīlān and Yomut Turkmens, and some Haxāras, Taymūris and Balūč. (See for the geographical, topographical and demographic background, Admiralty handbook, *Persia*, London 1945, and *Cambridge history of Iran*, I, ed. W. B. Fisher, Cambridge 1968, chs. 1, 2, 5, 16, 19; and for the historical geography of the older period, Marquart, *op. cit.*, I, 382-432, and *Hudūd al-ʿalam*, tr. Minorsky, § 231.)

The present population of Khurāsān is very mixed. There is of course the still-important Iranian substratum, but there are extensive other groups, such as Turkmens, Kurds, Balūč, Arabs, and Taymūris and Haxāras from Afghanistan. The presence of these varied races is a concomitant of Khurāsān's strategic position as a bastion facing Inner Asia and as a corridor between the steppes and the civilised, settled lands of the Middle East. Pressure on Khurāsān by the Inner Asian nomads has been intermittent from the earliest known times till the later 19th century, when permanent political frontiers were established and the free movement of peoples thus impeded, Khurāsān was therefore the gateway through which Alexander the Great passed to Bactria and India, and conversely, that by which Turkish peoples from the Seldjūqs onwards and then the Mongols entered Persia. The result has been an ethnic commingling in Khurāsān, especially as the rulers of Persia, whether Persian, Arab or Turkish, have, in pursuance of their historic task of defending their north-eastern frontiers, at various times planted colonies of auxiliaries and guards; for political reasons, colonies of peoples like Lurs were settled there as late

as the reign of Rūḍā Shāh Pahlawī. Nevertheless, whilst the basically Iranian ethnic and linguistic nature of northern Khurāsān at least has been overlaid, this process has not gone so far as in a Turkicised province like Aḥarabūdyān; the Kāzvin and Bīrdjān region, in particular, is still predominantly Persian.

In Sāsānid times, Khurāsān was one of the four great provincial satrapies, and was governed from Marw by an *ispahbād* (MP term *Spāhpat*; [see *ispahbād*]). Yaʿqūbī, *Tarīkh*, I, 201, enumerates as comprising Khurāsān under the Sāsānids the following districts: Nishāpūr, Harāt, Marw, Marw al-Rūdh, Fāryūb, Tāloqān, Balūč, Bulghāra, Bādghīs, Abiward, Qharīstān, Tūs, Sarakhs and Gurgān. In times of military expansion, Sāsānid arms pushed beyond Marw; thus Tabarī, I, 819, says that Ardāshīr Bāhān extended his power over Kāzvin and Tukhārīstān. In fact, many local princes must have remained as Sāsānid feudatories, holding offices like those of *marzbāns* or frontier wardens; many of these achieved temporary independence when the Sāsānid monarchy collapsed under the Arab onslaught. To the immediate east of Sāsānid Khurāsān lay the lands of their enemies, the powerful northern branch of the Hephthalite confederation, with its centres in Bādghīs and Tukhārīstān; Balāshūri, *Futūḥ*, 405, mentions that there was ruling over Harāt, Bādghīs and Pūshang a local potentate, called by him the *ʿaṣm* or 'mighty one', who must have been a Hephthalite chief. The ancient pattern of hostilities between the rulers of Persia and the Hephthalites was to be taken up by the Arab governors of Khurāsān in the Umayyad period (see further, *NAVĀTIL*).

It was at Marw that the last Sāsānid Emperor, Yazdgerd III, made his stand before his betrayal by the local *marzbān* Māhūya and his murder in 35/651. Meanwhile, the Arabs had already appeared in Khurāsān. During ʿUmar's caliphate, forces from Baṣra penetrated as far as Tabasayn in the Great Desert, and a determined attack on the province was made in the following reign of ʿUthmān when ʿAbd Allāh b. ʿĀmir b. Kurayz [q.v.] was governor of Baṣra (sc. from 29/549 till 35/655). An expedition eastwards was mounted by the men of Kāfa under Saʿīd b. al-ʿĀṣī, travelling along the northern route between the Alburz and the central deserts, and another one by the Basran army under ʿAbd Allāh b. ʿĀmir and his lieutenant al-Aḥnaf b. Qays, approaching via Kirmān and Tabasayn, a route which was for long preferred as an easier and safer route than that of the modern highway and railway connecting Tehran and Mashhad. It was the Basran army which made most progress, and in 35/651 a reduced Nishāpūr to obedience, receiving the submission of local rulers and former Sāsānid governors in most of the other towns of Khurāsān. In the following year, the last great stronghold of the Sāsānids, Marw al-Rūdh, fell to al-Aḥnaf after fierce fighting, but the local *marzbān*, Bādghīs, was confirmed in his office and possessions there in exchange for a relatively light tribute. The permanent pacification of Khurāsān was, however, a protracted process. Local potentates frequently rebelled against Arab control and appealed to outside powers like the Hephthalites, the Western Turks or Türgesh, the Soghdians, and even the Chinese Emperors (who claimed a vague sovereignty over Central Asia, and with whom certain Sāsānid pretenders took refuge). In particular, the civil war between ʿAlī and Muʿāwīya meant a relaxation in Khurāsān of Arab control, which had subsequently to be re-imposed by ʿAbd Allāh b. ʿĀmir (re-appointed governor of Baṣra and the east by Muʿāwīya from 41/662 to 44/664)

and his generals. Thus an important expedition was sent against Sistān and Zabulistān under 'Abd al-Rahmān b. Samarra, in the course of which Kābul was reached, and according to Balādhurī, *Futūḥ*, 409, Balh was restored to obedience and the great Buddhist shrine of Nawbahār despoiled.

A period of stronger Arab rule came with the appointment in 45/665 of Ziyād b. Abīh as governor of Baḡra and the east. During the Umayyad age, authority over the extensive provinces of Khurāsān and Sistān (within which were included at times, as noted above, such distant regions as Transoxania, Farḡāna, eastern Aṭṭānistān, Mākiān and Sindh) was exercised in the first place by the governors of Baḡra, for Baḡra troops, and especially the men of the North Arab or Kaysi tribes of Tamīm and Bakr, were prominent in the overrunning of the eastern Persian lands, though in the governorship of al-Muḥallab b. Abī Sufra (78-82/697-702), considerable numbers of that governor's fellow-tribesmen of the Yamānī and were settled in Khurāsān. Since the turbulent province of Ṭāšk always demanded the personal presence and attention of the governors of Kūfa and Baḡra, the latter appointed deputies in Khurāsān and often in Sistān also; and all these appointments tended to reflect policy trends and personal ascendancies at the heart of the caliphate in Syria. In Ziyād's time, attempts were made, against strong resistance from the local peoples and from the Hephthalites, to reduce Ṭukhārīstān to obedience. This was achieved by al-Rabi' b. Ziyād and his son 'Abd Allāh, in the case of Balh and the lands up to the Amū-Daryā, in the years after 57/672, but the Hephthalite threat was not finally removed till the governor Kutayba b. Muslim captured and killed their leader Ṭarḡhān Nizak in 97/710 and took as a hostage the Turkish *Yabghū* (in the Arabic texts, *Yabghīyā*) of Ṭukhārīstān. But even after this, Arab rule was far from secure. The Arabs made Marw their military centre, and by the end of the 1st century A.H. were beginning to settle down permanently in the Marw oasis and probably to intermarry with the indigenous Persian population. But their solidarity in the face of external threats from enemies like the Tūrghesh and Soghdians was adversely affected by the tribal divisions and feuds between the Kaysi faction, numerically superior and generally dominant, and the Yamānīs, and also by the fact that control by the caliphs was difficult to exercise from distant Damascus. See for events in Khurāsān during the Umayyad period, Marquart, *Erānshāh*, 47-70; Wellhausen, *Das arabishe Reich und sein Sturz*, Eng. tr. *The Arab kingdom and its fall*, esp. ch. 8; Gibb, *The Arab conquests in Central Asia*, Spuler, *Iran*, 3 ff.; M. A. Shaban, *Islamic history A.D. 600-750 (A.H. 132)*, Cambridge 1971; idem, *The 'Abbāsīd revolution*, Cambridge 1970; and idem, *Khurasan at the time of the Arab conquest, in Iran and Islam, in memory of the late Vladimir Minorsky*, ed. Bosworth, Edinburgh 1971, 479-90.

The last decades of Umayyad rule were characterised by tribal warfare amongst the Arabs, which, amongst other things, delayed the consolidation of Arab control across the Amū-Daryā in Transoxania; noteworthy in this connection is the prolonged revolt in Ṭukhārīstān from 126/734 onwards of al-Bārith b. Surayḍ [g.v.]. Large numbers of Arab troops continued to reach Khurāsān, so that according to the historian Ibn A'īsham al-Kūfī, there were 40,000 Muslims in Khurāsān by 172/732. The last Umayyad governor there, Nase b. Sayyār al-Kinānī (120-30/738-48) [g.v.], was forced later by the spread of the 'Abbāsīd *da'wa* or revolutionary movement from its

centre at Marw under a political adventurer of consummate skill, Abū Muslim [g.v.]. This movement had been organised, from the caliphate of Hishām onwards, under local *wahids* or representatives of the 'Abbāsīd family in Marw, until Abū Muslim took over the leadership there in 128/746, apparently drawing his prime support from the older-established Arab settlers in the district, those whom Ṭabari and the anonymous author of the *Ta'rikh al-Ḥulafā'* edited by Gryanzevich call the *ahl al-Ḥalabūsa* (see Shaban, *The 'Abbāsīd revolution*, 155-8). By 130/748 Abū Muslim was undisputed master in Marw and Nase b. Sayyār had been forced to flee towards the west.

Since Khurāsān support was so decisive in the rise of the 'Abbāsīds, the province enjoyed considerable favour from the early 'Abbāsīd Caliphs; cf. the encomium of the Khurāsānīs as 'our party, our helpers and the people of our *da'wa*' in a *khutba* of oration pronounced at Hishāmīyya by al-Manṣūr and reported by Mas'ūdī, *Murūj*, vi, 203 ff., and the similar sentiments quoted from Ibn Kutayba in *Mukaddasī*, 293-4. Khurāsānīen guards and officials, the *Aḥwā'* al-*Dawla*, continued to be the mainstay of the régime till towards the middle of the 3rd/9th century, when there began the wholesale adoption of slave troops as the nucleus of the Caliphal army and household (see *ghulām*). Many Khurāsānīs migrated westwards into 'Abbāsīd service, such as the Barmaki family from Balh (see *BARMĀNĪKA*); this process was accentuated when al-Ma'mūn, the former governor in Marw, achieved the caliphate in 198/813 with the support of the Persian east against his brother al-Amin.

The Ṭāhirids [g.v.] governed Khurāsān for the 'Abbāsīds, as faithful servants of the caliphs rather than as autonomous rulers, for some fifty years (205-59/822-73). They were of arabised, Persian *mawla* stock, one member of whom had been secretary to an 'Abbāsīd *da'i* or propagandist in Khurāsān, Sulaymān b. Kathīr al-Khuzā'i. Ṭāhir Dhu 'l-Yamānī was one of al-Ma'mūn's generals, and was in 205/822 appointed governor of Khurāsān and the east. The Ṭāhirids were strenuous supporters of Sunnī orthodoxy and the established Perso-Islamic social hierarchy against *Shī'ī* and older Iranian religious movements in the Caspian provinces and Transoxania, and also against heterodox currents of Persian socio-religious protest which were racking the Persian countryside at this time (see G. H. Sadighi, *Les mouvements religieux iraniens au II^e et au III^e siècle de l'Hégire*, Paris 1938). Under the Ṭāhirids, Khurāsān blossomed economically and culturally. We find 'Abd Allāh b. Ṭāhir (213-30/828-45) showing his concern for his province's welfare by his commissioning a book on water rights and the regulation of *bandes*, the characteristic means of irrigation throughout much of Khurāsān; this *Kutāb al-Kawā'id* was, according to the Ghaznavid historian Gardīzī, still in use two centuries later. Whereas in the early Islamic period Khurāsān had been economically and culturally backward compared with western Persia (cf. E. Herzfeld, *Khurasan: Denkmalsgeographische Studien zur Kulturgeschichte des Islams in Iran*, in *Ist.*, xi (1921), 207-24), its agricultural prosperity now increased; according to Va'ḡūbī, *Buldan*, 308, tr. 128, the *kharaḍi* or land tax of Khurāsān under the Ṭāhirids amounted to 40 million dirhams a year. It benefited from commercial traffic connecting Ṭāšk and Balh with Central Asia and the fringes of the Indian world, and a luxury product like the edible earth of Nishāpūr was, according to Ṭha'libī, *Lata'if al-ma'ārif*, 191, tr. Bosworth, 132, exported all over the

Islamic world, including to Egypt and the Maghrib. Above all, Khurāsān derived much advantage from the transit trade in Turkish slaves, which were a regular component of the annual tribute forwarded to the caliphs by the early 'Abbāsid governors, the Tāhirids, and later, the Sāmānids, and which often fetched high prices; Ibn Hawkal, II, 452, tr. II, 437, says that he saw more than once in Khurāsān slaves sold for 3,000 dinars. (Further on the Tāhirids, see Bosworth, ch. 3. The Tāhirids and Saffārids, in *Cambridge History of Iran*, IV, Cambridge 1975, 90-106).

The Saffārid adventurer from Sistān, Ya'qūb b. Layth, overthrew Tāhirid rule in Khurāsān, entering their capital Nishāpūr in 250/863, and in the ensuing years, Khurāsān was fought over by various contending generals, until the Sāmānid amir Ḥusayn b. Aḥmad [d. n.] defeated 'Aḥz b. Layth in 273/900 and incorporated Khurāsān into the Sāmānid dominions. Under what is described in the sources as the beneficent rule of the Sāmānids, Khurāsān continued to be within the mainstream of Sunni religious orthodoxy and culture, it had become already under the Tāhirids a vigorous centre of Arabic literature and of Sunni legal and religious scholarship. There is a large representation of Khurāsāni scholars in such literary biographical works as Tha'alibī's *Yatimat al-dahr* and the continuations of Bal'harī and Iṣfahānī. Khurāsāni theologians and traditionists were prominent in Sunni, especially Shāfi'ī and Aḥlī, learning, and in such theological and philosophical movements as those of the Mu'tazila and Karāmiyya [q.v.]. The extremist Shī'ī Ismā'īlī sect had pockets of support in the east, and Khurāsāni ascetics and mystics played important rôles in the development of Sūfism. It is, of course, well-known that Khurāsān and the eastern Iranian world in general had a crucial part in the renaissance of the New Persian language and its literature from the 3rd/9th century onwards; see Browne, *LHP*, I, 445 ff., and Rypke et alii, *History of Iranian Literature*, 133 ff.

As the Sāmānid emirate disintegrated in the later 4th/10th century under external attack from the north and internal revolt by unruly Turkish generals, Khurāsān passed under the rule of the Turkish Ghaznavid dynasty [q.v.]. In 384/994 the founder of the line, Sebük-tigin, had been given the governorship of Balkh and the eastern parts of Khurāsān, and in 388/998 his son Mahmūd consolidated his power in the whole of the province, which was to remain under Ghaznavid control for forty years. The riches of Khurāsān did much to finance the successful Ghaznavid war machine, but the financial exactions of Ghaznavid officials and a series of disastrous famines made the Sultāns' rule there unpopular. Hence Nishāpūr and the other towns were not averse during the period 428-31/1037-50 from surrendering to the incoming Oghuz nomads led by the Saljuq family; and the Saljuq victory at Dandānqān [q.v. in Suppl.] in 431/1040 sealed the fate of Ghaznavid rule over those parts of greater Khurāsān to the west of Badakhshān and the central Afghan mountain massif.

Under the Saljuq Sultāns, Khurāsān was an important province of their empire, even though the founder Toḡhril Beg soon moved his capital westwards from Nishāpūr to Ray and Iṣfahān. Khurāsān and the east were initially ruled by Toḡhril's brother Čāghri Beg Dāwūd, whose son and grandson Alp Arslan and Malik Shāh were to raise the Saljuq empire to its apogee. In general, firm rule brought peace to the towns of Khurāsān. This was temporarily ended in the uncertain years after Malik Shāh's death in 485/1092—the local historian of Bayhaq or Sebza-

wār, Ibn Fāduk, comments on the recrudescence of sectarian strife and the activities of the para-military 'ayyār groups in the town—but stability returned under the long reign of Sandjar, who was firstly governor in the east and then Sultān for a total of over sixty years. The intellectual and cultural vitality of Khurāsān remained unimpaired, and four of the original alim madrasas or colleges founded by the great Viāzir Niẓām al-Mulk were, according to his biographer Subki, in towns of that province, so, in Nishāpūr, Balh, Harāt and Marw. One effect of the Oghuz migrations into Persia was the arrival of Turkmen groups in northern Khurāsān, where suitable pasture was to be found for their flocks. These nomads remained an unassimilable element of Saljuq Khurāsān, until neglect of their interests by the central government drove them into revolt towards the end of Sandjar's reign, leading to the Sultān's own capture by the Oghuz and effective deposition in 548/1155.

In the decades preceding the Mongol invasions, post-Saljuq Khurāsān was held by various Oghuz tribal leaders and by former Saljuq generals, and was then fought over by the Ghūrides and Khwārazm-Shāhs [q.v.], until the Shāh 'Alā' al-Dīn Muḥammad finally overthrew his Ghūrid rivals in the opening years of the 7th/13th century. [See, for the history of Khurāsān in the Ghaznavid and Saljuq periods, Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, parts II and III, andidem, *in Cambridge History of Iran*, IV, ch. 5, v, ch. 3].

The Mongol hordes of Čingiz Khān, driving the Khwārazm-Shāh Djalāl al-Dīn before them, appeared in Khurāsān in 617/1220, and seized control of its towns. Whilst not all of the notorious massacres of the Mongols may have been perpetrated at the original surrender of some towns, but at the time of subsequent revolts, Marw and Nishāpūr, which resisted fiercely in 618/1221, suffered appallingly. Ibn al-Aṭir, xlii, 256, places the number of dead in Marw at 700,000, and Jāwāynī, tr. Boyle, I, 163-4, has the figure of 1,300,000 for the Marw oasis as a whole. Even allowing for statistical exaggeration, the Mongol invasions undoubtedly devastated Khurāsān to a far greater degree than the Oghuz incursions of the 5th/11th century had done, as is amply demonstrated in the accounts of European and Muslim travellers and geographers of the following period of the Il-Khānids, e.g. those of Marco Polo, Ibn Baṭṭūṭa, Ḥamid Allāh Mustawī, etc. As well as the population losses and destruction of settlements, the increased proportion of Turkish and Mongol nomads in the province accentuated the existing trend from Saljuq times towards pastoralisation and the decline of agriculture; moreover, the arbitrary Mongol system of taxation bore especially heavily on cultivators and landholders, according to I. P. Patrushevsky, in *Camb. Hist. of Iran*, v, ch. 6. Certainly, Khurāsān never recovered its cultural and intellectual position within Persia as a whole; the Il-Khānids made their centre in western Persia, and Dībil, Adharbāydjān and Īrāk became the foci of political activity and artistic and literary life. The towns of Khurāsān continued to suffer from the wars between the Il-Khānids and the Čaghatayids, and a place like Harāt only became a major centre with the florescence of the Timūrids in the 9th/15th century.

After the death of the Il-Khānid Abū Sa'īd in 736/1335, various local dynasties arose in Persia, including in Khurāsān the Karti or Kurti and the Sarbadārī [q.v.]. The Karti arose in Harāt during the 7th/13th century, and successive rulers with the

title of *malik* or king retained power there till the deposition by Timūr of the last ruler, Ghīyāth al-Dīn Fir 'Alī, in 792/1389. The Sarbadārs stemmed from Bayhāk, and in the middle years of the 8th/14th century they held this region of western Khurāsān, extending to Dāmghān and even holding Nishāpūr temporarily, till they too were extinguished by Timūr in 783/1388. Timūr made his own capital at Samarkand in Transoxiana, but his son Shāh Rukh became governor of Khurāsān for his father in 799/1397 and ruled there for fifty years until his death in 850/1446-7. Towns like Harāt and Marw were rebuilt, and a considerable degree of prosperity restored; and under the Timūrid prince Husayn b. Manṣūr b. Baysunghar (855-922/1470-1506) [q.v.], Harāt and Khurāsān enjoyed a period of political stability and of brilliant cultural and artistic life.

In the early 10th/16th century, Khurāsān was overrun by the Ōzbeḡ chief Muḥammad Shaybānī Khān and his hordes, but three years later, in 925/1510, the Safawid Shāh Ismā'īl I killed the Khān and incorporated Khurāsān into the Safawid dominions. The Safawids were, however, unable to hold Balkh, and lost it permanently in 925/1516. Warfare with the Ōzbeḡs remained endemic in northern Khurāsān, with the possession of frontier towns like Marw oscillating between the two powers. Noteworthy in the Safawid period—one in which Persia became in majesty a Shi'ī land—was the rise in importance of the great shrine of the Imām 'Alī al-Riḍā [q.v.] at Mashhad, originally the village of Sanābād, where both the eighth Imām of the Shi'as and the Caliph Hārūn al-Raḥīd were buried. The shrine was already splendidly ornamented in Il-Khānid times, as Ibn Beṭṭīya noted (Riḥla, iii, 77-9, tr. Gibb, iii, 582-3), and was increasingly enriched by the Timūrids and Safawids. Shāh 'Abbās I endeavoured to encourage the Shi'ī pilgrimage to Mashhad, since the holy places of 'Irāk, such as Najaf and Karbala', were often in Sunnī, Ottoman hands. In the comparatively peaceful period of Kādjār rule, Mashhad gradually attained its modern position as the principal city of Khurāsān.

With the resurgence of tribalism and the political upheavals of the 12th/18th century, Mashhad became Nādir Shāh's capital, and he made his military redbut in the mansion of Kal'at-i Nādir in northern Khurāsān, but after Nādir's death in 1260/1747, the eastern parts of Khurāsān passed for a while into the control of the Durrānī Afghān chief Ahmad Shāh [q.v.], and by 1263/1750, Balkh, Harāt, Mashhad and Nishāpūr were all in his possession. But the blind, half-Safawid grandson of Nādir, Shāh Rukh, had meanwhile been raised to power in Khurāsān, and remained there as nominal ruler at least till his death in 1290/1796.

Once Aḡā Muḥammad Kādjār had made firm his power over the whole land of Persia, control over Khurāsān was fully restored to the central government, now installed in Tehran. But the depredations of the Ōzbeḡs and other Turkmens continued to make life in northern Khurāsān chronically insecure; the progress of commerce and agriculture was inhibited, and many Persians were carried off and enslaved by raiders from the Central Asian amirates. These causes of friction were only ended by the Russians' virtual annexation of Khywa in 1873 and the crushing of the Tekke Turkmens at Gök Tepe in 1881. After this last victory, the Persian government was not strong enough to withstand Russian pressure, and the Russians annexed the Marw oasis in 1884. Relations with the emirs of Afghanistan had meanwhile continued to be bad, with contention over possession

of Harāt. The town was besieged in vain by the Persians in 1838, and Nāṣir al-Dīn Shāh fought a brief war with Britain in 1856-7 over a temporary Persian seizure of Harāt. After this, overt Persian attempts on these districts of western Afghanistan ceased, though disputes over the demarcation of the boundary between Khurāsān and Afghanistan were not finally settled till the definitive demarcation of the whole boundary as far south as Sistān in 1934-5.

Khurāsān and the provincial capital Mashhad are now fully connected with Tehran by a metalled road, a railway and air services. The present population of the province (1966 census) is 24 millions, with Mashhad now the third largest city of Persia with 409,000 inhabitants.

Bibliography: This is largely given in the article, but note for the earlier period the flourishing genre of local histories, e.g. of Bayhāk, Nishāpūr, Balkh and Harāt (see Storey, I, 353 ff.). The political and social history of the province must be largely extracted from such general works as the books of Spuler, *Iran and the Mongols in Iran*, Sykes' *History of Persia*, the relevant chapters of the *Cambridge History of Islam*, I, and above all, the published and forthcoming volumes IV-VIII of the *Camb. Hist. of Iran*. For the 19th and early 20th centuries, the works of European, mainly British, travellers, officials, consuls, etc. are a prime source, e.g. those of J. B. Fraser, C. Metcalfe MacGregor, the Hon. G. C. Napier, the Hon. G. N. Curzon, C. E. Yate, P. M. Sykes, W. Ivanov, etc. (C. E. Bosworth).

BANŪ KHURĀSĀN, the dynasty which, taking advantage of the anarchy initiated in Zīrid Ifrīqiya by the Hilālī invasion, governed Tunis 454-522/1062-1128 and 543-554/1148-59. When leaving Kayrawān to take refuge in al-Mahdiyya (449/1037), the Zīrid al-Mu'izz b. Badīs had left Kayrawān and Tunis in the protection of a Ṣanhāḡī chieftain Kāḍī b. Maymūn. The latter seems to have exercised no authority at Tunis, which was probably evacuated by the Ṣanhāḡīa, regrouping at al-Mahdiyya or in Hammādid territory, and independent. Ibn Khaldūn states that it fell prey to a Hilālī amir, a son-in-law of al-Mu'izz b. Badīs, 'Abī b. Abī Ḥayyūn who reduced the inhabitants to slavery; this episode, undated, seems to have been no more than an isolated raid of which the effects were short-lived. According to the same author, a mercenary leader, Kaḥrūn b. Ḥannūsh, who became governor of Tunis, was banished from there because of his bad administration; subsequently he made a stronghold for himself in the arches of the aqueduct at Manzil Dahmūn, a refuge of brigands which the Tunisians succeeded in destroying with the aid of the Riḡābīd amir Muḥriz b. Ziyād. One imagines the Tunisians paying ransoms and tribute to the nomads, the rulers of the plains, but wishing to be protected against these marauders.

In the West, the Hammādid principally, still intact, and indeed reinforced by the downfall of the Zīrid state, passed into the hands of an energetic, far-sighted sovereign, al-Nāṣir (454/1062). His power was quickly consolidated by the rallying to his side of Sfax and Kāsiḡliya. It was only to be expected that Tunis should have considered doing the same thing, and accordingly a delegation of Tunisian *ḡayyās* went to the Kal'a to ask the Hammādid prince to choose them a governor. According to the *Iḡḡār*, al-Nāṣir, prudently no doubt, contented himself with advising them to choose for themselves a *ḡayyā* who would govern them whilst he confined himself to observing them, taking his time to study

the situation (*yakūnu bi-amrīhim ḡalālā mā yanquru ḡayāhim*); they chose one of the leaders of their own community but he refused, and it was then that 'Abd al-Hakk b. 'Abd al-'Aziz b. Khurāsān took power in the name of al-Nāṣir. According to Ibn Khaldūn, 'Abd al-Hakk was appointed by the Hammādid immediately following the reception of the embassy of the Tunisian ḡayāḥ. This historian, who makes no mention of the election of a Tunisian ḡayāḥ, proposed initially by al-Nāṣir, seems to have condensed his account of events; possibly there was a second deputation which returned with the designation of the Khurāsānid, or even with the governor in person.

Abū Muḥammad 'Abd al-Hakk b. 'Abd al-'Aziz b. Khurāsān, a native of Tunis, was quite probably, says Ibn Khaldūn, of Ṣāḥṣāḡ origin; without this affirmation one would have to postulate for him a Khurāsānid descent; in Tunisian dialect, Khurāsān became Khirāsān (the cupola of Sidi Bū Khirāsān).

He bore only the title of ḡayāḥ and ruled the city assisted by a council of ḡayāḥ, a kind of senate partaking, no doubt, of the nature of the Berber *djama'a*. Nothing more is known of the institutions, certainly of a rudimentary nature, of this oligarchic republic. 'Abd al-Hakk showed himself a good administrator, knowing how to assert himself and gain the sympathy of the population. To put an end to the brigandage of the Hilālī Arabs, he had the wisdom to agree to pay them an annual tribute (*ḡidān ma'ūma*); this *modus vivendi* probably made conditions favourable for the exploitation of neighbouring lands, for the provision of food supplies, for industry, and commerce.

The Hammādid suzerainty seems to have been no more than nominal; besides, al-Nāṣir was occupied warding off the Hilālī peril and in 457/1064-5, at Sēhla, he suffered a defeat as great as that of the Zirid at Haydarān in 443/1052. Tamīm b. al-Mu'izz b. Bādīs took advantage of his cousin's defeat to attack Tunis (458/1065-6); after a siege lasting fourteen months, 'Abd al-Hakk submitted to him and recognised his suzerainty, but the authority of the Zirid of al-Mahdiyya seems to have been exercised in Tunis no more than had been that of the Hammādid of Kal'a. 'Abd al-Hakk governed for a further thirty years until his death (488/1095). His son 'Abd al-'Aziz succeeded him. One may suppose, on the basis of an inscription on the foundation of a mosque dated Ramaḍān 485/5 Oct. - 3 Nov. 1092 where he is called *al-ḡayāḥ al-aḡḡālī* (the most venerable ḡayāḥ) that before his father's death he bore at least some of the authority. In addition, the frieze on the cupola of Sidi Bū Khirāsān says that this mausoleum was built in Dhu'l-māda II 486/29 June - 27 July 1093 by "the victorious power" (*al-sulṭān al-maṣṣūr*) Abū Muḥammad 'Abd al-'Aziz and Abū 'I-Tahir Ismā'īl, both of them sons of ḡayāḥ 'Abd al-Hakk b. 'Abd al-'Aziz b. Khurāsān; from this we may suppose that at this date, 'Abd al-Hakk, doubtless aged and sick, had handed over the reins of government to his two sons. It seems that 'Abd al-'Aziz, whom Ibn Khaldūn accuses of "a feeble spirit", at least to a certain extent shared power with his brother Ismā'īl.

Tunis must have broken with the Zirid of al-Mahdiyya, since the sources state that Tamīm attacked and took it again in 491/1097-8.

The epitaph has survived of ḡayāḥ Abū Muḥammad 'Abd al-'Aziz b. 'Abd al-Hakk b. Khurāsān who died on 5th Muharram 499/17th Sept. 1103, who that of the *amir* Abū 'I-Tahir Ismā'īl b. 'Abd al-Hakk b. Khurāsān, who died on 12th Raddjab 500/8th March 1107; so the latter must have reigned from 5th

Muharram 499 to 12th Raddjab 500 with the title of *amir*. Had he seized power? Had he aimed a blow at the power of the council of elders? Whatever the explanation, his nephew Ahmad b. 'Abd al-'Aziz put him to death and his son Abū Bakr b. Ismā'īl fled to Bizerta.

Ahmad b. 'Abd al-'Aziz b. 'Abd al-Hakk b. Khurāsān showed himself a dictator, abolishing the authority of the ḡayāḥs, many of whom were exiled to al-Mahdiyya and elsewhere, and he sought the favour of the jurists with whom he liked to surround himself. He built the *Kaṣr* (palace) of the Banū Khurāsān, surrounded Tunis with ramparts and obtained from the Hilālī Arabs a guarantee to watch over the safety of travellers. Ibn Hamdīs wrote a panegyric of this prince, considered by Ibn Khaldūn the most remarkable of his family.

In 510/1116-17, he was obliged to submit to 'Alī the Zirid of al-Mahdiyya who sent an army to besiege Tunis, but in 514/1120-1 it was al-'Aziz the Hammādid of Bougie who laid siege to Tunis and imposed this suzerainty upon it. Finally, in 522/1128, a general of the Hammādid Yahya b. al-'Aziz attacked Tunis. Ahmad b. 'Abd al-'Aziz went out of the city, surrendered and was banished, with all his family, to Beugue where he died. Tunis was entrusted to Hammāmid governors who continued to rule there until 543/1148-9.

There followed for the Tunisians a period of anarchy; they were threatened simultaneously by the Normans—already masters of Djerba (530/1135), of Tripoli (541/1146), of Gabès (whose chieftain, a usurper, recognized them in about 541/1146-7), of al-Mahdiyya, of Sousse and of Sfax (these three taken in the same year, 543/1148)—and by the Hammāmidis of Bougie who were making preparations to subjugate them unconditionally; in addition, they were harassed by Muḥriz b. Ziyād, the Riyābid *amir* of La Māga (at M'zallaka, between Tunis and Carthage). They took as their chief the *ḡaḡī* Abū Muḥammad 'Abd al-Mu'min, son of the *imām* Abū 'I-Ḥasan. With his approval, they made an astonishing *coup d'état*, deciding to appoint Muḥriz b. Ziyād as their king. In reply to their invitation, the Riyābid approached Tunis; the *ḡaḡī* and the ḡayāḥs came in procession to meet him; but a cry taken up by the crowd, "No obedience to an Arab or a *ḡuzz* (i.e. a Turoman)", caused the enterprise to fail. It seems that the ruling class, having acted out of realism or for the defence of their own interests, were fooled by public opinion. Muḥriz b. Ziyād made his way back to La Māga where he was joined by the *ḡaḡī* who had been chased out of Tunis.

In order to put an end to the civil war, the Tunisians decided on a restoration of the Banū Khurāsān. A deputation went to Bizerta to fetch Abū Bakr b. Ismā'īl b. 'Abd al-Hakk who was hauled up at night over the city walls of Tunis in a wicker basket. This secret entry, which is not adequately explained by the closure at night of the city gates, suggests that the population was not uncooperative in the decision to adopt him as *amir*. Seven months later he was betrayed by his brother's son, 'Abd Allāh b. 'Abd al-'Aziz who seems to have had him drowned. 'Abd Allāh b. 'Abd al-'Aziz b. Ismā'īl b. 'Abd al-Hakk remained in power for about ten years. He killed the *ḡaḡī* Abū 'I-Fadl Dja'far b. Halwān, his son and the son of his sister Ibn al-Banā'id, fearing lest they conspire against him with the Arabs, doubtless with Muḥriz b. Ziyād.

Nevertheless, it was thanks to a unit commanded by Muḥriz b. Ziyād, which had penetrated into Tunis,

that the inhabitants, under siege by Abū Muḥammad 'Abd Allāh, son of the Almohad caliph 'Abd al-Mu'min, made a successful sortie and forced the enemy to retire. On the last day of Jumādī I 552/20th July 1157, 'Abd Allāh b. 'Abd al-'Azīz reported to the archbishop of Pisa the victory which he had just won over the Maṣmūda, in a letter preserved in the archives of Pisa confirming the verbal terms of a commercial treaty between Pisa and Tunis.

He was succeeded by his nephew 'Alī b. Aḥmad b. 'Abd al-'Azīz b. 'Abd al-Hakīm b. Khurāsānī (in about mid-February 1159). But five months later (about mid-July 1159), Tunis was laid under siege by a formidable army and fleet under the caliph 'Abd al-Mu'min, and surrendered. A deputation of twelve (or seventeen) *shaykhs* went to 'Abd al-Mu'min to ask for peace. After an initial refusal, and long equivocation, he accepted. In the list of these *shaykhs*, unfortunately incomplete, we notice nine names: three brothers, the Banū 'Abd al-Sayyid, Ḥāshimī *sharifs* (the epitaph of another member of this line, dating from 523/1123, is qualified by *faḥsh* and *imām*), and two sons of Maṣṣūr Iemā'ī and their paternal cousin; so we are dealing here with an oligarchy, and, once more, it is making terms with the enemy, in a fact, 'Abd al-Mu'min promised to respect the lives, families and goods of the *shaykhs* who had come to negotiate, in return for their readiness to surrender, but he made the same guarantees to the other inhabitants of the city and environs only after they had handed over to him half of their goods.

The last of the Khurāsānids, 'Alī b. Aḥmad, had not only to surrender half of his goods, but also to accept exile in Bougie; once these conditions were accepted, he left Tunis that same day, but died on the road.

Tunis has kept some relics of the Banū Khurāsān, sc. the mosque of the *Ḍiānī* al-*Kāṣir* (ca. 499/1106), which probably adjoined their palace (no longer in existence), and not far from Sidi Bū Khriṣān street, a *Kabba*, their lunar mausoleum in the centre of a necropolis excavated by S. M. Ziss, to whom we owe the establishment of an epigraphic museum and the publication of a number of tomb-inscriptions of the men and women of this family.

KHURĀSĀNĪ, AḤMAD MUḤAMMAD KĀZIM (1839-1911), a distinguished *Shi'ī muftī* *faḥsh* of Iran; born in Tās, he received his early education in Maṣḥad, pursued traditional studies including natural philosophy in Tehran in 1860, and moved to Naḡḡāf in 1861 for further studies. He studied under Mirzā Ḥasan Shīrāzī, the then sole *marja'ī* *faḥsh* of the *Shi'ī* world. After the latter's death (1894), Khurāsānī was recognised as the legitimate successor to Shīrāzī. He proved to be a resourceful teacher, lecturing daily before more than 1,000 students of *ṣulūḥ al-fikḥ* and producing as graduates of his courses some 120 *muftiḥs* (Mahdī al-Mawsūṭ, *Asṣan al-muḥḥiḥ*, I, Naḡḡāf 1908, 147-8). He established three religious (*ibid.*, 148) and some modern schools in *Qazvīn* ('Abd Allāh al-Fayyāḍ, *al-Ṭawarīḥ al-ṭarīḥiyya al-akbarā* *sana* 1920, Baghdad 1967, 82 ff.). Since 1906 Khurāsānī's name has been associated with the Persian Constitutional Revolution as one of its most influential supporters. He and two other *muftiḥs*, Ṭibrānī and Mizzandārānī, issued numerous *fatwas* and manifestos, sent many telegrams, wrote many letters to responsible authorities in Persia and Turkey, and organised two uprisings.

Led by Khurāsānī, the Persian *'ulamā'* of *Irāq* intensified their campaign against Muḥammad 'Alī Shāh's abrogation of the constitution in 1908, and in a *fatwa* they declared that obedience to the Shāh and the payment of taxes to his government were un-Islamic (Ahmad Kasravi, *Tārīḥ-i Maṣḥāḥa-yi Irān*, Tehran 1957, 750) and strongly condemned their clerical opponent *Shaykh* Faḍl Allāh Nūrī (*ibid.*, 548). Khurāsānī's activities were not favoured by 'Abd al-Ḥamid II of Turkey. Thanks to the Young Turks' Revolution of 1908, however, there appeared a degree of mutual co-operation between the *'ulamā'* and the Turks, and Khurāsānī openly supported the Turkish Revolution. He even threatened to dethrone 'Abd al-Ḥamid upon the latter's counter revolution in 1909 (Sayyid Muḥammad Ḥasan Naḡḡāfī Kūrānī, *Siyāḥāt i shāhī*, Maṣḥad 1972, 474-6).

Living in an Ottoman province, *Irāq*, Khurāsānī and other Persian constitutionalists seem to have been led to an agreement of expedience with the Young Turks. We see Khurāsānī, for instance, sanctioning the Pan-Islamic policy of the Young Turks (*RMĀ*, xii (1912), 385-6) and at times, despite his being a *Shi'ī muftiḥ*, calling the Ottoman sultan 'caliph' (*al-'Irḡān*, i (1909), 240-3; Niṣān al-Dīn-Zāda, *Hudūḡ-i Rās bi-*Irān**, Baghdad 1973, 45). In support of the sultan, he also declared a holy war against the Italian invasion of Libya in 1911 (*al-'Irḡān*, ii (1911), 246-7, 290-7, 338-42). In return, Khurāsānī appealed to the sultan to interfere in favour of the Persian constitutionalists: once in 1909 when he was successfully working towards the dethronement of the foreign-backed Shāh (*al-'Irḡān*, i (1909), 240-3), and another time when, upon the Anglo-Russian invasions of Iran in 1911, the deposed Shāh vainly attempted to regain his throne (*Hudūḡ-i Rās*, 45-6). In both cases Khurāsānī, leading many of his supporters, set out for Persia to mobilise the masses; the first uprising was stopped because of the Shāh's downfall (*al-'Irḡān*, i (1909), and iv (1912), 36-40), and the second one was postponed because of Khurāsānī's sudden death (*Hudūḡ-i Rās*, 58-67).

Despite the allegation concerning Khurāsānī's ties to the Oudā Bequest (Mahmūd Mahmūdī, *Tārīḥ-i rawḍih-i siyāḥi-yi Irān va Inḡilīs*, Tehran 1953, vi, 1741-5), he does not seem to have favoured the British. Since the Russian troops were suppressing the Persian Revolution and the British were thought to have supported it, Khurāsānī sent delegates to the British Consulate in Baghdad seeking co-operation (Abdul-Hadi Hāziri, *Shi'ism and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1971), though this proved useless because of the British commitment to the 1907 Convention. From then on, we see Khurāsānī in an equal opposition to the two powers. He expressed his deep mistrust in the Shāh, and paid no attention to the intercession of the two powers under whose pressures the Shāh had to promise the re-establishment of the Persian constitution; Khurāsānī only insisted upon the deposition of the Shāh and the declaration of a genuine constitutional régime (Hawr, *Why did the 'Ulamā' participate in the Persian Constitutional Revolution of 1905-1909?*, in *WT*, xvii (1976-7).

AL-KHURAYMĪ (see also VAʿĪZU AL-KHURAYMĪ)
AL-KHURĪ, FĀRIS (1875-1962) a Syrian politician, a Christian, who played a very important role over a period of almost half a century. Born in a Lebanese village on the slopes of Mount Hermon, he studied at ʿSaydī then at the school in Beirut which was later to become the American University, while also working as a teacher. When family affairs took him to Damascus in 1899, he took up residence in the Syrian capital, learned Turkish and French and was employed as an interpreter in the British consulate. His political career began in 1909 when he joined the Committee of Union and Progress. A legal adviser to the municipality of Damascus (1910-38) he was elected a member of the municipal council of the town in 1914, took part in 1918 in the Council of State which met in Istanbul, participated in the creation of the Arab Academy, and then occupied a number of important political offices: Minister of Finance in 1920, of National Education in 1926, President of the Chamber of Deputies in 1943 and then from 1946 to 1949, and President of the Council of Ministers in 1944-5 and in 1954-5. At the same time, he was President of the Bar of Damascus (1920-36), for a short time Professor of Law (1922), a founder member of the People's Party (1915), then of the Nationalist Bloc (*al-Kalla al-Waṭaniyya*, 1918), and was a member of the delegation which negotiated with France the Treaty of 1936. After the war he was appointed Syrian delegate to the United Nations, and presided over the Security Council in 1947 and 1948. He retired from active life in 1955 and died on 2 January 1962.

Fāris al-Khūrī was a calm, level-headed man whose essential aim was to achieve the supremacy of justice. He was a man of great culture and erudition, and his powers of oratory were widely recognised. After the beginning of this century he took an interest in events outside the Arab world and derived from them the inspiration for his literary, more precisely his poetic, production, for this man of politics was also a poet. His classical background gave him the idea in 1898 of preparing an anthology entitled *Shiḥr al-ʿArab fi ʿaṣr al-ʿArab* which has remained unedited, but he continued subsequently to compose verses, of which the total number is close to 2,000. His poetry is neo-classical in style and comprises a number of *ḥaṣḥas* on various events, notably on the Russo-Japanese War, panegyrics and obituary tributes dedicated to his friends or to distinguished personalities, a single *ḥidjāʾ* (of sultan ʿAbd al-Hamid II, which he later regretted), and some love poems, including three *misraʿiyyāt*, another product of his classical education is a *ṭaḥṣīs* of the *nawāyis* of Ibn Zaydūn (q.v.). He also found the time, in spite of his many commitments, to write two legal works: a *Mafḥaz fi ʿilm al-mahyāya* (1924, 1937) and the *Uṣūl al-muḥakamat al-kusūbiyya* (2nd ed. 1936).

Bibliography: In addition to the archival information held by the family, whose material is unedited, there have been two monographs on Fāris al-Khūrī: Hannā al-Khabbās and Dūrūd Haddād, *Fāris al-Khūrī*, Beirut 1952, and Muḥammad al-Farḥānī, *Fāris al-Khūrī wa-ʿayyid al-ḥaṣḥa*, Beirut 1964. See also *Cahiers de l'Orient Contemporain*, Paris, I-xxiii (1945-55), index; Nasīm Sh. al-Khūrī has presented at the Lebanese University in 1973 a *Madīna Fāris al-Khūrī* containing all of his poetic work which is accessible, together with a

detailed bibliography; this work should be published. (ED.)

AL-KHURMA, an oasis in western Saudi Arabia situated at lat. 21° 34' N and long. 42° 2' E, which became prominent in Arabian politics during the first quarter of this century. The oasis lies in the middle reaches of Wādī Tarābā or Turābā (also shown on maps as Wādī Subayʿ). The companion oasis of Tarābā (q.v.), capital of the tribe of the Buḥānā, is farther up the valley about 75 km. to the south-west. Another 75 km. downstream from al-Khurma the valley passes by the wells of al-Kunṣuliyya and then ends at ʿIrq Subayʿ, whose sands keep the floodwaters from joining the main drainage system emptying into Wādī ʿt-Dawāsir (see [BAḤIRAT] AL-ʿARAB). The oasis is close to the northern tip of Ḥarrat Nawāṣir, the southern part of which is called Ḥarrat al-Buḥānā. The road from al-Khurma to al-Taʿīf runs south of west over the range of Ḥadā, often taken as marking the eastern geographical limit of al-Hijāz (q.v.). About 80 km. north of al-Khurma is the ancient gold mine of ʿZalīm, attempts to rework which in recent times proved a failure. Beyond ʿZalīm to the north is the present main highway from Jidda and Mecca to al-Riyāḍ (Darb al-Hijāz); earlier, many pilgrims and a considerable amount of trade went along the track through al-Kunṣuliyya and al-Khurma.

The relatively small population of al-Khurma is made up of tribesmen from the western section of Subayʿ (q.v.), who regard the oasis as their capital, ʿSharifa, and black freemen. The chief place in the oasis is Kaṣr Khālīd, named after a former *Amīr* (see below), and the other principal settlements are al-Sūq and al-Sulaymiyya.

Unlike Tarābā, al-Khurma is not mentioned by Ḥamdanī, though it may have been inhabited even before his time. Its first appearance in history seems to have been in 1222/1798, when the ʿSharif Ghālib b. Muṣṭafā, a determined foe of the Wahhābiyya (q.v.), pitched his camp there with a host of "Bedouins, townsmen, Egyptians (*naṣāriyya*), and Maghribis" (Ibn Bighr, 4, 122) while making a sweep through the southwestern oases in an effort to halt the spread of the reform movement. Surprised by Wahhābi warriors under the leadership of Ḥādī b. Karmālād Kaḥlān and Rubayyī b. Zayd of the Dawāsir, Ghālib and his host fled pell mell, losing many hundreds of men and rich booty. This catastrophe compelled Ghālib to resign in 1233/1799 the ban that for some years prevented the Wahhābis of Najd from making the pilgrimages.

With the resurgence of the Wahhābiyya in this century under ʿAbd al-ʿAzīz Al Suʿūd, possession of al-Khurma became a crucial issue. Many Khurmans had remained attached to the reform movement since the preceding century. As Wahhābi proselytising also won new adherents in the west, the ʿSharif al-Ḥusayn b. ʿAlī of Mecca tried to assert sovereignty over al-Khurma, which would have carried his authority well towards the east. In the words of Philby, "Khurma itself was a locality of little importance, economically or politically, though it occupied a strategic position as the back-door to Najd. Its real significance was as a symbol of the struggle for Arabian hegemony, which had now been transferred from the old cockpit of the Qasim (see AL-ḠAṢIḤ) to the frontiers of the Hijaz" (*Arabian jubilee*, 60). The British government held that al-Khurma, which it thought was not very far away from al-Taʿīf (the actual distance is 190 km.), fell within al-Ḥusayn's sphere. ʿAbd al-ʿAzīz, on the other hand, avowed that he had inherited all

the territory that had belonged to his forefathers, including al-Khurma.

The Sharif Khālid b. Mansūr Ibn Lu'ayy, said to have been named *amir* of al-Khurma by al-Husayn, became a convert to the Wahhābiyya, as a result of which al-Husayn detained him in Mecca for a time; al-Husayn also rebuked the Haḥbal *shaykh* of al-Khurma for preaching in the Wahhābi vein. The Khurman Wahhābis were devout enough to be reckoned as belonging to the ranks of the *ikhwān* [q.v.]. Late in 1335/1917 al-Husayn's son 'Abd Allāh delivered ultimata to Khālid demanding that he return to his original loyalty. Khālid rejected the ultimata, and the Khurman called on 'Abd al-'Azīz for help. Sympathetic though he was to their cause, he was occupied elsewhere and could do little for them. During 1336/1918, expeditions sent by al-Husayn to subdue al-Khurma were repulsed one after another by Khālid and the *ikhwān*.

Infuriated by the tenacious and successful resistance of the little oasis, al-Husayn in Sha'bān 1337/May 1919 deputed his son 'Abd Allāh with a martial array, well armed by Arabian standards, to settle accounts there once and for all. On the way, 'Abd Allāh paused at Taraba, where Khālid and the *ikhwān*, striking suddenly at night, won a signal victory reminiscent of the one achieved by their Wahhābi predecessors over the Sharif Khālid. No serious military obstacle then barred the way to al-Ta'if and Mecca, but 'Abd al-'Azīz chose to bide his time. When the move in that direction leading to the capture of Mecca was finally made in 1343/1924, al-Khurma and Taraba provided the springboard for Khālid and the *ikhwān*.

The *hijra* of the *ikhwān* beside Khālid's castle in al-Khurma is said to have been founded after the battle of Taraba. The British explorer Philby visited the oasis in 1336/1917 and again in 1351/1932, as well as a year or two before that while hunting with 'Abd al-'Azīz.

Bibliography: In addition to the works cited under al-Tawwāh, see 'Uthmān b. Bishr, *Umm al-ma'dīn*, Mecca 1349; H. Philby, *Arabian highlands*, Ithaca, N. Y. 1952; G. Troeller, *The birth of Saudi Arabia*, London 1976. (G. ROBERT)

KHURRAMĀBĀD, chief town of the *ghoiristān* of the same name in the Iranian province of Luristān (*ushūn* 6), situated in long 48° 21' E, lat. 33° 29' N.; population of the *ghoiristān* (1966): 259,000, elevation above sea-level: 4,700 feet.

The town is first mentioned under its present name in the 8th/14th century by Ḥamd Allāh Mustawfī, who states: "this was fine town, but it is now in ruins" (*Nuḥat al-jalūd*, 74). To the south-east of the town, along the banks of the Khurramābād river, and also to the south-west, are remains dating from the Ume when the site, then known as Diz i Siyāh, was the capital of the Sāldūk *asābegs* of Lur-i Kučik [q.v.], who governed the area from 580/1184 and whose last representative was killed by Shāh 'Abbās I in 1006/1597. At a still earlier date, the Sāsānid town of Shāpūrkhāst seems to have occupied the site (thus Minorsky, in *EF*, Luristān, who supports Rawlinson *contra* Le Strange, *Lands*, 201-2).

This mountainous region, inhabited by Luri-speaking tribes, remained remote until almost the end of the 13th/19th century, when it was finally opened up by the construction of the Tehran-Abwāz highway; this reduced to 12 days the 40-50 days previously required for the journey from the Persian Gulf to Tehran via Shirāz.

(R. M. SAVORY)

KHURRAMIYYA or **KHURRAMDINIYYA** refers in the Islamic sources to the religious movement founded by Mazdak [q.v.] in the late 5th century A.D. and to various Iranian, anti-Arab sects which developed out of it under the impact of certain extremist Shi'i doctrines. Although the Khurramiyya are sometimes mentioned separately besides the Mazdakiyya, Ibn al-Nadīm, following Abū 'l-Kāsim al-Balḥī, is no doubt right in stating that the name Khurramiyya, as also Mubammira [q.v.], originally meant the movement of Mazdak in general, and not merely a branch of it. Al-Mas'ūdī's assertion that the Khurramiyya are distinct from the Mazdakiyya evidently relates to the later development, since he at the same time identifies the former with the followers of Abū Muslim. The Persian name Khurram-dīn ("joyous or agreeable religion") may, as has been suggested, have been chosen by the sectarians in analogy to the name Vēhden which the Zoroastrians applied to their own religion, though it seems also possible that it was coined by their Zoroastrian opponents. In the Islamic sources, it is usually explained as referring to their liberticist and hedonistic view that everything agreeable to the senses is permitted. Other explanations of the name, that it is derived either from Khurram, a district of Ardabil, or from Khurrama, the wife of Mazdak, are probably unfounded.

Although the sources do not mention the Mazdaki movement in early Islamic times, it is evident that Mazdaki communities were dispersed in the countryside of many regions of Iran with the heaviest concentration in the province of al-Dīlīl. The coalescence of the Khurramiyya with various extremist factions of the Kaylaniyya [q.v.] began during the upheavals of the late Umayyad age. Abū Ṭabarrī, i, 1355, reports that the 'Abbasid dā'i Khidāsh [q.v.], who was active before 118/736 in the area of Naysābūr and Marw, taught the religion of the Khurramiyya and permitted promiscuity. Abū Naṣīb identifies the Khurramiyya of Khurāsān with the Khidāshiyya, who held that the imāmate had passed from the 'Abbasid Muḥammad b. 'Alī by forfeiture to Khidāsh, and who furthermore denied the death of the latter. According to Abū Ḥatm al-Rāzī, the Khidāshiyya, the extremist supporters of 'Abd Allāh b. Mu'āwiya [q.v.] who after his death in 131/748-9 chose various chiefs of their own, were called Khurramiyya. It is likely that these two sects were partially recruited from the local Mazdakites in Khurāsān and western Iran, which was controlled by 'Abd Allāh b. Mu'āwiya for some time. The strongest impact on the Mazdakiite Khurramiyya was made, however, by the figure of Abū Muslim [q.v.], who as the leader of the revolutionary movement which overthrew the Umayyad caliphate and as the victim of 'Abbasid perfidy came to symbolise Persian self-assertion against Arab dominance. Many historiographers fully identify the Khurramiyya with the Musakaniyya, who considered Abū Muslim as their *imām*, prophet or an incarnation of the divine spirit. Abū Ḥatm's statement that the Ruzāmiyya belonged to the Khurramiyya is to be understood in the same sense, for he and some other sources explain this name as meaning the radical, anti-'Abbasid followers of Abū Muslim. The *de'wa* of Abū Muslim evidently gained numer-

ous Mazdakite adherents during his lifetime. After his murder in 137/755, the Khurramiyya in Khurāsān, according to al-Nas'abī, rose in revolt. Some of them denied his death and expected his early return to establish justice in the world. Others affirmed his death and held that the imamate had passed to his daughter Fāṭima. They were known as the Fāṭimiyya. The Zoroastrian Sunbādh [see sunbād], a former associate of Abū Muslim, led an army of rebels from Naysābūr to al-Rayy where his following swelled rapidly. According to the *Siyaṣat-nāma*, it was composed of Mazdakites, Shī'īs and Zoroastrians. Sunbādh predicted the end of the Arab empire and promised to destroy the Ka'ba. Abū Muslim, he asserted, had not died and would shortly reappear, together with Mazdak and the Mahdi. By the latter, who is not identified, Muḥammad b. al-Hanafiyya may have been meant. The revolt was suppressed after 70 days and the leader was killed. Another former associate or *de'f* of Abū Muslim, known as Ishāk al-Turk, after the former's murder tomentored an insurrection in Transoxania, affirming that Abū Muslim was alive in the mountains of al-Rayy and would return. He is also reported to have previously taught that Abū Muslim was a prophet sent by Zoroaster, who himself was alive and would reappear to restore his religion. Nothing is known about the exact date of the activity of Ishāk and the fate of his movement. It has been suggested, on the basis of the account of Gardīzi, that the governor of Khurāsān, Abū Dāwūd Ḥalīd (d. 240/757) was killed by followers of Ishāk and that the rebel leader Barāzbanda, whom Abū Dāwūd's successor 'Abd al-Dīnabār joined when he revolted against the caliph al-Manṣūr, also belonged to Ishāk's movement. The first suggestion is highly conjectural and the second quite unlikely; the white-clad (*sapīd-gāmaghān*) murderers of Abū Dāwūd were, according to Gardīzi, the followers of one Sa'īd the weaver (*dūdhān*), and Barāzbanda claimed to be Ibrahim b. 'Abd (read: Muḥammad?) al-Ḥāshimī (Gardīzi, *Zayn al-ahbār*, ed. 'Abd al-Hayy Habībī, Tehran 1347, 133 f.). About two decades after the death of Abū Muslim, al-Mukanna' (q.v.), also a former member of his *da'wa* and of the Rizāmiyya, appeared in Transoxania to lead another revolutionary movement. His following was composed of white-clad (Ar. Mubayyiḍa [q.v.], Pers. Sapīd-gāmaghān) Soghdian peasants and by Turkish tribesmen. He claimed to be the final divine incarnation after Adam, Nūh, Ibrāhīm, Mūsā, 'Isā, Muḥammad and Abū Muslim (a different report adds Shaykh and substitutes 'Alī and Muḥammad b. al-Hanafiyya for Abū Muslim) and taught the transmigration of souls and sexual license. The sect of the Mubayyiḍa is still mentioned as surviving in the 6th/12th century.

The latter two movements usually are not called Khurramiyya in the sources, though as branches of the Muslimiyya they were covered by the name in its wider sense. There is no specific information on their doctrine about Mazdak and the role of Mazdakites in them. A. Blund, however, states in general terms that al-Mukanna' prescribed for his followers "everything Mazdak had brought" and al-Shahrastānī counts the Mubayyiḍa as one of the neo-Mazdakite sects and as a variety of the Khurramiyya. They may have been crypto-Mazdakites before the coming of al-Mukanna' (see A. Yu. Yakubovskiy, *Voestanie Muḥammad-Dāwida iṣṣayey v beikāh odelakh*, in *SO*, v [1948], 35-34).

The use of the name Khurramiyya is more prevalent for the neo-Mazdakites in western Iran. In 162/779 the Muḥammadī, i.e. the Mazdakites, of

Djurdjān rose and made common cause with the Khurramiyya, i.e. the Muslimiyya, claiming that Abū Muslim was alive and promising to restore his reign. They put Abū T-Ḥarāzī, the young grandson of Abū Muslim, at their head and reached al-Rayy before they were defeated by 'Umar b. al-'Alā. At the same time, the Khurramiyya of Isfahān revolted. Again in 180-179/6-8 the Muḥammadī of Djurdjān rose and for a brief time held sway over the province. In 192/808 the Khurramiyya revolted in Aḡharbaydjan and the regions of al-Rayy, Hamadān and Isfahān. The insurrection was quickly suppressed by 'Abd Allāh b. Mālīk and Abū Dulaf al-Iḡlī.

The anti-Arab and anti-Muslim activity of the Khurramiyya reached its climax in the great rebellion of Bābak (q.v.) at Khurramī in Aḡharbaydjan (201-23/810-18). Bābak had become the chief of the Khurramiyya in the region of al-Baḡdādī in Aḡharbaydjan in succession to Dāwūdān b. Shahrak, whose prophetic spirit, he claimed, had settled upon him. Dāwūdān was alleged to have predicted the victory of Mazdakism under his successor. The sources offer little information on the religious doctrine of Bābak and his followers. Their connection with the Muslimiyya is indicated by the fact that some people, according to al-Dīnawarī, held Bābak to be a son of Muṭahhar, son of Fāṭima, daughter of Abū Muslim. The revolt later spread outside Aḡharbaydjan. In 212/827-8 the Khurramiyya rose in the area of Isfahān and al-Karadī and some of them joined Bābak in Aḡharbaydjan. In 218/833 they revolted around Isfahān under their chief 'Alī b. Mazdak and in Fārs. As 'Alī b. Mazdak took al-Karadī, the sectarians joined him in large numbers. After a bloody defeat by Ishāk b. Ibrāhīm near Hamadān, some of them retreated and pillaged in Isfahān, while others under their leader Bāksīr fled to Byzantine territory. They were enrolled to the Byzantine army and are mentioned in 223/835 fighting under the emperor Theophilus against the Muslims.

'Abd al-Kāhīr al-Baḡdādī treats a sect called Māziyāriyya, followers of the Kirmān ruler of Tabaristān, Māziyār (see KĀRIMIDS) (d. 225/840), as the second major branch of the Khurramiyya besides the Bābakīyya. Māziyār, whose revolt against the caliphate developed out of his quarrel with the big landowners of the lowlands of Tabaristān and his rivalry with 'Abd Allāh b. Fāhr, was certainly not a Mazdakite, although he was accused of having aided Bābak. In his political struggle he came to rely on the non-Muslim elements of the highlands, particularly Zoroastrians, but evidently also Mazdakites. The Khurramiyya of Tabaristān and Djurdjān may have continued to honour his memory as the account of al-Baḡdādī suggests.

According to the *Siyaṣat-nāma*, the rebellions of the Khurramiyya in the area of Isfahān continued after the execution of Bābak until the year 300/912-3. First they rose during the reign of al-Wāṭik (227-32/842-7), and again sacked al-Karadī. Later, at an unspecified date, one Bāryazdīsh succeeded in fortifying himself in the mountains of Isfahān. The Khurramiyya joined him and raided caravans and villages. Only after some 30 years was he seized and executed. Still in 320-1/932-3, 'Alī b. Būya conquered several fortresses previously held by the Khurramiyya in the region of al-Karadī and captured great treasures.

Khurramī communities are mentioned in the 4th/10th century in the regions of Fārs, al-Ahwāz, Isfahān, al-Burdī, al-Karadī, Māsabaghān, Muḥriḡān-kadkhā, al-Shaymara, Dīnawar, Nihāwand, Hamadān, Kāshān, Kumm, al-Rayy, in the mountains of

Tabaristān, al-Daylam, Ādharbaydān, Armenia, Shahrastār, Dīrdjān, Balkh and Khurāsān. It has been accepted on the basis of a report of Miskawayh (ed. Amedroz, *Eclipse*, II, 299; cf., v, 322) that Khurramiyya living along the coast of Makrān and Kirmān were subjugated in 360/971 by a general of 'Aḍud al-Dawla. The name al-Khurramiyya is, however, a corruption in the manuscript and should be read al-Djurrumiyya. This is evident from the text of Ibn al-Athīr (viii, 451) which is based on Miskawayh as well as from Miskawayh's mention of the same people called al-Djurrumiyya later under the year 364/974-5 (ii, 359 f.; Ibn al-Athīr, viii, 482; Hitti in *Eclipse*, III, 377; al-Djardīn; this point is also made by C. E. Bosworth, *The Esmā'īlīs of Kirmān* (220-57/923-68), in *Iran and Islam, in memory of the late Vladimir Minorsky*, ed. Bosworth, Edinburgh 1972, 123 n. 34). The latest mention of surviving Khurramiyya communities is for the first half of the 6th/12th century in the region of Anshūbāh and Darkatān, north-west of Hamadān (al-Bundārī, *Muḥabbat al-nawā*, ed. M. Th. Houtsma, Leiden 1889, 124), and in Ādharbaydān.

According to al-Mas'ūdī (d. 345/956), the Khurramiyya in his time mostly belonged to two divisions, the Kūdakiyya and the Lūdshāhiyya. (variants Kūshshāhiyya, Kurdshāhiyya). The former were probably named thus because of their veneration of Mahdī b. Fayrūz, the son (or grandson?) of Fāṭima, daughter of Abū Muslim, whom they called *kūdāk-i dānā*, the omniscient boy. They are also mentioned in other sources and apparently constituted the great majority of the Khurramiyya in western Iran. Abū Ḥatīm al-Rāzī (d. 322/924) states that the extremist factions which originally developed out of the 'Abbāsid revolutionary movement were known under different names in different regions; in the country of Isfahān as Kūdakiyya and Khurramiyya, in al-Rayy and elsewhere in al-Djīl as Mazakiyya and Sunbādiyya, in Dinawar and Nuhāwand as Muḥammira and in Ādharbaydān as Dūshkūhiyya (or Dāfūhiyya). It is not clear if the latter name implies a distinction in religious doctrine between the Khurramiyya in Ādharbaydān and elsewhere in western Iran, though any such differences were most likely not substantial. Abū Dulaf b. Muḥallī, who visited al-Baḥdāh about the middle of the 4th/10th century, mentions a place there were the Muḥammira known as the Khurramiyya consecrated their flags and where they expected the coming of the Mahdī. Probably the *kūdāk-i dānā* or, in any case, a descendant of Abū Muslim's daughter Fāṭima, is meant.

The reports of the Muslim sources about the doctrine and practices of the Khurramiyya are mostly summary and biased. An exception is the account of Muṭahhar b. Ṭāhir al-Makdīsī, which is based on his personal acquaintance with members of the sect and his reading of some of their books. The Khurramiyya were dualists holding that the principle of the world was the light, some of which had become effaced and turned into darkness. They all believed in the transmigration of souls in human, animal, and angel bodies. Prophetic revelation in their view never ceased and the same divine spirit inhered in all prophets. They had no religious law but, according to Muṭahhar, had recourse to their *awāṣim* in legal matters. Messengers whom they called *angels* (*frīshagān*) made the rounds among them. They were much concerned with cleanliness and purity, tried to win people's favour through acts of kindness and strictly avoided bloodshed except when they decided on rebellion. They expected

the appearance of a descendant of Fāṭima, daughter of Abū Muslim, as the Mahdī who would make their cause prevail in the world. Wine was considered particularly blessed by them. According to Muṭahhar, some held promiscuity licit with the consent of the women and, in general, any fulfillment of natural desires as long as no one was harmed. The more extravagant clichés of some sources concerning their sexual libertines deserve no credence. There is no sound evidence for community of goods among them.

The Mazdakite and Manichaean basis of these beliefs is manifest. The attempts of some sources to establish a close link between the Khurramiyya and the Karmāṭis and Ismā'īliyya must be viewed with reserve. There is no evidence for any influence of Khurrami doctrine on Ismā'īli doctrine or of any large-scale conversion of Khurramis to early Ismā'īlism.

KHURRAMSHAHR, chief town (population in 1966: 88,536) of the *shāhristān* of the same name (population in 1966: 136,281) in the Iranian province of Khūzistān (just n. of), and situated in long. 48° 09' E, lat. 30° 25' N. Its elevation above sea-level is 8 m./26 ft., and the climate is hot and humid, with summer temperatures rising to 58° C./136° F., and a winter minimum of 8° C./46° F.

The present town is the successor of a number of settlements which, since ancient times, have been located in the general area where the Kārdn (Dūḡayl) river and the combined Tigris and Euphrates rivers flow into the Persian Gulf a few miles apart. Elamite and Achaemenid settlements were succeeded, in Islamic times, by Bayan and Muḥriz, which were included by the Islamic geographers in the province of 'Irāk-i 'Aḡdam. The earlier settlements were situated on the Kārdn river itself, the later ones on a channel cut to link the Kārdn and the Tigris-Euphrates estuary (now called by the Arabs *Shatt al-'Arab*, and by the Persians *Arvand-rūd*). The construction of this channel (known at different times as Jāy-i Bayan; Jāy-i 'Aḡdī (after it had been widened by the Buwayhid ruler 'Aḡd al-Dawla [g.s.]); and the Ḥafid channel) created the island of Āḥādān [see 'Āḥādān],

the site of the National Iranian Oil Company's refinery.

After being mentioned by al-Mukaddasi (4th/10th century), the site is not heard of again until the beginning of the 13th/13th century, when a fort called Kūt al-Muhammara ("Red Fort") developed into the town of Muḥammara governed by Arab *ghayāḥs* of the Ka'b tribe. The new town was situated on the Halfar channel, one mile from its confluence with the Kārdā. The rise of a rival port at the end of the Persian Gulf was regarded by the Ottomans as a threat to the prosperity of Basra, and in 1254/1836-9 they sacked the town, which was, however, subsequently ceded to Persia by the Treaty of Erzerum in 1847. This treaty was violated by the Ottomans in 1886 by the construction of a fort at Fao, at the mouth of the estuary, which enabled them to harass shipping bound for Muḥammara.

In 1925, Rīdā Shīh Pahlāwī brought the virtually autonomous *ghayḥkhān* of Muḥammara firmly under Iranian control, and in 1937 the name of the town, by a decision of the Iranian cabinet, was changed to Khurramshahr. During World War II, the port facilities at Khurramshahr were greatly expanded, and a 75-mile branch line was constructed to link the city with the Trans-Iranian railway at Ahwāz. After further development under the Second Seven-Year Plan (1955-62), Khurramshahr is now one of Iran's principal ports of entry on the Persian Gulf; its exports include dates, milk-products, silks and wool.

The 1912-14 Boundary Commission took as the international boundary with 'Irāk the low-water line on the Iranian side of the *Shatt al-'Arab*. This left the navigation channel to Khurramshahr under 'Irākī jurisdiction, and resulted in constant friction between the two countries. This dispute appears finally to have been settled by the agreement signed on 6 March 1975, whereby Iran and 'Irāk agree that the international boundary shall be the *takwā*, or line of deepest water.

(R. M. Savory)

KHURREM (F. "cheerful, smiling") is a name of both men and women. The most famous bearer of it is the Khāṣṣakī [q.v.] and beloved wife of Sulaymān I [q.v.], who was born in the early years of the 16th century and died on 26 Rūmādī II 963/15 April 1558. Because of the necessary seclusion of her life, few facts about her are known. It is, however, certain that Sulaymān remained passionately devoted to her from their meeting, probably in Istanbul after his accession on 17 Shawwāl 956/30 September 1550, until her death; hence her power, by which she altered the course of the Ottoman Empire. This power, for which she is hated, brought upon her charges of witchcraft (Bassano, *Costumi*, Rome 1545, 18v.) and sorcery (Busbecq, *Omnia* . . . Harel 1740, 72-3), but Navagero's remark (Albēri, *Relazioni* III, 74), "she knows the Sultan's nature very well", seems nearer the truth. According to the tradition established by Hammer-Purgstall (GOR, II, 675), she was Polish, from Kogatin (Polish: Kobatyn) on the Galiya Lipa river, now in the Ukrainian SSR, then in the Little Russia of Poland, the daughter of

a Greek Catholic *papas*; possibly her name was Aleksandra Lisowska (see *Belleten*, XXII, 230). The area, an old Ruthenian settlement, was subjected to frequent Tatar raids; she may have been carried off on one of these and sold as a slave in Istanbul. It may not be a coincidence that she had a mosque built later in the 'Avret Pazarı quarter, near the female slave-market. Other traditions, of little reliability, make her Slav, Circassian, Siamese, even French. She may have been presented to Sulaymān by his mother Hatīsa Sultān or by Ibrahim Pasha [q.v.] (Bassano, *loc. cit.*, 18v.), with whom she was to share Sulaymān's affection. She was called Khurrem (variants: Churram, Curram, Hürrem) but is known in Turkish histories generally as Khāṣṣakī Sultān and in Western accounts as Roxolana (variants: Roxolana, Roxelane, Rossolana, Rossane, la Rossa, la Rosa), probably all referring to her origin as a Russian or even a Ruthenian woman (*Belleten*, XXII, 229), but not meaning "Rose", "Redhead", nor Baudier's ingenious "Roxana" to Sulaymān's Alexander the Great (*Faustland*, Paris 1620, 344). Brüggen in 1526 (Albēri, III, 3, 105) describes her as "young not beautiful, but graceful and small".

As heir-apparent in Manisa, Sulaymān seems to have favoured two ladies, Gulbahār and Gülfem, said to be variously of Circassian, Albanian, Montenegrin and Crimean origin. Gülfem bore him Murād in 921/1513 and Mahmūd in 927/1513, but both these sons died in 927/1521. Gulbahār bore Mustafa [q.v.] in 927/1513; thus, by 1521, as mother of the Sultan's eldest surviving son, she was Khāṣṣakī Sultān and, after Sulaymān's mother, foremost in the Imperial Harem, then housed in the Old Palace. However, Khurrem had captivated Sulaymān, borne him a son Mehmed [q.v.] in 927/1521 and, after a squabble reported by Navagero (Albēri, III, 75), during which Gulbahār had called her "old meat", had ousted her. Gulbahār devoted herself to her son Mustafa and, when she died in 988/1580, was buried beside him in Dîlem Sultan's mausoleum in Bursa (Refik, *ay. asrında İstanbul hayatı*, Istanbul 1935, 8). Gülfem, no rival, was accepted by Khurrem and lived with her ladies; after her death, in 969/1561-2, a mosque was constructed in her memory in Üsküdar.

There is unanimous agreement that Sulaymān made Khurrem his legal wife by giving her the *iddin* (dowry), said to be 5,000 ducats annually, but no hint as to when this took place. It may have been after the birth of Mehmed. An undated letter in the Archives of the Bank of St. George, Genoa, describes the wedding festivities in some detail (see Davey, *The Sultan and his subjects*, London 1907, 18-19). In 928/1522 their daughter Mīr-i Māh Sultān [q.v.] was born, the next year a son 'Abd Allāh (died 932/1526) and, on 24 Rādjab 930/28 May 1524, the future Sultan Selīm II [q.v.]. Khurrem bore two more sons, Bāyezīd in 932/1526 and, in 937/1530 Dūshāgīz, a bachelorette much loved by his father. The circumcisions of Mustafa, Mehmed and Selīm were celebrated together with great pomp in Dhu 'l-Kāda 936/July 1530, after which Mustafa, as *ṣandīd*-beg of Sarukhān, departed with his mother to Manisa. On 4 Rādjab 940/19 March 1534 the wildie Hatīsa Sultān died. During the night of 21-2 Rādjab 942/14-5 March 1538, Ibrahim Pasha was assassinated in the Sultan's bedchamber in Topkapı Sarayı. Khurrem's influence is suspected in this murder, out of jealousy and fear for her children's lives after Ibrahim had declared in favour of Mustafa as heir, but there is no proof of this. With Ibrahim's death, however, all her rivals had been removed.

In 945/1539 *Khurrem* began a long series of pious bequests with the construction of the Hasnâid mosque in İstanbul, the first commission of the new Chief Architect Sinân [q.v.]. It is in the former 'Avret Pazarı, now Haseki district, and comprises two *medreses*, a *mekteb*, a *sabûl* and a hospital (finished 952/1539) which, as the Haseki Kadınlar Hastanesi, is still in use for women. Sinân also built another mosque on her behalf at Edirne, *Yeniçeri* near the Ka'ba at Mecca, at Medina and at Edirne, and baths in the Aya Sofya and Yahûdler districts of İstanbul. Her other charitable works include a caravanserai and fountains at Edirne and a richly endowed *imaret* at Jerusalem.

On the night of 27 Ramađân 947/25 January 1541 a fire swept through the Old Palace (Lütfî, *Tevârih*, İstanbul 1347, 384). *Khurrem* seems to have moved at once with her ladies to Topkapı Sarayı, where she remained. With a woman lodged for the first time at the political centre, there began at this date the *Kadınlar saltanatı*, the rule of women, during which the policies of the Ottoman Empire were directed by a succession of foreign favourites, until the death of Murâd IV's mother in 1061/1651. In the Genoa Archives there is a description of *Khurrem's* apartments, probably written in 1542 (see Davey, *Sultan*, 21-3), and also in Bassano (*loc. cit.*, 127v). On 21 Şafâr 948/16 June 1541 *Khurrem* had Mustafa dismissed to Amasya and on 3 Şeb'ân 949/12 November 1544 her own son Mehmed was appointed *sandâk-bey* of Şarukhân, the heir apparent's post (*Kanûn armağanı*, 249). One year later, on 8 Şeb'ân 950/6 November 1543, Mehmed died in Manisa. Sulaymân was inconsolable; in a deed of gift to *Khurrem* made some eight years later (Ferîdûn, *Münşâ'ât*, I, 608-10), with all his other sons still alive, he calls her 'the mother of my late son Mehmed'. On 13 Ramađân 953/28 November 1544 Rüstem Paşa [q.v.], husband of Mihr-i Mâh since 945/1539, was appointed Grand Vizier. He was devoted to the policies of his mother-in-law and wife, foremost of which was the destruction of Mustafa so that one of *Khurrem's* sons might succeed. The law decreeing that a Sultan at his accession must have all his brothers executed created such a desperate struggle for life within the Sultan's family, of which the pathetic aspect is well illustrated by Navagero (Albîri, *ibid.*, 77). Their scheming was crowned with success on 27 Shawwâl 960/6 October 1553, when Sulaymân witnessed the execution of his brilliant and popular eldest son in camp at Ereğli near Konya. To pacify the infuriated army Rüstem Paşa was dismissed at once and Kârî Ahmed Paşa [q.v.] appointed Grand Vizier. Dîhânîr, proceeding with his father on the Persian campaign, died of pleurisy at Aleppo on 22 Dhu 'l-Hijja 960/29 November 1553. A few weeks later Mustafa's son Mehmed, born at Amasya in 953/1546, was executed at Bursa. His death also is attributed to *Khurrem's* plots, as is the execution in office of Kârî Ahmed Paşa on 13 Dhu 'l-Ka'da 962/29 September 1555 and the immediate reinstatement of Rüstem Paşa. He and *Khurrem* plotted for the succession to pass to Bâyezîd, the younger but ablest of Sulaymân's surviving sons, but neither of them lived to see the end of the struggle between the two brothers which resulted in Bâyezîd's execution in Persia at Selâm's instigation on 23 Dhu 'l-Ka'da 969/23 July 1562. Barbarigo tells us (Albîri, *ibid.*, 148) that in her last years *Khurrem* would not allow Sulaymân out of her sight; both infirm, they spent the winter of 965/1557-8 in Edirne together, and she returned to die in İstanbul in April. She is buried in her mausoleum, built by

Sinân beside Sulaymân's near the Süleymaniyye mosque. Due largely to her intrigues Selâm, Sulaymân's least worthy son, remained alone to succeed his father.

A number of *Khurrem's* letters exist. Seven letters to Sulaymân, written between 1526-33, published in modern Turkish transcription in Uluçay, *Osmanlı sultanlarına aşk mektupları*, İstanbul 1950, are preserved in the Archives of the Topkapı Sarayı Museum as TKŞ Arşivi nos. E. 5038, 5662, 5859, 5226, 6036, 6056, 11480. In 1548 and 1549 she and Mihr-i Mâh wrote to Sigismund Augustus of Poland; the originals are in Warsaw, AGAD, Arch. Kor., Ds. turecki, teczka 210, nos. 218, 219, 221, 222; French translations by Askenazy, *Listy Roslany*, in *Kwartalnik Historyczny*, x (1896), 113-7. A correspondence with Persia ensued over the building of the Süleymaniyye mosque, with *Khurrem* answering Şah Tahmâsp's wife's letter of good wishes to her in 964/1555 (reference to copies in Hammer-Purgstall's Ms. in GOR, ix, 375; items 499, 500) and the Şah's sister's letter of congratulations after the completion in 964/1557; published in Ferîdûn, *Münşâ'ât*, I, 63-6. There are many deeds of gift made by Sulaymân to *Khurrem*; see, for example, Heyd, *Ottoman documents*, Oxford 1960, 143, and Kanûn Sultan Süleyman sergisi, İstanbul 1951, nos. 71, 90, 102, 125. Some examples of embroidery said to be *Khurrem's* work are preserved in the Topkapı Sarayı Museum and the Türk İslâm Eserleri Müzesi in İstanbul.

Khurrem's fame spread through Europe in her lifetime. It is unlikely that she ever sat for a portrait, but several portraits of her exist. In Topkapı Sarayı there is an oil painting (see cover of Uluçay, *Aşk mektupları*), made from the engraving in Boissard, *Vides et icones sultanorum*, Frankfurt 1596, and two other portraits (see Uluçay, 7, 20). Sokolnicki, *La Sultane Rûdhne*, in *Bulleten*, xxiii, 1955, 229-39, lists further portraits in Florence, Venice and Vienna, the latter bearing the same inscription as Uluçay, 20, and probably identical to it. There is a fine engraving of her by Melchior Lorich in *Türkische Figuren* (see Rouillard, *The Turk*, Paris 1938, plate 23). *Khurrem's* story inspired drama and literature in Europe in the 16th and 17th centuries, including two French plays, *La Sultane*, Paris 1561, and *Roxelane*, Paris 1643; see Rouillard, *The Turk*, 421-66, and Chew, *The Crescent*, New York 1937, 497-503.

KHURŞABÂD, a village situated 36° 40' N. and 43° 10' E. in the plain 17 km. to the north-east of Mosul, in the *mushâfaga* of al-Mawşil. It is the site of the ancient Assyrian royal city Dur Sharr-

rukio, "The Fortress of Sargon". The earliest excavations there were undertaken by Paul Emile Botta in 1843 when he was the French Consul at Mosul, and he has been described by Parrot as "the first systematic excavator of a Near Eastern site". He himself described his work in a series of letters which he wrote after each important find and he carefully copied all the inscriptions he discovered, although at that time Akkadian was still an undeciphered language. Victor Place continued the excavation of the site from 1852-3, but then it was abandoned until G. Loud worked there on behalf of the Oriental Institute of Chicago for eight seasons from 1927-35. Since then a number of stone reliefs from the palace, including two famous colossal bulls, have been removed to the Iraq National Museum in Baghdad (1938, 1943) and the Directorate-General of Antiquities of Iraq resumed excavations for a short period in 1937.

Sargon II (722-705 B.C.) built the city between 717 and 707 when he moved the centre of his administration from Kalah (modern Eirs Nimrud), and the city is a model of Assyrian town-planning. It has seven fortified gates and the early excavations revealed the rooms of the palace and the houses of the palace officials. There are a number of shrines to various deities (called by Botta the Harem) and a zigurat (which Botta described as an observatory). The later American excavation discovered the temple of Nabu who, with his consort Tashmetum, was a god of vegetation and recently it has been suggested by Postgate that the fertility ritual of the sacred marriage was performed in this building. The entrance to the palace was flanked by a pair of massive, winged, human-headed bulls (as to other Assyrian cities) and the walls were decorated with detailed reliefs of battle scenes and festival processions. A number of glazed brick panels have also been recovered from the site and chemical analysis of the blue glazes derived from copper suggests that lead was being used as a flux, a technique that was forgotten but later re-developed.

Cuneiform inscriptions show that the city was completed just before Sargon died. It was during his eighth military campaign, on which he plundered towns and villages in north-western Iran, that he was ambushed and killed (705 B.C.) and his corpse was left unburied as "food for the birds of prey". The priests seem to have interpreted this final humiliation as a sign of divine punishment, and his son Sennacherib abandoned the city and turned his attention to the rebuilding of Nineveh, which remained the capital of Assyria until the empire was overthrown in 612 B.C. The most important document for historical research which has been discovered at the site is a list of the names of the kings of Assyria together with the length of their reigns as far back as Iribum I (1835-1813). Although there are inconsistencies of detail between this list and the King list from Asshur (see *ANU*) in Suppl. and the records of astronomical observations, it does provide the basic framework for the study of Assyrian history.

The palace is built on a raised platform and planned around an open courtyard which was accessible to the public. This gave access to an inner courtyard which seems to have been reserved for those in special positions of authority. The throne room was approached from the inner courtyard through a triple doorway flanked by monumental sculptures. A staircase led from the throne room to the private living rooms. Because of the absence of any relief carving in the throne room it has been suggested that this

was originally decorated with mural paintings but no traces have survived.

Sargon had the construction of the city described in detail on the pavement stones in the palace gates with these words: "[the king] built the city at the foot of Mount Musri above Nineveh and named it Dur Sharrukin. He erected palaces of ivory, maple, boxwood, mulberry, cedar, cypress, juniper, pine and terebinth as his royal dwelling place. In front of the gates he built a portico, as in a Hittite palace, which in the Amorite language is called a *bit hildu*." It is particularly interesting to note that he received inspiration for at least one architectural detail from his western expedition.

When the site was first discovered, Botta thought he had found the much more famous city of Nineveh, for he was so astounded by the size and obvious splendour of the ancient city. Layard raised objections to this identification because he thought it was too far away from the Tigris. Neither of them appeared to know the traditional identification in Arabic historical sources; Yāqūt describes the village as the site of an ancient city called Šar'ān, which probably reflects an earlier corruption of Sarghān.

When excavations began, E. Flandin was sent by the French government to copy the sculptures which had been found. It was identified with Dur Sharrukin after the inscriptions of its founding king had been translated. He had had it built as a strategic defence against the troublesome Elamite attacks from the north and had cobbled the main exit roads so that his troops could be transported efficiently with their supplies. The ancient walls surround an area of 320 hectares with the citadel occupying 30 hectares. Yāqūt mentions that the village of his day (which he refers to as Khursābād) had good irrigation. The modern village supports a small population (the average density of the area is 29.5 persons per km.²) situated on the eastern bank of the river Khawсар at the northern end of the Djabal Maḥlūb.

(M. E. J. RICHARDSON)

KHURSHĪD, *isfahbād* [شاه آباد] of the Dabāyīd line in Tabaristān. It was long believed that there were two Khurshīds, because of errors in interpreting coin legends; Mordtmann, in *SB Bayr. Ak.* (1872), 30, 36, dated three coins of this prince to the years 70, 60 and 54 of the Tabaristān era, and this led people to posit the existence of a Khurshīd I who reigned 30-60 T. and a Khurshīd II who reigned 55-126 T. (idem, in *ZDMG*, xxxiii, 110, cited by Unvala, p. 6, § 5, p. 30, § 12). He was followed by Marquart, *Erdfahr*, 132, who also read 54 T. on a coin which

be attributed to Khurshid I, who must in his opinion have reigned 60-4 T. Vasmer, in *EP* art. MĀANDARĀN was the first to perceive this false reading, which he explained by the resemblance between *ghast* = 60 and *dashat* = 110 in the Pahlavi script. Accordingly, Vasmer dated the coins to 110 and 114 T. instead of 60 and 64 T., and he therefore denied the existence of two Khurshids, especially as the local sources make no mention of a Khurshid I. Unvala, p. 7, § 4, p. 8, § 5, p. 30, § 11, confirmed Vasmer's conclusions, and remarked that the coins of the alleged Khurshid I are absolutely identical with those which Nordmann attributed to Khurshid II. As for the bronze coin dated by Nordmann (*ZDMG*, xix, 474, No. 170) to the year 70 T. and attributed to Khurshid I, Vasmer corrects this false reading to 107 T. (*EP*, loc. cit.). Unvala (p. 9, § 16, coin No. 800 in his catalogue) confirms Vasmer's dating, and observes that to date the coins to 64 and 70 T. and attribute them to Khurshid I would interrupt in an inexplicable fashion the series of coins issued by Farrukh the Great (60-79 T.). One must thus cease speaking of two Khurshids, as does Spuler in *EP* art. DASHŌYA.

The *isṭabāḥ* Khurshid is therefore the last Dabūyid prince, who reigned in Tabaristān 89-110 T./123-44 A.H./740-61 A.D. according to his coins, which corresponds closely with the information of local chroniclers. In fact, Zahir al-Dīn, 40, gives him a reign of 13 years, to which should be added 8 years of the regency of his paternal uncle Sārūya (Ibn Isfandiār, 113). But elsewhere (319), he gives him a reign of 31 years, which cannot even be given credence as an indication of his age. Al-Tabarī, iii, 140, states that Khurshid was still young when his father Dāghburzair died. According to Ibn Isfandiār, loc. cit., Dāghburzair's brother Sārūya acted as regent for 8 years, but his sons wanted to keep the throne in their own line, hence plotted against their cousin Khurshid, who had reached his majority. The latter managed to defeat them and recovered his throne (*ibid.*, 113-14). He was a real petty king, with a personal guard, an army and representatives in the various districts of Tabaristān (*ibid.*, 114-16). He even sent an embassy to the Chinese court of the T'ang, in ca. 746 (Abel-Rémusat, I, 254, li, 160-69): "In the fifth year T'ien-pao, the king Hu-tu-han sent an embassy to the Imperial Court and received in exchange the title of King of Kuei-Sin" (submission to vassalage). These royal pretensions explain his rebellion under the last Umayyad caliph Marwān II (127-32/744-50; cf. Balāghuri, 338), but he had to submit to Abū Muslim al-Khurasānī in 131/749 (Tabarī, ii, 1016). After al-Manṣūr's execution of Abū Muslim in 137/755, Sunbāgh revolted and entrusted to Khurshid part of the treasures of Abū Muslim (Tabarī, iii, 86, 119; Nizām al-Mulk, tr. Schefer, 267-8, tr. Darke, 112). After his defeat, Sunbāgh sought refuge in Tabaristān, but Khurshid had him killed by his cousin, in order to get his hands on the rest of Abū Muslim's treasures (Ibn Isfandiār, 117-18). The caliph al-Manṣūr had to send his son al-Mahdī to Rayy to recover Abū Muslim's property (Ibn al-Aḥṭir, v, 369; Ibn al-Faḥh, 312, 314). Khurshid refused to send his son as a hostage, but had to pay a heavier tribute, at the level paid to the Sāsānids (Ibn Isfandiār, 118).

This submission did not last long, since he took advantage of the rebellion of 'Abd al-Jabbār b. 'Abd al-Rahmān, governor of Khurasān, to cut off tribute in 141/758 (Ibn al-Faḥh, 309-10; Balāmi, iv, 380). This time, the caliph decided to finish once and for all with his vassal's insubordination and to annex

his principality. His army invaded Tabaristān and they made contact with each other without fighting, forcing Khurshid to take to the mountains, where he shut himself up in the fortress of al-Tāh (Ibn al-Faḥh, 310). A long siege followed, but the place was finally captured in 142/759-60. Khurshid managed to flee for refuge in Daylam (Ibn al-Aḥṭir, v, 387; Ibn Isfandiār, 118), but his family fell into the hands of the Muslims and were sent to the 'Abbasid court (Balāghuri, 339; Tabarī, iii, 156-7, 339-49). There is great confusion over the names of these captive princesses, and certain chroniclers identify them with the daughters of the *mawmūghān* of Dun bāwand and not with Khurshid's family (Vasmer, 91, 100-1). However, various of this prince's daughters became concubines of al-Manṣūr, his brother al-'Abbās, and al-Mahdī, who had a son of al-Bakhtariyya (or al-Bakhturiyya, according to Ibn Kutayba, *Ma'arif*, 193) called al-Manṣūr. It was al-Manṣūr b. al-Mahdī who refused the caliphate, as offered to him by the people of Baghdad in 202/817, after the choice of the 'Alid 'Alī al-Riḍā an al-Ma'mūn's heir-presumptive. He merely agreed to become governor of 'Irāq for al-Ma'mūn (Tabarī, iii, 1000, 1005-6). Another of Khurshid's daughters, usually named as Shākila, also became the concubine of al-Mahdī (Tabarī, iii, 140; Ibn al-Faḥh, 314). She gave him a son, Ibrāhīm b. al-Mahdī (q.v.), the anti-caliph of 201-4/817-19, who accepted his acclamation by the Baghdad populace after his half-brother al-Manṣūr's refusal. All this shows that one cannot set up against each other, in a simplistic fashion, the son of the "Persian concubine" (al-Ma'mūn) and the son of the "Arab princess" (al-'Amīn), since the 'Irāqīs did not hesitate in 202/817 to set up the son of a Persian concubine (al-Manṣūr and then Ibrāhīm) against the son of another Persian concubine (al-Ma'mūn), who was moreover the very nephew of Ibrāhīm b. al-Mahdī.

Khurshid gathered an army in Daylam and Gilān and in 143/760 tried to regain his principality (Tabarī, iii, 142-2), but meeting no success, killed himself the following year (Balāmi, iv, 381; Ibn al-Faḥh, 314). His son, who was on an embassy to China, learnt of the annexation of Tabaristān, as recorded in the Chinese annals: "He was honoured by the title of supernumerary officer-general, and awarded a purple cloak and a golden fish. Whilst he was staying in the capital, the black-robed Arabs conquered his lands" (Abel-Rémusat, I, 254). The other local dynasties of Tabaristān (the Bāwandids [q.v.] of Mount Shārwīn, the Kārkīs [q.v.] of Mount Kārin and the Zarmihrids of Miyāndarūd) were kept as tributaries under the oversight of 'Abbasid governors resident at Amul. These last continued to mint coins with Khurshid's name till 114 T. (he having killed himself in 110 T.), which has led many historians to think that Khurshid reigned till 115 T. The first extant coin minted in the name of an 'Abbasid governor is that of Rawḥ b. Hātim in 147/764 (cited by H. Geube, *Arabosasanische Numismatik*, Brunswick 1973, 124; it will be published shortly by R. Curiel, of the Cabinet des Médailles of the Bib. Nat. in Paris).

Bibliography: In addition to the Arabic chroniclers (Balāghuri, *Futūḥ al-Bulḍān*; Ibn al-Aḥṭir; Ibn al-Faḥh; Ibn Kutayba; Tabarī, etc.) and the Persian ones (Balāmi; Ibn Isfandiār, *An abridged translation of the History of Tabaristān*, by E. G. Browne, Leiden 1905; Nizām al-Mulk, *Siyāsat-nāma*, ed. and fr. tr. Ch. Schefer ed. and Eng. tr. H. Darke; Zahir al-Dīn, *Tārīkh-i Tabaristān* . . . , ed. B. Dorn, St. Petersburg 1850), the following should be consulted: J. Marquart, *Eränsahr* . . . ;

AL-KHURTUM (KHARTUM, KHARTOUM), a city at the confluence of the Blue and White Niles, now the capital of the Democratic Republic of the Sudan. The name is said to be derived from the resemblance of the site to an elephant's trunk. At the time of the Turco-Egyptian invasion (1821), Khartum was a small village, the residence of a holy man. It was chosen as the military and administrative headquarters of the conquered territories by the governor, 'Uthmān Bey Djaqas, in 1824. With the extension of Turco-Egyptian rule, the pacification of the Sudan, and the opening-up of the Equatorial Nile and Bahr al-Ghazāl (q.v.), Khartum developed into a flourishing town with a heterogeneous population, which included European traders, consular officials and Catholic missionaries. After the outbreak of the Mahdist revolt, the defence of Khartum was assumed by the governor-general, C. G. Gordon Pasha (General Gordon), a British subject in the khedivial service. The town, which had been under close siege from October 1884, fell to the Mahdī on 26 January 1885, Gordon being among the slain. During the Mahdist period, the capital was transferred to Omdurman (Umm Durmān), on the left bank of the Nile below the confluence, and Khartum was abandoned, apart from the dockyard (*al-karāma*), where the steamers of the Mahdist state were maintained, and the gardens, which became a source of revenue. After the defeat of the Khalfīa 'Abd Allāh b. Muhammad (q.v.) at Karārī in September 1898 by Anglo-Egyptian forces, the restoration of Khartum was begun by Kitchener, the *serdar* and governor-general. Although again the administrative centre and the principal place of residence for Europeans, Khartum did not equal Omdurman in extent or population during the Condominium (1899-1955). Together with Omdurman and Khartum North it forms a conurbation known as 'the Three Towns' (*al-Mudun al-Thalāth*).

KHURYÂN-MORYÂN, a group of islands in the bay of the same name on the south coast of Arabia, lying along latitude 17° 30' N between longitudes 53° 30' and 56° 30' E. The islands, principally of granite and limestone formation, are the peaks of a submarine ridge. From west to east they are Hāshīyya, Sawdā, Hāllāniyya, Karzawt and Dhubayla. Hāllāniyya is both the largest (about 8 miles long and 23 in circumference) and the only inhabited island of the group. At its centre it rises

to a peak some 1,300 feet above sea-level. Its vegetation is scanty: only a few marine shrubs, some scattered tamarisks and occasional mimosa relieve the monotony of the landscape. The water is brackish, the best being obtained from a couple of wells sunk by a RAF survey party in 1963. Sawdā, the second largest island (3 miles long), is equally barren, though it was once inhabited. So also, apparently, was Dhubayla, to judge from a few tombs on the island. Dhubayla and Hāshīyya, the westernmost island, lying only 20 miles from the mainland, are the haunts of thousands of seabirds, including pelicans and gullsanders.

The Khuryân-Moryân islands were early identified with the so-called seven successive islands of Zeno-bios, and as such they marked the frontier between the kingdom of the Parthians and the kingdom of Hadramawt. From this it would appear that the Parthian frontier should be located in the innermost corner of Khuryân-Moryân Bay. Over the centuries the inhospitality of the islands has forced their inhabitants to seek their livelihood from the sea. In the 5th/11th century, al-Idrīsī (q.v.) records that the islanders, who were then politically under al-Shīrī, were very poor in winter and only managed to make a moderate living in the sailing season. They used to sail to 'Uman, Aden and the Yemen. Their main source of revenue was tortoise shell, which they traded to the Yemenis, and occasionally very beautiful amber, for which they sometimes got very high prices. Al-Idrīsī calls the bay containing the islands *Djawn al-Haḡḡish* (Bay of Herbs). The Khuryân-Moryân islands in their turn were frequented by Arabs from Shīr and Mukallā in the Hadramawt (q.v. in Suppl.), and from Hudayda in the Yemen, to dig guano from Hāshīyya and Dhubayla Islands, where the seabirds down the centuries had left rich deposits. The guano was used as agricultural fertiliser, especially in the cultivation of tobacco.

The Portuguese were the first Europeans in modern times to record the existence of the Khuryân-Moryân islands. Afonso d'Albuquerque discovered them in 1503, and they appear thereafter in Portuguese sources as the *Curia Maria* Islands, with Hāshīyya as *Asquē*, Sawdā as *Sodā* and Karzawt as *Rodondō*. Kawāḡīn (q.v.) from Ra's al-Khayma descended upon the islands in 1818, possibly with the intention of using them as a base for attacks upon shipping. The local inhabitants were driven or carried off and the islands remained unpopulated for several years afterwards. Sometime before or, more probably, after this incursion (the sources are unclear) the islands came into the possession of a sub-section of the Māhrā tribe, the Ibn Khalfān, residing in the vicinity of Māhrā on the coast of Dhufār (Zufār (q.v.)). It is from this clan that the islanders have derived the name by which they are known to the Arabs of southern Arabia—*Djazzi* b. bin Khalfān. By the middle of the 13th/19th century—and possibly a decade or so earlier—the islands had become a dependency of the sultanate of Maskāt. French planters from Réunion Islands occasionally resorted to the islands to load guano for use as fertiliser, and it was the existence of these valuable deposits that led the British government in 1854 to ask the Sultan of Maskāt, Sayyid Sa'īd b. Sulṭān, to cede the islands to Great Britain. The deed of cession was signed on 14 July 1854 and the guano deposits were worked from 1857 to 1859. A cable station was set up on Hāllāniyya Island in 1861, only to be abandoned a year later when the Red Sea Karachi cable proved unworkable.

From 1854 onwards, the Khūrvān-ūl-Yān islands were formally designated a dependency of the British colony of Aden, although administrative control over them was vested in the British political resident in the Persian Gulf, since it was more practicable for the British political agent at Maskat to visit them than it was for the political resident (later governor) at Aden. When British rule over Aden ceased on 30 November 1967, the islands were handed back to the Sultan of Maskat, despite the protests of the Aden successor government, the People's Republic of South Yemen, that it was entitled to succeed to sovereignty over all the dependencies of the former colony. Since that time the islands have been administered as part of the wilāya of Dhufār of the sultanate of 'Uman. Hallāniyya Island is still populated, the number of inhabitants having remained fairly constant over the past century—36 in 1883, 50 in 1936, 70 in 1947 and 53 in 1976. They still derive their living from the sea, and especially from the great shoals of sardines which appear off the islands in late October each year, at the end of the south-west monsoon. Of late, foodstuffs and medical treatment provided by the 'Umani authorities in Salāla have gone some way to alleviate the rigours of the islanders' existence.

KHUSADĪ (see KALĀT)

AL-KHUSHANĪ, ABŌ 'ABŌ ALLĀH MUḤAMMAD B. AL-HAṢṬĪ, Mālikī faḳīh and biographer, originally from Khushan near Kayrawān. After studying fiqh at the latter place and at Tunis, he left his homeland ca. 311/923, passing through Centa, where he was held back some time by teaching (he is said also to have corrected the orientation of the mosque there), and travelling to Spain. He resided in the Marches, and completed his legal training, especially from Kāsim b. Asbagh [q.v.], and ended up by enjoying the favour of the heir to the throne, prince

al-Hakam, who procured for him the job of *ḥāfiḥ* of inheritances (*muḥarrir*) at Pechina, then that of the *ḥāfiḥ* of Cordoba and after that, summoned him to his own side. He was something of a poet (though accused of committing faults here), and was considered to have a certain maḥṣul dexterity and to practise alchemy; he seems also to have acquired some medical expertise which allowed him, after his disgrace following al-Hakam's death in 366/976, to live by making up elixirs (addās). He is said to have died in 372/981, but this date is not accepted by all his biographers, who however knew very little information about the last years of his life.

Al-Khushanī is credited with a hundred or so works and treatises composed at al-Hakam's behest, who was, as is well-known, a great lover of books. Amongst the titles cited here figure *al-Itisāf wa 'l-Itihāṣ* *fi madhāb al-faḳh*, *al-Taḥḍir wa 'l-mughāḍir*, *al-Fayḍ*, *al-Ta'rif*, *al-Mawāḍ wa 'l-maḥāṣil*, *al-Nasab sod al-Itihāṣ*, which do not seem to have survived. His fame, however, rests on his biographical works. As well as a *Ta'riḥ 'Ulamā' al-Andalus* and a *K. Faḳh* *al-Mālikhiyya*, which are no longer extant, al-Khushanī left two collections of especial interest. The first one which one thinks of is his *T. Ḥadīṭ al-Andalus*, ed. and tr. into Spanish by Ribera, Madrid 1914. Basing himself on written sources, archives and oral traditions, the author traces the biographies of the *ḥāfiḥ* of al-Andalus from the conquest till 357/968, in a lively and instructive manner; and if he lacks a critical spirit in relating, for instance, the fictitious story of the first three judges in Cordoba, he nevertheless does not omit items of information which are sometimes unfavourable to the Umayyads.

The second work which has been preserved, the *Tabaḥāt 'ulamā' Ifrīkiya*, has been published by M. Ibn Cheneb in his *Classes des savants de l'Ifrīqiya*, Algiers 1915-20, as a continuation of the *Tabaḥāt* of Abū 'l-'Arab [q.v.]. These *Tabaḥāt*, which the *ḥāfiḥ* 'Iyād [q.v.] utilises freely in his *Madrik* under the title of *Ta'riḥ al-Ifrīkiyyin*, calling the author in familiar fashion Ibn Ḥarīṭh, contain biographies of scholars who did not belong to the Mālikī school, and most remarkably, of converts to Shi'ism established in Ifrīkiya by the Fāṭimids. It is the opinion of R. Brunschwig (*Un aspect de la littérature historique-géographique de l'Islam*, in *Mélanges Gauthier-Demontigny*, Cairo 1935-45, 150-1) that this exile, unable to come to terms with the doctrine imposed upon his native land, may have written this work at the demand of al-Hakam, who was eager to know about the situation there; in this respect, the *Tabaḥāt* are interesting for the information which they give on the Fāṭimids, but the author, far from being impartial, paints a gloomy picture of the 'ulama' who remained behind in Ifrīkiya and were compelled, according to his view, to rally to the new masters, either out of financial cupidity or from fear of persecution.

KHUSHNĀL KHĀN KHAṬAK, Pashtun poet and a warrior chieftain (1022-1100/1613-89), *Khushnāl Khān* is recognised as the national poet of the Pashtūns.

1. Life. Son of *Shah-bāz Khān* and grandson of *Yahyā Khān* who, in turn, was the son of *Malik Aūdāy*, leader of a clan of the *Khaṭak* [g.v.], the boy *Khushnāl* accompanied his father in tribal wars. After his father's death in a tribal battle, *Khushnāl* succeeded him as *khān* or chieftain, and was recognised as such by *Shāh Dīshān*, the Mughal Emperor. *Khushnāl* served *Shah Dīshān* in his army's campaigns in Belkh and *Badakhshān* in 1035/1645, but later, in the time of the Emperor *Aurangzib*, the governor of *Kābul* aligned himself, along with some of *Khushnāl*'s uncles and cousins, against *Khushnāl*. In 1074/1666, *Khushnāl*, then 55 years old, was summoned by the governor to *Peshāwar*, where he was arrested and dispatched in chains to a fortress in *Tharapur*. He was released two years later, but was not allowed to return home until 1080/1669. For the rest of his life, his sympathies rested with the rebel *Pashtūn* tribes. In his poems he preached unity of the *Afghān* tribes to resist Mughal domination. *Khushnāl* greatly admired the *Afīdī* chieftain *Daryā Khān*, who defeated the Mughal army at *Landi Kōtal* in the *Rhyber Pass* [see *ḡayyār* *Fāss*] in 1053/1672, while leading a confederation of *Afīdī* and *Muhmūd* tribesmen. Accompanied by one of his loyal sons, *ʿAbd al-Kādir Khaṭak*, *Khushnāl* fought and defeated the *Bangash* tribe, which supported *Mughal* rule. He also had to fight his third son, *Bahrām*, whom the *Mughals* sponsored in attempts to replace *Khushnāl* as chieftain. In 1085/1674, he voluntarily relinquished his chieftainship to his eldest son, *Ashraf*, also a poet who was later (1044/1683) jailed by the *Mughals*. *Khushnāl* declared himself a rebel and spent rest of his life with *Afīdī* friends in the inaccessible eyries of *Triāh*, a zone "never effectively occupied by any government in all history". He travelled from tribal area to tribal area, seeking assistance and refuge. He was relentlessly pursued by his treacherous son, *Bahrām*, but evaded capture and died in the *Afīdī* country in 1100/1689. The armed resistance which he encouraged by his pen and emphasised by his sword is "to be counted among the causes that brought about the dramatic collapse of the *Mughal* Empire in India" (Sir *Olaf Caroe*).

2. Literary Works. *Khushnāl*, a prolific poet, constantly chanted his love of beauty, honour, and justice. As part of his opposition to *Aurangzib* and his forces, *Khushnāl* preached union of all *Afghān* tribes and encouraged revolt against *Mughal* rule:

"My sword I gird upon my thigh
To guard *Afghān* honour and fame:
Its champion in this age am I,
The *Khaṭak Khān*, *Khushnāl* my name".

Khushnāl also celebrates his successes and laments his subsequent misfortunes. He chastises those *Pashtūns* who accept gold rather than give battle to the *Mughals*.

As well as poetry, he wrote manuals on falconry, folk medicine, a dialogue between the pen and the sword, an account of his imprisonment and exile, and a geography of *Swāt*. "His lyrics and epics, like present his religious devotion, occasionally in mystic terms, his patriotic feelings, his moral code, his many loves in object or joyful mood, and many other subjects" (D. N. MacKenzie). *Khushnāl* rightly claims to be the originator of *Pashtō* poetic form and metre, but it must be remembered that he had a predecessor,

Mirzā Anṣārī. Both these early *Pashtō* poets used the *Dari* or *Persian* poetic mould, but instead of strictly applying the classical rules of prosody to *Pashtō*, they adopted the metres of popular *Pashtō* songs to verse forms known in *Persian*. "This metre is syllabic in nature, but the pattern is made by the stress usually recurring on every fourth syllable" (MacKenzie).

Khushnāl further left many *ghazals* in *Persian* under the pen-name of *Ruhī*, and a *Persian ḡazida* or ode on the futility of this world in same metre as the *Bahr al-abrār* of *Amīr Khusrāw Dīhlawī*; this *Persian* poetry is amongst the best of that written in the so-called *Sabk-i Hind* or "Indian style".

(RAVAN FARHADI)

KHUSHKADAM, AL-MALIK AL-ZĀHIR AḤD SA'ID SAYF AL-DĪN AL-NĀSIRI AL-MU'AYYADI, Mamlūk sultan of the Burjids (regn. 19 Ramaḍān 865 = 10 Rabi' I 872/22 June 1461 = 9 October 1467). By origin a Rūmī (i.e. perhaps a Greek, but the term had a wide range of meanings), he was born c. 815/1413. Brought as a boy to Egypt by the slave-merchant Kh'adīd Nāsir al-Dīn, he was purchased by the sultan al-Mu'ayyad Shāykh, whence his two nicknames. He rose through the grades of promotion of the Royal Mamlūks as *hāṣṣ*, *shāh* and *amīr*, finally succeeding al-Mu'ayyad Ahmad b. Ināṭ as *alḥak al-ṣāḥib* in Egypt when the latter became sultan in Jumādā I 865/Feb. 1461. The *alḥak*iya was at this time the highest in rank of the great offices of state, but had no specific functions; its holder was also styled *amīr kabīr*, i.e. the senior *amīr*. The reign of al-Mu'ayyad Ahmad was soon disturbed by the intrigues of Dīnālm al-Aḡrafi, the governor of Damascus, who sought to usurp the sultanate with the support of his *Khushd-ghiyā*, the Aḡrafiyya, i.e. the Mamlūk household of al-Aḡrafi Barīdīy (q.v.). The Aḡrafiyya were at first opposed by their rivals, the Zāhiriyya, i.e. the household of al-Zāhir Čakmak (q.v.), whose chief Dīnālbak al-Zāhiri (formerly governor of Dudda) skillfully won the agreement of the two factions to the deposition of al-Mu'ayyad Ahmad and the installation of Khushkadam as a compromise candidate until the arrival of Dīnālm from Syria. Since Khushkadam was not of "the Nation" (*al-ḡayr*, i.e. not a Circassian), it would be easy to depose him at will. Thus Dīnālbak alleged, but he rightly calculated that once Khushkadam was recognised as sultan, he would be difficult to oust. He was accordingly proclaimed, and his supporters captured the Citadel of Cairo with little resistance, al-Mu'ayyad Ahmad being arrested and sent to imprisonment in Alexandria.

The new sultan was thus faced at the outset with both an over-mighty kingmaker and a powerful rival. Dīnālbak, who was appointed *mudabbir kabīr* (a great office of state of growing importance in the later Circassian period), was at first the effective ruler (*mudabbir al-mamlaka*). When Dīnālm al-Aḡrafi advanced to Khānkhān Sīrīyān, north of Cairo, Dīnālbak succeeded in obtaining an oath of loyalty to the new sultan from him, and Dīnālm returned, loaded with gifts, to Damascus (Shawwāl 865/July 1461). Some months later, Dīnālm was removed from office, and fled to Umm Hasan of the Ak Koyunlu (q.v.) in Safar 866/Nov. 1461. With a force of Mamlūks and Ak Koyunlu Turcomans, he subsequently crossed the Euphrates and advanced to Isfī Bāghr (Shawwāl 866/July 1462), but the invasion came to nothing, and in the following winter he was killed in Edessa. The sultan was now strong enough to procure the murder of Dīnālbak (Dhu 'l-Hijja 867/August 1463); an event which was followed by the arrest of leading members of the Zāhiriyya faction. Khushkadam's coup against the Zāhiriyya was, however, abruptly halted, probably because of a conspiracy against him in his own Mamlūk household. A reconciliation was effected through Kāyitbāy al-Zāhiri (the future sultan), and the offices and *ḥāḥs* of the Zāhiriyya were restored.

There were no major foreign developments during the reign. Suzerainty was maintained over Kūng

James of Cyprus (who had been installed with the help of a Mamlūk contingent sent by al-Aḡrafi Ināṭ (q.v.) in 864/1460), although in a clash between the king and the sultan's resident in Cyprus, the latter was killed, and Famagusta, which he had held, passed into the king's possession (868/1464). Another vassal-state, the march-principality of Lībiṣtan (q.v.) under the Turcoman dynasty of Duḡhādīr (Dhu 'l-Kadr (q.v.)), was disturbed by a succession-struggle following the murder of its ruler, Maḥk Arslān, in 870/1465. Two pretenders, Shāh-Badāk and Rustum, successively backed by Khushkadam, failed to hold their position against a third Duḡhādīr, Shāh-Suwar, who had Ottoman support and at the end of the sultan's reign was threatening northern Syria. Khushkadam sent orders to the governors of Tripoli and Hamāh to assist Aleppo, and made provisional arrangements for an expeditionary force from Egypt (Muharrar 872/August 1467). There are some indications of a resurgence of Arab tribal power during the reign. Five expeditions were launched between 866/1462 and 869/1465 against the Labīd tribe of al-Bubayra; while a few months before the sultan's death, he sent a punitive force against Shāykh Mubārak of Banū 'Ukba, who had plundered the provisions for the pilgrims in the vicinity of Ayla. One of his last acts was to approve an expedition to Upper Egypt, where the *khāḡ* had been defeated in a fight with Yūnus b. 'Umar, the chief of the powerful tribe of Hawwāra (q.v.). The sultan died a few days later. Shortly before his death, an assembly of magnates had elected the *alḥak* Yalḡay al-Ināṭ al-Mu'ayyadi to succeed him.

KHUSRAW [see ANḠHRĀWĀN, AMīR KHUSRAW, KHUSRAW, KISRA, FARWĀZ].

KHUSRAW FIRUZ, name of the last Būyid ruler, better known by his *laqab* of al-Malik al-Rāḥim. He succeeded his father Abū Kālīghār in 914 in 440/1048. Most of his reign was spent in disputing with his brother Fulāḡh Sūtūn the possession of Fārs and Khūzistān and in trying to maintain discipline amongst the Turkish troops of his general al-Basāṣrī (q.v.). There is no discernible doctrinal reason for his adoption, in defiance of the caliph, of an epithet reserved for God. In any case, the enfeeblement of the Būyid dynasty allowed the caliph in question, al-Kāḡim, to recover a certain amount of political authority, seen in the appointment once more of a vizier to the caliph, Ibn al-Muslīmā (q.v.). A group within the caliphate, in which Ibn al-Muslīmā was a driving force, hoped to throw off the Būyid tutelage as the Sunni sultan, the Saljūq Toghril Beg approached, at the invitation also of Fulāḡh Sūtūn. In 448/1055 Toghril entered Baghdad, after having promised to respect al-Malik al-Rāḥim's position as his vassal, but a rebellion gave him a pretext to arrest (the Būyid ruler, and the latter died two years later in prison at Rayy).

Bibliography: See the main histories of the period, and especially Ibn al-Djāwzī's *Muntazam*, Ibn al-Aḡḡar's *Kāmil* and Sibḡ b. al-Djāwzī's *Mawāzī*; H. Bowen, *The last Buyarids*, in *JRAS* (1928);

and in general, the bibliography to SUWAYHIDS, to which should be added, H. BUSSE, *Chalif und Grosskämmer, die Bayiden im Iraq* (1945-1955), Beirut-Wiesbaden 1960. (CL. CAHEN)

KHUSRAW MALIK [see GHAZNAWIDS]

KHUSRAW PASHA [see KHOSREW PASHA]

KHUSRAW SHAH [see GHAZNAWIDS]

KHUSRAW SULTAN, eldest son of the Moghul emperor Djabāngir [q.v.] by the daughter of Rājā Bhagwān Dās, was born at Lahore in 995/1587. He was a favourite with his grandfather, Akbar, who perhaps wanted to make him his successor. He rebelled against his father in the first year of the latter's reign (so. in 1015/1606), was defeated and imprisoned. He made a second conspiracy in Afghanistan, and this having been detected, he was, with one interval, kept in confinement for the rest of his life. He died at Asirgah near Burhanpur in the Deccan in 1035/1622, in suspicious circumstances, and was in all probability murdered by Shāh Jahān. His sister had his body buried in the Khusrav Bagh at Allāhabād. His two sons, Dikwar Bahāsh, otherwise Bulaki, and Garhāshp, were put to death at Shāh Jahān's accession.

Bibliography: The principal source is the *Tarikh-i Djabāngir*; see also the bibliography to Djabāngir. (H. BEVERIDGE)

KHUSUF [see KUSUF]

KHUTBA (A.), sermon, address by the *khawf* [q.v.]. The *khutba* has a fixed place in Islamic ritual, viz. in the Friday-service, in the celebration of the two festivals, in services held at particular occasions such as an eclipse or excessive drought. On the Friday it precedes the *salāt*, in all the other services the *salāt* comes first. A short description of the rules for the *khutba* according to al-Shīrāzī (*Tamdhī*, ed. Juynboll, 40), one of the early Shāfi'i doctors (9 c.), may be given here.

(a.) One of the conditions for the validity of the Friday service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the *khawf* must be in a state of ritual purity; his dress must be in accord with the prescriptions; he must pronounce the two *khawfs* standing and sit down between them; the number of auditors required for a valid *khutba* must be present [see *ṢALAT*].

Regarding the sermon itself, there are obligatory: the *ḥamdala*, the *salāt* on the Prophet, admonitions to piety in both *khawfs*, prayer (*du'a*) on behalf of the faithful, and recitation of a part of the Qur'ān in the first *khutba* or, according to some doctors, in both. It is commendable (*ṭanna*) for the *khawf* to be on a pulpit or an elevated place; to salute the audience when directing himself towards them; to sit down till the *adān* is pronounced by the *mu'adḍin*, to lean on a bow, a sword or a staff; to direct himself straightway to his audience; to pray (*du'a*) on behalf of the Muslims; and to make his *khutba* short.

(b.) Regarding the *khawfs* on the days of festival the same author says (42) that they are like those of the Friday-service, except in the following points: the *khawf* must open the first with nine *takbīrs*, the second with seven. On the *ṭa* he must instruct his audience in the rules for the *salāt al-ṭa*, on the *ṭa* al-*adān* in the rules for the sacrifice of this day. It is allowable for him to pronounce the sermon sitting.

Regarding the *khawfs* of the service during an eclipse, al-Shīrāzī (43) remarks that the preacher must admonish his audience to be afraid, and in the service in times of drought he must ask Allāh's par-

don, in the opening of the first *khutba* nine times, in the second seven times; further, he must repeat several times the *salāt* on Muhammad as well as *istighfār*, recite verse 9 of Sūra LXVI, elevate his hands and say Muhammad's *du'a* (which is communicated by al-Shīrāzī in full). Further, he must turn towards the *qibla* [q.v.] in the middle of his second *khutba* and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it on till he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker was the first to point to the relation between the Islamic pulpit and the Judge's seat in early Arabia. This explains why the *khawf* must sit down between the two *khawfs*; it explains why he must lean on a staff, sword or bow; for these were the attributes of the old Arabian Judge. It is not easy to see why the *khutba* precedes the services on Friday, whereas on the days of festival and the other special occasions *salāt* comes first. *Ṭamdhī* tells us that Marwān b. al-Hakam was the first to change this order by pronouncing the *khutba* before the performance of the *salāt* on the days of festival (e.g. al-Bukhārī, *Ṭāyā*, bāb 6 and especially the pathetic picture in Muslim, *Ṭāyā*, trad. 9).

It is also said that Marwān was the first to hold the *khutba* on these days on a pulpit, the old custom being a service without *minbar* or *adān*. According to other authorities (cf. Muslim, *Ṭāyā*, tr. 76, 79, and al-Nawawī's commentary) the *khutba* before the *salāt* was an institution going back to 'Uthmān or even to 'Umar. The common opinion of traditionalists is, however, that it was an innovation due to the general tendency of the Umayyads to favour their own dynastic interests rather than those of religion. If this opinion should be right, the innovation as well as the holding of the *khutba* in a sitting attitude may be looked upon as an endeavour to go back to the pre-Islamic judicial rites concerning *minbar* and *khutba*.

Regarding the prayer on behalf of the faithful (*du'a*) [i. 'mu'minin] it must be observed that in this prayer before the Friday-*salāt* it has become customary to mention the ruling sovereign. The history of Islam is full of examples of the importance which was attached to this custom, especially in times of political troubles, the name mentioned in this *du'a* betraying the *imām*'s political opinion or position. Though it is not prescribed by law to mention the ruler's name, the suppression of the name at this occasion exposed the *khawf* to suspicion. In countries where Muslims lived under non-Muslim rule, even a prayer for the worldly prosperity of the ruler could expose the *khawf* to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgronje, *Islam and Phonograph*, 231. = *Verspre. Geschr.*, II, 430 f.; idem, *Mr. L. W. G. van den Berg's beschrijving van het Mohammedaansche recht*, in *Ind. Gids*, vii, 809 f. = *Verspre. Geschriften*, II, 214 f.). The custom of mentioning the ruler in prayer is found as early as the 5th century B.C. in the Aramaic papyri of Elephantine (Pap. I, line 26; cf. also Harnack, *Mission und Ausbreitung des Christentums*, I, 286).

Several of the characteristics of the *khutba* prescribed by the doctors of the law occur also in *ḥudūd*. The *khawfs* of Muhammad usually begin with the formula *ammiḥ ḥādā* (al-Bukhārī, *Ḍawā*, bāb 29). Side by side with the *ḥamdala* (Muslim, *Ḍawā*, tr. 44, 45) the *ghadāda* occurs (Ahmad b. Hanbal, II, 302, 343: "A *khutba* without the *ghadāda* is like a mutilated head"). In a large number of traditions it

is stated that Muhammad used to recite passages from the Qur'an (e.g. Muslim, *Ḍu'm'a*, tr. 49-52; Ahmad b. Hanbal, v, 86, 88, 93 etc.). The *khutba* must be short, in accord with Muhammad's saying: "Make your *ḥadīth* long and your *khutba* short" (Muslim, *Ḍu'm'a*, tr. 47). Just like the *ḥadīth* the *khutba* must be right to the purpose (*ḥaṣa*, Muslim, *Ḍu'm'a* tr. 41). The audience must be silent and quiet; "who says to his neighbour 'listen', has spoken a superfluous word", al-Bukhārī, *Ḍu'm'a*, bāb 36). The two *khutbas* pronounced by the standing *khutbā*, who sits between them, are based on Muhammad's example (al-Bukhārī, *Ḍu'm'a*, bāb 27; Muslim, *Ḍu'm'a*, tr. 33-5; Ahmad b. Hanbal, ii, 35, 91, 98). During the *khutba* Muhammad used to sit on the *minbar*; the *ḥadīth* was spoken when he had descended (in order to hold the *khutba* standing), this order was observed by Abū Bakr and 'Umar (Ahmad b. Hanbal, iii, 449 b/c).

Neither the term *khutba* nor the verb *khutaba* in their technical meaning occur in the Qur'an. Even in the passage containing an admonition not to abandon the Friday-service for worldly profit, it is only the *ḥadīth* which is mentioned (Sūra LXII, 9-11). It would be wrong to conclude from this silence that the *khutba* did not yet form a constituent part of worship in Muhammad's time. Still, it is not probable that the different kinds of service were accurately regulated from the beginning. *Ḥadīth* has preserved descriptions showing that Muhammad's *khutba* often did not have much to do with the regular sermon of later times. Abū Dawūd, *Kutub al-ḥadīth*, bāb 13, reports, for example, that the Prophet pronounced two *khutbas* at the end of a complaint raised against a collector of the *zakāt*. Still, it is not possible to distinguish between the kinds, as may appear from the following traditions. According to one of them related on the authority of Abū Sa'īd al-Khudrī it is said that Muhammad on the days of festival used to open the service with the *ḥadīth*, then he pronounced the *khutba* "and his *khutba* usually consisted in the command to participate in some mission or expedition" (Ahmad b. Hanbal, iii, 56 f.). A similar statement is to be found in Muslim, *Ḍu'm'a*, tr. 9: "When Muhammad had concluded the *ḥadīth* on the days of festival by the *ḥadīth*, he remained on his feet and turned to the sitting audience; when he wanted to send a mission or when he desired some other arrangement, he gave his orders on it; he used also to say: give alms, give alms; ... then he went away. This state of things lasted till Marwān, etc.". This is a very simple description of the service and would be a considerable support to the view that a service with a fixed order only arose long after Muhammad's time. Yet it must not be forgotten that the description just translated betrays the tendency to contrast the simple service of the Prophet with the highly official style introduced by Marwān, who even had a *minbar* built on the *masjid*. According to another tradition, the Prophet once interrupted his *khutba* in order to reply to a stranger who had asked for instruction in the Muslim faith (Muslim, *Ḍu'm'a*, tr. 60); he is also portrayed as interrupting the *khutba* to call out directly to a man (*ibid.*, tr. 54-9).

However uncertain the value of these traditions may be, it seems not out of place to suppose that a fixed order of service on Friday and the days of festival arose only after Muhammad's lifetime. This order reposes on three elements: the early Arabian *khutba*, Muhammad's *sunna* and the example of Jews and Christians.

In his study on the history of Muslim worship

C. H. Becker endeavoured to establish a close connection between the services on Friday and the days of festival on the one hand, and the mass on the other. But this view was opposed by Mitwoch, who found in the Jewish liturgy features corresponding to *adḥān* and *shāma*, in the *ḥamāla*, the recitation of the Tora (first *khutba*) and the recitation from the Prophets (second *khutba*). It is perhaps impossible to decide the question; probably the example of the Jewish as well as that of the Christian liturgy exercised influence on the final constitution of the Muslim worship.

It is customary to pronounce the *khutba* in Arabic; nevertheless, this rule is not infrequently broken in non-Arabic speaking lands.

The history of the *khutba* in Islam remains to be written, and the study of oratory from the *minbar* or pulpit likewise remains to be undertaken. On the latter point, the enquirer might utilise with profit the texts (of varying degrees of authenticity) of those sermons of the Prophet given in the *Sūra*, in the *ḥadīth* collections and in historical texts, as well as in those *ḥadīth* works which have preserved specimens of famous *khutbas*. Collections like those of Ibn Nubāta al-Fāriḍī (q.v.) and the specially-compiled anthologies of sermons used by the professional *khutbas*, just as the secretaries used collections of model letters, would also be found useful. Collections of this latter type are often arranged according to the calendar, i.e. there are four sermons for each month plus supplementary ones for festival days, the Prophet's birthday and his *mi'rāj* or night-journey (see Ahlwardt, *Verzeichniss der arab. Hss.*, iii, 437).

(A. J. WERNER)

KHUTTALAN, **KHUTTAL**, a region on the right bank of the upper Oxus river, in what is now Soviet Central Asia, lying between the *Wakhsh* river and the *Pandj* river (i.e. the head waters of the Oxus), called the *Wakhshāb* and *Djaryāb* in mediaeval times. It was bounded on the west by the topographically similar regions of *Čaghāniyān* and *Wakhsh* (q.v.) and was often administratively linked with *Wakhsh* (Yakūt, *Buldan*, ii, 402). *Khuttal* was a land of rich pastures in both the river valleys and on the upper slopes of the hills, where the famed horses of *Khuttal*, known even to the Chinese, were reared; the geographers advert frequently to the *Khuttal* and *Tughart* breeds, and the men of *Khuttal* were celebrated for their knowledge of horse-breeding, farriery and veterinary science, and for their skill in making saddles and other accoutrements (see Bosworth, *The Ghaznavids*, 215). The valleys ran northwards towards the *Batāniyān* mountains, which separated *Khuttal* from the upper *Zarafshān* river valley; gold and silver were mined there, and there dwell in these mountains two fierce and predatory groups, the *Kumūdīs* and the *Kandjina* Turks, both of them probably remnants of Hephthalite peoples (see *Khutb* p. 15).

The form *Khuttalan*, with the plural ending, is early attested, for this is found in the very early New Persian satirical verses composed by the local

people against the Arab commander Asad b. 'Abd Allāh al-Ka'bi when he unsuccessfully raided Khuttal in 108/726-7; see Tabari, II, 1292, 1294, 1292. Later Persian poetry requires forms like Khutlān or Khutlān, whilst the *Hudūd al-'Īlam*, tr. Minorsky, 119, spells Khutlān. Yāqūt, loc. cit., gives both Khutlān and Khuttāl, with his main entry under the latter form. In the Chinese annals we find forms like K'o-tut-lo, see Marquart, *Erānshahr*, 299-300. An etymological connection with the name of the Hephthalites, within whose northern kingdom Khuttal certainly fell (see MAYATLA) is certainly not impossible.

The principal town of Khuttal and the residence of its ruler was at Hufbuk to the south of the modern centre Kulāb/Kuliyāb, whilst Nučārā or Andīšārdīh is described as the main trading centre. Other towns enumerated by the geographers include the important centres of Halkwānd and Munk, the latter probably corresponding roughly to the modern Baljowān; according to Yā'qūbī, Munk was on the borderland with Rāghī and the Turkish lands, so those of the Kumīdī, etc. Clearly, Khuttal was a prosperous and well-settled region at this time.

In the pre-Islamic period, the local rulers bore the titles Khutlānā-Shāh or Khutlānā-Khuddāh and Shāh-i Khutlān (Ibn Khurrādādhbih, 40). The Arab invaders did not gain full control of Khuttal till the end of the Umayyad period. The rebel al-Hārīth b. Surayj (q.v.) received support from the local ruler, and in retaliation, Asad b. 'Abd Allāh al-Ka'bi led two expeditions into Khuttal in 129/737. These provoked an appeal for help to the Khāqān of the Tūghh or Western Turks Su ku, and the Arabs had to retreat hastily (Gibb, *The Arab conquests in Central Asia*, 82-3). The region was not fully secured till 132/750-1, when Abū Dāwūd Khālid b. Ibrahim, governor of Balikh, drove out the ruler (malik) of Khuttal, who fled first to the Turks and then to China, where he was granted the honorific title of Yabghu (Gibb, *op. cit.*, 95; E. Chavannes, *Documents sur les Toukhue occidentaux*, 166, 216).

In the ensuing century or so, Khuttal came under the rule of the Banīdīlīs or Abū Dāwūdīs, who exercised power on both sides of the upper Oxus. In the Sāmānid period, the amirs of Khuttal were in loose tributary status only to the Sāmānids, sending presents but not taxation to Bukhārā (Muḥaddasi, 337), and they exercised suzerainty south of the Oxus, for the *Hudūd al-'Īlam*, 109, says that the *dihlān* of the small principality of Yān in Badakhshān was tributary to the amir of Khuttal. In the warfare of 336-7/947-9 between the Sāmānid Nūh b. Naṣr and Abū 'Alī Qaghānī, all the vassal rulers (*mudh-i āfrā*) along the upper Oxus were stirred into revolt by Abū 'Alī, including the amir Ahmad b. Dī'far of Khuttal, the amir of Rāghī and the Kumīdīs (Gardizi, ed. Nāzin, 36-7, ed. 'Abd al-Hayy Hujjīl, Tehran 1347/1968, 157-8, cf. Barthold, *Turkestan*, 248).

Under the early Ghaznavids, Khuttal was strategically important as being in the buffer zone between the Ghaznavids and their Karakhanid rivals. Khuttal is included with Caghāniyān and Kubādhjān amongst the territories enumerated in the 'Abbasid Caliph's investiture diploma of 422/1031 to Mas'ūd b. Maḥmūd (Bayhaqi, in Bosworth, *The Ghaznavids*, 54), but it was also claimed by the Karakhanid 'Alī-tigin (see *IKAN-KHĀN*), who stirred up the Kumīdīs to harry the region. Unlike as in the neighbouring principality of Caghāniyān, where the Muḥtādī amirs remained, an separate family of local rulers is mentioned for Khuttal at this time; Ghaznavid influence was exercised directly, seen in Mas'ūd's appointment

of a *khāfi* *Y-bukhl* for Khuttal (Bosworth, *op. cit.*, 178).

In the Saljuq period, however, various local amirs are mentioned. An amir of Khuttal rebelled against Alp Arslan in 456/1064, but was killed (Ibn al-Athīr, x, 25), and in 553/1158 there was a campaign by the lord of Khuttal, one Ibn Shujā' Farukhshāh, formerly a vassal of Sandjī, against the important crossing place of Tirmīdh, taking advantage of the chaos in Khurāsān consequent upon Sandjī's capture by the Ghuzz and then his death; this Ibn Shujā' is said to have claimed descent from the Sāsānid emperor Bahān Gōr (Ibn al-Athīr, x, 155). In the period of the Ghūrids and Khwārazm-Shāhs, no separate native dynasty is mentioned. Like Wakhsh, it may have been part of the Ghūrid empire and may have become one of the small principalities into which that empire broke up, see Dīnāzādī, *Tabakh-i nāseri*, ed. Habbībī, Kabul 1347-8/1962-4, I, 387, 392, tr. Ravery, 426, 236, 490. A Dīlālī al-Dīn 'Umar of Wakhsh, apparently from the Bamiyān branch of the Ghūrids (q.v.), was carried off into captivity in Khwārazm ca. 612/1215, according to Nasawī, see Barthold, *Turkestan*, 372.

In the 8th/14th century, Khuttal was likewise one of the small states into which Caghāniyā's empire disintegrated; Shāraf al-Dīn Yazdī records that the ruler of Khuttal Kay Khusrav was killed by Timūr for treacherous contacts with Khwārazm (*Zafar-nāma*, Calcutta 1885-8, I, 243). Later, Khuttal was one of the dependencies of the region of Kūsh (q.v.) and was controlled by the later Timūrid amir of Kunduz. Then in the 12th/16th century it passed under Ōzbek control. The name Khuttal now disappears from use, being replaced by that of the modern town of Kulāb; one of the last recorded uses of the old name is in the dynastic history of the Ōzbeks, the *Baḥr al-asīr* / *fi manāzil al-aḳānīs* of Maḥmūd b. Amir Wali (begun in 1044/1634). After being included in the Khūzestān of Bukhārā during the 18th and 19th centuries, the mediaeval region of Khuttal now forms part of the Tadzhikistan SSR.

Yāqūt, *Bulādn*, II, 402, also mentions a village of al-Khuttal in Jāzā on the Baghād-Khurāsān high road near Daskara.

KHUZĀ'A, an ancient Arab tribe of obscure origin. Muslim genealogists assuming a Mudari origin attributed to the Prophet according to which the ancestor of the tribe, 'Amr b. Luḥayy (q.v.) was a descendant of Kame'a (= 'Umayy) b. Khindif, thus tracing their pedigree to Mudar (Ibn Hishām, *al-Sira al-nabawiyya*, ed. al-Sakā, al-Abyārī and Shālabī, Cairo 1355/1936, I, 78; al-Balādhurī, *Anṣab al-aḥrāf*, ed. Muḥammad Hamīdullāh, Cairo 1939, I, 34; al-Faṣī, *Shaj'at al-gharam* *al-bahār al-balad al-haram*, Cairo 1956, II, 44-5; Muṣ'ab b. 'Abd Allāh al-Zubayrī, *Nasab Quraysh*, ed. E. Lévi-Provençal, Cairo 1953, 7-8, 11; Ibn 'Abd al-Barr, *al-Ishāb 'alā ḥabā'ih al-asnād*, al-Nadīyat 1366/1966, 97-8; Ibn Huzaym, *Dīwanat anṣab al-'Arab*, ed. E. Lévi-Provençal, Cairo 1948, 222-4; al-Sam'ānī, *al-Aḥṣab*, ed. 'Abd al-Rahmān al-Muḥalladī, Hyderabad 1385/1966, V, 116). Some sections in Khuzā'a asserted that

they were descendants of al-Ṣālt b. al-Nadr b. Kināna b. Khuzayma b. Mudrika b. Ilyās b. Muḍar. The claims for Muḍar descent made by some groups of Khuzā'a were firmly rejected by genealogists, who asserted that both Kama'a and al-Ṣālt died childless. (Ibn al-Kaḥbi, *Qasasat al-nasab*, Ms. B.M., Add. 23297, fol. 46, ll. 9-10; al-Wazīr al-Maghribi, *Adab al-ḥamīq*, Ms. Bursa, Hüseyin Celebi, 29, fols. 84b-86a; al-Balādhuri, *Ansab*, I, 34 UK., 36-9; Muṣ'ab, op. cit., 11-12). Muṣ'ab, according to the Muḍari genealogy of Khuzā'a, confirmed by an utterance of the Prophet, remarks cautiously that the pedigree uttered by the Prophet is certainly true, provided that it was actually said by him (Muṣ'ab, 3; Ibn 'Abd al-Barr, *al-Istisā*, 98). Harmonising traditions, trying in the usual way to bridge the contradictory reports about the origin of Khuzā'a, claim that the mother of Lubayy married after the death of Kama'a the Yamani Ḥāritha and the child traced his pedigree to the Yamani father who adopted him (al-Fāsi, *Shayb*, II, 46). Another tradition states that Kama'a married, begot children, but clashed with his relatives, left for al-Yaman and allied himself with the Azd (al-Balādhuri, *Ansab*, I, 35, ll. 1-2). The Yamani tradition, on the other hand, records a lengthy list of ancestors of Khuzā'a beginning with Lubayy (= Rabī'a) b. Ḥāritha b. 'Amr b. 'Amir b. Ḥāritha b. Imru' b. Kays b. Thā'aba b. al-Azd. The pedigree is traced back, of course, to Kātibān (al-Fāsi, *Shayb*, II, 45, ll. 5-10; Ibn 'Abd al-Barr, *al-Istisā*, 97; Ibn Durayd, *al-Ḥāritha*, ed. 'Abd al-Salām Ḥārūn, Cairo 1378/1958, 468; al-Ḥāzimī, *Uḡḡat al-amḥadi*, ed. 'Abd Allāh Kāṭūn, Cairo 1384/1965, 54).

The traditions about the beginnings of the rule of Khuzā'a in Mecca, ascribing Khuzā'a to Azd, record a lengthy story about the migration of the tribal groups of Azd from al-Yaman to the North. While some tribal divisions continued their migration to Syria (Ḥassān) and 'Umān (Azd Ḥamā'a), the Khuzā'a separated (*infazā'a*) and managed to get control of Mecca. One of the traditions reports that the leader of the Azd asked Dujrhum (q.v.), the tribe which ruled Mecca at the time, to permit them to stay in the territory of Mecca until their foragers would find for them suitable pasture-grounds, threatening war if they were denied this. In fact, when Dujrhum refused to grant permission, Khuzā'a fought them, defeated them and got possession of the Sanctuary of Mecca. Another tradition, on the authority of Abū 'Amr al-Shaybānī, reports that the custodianship of the Ka'ba was gained legally by Khuzā'a, as their leader Rabī'a b. Ḥāritha married Fuhayra, the daughter of al-Ḥārith b. Muḍall al-Dujrhum; his son 'Amr b. Rabī'a (i.e. 'Amr b. Lubayy) had thus a legal basis for his claims to the custodianship. In the protracted battles which ensued between Khuzā'a and Dujrhum, Khuzā'a defeated Dujrhum, who had to leave the city. A third tradition ascribes the decline of the Dujrhum in Mecca to their deterioration and moral decay. Afflicted by plagues, God's chastisement for their wickedness, they were extirpated, and only few survivors from amongst them left Mecca; the custodianship of the Ka'ba was then taken over by Khuzā'a. A diverse tradition gives a quite different account of the events, so that Khuzā'a took over the control of Mecca from Iyād (q.v.). A peculiar version of this tradition transmitted by al-Zubayr b. Bakkr reports a battle which followed some clashes between the ruling Iyād and Muḍar in which Iyād was defeated. Iyād got permission to leave Mecca on the condition that Muḍari women married to Iyādis would be returned to Muḍar if they wished.

Among the returned women was a Khuzā'a woman named Kudāna. Khuzā'a, the report states, traced at that time their pedigree to Muḍar. As the Iyād failed to carry with them into exile the pillar with the Black Stone, they decided to bury it. The Khuzā'a woman revealed to her people the place of the buried Stone and advised them to ask from Muḍar the custodianship of the Ka'ba as reward for finding the pillar with the Black Stone. Muḍar complied and Khuzā'a got control of the Ka'ba, and retained this office until the arrival of Kusayy (q.v.) (al-Fāsi, *Shayb*, II, 26 ff.; al-Ya'qūbī, *Ta'rib*, II, al-Nadīj 1384/1964, I, 208; Muḥammad b. Ḥabīb, *al-Musammah*, ed. Khūrshīd Ahmad Fārik, Hyderabad 1384/1964, 344 f.; al-'Isāmī, *Simt al-nudjūm al-'amīn*, Cairo 1380, I, 185). Another tradition reports that Dujrhum were driven out through a joint action of Bakr b. 'Abd Manāf of Kināna and the Banū Ghubshān of Khuzā'a (al-Fāsi, *Shayb*, I, 370; 'Bakr b. 'Abd Manāf of Khuzā'a', as recorded in the article *Dujrhum* above is an error).

These stories allotting exceptionally long lives to the rulers of Dujrhum and Khuzā'a have the character of folk-tradition in which were embedded elements of *mufammarin*-tales, edifying stories about righteous and pious men (see e.g. the story of Waki' b. Salama of Iyād and his servant Hazwara, in al-Fāsi, *Shayb*, II, 26, and Muḥammad b. Ḥabīb, *al-Musammah*, 346-7), accounts of battles and clashes in the popular style of the *ayyām al-'arab*, and recollections of legends about the migrations of tribes caused by a dam breaking in South Arabia. The tradition focuses around the person of 'Amr b. Lubayy, almost unanimously putting on him the blame for the wicked innovations in the faith of Abraham and for the introduction of idol-worship, especially that of Hubal, into Mecca. There is, however, a contradictory tradition asserting that it was Khuzayma b. Mudrika, one of the ancestors of Kuraysh, who introduced the worship of Hubal and stating that Hubal was consequently called "Hubal Khuzayma" (al-Balādhuri, *Ansab*, I, 37, no. 77; al-Fāsi, *Shayb*, II, 51 inf.). As in the case of Iyād, some traditions mention among the Khuzā'a a *kemo religiosus*, Abū Kabsha, who in his search after the true religion worshipped Sirius. The unbelievers used to refer to the Prophet as Ibn Abī Kabsha in the early period of his prophethood, pointing out his deviation from the current beliefs of his people. (Muḥammad b. Ḥabīb, *al-Musammah*, ed. I. Lichtenstadter, Hyderabad 1361/1942, 129; 'Alī b. Burhān al-Dīn al-Ḥalabī, *Insān al-'uṣaym fi strat al-amin al-ma'mūn* (= *al-Sira al-kalabiyya*), Cairo 1382/1962, I, 333; al-Balādhuri, *Ansab*, I, 91, 327; al-Suyūṭī, *al-Durr al-manthar*, Cairo 1314, VI, 31; al-Kurṭubī, *Ta'rib*, 1387/1967, XVII, 119; al-Makrīzī, *Imta' al-'asne*, ed. Muḥammad Ḥāḥir, Cairo 1941, I, 77, 158; al-Kāzartī, *Strat al-nabī*, Ms. B.M. Add. 1499, fol. 231a-b, 'Abd al-Salām Ḥārūn, ed., *Nawādir al-makhrūṭāt*, Cairo 1370/1951, I, 100 (al-Fayrūzādī, *Tahsil al-ahāḍiṣ min ashiḥā ilā ḥayri ahik*).

These conflicting and contradictory stories seem to indicate that the formation of the tribe of Khuzā'a took place over a long period of time, ramifying into various tribal units. The main area of abode of the tribe was between Mecca and Medina.

When Kusayy arrived in Mecca anxious to gain control of the city, he had to subdue the ruling Bakr b. 'Abd Manāf of Kināna, the Khuzā'a and their abettors, the Ṣāḍa. The different stories about the enigmatic Kusayy resemble in their outline the stories about the former rulers of Mecca; his marriage with Hubbā bint Hulayl b. Hubhā'iyya gave legitimacy to his custodianship of the Ka'ba. Another manner of

maḥmūd's, 60, fol. 83b; al-Tabarānī, *al-Muḥjam al-saghir*, ed. 'Abd al-Rahmān Muḥammad 'Uḥmān, Cairo 1388/1988, II, 73-5). It is evident that the tendency of this tradition is to establish the position of the 'Adl b. 'Amr in the Prophet's invocation and to stress their role in the expedition against Mecca. Whether the Ka'b b. 'Amr were already Muslims when they applied for help is disputed by scholars (Ibn Saʿyid al-Nās, II, 182, *penult*, says that they were unbelievers; al-Kalālī, *al-Iḥṣāʾ*, ed. Muṣṭafā 'Abd al-Wāḥid, Cairo 1349/1970, II, 288, that they were Muslims; and see Ibn Hishām, *op. cit.*, IV, 36, n. 4). According to some commentators of the Qurʾān, vv. 13-15 of *Sūrat al-Taḥrīr* ordering fighting against the people who had broken their solemn pledges (*al-fuṣūḥāna ḥayman nakathū aymānūhā...*) were revealed in connection with the wicked attack of the Banu Bakr b. 'Abd Manāt against the Ka'b b. 'Amr (al-Tabarī, *Tafsīr*, ed. Shāhīk, Cairo 1958, XIV, 158-62 (nos. 10535-10547); al-Suyūṭī, *al-Durr al-manḥūr*, II, 214-15; *idem*, *Lubdh al-nuḥūl*, Cairo 1373/1954, 124; al-Kurṭubī, *Tafsīr*, VII, 86-7; al-Farrāʾ, *Maʾānī l-Qurʾān*, ed. Ahmad Yūsuf al-Nadīdī and Muḥammad 'Alī al-Nadīdī, Cairo 1374/1955, I, 425).

When the Prophet went out against Mecca, he was joined by the tribesmen of Ka'b who stayed in Medina; the main troop of Ka'b joined the forces of the Prophet in Rudaʿy. The troop of the Ka'b, numbering 500 warriors, had three standards carried by Busr b. Sufyān, Abū Shurayb (Ibn 'Asākir, *Taʾrīkh*, Damascus 1349, VI, 400; Ibn Saʿd, *Tabaqāt*, Beirut 1377/1957, IV, 294-5; al-Wāḥidī, 801 [Ibn Shurayb's in *ibid.* is an error]) and 'Amr b. Sallm. It is noteworthy that the Prophet permitted the Ka'b to fight the Bakr b. 'Abd Manāt in Mecca for some additional hours after he had ordered all other troops to stop fighting (see *ibid.* 839, al-Makrīzī, *op. cit.*, I, 388; al-Fāst, *Shiʿr*, II, 244; al-Hāzīmī, *al-Iḥṣāʾ*, 153; 'Alī b. Burhān al-Dīn, *op. cit.*, III, 97, *inf.*). It may be remarked that a group of the Bakr b. 'Abd Manāt hastened to join the forces of the Prophet. When Abū Sufyān looked at the marching troops of the Prophet and noticed the force of the Bakr he remarked sadly "By God, they are an inauspicious people; because of them Muḥammad raided us" (al-Wāḥidī, 820, Ibn 'Asākir, VI, 401).

The meritorious attitude of Khuzā'a towards the Prophet is fairly reflected in Muslim tradition. The Prophet is said to have stated that Khuzā'a was intimately linked with him. (*Khuzā'atu minni wa-minnā; Khuzā'atu l-muḥabbin wa-minnā l-muḥabbin*; see, e.g. al-Daylāmī, *Furūq al-akhbār*, Ms. Chester Beatty 3037, fol. 78b; 'Alī b. Burhān al-Dīn, II, 83; al-Muntakāb al-Minī, *Kawā'ir ḥamūdī*, Hyderabad 1385/1965, XIII, 55, no. 376). The Qurʾān is said to have been revealed to the Prophet in the dialect (*lughat*) of the two Ka'b's, Ka'b b. Luʾayy and Ka'b b. 'Amr b. Luḥayy, because they shared the same abode (al-Fāst, *Shiʿr*, II, 35; Ibn 'Abd al-Barr, *al-Jamhūr*, 99). A special privilege granted by the Prophet to Khuzā'a was that he awarded them the rank of *muhājirūn*, permitting them to stay in their abode (*ibid.*, 100). It was a Khuzā'i, Tamīm b. Uṣayd, whom the Prophet entrusted with the restoration of the border-marking stations (*anṣāb*) of the *ḥaram* of Mecca (Mughallīy, *al-Zahr al-bāṣim fī sirat Abī l-Qāsim*, Ms. Leiden, Or. 570, fol. 319a, *inf.*-320b; al-Fāst, *al-Iḥṣāʾ al-ḥamīn*, ed. Fuʾād Sayyid, Cairo 1383/1964, II, 387, no. 862).

The leader of the Ka'b, Busr b. Sufyān, according to one tradition, was appointed by the Prophet as the tax-collector of the Ka'b. In 9630 they were pre-

vented from handing over their taxes by groups of the Banu l-Anḥar and Banu l-Hudaym ("Ibn al-'Uṭayr" and "Band Dhuḥaym" in al-Wāḥidī, 974 are errors) of Tamīm; against these two Tamīm groups the Prophet sent a troop commanded by 'Uṣayna b. Rīḥ (al-Wāḥidī, 974 f.). In the account it is emphasized that the Ka'b were believers, paying the *ḥadana* willingly. A special tax-collector was sent to the other branch of Khuzā'a, the Banū Muṣṭalīk (Ibn Saʿd, II, 440 *inf.*).

'Umar b. al-Khaṭṭāb used to carry the *diḥān* of Khuzā'a to Rudaʿy and distributed these payments to the people of the tribe (al-Balādhurī, *Furūq al-bulāḥīn*, ed. 'Abd Allāh and 'Umar al-Ṭabbī, Beirut 1377/1957, 634; Ibn Saʿd, II, 298).

Khuzā'i warriors participated in the conquests of Islam and groups of Khuzā'a settled in the various provinces of the Arab empire. Some people of Khuzā'a took part in the revolt against 'Uḥmān in Medina (Ibn 'Abd Rabbīh, *al-Iḥṣāʾ al-farīd*, ed. Ahmad Amin, Ahmad al-Zayn, Iḥṣān al-Abyarī, Cairo 1381/1962, IV, 300, 119). Some groups of Khuzā'a joined 'Alī and fought on his side in the battle of Siffin, and some Khuzā'is in Khurāsān were among the 'Abbāsid agents who paved the way for the new dynasty.

AL-KHUZĀMA (أ) "lavender" has for a long time been considered as the origin of the name of Alhucemas, on the coast of the Rif of Morocco, and this etymology is still given in *EP*³ (art. ALHUCEMAS). Since the problem raised by this toponym has not yet been satisfactorily resolved, and since moreover Alhucemas has now, since Morocco's achievement of independence, been "arabised" to al-Husayma, it is under al-HUSAYMA that an article on the place will be found in the Supplement.

KHŪZISTĀN, a province of south-western Persia, and the land of the Hūz/Hūz/Khūz (Hwsi/Kussi), the Oūzōi/Uxli of Strabo and Ptolemy. The province of Khūzistān corresponds more or less to the ancient Elam and to the classical Susiana, and the names of its present capital, Ahwāz (q.v.), its ancient capital, Susa (q.v.), and the town of Hawwa (q.v.), all reflect the name of its inhabitants in Elamite times.

Essentially, the province consists of alluvial fans formed by the Karḡha and the Kārūn (q.v.) rivers and situated between the Zagros mountains and the sea; near the Persian Gulf, partially saline mudflats merge into a zone of tidal marshes, and the coastline is plicated by deep tidal estuaries known as *ghor*. The province is bounded on the west by the Franco-Irānī border; on the north by Laristān (q.v.); on the south by the Persian Gulf; and on the east by the river Hindiyān or Hindūjān. The chief towns are: Abūddān (see *ANABĀN*); Ahwāz (q.v.); Khurram-shahr (q.v.); Dehshīr Mīhān; Dīnkūf, and Shūshār (see *SHUSTAR*). The population of the province (1,614,576 in 1966) is mainly hybrid Arab-Persian.

The climate of Khūzistān is hot and, in summer, so humid that water drips from the trees. Both the Greek and Muslim geographers speak eloquently of the heat. Strabo, quoting an unknown source (*Nearchos?*), says that in Susa at mid-day lizards and snakes could not cross the streets quickly enough to avoid being fried, and that barley spread out in the sun jumped as though it had been placed in an oven (*Geography*, xv, 1.10). There was general agreement that snow rarely fell in Khūzistān, and water rarely froze. The great heat is accounted for by: (1) the lack of elevation (average altitude in southern Khūzistān = 10 metres/32.80 feet, rising to 100 metres/328 feet in central Khūzistān); (2) the southerly inclination of the land, which exposes it to the maximum effect of the sun's rays, (3) the hot winds in summer from the Syrian desert and Arabia; (4) the clayey nature of the soil, which retains the heat; (5) the lack of open water, snow-covered mountains or forests to the west to moderate the heat of westerly winds. Because of its climate, Khūzistān did not have a good reputation as a place in which to live; the *Hudūd al-'ālam*, tr. Minorsky, 130, describes the people of Ahwāz as "yellow-faced", and quotes a popular belief that "whoever establishes himself in Ahwāz becomes wanting in brains, and every aroma that is carried there loses its scent on account of the climate". Despite this, the province was noted for a perfume manufactured there from violets (B. Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 385).

Despite the disadvantages of its climate, Khūzistān from earliest times was noted for its prosperity. Unlike the regions of the Iranian plateau, Khūzistān has never lacked for water, which is provided in abundance by the Karḡha, Diz and Karūn rivers and their tributaries. The province was the breadbasket of the Achaemenid empire. Strabo states that "Susa abounds so exceedingly in grain that barley and wheat regularly produce one hundredfold, and sometimes two hundredfold" (*Geography*, xv, 3.11). In Sāsānid times, extensive urban settlements, and cultivated lands watered by large-scale irrigation works, were protected from the destructive raids of the bedouin by a defensive ditch known as *ghandāb Sābūr*. In the 4th/10th century, Khūzistān had a monopoly of the sale of cane-sugar throughout Iran, Irān-i 'Arab and Arabia. Other important crops included citrus fruits, dates, melons, cotton and rice. The waters of the Persian Gulf provided abundant fish. The other basis of the province's prosperity was trade; from early times, Ahwāz had been the centre of an important road network and a recognised crossing-place on the river Kārūn.

Under the two great pre-Islamic Iranian empires, that of the Achaemenids and that of the Sāsānids, Khūzistān was firmly under the control of the central government. To the Achaemenids, it was the province of Uveja, and Susa was the administrative capital of the empire; for the Sāsānids, it formed part of the "super-province" (*pādshāh*) of Nēnārūn (the South), and was divided into seven *kūras*. In 276/38 the Muslim Arabs, after a reconnaissance raid across the Kārūn, launched a major attack on Khūzistān under 'Uṭba, captured Ahwāz, and completed the subjugation of the province by 196/40. In the 3rd/9th century Khūzistān, and particularly the city of Ahwāz, suffered as a result of the Zangī (q.v.) rebellion, and considerable damage was done to the irrigation systems. During the succeeding four centuries, Khūzistān was governed in turn by the Būyids (see *BUYATIDS*), the Seldjūqs (q.v.) and the Dīkkānids (q.v.).

In the 6th/12th century, following the onslaughts of Tūḡrūq on the Iranian world, a local Arab Shī'ī dynasty, the *Musha'shah* (q.v.), established itself at Hawwa, on the old course of the Karḡha river on the western edge of Khūzistān, and enjoyed about seventy years of independence. In 914/1508, however, Shāh Ismā'īl Ṣafawī (see *ISMA'IL I*), after his capture of Baghdad, occupied Hawwa, Dīnkūf and Shūshār, and received the submission of the *Musha'shah* *sultāns*. Like the rulers of other petty states along the Ottoman-Safawid border during the 10th/16th to 11th/17th centuries, the *Musha'shah* *sultāns* played one side off against the other, often very much to their own advantage. As a consequence of *Musha'shah* rule, the western portion of Khūzistān became known, from early Safawid times, as 'Arabistān. In later Safawid times, the title of "wālī of 'Arabistān" was conferred on the *Musha'shah* *sultāns*. In the Safawid administrative system, the wālīs were the highest in rank of the four categories of *umārā-yi sarbādā*, or "amirs of the marches", and, of the four wālīs, the first in rank was the wālī of 'Arabistān, who was "higher and more honoured than his colleagues, on account of his belonging to a *sayyid* family, his valour and the number of his tribes" (*Tadhkirat al-mawlānā*, tr. Minorsky, London 1943, 44). When the Afghāns invaded Iran in 1235/1752, the *Musha'shah* *sultāns* threw in their lot with the invaders. In 1240/1727 Khūzistān was temporarily occupied by the Ottomans, but in 1242/1729 Nadīr Khān Afghān (see

Wādīr (gāh) reoccupied the province and made the Mughā'gha' sultans his vassals.

In the course of the 18th and 19th centuries, the Mughā'gha' dynasty steadily lost ground to Arab tribesmen of the Banū Ka'b and Banū Lām (q.v.). The former had begun to migrate in large numbers from central and southern Arabia into southern Mesopotamia and southwestern Iran during the 11th/17th century; at the height of their power, in the latter part of the 12th/18th century, their sway extended from Basra to Bībīhān (in the province of Fārs, just east of the Khūzistān border). The Banū Lām were nomads inhabiting regions along the lower course of the Tigris, and between 1788 and 1846 some 17,450 families from this tribe moved into Iranian territory. These immigrants lived a life that was neither completely settled nor truly nomadic, but gradually a sedentary way of life became the norm. The Banū Ka'b not only intermarried with Iranians, but adopted Shi'ism, and wore a compromise style of dress consisting of Persian tunics and trousers under an Arab 'abā'. Still later Arab arrivals, however, the Muntafik (q.v.), who in 1815 migrated to Hawiza and ousted the Ka'b from that area, have remained Sunnis. As a result of this great influx of Arabs, the name of 'Arabistān' was, by the 19th century, usually applied to the province as a whole. In the 19th century, control of the province virtually passed from the hands of the central government into those of the *shaykhs* of Muhammara (Khurramshahr), and it was not until 1905 that Rūḍā Shāh Pahlavī (q.v.) overthrew the *Shaykh* of Muhammara and restored the proper name of Khūzistān.

After the collapse of the Safawid dynasty (1555/1722), the prosperity of Khūzistān sharply declined. A number of factors seem to have been involved: (1) hostility between Iranian and Arab elements; (2) the extensive damage to agriculture and to the settled communities caused by both the recent Arab immigrants and by the indigenous transhumant tribes like the Lurs and Bakhtiāris (A. K. S. Lambton, *Landlord and peasant in Persia*, Oxford 1953, 257-8); (3) the constant raiding of trade caravans by the Banū Lām; (4) the breakdown of the authority of the central government, which led to general neglect and maladministration, and the instability caused by frequent changes of governors; (5) oppression by tax-collectors. In some areas the Arab *shaykhs* levied taxes five or six times a year (Lambton, *op. cit.*, 292). It was only after the discovery of oil at Maqdūd-i Sulaymān in Khūzistān in 1908 that the economy of the province began slowly to recover, and this trend was accelerated by the completion of the Trans-Iranian Railway in 1936; the line ran through Ahwāz, and its southern terminal was Bandar-i Shāhpūr.

In the last twenty years, Khūzistān's prosperity has increased exponentially. Many large oilfields are connected by road and pipeline with the refinery at Ābādān and with the terminal at Bandar-i Māghshahr (formerly Bandar-i Ma'shūr). Ābādān, a virtually uninhabited site fifty years ago, is now Iran's fifth city (estimated population, 1975, 320,000). In 1961, the deep-water tanker terminal on Khūrg Island was opened. The construction of the massive Muḥammad Rūḍā Pahlavī dam on the Dīr river (1962) has not only provided the province with hydro-electricity but with water for the large-scale development of market-gardening and other agricultural projects, including the resumption of the cultivation of sugar-cane; other dams are planned. Khurramshahr is now one of Iran's principal ports-of-entry on the Persian Gulf. More recently, the development of the natural gas industry

has taken place on a large scale; in 1973, 8.7 billion cu. m. of natural gas were exported to the U.S.S.R. The petrochemical industry is expanding at a great rate. The rapidly developing Hūdudishāpūr University at Ahwāz now has over 2,000 students. The words of the author of the *Ḥudūd al-'Ilām*, written one thousand years ago, now once again hold true: "This province is more prosperous than any province adjoining it. Great rivers and running waters are found in it. Its countryside is flourishing and its mountains are full of utility" (129-30).

KHVARSHI (self-designation, Kēdās Hīkwa, Khvānī, Khvārshai; in Russian, Khvārshantsi) an ethnic group in the Caucasus whose language forms, with Bezhta, Gwūkh, Dido and Khunzal (q.v.) the Dido division of the Avar-Andi-Dido group of the north-eastern Iberian-Caucasian languages.

According to the 1926 Soviet census, there were 1,019 ethnic Khvārshis, of whom 1,018 gave Khvārshī as their maternal tongue. They formerly lived in five auls (including Khvārshī and Ikhkharan) on the upper course of the Or-Tskalis, a southern affluent of the Andi Koyssu in the south-west of the Bagulal district of the Daghistan ASSR. In 1944, they were resettled in the district of Vedeno in that same republic. They lived originally in an isolated region of high mountains, which long preserved them from any marked degree of outside influence and allowed them to retain their patriarchal customs. They are Sunnīs of the Shāfi'i legal school.

Their traditional economy was based on sheep-rearing, with a system of transhumance, and also on terraced agriculture and various crafts; their present-day economy is essentially similar, with the added element of cattle-rearing.

Khvārshī is purely a vernacular language; Avar is used as the first literary language, and also as the second (sometimes first) spoken language, since it is used as the medium for primary education. Russian is the second literary language. Both linguistically and culturally, the Khvārshis are now being assimilated to the Avars (see further AVAR, DĀGHISTĀN, DĪDO, AL-KARK).

KIBLA, the direction of Mecca (or, to be exact, of the Ka'ba or the point between the *miṣbāḥ* or waterspout and the western corner of it), towards which the worshipper must direct himself for prayer.

I.—RITUAL AND LEGAL ASPECTS

From very early times the direction at prayer and divine service for the worshippers was not a matter of choice among the Semitic peoples. There is already an allusion to this in I Kings, viii, 44 and it is recorded of Daniel (Dan., vi, 11) that he offered prayer three times a day in the direction of Jerusalem (which has remained the Jewish *kibla* to this day). As is evident from the names of the quarters of the heavens, the whole life of the Semitic peoples was turned eastwards. The Essenes prayed in the direction of the rising sun and the Syrian Christians also turned eastwards at prayer (*Ancient Syrian documents*, ed. Cureton, 24, 60; *Acta martyrum occid.*, ed. Assemani, ii, 125). It may therefore very well be assumed in agreement with the tradition that Muhammad appointed a *kibla* at the same time as he instituted the *ṣalāt*. It is certain that in the period immediately following the *hijra* the direction taken by the Jews was also used by the Muslims. Tradition places the alteration in the *kibla* to 16 or 17 months after the *hijra*, in Rabi'ab or Sha'bān of the year 2, probably rightly, for in this period we have the important change in Muhammad's attitude to the Jews. Disappointed at the slight success of his preaching among the Jews of Yathrib, he began to turn more and more to the old Arabian tradition and make the religion of Ibrāhīm the basis of all monotheistic religions. The Ka'ba was brought into prominence as a religious centre and the *ḥaḍḡ* began to be talked of as a Muslim rite. At the same time a beginning was made with the eviction of the Jewish tribes of Yathrib. The alteration in the *kibla* is a not unimportant fact in this series of events and this train of thought. The Kur'ān verses, II, 136 ff., refer to this: "What has induced them to abandon their former *kibla*? Say: To Allāh belongs the east and the west. He guides whomsoever he pleaseth unto the right path ... We only appointed your previous *kibla* to distinguish him who follows the Prophet from him who turns back on his heels ... Turn then thy face toward the holy masjid; turn your face to it wherever you are".

The importance placed by Muhammad himself upon the change is clear from these words. It is not necessary to assume with the tradition that it was brought about by scornful remarks of the Jews regarding Muhammad's dependence on the prescriptions of their religion (so Tabari, i, 1780). In other traditions, the new *kibla* is represented as that of Ibrāhīm (Tabari, *Taṣfir*, I, 376, ii, 13). Here we have a glimmering of the real truth of the matter, namely the connection with Muhammad's new politico-religious attitude. According to one tradition (Bukhārī, *Ṣalāt*, bāb 32; *Taṣfir*, Sūra II, bāb 14) the revelation of the above quoted verses from the Kur'ān was communicated to the believers in the morning *ṣalāt* in Kubā'; according to another story Muhammad had with a portion of the community performed two *rak'as* of the *ṣubr* prayer in a mosque of the Banū Sālim, when he turned round to the direction of Mecca (Bayḍāwī, on Sūra II, 139). The mosque received the name of *masjid al-ḥiblatayn*, "the mosque of the two *kiblas*".

If it may then be considered established that Muhammad and his community turned towards Jerusalem at the *ṣalāt* during the early years of the *hijra*, the question still remains, what was his *kibla* before

the *hijra*? In Tradition two answers are given to this question and a third deduced by harmonising the other two. According to one, Muhammad in Mecca observed the *kibla* to the Ka'ba (Tabari, *Taṣfir*, ii, 4; Bayḍāwī, on Sūra II, 138); according to the other story the *kibla* had always been Jerusalem (Tabari, *Taṣfir*, ii, 3, 8, *Annals*, i, 1280; Balāḡhūrī, *Furūḡ*, 2); according to the third (Ibn Hishām, 190, 218) Muhammad in Mecca was careful to have the Ka'ba and Jerusalem in a straight line in front of him at the *ṣalāt*. The first view is influenced by the theory of the "religion of Ibrāhīm" for at Tiberias also makes 'Abd al-Muṭṭalib already know that Ibrāhīm appointed the Ka'ba as *kibla* (*Hamāsa*, i, 125). If the second opinion had not an historical basis, one does not quite understand how it could have arisen, for Tradition does not like to acknowledge Muhammad's dependence on Jewish practice. This view seems therefore to be the most probable. It is further mentioned as a distinguishing peculiarity of Barā' b. Ma'rūr that even in the period before the *hijra* he would not turn his back on the Ka'ba (Ibn Hishām 294); this tradition would lose its point if the old *kibla* had been in the direction of the Ka'ba. Besides these traditional views, others have been put forward in recent years. According to Tor Andrae, *Der Ursprung des Islams und des Christentums*, Uppsala and Stockholm 1906, 4 (cf. Bohl, *Mohammed's life*, 212) the original *kibla* was to the east. Andrae bases his view not on the material of Tradition but on the general agreement between early Muslim and Christian religious usages. Schwally said that the Jerusalem *kibla* was introduced into Mecca, perhaps as a Jewish-Christian institution (*Geschichte des Qurans*, i, 175, note k).

The direction of the *kibla* was, or is, not assumed at the *ṣalāt* only and with the points of the toes (Bukhārī, *Ṣalāt*, bāb 28; *Aḥḡād*, bāb 131; Nasā'ī, *Ṣāḡ*, bāb 25; *Taḡlīb*, bāb 96), but also at the *ḡu'ḡ* (Bukhārī, *Da'awāt*, bāb 24), at the *ḡhāl* or *ḡḡam* (Bukhārī, *Ḥaḡḡ*, bāb 39) and after the stone-throwing at the central *ḡamra* (Bukhārī, *Ḥaḡḡ*, bāb 140-2); the head of an animal to be slaughtered is turned to the *kibla* and the dead are buried with the face towards Mecca (Lane, *Manners and customs*, Paisley and London 1899; Snouck Hurgronje, *Verspreide Geschr.*, [vfr 243; v, 409]).

In the *ḡhāl* it is forbidden to turn towards Mecca when relieving nature (Bukhārī, *Wuḡḡ*, bāb 11; Muslim, *Tahḡra*, trad. 61; Nasā'ī, *Tahḡra*, bāb 18-20). On the question whether it is allowable to do this to turn one's back to Mecca and thus in some parts of Arabia be facing Jerusalem no anomaly prevails (cf. Bukhārī, *Wuḡḡ*, bāb 14; *ḡḡams*, bāb 4; *Ṣalāt*, bāb 29; Muslim, *Tahḡra*, trad. 59, 61-2; Abū Dawūd, *Tahḡra*, bāb 4); one should not expectorate in the direction of Mecca (Bukhārī, *Ṣalāt*, bāb 35).

The observance of a *kibla* is given in old traditions along with the performance of the *ṣalāt* and ritual slaughter as a criterion of the Muslim: The Prophet of God said: "The command has been given me to fight the people till they say: There is no god but Allāh; when they say these words, perform our *ṣalāt* and slaughter in our way, their blood and their property shall be inviolate for us", etc. (Bukhārī, *Ṣalāt*, bāb 28; cf. *Aḡḡ*, bāb 21). One of the terms for the orthodox community is *al-ḡḡibla wa 'l-ḡḡama'a*. In many Muslim lands the word has become the name of a point of the compass, according to the direction in which Mecca lies; thus *kibla* (pronounced *ḡibla*) means in Egypt and Palestine, south, whereas in the Maghrib, east.

In the mosques the direction of the *qibla* is indicated by the *mihrab* [q.v.]; in classical *ḥadīth*, this word does not occur and *qibla* is used to mean the wall of the mosque towards which one turns. At a *ḥajāt* outside a mosque, a *sura* [q.v.] marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the *qibla* (Lane, *op. cit.*, 228). It should be noted that many mosques are not accurately but only approximately orientated (according to the *qibla*, see below). It sometimes happens that this error has been later corrected by the drawing of lines or the stretching of threads. This is, for example, the case in many mosques of Indonesia where the faithful at the *ḥajāt* take their direction not from the *mihrab* but from such indicators.

The laws relating to the *qibla* are here given very briefly only and according to the Shāfi'ī school as laid down in al-Shīrāzī's *Kiṣāb al-Taḥḍīb* (ed. Juynboll, 20). The adoption of a *qibla* is a necessary condition for the validity of a *ḥajāt*. Only in great danger and in a voluntary *ḥajāt* on a journey can it be neglected. But if one is on foot or can turn his steed round, it should be observed at the *ḥajāt*, *rukūʿ* and *sujūd*. One should turn exactly in the direction of the *qibla*, and one who is near it can do so with certainty. According to others, when one is distant only the general direction (*qibla*) is obligatory. Outside of Mecca one turns towards the *mihrab* within a mosque; when not in a mosque one follows the direction of reliable people: only a man who is in a deserted region is allowed to ascertain the direction for himself by means of certain indications. For details of the laws see the *Bibliography*.

II.—ASTRONOMICAL ASPECTS

The determination of the *qibla* was an important problem for the scientists of mediaeval Islam. Although essentially a problem of mathematical geography, the determination of the *qibla* can also be considered as a problem of spherical astronomy. Thus most Islamic astronomical handbooks or *siḥḥ*, of which close on 200 were compiled during the millennium beginning in 750 A.D., contain a chapter on the determination of the *qibla*. In addition, several dozen mediaeval manuals for timekeeping deal with the topic. In contrast, the number of treatises dealing specifically with the *qibla* problem is quite few.

The *qibla* at a given locality is a trigonometric function of the local latitude, the latitude of Mecca, and the longitude difference from Mecca. The derivation of the *qibla* in terms of these three quantities was the most complicated of the standard problems of mediaeval Islamic spherical astronomy, and the solutions to the *qibla* problem proposed by the leading astronomers of mediaeval Islam bear witness to the development of mathematical methods from the 3rd

9th to the 8th/14th centuries and to the level of sophistication in trigonometry and computational techniques attained by these scholars. Already in the 3rd/9th century Muslim scholars had derived exact solutions using the construction of Greek mathematics known as the analemma (in which the various significant planes involved in a specific problem are either projected or folded into a single working plane, whereupon the geometrical solution can be derived graphically or the trigonometric solution can be derived by plane trigonometry) or using the classical Theorem of Menelaos for the complete spherical quadrilateral. Later *qibla* methods included trigonometric solutions based on projection methods or on the simpler corollaries of the Theorem of Menelaos. Certain Muslim astronomers contented themselves with approximate solutions, which were adequate for practical purposes. The final mathematical solution to the *qibla* problem was the table compiled by the 8th/14th century astronomer al-Khālīl, displaying the *qibla* for all latitudes and longitudes.

The mathematical problem

FIG. 1

Fig. 1 shows a locality P and Mecca M on the terrestrial surface. The point N represents the north pole, and the meridians at P and M are shown as NPA and NMB, where A and B lie on the equator. In mathematical terms the *qibla* at P is defined by the direction of the great circle through P and M. In mediaeval Arabic the angle q between the arc PM and the local meridian NPS was called *inṣirāf al-ḥibla*, and the complementary angle between PM and the east-west line through P was called *azim al-ḥibla*. If p and q_m denote the latitudes of the locality and of Mecca ($= PA$ and MB), and ΔL denotes their longitude difference ($= AB$), then q is a function of p , q_m , and ΔL , and can be determined by spherical trigonometry. The modern formula, which can be derived from an application of the spherical cotangent rule to ΔNPM , is:

$$q = \cot^{-1} \frac{\sin p \cos \Delta L - \cos p \tan q_m}{\sin \Delta L}$$

The exact solutions proposed by the mediaeval astronomers are less direct but ultimately equivalent to this.

Although the problem of determining the *qibla* is a problem of mathematical geography, it is mathematically equivalent to the astronomical problem of determining the azimuth or direction of a celestial body with given declination for a given hour-angle, and as such it was usually treated by the mediaeval

astronomers. Indeed, the *ḥiḥla* problem may be transferred to the celestial sphere simply by considering the zenith of Mecca rather than Mecca.

Fig. 2

Fig. 2 shows the zenith of Mecca M on the celestial sphere for a locality O. The local horizon is NESW and the local meridian is NPZS. EQW is the celestial equator, P is the celestial pole, and ABC is the day-circle of M. PMTR is the meridian of Mecca. Now:

$$PN = \varphi, MT = \varphi_M, \text{ and } QT = \Delta L,$$

and the problem is to determine the azimuth of M measured from the meridian by the arc SK = φ . Most mediaeval methods involve first finding the altitude of the zenith of Mecca above the local horizon, measured by the arc SK = δ . This is equivalent to finding the complement of the distance between the two localities. Thus the problem of determining φ ($\varphi, \varphi_M, \Delta L$) is mathematically equivalent to determining the azimuth δ (φ, δ, δ) of a celestial body with declination δ (measured by MT) when the hour angle is t (measured by QT) and the local latitude is φ (measured by PN). Indeed, several Islamic *ḥiḥla* methods state simply that if one faces the sun on the day when the solar declination is φ_M at the time when the hour-angle is ΔL (before or after midday, according as the locality is west or east of Mecca), then one is facing Mecca.

In the sequel a selection of methods is presented to illustrate the variety and sophistication of some of the few mediaeval *ḥiḥla* determinations that have been investigated in modern times. The notation has been modified in order to relate to that used in Fig. 2. For the details of the original constructions the reader is referred to the secondary literature listed in the bibliography. Those methods that are trigonometric in character are represented by means of trigonometric equations; in the original texts the relations are written out in words. The capital notation for trigonometric functions denotes that they are to a base other than unity; thus, for example, $\sin \theta = R \sin \theta$ where R is generally 60 and occasionally, in the case of works following the Indian-Sāsānid tradition, 150. Likewise $\cos \theta = R \cos \theta$, $\tan \theta = R \tan \theta$ ($\tan \theta = R \tan \theta$), etc. The radius of the celestial sphere is taken to be R .

The trigonometric procedures outlined by the Muslim astronomers can also be performed geometrically using a grid of the kind which occurs on the circular instruments known in mediaeval Arabic as *al-ḥuṣṣā* and *al-shakkāsiyya*, or the related quadrants known as *al-rubʿ al-muḥayyayy* and *rubʿ al-shakkāsiyya*. Most Islamic treatises on these instru-

ments contain a chapter on the determination of the *ḥiḥla*.

Approximate solutions

A popular approximate method for determining the *ḥiḥla* which occurs in the *Zīj* of the Syrian astronomer al-Battānī (*fl.* Raqqa, ca. 297/910) and in several unsophisticated Islamic astronomical works such as *al-Mulakhḫaṣ fi ʿibāḥayn* by al-Diaghini (*fl.* Kh̲̲ārazm, ? ca. 725/1325) is the following.

Fig. 3

Fig. 3 shows the construction for a locality where Mecca is to the south east. Mark the cardinal directions NWSE on a horizontal circle centre O and radius R and measure arcs EA = WB = $\Delta\varphi = \varphi - \varphi_M$ southwards and SC = ND = ΔL eastwards. Next draw AB and CD, and denote their point of intersection by F. Then OF defines the *ḥiḥla*. This method is equivalent to an application of the formula

$$\varphi = \sin^{-1} \left\{ \frac{R \sin \Delta L}{\sqrt{\sin^2 \Delta\varphi + \sin^2 \Delta L}} \right\} = \tan^{-1} \left\{ \frac{R \sin \Delta L}{\sin \Delta\varphi} \right\}.$$

Certain Muslim astronomers also used tables based on this formula and displaying values of φ ($\Delta\varphi, \Delta L$) for each degree of both arguments from 1° to 20° . A feature of these tables is that the entries for $\Delta\varphi = \Delta L$ are all $45^\circ 0'$.

Another approximate solution to the *ḥiḥla* problem is outlined in a treatise related to *al-Fih̲̲ārazmī* (*fl.* Baghdad, ca. 215/830). Here the formula

$$\varphi = \sin^{-1} \left\{ \frac{\left[\frac{\sin \Delta L \cos \varphi_M}{R} \right] R}{\sqrt{\sin^2 \Delta\varphi + \left[\frac{\sin \Delta L \cos \varphi_M}{R} \right]^2}} \right\},$$

with the trigonometric functions to base $R = 150$ rather than $R = 60$, is outlined in words. The table displaying φ ($\Delta\varphi, \Delta L$) that accompanies this treatise was rather popular with later Muslim astronomers and exists in several manuscript copies, some of which are of Syrian, Yemeni, and Turkish provenance. Yet other approximate *ḥiḥla* tables based on non-trivial formulae are found in the *Al-shakkāsiyya* of the Persian astronomer Sayf-i Munsajjīl (*fl.* ca. 720/1310), the *Zīj* of the Persian astronomer Shams al-Munajjīl al-Wāḥidnawī (*fl.* ca. 725/1325), and

in a treatise on the quadrant by Ibn Tayyibghā (*Jl. Aleppo*, ca. 753/1350).

Exact solutions

Four exact solutions to the *kibla* problem are outlined below. The first and second illustrate the application and mathematical elegance of the analemma construction, and the way in which it can be used to derive complicated formulae of spherical trigonometry from a plane figure. The third and fourth illustrate the application and mathematical elegance of the Theorem of Menelaos and its corollaries. Al-Khālīl's *kibla* table, which is perhaps the most sophisticated trigonometric table compiled in the mediaeval period, illustrates the competence of an 8th/14th century scholar in the algebra of functions and computational techniques.

A geometric *kibla* construction proposed by Ḥabāsh al-Hāshib (*Jl. Baghdad and Damascus*, ca. 235/850) involves an analemma in which the working plane is considered consecutively as the meridian, equatorial, meridian, and horizon planes. Ḥabāsh's method may be summarised as follows (see Fig. 4). On a circle centre O and radius R mark the cardinal directions NWSE, and then draw arc $WQ = \varphi$, arc $QB = \varphi_M$, and arc $QT = \Delta L$. Draw the diameter QOR and the parallel chord BC with midpoint G . Mark the point M_1 on OT such that $OM_1 = GC$ and draw the perpendicular M_1M_2 onto BC . Next draw M_2L parallel to WE and M_2I parallel to SN to cut WE in I and the circle in J . Finally, construct the point M_3 on M_2L such that $OM_3 = IJ$ and produce OM_3 to cut the circle at K . Then OK defines the *kibla*.

This construction may be explained as follows. Firstly, QOR and BGC represent the projections of the celestial equator and the day circle of the zenith of Mecca in the meridian plane. Secondly, M_1 represents the projection of the zenith of Mecca in the equatorial plane. If we then imagine the equatorial plane to be folded into the meridian plane, M_1 moves to M_2 , which is thus the projection of the zenith of Mecca in the meridian plane. Furthermore, M_2I is the projection in this plane of the almucantar through the zenith of Mecca, whose radius is thus IJ . Also M_2I and IJ measure the distances from the zenith of Mecca to the prime vertical and to the line joining the local zenith to O , respectively. Finally, we consider the horizon plane the working plane; by virtue of the construction, M_3 is the projection of the zenith of the Mecca in this plane. Thus OK defines the *kibla*.

From such a geometric construction a trigonometric solution for the *kibla* problem can be derived with facility. Indeed, from the analemma construction for the *kibla* proposed by Ibn al-Haytham (*Jl. Cairo*, d. 450/1039: a single formula for φ (φ, φ_M, L) equivalent to the modern one can be derived directly. Ibn Yūnus (*Jl. Cairo and Fustāt*, d. 399/1009) proposed the following trigonometric solution to the *kibla* problem. Firstly from the quantity

$$h = \sin^{-1} \left\{ \frac{\cos \varphi \cos \Delta L}{R} \cos \varphi_M + \frac{\sin \varphi_M \sin \varphi}{R} \right\},$$

and then the *kibla* is defined by

$$\varphi = \sin^{-1} \left\{ \frac{\sin \Delta L \cos \varphi_M}{\cos h} \right\}.$$

Ibn Yūnus offered no justification for this procedure, but his formulae can be derived from an analemma construction such as the one proposed by Ḥabāsh.

Fig. 4

If in Fig. 4 we draw the perpendiculars GH and GV from G to SN and M_1Y , then we have

$$M_1V = \frac{(\cos \varphi \cos \Delta L \cos \varphi_M)}{R},$$

since

$$M_1V = M_1G \frac{\cos \varphi}{R}$$

and

$$M_1G = OF = OM_1 \frac{\cos \Delta L}{R} = GC \frac{\cos \Delta L}{R} \frac{\cos \varphi_M \cos \Delta L}{R}.$$

Also

$$GH = OG \frac{\sin \varphi}{R} \frac{\sin \varphi_M \sin \varphi}{R}.$$

Furthermore, since the arc JN measures h , we have $M_1V = \sin h$. But $M_1V = MV + VV = MV + GH$. Ibn Yūnus' first formula follows immediately.

Next we observe that M_2Y and M_2F both measure the distance of the zenith of Mecca to the meridian and are hence equal. Thus

$$M_2V = M_2F = OM_2 \frac{\cos \Delta L}{R} \frac{\cos \varphi_M \cos \Delta L}{R}.$$

Also, since the arc JN measures h , and OMF is by construction equal to IJ , we have $OMF = IJ = \cos h$. Ibn Yūnus' second formula follows immediately, since φ measures the arc SK .

Ibn Yūnus also compiled a table displaying the solar altitude in Cairo when the sun is in the azimuth of Mecca. His table gives values for each degree of solar longitude, corresponding roughly to each day of the year. Tables of this kind were contained in the main corpora of tables for timekeeping that were used in such centres as Cairo, Damascus, Jerusalem, and Istanbul, and an isolated table of this kind was compiled for the observatory at Marāgha in north-western Persia. The solar altitude in the azimuth of Mecca is occasionally displayed graphically on the backs of astrolabes.

Al-Nayrizī (*Jl. Baghdad*, ca. 287/900) solved the *kibla* problem by four successive applications of the Theorem of Menelaos. His solution involves finding

successively the arcs TR, SR, MK and KS in Fig. 4, as follows. Firstly, find TR using

$$\frac{\sin PS}{\sin SQ} = \frac{\sin PR \sin TE}{\sin RT \sin EQ},$$

that is,

$$\frac{\sin (180^\circ - \varphi)}{\sin \varphi} = \frac{\sin (90^\circ + TR) \sin (90^\circ - \Delta I)}{\sin TR \sin 90^\circ}.$$

Secondly, find SR using

$$\frac{\sin PQ}{\sin QS} = \frac{\sin PT \sin ER}{\sin TR \sin ES},$$

that is,

$$\frac{\sin 90^\circ}{\sin (90^\circ - \varphi)} = \frac{\sin 90^\circ \sin ER}{\sin TR \sin 90^\circ},$$

whence ER and SR ($= \overline{ER} = 90^\circ - ER$). Thirdly, find MK ($= h$) using

$$\frac{\sin SP}{\sin SZ} = \frac{\sin PR \sin MK}{\sin RM \sin KZ},$$

that is,

$$\frac{\sin (180^\circ - \varphi)}{\sin 90^\circ} = \frac{\sin (90^\circ + TR) \sin MK}{\sin (TR + \varphi_M) \sin 90^\circ}.$$

Finally, find KS ($= \varphi$) using

$$\frac{\sin KS}{\sin SR} = \frac{\sin KZ \sin MP}{\sin ZM \sin PR},$$

that is

$$\frac{\sin \varphi}{\sin SR} = \frac{\sin 90^\circ \sin (90^\circ - \varphi_M)}{\sin (90^\circ - h) \sin (90^\circ + TR)}.$$

Al-Bīrūnī [3, v.] (f. Kh̲arazm and Ghazna, d. after 442/1050) proposed several different methods for finding the *ḥiḍā*, based on a variety of different procedures. In his work on mathematical geography, the *Tahḍīb al-muḥayyil al-aṣṭakī*, al-Bīrūnī derived the longitude difference between Mecca and Ghazna mathematically using the distances between staging posts on the major caravan routes, and then derived the *ḥiḍā* at Ghazna using four different methods, including spherical trigonometry (using Menelaos' Theorem), solid geometry (using procedures equivalent to those standard in solving timekeeping problems), and the *asāḥimna*. Al-Bīrūnī's solution to the *ḥiḍā* problem in his major astronomical work *al-Kānūn al-Masʿūdī*, compiled after the *Tahḍīb*, is more elegant than his solution by spherical trigonometry in the earlier work. It was also proposed about thirty years previously as an alternative solution by Ibn Yūnus. Al-Bīrūnī proved its correctness by spherical trigonometry. Ibn Yūnus presented it algebraically with no justification, but he appears to have derived most of his formulae for spherical astronomy by projection methods rather than by spherical trigonometry. Al-Bīrūnī's treatment of the problem illustrates the progress made by Muslim scholars in spherical trigonometry during the tenth century. Whereas his predecessor al-Nayrizī had laboriously used Menelaos' Theorem, al-Bīrūnī used its simpler corollaries, the spherical Sine Rule and the "Rule of Four Quantities".

Al-Bīrūnī first outlined an algebraic procedure for finding φ using four auxiliary arcs which we call θ_1 , θ_2 , θ_3 and θ_4 . Since he used $R = 1$ rather than 60 his trigonometric functions are the same as the

modern ones. First find θ_1 , "the distance on the day circle", thus $\sin \theta_1 = \sin \Delta L \cos \theta_M$. Then find θ_2 , "the local latitude adjusted for the horizon (of Mecca)", using $\sin \theta_2 = \frac{\sin \theta_1}{\cos \theta_1}$, and θ_3 , "the correction to the latitude", using $\theta_3 = \varphi - \theta_2$. Then find θ_4 , "the distance between the two localities", using $\cos \theta_4 = \cos \theta_2 \cos \theta_3$. Finally, φ is given by

$$\sin \varphi = \frac{\sin \theta_4 \cos \theta_1}{\sin \theta_4}.$$

Fig. 5

Al-Bīrūnī's justification of this procedure is equivalent to the following. In Fig. 5, which is essentially the same as the diagrams in the manuscripts of the original text, the base circle represents the horizon, with N and S the north- and south-points. The local meridian is SZPN where Z is the local zenith and P is the celestial pole. M is the zenith of Mecca and GLJ and MPL are respectively the horizon and meridian at Mecca. ZMK is the altitude circle of M and MHJ is a great circle with F as pole. Thus $\angle PN = \varphi$, $\angle PL = \varphi_M$, and $\angle MPZ = \Delta L$, and it is required to find $\angle SK (= \varphi)$. Al-Bīrūnī observed that (by the spherical Sine Rule),

$$\frac{\sin MP}{\sin MH} = \frac{\sin \angle MHP}{\sin \angle MPH}, \text{ i.e., } \frac{\cos \varphi_M \sin 90^\circ}{\cos \angle F \sin \Delta L},$$

whence $\angle F (= \angle PPL)$ is known. Thus θ_1 is the complement of $\angle P$. Similarly

$$\frac{\sin \angle P}{\sin \angle PLF} = \frac{\sin PL}{\sin PF}, \text{ i.e., } \frac{\cos \theta_1 \sin \varphi_M}{\sin 90^\circ \sin PF},$$

whence PF is known.

Thus θ_2 is PF. Thirdly, since $\angle FN = \angle PN = \angle PP = \varphi - \theta_2$, θ_3 measures FN. Fourthly, al-Bīrūnī states that by the "Rule of Four Quantities"

$$\frac{\sin FZ}{\cos \angle G} = \frac{\sin FH}{\sin HJ}, \text{ i.e., } \frac{\cos \theta_4}{\cos \angle G} = \frac{\sin 90^\circ}{\cos \theta_1},$$

(note that $\cos \angle G = \cos \angle FGN = \cos \angle IQ = \sin \angle ZI$) so that θ_4 measures $\angle G$.

Finally, he points out that (by the spherical Sine Rule)

$$\frac{\sin \angle G}{\sin \angle F} = \frac{\sin FN}{\sin GN}, \text{ i.e., } \frac{\sin \theta_4}{\cos \theta_1} = \frac{\sin \theta_2}{\sin GN},$$

whence $\varphi = \angle SK = 90^\circ - \angle GN$.

Al-Khalili (*Jl. Damascus*, ca. 766/1365) compiled a *kibla* table based on an accurate formula and displaying q (φ , ΔL) for each degree of φ from 10° to 56° and each degree of ΔL from 1° to 60° . Al-Khalili's table thus contains a total of almost 3,000 entries, and the *kibla* is computed to degrees and minutes. The vast majority of the entries are either correct or in error by ± 1 or ± 2 minutes, a remarkable achievement. Table 1 shows a section of al-Khalili's table.

$$f\varphi(\theta) = \frac{R \sin \theta}{\cos \varphi} \cdot \varepsilon \varphi(\theta) = \frac{\sin \theta \tan \varphi}{R},$$

$$\text{and } G(x, y) = \arccos \left\{ \frac{Rx}{\cos y} \right\}.$$

The procedure for finding q (φ , ΔL) would be to first find h (φ , ΔL) using the simple formula of al-Marrākushī and then to use the auxiliary tables to apply the formula

Table 1

Al-Khalili does not describe the way in which he computed his *kibla* table. However, in his introduction to the table he expresses his approval of the *kibla* method of al-Marrākushī (*Jl. Cairo*, ca. 679/1280). This involved first finding h using

$$\sin h = \sin \left(\varphi + \varphi_{ME} \right) - \cos \Delta L \frac{\cos \varphi_{ME} \cos \varphi}{R},$$

and then applying the standard Islamic formula for finding the azimuth from the celestial altitude, namely

$$q = \arccos \left\{ R \frac{\left[\frac{\sin h \tan \varphi}{R} - \frac{R \sin \delta}{\cos \varphi} \right]}{\cos h} \right\}.$$

Both of these formulae can be derived from Fig. 4. If al-Khalili did use precisely this method to compile his *kibla* table, it may be that he also used his universal auxiliary tables (*al-djāwāl al-šāhī*) to facilitate the computation. These tables which were specifically designed for solving all of the standard problems of spherical astronomy for any latitude, display the three functions

$$q(\varphi, \Delta L) = G \{ x(\varphi, \Delta L), h \}$$

where

$$x(\varphi, \Delta L) = \varepsilon \varphi(h) - f\varphi(\varphi_{ME})$$

This latter procedure is easily shown to be equivalent to the standard azimuth formula.

Al-Khalili also computed the *kibla* for 44 localities in Palestine, Syria, and Iraq. These are likewise very carefully computed. Sample entries from this list are shown in Table 2. Several other *kibla* lists were compiled by mediaeval Muslim astronomers, and the geographical tables in late Islamic *siḡis* often display the *kibla* alongside the latitudes and longitudes of important localities.

Alignment of Mosques

Now even though the mediaeval astronomer might have been aware of an exact formula for computing the *kibla*, the accuracy of his *kibla* determinations depended on the geographical data that he had at his disposal. Mediaeval longitude determinations, based either on simultaneous observations of lunar eclipses in different localities or on measuring distances between the localities, were generally not very accurate. Mediaeval latitude determinations,

Table 3

Sample Entries from al-Khalīlī's *Qibla* List

(The errors are derived using the mathematical correctness of formula and at Khalīlī's coordinates)

Locality	Longitude	Latitude	<i>Qibla</i>	Error
Gaza	57° 0'	32° 0'	44° 45'	+ 1°
Hebron	56 30	31 35	45 21	- 6
Jerusalem	56 50	32 0	45 14	- 2
Damascus	60 0	33 30	49 4	+ 1
Beirut	39 15	33 30	31 59	- 4
Ba'labakk	00 0	33 30	28 25	+ 1
Hama	61 45	34 45	30 32	- 2
Aleppo	62 10	35 50	17 42	0
Mardin	64 0	37 55	9 48	0
Baghdad	70 0	33 25	13 19	0
Kufa	69 30	31 30	13 12	+ 1
Mecca	67 0	21 30	-	-

on the other hand, based on observations of the solar meridian altitude, were generally more accurate. Even so, the most popular values used by Muslim astronomers for the latitude of Mecca were 21°, 21° 30', 21° 30', and 21° 40', whereas the accurate value is 21° 46'. This explains why mediaeval mosques may be incorrectly oriented even though their *mihrābs* [q.v.] were erected in a *qibla* direction computed by competent mathematicians.

Another reason why mosques may be incorrectly aligned is that their *qiblas* were not computed from geographical data at all but were inspired by tradition. Thus, for example, mosques in the Maghrib and the Indian subcontinent generally face due east or due west, respectively. Likewise, in early Muslim Egypt, the *qibla* adopted was the azimuth of the rising sun at the winter solstice. Several mosques in Cairo face this direction, which was favoured as the *qibla* al-*ṣābiḥa* but which is about 20° off the *qibla* computed mathematically using mediaeval geographical coordinates and about 20° off the true *qibla* for Cairo. No survey has yet been made of the orientation of mediaeval mosques. Such a survey would be of considerable interest for the history of Islamic architecture as well as the history of science.

Bibliography: Several of the following secondary sources contain descriptions and analyses of mediaeval *qibla* methods. There exist numerous Islamic astronomical works containing *qibla* methods that have not been investigated in modern times. On the *qibla* method of Ubayd Bag [q.v.] (fl. Samarqand, d. 553/1149), which is none other than the method of Ibn Yūnus and al-Bīrūnī, see L. A. Sédillot, *Prolégomènes des tables astronomiques d'Oubayd Bag: traduction et commentaire*, (Paris 1853), 216-21. On the approximate methods of al-Battānī and al-Dīghmīlī, see C. A. Nallino, *al-Battānī et al-Aḥmadī Opus Astronomicum* (Milan and Rome 1899-1907), i, 318-9, and ii, p. xxvii; and G. Rudloff and A. Hochheim, *Die Astronomie des Maḥmūd ibn Muḥammad ibn 'Umar al-Gaḥmīd*, in *ZDMG*, xlvii (1893), 213-75 (esp. 277-2).

The first serious investigations of Islamic *qibla* methods were conducted by C. Schoy (see his article *qibla* in *EIF*). The methods of Ibn al-Haytham and al-Nayrizī were discussed in his *Abhandlung des al-Ḥasan ibn al-Ḥasan ibn al-Ḥaytham (Aḥsan) über die Bestimmung der Richtung der Qibla*, in *ZDMG*, lxxv (1921), 242-53; and in his *Abhandlung von al-Faḍl b. Ḥātim al-Nayrizī über die Richtung der Qibla*, in *SB Bayr. Akad.*, Math.

phys. Kl. (Munich 1922), 55-68 (also contains a list of *qibla* values for various cities, taken from an 8th/14th century Syrian source). Schoy's other studies on the *qibla* include *Die arabische Sonnenuhr im Dienste der islamischen Religionsübung*, in *Naturwissenschaftliche Wochenschrift*, N.F., xi (1912), 625-9; *Mittagslinie und Qibla*, in *Zeitschr. der Gesell. für Erdkunde zu Berlin* (1915), 551-76; *Die Mekka- oder Qiblaharte (Gegenstands-karte multiblastische Projektion mit Mekka als Kartennütze)*, in *Kartographische und schalgographische Zeitschr.* (Vienna 1916), 184-5; and *Gnomonik der Araber*, in E. von Bassermann-Jordan, ed., *Die Geschichte der Zeitmessung und der Uhren*, Band 1F (Berlin-Leipzig 1923) (esp. 33-43 and 84-6 on the methods of al-Battānī, Ibn Yūnus, and Abu 'l-Wafā').

On al-Bīrūnī's *qibla* methods, see his *al-Kānūn al-Masūdī*, ed. M. Krause, Hyderabad 1955, li, 521-8; Schoy, *Die trigonometrischen Lehren des al-Bīrūnī* ..., Hanover 1927, 70-1; and E. S. Kennedy, *A commentary upon Bīrūnī's Kitāb Taḥdīd al-Amḥak*, Beirut 1973, esp. 298-315. Ḥabash's construction is discussed in E. S. Kennedy and Y. Id, *A letter of al-Bīrūnī: Ḥabash al-Ḥāṣid's analemma for the Qibla*, in *Historia Mathematica*, 1 (1974), 3-11.

Al-Khalīlī's *qibla* table is analysed in D. A. King, *Al-Khalīlī's Qibla Table*, in *JNES* (1973), (which also contains references to other mediaeval *qibla* tables and a discussion of the determination of the *qibla* using a quadrant). Ibn Yūnus's table displaying the solar altitude in the azimuth of the *qibla* is discussed in Idem, *Ibn Yūnus' Very useful tables for reckoning time by the sun*, in *Archives for History of Exact Sciences*, x (1973), 344-94 (esp. 368). Considerable additional information on *qibla* determinations is contained in the forthcoming publication by Idem, *Studies in astronomical time-keeping in mediaeval Islam. II. A survey of mediaeval Islamic tables for regulating the times of prayer*.

Several lists of geographical coordinates of cities and the corresponding *qibla* values, taken from Islamic astrolabes, are given in R. T. Gunther, *The astrolabes of the world*, I, Oxford 1932, see esp. 24-6. On mediaeval Islamic longitude determinations, see Schoy, *Längenbestimmung und Zentral-meridian bei den älteren Völkern*, in *Mit. der kaiserlich-königlichen Geographischen Gesell.*, xii (1915), 27-62; Kennedy's commentary on al-Bīrūnī's *Ṭaḥdīd* (mentioned above); and F. Haddad and E. S. Kennedy, *Geographical tables of mediaeval Islam*, in *al-Abhāt*, xxiv (1971), 87-102.

On the analemma in mediaeval Islamic astronomy, see the reference cited in the study by E. S. Kennedy and Y. Id (mentioned above). On the development of spherical trigonometry and computational techniques in mediaeval Islam, see P. Luckey, *Zur Entstehung der Kugeldreiecksrechnung*, in *Deutsche Mathematik*, v (1940), 405-46; Kennedy, *al-Bīrūnī's Maqālāt 'Ilm al-Hay'a*, in *JNES*, xxx (1971), 308-14, and the references there cited; and King, *Al-Khalīlī's auxiliary tables for solving problems of spherical astronomy*, in *Jnal for the Hist. of Astronomy*, iv (1973), 99-120. (D. A. King)

AL-KIBRĪT, sulphur. The Arabic term is derived from Akkadian *kuprītū* through Aramaic *kuḥrītā*.

The Arabs knew both sedimentary and volcanic brimstone. Muḥammad b. Aḥmad al-Tamīmī, *K. al-Murshid*, Ms. Paris 2870, f. 20a, mentions a place where "white" brimstone was to be found on the

shore of the Dead Sea and in the neighbourhood of Jerusalem (see also Mukaddas, 184), in fact the deposits of brimstone to be found in clay, mixed with gypsum and calcium carbide, on the right bank of the river Jordan at a mile from the Dead Sea (see C. Hintze, *Handbuch der Mineralogie*, 1/1, Leipzig 1904, 68 ff.). Abū Dulaf al-Kharrāḡī (*al-Risāla al-ḡāsiya*, ed. V. Minorsky, Cairo 1935, 22, tr. 54-5, ed. P. Bulgakov, Moscow 1960, 34) mentions already a sulphur spring on Mount Damāwūd (q.v.) around which brimstone had crystallised, and this volcano showed immense deposits of brimstone. The same author (*ibid.*, 43 = Yāqūt, iv, 619) knows also the sulphur springs of Dawraq (q.v.) in Khiristān.

In general, four sorts of brimstone are distinguished: yellow, white, black and red (see W.K.A.S., I, 556). Muḥammad b. Zakariyyāʾ al-Rāzī, *K. al-Asrār* (ed. M. T. Dāniḡh-Faḡhūh, Tabriz 1964, 3), however, differentiates these even further into 1. pure, massive, yellow brimstone; 2. pure, granular, yellow brimstone; 3. white, ivory-coloured brimstone; 4. white brimstone mixed with soil; 5. black brimstone, adulterated with stones; and 6. red brimstone. Descriptions like *al-kibrit ḡāsi* "bright red brimstone", *al-kibrit ḡāḡāḡ* "golden brimstone", *al-kibrit ḡāḡāḡ* "milk brimstone", *al-kibrit ḡāḡāḡ* "brimstone of the sea", *al-kibrit ḡāḡāḡ* "brimstone of the river", etc. are also found. These descriptions indicate the various modifications and qualities: brimstone deposited by springs is mostly fine-grained and yellow-white, elementary brimstone is often contaminated with bitumen, selenium and arsenic. These various descriptions, however, were of course not used by the Arabs to indicate a strict classification.

A special case was the "red brimstone" (*al-kibrit al-aḡmar*). According to Aristotle's *Stone-book* (ed. J. Runka, Heidelberg 1912, no. 26, p. 161 = Ibn al-Bayḡar, *K. al-ḡāsi*, iv, 49) it shines by night over a distance of many parasangs, as long as it is left in its place of occurrence. Others maintained that red brimstone was a mineral to be found in the valley of the ants, marched through by Solomon (Ibn Sanaḡūn, in Ibn al-Bayḡar *loc. cit.*). These are fairy-tales. Al-Rāzī (*K. al-Asrār*, *loc. cit.*) knew already that "red brimstone" does not exist as a mineral, and this scepticism was wide-spread. Al-Djāḡiz (*Risāla fi ʿl-ḡāsi*, ed. P. Kraus, Cairo 1943, 93; ed. Hārūn, Cairo 1964, I, 271) remarks that "red brimstone" is easier to be found than a trustworthy friend, and the caliph al-Muḡtādīd bi-ḡāḡ (879-89/892-902) said that two things exist only in name: the phoenix (*ʿanabīl muḡrib*) and *al-kibrit al-aḡmar* (Bīrūnī, *Djāḡmīr*, 534). In this sense is also to be understood al-Mayḡdān's proverb "more costly than red brimstone" (see Freytag, *Arabum proverbia*, I, 18, 120, ii, 149) and Bilawḡar's saying (ed. D. Gimaret, Beirut 1977, 33) that his merchandise is better than red brimstone. The solution to this enigma is that *al-kibrit al-aḡmar* is a pseudonym for the elixir, by means of which silver can be changed into gold (Bīrūnī, *Djāḡmīr*, 103, W.K.A.S., I, 536-537-538).

The position of brimstone in the mineral system has been determined more than once: in Aristotle's *Stone-book*, compounds of brimstone and arsenic form one group together with salts and boraxes, without a fixed classification. The authors of the *Corpus Galienianum* (3rd-4th/9th-10th centuries) counted red, yellow, black and white brimstone, together with orpiment, realgar, quicksilver, camphor and ammoniac among the "spirits" (*al-awḡāḡ*, τὰ πνεύματα), as opposed by the "metallic bodies" (*al-aḡḡḡḡm*) and the "mineral bodies" (*al-aḡḡḡḡ*). Ibn Sīnā (*K. al-ḡāsi*,

al-ḡāsiyyāt, v, ed. Madkur, Cairo 1965, 20-2) divides all minerals into four classes: the stones (*al-aḡḡḡḡ*), the salts (*al-aḡḡḡ*), the fusible bodies (*al-ḡāḡḡḡ*) and the brimstone-like ones (*al-aḡḡḡḡ*). Brimstone has become here a general notion indicating those substances in which wateriness has been combined with earthiness and aliveness and which have then been consolidated by cold. According to al-Kawwāl, *ʿAḡḡḡḡ*, 203-45, brimstone, together with quicksilver, pitch, naphtha etc. belongs to the viscous substances (*al-aḡḡḡḡ al-aḡḡḡḡḡḡ*).

Already in the Middle Ages brimstone was an important mineral raw material. It was for instance used in bleaching. Thus the "brimstone of the river" (*al-kibrit al-naḡrī*) was also called *al-kibrit al-baḡḡḡḡḡ*, the "brimstone of the bleachers" (Galen, *K. al-ʿAmḡḡḡḡ al-aḡḡḡḡḡḡ ḡāḡḡḡḡḡḡ*, in Ibn al-Bayḡar, iv, 49, below). Together with bitumen, latex, oil, etc., brimstone was a component part of Greek fire (see WART), and from the 7th/13th century onwards it was used with salpêtre and charcoal, to make gunpowder.

Brimstone was also widely used in medicine. According to Dioscorides (*Mat. med.*, v, 107; Arabic tr. ed. C. E. Dubler, Tetuán-Barcelona 1952-7, 423) brimstone avails against a cough, against pus that is stuck in the chest, and against asthma. It is a woman is fumigated with brimstone, she will have a miscarriage. Leprosy, cutaneous eruptions and other skin diseases are treated with brimstone, which, if mixed with natron, dissipates itching. Finally, brimstone avails against the stings of poisonous animals, against jaundice, cold, sweat, podagra, ear-ache and deafness. The same indications are found in Galen, *De simpl. med. temp. ac fac.*, ix, 3, 9 (Vol. xii, 212, Kühn); Arabic tr. in Ibn al-Bayḡar, iv, 50; *ʿAlī b. Rabbān al-ḡāḡḡḡ*, *K. Firdaws al-ḡāḡḡḡ*, 122, 224, 272, 322, 324, 407 (cf. W. Schmucker, *Die pflanzliche und mineralische Materia medica im Firdaws al-ḡāḡḡḡ des ḡāḡḡḡ*, Bonn 1969, 310-2), Yāqūt b. ḡāḡḡḡ (*al-Kimī*) (cf. *The medical formulæ of al-Kimī*, ed. M. Levey, Midwaytown 1966, II, 958, 1018, 1338), al-Rāzī, *K. al-ḡāḡḡḡ*, xvii, 55, and Ibn Sīnā, *Kāḡḡḡḡ*, Rome 1593, I, 192. The *ḡāḡḡḡ* *al-kibrit* is one of the important electuaries. It equals theriac and avails against fever, cough, asthma, tetanus, dropsy, against stings of poisonous animals etc. (*ʿAlī b. Rabbān* 445; al-Muḡḡḡḡ, *K. al-Maḡḡḡḡ*, II, 336; Ibn Sīnā, *Kāḡḡḡḡ*, II, 192).

The curative property of sulphurous water is often praised: Abū Dulaf al-Kharrāḡī (*op. cit.*, ed. Minorsky, 12, II, 43, ed. Bulgakov, 27, Yāqūt, II, 317) mentions the sulphurous springs in the neighbourhood of ḡāḡḡḡḡ (q.v.) in ḡāḡḡḡ, which avails against manifold diseases. According to Aristotle's *Stone-book* (no. 26, pp. 153, 164) bathing in sulphurous springs is good for open wounds, tumours, itching, scabies and fever. Baths in sulphurous water avail also against trembling (*ḡāḡḡḡḡ*) (Philagrides, in Rāzī, *Hārūf*, I, 44, see Galen, *De tremore et palpitatione*, vii, 600, Kühn). Finally, sulphurous water is curative of articular pains (Rufus, in Rāzī, *Hārūf*, 21, 197), hemiplegia (*ḡāḡḡḡḡ*), *ʿAlī b. Rabbān*, *Firdaws*, 129) and elephantiasis (*ḡāḡḡḡḡ*, *ibid.*).

To the many palliatives which were recommended for expelling vermin from houses there are always included fumigations with sulphur (Rāzī, *Hārūf*, xix, 320-33), which was also used in magic as an ingredient of talismans (Pseudo-Maḡḡḡḡ, *ḡāḡḡḡḡ al-ḡāḡḡḡḡ*, 243-6, German tr. by Ritter and Plessner, London 1962, 254-8).

Sulphur played a prominent part in alchemy (see AL-KIMYĀʾ). Distillation of sulphur and the action

of sulphurous vapour on metals gave occasion to many observations and conjectures. Since sulphur is liberated in the distillation of most materials, it was believed to be a fundamental part of all minerals. In particular, it was assumed that the metals consisted of quicksilver and brimstone. If the parts of both materials are in an ideal ratio to each other, gold originates (see *Dīnawarī*, *Nuḥās*, 50ff.). Sulphur is therefore also called "the mother of gold" (*umm al-ḡalab*, see *K. al-Kanz*, ms. Beilfa 491, f. 31a).

The alchemists invented many pseudonyms for sulphur, like "the yellow, red or white hide" (*al-ʿurs al-ṣafra*, etc.), "the red soil" (*al-turba al-ḥamra*), "the colouring spirit" (*al-rūḥ al-ṣabīḡ*), "the sulfuron" (*al-ṣaʿfūr*), "the divine secret" (*al-sirr al-ilahī*). The breath-taking smell of burning brimstone gave it the name "the suffocater" (*al-ḡannāḡ*). Because brimstone combines quicksilver, it was also called "the letter of the volatile" (*ḥayd al-ʿāḡib*). Conversely, the term *kibrit* was also used in various combinations as pseudonym of other substances, e.g. *kibrita li taṭarīḡ* "incombustible sulphur" (see *WZKM*, fah-lxv (1972), 168) designates the elixir of gold. (For the problem of the pseudonyms, see J. Ruska and E. Wiedemann, *Alchemistische Decknamen*, Beiträge LXVII, in *SPMSE*, lvi-lvii (1945), 20-33 = E. Wiedemann, *Aufsätze*, II, 599-612; A. Siggel, *Decknamen in der arab. alchem. Literatur*, Berlin 1951).

(M. ULLMANN)

KIBT, the Arabic term for the Copts or native Christians of Egypt. The term is a derivative of the Greek *Aigyptos*, a pharaonic corruption of the Ancient Egyptian *Hs Ka-Ptah*, i.e. the house or temple of the god Ptah, signifying Memphis. The Greeks used the word for Egypt and the Nile, hence the word "Coptic" is originally the equivalent of Egyptian. Curtailment of both prefix and suffix from the Greek term gives us *Gypt* > Arabic rendering *Kibṭ*. According to Semitic sources, however, this term is derived from Kutham, son of Mizraim, a grandchild of Noah who first settled in the Nile valley and imparted his name to the city of Kufi or Gufi near Thebes or modern Luxor (see 1077). This latter theory is commoner among Arab writers who call Egypt *Dār al-Kibṭ*, i.e. the home of the Copts who were the Christianised descendants of the ancient Egyptians at the time of the Arab Conquest of 20-21/640-2.

Apparently the Copts were not unknown to the pre-Islamic Arab traders whose caravans penetrated the fringes of the Fertile Crescent and to some extent touched Egypt. More directly, the Copts came into the life of the Prophet Muḥammad through Maryam the Copt who was a gift from al-Muḥawwas [g.u.] and who bore him his short-lived and only son Isḥāq. The Prophet is said explicitly to have told 'Umar

b. al-Khaṭṭāb that "Allāh will open Egypt to you after my death. So take good care of the Copts in that country, for they are your kinsmen and under your protection". This is said to have appeared in the first *ḥajjās* by 'Amr b. al-'As after the conquest, and in it he subsequently admonishes his Muslim audience to "Cast down your eyes therefore and keep your hands off them".

Though the caliph 'Umar was hesitant to grant 'Amr approval for the conquest of Egypt, certain factors in the Egyptian situation favoured the invaders. The Copts were restive under Byzantine rule. In pursuance to the policies established by Justinian (527-65), the Emperor Heraclius (610-41) in 631 appointed Cyrus (al-Muḥawwas in Arabic sources) as prefect, army commander and patriarch of the whole of Egypt in order to facilitate the securing of both political and religious uniformity in that crucial part of the Empire. Byzantine taxation was also felt as oppressive. Cyrus forced the Copts to abjure their Monophysitism in favour of the Byzantine Chalcedonian profession and his legions pursued their native Patriarch-elect Benjamin I (623-62), who fled to the desert monasteries and remained in hiding until the removal of the Melkite Greeks from Egypt.

It was in these circumstances that 'Amr crossed the eastern frontiers of Egypt (see 1152) and entered the country. Cyrus realised by then that he was fighting a lost battle, because the Copts wanted a change of masters at any cost. While the servitude of the latter was complete in civic, financial and religious matters, the Arabs cared more for the revenues from the province than for interference with the religion of the Copts. They did not distinguish between Melkites and Monophysites, and the Copts as Christians were regarded as a protected people (*Ahl al-Dhimma*), in return for payment of the *ḡaza* [g.u.].

When the Byzantine régime finally ended with the fall of Alexandria in 642, the Greek Melkite population was granted safe-conduct to depart with Cyrus, and the active Patriarch Benjamin I was summoned to emerge from hiding. His appearance in Alexandria was honoured by 'Amr, and the Copts at last regained their religious liberty and even appropriated most of the Melkite churches and foundations then rendered vacant. Thus the saw was sutured well, and perhaps Muslim monotheism might have been interpreted as bordering on Coptic monotheism, thus creating a temporary bridge between the two religions in the eyes of those who were unaware of their philosophies in details of doctrine and future developments.

From this moment, the relationship between the Copts and the Arabs was based pre-eminently on revenue and taxation. The Arabs recognised the elaborate system of government in Egypt, and left the administration unchanged in the hands of the Copts. In the first year, 'Amr was able to raise 22 million *dīnars* in revenue, but the caliph 'Umar was dissatisfied and removed 'Amr, nominating 'Abd Allāh b. Sa'd b. al-Sarḥ [g.u.] to succeed him. The new governor was then able to raise 24 million *dīnars* in the second year.

From 21/642 to 254/868, Egypt was directly under Caliphal control through a viceroy, and ninety-eight governors were appointed by the Umayyad and the 'Abbasid caliphs. The average tenure of each governor was about two years, too brief a period for any constructive work. But caliphal policy aimed at removing governors before they had sufficient time for

trying to break away from the central government. In the circumstances, a governor's sole concern was simply to squeeze the maximum taxation from the subjects, not only to pay the necessary dues to the central government, but also for his personal enrichment. The depletion of the resources of the country was also often aggravated by low Nile floods and the spread of disease and plague.

The worsening of the economy meant heavier pressure and exactions for the Copts. The results of this situation were three-fold: many Copts fled to the desert monasteries to escape the poll-tax from which clerics were exempted, although this privilege proved to be ephemeral; some turned to Islam for the same reason, although wholesale conversions did not take place because the caliphs usually discouraged them in order to safeguard their revenue; and some rose in revolt, not infrequently reinforced in their insurrection by Muslim settlers.

Perhaps the Bashmuric Rebellion of 254-258/829-30 in the marshlands of the lower Delta was the most serious of these local insurrections. The caliph al-Ma'mūn had to come in person to Egypt to fight the Bashmuric rebels and to pacify the Copts. The outcome of a steadily deteriorating situation was a neglect of the irrigation system, the blocking of canals with sand and silt, and the ruin of the Nile dykes. In addition to a decline in the number of Coptic farmers, the steady shrinkage in the arable soil led to the fall of the revenue to 3 million *dirhams* by the 3rd/9th century until the last of the 'Abbasid governors, Ahmad b. al-Mudabbir (q.v.), assumed power in 254/868 and doubled the *kharaḡ* and the *ḡizya*; now even the clergy and the desert monks lost their customary exemption from payment. In the same year Ibn al-Mudabbir was imprisoned by Ahmad b. Ṭūlūn. The latter soon introduced numerous financial reforms which earned for him the loyalty of the inhabitants. The leniency and understanding towards the Coptic subjects of the Ṭūlūnids (254-92/868-905) and the *Ikḡhīd*ids (253-58/835-69) (q.v.) stood in contrast to the rule of Ibn al-Mudabbir, from whose injustice the Coptic clergy were once again exempted.

It would be wrong to judge Ibn Ṭūlūn by his harsh treatment and incarceration of the Coptic Patriarchs Shenoute I (359-80) or his successor *Ikḡhīd* III (380-90), caused by internal dissensions amidst the Coptic clergy themselves. An undeserving deacon and monk who wanted a bishopric hatched conspiracies against the Patriarchs, together with the bishop of Sakhe, who had been excommunicated for misdeeds. They went to the governor with false reports about the Patriarchs, including the worst of accusations in the eyes of a Muslim ruler, that is, trying to bring Muslims into apostasy and sending them to the desert monasteries to become monks. As usual, this was coupled with accusations that the Patriarchs were avaricious and possessed masses of gold. The truth was revealed in the end, and the Patriarchs regained their liberty after signing a warrant for debt, which they tried to repay through money raised from charity and from simoniacal practices.

The state revenue had declined to 3 million *dirhams* at the advent of Ibn al-Mudabbir, and he aimed at doubling it without mending the cause of its decline. Realising that the cause of this deficit was the decline of agriculture, Ibn Ṭūlūn introduced land and irrigation reforms which ultimately improved the revenue. Even with exemptions, the revenue rose to 4 million *dirhams* before Ibn Ṭūlūn's death,

in addition to accumulated savings of 20 millions in the treasury and the execution of an extensive building program. With the help of Ibn Kātib al-Firghānī, an accomplished Coptic architect, he constructed the Nilometer at the southern end of Rawḍa (Roda) Island (see *KIRYAS*) and his famous mosque with its external spiral minaret. Muslims commonly destroyed churches in order to use their materials and pillars in building mosques. To save the churches, Ibn Kātib promised the governor to construct the mosque of Ibn Ṭūlūn without having to utilise pillars from churches. Thus the new pillars were built of massive masonry supporting pointed arches long before their use in Gothic art in Europe, and only two small marble pillars were placed on the flanks of the *ḡibla*. The mosque still stands as a testimony to the architectural genius of the builder and the return of the country to affluence.

During the years of stability in the rule of both these dynasties of governors, the Copts enjoyed a great degree of tolerance and prosperity. It is recorded that Ibn Ṭūlūn cultivated the habit of retiring to the el-Kuḡayr monastery south of Fustāt for rest and recuperation, and the first *Ikḡhīd*id, Muḡammad b. Tūḡḡidī (323-34/935-46) used to participate in the celebrations of the Coptic Epiphany, according to the contemporary 11th/10th century historian al-Mas'ūdī. Both dynasties entrusted the Copts with key positions in government.

The really favourable position of the Copts, however, was still to come, viz. under the *Shīʿi* Fāṭimid dynasty (358-567/969-1171), if we accept the reign of al-Ḥākim bi-Amr Allāh (386-411/998-1021 (q.v.)), who ended by persecuting Copts, Jews and even Muslims. Hence the Copts, whose religious freedom had been undisturbed and who had occupied the highest positions in the administration during the reigns of al-Muʿizz (358-63/969-79) and al-Azīz (365-86/975-96) now faced forced apostasy or persecution by the unbalanced monarch, and many of their churches were levelled to the ground. However, towards the end of his reign, al-Ḥākim apparently fell under the spell of a priest named Anka Salomon during his visits to the monastery of el-Kuḡayr on the ḡibṭān road south of Cairo, and eventually began to wear a monks' garment, while his atrocities ceased.

During the caliphate of al-Zāhir (411-27/1020-56), the re-building of churches was again authorised, and Christians who had been forced to apostasy were permitted to return to their faith. Nāṣir al-Kuḡuraw (q.v.) who visited Egypt in the reign of his successor, al-Mustansir, remarked that nowhere in the world of Islam had he seen Christians enjoy as much peace and prosperity as did the Copts. The strongest Fāṭimid vizier, Badr al-Dīn Jamālī (q.v.), and his son al-Aḡḡāl, both Armenians converts to Islam, favoured the Copts and relied on their service. Ultimately, the sixty-sixth Patriarch Christodoulos (1046-77) decided to move his seat from Alcaandria to Cairo in order to be within easier access to the central government.

Only towards the end of Fāṭimid rule, when internal disorder grew, did Copts and Muslims alike suffer in the ensuing broils and confusion, and the fate of the Copts was further aggravated by the outbreak of the Crusades. It would therefore seem that the Copts reached the height of power and prosperity, but also laterally some of their worst tribulations, during the Fāṭimid era.

The advent of the Sunni Ayyubid dynasty (564-648/1169-1250) re-established internal stability and

eliminated the confusion of the age of the last Fāṭimid caliphs, but these times proved rather a mixed blessing for the Copts. In the course of his fighting the Crusaders in the Holy Land and the Christian kings of Nubia in the south, Ṣāliḥ al-Dīn's suspicions led him to dismiss the Copts from government service. It was probably on this occasion that Zakariyyā b. Abī 'l-Maḥbūb b. Mammātī (a corruption of the Coptic *Makomēti*) of Asyūt, a Copt who held the joint secretaryship of the War Office and the Treasury, decided to apostatise with his family and become a Muslim, in order to retain his high office for himself and his descendants. His son al-Asa'id inherited his father's office, and compiled one of the few cadastres of mediaeval Egypt (*al-Rasā' al-Ṣāliḥiyya*), leaving a record thereof in his *Kutāb Khamīs al-dawā'im*. Ṣāliḥ al-Dīn's brother, Shams al-Dawla, who led the Nubian campaign, destroyed in the years 567-8/1172-3 the monastic settlement of Bawīt in Middle Egypt, the Coptic city of Kūf, which sank into insignificance thereafter (see [KIST]), and the important Convent of St. Simeon (*Anbo Hidra*) across the Nile from Aswān. Ṣāliḥ al-Dīn further decided to remove the imposing building of the Cathedral of St. Mark in Alexandria for fear that it might serve Crusader invaders with a fortified site, and the Copts tried in vain to ransom this church.

It would however be erroneous to accuse the Ayyūbid sultans of continuous intolerance and persecution of the Copts. One of their first deeds was to suppress Ibn al-Mudabbib's substitution of the lunar for the solar calendar in order to shorten the year and thus get more taxes. They left most of the Coptic churches standing, and generally refrained from interference with religious freedom. Ṣāliḥ al-Dīn himself granted the Copts an imposing monastery adjacent to the Holy Sepulchre, which they own to the present day as *Dayr al-Sulṭān*. The sultan's successes against the Crusaders and the recapture of Jerusalem in 583/1187 seem to have terminated his early apprehensions about the Copts. The Copt Ṣaīf al-Dīn b. Abī 'l-Ma'ālī, surnamed Ibn Sharāfī, became his private secretary. Two Coptic architects, Abū Manṣūr and Abū Maḥkūr, were employed to repair and extend the fortified walls of Cairo and to build the Cairo Citadel on the Muqāṭam hills overlooking the capital, Ṣāliḥ al-Dīn's most enduring monument which became the fortified seat of successive governments and dynasties.

In the reign of Sultan al-'Adīl Sayf al-Dīn (596-613/1200-15 [p.r.]), the Saphadin of western chronicles, a Copt by the name of Ibn al-Muḥit assumed the administration of the War Office. In the Crusade of Damietta of 1218, the Coptic inhabitants participated in the defence of the city and with their clergy suffered greatly at the hands of the Latins. Again in the Crusade of St. Louis in 1249-50, notable Copts were to be found in the Sultan's camp. A number of Fāṭimid and Ayyūbid sources show that numerous Copts earned some of the highest titles of honour in the state such as *al-Ra'īs*, *Hibāl Allāh*, *al-Amdād*, *al-Aṭ'ad*, *al-Shaykh*, *Najīb al-Dawla*, *Tāj al-Dawla*, and *Fakhr al-Dawla*. The Church historian Ya'qūb Nakhlā Rufayz collected as a sample some 30 Coptic names bearing these titles.

Two important processes were in progress since the Arab conquest, the Islamisation of Egypt and the Arabisation of Egypt, and these two processes should not be confused. That there should be a measure of conversion to Islam under early Arab rule was inevitable. The apparent kinship between

Coptic monoophysitism and Islamic monotheism might have played a role in a stiff amorphous body of doctrine, but the vexatious *gizya* or poll tax, increasing at a steady rate, left the imppecunious Coptic taxpayer only one way to escape, i.e. that of Islam. It is known that most caliphs discouraged wholesale conversion, in defence of a depleted inflow of revenue to the treasury. How can we explain, therefore, the eventual numerical superiority of Muslims as against the shrinkage of the Copts in Egypt? E. L. Betcher implausibly ascribed it to the popularity of the monastic life and called it "suicide of a nation". The Muslim social historian, Aḥmad Mazāhārī describes this phenomenon as "ethnic exhaustion", and discards the assumption of wholesale conversion. It does not seem that a single, facile answer can be given here.

The Arabisation of Egypt, on the other hand, is a more transparent process. A study of the papyri indicates that at first the Copts conducted the administrative records in Coptic, and that the Arabs, who did not know the native language, accepted their procedures thus. Then the year 86/705 witnessed the issuance of an edict by the governor 'Abd Allāh b. 'Abd al-Malik imposing for the first time the use of Arabic in state records. At this point, bilingual papyri begin to appear in an intermediary stage. Meanwhile, the Copts hastened to master the language of the new rulers, but the clerics persisted in the use of bilingual protocols in the papyri. As to the use of Arabic in public life, this must have been a slower process, although we may note the compilation of Coptic grammars and Coptic dictionaries in the 13th century, which is probably to be regarded as an indication to national Coptic efforts to keep the torch of the Coptic language burning amongst those who were fast losing it. Nevertheless, it would be a mistake to assume that Coptic was becoming extinct at that early date. The same century produced eminent Coptic writers such as Ibn al-'Asāl [p.r.] and other members of his family, who were perfectly conversant with Coptic, Greek and Arabic. As late as 1673, the traveller Vansleb reported that he met the last Copt who really spoke Coptic; and Benoit de Maillet, an 18th century French consul in Egypt, stated that he found whole villages in Upper Egypt whose residents spoke Coptic. In the present century, Werner Vycichl is quoted by the Coptologist William Worrall to have discovered Coptic-speaking communities at Zēniya and other isolated villages in Upper Egypt. Of course, the liturgy is still celebrated today in Bohairic Coptic, together with Arabic, in Coptic churches. The Arabisation of Egypt is an undisputed reality, but the total extinction of the Coptic language is still a debatable problem.

The later Middle Ages brought difficulties for the Coptic communities. The Mamlūks (648-922/1250-1517) who were originally slave soldiers bought by the Ayyūbid sultans, ended by seizing power from them, and they then continued to reinforce their army by more slave purchases. They were therefore men of varied ethnic and religious origins and had nothing in common with the Egyptians except the bond of Islam; and it is doubtful whether any of them was fully aware of the doctrines of their faith or the language of the Coptic people. Internal insecurity and increasing poverty and isolation now began to drive the Coptic populace into desperation. Skilled Copts continued to work in the Muslim administration, but as soon as they rose to wealth and power, the Muslim mob tended to clamour for their dismissal from office and to start a wave of

church destruction. As mob fury became overpowering, the Mamlūk sultans had often to yield to public pressure and unseat the Copts and condone the assaults on their religious foundations. Yet after a short period, confusion usually supervened in the government machinery, and the sultans were constrained to restate the Copts in office once more.

On one occasion, a group of exasperated Copts decided to retaliate against Muslim oppression. In 720/1320, a number of Coptic monks from Dayr al-Baḥrī ("The Monastery of the Mule") south of Cairo, formed a secret pact to use arson against mosques and Muslim quarters in the capital. Once while the city was ablaze, four of these monks were seized carrying papyrus and other incendiary substances. The Sultan ordered them to be burnt, and the Copts were again dismissed from office. The infuriated mob continued their destruction of more churches. From 698/1299 to 831/1447, forty-four churches are reported to have been levelled to the ground in Cairo alone. The Patriarch Yohannes X (1363-9) was summoned by the Bahrī Mamlūk Sultan al-Aḥrāt Shāḥbān (764-78/1363-76), and he and the archons or elders of the Coptic community were subjected to abject humiliation and confiscation of property, partly to appease the populace and partly to raise funds for waging war against the Cypriots in retaliation for their sack of Alexandria in 766/1365.

Occasional spells of relief for the oppressed Copts came only as a result of foreign intervention from three main sources. The first was from Constantinople, where the Byzantine emperor, himself harassed by the Ottoman Turks, pleaded at the Sultan's court on behalf of the remaining Melkite minority. The second was from Aragon, whose kings were for commercial reasons, usually on good terms with the Mamlūk monarchs, though their intercession was essentially on behalf of the churches in the Holy Land and only incidentally for the Copts. The third and perhaps the most important source of mediation came from Abyssinia, whose Negus had a strong bargaining power on behalf of the Copts in the counter-threat of ill-treatment of the Muslims under his dominion, and in the imaginary menace of deflecting the course of the Nile to the detriment of Egypt.

The harassed Coptic patriarchs also hoped tentatively for an undefined form of assistance from the western world, without jeopardising their delicate position with the sultans. One such glimmer of hope appeared at the time of the Council of Ferrara-Florence (1438-9), which aimed at the union of the Churches of East and West, separated since the Chalcedonian schism in 451. We know that a certain Yohannes, Abbot of the Coptic Monastery of St. Anthony on the Red Sea, was a signatory to the *Decretum pro Jacobitis* declaring the formal union of the Churches. But the agreement long remained in abeyance until 1586, when Rome sent a delegation to Patriarch Yohannes XIV (1571-86) in order to discuss the practical application of the union. The Patriarch and a few bishops were agreeable, though the majority of the community remained apprehensive; the sudden death of the Patriarch ended this abortive mission.

By then the Ottoman Turks had been established in Egypt since its conquest by Selīm I in 925/1517. Egypt became a dependent province with a vast empire, and the sultans derived their revenue from a governor, an Ottoman Pasha, whom they invested with the provincial government for brief periods. There was a Turkish garrison headed by a general

independent of the governor, while the local administration was left in the hands of the surviving Mamlūk amirs. Tax farming (*iltizam* [q.v.]) became the practice and the tax farmers and village headmen were subjected to all sorts of pressures for the payment of excessive dues, not only for the sultan in distant Istanbul, but also for the enrichment of a whole hierarchy of the administration. Within this framework, the Copts worked as clerks and tax collectors mainly in local Mamlūk households. Though they suffered occasional, temporary dismissals from service, they were not goaded by the outbreaks of mob fury as in Mamlūk times. In fact, they suffered, together with the Muslim inhabitants, from the depredations of the Arab nomads who used to descend on villages in the countryside for looting. The land became isolated and its inhabitants sank into lethargy and ignorance until the French Expedition of 1798-1801 arrived under Napoleon and opened Egypt to western influences.

Perhaps the most significant Coptic document after the rout of the Mamlūks and the settlement of the French was a petition submitted to Napoleon by a notable Copt, Girgis al-Djāwharī, imploring him to lift Coptic disabilities, in keeping with the principles of liberty, equality and fraternity proclaimed by the French Revolution. However, the French, whose leaders feigned conversion to Islam in order to court favour with the Muslim majority, decided to overlook his plea and thus avoided the semblance of partisanship. Nevertheless, they did not hesitate to select the best candidates for the administration irrespective of religious considerations. Hence the same Girgis al-Djāwharī became the head of the taxation department. They also nominated a commission of twelve to administer local justice. Six of these were Copts and the chairmanship fell to Mu'āḥim Maḥṣūṭ, a Copt about whom we possess no documentary evidence. But the real hero in Coptic annals emerged in the personality of Mu'āḥim Ya'qūb Hanna (1745-1801), whose meteoric career began in the predominantly Coptic city of Aṣyūt, in Upper Egypt.

Originally a humble civil servant under Sulaymān Bey, a Mamlūk amir in charge of Aṣyūt province, he learned the equestrian art and the rudiments of Mamlūk warfare from his master and even participated in Mamlūk hostilities against the Turks. Later, when the French attempted to conquer Upper Egypt under Desaix, he played a prominent role in saving the French expedition from collapse. Then after the disastrous naval battle of Abūḥir, which gave Nelson and the British command of the sea, Napoleon left and Kheḗr succeeded him with an empty treasury, while Turkish infiltrators played upon religious sentiment and incited the Muslim population of Cairo to rebellion. It was in these precarious circumstances that Ya'qūb, with the approval of the French authorities, recruited a Coptic legion of 2,000 Coptic youths to be trained by professional officers under his own command, first as Colonel, then in 1801 as General.

Still more spectacular in Ya'qūb's career was his dream of Egyptian independence from both the Turks and the Mamlūks. The documents pertaining to this chapter in his biography were discovered and brought to light by an eminent Muslim historian, the late Professor Shafīk Ḡhurbaī. The departing French made the stipulation that any native desirous to leave with them should be permitted to do so. Thus the General, together with a few companions, left Egypt with the French on the British ship *Pallas*, in the hope of convincing the rulers of Europe

that the only solution of the Egyptian question was the independence of Egypt. Ya'qūb died on the high seas on 16 August 1805 leaving the fulfilment of his mission to his accompanying delegation. Apart from his secret deliberations with the captain of the *Pallas* Joseph Edmond, preserved in the memoirs of his interpreter Lascaris, a Knight of the Order of Malta, his correspondence was communicated or signed by proxy and addressed to Bonaparte and his foreign secretary Talleyrand (23 September 1801) as well as to the British Lord of the Admiralty, Earl St. Vincent (4 October 1801).

Curiously, the man destined to realise Ya'qūb's vision was Muhammad 'Alī (1805-49), the Macedonian soldier who came to Egypt as the head of a Turkish force and succeeded in founding the dynasty in Egypt which did not end till 1953. Under the new régime, the enfranchisement of the Copts went a long way. With increasing security and acceptance, it became less necessary for them to congregate in fortified quarters for self-defence, and they began to scatter all over the big cities side-by-side with their Muslim compatriots. They even took courage to fight for the removal of a few remaining disabilities in the Coptic Congress at Asyūt in 1911, clashing with a counter-movement in the Muslim Congress in Alexandria. Both, however, were confined to a war of words and were discouraged by the Khedive 'Abbas Hilmī (1892-1914); eight years later both sides were engaged within the Wafd Party in the struggle against the British protectorate over their common homeland. The only cases of violence in contemporary history have consisted of localised incidents of arson against churches by the Muslim Brotherhood [see *al-ṣṣuḥrān al-muslimūn*], whose organisation was eventually suppressed by Djamāl (Gamāl) 'Abd al-Nāṣir (q.v. in Suppl.) in 1966.

In recapitulating the story of the status of the liberated Coptic community in modern times, we should not forget two 19th century movements. The first was an educational and cultural one sponsored by the Patriarch Cyril IV (1854-61), known as the Father of Coptic Reform. He founded public schools including the first girls' school in Egypt, and imported a printing press, the second in the country after the Bolk press. On the international scene, he carried out with success a conciliatory embassy in 1858-8 with the Emperor of Ethiopia on behalf of the Khedive Sa'īd (1854-63). But he did not live to realise his grand dream of an oecumenical union with the Greek Church, the Russian Church and the Anglican Church; it is said that this enterprise disturbed the Muslim authorities and hastened the visionary Patriarch to his grave. The second movement was a natural corollary to the first, for western education created a Coptic élite who strove in the pursuit of establishing a more democratic system of government in community affairs and in the management of church property. This met with staunch resistance in the clerical conservatism of the age of Cyril V (1874-1927), and the project of a Community Council (*Madjlis Milli*) has been in abeyance ever since.

Within the framework of the Islamic legal structure, the Copts made several gains of capital importance. The abolition of the *dhimya* came to pass in 1855 during Sa'īd's reign, and this was coupled with the acceptance of the Copts into military service. At his accession, the Khedive Tawfīq Paṣhā (1879-92) publicly proclaimed the principle of a quality of all Egyptians in every way, irrespective of their ethnic origin or religion; this was later formalised in

a decree of 22 July 1913 and again in the Constitution of 1922.

In a period of more than thirteen centuries of Islamic rule, it seems that the density of population of Egypt has varied from time to time. At the Arab conquest, judging from the papyrus tax returns, the Copts must have been at least 22 millions. Owing to many hardships, occasional failure of Nile floods and diminution of cultivable soil, recurrent plagues, conversions to Islam and flight to the desert monasteries, we must assume the existence of a downward trend in the number of Copts throughout the Middle Ages and Ottoman Turkish times. We note that their number sank to approximately one million souls. However, the latest three official censused censuses of the population reveal the following figures:

Year	Total population	Muslims	Copts	Jews	Other religions
1947	18,966,767	17,397,946	1,504,635	65,639	1,547
1960	25,984,103	24,068,252	1,905,182	8,562	2,106
1966	29,943,810	27,909,528	2,018,305	2,484	3,493

It is difficult to accept the above figures unhesitatingly. This is largely due to the fact that Coptic villagers have always shown a reticence in divulging the real size of their families. The newly-founded Census Department in the Institute of Coptic Studies in Cairo has been working with the local country priests in assessing the Coptic population; suggestions of a Coptic population from four to six millions in the year 1974 have been put forward.

The basic causes of the survival of the Copts are both internal and external. Internally, the Copts clung to their Church as a cementing element in their private life. Coptic ethnicity and faith became a profound faith, a way of life, and an intangible doctrine of ethnic consciousness. Externally, it is fair to admit that Islam shares in the credit of this survival. Under the aegis of Islamic dynasties, there came dark times when the violence of the majority could well have exterminated minority groups with the concurrence of the rulers; yet this did not happen, despite such difficult periods as the reign of the Fatimid Caliph al-Hakim in the 5th/11th century.

Bibliography: All chronicles and source material on mediaeval Egypt contain many references to the Copts; see especially Makrizī, *Khitāt*, Bolk 1270, Suyūṭī, *Ḥusn al-muhādḍara fi akhbār Misr wa'l-Khāna*, Cairo 1327; and 'Alī Bāghā Mubārak, *al-Khitāt al-Tawfiqiyya*, Bolk 1304.6. Equally, bibliographies of Egypt under Islam cannot be overlooked. On the Copts proper, see W. Kammerer, *A Coptic bibliography*, compiled in collaboration with Elmor Huselman and Laise Shier, Ann Arbor 1950; and the monumental work of G. Graf, *Geschichte der christlichen arabischen Literatur*, 5 vols., Vatican City 1953. Some of the books cited below also contain additional detailed bibliographical material on special subjects.

1 **Primary sources.** Perhaps the most important primary source is Sawtrīs b. al-Mukaffāf, *History of the Patriarchs of the Egyptian Church*, ed. C. F. Seybold (to 567 A.D.) and T. Evetts (to 849), in the *Patrologia Orientalis*. The remainder to 1102 was jointly edited with an English tr. by Yassa 'Abd al-Masīh, O. E. H. Burmeister and A. S. Atiya in 4 parts in the publications of the *Society of Coptic Archaeology*, Cairo 1943-59. An older chronicle,

written 50 years after the Arab Conquest, is indispensable, John of Nikiön's *Chronicle*, ed. H. Zotenberg, Paris 1833. See also A. Grohmann, *Arabic papyri in the Egyptian Library*, 6 vols., Cairo 1934-62; B. T. Evetts, *The churches and monasteries of Egypt*, by Abū Šālih al-Armani, Oxford 1834-5 (a work probably written by Djirdjis b. al-Makīn, not Abū Šālih, who must have only owned the manuscript); F. Wüstenfeld, *Maori's Geschichte der Kopten*, Göttingen 1846; J. M. Vansleb, *Histoire de l'église d'Alexandrie*, Paris 1677; *ibid.*, *Voyage in Egypt in 1672-73*, London 1678; Renaudot, *Historia Patriarcharum Alexandrinorum*, Paris 1713 (old but still useful); the *Expédition d'Égypte* contains records on Copts in the 18th century.

2. *Secondary sources in European languages*: E. Amelinckx, *Géographie de l'Égypte à l'époque copte*, Paris 1893; A. S. Atiya, *History of eastern Christianity*, London 1967, and *Notre Dame*, Ind. 1968; E. L. Butcher, *Story of the Church of Egypt*, London 1897; A. J. Butler, *The Arab conquest of Egypt*, Oxford 1902; G. Douin, *L'Égypte indépendante, projet de 1802 A.D.*, Cairo 1924; A. Fortescue, *The lesser Eastern Churches*, London 1913; G. (A. S. ATIYA)

KIBTĪ [see GINGARĒ]

KIDAM (A.) in the technical vocabulary of philosophy and theology denotes eternity. It must be distinguished from *asal* and from *abad* (q.v.). Al-Tahānawī writes: "ʿAsal is the constant duration of existence in the past, as *abad* is its constant duration in the future." As opposed to temporal origin (*ḥudūth*), it is the fact of having been preceded by nothing else (*al-lā mashāḥiyya bi-ʿiḥṣān*): *asal* implies the negation of a first beginning (*maʿy al-awwalīyya*); it is therefore a case of eternity *a pario ante*, and *abad* is eternity *a pario post*. *Asal* and *abad* are essentially identical in God (*inna ʿabadūku ʿayn ʿasalūhi*), for they mean that the two relative extremities which are the beginning and the end are both "cut off" from God (*inḥiṣāʾ al-ʾarfayn al-ʾiḥṣāʾiyyayn ʾanhu*). For Him they are negative attributes (cf. Faḥr al-Dīn al-Rāzī, commentary on

the Most Beautiful Names of God, sūra VII, 180; *asal* and *abad* are classed among the real and negative attributes. First, *asal* is regarded as real, accompanied by relationship and negation (*ḥiṣāḥiyya maʿa ʿiḥṣāʾ wa ʿiṣāl*). He is eternal, in the sense of *asal*, that which is not preceded by nothingness, that which is in existence before any rational conception of a first beginning (*ḥabla ʿaḥṣāl al-awwalīyya*), and in the sense of *abad*, that which persists beyond any rational conception of an ultimate term (*ḥabla ʿaḥṣāl al-ʾakhīrīyya*). Through these various definitions there come to light two conceptions of pre-eternity and post-eternity. The first is that of endless duration (*lā niḥāya lahu*) which extends either towards the past, or towards the future (in which case it is also known as *al-lā yādā*, that which does not cease to be). This scheme (cf. below) raises many difficulties in the solution of the problem of the creation of the world, since it introduces the concept of an infinite time before the moment of this creation. The second is more philosophical: the two eternities are nothing more than negative conceptions, to which contemplative thought has recourse in order to grasp the idea of eternity in relation to time, but which do not correspond to the reality of an infinite time in the two senses: they are relative to the mode of thought belonging to the human spirit, which as al-Rāzī points out (cf. below), cannot conceive of itself outside time. The reality which is hidden behind these imaginary concepts is that of God and of His subsistence through His essence (*ḥaḥṣāʾu bi-ḥiṣṣi*), that is, of a being totally unaffected by time and temporality.

So what does *ḥādām* denote? Etymologically, the term should be associated with *asal* since it is a root expressing the idea of anteriority. The *LA* says of it exactly the same as al-Tahānawī says of *asal*: "It is the contrary of temporal origin (*maḥiḥ al-ḥudūth*)". Ibn Maḥṣūr also explains it through the roots *ʿatāha* and *sabaḥa* ("to precede in a race"). It should in fact be noted that the idea of anteriority in time or space is linked to that of superior worth, as would appear from the substantive *ḥādām* and from its Kurʿānic use: *ḥādām fidh* (X, 2) which al-Zamakhsharī interprets as *sabaḥa wa-jadh wa-maḥṣūr* *raʿīʾa*, a priority, a higher abode that God is preparing for the Believers. Another explanation is that in advance a gift has been prepared for them on the part of God (*ḥad sabaḥa lahum ʿind Allāh ḥayy*) which unites the two ideas of anteriority and of the existence of the divine gifts. It may be noted further, with regard to *ḥādām* ("step"), whence the fact of being a step ahead of the others, of precedence) that the *LA*, as well as al-Kurṭubī in his commentary, quotes verses of *Ḥim* 1-Rumma [q.v.] where the expression of Bedouin mentality may be seen: *ḥādām* is associated there with high nobility and acts of splendour (*maʿfāḥ*). Since the qualities of Bedouin sthly were in general transferred by Islam to God, it may reasonably be supposed that the root *K-Ḥ-M* served not only to connote the anteriority of God, but also His ontological pre-eminence over all things, while it must be made clear that this is not an anteriority and a pre-eminence relative to others, as in the case of *maʿfāḥ* which implies rivalry, but qualities that are transcendental and absolute. It is in this sense that the *LA* says that God is *al-Maḥādām*, because he precedes all things (*yuhaddim al-ḥayy*) and He puts them in their place (*yadḥuḥu fi maʿadḥiḥi*). But the terms *ḥādām* and *ḥādīm* in the sense of eternity and the

eternal, are technical creations (*isfihāfāt*); they are not Kur'ānic. The ḥadīṡ 'Abd al-Djabbār, in the *Sharḥ*, writes that according to the principles of the language *ḥadīm* is that which has existed for a longer time than something else (*maḍ ṭaḥḍāmā muḡḍāḥū*) and he quotes the verse (XXXVI, 39) where God compares the moon to an old palm (*ka 'l-ṭarḡūn al-ḥadīm*). As for the word *ḥadīm*, it does not occur in the Kor'ān. The revealed Book conveys the idea of divine eternity through that of transcendence. God is al-Muta'ālī (XIII, 9), and this name, according to al-Rāṣī, belongs to him on the grounds that he is utterly removed (*munamāḥ*) in His essence, in His attributes and His actions from all that may not be asserted of Him. In consequence, He is outside time, Eternal, and it is thus that the term *ḥadīm*, taken absolutely (*al-ḥadīm*) denotes God Himself.

Al-Tāhānawī also makes *ḥadīm* the opposite of *ḥudūṡ* (g.n.). These two terms denote attributes of existence and are studied together. Essence (*māhiyya*) is qualified only in regard to the qualification of the corresponding existence. They may be applied to nothingness, according to whether it is preceded by existence or not; thus one may speak of an eternal nothingness or nothingness resulting from obliteration. *Kidaw* and *ḥudūṡ* may be taken according to reality (*ḥāqīqīyya*) or according to relation (*idāfīyya*).

1. Real eternity consists in the fact of not being preceded by another thing according to an anteriority which is essential and not temporal. This is what is known as essential eternity (*ḥadīm ḡhāṡī*), which consists in the fact of needing absolutely nothing other than the self in order to exist. This implies the necessity of the being. The Eternal in this sense is the necessary Being. On the contrary, origin (*ḥudūṡ*) is the fact of having been preceded by something in existence according to an essential anteriority, which in this case may or may not also be a temporal anteriority (for example, the world is essentially the result of an origin, it is *muḥḍaṡ*, but nothing precedes its time; man is also essentially engendered, but his parents existed in the time previous to his birth). In a certain sense, time is the result of an origin (*ḥudūṡ*), because if it has been preceded by nothing which could have existed before it in a temporal way, an absurd hypothesis, it does not have the absolute existence of necessary Being and at every instant it renews itself. It is possible to understand in particular by eternity the fact of not being preceded by the non-existence of a temporal anteriority: this will then be called temporal eternity (*ḥadīm zamānī*), and the eternal in terms of time is therefore "that of which the time of existence has no first beginning". Similarly, one may talk of a temporal origin (*ḥudūṡ zamānī*) where the existence of a being is preceded by non-existence in time. Thus we define that which is the fruit of a temporal origin (*al-ḥudūṡ al-zamānī*) as that which is preceded in time by its non-existence, according to the well-known formula: *lans yakūn, ṡumma ḥadā* ("it was not, then it happened"). In this sense, time is not *ḥadīm* because nothing can pre-exist itself.

2. As for relative *ḥadīm*, it implies that the past time of the existence of a being is greater than that of the existence of another. But this sense cannot be conveyed by the word eternity. It concerns the antiquity of a being compared to the novelty of an other, and *ḥadīm* means ancient, old, like *ʿaṡīḡ*. Conversely, *ḥudūṡ* will be novelty, *ḥādīṡ*, that which is new.

Al-Tāhānawī adds that essential eternity is more particular (*akḥaṡ*) than temporal eternity, which in its turn is more particular than relative eternity or antiquity. Thus necessary Being, which is *ḥadīm ḡhāṡī*, is also eternal according to a temporal point of view, since it is preceded neither by nothingness nor by that which is other than itself. But the converse is not true; thus the attributes of eternal Being, which are not preceded by nothingness since they are concomitants of its eternal essence, are not eternal in themselves and so do not have *ḥadīm ḡhāṡī*. The same could be said of the world which is *ḥadīm zamānī* according to the *ḡalāṡīḡ*, but which is not however *ḥadīm ḡhāṡī*, because it depends on its cause, which is other than itself. As for *ḥadīm idāfī*, it is not co-extensive with *ḥadīm zamānī*. In fact, the past time of an existence may be greater compared with that which subsequently occurs for the first time. This applies to the father who is *ḥadīm* in relation to his son, but who is not thereby *ḥadīm zamānī*, because he is born of parents. So if we compare the world to a man, both of these have a history made up of successive events. In relation to one of these events, the past of the world and of this man extend over a time greater than that of the new happening. Each of them will therefore be called *ḥadīm* in relation to it. They are both *ḥadīm idāfī*. But the world is not only *ḥadīm* in this context: it is so in itself, because there has never been a time where it did not exist. Man is only *ḥadīm* in relation, for example, to the event of his paternity: doubtless he is preceded by it, but precisely according to an antecedence which is only relative to it. On the contrary, in the context of origins, it is *ḥudūṡ idāfī* which is the most particular; then comes *ḥudūṡ zamānī* and finally *ḥudūṡ ḡhāṡī*. This is because everything whose existence in the past covers a lesser time-span (*ḡḡāl*: that is to say *ḥudūṡ idāfī*) is preceded by nothingness, and is therefore *ḥudūṡ zamānī*. A fortiori, it is *ḥudūṡ ḡhāṡī*. This analysis has clearly been influenced by the thought of philosophers who tend to associate eternity with the ontological necessity of the *māḡḡūb al-muḡḡad* and *ḥudūṡ* with continuity. Theologians simply understand by *ḥadīm* that which is not preceded by nothingness, or in the vocabulary of al-Tāhānawī, *ḥadīm zamānī*.

To what does the notion of eternity apply? *Kidaw* relates first to the essence of God. On this point all the philosophers and religious scholars are in agreement. On the question of the eternity of the attributes of God, there are differences of opinion among the *mutakallīmūn*. God is eternal because He is not subject to an origin, and being, cannot be other than *muḥḍaṡ* or *ḥadīm*. So if God were subject to origin, in order to exist He would need another being to create him, a *muḥḍiḡ*. But the question would apply to the latter too and so on to infinity. So one must affirm the existence of God as eternal Creator, as it is expressed by 'Abd al-Djabbār (*al-ṡānī al-ḥadīm*). This argument, which bears a philosophical mark, is not the exclusive property of the *Mu'taṡilīn*. It is found in the same or similar terms in the *Kutāb al-Tawḥīd* of al-Bāḡillānī, in the chapter where he shows that the agent which produces beings subject to origin (*ṡā'ī al-muḥḍaṡiḡ*) cannot itself be the fruit of an origin. It is found in the *Kutāb al-Iṡḡād* of al-Djawaynī, where he proves that the existence of the Eternal "does not inaugurate itself" (*muḡḡīd al-ḥadīm ḡḡayr muḡḡiṡiḡ*); in the same place he gives an interesting and precise observation on the concept of an existence that has no beginning: does this not imply an infinite succession of moments? He replies

that the moment of a thing is defined by the fact that it is contemporary with other things. Now God is not contemporary with any other thing. So the eternity of God is implied by his uniqueness.

The Ash'ari school admits the eternity of the divine attributes. On the contrary, the Mu'tazilites express the major principle that "God has no co-eternal", according to the formula of 'Abd al-Djabbār in the *Sharḥ* (*al-ḥadīth ma' al-Aḥsā*). Nevertheless, they recognise as eternal four attributes: existence, life, knowledge and power. In fact, according to al-Djabbār and the majority of the learned men of the school, these four attributes necessarily belong to God through his essence, therefore they are also eternal. His knowledge is His being in acts of knowledge (*ḥawākū 'āliyya*) and the same applies to the other *ṣifāt*. Or furthermore, He knows through a knowledge which is Himself (Abu 'I-Hudhayl), etc. They do not say that He possesses eternal knowledge, but that he has not ceased to be in acts of knowledge (*lam yasal bi-asmā'ih*), etc. 'Abbād b. Sulaymān refused to say that God possesses knowledge, any more than He possesses eternity (*ʿidam*); but it may be said that He is eternal (*ʿadīm*). Contrariwise, Ibn Kullāb thought that God is in acts of knowledge through a knowledge belonging to Him, and so on. To say that He is eternal, is to assert that He has not ceased to be in His Names and Attributes (*lam yasal bi-asmā'ih wa-ṣifātih*, *Makdsh*). The essence of God alone is eternal, not in the sense that it is stripped of all attributes, but on the contrary, clad in all that belong to God. Some of his disciples claimed that God is eternal through an eternity (*ʿadīm bi-ʿidam*), others that He is eternal, but not through an eternity (*ʿadīm lā bi-ʿidam*). We begin to deal here with pure subtleties of language, as in the distinction between the two expressions "God has not ceased to be" and "God has not ceased to be through the eternal attribute of eternity." A passage from the *Makdsh* deserves notice, however: "The supporters of the theory of attributes (*ashʿab al-ṣifāt*) differ in opinion concerning the attributes of the Creator: are they eternal or have they had an origin? Some say that they are eternal. Others declare: "If we say that the Creator is eternal in His attributes, we do not need to say that His attributes are eternal; so we say neither that they are eternal, nor that they have had an origin." According to al-Tāhāwī, Abū Ḥāshim added a fifth eternal attribute to the four above-mentioned: holiness (*al-ḥāyiyā*), which is distinct from essence. This is reminiscent of the divinites of the 12th century theologian of Chartres, Gilbert de la Porrée. It is no doubt to this thesis that 'Abd al-Djabbār alludes when he writes that, according to Abū Ḥāshim, the attributes belong to God necessarily, and by virtue of that to which he confirms in his essence (*bi-mā huwa 'alayh ji ḡāṭih*). So it is through divinity that these attributes are eternal. For Sulaymān b. Djarir and other *Ṣifāyya*, the attributes belong to God necessarily through "notions (*bi-ma'āni*) which can be qualified neither by existence nor non-existence, nor by origin nor eternity" (*Sharḥ*). It is the concept of notional attribute (*ṣiḥ ma'awiyā*), a term that has been translated variously as "essential", "qualitative", or even "entitative". It is nothing other than the qualification made necessary by the notion that one has of God. *Ma'āni* is always a notion signifying *cum fundamento in se*. The attribute *ma'awiy* therefore is not essence; neither is it a "thing" in God. It is that which the reality of God demands that one says

of God. But, here too, that which is eternal is God and his essence, and the *ṣiḥ ma'awiyā* escapes all ontological alternatives. Nevertheless, according to 'Abd al-Djabbār, certain disciples of Ibn Kullāb reified the *ma'āni* and considered them to be eternal; for them the four aforementioned attributes are fitting to God by means of the *ma'āni analyya*, which may be translated by "eternal entities". (We may note with 'Abd al-Djabbār that here *ma'āni* has the sense of *ḥadīm*, as often happens.) The *Kāfi* points out however that these Kullābiyya did not dare employ this formula in its absolute sense, so as not to run counter to the unanimity of the Muslims over the denial of co-eternal attributes.

From the same root as *ʿidam* is the 5th form *maḥḍar*, *taḥaddum*, which occurs in a very interesting commentary by Rāzī on Kur'an, LVII, 3: "He is First and Last". The word *taḥaddum* (antecedence) has several meanings: (1) *al-taḥaddum bi 'l-ta'atir* where the antecedent exercises an influence over the consequent, for example, the movement of the finger entails that of the ring; (2) *al-taḥaddum bi 'l-ḥādī*, based on the need which the consequent has of the antecedent; thus the number one is anterior to the number two without being its cause; (3) *al-taḥaddum bi 'l-ḡarāf*, according to worth; thus Abū Bakr has precedence over 'Umar; (4) *al-taḥaddum bi 'l-mawāḍi*, according to a hierarchical order, either sensible, such as the place of the *imām* in prayers before the faithful who pray; or rational, such as the place of the genus in relation to the species; (5) *al-taḥaddum bi 'l-ta'mīn*, temporal anteriority or *ḡāṭihyya*; to which al-Rāzī adds (6) "But I think that there is a sixth division which is like the anteriority of certain parts of time in relation to others; this anteriority is not temporal, otherwise it would be necessary for time to develop another time, to the point of infinity. Thus the present would be within another present which would be within a third present... and all these presents would be present at the present moment (*ḡāṭih bi ḡāṭih 'l-ʿān*). But the ensemble of these moments would be posterior to the ensemble of past moments, to the extent that there would be another time for the ensemble of times (*maḡimā 'al-ʿamāl*), which is absurd, for, being a time, it would have to enter into the ensemble of times. Consequently, it would be both within and outside this ensemble, which is impossible. "Furthermore, this anteriority of parts of time in relation to one another is not an anteriority according to causality, nor according to need, otherwise they would co-exist; evidently it is not according to worth, nor according to space. It is therefore a sixth kind of *taḥaddum*. Now the Kur'an shows that God is First (Primus, not prior) for all that is not Him, and al-Rāzī shows here that this qualification only fits the necessary, first and unique Being, for all that is not Him is possible (*muḥḍar*) and the possible exists only through origin: it is *mukdsh*. But what is the nature of this divine anteriority? It is not owed to an act of influence, for the agent and the patient are relative one to another and co-existent. It is not a priority founded on need, since the precedence here is absolute. It is not a precedence owed to worth, for it cannot be said that God is more worthy or more noble (*ashraf*) than possible, since He is incomparable (although in one sense, necessary existence implies a fullness of being besides which the existence of the possible is deficient). As for anteriorities according to time or space, they have no meaning for God, because time and space are possibles which depend on an origin.

God, being anterior to the totality of times, is not anterior according to time, otherwise the divine anteriority would have to enter into the ensemble of times, since it would be a time; but it would have to be exterior to it, because it would contain them all and that which contains is other than what is contained. This would be an absurdity. Apparently al-Rāzī is proposing, in so far as concerns God, a sixth kind of anteriority which is not without analogies to the anteriorities of parts of time in relation to one another. However, these are not identical and that is why al-Rāzī, when introducing his sixth division, does not say it is, but only that it is like . . . In conclusion, we know that God is First in a universal manner ('*alā sabli al-idimā*'), not in a detailed manner ('*alā sabli al-taḥḥil*'). As for grasping the reality of this priority (*awwalīyya*), human intelligences have not the means, since they cannot escape temporal forms. We may note that a similar division of *taḥaddud* is to be found in the *Mafāḥiṣ al-falāḥiyya* of al-Ghazālī, except that the *taḥaddud* bi 'l-hāḍi'a is called *taḥaddud* bi 'l-jawāb', in a case where the antecedent is not suppressed by the suppression of the consequent, but the consequent is suppressed by the suppression of the antecedent (as with a series of numbers), and except that *taḥaddud* bi 'l-taḥḥil' bears the name *taḥaddud* bi 'l-ghāḥ' (in the relation of cause to effect).

The doctrine of the eternity of the world [see ASAN] was upheld in Islam only by the *falāsifa*, directly following the systems of thought of the Greek philosophers: Plato, Aristotle, Philo of Alexandria, Proclus, and John Philoponos the Grammarian. The two *Tahḥīṭ* of al-Ghazālī and of Ibn Ruḡdā deal with it in a detailed fashion. The fundamental argument is that it is impossible to conceive a temporal beginning to the world, a moment of time in which it was created, in such a way that an empty time preceded the creation. In fact, if, as Aristotle maintains, time is the numerical measurement of movement (a theory taken up by the *falāsifa*, see SARAKA), movement demanding a mobile thing, moving bodies, the physical world and in particular the stars, then it is impossible for time to have existed before the existence of the world. Furthermore, if it existed, it would be eternal or created. But eternity does not conform with time that is changing and elapsing (*ṣayālīn*): each of its parts is new in relation to the preceding part, and time renews itself (*ṣayālīddad*) in every one of its instants. If time is *ḥāḍiṭh* in each of its parts, it has all the more reason for being so in its totality. So it is created; but then the problem arises: is it created in time and did a time exist before time? That is absurd. This is the argument as taken on the part of the world. On the part of God, given a temporal creation, what did the Creator do before creating. Was He inactive? That is not his nature and it is written (II, 255) that "Neither weariness nor sleep take hold of Him". Besides, if He was first inactive, then active, a change would have taken place in Him, which is inadmissible. What would have induced Him to create at the moment when He undertook His creation? A *muḥaddith*, something which could have turned the scales in the sense of the act of creation? But this *muḥaddith* is eternal or created. If it is eternal, the world must also be eternal, unless some other thing could prevent this *muḥaddith* from acting; this is known as *lark al-muḥaddith*. This *lark* in its turn will be created or uncreated. If it is eternal, there must have been, for creation to have taken place, the intervention of a

lark lark al-muḥaddith, and so on. If now the *muḥaddith* is created, the question applies to it as to the world.

For their part, the theologians who believe in the creation of the world in time object on the grounds that if the world is eternal, it has no beginning, it has never ceased to exist and consequently it has existed for an infinite period of time. Now, according to an Aristotelian principle, it is impossible to traverse an infinite time. If there is an infinity of instants to traverse in order to arrive at the present instant that exists, it is impossible to arrive there and it does not exist. This is a contradiction. The same reasoning is made in considering the infinite chain of causes: the effect that exists at present could not possibly exist. The difficulty arises from the assimilation of eternity to an infinite time. But to say that the world is eternal is to affirm that while remaining in the interior of the world and of the time which is linked to the world, one will never find a moment which could be its first beginning. One will need to go back indefinitely, but not to infinity: in other words, we are dealing here with an indefinite, or in the language of Aristotle, with an infinity in power, not an infinity in action. In short, the objection supposes that the expression "not having a beginning in time" means "having a beginning in infinite time." Besides, an infinity may be traversed if it is contained; between two points on a line, an infinite number of points is traversed. Ibn Sīnā seems to have held this view with regard to the problem of the first cause, analogous to the problem of the first beginning. If one considers the ensemble (*ḡumda*) of causes within this world, it is clear that each one of them is at once cause and effect. Therefore, one cannot insert into this ensemble a first cause which would be without cause. "Every ensemble of which each unit is an effect caused demands a cause exterior to these units." In such a hypothesis of a causal chain "every series composed of causes and effects, whether finite or infinite, shows itself, if it contains within itself only caused effects, to need a cause that is exterior to it, but is definitely in continuity with it, as with a limit (*ḡadāḥ biḥāḥ paraḥ*)". If the components of this ensemble are infinite, we are then dealing with a limited infinite ensemble. That is to say, that in the search for the first cause, it will be seen to stand out as a limit to the infinite which thought can never reach and towards which it strives. But its action does not need to traverse the infinite discontinuity of causes and effects in order to act *hic et nunc*, for, as Ibn Sīnā points out "every cause of an ensemble which is not one of the units of that ensemble is in the first place cause of these units and in consequence cause of the ensemble." Such is one of Ibn Sīnā's points of view on this question, according to the *Iḡhārāt*. Another objection to the theory of the eternity of the world is based on astronomy. We have an example of it in the *Fisal* of Ibn Ḥazm. Having declared that to an infinite time one can add nothing, and having thus shown that the infinity of centuries to come adds nothing to the infinity of centuries passed, Ibn Ḥazm writes: "In its circular orbit, Saturn makes one revolution in thirty years, and it has never ceased to turn. The greatest sphere, in these thirty years, makes approximately 11,000 revolutions, and it has never ceased to turn. Now beyond any doubt, 11,000 revolutions is greater than one alone. Consequently, that which is infinite will be approximately 11,000 times greater than that which is infinite, which is absurd." This is a

crucial variation on the same theme: the assimilation of eternity to an infinite time. The reasoning of Ibn Hazzam is ingenious, but it ignores the powers of the infinite.

And what of the end of the world? Plato apart, the philosophers held the view that that which has a beginning has an end, and correspondingly that which has no beginning has no end. From a creationist perspective, one could, however, admit that God will not destroy that which He has created, in such a way that the world could have been created, but eternal *a priori*. For the philosophers, the universe cannot perish, but a part of it may disappear. For the theologians who believe in the end of the world, there remain Paradise and Hell which are eternal in the sense of *abadi*; in fact, it is written that the Chosen and the Damned shall dwell there eternally (*hawa fihi 'abidun*, as the Qur'an says in a number of places). But on the basis of the verse where God describes Himself as the Last, *Qiyam b. Saif* supposed that Paradise and Hell shall also have an end, and he found a confirmation of his theory in verses 107 and 108 of Sura XI, "To dwell there eternally as long as the heavens and the earth remain". Thus God will find Himself as absolutely alone in post-eternity as he was in pre-eternity.

(R. ARNALDEZ)

KIFT, KUFT, KAFT, ancient Coptos, a small town of Upper Egypt situated where the Nile approaches its closest to the Red Sea (some 40 km. north of the ruins of Thebes, and about 2 km. to the east of the river). In Pharaonic times it was connected with the exploitation of the minerals in the hills between the Nile and Red Sea and with trade through the eastern part of Egypt, and enjoyed its greatest florescence in the Greek and Roman periods. Strabo describes the organisation of traffic up the Nile to Coptos, then by caravan across the desert to the Red Sea, and calls it a "town inhabited by the Egyptians and the Arabs together". In fact, it was a centre of attraction for the peoples of the eastern desert coming to trade there, above all, for the *Bedja* [p.], who doubtless received from there their Christianity; a bishop of the *Bedja* resided at Coptos-Kift. It formed the centre of a pagarchy, then of a *kura*, but then the position of Kift as a starting-point for tracks to the Red Sea (in 132/750 some members of the Umayyad family fled there temporarily, probably with the intention of escaping) lost importance when the mainstream of oriental trade started using the Persian Gulf instead.

The tribes of the Nile-Red Sea deserts started attacking the Nile valley; Kift was plundered with impunity in 204/819 by the *Bedja*, who were still Christian, and not till 275/888 was a rampart constructed to protect the settlement. In the first half of the 4th/10th century, al-Mas'udi wrote that Kûs

was more important than Kift, whose lapse into disfavour he connects with the distance of the Nile channel from the town. In fact, the skillful traders of Kûs had been able to benefit by the river, the only commercial axis still flourishing, because of the commerce with Nubia, whilst the tracks were all deserted; when they were utilized once more, with the revival of oriental trade under the Fatimids in the 5th/11th century, Kift revived, but by then Kûs had assumed the first place, by now a provincial capital. Kift nevertheless acquired a numerous, mixed population, especially as relations with the Higgas had over a long period led to the settlement there of 'Aid families. It was no doubt their influence which explains the considerable expansion there of Shi'ism and its fidelity to the Fatimids after Salih al-Din's assumption of power; a conspiracy, leading to a revolt in 572/1177, was savagely repressed. Consequently, Kift left to Kûs the task of imposing the Sunni counter-revolution on the 593d. The departure of certain families from the town (e.g. that of Ibn al-Kifti) is probably to be connected with these events; Kift does not seem to have had a *madrasa* like the other small towns of Upper Egypt, and it soon lost its *hadd* (it passed under the jurisdiction of the representative of the *hadd* of Kûs). Its territory remained a *ma'af* whose revenue went to support the *shari'is* of Mecca. In the Mamluk period, Kift was nothing more than a small agricultural centre in a countryside where the cultivation of sugar cane provided the main means of livelihood, and it has remained thus to the present day.

AL-KIFTI (see **IBN AL-KIFTI**).

KIHANA (أ.ع) means divination in general. *La Ahkama ha'at al-shamsiya* "there is no divination after the prophetic mission"; if it were necessary to be content with this dictum, frequently repeated in the Tradition, such an article as this would be out of place in an *Encyclopaedia of Islam*. But once the precise sense of this term has been established and the range of concepts which it covers outlined, the reader will agree that it is, on the contrary, far from superfluous.

The word itself, both in terms of the conceptual aspect (*ma'na*) and the pragmatic aspect (*ha'izna*) is a legacy, through its root at least, from the earliest Semitic antiquity (see **KAHN**). Because of this fact, it covers all the concepts and all the practices which are connected, closely or distantly, to the general concept of divination or the art of knowing that which cannot be spontaneously known. The current division of divinatory methods into inductive and intuitive is also to be found in the immense Arab-Islamic corpus of Arab-Islamic mantic literature, without always taking on the nature of a rigid classification, in that the two types of method may overlap or be used concurrently.

It is fruitless to search for a theoretical definition of divination in the impressive mass of divinatory documents contained in the literatures of the Semitic languages, throughout the ancient period. At the most, there are to be found descriptive definitions,

consisting of a list of the techniques which it comprised, according to places and periods. It is such a pragmatic definition which may be drawn from the Arabic documentation reckoned to preserve pre-Islamic traditions.

But in the medieval era, with the impact of Greek and Hellenistic philosophical thought, there was born, among the Arabs and the Islamised Iranians, a taste for theoretical definitions and methodical classifications. Already, in the works of a polygraph like al-Mas'ūdī (d. 346/956) there are recorded a number of attempts at theoretical definitions which have been summarised, by T. Fahd in *La divination arabe*, 43-5; cf. *Murāǧi*, iii, 347 ff. — §§ 1233 ff. Some philosophers, such as Ibn Sīnā, al-Ghazālī, Ibn Rushd and Maimonides, have tackled this problem and attempted to elucidate it (cf. *La divination arabe*, 51-63). Then came Ibn Khaldūn who put together all these speculations (*ibid.*, 45-51). He emphasises that as a branch of prophetic practice, divination constitutes the lowest echelon. Like prophecy, it is a divine gift entrusted to a privileged group, men and women. In fact, according to al-Kāzinī, there exist illuminated and celestial souls which possess the faculty of knowing the names of the spirits. These are the souls of prophets and saints; they are also the souls of physiognomists, of soothsaying genealogists and of those who see the future by means of past and present events. "As for the souls of the soothsayers", he continues, "they receive spiritual knowledge and see through it the contingencies of beings which appear in dreams and in other manifestations" (I, 317-22; *La divination arabe*, 50-52).

So, divination is seen to be theoretically legitimised by inclusion in the mainstream of prophecy (on divination and prophecy see *La divination arabe*, 63-90). But, for practical purposes, it was necessary to strip it of all that was obsolete and too closely linked to paganism. From that point was born, in Islamic literature, a detailed inventory of divinatory practices, with precise definitions of the techniques listed. In their taste for the classification of knowledge, encyclopaedists and bibliographers finished by conferring upon the concept of divination an epistemological quality. We shall begin with the most detailed classification, that of Kāshānī (I, 34-5), who draws the date of his inventory from his predecessors, from Ibn al-Nadīm (*Fihrist*) to Ṭāǧh al-Kāshānī (*Miftāḥ al-sa'āda*).

Islamic divination, a legacy both of ancient Semitic divination and of Hellenistic divination, is divided into three categories:

1. *Firās* (فِرَاس), or physiognomancy, and its ramifications. Under this heading, eleven "sciences" are listed:

1. 'ilm al-ghimāḥ wa l-ḥāḥīl "beauty-spots and birthmarks" (see ǧayālāt and *La divination arabe*, 390-3).
2. 'ilm al-aḥḥār, "chiromancy" (see AL-KATIF and *La divination arabe*, 393-5).
3. 'ilm al-aḥḥāf, "omoplatoscopy" (see AL-KATIF and *La divination arabe*, 393-7).
4. 'ilm ḥayḥat (read ḥayḥat) al-aḥḥār "observation of footprints (on the ground)" (see KAYARA and *La divination arabe*, 370-3).
5. 'ilm ḥayḥat al-baḥār, "divination by morphoscopic and genealogical lines" (see FIRASA and KAYARA and also *La divination arabe*, 370-90).
- 6-7-8. 'ilm al-ḥidāḥ fī l-ḥandī wa l-ḥāḥār, "the sense of orientation in deserts"; 'ilm ḥisāb al-ma'ādīn "the detection of minerals"; 'ilm al-ḥayḥa,

"the detection of wells". These three categories may be put together under the heading of "divinatory observation of the ground" (see MĀʾ and *La divination arabe*, 403-6).

9. 'ilm murād al-ḥayyā "the knowledge of (signs foretelling) rainfall". This consists in meteorological divination with its various techniques: aeromancy, capnomancy, anemomancy, phylomancy, bromomancy, etc. (see ANWĀʾ, MAJMAʾ and *La divination arabe*, 407-17).

10. 'ilm al-ḥayḥa, "knowledge of the future by means of past events". This definition suggests that it is a *casa strictu sensu* of inductive divination, although initially ḥayḥa implied a certain intuitive, and consequently gnostic and esoteric, awareness (see KĀZIN and *La divination arabe* 113-19).

11. 'ilm al-ḥayḥa, "palmomancy" (see KĀZIN and *La divination arabe*, 397-402).

12. *Sifr* (سِفْر) or magic, and its ramifications. 12. 'ilm al-ḥayḥa, "divination" (astrological divination, involving incantations and invocations to the stars). Thus the influence of Hellenistic ideas led to the division of divination into two types, traditional divination or ḥayḥa and astrological divination, which underwent a great expansion in the Hellenistic period and which the Arabs came to know through the many translations of Greek, Syriac, Pahlavi and Hindī astrological writings (see MURJUM and *La divination arabe*, 478-97).

13. 'ilm al-mirādī, "white magic" (see MĀʾ and T. Fahd, *Le monde du sorcier en Islam, in Sources orientales*, vi (1966), 284 ff.).

14. 'ilm al-ḥayḥa: "knowledge of the properties of divine names (al-asmāʾ al-ḥusnā), of prayers (al-dawāʾ), of numbers (see ǧayālāt and MURJUM) and various other special things" (see KĀZIN and KĀZIN; *La divination arabe*, 214-45; *Le monde du sorcier*, 275-6).

15. 'ilm al-ḥayḥa, "sympathetic actions or sorcery" (see KĀZIN and *Le monde du sorcier*, loc. cit.).

16. 'ilm al-ḥayḥa, "conjurations of demons or incantations" (see KĀZIN and *Le monde du sorcier*, 264-5).

17. 'ilm al-ḥayḥa, "the evocation of spirits in physical form" (see KĀZIN and *Le monde du sorcier*, 270 ff.).

18. 'ilm al-ḥayḥa al-ḥayḥa "the invocation of (the spirits of) the planets" (see MURJUM and *Le monde du sorcier*, 269 ff.).

19. 'ilm al-ḥayḥa (φύλαξη τέχνη), "the art of making phylacteries" (see KĀZIN and *Le monde du sorcier*, 272 ff.).

20. 'ilm al-ḥayḥa, "the art of making oneself instantly invisible" (see KĀZIN and *Le monde du sorcier*, 284 ff.).

21. 'ilm al-ḥayḥa al-ḥayḥa, "the art of trickery and forgery" (see *ibid.*).

22. 'ilm al-ḥayḥa al-ḥayḥa, "the art of disclosing truths" (see *ibid.*).

23. 'ilm al-ḥayḥa, "conjury" (see *ibid.*).

24. 'ilm al-ḥayḥa al-ḥayḥa, "charms" (see KĀZIN and *Le monde du sorcier*, 272 ff.).

25. 'ilm al-ḥayḥa al-ḥayḥa al-ḥayḥa, "the art of employing the properties of drugs" (see KĀZIN).

III. Judicial astrology (see MURJUM) and its ramifications.

26. 'ilm al-ḥayḥa, "hemerologies and menologies" (see KĀZIN and *La divination arabe*, 483-8).

27. 'ilm al-ḥayḥa, "geomancy" (see KĀZIN and *La divination arabe*, 195-204).

28. 'ilm al-ḥayḥa, "omens" (see KĀZIN, KĀZIN; *La divination arabe*, 431-519).

29. 'ilm al-ḥayḥa, "rhapsodomancy" (see KĀZIN; *La divination arabe*, 214-19).

30. *ʿilm al-ḥīra*, "ornithomancy" (see PA'L, ṬVAPA; *La divination arabe*, 431 ff., 498-519).

As can be seen, in this inventory, Islamic divination avails itself of methods belonging to magic and astrology. A single term embraces all these arts: *ʿilm al-ḥayyā*, "the art of apprehending the invisible". Any method permitting the acquisition of supernatural knowledge or assumed to do so is considered as relevant to divination.

IV. The disciplines omitted in this inventory.

31. Divination by dreams (see TA'SIR AL-AV'ĀL; *La divination arabe*, 247-367; Fahd, *Les songes et leur interprétation selon l'Islam*, in *Sources orientales*, II (1959), 127-58. The absence of oneirism among the divinatory techniques is justified by the fact that it occupies in Islam a higher place than that of divination in the sphere of religious inspiration. It is closer to prophecy, of which it constitutes one of the forty (or forty-six) parts (cf. Wensinck, *Concordance*, I, 343), while divination is the lowest echelon.

32-4. Among cleromantic practices, only rhapsodomancy and geomancy are mentioned. (32) Belomancy (see ISTIKRĀM; *La divination arabe*, 181-8), (33) lithoboly (see RAKY AL-BULMĀN; *La divination arabe*, 188-95), (34) *mayyir* (see AL-MAYYIR; *La divination arabe*, 204-14).

The absence of these practices in the above inventory is due to the fact that they were associated with pagan culture and they were for this reason prohibited in the Qur'ān.

35-47. The use of the oracle (in its various forms: *sadi*, *raḡḡa*, *ḥāṭif* [q.v.], ventriloquism, and necromancy; see, *La divination arabe*, 148-9), which was still popular in pre-Islamic Arabia, (36) extispisciny, (37) hepatoscopy, (38) torantomancy, (39) medical diagnoses, (40) lecanomancy, (41) ordeal, mantic disciplines much used in ancient Mesopotamia, are present only as vague survivals in Islamic divinatory literature (cf. the index of techniques and ideas in *La divination arabe*, 591-3, and J. Nougayrol, *La divination babylonienne*, in *La divination*, studies collected by A. Caquot and M. Lebovici, I, 28-81).

If the diviner ceased officially to exist in Islam, divination survived, but considerably changed, adapted progressively to the taste of the period and enriched by new Hellenistic, Iranian and Hindu practices, to which were added the local practices of the conquered territories. At the end of this period of adaptation and enrichment, Islamic divination progressively lost its primitive oracular nature to become a *ṭayyā*, an art or a science (*ʿilm*). It is thus, for example, that to belomancy, condemned by the Qur'ān because of its connections with paganism, there succeeded *ʿilm al-ḥur'a* or rhapsodomancy, *ʿilm al-ḡafr* and *ʿilm al-ḥuruf* or onomatomancy, *ʿilm al-ḡawāṣṣ* al-*ḡur'ān*, a combination of rhapsodomancy and iatromancy, *ʿilm al-raml* or geomancy and *ʿilm al-si'r* or *si'r*, a sort of machine for producing omens. To *geomancy*, in the sense of dream-messages received directly from the divinity by a man or by his substitute and often expressed in explicit language, there succeeded *ʿilm al-ta'tir* or oneirocriticism. To *si'yā* or physiognomancy, there succeeded *ʿilm al-firās* or physiognomancy and the ramifications indicated above. The sphere of *ḡafr* or omens was enriched by the transition of the Arabs from a nomadic to a sedentary culture, while preserving nevertheless, its original structure, especially where ornithomancy was concerned (cf. *La divination arabe*, 385-6).

Islamic divination resembles a crouble in which the divinatory practices of Semitic and Hellenistic antiquity were fused. The rich divinatory literature written in Arabic, Persian and Turkish conveys an imposing heritage the study of which will contribute to a better understanding of ancient and medieval *Weltanschauungen*.

(T. FAHD)

KIHĀN / KIHĀN [see KILĀT].

KILĀB s. **RABĪ'Ā**, an Arab tribe belonging to the group of tribes called 'Amir b. Sa'ḡa'a [q.v.]. The territories and pre-Islamic history of the tribe are described in that article. Kilāb was considered to have ten main divisions, of which the chief for a time was ʿUḡayr b. Kilāb, from which came leaders of the whole of 'Amir. The most serious war of the Fajjār [q.v.] resulted from the killing of 'Uḡayr al-Rabḥīl of Kilāb by al-Barrāḡ b. Ḳays al-Kināf. Divisions within the tribe are reflected in hostility to the Muslims and friendship with them. Two men of Kilāb joined in attacking the Muslims at Bīr Ma'ūna [q.v.]; but al-Qaḥḥāk b. Sufyān became a Muslim and both called on his tribe to accept Islam and raided a recalcitrant section (al-Korjā).

KILĀT, KALĀT, KELĀT, the name of a town and of an extensive region, formerly a *Khāṣṣa*, of Baluchistan, now a District of Pakistan.

(1) The town (often called Kalāt-i Balūḥ to distinguish it from the Afghān Kalāt-i Ghilzay) lies in lat. 28° 53' N. and long. 66° 28' E. at an altitude of 6,800 feet, and has in recent centuries been the centre of the *Khāṣṣa* of Kalāt; until the rise of Quetta as a military base of British India (see kwatta) it was the most important town of Baluchistan. The name Kalāt or Kilāt represents Arabic *kal'a* and Persian *kalā/balāḥ*, often pronounced *kālā/kilāl* in Indo-Muslim usage; in Balūḥ we have *ḡalāḥ* "fortress, citadel", cf. Yule and Burnell, *Hobson-Jobson*, a glossary of Anglo-Indian colloquial words and phrases, 480, s.v. *Khelāḥ*, this last being the form of the name usually found in Anglo-Indian sources of the period. On locally-minted coins we find the name of the town both as *Kilāt* and as *Kālāt* (W. H. Valentine, *The copper coins of India*, London 1914, II, 223).

In earlier times, the town was known as Kalāt-i Sēwa, from a legendary Hindu king, or as Kalāt-i Nīkārī, after the local Brahṇ tribe of Nīkārī. The name is not found in any of the early Islamic histo-

rians and geographers, but it is very probable that Kalāt marks the site of mediaeval Kikānān or Kikān, judging by the latter's position in the itineraries; it seems to be the Kikānāna of the early 7th century Buddhist pilgrim Hsüentsang (see Marquart, *Eranshahr*, 275-6). Kikān and Bāḳān were raided by the Arab commander Sinān b. Salama al-Hudhālī and then by al-Mumghir b. al-Djāfūd al-'Abdī as early as Mu'awīya's caliphate (Balādihuri, *Futūḥ*, 433-4). In the 4th/10th century, Kikānān is named as the residence of the local ruler of the region of Tūrkān (on which see Minorsky in *EI* s.v.), whom Ibn Hawkal I, 524, tr. Kramers-Wies 317 8, calls Mu'azz b. Ahmad, adding that he recognised the 'Abbasids in his *ḥuḥūḥ* (a point probably made by Ibn Hawkal because the adjacent province of Sind at this time acknowledged the Fātimids and the Ismā'īlī imāmate). However, the capital of the region was located not long afterwards at Kuḥḍār, modern Khuzdar, 50 miles to the south of Kikānān/Kalāt (see *ḡuḡḡā*). In the early Ghaznawid period, it is recorded that Mas'ūd b. Maḥmūd went lion-hunting in the district of Kikānān (Bayhaqi, *Ta'rikh-i Mas'ūd*, ed. Ghani and Fayyāḍ, 126).

Since approximately the 9th/15th century, Kalāt has been in the hands of Brahūils of the Kambarānī tribe, from whom the later Ahmadnāy Khāns of Kalāt were descended. In the 18th century, the Khāns recognised the suzerainty of Nādir Shāh Afghār and Ahmad Shāh Durrānī (q.v.) during their Indian campaigns, and their power in Balūḥistān grew. The greatest of the chiefs of this period, Nāṣir Khān b. 'Abd Allāh, tried to shake off Afghān control, and though Ahmad Shāh defeated him in battle, the latter was unable to take Kalāt town from Nāṣir Khān, despite three attempts (1752/1758). It was Nāṣir Khān who built the citadel of Kalāt, known as the Miri, which became the Khān's palace. We possess descriptions of Kalāt during the first half of the 19th century by travellers such as H. Pottinger (1810), who mentions the mud-brick defensive walls pierced with gun-holes and the ample water supply from a spring, which also turned several mills (*Travels in Beloochistan and Sindh; accompanied by a geographical and historical account of those countries*, London 1816, 40-51), and C. Masson (1850s), who describes the colony in Kalāt of Bābī Afghāns, expelled thither by Ahmad Shāh from Kandahār, and who numbers the houses there at ca. 800, giving a population of say 5,400 (*Narrative of various journeys in Beloochistan, Afghanistan and the Panjab*, London 1842, II, 50-6, 96-8, 177-8).

In 1250/1834 the Afghān ruler Shāh Shujā' al-Mulk took refuge in Kalāt with Mīrāb Khān b. Maḥmūd b. Nāṣir after his failure to recover Kandahār from Kūhandil Khān, governor there for his brother Dost Muḥammad (q.v.). During the First Afghan War (1839-42) Mīrāb Khān was drawn into conflict with the British force which advanced on Kandahār in 1254/1838 through the Bolān Pass in order to reinstate Shāh Shujā'. Kalāt was stormed in 1255/1839 and the Khān killed in the fighting; the districts of Kādchī, Shāl and Mustang in the northern part of the Khānate were taken from Kalāt and ceded to Shāh Shujā', temporarily placed on the thrones of Kābul, and British Agent installed in Kalāt. This last was killed by Brahūil tribesmen soon afterwards, leading to a second British occupation in 1257/1841. The ceded territories were now returned to the Khān, and with the annexation of Sind in 1843 and the Panjab in 1849, British influence was brought right up to the

frontiers of the Khānate. The Khāns themselves suffered several decades of disputed authority and tribal turmoil, till in 1286 the Government of India was compelled to intervene, and Capt. (later Sir Robert) Sandeman negotiated an agreement between the Khān and rival chiefs, making Kalāt a protected native state, with a British Political Agent to be henceforth stationed at Quetta. The northern *ṭāḡiḡ* of the Khānate, Quetta, Nughid and Naḡribād were leased to Britain in perpetuity, to form British Balūḥistān, and the right to levy transit dues at the Bolān Pass committed for an annual subsidy (see T. H. Thornton, *Colonel Sir Robert Sandeman: his life and work on our Indian frontier*, London 1895, 39-87, 117-82, etc.). Even so, further intervention was necessary in 1293, when the tyrannical Mir Khudādād b. Mīrāb was deposed from his Khānate by the Government of India.

The earthquake of 1935 affected Kalāt badly, as well as Quetta and Mustang, demolishing most of the old town and causing widespread economic damage through destruction of the irrigation *āwārs* (see *SAWĀR*). In 1940 strained relations and clashes between the Khān of Kalāt and the chief of Khārān (q.v.) to the northwest of Kalāt led to the recognition of Khārān as a separate native state under the control of the British Political Agent. Early in 1948 the Khān of Kalāt acceded to Pakistan and his Khānate became part of the Balūḥistān States Union, with the Khān no longer an independent ruler but enjoying a privy purse from the central government.

(4) The province. This included by the 18th century the districts of Sarawān, Dāhlawān, Kādchī and Makrān, and the tributary states of Las Bēla and Khārān. In 1955 all the provinces of West Pakistan were merged into one unit, and Kalāt became a separate District under a Deputy Commissioner, whilst Khārān, Makrān and Las Bēla formed separate Districts. Kalāt District is today the biggest in area of all Pakistan, covering 30,931 sq. miles in area and with a population, made up of Brahūils, Balūḥ, Jhāts, etc., of 341,420 (1961 census).

(C. E. BOSWORTH)

KILĀT (KALĀT)-I NĀDIRI, "the most famous fort of Central Asia", located some 70 miles north of Māghdāh near the Irano-Soviet border, on a spur of the Kārāḡāz-Dāgh Mts. Kalāt-i Nādiri consists of a high valley (altitude 2,300-3,000 feet), some twenty miles long and running west-east, which is converted into a natural fortress by walls of virtually unscalable rock to the north and south. The height of the southern rampart is 700-800 ft; the northern rampart is even higher. These walls are breached at only five points: Darband-i Arghūn on the south-west; Nafta on the north; Kughānī Darband on the south-east; Čōbāt on the west; and Dāḡā on the north-west.

In 683/1284, the rebellious Mongol prince Arghūn took refuge there after his defeat at the hands of

the Ilihan Tekuder. In 782/1380-1, Timur launched numerous assaults on Kalāt-i Nādiri with no success; the fortress eventually fell as a result of pestilence. In 1153/1747, Nādir Shāh, who had previously used Kalāt-i Nādiri as the headquarters from which he set out to free Iran from the Afghans, chose it as the site for the treasure-house in which he deposited the loot from his Indian campaign; the treasure-house was built by Indian craftsmen from massive blocks of Marāgha marble. After Nādir's death, his son Rūḍā Kān and fifteen members of his family were executed at Kalāt-i Nādiri by the future 'Ādil Shāh.

Today, Kalāt-i Nādiri has reverted to its earlier name of Kalat, and constitutes one of the five *beḥārs* of the *shāhristān* of Darragaz.

(R. M. SAVORY)

KILBURUN (Klaburun), a sharp cape or headland at the mouth of Düceper (Özi) river on the Black Sea coast of South Russia, this Turkish name was given to it by the Turks because it looked as slender as a single hair (iḥ). It lies at 2 sea miles' distance from the fortress of Özi or Oczakof, and at the tip of the cape was a fortress built by the Ottomans. Within the Kilburun promontory is an inner estuary 40 km. long and 8-10 km. wide (P. Minas Bijlkyan, *Karadeniz tarih ve coğrafyası*, tr. H. D. Andreasyan, Istanbul 1969, 100). The salt obtained from the lakes in the vicinity of Kilburun increased its importance economically.

Kilburun came into prominence at the beginning of the 14th/15th century as a result of the Cossack invasions towards the Black Sea coastlands (Kātib Çelebi, *Faḡhilek*, Istanbul 1287, II, 72, 103), hence fortresses were built in various places, including Kilburun, against Cossack raids (Pelevi, *Ta'riḥ*, Istanbul 1283, II, 152). The one constructed at Kilburun had a staff of 193 persons (Bağbanikh arxiv genel müdürlüğü, Kāmil Kepeci tasnifi, no. 4891). It became of especial strategic importance to the Ottomans when the Russians started descending the rivers to the Black Sea, and major reconstructions were accordingly undertaken in 1709 and 1733-4 (Muzaffar Erdoğan, *Lale devri Mimarî Nâyesleri Mehmed Ağa*, Istanbul 1962, 58-9, 81). In time of war, the Kilburun garrison worked in collaboration with the garrison of Özi (Oczakof) opposite to it, in defence of the mouth of the Dnieper. The Russians succeeded in capturing Kilburun for a while during the 1736-8 Ottoman-Russian war, but were later obliged to return it after demolishing it. The fort was again captured in 1772 during the 1768-74 Ottoman-Russian war, and this fact was accepted by Turkey at the settlement of Küçük Kaynardja. Ottoman forces which tried to recapture it during the 1789-91 war failed decisively to do so (Djiewdet, *Ta'riḥ*, Istanbul 1309, iii, 32). Kilburun fort was occupied by a French force on 17th January 1855 during the Crimean War, but finally demolished by Russia in 1860. Kilburun, on which there is a small fishing village, is now within the Ukrainian SSR.

KILĪJ AL-BAHR [see ÇANAK-KALE BOĞAZI].

KILĪJ ALAYI [see TAILED-I SAYI].

KILĪJ 'ALĪ PASHA [see 'ULŪḤ 'ALĪ].

KILĪJ ARSLAN I, also known to the Crusaders, like his father, under the name Sulaymān/Soliman, son of Sulaymān b. Kutlumush [q.v.], second Seljūq prince of Asia Minor. At an early age, he was in Antioch when his father was killed in battle fighting Tutugh [q.v.], and he was handed over as a hostage to Malik Shāh [q.v.] who conquered Syria in 1086. On the death of the latter (1092) he managed to escape, and arrived in Nicaea, his father's former residence, where he seems without much difficulty to have had himself accepted as sovereign by the semi-autonomous Turcoman chieftains who were waging against Byzantium a policy of entente with the Basileus, who for his part, threatened on all his frontiers, sought to use against his other opponents those of the Turks whom he hoped gradually to assimilate or to neutralise. Kilij Arslan was especially anxious to maintain relations with the Turkish East, which other Turks, in particular the Dānishmendids [q.v.] were threatening to cut off. In summoning his father to Nicaea, Alexis Comnenus had in effect brought his Turks far in advance of what then was still the principal zone of Turcoman population.

It was in these circumstances that the Crusades intervened, enabling Alexis temporarily to abandon the task of dealing with the Turks. Kilij Arslan crushed the Peasant Crusade of Peter the Hermit, but was subsequently forced to give up Nicaea, along with his harem, to the Barons' Crusade, and was later beaten by the Christians again on the edge of the Anatolian plateau at Dorylaeum. These victories of the Christians enabled Alexis Comnenus to regain control of the entire Aegean coast of Asia Minor; but the Crusaders did not stay in Asia Minor, and the Turkish forces, who being still semi-nomadic in character had been repelled but not destroyed, returned behind the backs of the Crusaders. The danger had furthermore led to a temporary reconciliation between Kilij Arslan and Dānishmend, which led to the annihilation, in 1100-1, of the rear-guard troops of the Crusaders, an operation in which Dānishmend, it is true, played the more significant role; the latter, at the head of his troops, deprived the Franco-Armenians of the strategic centre of Malatya, vital to Kilij Arslan's links with the East. Also, when Dānishmend died in 1104, Kilij Arslan, who had become reconciled with the Greeks to the point of sending them contingents to fight other enemies (1106), came and occupied the place.

From there he was able to control Upper Mesopotamia, where the lieutenants of his Eastern Seljūq cousins were in conflict with one another. When the enemies of Sultan Muḥammad b. Malik Shāh [q.v.]

appealed to him for help, he confronted the army of the latter on the *Khabûr*, and was killed (1207). This was for a long time the last intervention by the Saljuqs of Rûm in the East, and the roughly-constituted Turkish state was definitively enclosed within Asia Minor proper.

Bibliography: The sources include Anna Comnena, Matthew of Edessa, Michael the Syrian and the Latin historians of the First Crusade; the *Kawâid* of Ibn al-Athîr and the chronicles of Syria (Ibn al-Kalânî, Ibn Abî Tayyîr in the unedited part of Ibn al-Furât and Ibn al-'Adim, ed. S. Dahan) and of al-Djazarî (Ibn al-Azrak, unedited).

The modern bibliography is given in Cl. Cahen, *Pre-Ottoman Turkey*, London 1968, and O. Turan, *Selçuklular zamanında Türkiye*, Ankara 1971). (CL. CAHEN)

KILIDJ ARSLAN II, son and successor of Mas'ûd I, and one of the most important sultans of Rûm (1155-92).

Mas'ûd had, in dealing with the Greeks, succeeded in restoring the position of the Saljuqs in relation to the Dânişmendids who were divided by quarrels over the succession. Kiliċi Arslan at first maintained this policy, and carried it to the extent of offering the Basileus Manuel Comnenus at Constantinople in 1161 a form of allegiance which, in concrete terms, cost him nothing. He was then able to make himself master of a portion of the Dânişmendid possessions, and he would have taken them all had he not been confronted by the powerful ruler of Muslim Syria, Nûr al-Dîn. The latter, champion of the Holy War against the Christians, pretended indignation at Kiliċi Arslan's relations with the Greeks. The two princes in fact were alternately allied and at odds, Kiliċi Arslan helping Nûr al-Dîn to deprive the Franks of their possessions on the Syro-Anatolian frontiers with the object of sharing them with his rival, and Nûr al-Dîn extending his power over this territory as soon as the Saljuq sultan withdrew. The conquest of Egypt by Nûr al-Dîn's lieutenants Shîrkûh and Ṣalâh al-Dîn crowned his glory, and Kiliċi Arslan's enemies persuaded Nûr al-Dîn to undertake an expedition into Asia Minor which forced Kiliċi Arslan to recognise what remained of Dânişmendid territories. On the death of Nûr al-Dîn, he annexed them (Malatya in 1177) thus accomplishing, from the Byzantine territories in the West almost to the furthest limits of the East, the political unity of Asia Minor.

He no longer needed to deal with the Greeks, and on his side, Manuel Comnenus, though strengthened by the general success of his foreign policy, was uneasy at the growing power of the sultan, and decided that he must put an end to it. In 1176, at the head of a powerful army, he advanced on to the Anatolian plateau, but was crushed at Myriokephalon. This was, after an interval of a century, a replica of Mantzikert, which showed that henceforward there existed a Turkey which could never be further assimilated. If Kiliċi Arslan showed moderation in his official policy, the pressure of Turcomans on the frontiers led him to reach out to the upper valleys of the Aegean coast and, in spite of opposition from Rhodes, to the sea itself.

This expansion could not take place without risk. Trouble with the Turcomans, breaking out to the east of the Saljuq State, grew more intense, with these Turcomans supplying troops ready to serve any ambitious chief. Whether for this reason or not, Kiliċi Arslan divided the territories under his suzerainty between his nine sons, a brother and

a nephew. Needless to say, the latter quarrelled among themselves and one of them, Kutb al-Dîn, with support from some Turcomans, forced his aged father to accept his protection at Konya. These events were interrupted by the Crusade of Frederick Barbarossa, the latter, an enemy of the Byzantines, had established diplomatic relations with Kiliċi Arslan who, indifferent to Syro-Palestinian affairs, was inclined to promise him free passage. But Kutb al-Dîn's Turcomans attacked the Germans, who converged on Konya (1190). Shortly after, the old sultan succeeded in escaping from the semi-captivity in which his son was holding him, and took refuge with another of his sons, the son of a Greek mother, who was established on the western borders. It was there that he died, at the age of seventy-seven.

Bibliography: Sources include the Byzantine writers Cinnamus and Nicetas Choniatus, the Armenians Matthew of Edessa, and Gregory the Priest, Michael the Syrian, and the Arab authors cited in the preceding Bibliography. References to modern works are given in the works of Cahen and Turan cited in *ibid.* and in N. Elisséeff, *Nûr al-Dîn*, Damascus 1968. (CL. CAHEN)

KILIDJ ARSLAN III, the young son of the sultan of Rûm Rukn al-Dîn, who reigned only a few months (1204-5), after which the majority of the army, worried at the general dangers inherent in the rule of a minor, deposed him in favour of Kay Khusraw I (401).

KILIDJ ARSLAN IV, better known by his laqab of Rukn al-Dîn, one of the sons and successors of Khueraw II (1246). It was at the beginning of the period of the Mongol protectorate that, the three sons of the late sovereign all being minors, the senior amirs, in order to safeguard the unity of the state, sought to install, under their own executive power, a sultanate shared jointly between the three young princes; Kiliċi Arslan was sent on a mission to the Mongol chief Batu to persuade him to accept this solution. This very mission alone established a special relationship between Kiliċi Arslan and the Mongols, and for many years two opposing parties were in conflict; the one, taking him as its figure-head, believing that the only possible course of action was to submit to the Mongols, the other, rallying behind his brother 'Izz al-Dîn, seeking to organise resistance with the aid of the Turcomans of the West and in alliance with the Byzantines. Successive schisms resulted, leading on each occasion to a division, temporary at first, between the territories in the east, favouring the Mongols who were close by, awarded to Kiliċi Arslan, and those of the west, left to 'Izz al-Dîn. United for the last time in 1260, the two brothers participated in a campaign against Syria under the orders of the Mongol chief Hûlegü. Eventually, 'Izz al-Dîn fled to Constantinople, and Kiliċi Arslan remained sole sultan. This did not mean that he exercised power; power in fact belonged to the *perwân* Mu'in al-Dîn Suwaymîn, the favourite of the Mongols. When Kiliċi Arslan came of age and showed resentment towards him, the *perwân* had him strangled (1265).

Bibliography: Sources include the Muslim historians of Anatolia Ibn Bîbî, Aqarsayî and the anonymous author from Konya of the *Saljuqnâme*; the Arabic historians Baybars al-Mansûrî (unedited) and Yûnûs; and the Syriac one Bar Hebraeus. General references to modern works are given in the works of Cahen and Turan cited in the previous Bibliographies. (CL. CAHEN)

KILIFI, headquarters of Kilifi District in the Coast Province of Kenya, in lat. 4° S, is a small port which was an independent sultanate until 1592, including the present Kilini, Kitoko and Mnarani. The large Friday mosque, the wealthy *dīār* of the adjacent tombs, and the walls and gatehouse, show that Mnarani was the chief amongst these settlements in medieval times. The cemetery is noteworthy for eleven inscriptions in 15th century *nashqī* script. Excavations by J. S. Kirkman in 1954 showed that the site was occupied from the end of the 14th century until some time in the 17th century when, as Capt. W. F. W. Owen recorded in 1833, it was destroyed by Galla tribesmen. The Sultan of Kilifi sent an ambassador to greet the Turkish commander Ankr 'Alī Bey at Mombasa in 1586, and in 1589 joined him against the Portuguese in Mombasa. Following a long feud with Malindi, Kilifi was razed by the Portuguese with local allies in 1592, but recovered. It was to Kilifi that Sultan al-Ḥasan b. Ahmad of Mombasa withdrew in protest against the Portuguese Captain of Mombasa's exactions in 1612.

(G. S. P. FREEMAN-GRENVILLE)

KILLAWRIYA, Calabria (in Yāqūt is found *Killawriya*, and in Ibn Dīnabār, *Rūla*, *Kilawriya*, both of these close to the Byzantine *Καλαβρία*, Kalavria, in Italian Calabria).

It is very likely that the Arabs, coming probably from Spain, launched attacks across the sea against certain coastlands of Calabria even before Asad b. al-Furāt [g.u.] landed in Sicily in 272/827, thus providing the Muslims with a base for military operations against the Italian mainland.

According to Ibn al-Aḥir (M. Amari, *D.S.S.*, Leipzig 1857, text 228), followed by Ibn Khaldūn (*ibid.*, 449), the first serious operation against Calabria took place in 225/839-40. With the capture of Messina in 228/842-3, it became easier for the Muslims of Sicily to undertake devastating raids and lengthy sieges, by means of which they were able to keep the Calabrian territory under continual threat from their incursions. This state of affairs lasted until the time when Constantinople decided to take the offensive and operations for the recovery of this region were entrusted to Nicephorus Phocas, who in 272/885-6 inflicted severe losses on the enemy. The Saracens, however, speedily counter-attacked. Possibly encouraged by the traditional hostility in southern Italy between the Lombard princes and the Byzantine imperial government, they managed in the course of the following three years to assemble in Sicily a fleet meant for attacking Calabria. Operations began in 275/888, and ended in the waters of Milazzo by the rout of the Byzantine army, the sack of the town of Reggio and the resumption of the raids, hence forth continuous, into the interior of Calabria.

However, it was at the beginning of the 4th/10th century that the Muslim offensive grew more violent, under the stimulus of the savage Aghlabid prince Abū Ishāq Ibrahim, who had been compelled, as a result of his unbridled despotism, to abdicate in favour of

his son 'Abd Allāh (see AGHLABIDS); in order to avenge his misdeeds, he undertook a "holy war" in Sicily and Calabria, where he wrought, without any scruples, enormous devastations, attacking persistently Cosenza, before whose walls he died in 289/902.

The first Kalbid (g.u.) ruler to resume military operations in Calabria with both regular land and naval forces was al-Ḥasan b. 'Alī, who captured Reggio in 339/950 and built there a mosque, which was however diverted from this usage after only four years; two years later, the same ruler gained a great victory over the Byzantine forces beneath Gerace.

The sequence of raids, sieges and movements of resistance on the part of the Christians continued until the point when, in 372/982, the Emperor Otto II decided to end this situation by simultaneously attacking both the Muslims and the Byzantines, whose troops, in this state of affairs, helped each other against the Frankish ruler. The latter's troops gained an initial success, but had to flee when his army was defeated before Stilo. In the period between this defeat and the occupation of Calabria by the Normans towards the middle of the 5th/11th century, the Calabrian region was once again the scene of clashes (in the course of the naval battle before Reggio in 393/1005, the Pisans inflicted a defeat on the Muslims), of unusual ententes between Christians and Muslims, and of exhausting trials for the local population, which suffered violent raidings and incursions and was never able to benefit from a stable Muslim régime which, in other places and in more favourable circumstances, was often the mediating force for the transmission of the genuine values intrinsic in its culture.

Bibliography. The treatise of the greater part of the Arab geographers (above all, al-Idrīsī), chroniclers and historians, which involve Calabria, may be found in M. Amari, *Biblioteca arabo-sicula*, Leipzig 1857, 1st Appendix, Leipzig 1873, and Appendix, Leipzig 1887, and *Storia dei Musulmani di Sicilia*, ed. C. A. Nallino, Catania 1933-9 (cf. the index v.v. Calabria, Reggio, Bruzzano, Gerace, Stilo, Tiriolo and Cosenza).

(U. RESHTAKO)

KILLIZ, a town of northern Syria, situated to the north of Aleppo between the two rivers 'Afrin and Kuwayk, north of Aḥlāz and on the road from Aleppo to 'Aynṭāb. It was apparently known to the Assyrians, since a letter in cuneiform script (Harper, no. 1037, Brit. Mus. K 13073, obv. 3) mentions a town *Ki-li-zi*. In Roman times, Killiz was called *Cilina sive Urmagiganti* (*Itin. Ant.*, ed. Pinder-Parthey, 24). In the mediaeval period it seems to have been of no importance. It is mentioned by Ps. Denys of Tell-Mahrē at the time of the revolt against the Patriarch Dionysius in 817. One should read Kilis instead of Kalaz or Shalaz in Bar Hebraeus, *Hist. eccl.*, ed. Abbeloos-Lamy, i, 339, 342, and Killiz instead of Haliz in Michael the Syrian, *Chron.*, 579, ed. Chabot, lii, 23.

The Arab geographers do not seem to mention Killiz. Yāqūt is somewhat confused. His Killiz (iv, 158, ed. 168) refers to somewhere which he places near Samayāt or Samosata, but his Killiz (iv, 299) really does mean our Killiz, a town in the *nāhiya* of 'Aḥlāz (Aḥlāz) between Aleppo and Antich, and he believes that it should be written Killiz. The place in the region of Samosata is probably not Killiz but al-Kalis or al-Kalis, which Kudāma Ḥas among the frontier settlements of Diyar Bakr and which Ibn Hawqāl, 196 (1st edn., 131) places on the May-

yāfārikha-Malāṭya route, and which is consequently not near to Samosata/Sumaysāt but to Shīnshāt (on this al-Kālīs, see Markwart, *Südarmanien*, 249-50).

Killiz and Nargī Killis are mentioned in verses of Abū Firās (in regard to Sayf al-Dawī's campaigns), which Yāqūt also cites (*Dīwān*, ed. S. Dahhān, 115, v. 128, 150, v. 137). Since his successor Abū 'I-Ma'ālī Sa'īd al-Dawī neglected to pay tribute owed to Byzantium according to the treaty of 359/969, the Domesticus Bardas Phocas led an expedition into Hamdānī territory, stormed Killiz and carried off its inhabitants into captivity. At the time of the Crusades, Killiz fell within the Frankish territories, no doubt after the capture of A'ḏāz by Roger of Antioch in 1118-19, for in 1124 the Turcoman amir Balak, who had become master of Aleppo, attacked A'ḏāz and his troops laid waste the region of Killiz. Killiz presumably fell into the hands of Nūr al-Dīn at the same time as did A'ḏāz, *ibid.*, in 1150.

Although Killiz is some distance away from the important meeting place of routes near A'ḏāz, it has nowadays collapsed A'ḏāz in importance. The present town is in Turkey (see *Guide bleu* under Killiz), and in 1948 had 24,000 inhabitants; Cuinet had given 20,000 in 1891, 15,000 of which were Muslims. The town was in the 10th/16th century the residence of the Druze Jumblatt family (see *جبلات*). According to Hartmann, ancient Killiz was the modern Tanizim Khān, where can still be found enormous piles of stone, whilst the little garden lies Baghbesi, 20 minutes' journey to the east of Killiz, is traditionally pointed out as being the ancient site of the town or at least of part of it, since it is assumed that lies contains the name Killiz, and there are at that site traces of an ancient settlement.

KILWA, the name of various localities and islands of the east coast of Africa, amongst which should be mentioned KILWA RIVERINE, on the mainland (8° 45' S.) about 140 miles south of Dār al-Salām (Dm es Salam), and in particular, the QUISOLO of the Portuguese (Kulwa in Ibn Battūta, ii, 192 ff., tr. Gibb, ii, 379 ff., and in the ms. B.M. Or. 2666, but Kilwa in Yāqūt s.v.). This last is today called KILWA KISAWANI, and is situated on an island near to the Tanzanian coast, 150 miles south of Dār al-Salām (8° 58' S., 39° 34' E.). It is the site, covering about one km.², of the capital of a region

which stretched from the Rufiji River to Sotola in mediaeval times and was the greatest of the Islamic trading states in East Africa.

Barros, *Da Asia*, 1552, preserves an anonymous abbreviated *Chronica dos Reys de Quiloa*, composed perhaps before 1507; an independent 16th century *Kilwa al-Sulwa fi al-hikmah Kulwa*, by an anonymous Shī'i author, survives only in B.M.ms. Or. 2666, dated 1862. Neither is complete. A 19th century Swahili *History* is of little value. Coins of at least seven rulers are certain, and with them, Ibn Battūta and Muhammad al-Fāsi sustain the historicity of the documents. After 1500, numerous accounts occur in Portuguese and French sources. In 1960-3 H. N. Chittick excavated the chief buildings.

The chronology is controversial. Chittick's dating from the text of Barros of some fifteen rulers must be regarded as unacceptable. He dates the earliest occupation to ca. 800. The finds agree well with the documentary sources as they stand. They describe a dynasty of "Shīrāzi" settlers from the Gulf established ca. 957. The founder, 'Alī b. al-Husayn, bought the island from the preceding pagan ruler, marrying his daughter. For two centuries the expanding trading centre was often at war with neighbouring islands. In the 12th century it acquired the monopoly of Sotola's gold trade with its hinterland; its former governor, Dāwūd b. Sulaymān, was Sultan of Kilwa ca. 1131/70, and "master of the trade" of Pemba, Zanzibar, Malila and the mainland. Essentially, it was an entrepôt trade serving Arab Indian Ocean routes, in gold, ivory and some slaves, against imported textiles, beads, and Near and Far Eastern ceramics. Under Sulaymān b. al-Hasan, ca. 1170-89, many important buildings were erected in a new style. 'Alī b. al-Hasan, otherwise unrecorded, issued the first coinage in the late 12th century. About 1294 Mahdī al-Sayyid succeeded the original dynasty, possibly by female descent, Ibn Battūta visited Kilwa in 1331: the people were black, orthodox Shī'īs, and devoted to *ghīrah* against mainland unbelievers.

Vasco da Gama sailed past Kilwa in 1498. In 1500 Pedro Alvarez Cabral was the first Portuguese to levy tribute. Francisco d'Almeida took it by storm in 1505. Contemporary accounts attest its wealth. A Portuguese fort controlled it until 1522: its economy was ruined by the Portuguese seizure of the Sotola trade in 1505. A population of perhaps 20,000 in 1500 had already dwindled to about 4,000 by 1587, when marauding Zimba massacred 3,000 inhabitants. Kilwa never recovered. After the 'Umayyid capture of Mombasa from the Portuguese in 1698, Kilwa also was made tributary to 'Umayyid. In the 18th century the slave trade developed greatly, but Zanzibar was the main entrepôt. Zanzibar finally absorbed Kilwa in 1843, deporting the last sultan. When Germany acquired the mainland in 1886, some surviving royalties threw their records in the sea, lest they fall into infidel hands.

Walker, in *EI*² Suppl., and in *Num. Chron.* (1926, 1939); Freeman-Grenville, *Num. Chron.* (1924, 1927, 1965, 1971), and *The French of Kilwa Island*, 1963; H. N.

Chittick, *Kilwa: an Islamic trading city on the East African coast*, Nairobi 1974, with detailed bibliography; B. G. Martin, *Arab migrations to East Africa in medieval times*, in *Internat. Jnl. of Afr. Hist. Stud.* (1975); S. A. Rivi, in *Salāḥ Ḥamūdū and Noel King, Ibn Baṭṭūṭa in Black Africa*, 1975; R. W. Beachey, *The slave trade of Eastern Africa*, 1976; see also the Bibl. given by J. Walker in *ET*, Suppl., s.v. (G. S. P. FREEMAN-GRENVILLE).

AL-KILY, also **AL-KILĀ**, according to Abu 'l-Ḥasan al-Libhānī also **al-kīl** (see al-Dīnawarī, *The book of plants*, ed. B. Lewin, Wiesbaden 1974, 170, § 643); the word is derived from *arimaḥ kilyā*, potash, potassium carbonate (K_2CO_3), but also *soḍā*, sodium carbonate (Na_2CO_3) (both materials were not clearly distinguished, therefore the Arabic term is kept in what follows.) *Al-kily* thus indicates the salt which it won from the ashes of alkaline plants, but is also confusingly used for the ashes themselves and the lye. As synonyms are given *ḡabb al-ṭayfar* and *ḡabb al-ṣadīḡa* (Ibn Maḡmūn, *Sharḥ aṣmā' al-ṭibbīyya*, ed. M. Meyerhof, Cairo 1940, no. 345). The plants or families of plants *rimḡ* (Haloscyon articulatum Cav.) and *ḡamḡ* (Chenopodiaceae) serve as the standard plants employed. According to Abū Ḥanīfa al-Dīnawarī (op. cit. 104, § 411 = *LA*, s.v. *ḡ-ṭ-y* = Ibn al-Bayṭār, *Djāmi'*, IV, 31) the best potash is won from *al-ḡurud* (Arthrocnemum c.g. Sediditla), the so-called "potash of the dyers" (*kily al-ṣabbāḡīna*). The other sorts sufficed for the fabrication of glass. The extraction of *kily* is concisely but accurately described by al-Layṭī, the editor of the *K. al-ʿAyn* of al-Ḳhālī b. Aḥmad al-Fārīdī (d. ca. 1207/86): the plants *al-ḡadd* (Arthrocnemum c.g. *Salicornia*) and *al-rimḡ* are burnt while green; the ashes are sieved with water which then consolidates into *kily* (see *LA*, s.v.).

Kily is used for various purposes: in the absence of soap (*ṣābūn*), clothes are washed with it (see *LA*: Yāḡūt, II, 465). Chemists used it to manufacture pungent lyes (Muḥammad b. Zakarīyāʾ al-Rāzī, *K. al-Asrār*, ed. M. T. Dāmūsh-Pārzhūb, Tehran 1964, 76, 108 f.; J. Ruska and K. Garbert, *Vorschriften zur Herstellung von scharfen Wassern bei Gicht und Rist*, in *Ist.* xxv (1939), 1-34).

A prominent part is played by *al-kily* in the manufacture of glass. It is melted together with sand and magnesia and thus produces the "substance of glass" (*ḡawhar al-ṣafīḡī*, Naṣīdī, *Murāḡī*, II, 407). Above all, it happens that the glass easily absorbs the various colorations (see Dimashqī, *Nuḡḡat al-dahir*, ed. Mehren, 80; J. Ruska, *Das Buch der Alunne und Salze. Ein Grundwerk der spätlateinischen Alchemie*, Berlin 1935).

Because of its biting, burning and purifying effect *al-kily* is used in medicine to treat skin diseases like vitiligo (*ḡalak*), leprosy (*ḡaraz*), scabies (*ḡjarab*) and also wounds and sores (*ḡirūḡ*, *ḡurūḡ*). Morbid growths are also etched with it (Naṣīdī al-Dimashqī, who lived in the time of Ḥārūn al-Raṣīd, in Ibn al-Bayṭār, IV, 31; 'Alī b. Rabban al-Tabarī, *Firdaws al-ḡisḡa*, Berlin 1928, 322; Pseudo-Ḥabīb b. Kurra, *K. al-Dhakhīra*, ed. G. Sobhy, Cairo 1928, 214; Ibn Sīna, *Kānūn*, Rome 1593, I, 248; *The medical formulary of al-Samarqandī*, ed. M. Levey and N. al-Khaleedy, Philadelphia 1967, 148; Kāzwinī, *ʿAḡḡāḡ*, 231). Many people apply *al-kily* and vinegar on scorpion stings (Ibn Qutayba, *ʿUyūn*, II, 202).

KIMĀK (in the texts usually *Kimāk*, often wrongly vocalised *Kaymāk*), an early Turkish people living in western Siberia on the lower course of the Irtysh River and on its tributaries the Irtish and Tobol, possibly as far north as the confluence of the Irtysh and Ob and as far west as the Ural Mts.; they are mentioned in Islamic sources from the 3rd/9th century onwards.

The most detailed accounts of the *Kimāk* and their territories are in the anonymous *Ḥudūd al-ʿĀlam* (begun 372/982-3), tr. Minorsky, 99-100, 304-10, and in Gardīzī's *Zayn al-akhbār*, ed. 'Abd al-Ḥayy Ḥabībī, Tehran 1347/1968, 257-9. There is considerable confusion in these and other sources on the localisation of the *Kimāk*, possibly reflecting a major historical displacement of the tribe or else a confusion between their winter and summer pastures; but there must certainly have been confusion from the fact that the two major sources above believed that the Irtysh flowed westwards through the Urals, becoming the Kama and joining the Volga in Bulghār. The *Ḥudūd* places the *Kimāk* to the west of the *Kirghīs* and to the east of the *Kipčak* (q.v.), but all the sources agree that to the north of them lay the forest lands inhabited by savage peoples who exchanged their goods by dumb barter. The fur-trapping *Kirghīs* tribe of the K.s.y.m. (* *Kishtim*?) mentioned by the *Ḥudūd* as living near the *Kimāk* may have been Samoyedes or a Yenisei Palaeoasiatic people (see Minorsky, *Sharaf al-Dīn ʿAlī Marwazī on China, the Turks and India*, 107-8). The *Kimāk* also had connections with the Oghuz to the south of them, and are said to have visited the Oghuz pasture-grounds in summer, possibly explaining why Muḡaddasī, 274, says that Sawrān on the middle Sir Daryā is a frontier post against the *Qhuzz* and *Kimāk*.

A legendary account of *Kimāk* origins given by Gardīzī mentions seven component groups, such as the Imi, Imāk, Tātār, Bayānār, *Kirghīk*, etc., and in his section on the Yagmal tribe (ed. Ḥabībī, 260), he gives to the chief of the *Kimāk* the titles *ḡad* and *ḡudḡk/ḡaluk*. The *Ḥudūd*, however, mentions that the ruler of the *Kimāk* is called the *Ḳāḡān* and has under him eleven subordinate chiefs. Two routes northwards to the *Kimāk* country from the northern fringes of Transoxania are mentioned, one from Tarāz or Talas, taking 80 days by swift horse (Ibn Khuradādhbih, *Kudāma*, the *Ḥudūd*), and another more westerly route from Yung-kant or Dih-i Naw near the Sir Daryā mouth (Gardīzī). The country of the *Kimāk* was excessively cold, so that the *Kimāk* lived in subterranean dwellings in winter and hunted on skis. They were in part pastoralist nomads, but were also trappers of sable and marten furs, which were exported to the Islamic lands; also mentioned is the *ḡisḡanḡ* hardwood of the forest zone, brought from the *Kimāk* lands and used for making bowls and such-like table ware (see *Dīḡāḡ*, *Bukḡad*, ed. Ḥādīdī, 54, tr. Pellet, 77: *ḡisḡanḡ* (iyya *ḡimāk* iyya)). The only town, or rather encampment, of any signifi-

cance, was the Khākhān's summer residence, Namakiyya (*Yimakiyya?). The Kimāk worshipped fire and water and venerated the Irīsh; according to Abū Dulaf al-Khazraǧī in *Yāqūt, Buldān*, iii, 448, the Turks' "magnetic rainstone" belonged to the Kimāk.

The main significance of this remote people, who can never as such have been Muslim and who impinge little on Islamic history, is that the much more important people of the Kipčak (q.v.), the later Comans or Polovtsi, apparently sprang from them and eventually overshadowed them. By the late 5th/11th century, the Kimāk, whom Maḥmūd Kašgharī, ii, 22, tr. Atalay, iii, 29, names as the Yamāk (*Yimāk), were reckoned as a group of Kipčak, but different in origin; it is clear that the remnants of the earlier Kimāk were now being absorbed into the rising tribal confederation of the Kipčak. In the ensuing period, the name "Kimāk" fades into oblivion, although we belatedly hear of the Yimāk in association with the Kipčak and Kaḡhīl (q.v.) at the time of the appearance of the Mongols; thus Nasawī, *Siyaṣat Sulṭān Dūlāl al-Dīn*, tr. Hoodas, 44, 72, says that the Kh̲wārazmīyāh's mother Terken Khātūn was of the Bayaṭut branch of the Yimāk.

KIMĀR, the name given in Islamic geographical and travel literature to Khmer or Cambodia. The geography and political organisation of South-East Asia early became of interest to Islamic scholars because of trade links with Further India and China, and information was brought back by, *inter alios*, Arab and Persian merchants and navigators. Some of this information relates to the Khmer kingdom on the lower Mekong River, an outpost of Indian cultural and religious life, which lasted from the beginning of the 9th century to the middle of the 13th century (see R. Grousset, *Histoire de l'Extrême-Orient*, Paris 1929, 559-68, 567-8; G. Coedès, *Les États khmoues d'Indochine et d'Indonésie*, Paris 1964, ch. vii, § 1, viii, § 1, ix, § 1, x, § 1, xi, § 1, Eng. tr. *The Indianised states of Southeast Asia*, Honolulu 1968).

Thus Ibn Khurraḍādhbih (mid-3rd/9th century), 66, 68, mentions Kūmar as a place on the route to the Far East. Some decades later, Ibn Rusta, 121-3, tr. Wiet, 148-50, devotes considerable space to the customs of the kings of Kūmar, their justice, their severity against fornication, adultery and wine-drinking, and he remarks on the flourishing state of the ascetic and heretical life there; Muslim merchants were welcomed and not molested, and one Islamic funerary inscription has in fact been found in Cambodia (see *Kirāyat*, 8, South-East Asia). Al-Mas'ūdī, *Murāǧī*, i, 169 ff. = § 178 ff., has a lengthy anecdote on the relations of the king of Kūmar and the ruler named as al-Maḥarīǧī, the usual designation in the Islamic sources for the ruler of the kingdom of Śrīvijaya (Zābaǧī, Zābiǧī), centred on Palembang in Sumatra but also controlling the Malayan peninsula. Ibn Rusta names as his source one Abū 'Abd Allāh Muḥammad b. Ishāk who had resided for two years in Kūmar, probably early in the 3rd/9th century under the great king Jayavarman II Paramisvara of Angkor (802-50); information from this authority came first to Ibn Khurraḍādhbih, who referred to Kūmar only cursorily, and was eventually

utilised even by al-Iḥrīq, see S. Maqbul Ahmad, *India and the neighbouring territories in the Kitāb Nuḥbat al-mushtāq fī khatṭiq al-ḥāǧiq of al-Sharīf al-Iḥrīq*, Leiden 1960, 29, 142.

The *Ḥudūd al-'ālam* (371/982), tr. Minorsky, 86-7, mentions three great kingdoms of South-East Asia, sc. Kāmarūn (Kāmarūp, Assam [see Assam and Kāmarūp]), Šant (Čampa, southern Annam or South Vietnam) and Kūmar, and it states that two of the most precious products of Kūmar were elephants' tusks and aloes wood. The aloes wood of Kūmar (*ʿūd kumārī*) is much-mentioned in Islamic sources, as is that of Čampa (*ʿūd paṃpī*), but there is considerable confusion in the sources about the origins of the different kinds of aloes wood stemming from eastern India and South-East Asia, with a particular uncertainty over the wood of Kūmar and that of Kāmarūp. Moreover, Ibn Baṭṭūṭa, iv, 240-1, 241-2, when speaking of Dīšwa (possibly Sumatra, since Sumatra and Java were frequently confused or even regarded as one island by the Muslims) mentions Kūmarā as part of that land (*min ba'ḍi bilādihā*) and the Kūmarī variety of aloes wood as being particularly fine. See, in regard to these problems, the discussions about the various varieties in Ya'qūbī, *Bulḍān*, 367-8, tr. Wiet, 238-9; and also Maqbul Ahmad, *op. cit.*, commentary, 128-9, and J. D. Latham, *Arabic into medieval Latin: Letter C, M.L.D.*, in JSS, xxi (1976), 151-7 (on the linguistic problems involved).

Ferrand, *Relations de voyages et textes géographiques arabes, persans et turcs relatifs à l'Extrême-Orient du VIII^e au XVIII^e siècles*, Paris 1913-14, i, 229-30 (= Abū Dulaf al-Khazraǧī's information on Kūmar), and index s.v. "Kūmar". (C. E. Bosworth)

KIMĀR is the most common Islamic term for gambling, which is strictly forbidden according to Muslim law. The prohibition goes back to the references to *mayyis* (q.v.) in Kur'ān, II, 219/218, and V, 90/192 f. *Mayyis* was expressly equated with *kimār* in general, supposedly already by 'Abd Allāh b. 'Umar (cf. al-Bukhārī, *al-Adab al-mufrad*, Cairo 1375, 325). Voices querying this assumption, and the assumption that the Kur'ān had the legal classification of "forbidden" in mind, were rarely raised, and then only for the sake of argument. For all we know, the Muslim ban on all gambling has existed since the time of the Prophet in the same form as later on, and has remained in force throughout. Gambling was conceived as a transaction in which property changed hands arbitrarily and unproductively, something falling also under the injunction of Kur'ān, IV, 29/53, against frivolous and worthless (*biḥīl*) business transactions. Economic theory, and economic realities, tended to favour a strict view of what constituted gambling.

According to Muslim sources, universal and reckless gambling was endemic in pre-Islamic Arabia. Although the Muslim attitude toward the *Dīshābiyya* no doubt contributed to this view, gambling was probably widely practised, and in a variety of ways, among which the drawing of arrows and the stake racing of horses and camels were the most prominent. The actual *mayyis* game, as painstakingly reconstructed from stray verses of poetry by later scholars, principal among them Ibn Kutayba, *al-Mayyis wa-l-ḥidāḥ* (Cairo 1342), is presented to us as a kind of ceremonial lottery organised for charity.

Several gambling stories lead into the time of the Prophet. Thus, wagering with unbelievers by Abū Bakr "before gambling was forbidden" is mentioned in the Kur'ān commentaries in connection with Kur'ān, XXX, 1-4/2-3; it appears to be a rather old story, though hardly historical. Another, no less famous story, reported in connection with the battle of Badr, that of Abū Lahab gambling with al-'Āṣ b. Hishām, may also be old, but its connection with gambling can be shown to be mostly a later elaboration. The Kur'ān clearly indicates the social and religious undesirability of gambling: it is something causing quarrels, and it interferes with the performance of worship and prayer. However, the commentators were at a loss to cite any particular occasion for the prohibition. While there is much room for speculation, no convincing historical explanation can be offered, unless there is some significance in the fact that the *aswāb* literature credits a contemporary of the Prophet, al-Aḥwā' b. Hābis [q.v.], with being the first to forbid gambling.

In spite of its being prohibited, gambling, or what was considered as such, seems to have always flourished everywhere in the Muslim world and at all levels of Muslim society. Lotteries proper appear to have been unknown in Islamic times, and wagering on unstaged events is not much attested (cf. for instance, al-Rāghib al-Iṣṭihānī, *Mukaddarāt al-udabā'*, Bulak 1266-7/1869-70, I, 127, 142). Favourite outlets for the gambling instinct were, among board games, backgammon (*nard* [q.v.], played with six-sided dice, and, among sports, horse racing (see FURDUSIYA). Other board-games, such as *menes* (*ḥirḥ*) and "fourteen" (*shibḥ al-kadab/ṣarḥa'ala* 'ashara), could involve stakes; chess (*shatranj* [q.v.]) and draughts (see *ḥarabāṭ*), when played for stakes, fell into the category of gambling. Important sports suspected of being devices for gambling were archery (*ṣumay al-muḥabb* [q.v.]) and pigeon flying (see *ḥamām*), as well as competitions such as footracing, swimming (*ḥimām*), or, more significant as an organized activity, wrestling (*muḥāra'a*). Fighting games of animals, looked upon with disapproval on the basis of the Prophetic warning against inciting animals against each other (*ḥabrīḡ*, *Concordance*, I, 445b, 64-66) and humanitarian principles, included cock (see *ḥir*) and dog (see *kalā*) fights. Playing cards (*ḥanḡif/ḡa* [q.v. in Suppl.]) are attested since Mamlūk times (cf. L. A. Mayer, *Mamlūk playing cards*, ed. R. Ettinghausen and O. Kurz, Leiden 1971). All these activities, of course, could be, and were, undertaken and enjoyed for their own sake without any accompanying gambling, and the gambling habits connected with them differed considerably. According to Ibn Taymiyya, *Fatāwā* (Cairo n.d. [1384-6]), IV, 308, *nard* was mostly played for stakes, while chess usually was not. The gambling that did take place was commonly in the form of stakes put up by the participating players themselves or, in the case of sports competitions involving animals, by the owners of the animals. However, although our information on this point is most deficient, it is clear that spectators, too, engaged in gambling on the outcome of the games and sports they watched.

While gambling by outsiders was clearly and indisputably illegal, the main problem for jurists was the determination of what constituted gambling by virtue of the manner in which the stakes were put up. The *ḥadīth* expressly permitted competitions with camels (*ḥaḡḡ*), horses (*ḡir*), and arrows (*naḡf*) (*Concordance*, I, 480a, 16-18), and there are stories establishing precedents set by the Prophet. Later

jurists were inclined to deny the legality of stakes in connection with any other kind of sports contests and, in particular, board-games (of which *nard* was often declared illegal, even when played without stakes, because of its dependence upon dice). However, the pervasibility of the legal sports was rationalised on the ground of their usefulness for military preparedness, an argument which, in practice, could be extended to other sports, even though jurists were usually hesitant to do so. The crucial question of how stakes, where they were at all admissible, could be legally established, was considered under three basic aspects: the establishment of stakes by a non-participant such as, for instance, the government, by one of the participants, and by both (or all) participants. The first two cases were legal (with some doubts in the second case as to what is to be done with the stake if the donor himself is the winner). The third constituted illegal gambling. In order to make it legal, the presence of a "legaliser" (*muḡallī* [q.v.]) was required, i.e. the participation of someone who did not contribute to the stakes. There exists a *ḥadīth* to this effect (*Concordance*, II, 402a, 15-17, etc.). However, the legality of this procedure was debated. Mālik personally did not admit the device of the *muḡallī*, with the consequence that later Mālikites differed in their attitudes. The Hanball Ibn Taymiyya and his followers rejected it forcefully. Legal attitudes towards potential gambling games in general can be said to cut across school lines. Shāfi'ism, whose basic text on games was *Kutub al-Uḡm* (Bulak 1324), VI, 213, was sometimes attacked, with little justification, for its alleged somewhat more lenient attitude. It should also be noted that by and large the legal literature paid comparatively scant attention to gambling, the reason being not so much the scarcity of gambling activities as the clearest stand of the law as to its illegality. Occasionally we come across interesting statements, such as that one by the Hanafī Kādīhān, *Fatāwā* (Calcutta 1835), IV, 387, suggesting that a Muslim could legally gamble with non-Muslims in non-Muslim territory.

The official handling of gambling offenders was determined by the peculiar nature of the circumstances under which gambling took place. Sporting events were mostly held in the open, but much other gambling went on in private. In the larger cities, there were gambling casinos (*dār al-ḡimr*, *ḡimr-ḡāna*, and other terms), where gambling was encouraged even to the extent of tempting losing gamblers with offers of loans (cf. Ibn Sa'ūd, *Maḡrib*, ed. and tr. K. L. Tallqvist, Leiden 1899, 30/63). Ordinary taverns, as later on the coffee houses (see *ḡahwa*), also had the reputation of allowing gambling (in connection with board-games) on their premises. These could be raided, if local authorities saw fit to do so. However, unless public annoyance resulted, or complaints were lodged, the legal authorities, presumably represented primarily by the office of the *muḡallī*, had little power or incentive to interfere with voluntary activities undertaken by mutual consent in the privacy of the home. If brought before the authorities, gamblers were liable to discretionary (*ta'ḡir* [q.v.]) punishment. Jurists considered habitual gamblers as having forfeited their *ḡadila* and their capacity to function as witnesses, thus decisively downgrading their social and legal standing. Social degradation was commonly associated with gambling, at least in literature and theory. In real life, this probably affected only those who were unable to afford the losses incident to their gambling.

Excessive gambling, though evidently not un-

common, is not frequently attested. We hear about the gambler in moderate circumstances who brought ruin upon himself and who neglected his family (cf. Ibn 'Inaba, *ʿUndat al-filāh*, al-Nadīj 1361/1965, 216), or the poet al-Tallāʿī (q.v.) whose compulsive gambling made him a liability in court circles and kept him from advancement, or the—fictitious—Šāfi who intentionally freed himself from all worldly possessions by gambling them away (cf. H. Ritter, *Das Meer der Seele*, Leiden 1955, 202). Most gambling probably involved the minor losses that the losers were somehow able to absorb. It lies in the nature of gambling activities, especially where they are illegal, that reliable statistics with respect to them are unobtainable, and we have, of course, nothing to go on in the way of statistical information for the Muslim Middle Ages. We can only guess that gambling as such, common as it was, was nevertheless in no way a major economic factor or disruptive social force.

In addition to the legal injunction against it, the social stigma it carried, and its unsuitability for the economic environment created by Islam, gambling also presented a challenge to the metaphysical presuppositions of monotheism. Gambling was felt to be a manifestation of trust in blind fate and of an attempt at interference with, and thus disrespect for, the divine government of the world. A clever story, circulating since at least the 3rd/9th century (cf. in particular, Abū Zayd al-Balḡī, *Kisālat al-ḥimā waʿl-nard waʿl-ṭharāṭif*), praised *nard*, with its reliance upon chance, as representative of the orthodox view of predetermination and trust in God, and blamed chess for the freedom of choice it requires of the player as something akin to Muʿtazilī doctrine. The story appears to have been meant originally as the opposite of what it seems to suggest, namely, as an argument for the superiority of the Muʿtazilī view of free will, while taking a dim view of gambling as supporting the idea of blind chance in the realm of metaphysics.

Thus the factors that in Islam fought against the human propensity for gambling were numerous. They were, moreover, reinforced by the generally difficult attitude toward "play and amusement" (*liʿb—lahw*) in all forms professed by religious scholars and intellectuals. This did not eliminate gambling in Islam but, to all appearances, succeeded in keeping its impact upon society largely under control.

Bibliography: T. Hyde, *De ludis orientalesibus*, Oxford 1689-94; *Met. Renaissance*, 382-4 (Eng. tr. 403-6). References to gambling are as sporadic in the modern scholarly literature as they are in the primary sources. A first attempt to bring the available information together has been made by F. Rosenthal, *Gambling in Islam*, Leiden 1975, which contains the full documentation for the present article. (F. ROSENTHAL)

AL-KIMYĀʾ, alchemy. The word is derived from Syriac *kimyāʾ* which in its turn goes back to Greek *χημία χημεία* "the art of casting or alloying metals" (see Liddell-Scott, *Greek-English Lexicon*, 1073). The Arabs believed that al-*kimyāʾ* was a loanword from Persian (Ibn Durayd, al-*Ḍawāʾir*), from Hebrew (al-Aḥḍāl) or from Greek and had the meaning of "artifice and acuteness" (al-*ḥīla waʿl-ḥudūd*), according to al-*Ḥaḍḍir* or "solution and division" (al-*taḥlīl waʿl-ḥaḍḍir*), according to Ibn Sallām, 12th/13th century. As synonyms of al-*kimyāʾ* were used al-*ṣanʿa* (for *ποίησις*), al-*ṣanʿa al-ḥāḥiyya* (for *ἡ τέχνη ἡχητή*), *ʿilm al-ṣanʿa*, al-*ḥikma*, al-*ʿamal al-ṣanʿi* (for *τὸ μέγα ἔργον*) etc. In abbreviation alchemy is

also called al-*ḥāḥ*, which serves also as pseudonym (see *W.K.A.S.*, I, 459b, 89 ff.).

The Arabs have defined alchemy more than once. Its task is to make gold and silver without falling back upon the corresponding ores (*ṣanʿat al-ghayāḥ waʿl-ḥidda min ghayr maʿdūnāt*, Ibn al-Nadīm, *Fihrist*, 257); it should lend colourings to the metals which they did not have before (Djābir b. Ḥayyān, *Textes choisis*, ed. P. Kraus, Paris 1935, 141), and it should alter the specific qualities (*ḥaḥawīḥ*) of the mineral substances so that gold and silver can be obtained through certain artifices (*ḥiyāl*; *Ḥaḥāḥīl*, *Takwīd*, ed. M. Bouyges, Beirut 1927, 270); through alchemy harm and poverty are done away with (Ikhwān al-*Ṣafāʾ*, Beirut 1957, iv, 286, 305). The theme of alchemy is therefore the transmutation of base metals into precious ones. And thus certain limitations are given: retrology and mineralogy do not belong to alchemy in the strict sense, although the alchemist must of course have an exact knowledge of minerals (as well as of animal and vegetable substances). In the same way, fabrication of glass and falsification of precious stones (see the *Papyrus Græco-Holmiensis*, ed. O. Lagercrantz, Uppsala 1913) belong no more to alchemy than metallurgical activities like extracting iron, gold and silver from their ores, so precisely and impressively described by al-Ḥamdānī (K, al-*Ḍawāʾir*, ed. C. Toll, Uppsala 1968). Nor does the technical chemistry of the craftsman, namely the manufacture of tints, colours and perfumes, come within the field of alchemy. The title *al-ḥimāʾ* al-*ʿūr* (ed. K. Garber, Leipzig 1948) which al-Kinḍī gives to his book on the falsification of perfumes is as metaphorical as the *Kimyāʾ al-ṣāʿda* with which the mystics entitled their writings (see *W.K.A.S.*, I, 515b). Finally, it should be mentioned that the notion of "pharmaceutical chemistry" did not exist in the Islamic Middle Ages. The often very complicated "compound medicines" (*al-ḍawāʾ al-musakhkha*) are prepared by the physician or the apothecary according to Galen's work *De compositis medicamentorum* or to the many *Akrābāḥīnāʾ* (q.v.) composed by the Arabs. There were of course points of contact between the various professions: the metallurgists and perfumers worked with the same instruments and appliances as the alchemists. Some of the latter also excelled in the related sciences, like Maḥammad b. Zakariyyāʾ al-Rāzī, who classified the minerals. Alchemy, however, the art of transmuting metals, has to be singled out from the other more technically oriented professions because of its theoretical foundations.

Alchemy originated among the Greeks. In order to prevent misunderstandings, it should be mentioned that the fourth book of Aristotle's *Meteorology* (the genuineness of which is disputed) is neither a writing about chemistry in the modern sense of the word nor was it a starting-point for alchemy. It discusses only the primary qualities as causes of all changes in nature (see J. Düring, *Aristotle's chemical treatise Meteorologica, Book IV*, Göteborg 1944; H. Happ, *Der chemische Traktat des Aristoteles, Meteorologie IV*, in *Synthese, Festgabe W. Schneider*, Pfullingen 1965, 289-322). Ca. 200 B.C. Boethus of Mendes knew certain techniques of colouring, and such techniques, combined with neo-Platonic, gnostic and hermetic ideas (Stoic philosophy seems also to have had some influence) helped alchemy to assert itself in Egypt (H. Diels, *Antike Technik*, 2, Leipzig-Berlin 1920, 101-54). From the period between the 2nd and 3rd centuries A.D. (see F. Sherwood Taylor, *The origins of Greek alchemy*, in *Ambix*, I (1937), 30-47; J. Lind-

say, *The origins of alchemy in Greco-Roman Egypt*, London 1970) date a number of writings disseminated under the names of Hermes, Thoth, Agathodaimon, Cleopatra, Moses, Solomon, Mary, Jesus, Democritus (or Democritus), Zarathustra, Asanes etc. At the beginning of the 4th century these pseudographs are joined by the writings of Zosimos of Panopolis (= Akhmim [g.n.]), the genuineness of which is better vouched for. In the 5th century the neo-Platonic philosopher Alymiodorus and emperor Heraclius wrote also on alchemy. A not inconsiderable amount of these Greek writings were translated into Arabic, but we have no exact information about times and places of these translations. It seems however that the first were made towards the end of the 2nd/3th century and that the greater part of these writings came to the Arabs in the 3rd/9th century (D. M. Dunlop, in *JRAS* (1974), 6 ff., makes it clear that the assertion according to which a work of Zosimos was translated into Arabic already in 386/90, is false). It is possible that in some cases there may have been intermediary translations in Syriac (for Syriac alchemy, see R. Duval in M. Berthelot, *La Chimie au moyen âge*, 3, Paris 1893), but it is not clear whether Hunayn b. Ishāq [g.n.] and his pupils took part in the work of these translations. Most of the Greek writings have only been preserved in a very poor and fragmentary way. The oldest codex is Marcianus 499 dating from the 11th century (see M. Berthelot and Ch. E. Ruelle, *Collection des anciens alchimistes grecs*, I-III, Paris 1887-8; J. Bidez, F. Cumont et alii, *Catalogue des manuscrits alchimiques grecs*, I ff., Brussels 1927 ff.). Since the Arabic translations are thus two hundred years older, and the Arabs at that period still knew an essentially greater amount of Greek writings than we do at present, the oriental tradition is of the greatest importance. It is certain that the study of Arabic alchemical literature will bring to light Greek works which have been lost in their original language.

Unfortunately, Arabic alchemistic literature has remained until now still a *tabula inuestigata*. Very many manuscripts have been preserved, but only an extremely small part of their contents has been disclosed through catalogues or published. Consequently, it is not yet possible to sketch out a history of Arabic alchemy. In particular, the beginnings of this science in the 2nd/3th and 3rd/9th centuries are still largely wrapped in darkness. It may however be stated that already in the period in which the *Corpus Gabirianum* (end of the 3rd/9th—beginning of the 4th/10th centuries) and the works of Muḥammad b. Zakariyyā' al-Rāzī [g.n.] were compiled, an important literature must have come into being, whose authors might have been Greek, Egyptian, Jewish, Christian, Persian or Indian wise men and philosophers. This pseudographic literature uses to a great extent the same names that served early Greek alchemy as designations. Some writings are in fact translations of Greek works; others were composed directly in Arabic but are imitations of Greek examples. It should however not be assumed that all sentences of Greek wise men, quoted by the Arabs, are taken from specific writings which are ascribed to these wise men. It seems rather that some of them originate only from doxographical collective works.

Nevertheless, a great number of Greek notions are found in these writings. The etyma of the terms *al-kimiya'*, *al-pan'a al-ilāhiyya* etc. have already been mentioned above. The metals are called *al-ṣafṣā'*, corresponding to τὰ σίματα, quicksilver and sulphur are *al-arṣab* τὰ νεφελάρια. *Elkīr*, *al-*

alkīr is the loanword τὸ ἔργον, the distilling apparatuses *al-ṣafṣā'* and *al-arṣab* are derived from τὸ αἰθόλον and ὁ ἀμβλῆς, the processes *ṣafṣā'*, *ṣafṣā'*, *ṣafṣā'* etc. are adaptations from λεύκωσις μέλανσις, ἐγκύρῳσις, ἰωσις. In the same way a number of pseudonyms are imitations of Greek models, e.g. *al-ṣafṣā'* *ṣafṣā'* from ὑπεράφραγρος ἀντολόσις, *ṣafṣā'* *al-hammar* from ἀφροσύλῳσις, *ḥabib* *al-taḥṣīr* from ἑλὶον ἑκκυσσῳσις and *ṣafṣā'* *al-ṣafṣā'* from γόλα παρδενικόν (for other pseudonyms formed with *ṣafṣā'*, see *WKAS*, II, 25 ff.). To these are added whole theorems: *al-ṣafṣā'* *ṣafṣā'* *bi' ṣafṣā'* is the innumerable repeated ἡ φύσις τῆς φύσεως τέρεται, and *ṣafṣā'* *ṣafṣā'* *al-ṣafṣā'* *ṣafṣā'* *ḥabib* *al-taḥṣīr* *ṣafṣā'* corresponds to ἡ φύσις οὐδὲν ποιεῖ μάτην. All this shows without any doubt the origin of Arabic alchemy.

We thus possess a great number of Arabic writings, fragments and quotations in which our attention is caught by the names of Pythagoras, Archelaus, Socrates, Plato, Aristotle, Porphyrius, Galen, Democritus, Zosimos and Theophrastus, Secundus "the silent philosopher" and many others. Often Hermes Trismegistus [see *trismegistos*] is mentioned, who in the opinion of the alchemists was the first to speak about alchemy (*ṣafṣā'* *al-pan'a*, see *Fikrist*, 351). The writings attributed to him, *al-Risāla al-falāhiyya al-ḥabib*, *Risāla al-Sirr*, *Tadhīr Ḥimīr al-Harīmīya*, *al-Dhāḥira al-ṣafṣā'*, etc. have introductions in which in a legendary way is described how these texts were found in temples, caves and sepulchral vaults. The "Emerald table", a brief text full of symbols, was considered to be the key to the ultimate secrets of nature (see J. Ruske, *Tabula smaragdina*, *Ein Beitrag zur Geschichte der hermetischen Literatur*, Heidelberg 1926; M. Plessner, *Neue Materialien zur Geschichte der Tabula Smaragdina*, in *Isl.*, XVI (1927), 77-113). Sentences by Hermes are to be found in almost every Arabic alchemistic work (see e.g. H. E. Stapleton, G. L. Lewis, F. Sherwood Taylor, *The sayings of Hermes quoted in the Mā' al-Warāq of Ibn Umayl*, in *Arabica*, XI (1949), 69-90). Apollonius of Tyana (see *salūs*) is considered to be the intermediary of the hermetic wisdom. Under his name a big commentary on the "Emerald table", the so-called *Kutāb al-Sirr al-ḥabib*, an allegorical book on the seven metals, the *Kutāb al-Asmā' al-ṣafṣā'*, and other writings were disseminated. Agathodaimon [see *agathodaimon*] is also associated with Hermes. In the *Risāla al-Ḥadīr* he communicates before his death to his pupils the secret of alchemy. Finally they are joined by Cleopatra (see M. Ullmann, *Cleopatra in einer arabischen alchemischen Disputation*, in *WKAS*, IX, 141-149 (1971), 156-75). Mary the Jewess, the Persian wise man Dīdmānd and Ostanes, Nani, an Indian called Bīyān, Adam, Moses, Korah (Kārah) and many others, whose writings and sentences became known to the Arabs at a relatively early period. This largely still uninvestigated complex of the pseudographs was enlarged by the Arabs since the 3rd/9th and 4th/10th centuries and rendered even more opaque by stamping as alchemists the Umayyad prince ʿAlī b. Yazīd, the son-in-law of the Prophet, ʿAlī b. Abī Ṭālib, the *Imām* ʿAlī b. al-Sādiq [g.n.] and the mystics al-Ḥasan al-Baṣrī, Sulaymān al-Baṣrī, ʿAlī b. al-Muḥṣi and Abu ʿAlī al-Kāsim al-Buhārī [g.n.]. The alleged writings and doctrines of all these Greek, Persian, Jewish and Arabic authorities form the groundwork for the two large alchemistic corpora which came into being at the turn of the 3rd/9th and the 4th/10th centuries, namely the *Corpus Gabirianum* and the writings of

Muhammad b. Zakariyya² al-Rāzi (the mutual relation of these two cycles has been discussed by J. Ruska and K. Garsbers, *Vorschriften zur Herstellung von scharfen Wässern bei Gābir und Rāzi*, in *Isl.*, xzv (1939), 1-34). Dīlābir b. Ḥayyān [q.v.], who may have died ca. 196/812, is considered to be the author of the first work. Meanwhile, P. Kraus has proved that these writings cannot have originated before the second half of the 3rd/9th century and that a team of authors must be supposed (for this problem see also F. Rex, in *Isl.*, xlix (1972), 305-10; idem, in *Deutsche Orientalistik als Beispiel Tübingens*, Tübingen 1974, 86-8). Accordingly, the writings of the so-called Ibn Wahshīyya and the *Maḥṣaf al-ḡimār*, whose Latin translation carries the title *Turba philosophorum*, may have originated at the turn of the century. In the *Turba* a congress of alchemists is pictured, in which Pythagoras takes the chair and Archelaus records the minutes, while nine pre-Socratic philosophers present their doctrines (J. Ruska, *Turba philosophorum. Ein Beitrag zur Geschichte der Alchemie*, Berlin 1931; M. Plessner, *The place of the Turba Philosophorum in the development of alchemy*, in *Isl.*, xiv (1954), 332-6; idem, *Vorschristliche Philosophie und griechische Alchemie in arabisch-lateinischer Überlieferung. Studien über Text, Herkunft und Charakter der Turba Philosophorum*, forthcoming). In the 4th/10th century Muhammad b. Umayr [q.v.] was outstanding with writings of a hermetic-allegorical character, followed in the 5th/11th century by Muhammad b. 'Abd al-Malik al-Kābil, pseudo-Magīdī with the *K. Ruḥat al-fakīm* and Muhammad b. Dīḥrān. In the 6th/12th century the most important alchemists were the poet and statesman Ḥusayn 'Alī al-Tughrāṭī and the preacher in Fās, 'Alī b. Mūsā, called Ibn Arīf Ra'. Around the middle of the 7th/13th century, Abū Ḥ-Kāsim al-Simāwī (*Book of knowledge acquired concerning the cultivation of gold by Abū Ḥ-Kāsim Muhammad Ibn Ahmad al-'Irāqī*, ed. E. J. Holmyard, Paris 1923) worked in 'Irāk, and in the 8th/14th century the Egyptian Aydamir b. 'Alī al-Dīlādī [q.v.] produced an unprecedented number of books in which he summarised and commented upon everything which had been written before him on alchemy and magic. In the following period a number of authors still further appear who are of importance partly as compilers, partly as producers of brief original writings, like al-Landī (= 'Alī Celabī), al-Maḥmūdī, Bīl Muḥḥūḡ al-Maghribī and others. In the second half of the 11th/17th century Šūhīb b. Naṣr Allāb b. Salīm, the court physician of sultan Mehemmet IV (1058-99/1648-87), tried to introduce into Arabic medicine the chemical concepts of Paracelsus, which gave the alchemists the chance to set about new ways. They did not however avail themselves of these; on the contrary, they continued until recent times the ancient fruitless search for the "philosopher's stone" (G. Salman, *Archives Marocaines*, vii (1906), 451 ff.; C. Snouck Hurgronje, *Mekka*, ii, The Hague 1889, 215, Eng. tr. J. H. Monahan, Leiden-London 1931, 262 ff.; E. W. Lane, *The manners and customs of the modern Egyptians*, ch. xli; C. Barbier de Meynard, *L'Alchimiste, comédie en dialecte turc aséri*, in *J.d.*, 8^e série, vii (1886), 5-66; Osman Nevres, in O. Rescher, *Beiträge zur arabischen Poesie*, iv/2, Istanbul, n.d., 92 ff.).

In the Middle Ages Arabic works were translated into Latin. We have in Latin versions the *Tabula smaragdina*, the *Tabula chemica*, the *Practica Mariae prophetissae*, the *Liber de compositionibus alchemias* of Morienus (translated by Robert of Chester in 1144;

partly translated by J. W. von Goethe, *Die Schriften zu den Naturwissenschaften*, Part 1, Vol. vi: *Zur Farbenlehre, Historischer Teil*, revised by D. Kuhn, Weimar 1957, 132 ff. Part 2, Vol. vi: *Ergänzungen und Erklärungen*, Weimar 1959, 439-41), the *Liber secretarum alchemias* of Calid, the *Liber de septinginta et alio* of Misericordiae of Geber (E. Darmstadter, *Ein lateinische Übersetzung des grösseren Kildā alrahma*, in *Sachoffs Archiv*, xvii (1925), 181-97) and many other works (see M. Steinschneider, *Die europäischen Übersetzungen aus dem Arabischen bis Mitte des 17. Jahrhunderts*, rept. Graz 1956, passim). It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy (J. Ruska, *Das Buch der Almane und Selse, Ein Grundriss der spätmittelalterlichen Alchemie*, Berlin 1935, 11). Thus they introduced a process which leads via Arnold of Villanova, the Latin "Geber" and Paracelsus to Robert Boyle (1627-91), Joseph Black (1728-99), Joseph Priestley (1733-1804), Antoine Laurent Lavoisier (1743-94) and finally to the miracle of modern chemistry. But they also gave important impulses to European cultural history; it may suffice to mention Jakob Böhme, the Rosicrucians, Novalis and Goethe (see R. D. Gray, *Goethe, the alchemist. A study of alchemical symbolism in Goethe's literary and scientific works*, Cambridge 1952).

This concise historical survey makes it clear that Arabic alchemy holds a key-position in the development of chemical thinking as a whole. However, in glaring contrast to its importance, it has been regrettably neglected by research until now. Most of what historians of science have written on the Arabic alchemists is second-hand, based on obsolescent literature and disfigured by gross errors. A vast and fertile field lies here open to research; access to it, however, is not easy.

Alchemy is an extraordinary complex phenomenon which combines many divergent trends. Muhammad b. Zakariyya² al-Rāzi in his *K. al-Aṣnā* exerted himself in particular to build up a sober system. The *Dīlābir*-writings contain concepts of the Ismā'īliyya [q.v.] which came into existence ca. 363/977. The authors introduce also into their thinking magical, arithmological, astrological and biological reflections. The hermetic writings and those of Ibn Umayr are marked by gnosticism, others are coloured by strong mysticism. So it becomes understandable that Ibn al-'Arabī (*Fuṣūḡ*, ii, 357) can indicate alchemy as a "natural, spiritual, divine science" (*ʿilm ṣabīḥ rūḥānī ʿilālī*). As a whole, it was a natural philosophy which aimed not only at teaching the transmutation of the metals, but also at the whole connection of the world. For many scientists, however, the effort to refine matter was inseparable from purification of the soul. The alchemists expressed their insight in theoretical discourses, and also in allegorical stories, myths, visions and poems (Pseudo-Ḥalīd b. Yazīd, Ibn Umayr, Ibn Arīf Ra'). In order to protect themselves against prosecution by orthodoxy or against competitors, they used pseudonyms and availed themselves of obscure, encoded expressions. All this renders the writings apparently abstruse. It was therefore bound to happen that the "Aufklärer" counted the history of alchemy among the *Geschichte der menschlichen Narkose* (J. G. Adelung, Leipzig 1785-9), and even in the first edition of the *Encyclopædia of Islam* E. Wiedemann still remarked: "Often it cannot be understood how reasonable beings could have written such things". Only the science of religion and depth-psychology have

(*K. al-Djawharatayn*, ed. C. Toll, Uppsala 1968, ch. xxxv).

But the very assertion that man is able to imitate nature was contested peremptorily by Abū Hayyān al-Tawhīdī and Abū 'Alī b. Sīnā: the alchemists were only able to make something that externally resembles the precious metals, but the senses do not perceive specific differences (*ṣaḥīḥ*) in the metals after the alchemical operations, but only attributes and accidents (*ḥawāṣiṣ*, *ʿawāṣiṣ*); the substance (*ḍawāḥir*) of the base metals remains untouched (E. J. Holmyard and D. C. Mandeville, *Avicenna de congelatione et conglutinatione lapidum*, Paris 1927, 85 f.; Ibn Sīnā, *K. al-Shifāʾ*, *al-Jabrīʿiyyā*, v, ed. A. Munṭaṣir ṣāḥī, Cairo 1385/1965, 23 f.; G. C. Anawati, *Avicenna et l'alchimie*, in *Congreso internacional 9-15 April 1969 [Accademia Nazionale dei Lincei, Atti 23]*, Rome 1973, 285-341). Because of these utterances, Ibn Sīnā became the target for the polemics of all later alchemists, in particular of al-Ḥusayn b. 'Alī al-Tughrāʾī and Aḥmad b. 'Alī al-Dīlādī.

With his *K. Ḥakāʾik al-ḥikmah*, written in 505/1112, al-Tughrāʾī produced the most important writing in defence of alchemy. He meets Ibn Sīnā's objection by stating that the alchemical processes do not absolutely create a new *differentia specifica* (*ṣaḥīḥ*), but that through them matter is only prepared to take in the *differentia specifica* which is granted to it by the Creator. Al-Tughrāʾī's argumentation thus takes account of the front of orthodox theologians, whose criticism found a mouth-piece in Ibn Ḥazm al-Andalusī, Ibn Taymiyya and the latter's pupil Ibn Kayyīm al-Dīnawīyya (d. 750/1349).

The latter's *K. Muṣṣaf dār al-ṣāʿida* contains a polemic of 200 pages against all secret sciences, especially astrology (see C. A. Nallio, *Raccolta*, v, 33 f.). Like Ibn Sīnā, he is of the opinion that the alchemists only keep up appearances, but are in fact unable to make real gold and silver. The economic argument adduced by al-Fārībī to justify the disguise of the alchemical writings is used by Ibn Kayyīm al-Dīnawīyya to refute alchemy itself: if man were able to make gold and silver, the economic order of the world, created by God, would collapse. Gold would lose its value if it were available in abundance. The social order would also be destroyed because nobody would be willing any more to be the slave of a master (J. W. Livingston, *Ibn Qayyīm al-Dīnawīyya: A fourteenth century defence against astrological divination and alchemical transmutation*, in *JAOS*, xci (1973).

Ibn Khaldūn also shows himself as adversary of alchemy, which in his opinion is in fact only a kind of magic (*sīkr*). With regard to Ibn Sīnā and al-Tughrāʾī his point of view is even somewhat more differentiated, without however alleging essentially new arguments (see G. C. Anawati, *La réfutation de l'alchimie par Ibn Khaldūn*, in *Mélanges d'Islamologie*, Vol. mēms. A. Abel, Leiden 1974, 6-17). For this kind of polemic literature see also Abū 'I-Barakāt Ḥibāt Allāh b. Maḥā, *K. al-Mu'abbar*, II, Hyderabad 1358, 231-6; Fakhr al-Dīn al-Rāzī, *K. al-Mabdhūh al-maḥṣūṣiyya*, II, Hyderabad 1343, 224-18; 'Abd al-Latif al-Baḥḥadī (A. Dierich, *NAWG*, I (1964), no. 5, p. 106); Muḥammad b. Ibrāhīm al-Dīnawī, *K. Nuḥḥat al-dahr*, ed. Mehren, 58-61; Khallī b. Aḥmad al-Safādī, *K. al-Ghayāh al-muṣṣaḍḍiyya*, I, Cairo 1305/187, 9-13.

The theoretical expositions and speculations of the alchemists were partly complete in themselves, and partly completed by experiments in the laboratory. The experiences gained in such experiments gave

again rise to new writings and theories. It is probable that alchemy had a greater part in the development of experimental science than medicine, pharmacology, physics and astronomy (see L. Thorndike, *A history of magic and experimental science*, I-viii, London-New York 1923-38). An important experimental achievement was the oxidation of quicksilver which had been exposed continuously to a very slow fire over forty days. Pseudo-Majdī describes the process in his *K. Ruḥat al-ḥakīm* and emphasises that the weight of the matter was the same before and after the experiment (E. J. Holmyard, *Makers of chemistry*, Oxford 1931, 78). The furnishing of a chemical laboratory is very impressively pictured by Ibn Shuhayr (381-426/992-1035) (see J. Dickie, in *al-Andalus*, xlix (1964), 243-310). There were many apparatuses: the *uḡḡī* (Latin *aludel*), used to distill and to sublimate, the *ḥārʿ* (*cucurbit*), a receiver over which was placed an alembic (*al-anbīḥ* [g.v.], melting-pot (*ḥāḥ*, pl. *ḥawāḥ*), kiln (*ṭanūr*, pl. *ṭanūn*), Latin *athanor*) to generate high temperatures, phials (*ḥunṭia*), casseroles (*ḥid*, *ḥiḡḡ*), pans (*ṣuḥurḡḡ*) and mortars (*ḥawḡḡ*). Many apparatus are named after their alleged inventors, like *al-ṭān Fīḥḡḡḡ*, the "oven of Pythagoras", the *ḥārʿ Zāʿim*, the "pit of Zosimos" and the *ḥammām Māriyya*, the bath-maria (see A. Siggel, *Verzeichnis der Apparate und Geräte, die in arabischen alchemischen Handschriften vorkommen*, in *Deutsche Ak. d. Wiss. zu Berlin*, Institut für Orientalforschung, no. 1, Berlin 1950, 91-100; E. J. Holmyard, *Alchemical equipment*, in Ch. Singer et al., *A history of technology*, II, Oxford 1956, 731-32).

With such apparatus, vessels and ovens the procedures (*ṣādīq*), i.e. certain chemical processes, were achieved. The methods of these procedures were essentially the same as those of Greek alchemy, and most of the Arabic *termini technici* are translations of Greek notions. The "solution" (*ṭahīl*, λύσις) of a matter is achieved by water, acids or lyes; the "putrefaction" (*ṭaʿīn*, σήψις) is a process of decomposition furthered by water. Distillation and sublimation are indicated with *ṭaʿīd* and *ṭahīr*, calcination with *ṭaḥḥa*. A substance is consolidated and fixed by *ṭaḥḥid* and *ṭaʿīd*. "Blanching" (*ṭaḥīḥ*, λεύκανσις) indicates the making of silver, "reddening" (*ṭaḥḥir*) the making of gold. Many alchemists, however, use these and many other expressions only symbolically or in a completely different meaning for fear that they might reveal their secret. Thus the understanding of alchemical texts is made extraordinarily difficult.

Since the alchemists were obliged from the earliest times to keep their esoteric knowledge secret (see *Papyrus Leidensis*, ed. C. Leemans, Leiden 1943, I, 20, 9: ἐν ἐκτοπρόρῳ ἔχει ὡς μυστολογιστήν, *μυστικὴ δόξα*), they used innumerable "pseudonyms", not only for the processes but also for the matters and mixtures. The same matter was often indicated with dozens of different names, and conversely, one and the same name was used to design different matters. These pseudonyms also have a Greek tradition. Thus the names of the planets serve as designations of the metals: *al-ḡham* is gold, *al-ḡamar* is silver, *al-murriḥ* is iron, etc. Certain words contain the characteristics of a matter: *al-farḡār* "the fugitive" is quicksilver, *al-ḡḡḡ* "the reddish" is copper. Often names of animals are used: *al-ḡḡḡ* "the eagle" may designate *al-ammoniac*, *al-ḡḡḡ* "the peacock" and *ḡḡḡ al-ḡḡḡ* "the snake-neck" can stand for sulphur, *ḡḡḡ al-baḥḥ* "the peacock of the Egyptian temple" for copper. The

meaning of such pseudonyms varied from one author to the other and from one workshop to the other; they had no general validity.

The first endeavour to solve this lexical problem were undertaken by the Aḥābā themselves: they composed glossaries or added to bigger theoretical works lists in which the meaning of the pseudonyms was explained. But the value of these lists is small. Only careful critical editions and competent lexicographical revisions of the sources may enable us to travel further in this thorny field, but in not a few cases it will probably be impossible to uncover now the original meaning of the alchemical recipes.

KĪMĪ [see KUNĪ].

KĪNALİZADE, 'ALĀ' AL-DĪN 'ALĪ ÇELEBİ (926-6 Ramaḍān 970/1710-22 January 1572), Ottoman scholar. His grandfather, 'Abd al-Kādir from

İsparta, was one of the tutors of Meḥmed the Conqueror, while his father was the *Kāfī* Amr Allāh, known also as a poet. His grandfather used to dye his beard with henna, hence was by-named *Kāfī* ('the one with henna'). This nickname was applied to other members of the family as well. Kīnalizade 'Alī was born in İsparta in 926/1510 where he had his elementary education. His first tutor was one of his relatives, the *Kāfī*-*āshir* Kādir Efendi. Then, he went to different *madrasas* and completed his education under such scholars as Ma'ālī Emīr, Sīmān, Merḥabī, Kāra Sālīh, and Çiwiade Nuhayī al-Dīn. In 948/1541, he was assigned by the *Shaykh al-Islām* Abū 'I. Sū'ūd (Ebūssū'ūd) to the *madrasas* of Husām al-Dīn (the Husāmīyye) in Edirne as *mudarris*. He next taught in the *madrasas* of Hamaa Bey and Welī al-Dīn-oghī Ahmed Pasha—both in Bursa—and in the two *madrasas* of Rüstem Pasha, one in Kütahya and the other in İstanbul, and in *madrasas* of Kāfī-*āshir* and Semānīyye, also in İstanbul. In the year of 966/1559, when the construction of the *madrasa* of the Süleymanīyye Mosque was completed, he was assigned to one of them as *mudarris*, thereby reaching the highest of the academic ranks. In *Dhu 'l-Hijja* 970/July-August 1563, he was appointed as *kāfī* of Damascus to succeed Kādir Çelebi. He remained in Damascus nearly four years, after which he was appointed to Cairo and then to Bursa. Two years later he was appointed *kāfī* of Edirne, after which he became *kāfī* of İstanbul. Shortly afterwards, in Muharrar 979/June 1572 he became *Kāfī*-*āshir* of Anatolia. This same year, while in Edirne with Selīm II, he died (6 Ramaḍān/22 January 1572) from an attack of gout, a complaint he had contracted during his earlier residences in Edirne. His funeral, attended by many of the statesmen and scholars of his time, took place at the Eski Dījami', and he was buried in the so-called Nāzır cemetery on the road to İstanbul. In his youth, 'Alī Efendi was famous for his memory and knew by heart numerous *ḥadīths* and poems in Arabic, Persian and Turkish. He was versed in most of the branches of the knowledge of his time, including mathematics, astronomy and rhetoric; and while in Egypt his mastery of the Arabic language was admired by all. His son, Hasan Çelebi, informs us that he wrote marginal notes to the *Kashshaf* of al-Bayḍāwī up to *Sūrat al-Hād* and that he corrected other versions of these manuscripts. According to his son's *Tadhkirat al-shu'arā'*, 'Alī's *Dhawl al-Sha'ā'ir* and *'Oḥūdunā' mū'allaḥī*, his works may be summed up as follows: (1) the *Alkāmī-i 'Alā'*, his most famous work and an important source for the study of Ottoman culture. He completed this work on 25 Safar 973/21 September 1565 when he was the *kāfī* of Damascus and dedicated it to 'Alī Pasha, the Beglerbeg of Syria, hence its title *Alkāmī-i 'Alā'* (for an analysis of the work and its sources, and in particular for its dependence on the *Alkāmī-i Naṣrī* of Naṣr al-Dīn Tūsī, cf. the article by A. Adnan Adıvar in *IA*, iv, 710-11); (2) his *Dīwān*, which includes his poems in Turkish, Arabic and Persian; (3) the *Hāshiyat ʿalā l-ḥadīth*. He taught *ḥadīth* when he was *mudarris* at the Hamaa Bey Madrasa at Bursa, and wrote these marginal notes at that time; (4) *Hāshiyat ʿalā Durar u-ghurar ʿalā naṣībī*; (5) the *Kudb al-Karāhī min al-Hādīya*; (6) *Kislatān fī ḥaṭṭ al-māḥī*, written as a reply to Shāh Meḥmed Çelebi who had criticised one of his *fatwas* when 'Alī Efendi was *kāfī* of Edirne; (7) the *Er'ā'*; (8) the *Risālet al-sayfiyya wa 'l-halemiyya*; (9) the *Hāshiyat ʿalā Hasan Çelebi li-Shāh al-Manāḥī*; (10) his *Mūnāḥāt*;

(11) the *Uḥḫīy-yi Kashkādī*; (12) the *Hāḫīy-yi Baylān*, (13) the *Tabakāt-i Hanafīyya*; (14) the *Shah-i Kashkādī Burda*.

KINALİZADE, HASAN ÇELEBİ (953-12 Shawwâl 1012/1346-24 March 1604), Ottoman scholar and biographer. He was born in Bursa where his father 'Alî Çelebi (see the preceding article) was *müderris* at the Hamza Bey Madrasa. He first followed the lectures of Nâzîrîzade Ramâḫî Efendi, who was *müderris* between 967/1560 and 973/1566 at the Yelî 'Alî Paşa Madrasa founded by Semî 'Alî Paşa in Istanbul. Afterwards he became a student of Abu 'I-Su'ûd (Ebûsû'ûd) Efendi. He began his career in 973/1567 as a *müderris* at Bursa. One year later, upon the assignment of his father as *kâdî* of Edirne, he was transferred to the Çukrâdî Hâdîdî Madrasa as a *müderris*. Later he became *müderris* at the Sütlüniyye Madrasa in Bursa, after which he taught at several madrasas in Istanbul, ultimately attaining an appointment to the Süleymaniyye. In Jumâdî al-âḫḫir 998/April 1590 he was appointed *kâdî* of Damascus, following which he received the *kafâ'a* of Cairo again, Bursa, Gallipoli, Eyyub and Eski Zagra respectively. While in this last post he became ill and returned to Istanbul. He then requested and received the *kafâ'a* of the small town of Reḡḡid in Egypt, where he died shortly after his arrival. Although credited with several minor works, his fame rests on his biographical dictionary of the Ottoman poets, *Tedkîrât al-ghu'arâ*, the autograph of which is in the Library of Istanbul University (TV 1737). This is the fifth work in this genre after those by Sehl, Latîf, 'Abdî and 'Ashkî Çelebi. Though completed at 994/1586, his own copy shows later revision and corrections. It is dedicated to Murâd III and includes three sections: the first devoted to the *shu'ab*, the second to the *ghazals* and the third to poets proper, most of whom are also mentioned in previous *tadkîrât*. Hasan Çelebi made use of the *tadkîrât* of Latîf (q.v.) and, in particular, that of 'Ashkî Çelebi. As may be seen from the alterations in his autograph, his method was to adopt the information given by these two predecessors, recasting it in his own individual, elegant style. However, he sometimes criticises their views on the merits of certain poets and advances his own opinions. The information he has to give about the poets and scholars with whom he was personally acquainted gives his work a particular value.

Bibliography: 'Atâyî, *Shahâ'ik al-mu'maniyya ḡayyâ*, Istanbul 1269, 491; *Sâdîll-i 'Oṭmânî*, II, 127; Gbbh, *A history of Ottoman poetry*, II, 199. For the *tadkîrât* manuscripts, see *Istanbul Hicabî-lâri tarih-coğrafya yazarları*, VII, 588-97.

(MEHMET ÇAVUŞOĞLU)

KINĀNA B. KHUZAYMA, an Arab tribe, genealogically related to Asad (b. Khuzayma) (q.v.). The territories of Kināna were around Mecca from the Thihāma on the south-west, where they were next to Hudhayl, to the north-east where they bordered on Asad. There were six main subdivisions of the tribe, though more are sometimes mentioned: al-Nadr (or Kayn), the ancestor of Kuraysh (q.v.), which is reckoned a separate tribe; Mālik; Mālikin (or Māikān); 'Amr; 'Amr; 'Abd Manāt. The latter was further subdivided. Bakr b. 'Abd Manāt was a strong group,

and included as parts Mudlīḡ, al-Du'āl and Layḡ, as well as the more independent Damra. Ḡhifār (q.v.) is sometimes reckoned to Damra and sometimes said to be Ḡhifār b. 'Abd Manāt. Al-Ḥārīḡ b. 'Abd Manāt was the main part of the Aḡḡīḡ (see GHARĠ, end), who were probably a collection of small groups without common ancestry (named as 'Aḡḡ, al-Kāra and al-Dīḡ, all of B. al-Ḥān b. Khuzayma, together with B. al-Muḡallik of Khuzā' and sometimes B. Liḡyān of Hudhayl).

History. At an early date Fihḡ, the common ancestor of all Kuraysh, was leader of Kināna when they defeated a Khimyarite force. His descendant Kurayy (q.v.) had the help of men of Kināna in the fighting which gave him control of Mecca, and his position was consolidated by the arbitration in his favour of Ya'mar b. 'Awf of Layḡ, though most of Bakr b. 'Abd Manāt opposed Kurayy. In the wars of the Fijīr (q.v.) the "day of Nakhl" resulted from the killing of a Kīlābī by al-Barrād b. Kays, a man of Damra rejected by his tribe but protected by al-Du'āl, and a *ḡayl* of Harb b. Umayya (cf Kuraysh). In general, Kināna, including Bakr, supported Kuraysh against Hawzīn, but some parts of Bakr continued to feel hostility towards Kuraysh, especially after the chief of Bakr was killed in revenge for a youth of Kuraysh. Because of this matter Kuraysh hesitated before setting out for Badr in 624, until a man of Mudlīḡ guaranteed that Bakr would not attack them from the rear. After this, however, Bakr supported Kuraysh against Muḡammad, and was an attack by Bakr on Muḡammad's allies of Khuzā'a which led to his conquest of Mecca in 630. In his force on this occasion Muḡammad had men from Ḡhifār, Damra and Layḡ. Little is heard of the movements of Kināna after this. A prominent member of the tribe, Abu 'I-Aswad al-Du'ālī (q.v.), is known as a supporter of 'Alī, and is incorrectly alleged to be the founder of Arabic grammar. In 230/845 al-Tabarī mentions some Kināna as still near Mecca but apparently weak. They are also recorded in the Hawrān, and in the 6th/12th century, in Upper Egypt and the western delta.

Bibliography: Ibn Hishām, 79 f., 430-2, etc.; Caussin de Perceval, *Histoire des arabes avant l'islamisme*, index; al-Kalīshandī, *Shu'ab al-ḡayl*, I, 350 f.; idem, *Nadāy al-arab*, mentions most subdivisions; Yāḡūt, *Mu'ḡjam al-bulḡān*, index of tribes; Watt, *Muḡammad at Medina*, index; Ibn Hishām, *Muḡaddar*, 156 f. (intercalators of months from Kināna), 195 f. (al-Barrād), etc.; idem, *Muḡammadh*, index; al-Azrakī, ed. Wüstenfeld, 61-4. (W. M. WATT)

KINĀYA (A.), a technical term of rhetoric corresponding approximately to "metonymy" and meaning the replacement, under certain conditions, of a word by another word which has a logical connection with it (from cause to effect, from containing to contained, from physical to moral, by apposition etc.). Etymologically, this term implies a cause of dissimulation found also in the word *kinaya* (q.v.), which is reckoned by such a grammarian as al-Mubarrad (*Kamāl*, 677) to be derived from *kināya*. *Kināya* constitutes a particular type of metaphor (*istīḡāra* (q.v.)) and it is distinct from trope (*maḡāḡis* (q.v.)) in that the latter is only to be understood if taken in its figurative sense (e.g. *ra'aynd 'I-ḡhayy* "we have caused the rain to feed", where *ḡhayy* can only mean the grass appearing after a fall of rain). For some theorists, *kināya* covers allusion (of which the various forms are called *ta'wīḡ*, *taḡwīḡ*, *raḡwīḡ*, *ḡmūḡ* and *igḡāra*), but this is not so because, if it may be

of slang, but it is not always easy to determine the degree of decency of such and such a term of which the satirists make considerable use. In this connection, we quote only one epigram of *Diḥl* (ʿAbd al-Karīm al-Aṣṭar, *Shiʿr Diḥl*, Damascus 1354/1964, 204) where the sixth verse contains the word *ḥiṣṣa*, "cucumber" the sense of which is all the more readily understood because of the appearance in verse four of *ḥiṣṣa* "ninety" which means the anus. This last *ḥiṣṣa* is borrowed from dactylogony (*ḥiṣṣa* al-*ḥiṣṣa* [g.v.]), which supplies a large number of less obscene examples (e.g. "93" or "99" = "miser"); see now Ch. Fellat, *Textes arabes relatifs à la dactylogonomie*, Paris 1977, 21-2 and *passim*.

As a result of its undeniable expressiveness, to which the numerous examples cited by rhetoricians bears witness, the *ḥiṣṣa* preserves all its force in colloquial Arabic, for not only do slang expressions abound here, but also convention demands a strict caution in circles where superstitions continue to be strong. To antiphrase (*ḥiṣṣa* "clear-seeing" for "blind"), already found in the name of Abū ʿAlī al-Baṣrī (see *al-Naṣṭa*), who lost his sight; with this may be compared Qurʾān, XI, 89/89; *inna-ha la-anta ʿl-ḥiṣṣa ʿl-raḥiṣṣa* "truly you are long-suffering and just", which must be interpreted in the contrary sense), to designation by a verb without subject *ḥiṣṣa ʿl-ḥiṣṣa* "the situation was lamentable"), by an adverb or a pronoun (*ʿand-hā ḥiṣṣa* "she is having her menstrual period"; cf. in a verse of Abū Nuḥayya, *Aḥṣān*, xx, 382, *ḥarḥakū-hā*, where the pronoun refers to an obscene word not expressed (likewise *ḥiṣṣa-hā*, in Yāqūt, *Iṣṣāḥ*, xvi, 209, l. 3 from bottom), and to euphemism pure and simple (in Morocco, *ḥiṣṣa* "gloriosa" to describe coal (*ḥiṣṣa*) because of its black colour), there are to be added voluntary alteration (*ḥiṣṣa* [ḥiṣṣa] "you shall be happy" for the number "nine" because *ḥiṣṣa* also means "you shall be a beggar"), borrowing from other languages (the Turko-Persian *ḥiṣṣa* for "latrine"), the refusal to specify ("those who are not to be named" — the *djinn*) and other procedures. On this subject, one can only refer to W. Marçais, *Nouvelles observations sur l'euphémisme dans les parlers arabes maghrébins*, in *Ann. de l'Inst. de Philol. et d'Hist. Or. et Slaves de Bruxelles* (*Mélanges Isidore Lév*), xlii (1953), 331-98. For Berber, see E. Deslauriers, *Interdictions de vocabulaire en berbère*, in *Mé. Rev. Suisse*, Paris 1928, ii, 177-277.

KINDA, a South Arabian tribal group, whose descent, real or imaginary, from Kahlān correctly identifies them as Arabs and distinguishes them, as it does the *ʿAd*, from Himyar and other non-Arab inhabitants of South Arabia. The tribe spread all over Arabia in the 5th and 6th centuries A.D., from the south to the centre to the north, and played a decisive role in the military, political, and cultural history of the peninsula before the rise of Islam.

1. The pre-Islamic period.

From Kinda (a *ḥiṣṣa*, nickname for *Ḥawr*) are descended Muʿāwīya and Aḥṣa, and from the latter

are descended al-Sakūn and al-Sakāsik. The more distinguished branch was Muʿāwīya, and within Banū Muʿāwīya, the house of Ḥudjir, nicknamed Ākil al-Murāḥ, became the most illustrious.

Genealogical table of the Banū Ākil al-Murāḥ

It was this Ḥudjir who, in the second half of the 5th century and supported by the power of Himyar, moved into central and northern Arabia and assumed supremacy over the Arab tribes of Maʿadd. One of the celebrated *Ayyām*, battle days of the Arabs, *Yawm al-Barādīn*, involves him with Ziyād b. al-Habāla, the Sāḥīl client-king of Byzantium. It was his descendants, the Banū Ākil al-Murāḥ, that dominated the political and military scene in Arabia for almost a century. He was succeeded by his son ʿAmr, nicknamed al-Makṣūr, while his younger son Muʿāwīya (nicknamed al-Djawn) ruled over al-Yamāna. Neither was distinguished, and it was his grandson, al-Ḥārith b. ʿAmr, who became the best-known member of the house, an international figure known not only to the Arabs of the peninsula but also to Persia and Byzantium and to their Arab clients, the Lakhmids and the Ghassanids. Around 500 A.D. his two sons, Ḥudjir and Meʿdī-Karīb, mounted an offensive against the Byzantine border and in 502 A.D. the Empire had to conclude a peace treaty with al-Ḥārith. For a short time he ruled over Hira, adopting Mazdakism during the reign of the Persian king Kōwīd. Then leaving al-Hira, he went over to the Byzantines, who assigned to him a phylarchate in Palestine, but he quarrelled with Diomedes, the *dux* of that province, and fled to the desert where he was killed in 528 A.D. either by the Lakhmid Mundhār or by a member of the tribe of Kalb.

Al-Ḥārith had divided the Arab tribes of Maʿadd among his four sons, Ḥudjir, Shurabḥīl, Salama, and Meʿdī-Karīb. After his death, rivalries broke out among them and brought about a bloody engagement, the first day of al-Kulāb, in which Shurabḥīl was killed. Then the tribe of *ʿAd* rose against Ḥudjir and killed him. It was at this juncture, after the violent death of al-Ḥārith when the power of Kinda was in disarray, that Byzantium sent its two diplomats, Julian and Nonnosus, ca. 530 A.D., to Himyar, Ethiopia, and Kinda for an alliance against the Persians. The services of Kinda were indispensable, and Byzantine diplomacy was finally able to compose differences between the Himyaris and the Kindis by withdrawing Kays (probably the son of Salama) from central Arabia and arranging for the division of his dominion between his two brothers, Yazīd and ʿAmr. Kays visited Constantinople and was given a command in Palestine.

In the second half of the 6th century, the power of Kinda in central and north Arabia was clearly disintegrating. In addition to the fratricidal wars among the sons of al-Ḥārith in Najd, the Banū

ʿI-Djawn branch in al-Yamāna allowed themselves to be involved in the inter-tribal feuds of Tamim and ʿAmir; these resulted in the two battles of Shīb ʿIjabala and ʿIḥā Najīb, which proved disastrous to the Banu ʿI-Djawn. So precarious was the position of Kinda because the tribe, according to the sources, decided to go back to its original home in Ḥaḍramawt.

A century or so of rule over such a vast area in the Arabian peninsula calls for an assessment of the role of Kinda in Arab history: (1) The dominion of Kinda represents the first attempt, however forcible, to impose unity on the tribes of central and northern Arabia; but this unity could not have been achieved without the support of Himyar. (2) Kinda brought from the Himyarī South a tradition of sedentary life; it ruled the Arabs from such urban spots as Ghamar ʿIḥā Kinda, Baṭn ʿĀkil, and Ḥaḍjar. (3) The house of ʿĀkil al-Murār adopted Christianity, and must have been an important factor in disseminating it in central and northern Arabia. The most important Arabic Christian inscription of pre-Islamic times, commemorating the erection of a church in al-Ḥifra, is that of Hind, daughter of al-Ḥārith b. ʿAmr; and the Banu ʿI-Djawn must have done their share in spreading Christianity in al-Yamāna. (4) Kinda contributed towards the spread of literacy among the Arabs and one Bisḥr b. ʿAbd al-Malik (from the Sakūn) is said to have learnt the art of Arabic writing in al-Ḥifra and to have taught it in Mecca, where he settled and married a sister of Abū Sufyān. (5) Kinda's greatest contribution, however, to the cultural life of the Arabs was Imruʿ al-Qays (q.v.), the foremost poet of pre-Islamic Arabia. Through him and through the unification of the Arab tribes for a century, Kinda accelerated the development of a common and standard Arabic language, transcending dialectal differences, a circumstance that attained its fullest significance with the rise of Islam.

While the Banū ʿĀkil al-Murār were making history in the Fertile Crescent as well as in central and north Arabia, other Kindi groups were not idle in the south, where they rebelled against, as well as fought for, the Himyarīs, with whom their relations as auxiliaries and clients remained close. They fought for Himyar against the Lakhmid Mundhir, against Najrān and the Ethiopians, and also for Abrahā (q.v.). A measure of the military power of Kinda, in both the north and the south, is provided by the fact that of the twenty-one ʿIḥārārūn (pl. of ʿIḥārār, "leader of a thousand", chieftains) of Yamān, eleven were Kindi. Their military role in the south is evidenced by references to them in the Sabaeen inscriptions (see below, Appendix).

The Arabic sources corroborate the Sabaeen inscriptions on the importance of Kinda in the south and give prominence to Kays b. Maʿdī Karīb, also a member of Muʿāwiya but from the family of Banu ʿI-Ḥārith. He was the lord of Kinda in Ḥaḍramawt, and is known to have adopted Judaism. Al-Aʿshā eulogised him and the famous al-Ashʿath (q.v.) was his son. Kinda is counted among the Arab tribes who adopted Judaism in pre-Islamic times, and it must have been this Kinda in the south that became Judaised. Their Judaism could possibly support the view that the *Nasab* (those in charge of intercalation in the pre-Islamic calendar) had been Kindi before the tribe of Kināna took over the function after one of them had married a Kindi princess.

a. The Islamic period.

Although it was in pre-Islamic times that Kinda, se. Kindat al-Mulūk, "Royal Kinda", had its heyday,

the tribe retained some of its power and influence in the time of the Prophet and in Islamic times. In addition to the Banū Muʿāwiya, the Ashʿath, especially the Sakūn, now come to the fore, and within the Sakūn the Tuḡlībīs become the most important group. The Kindi crossed the paths of Muḥammad, the caliphs, and their governors, who enlisted their talents in the service of Islam, as is clear from the many personages listed in the pages of such works as Ibn Hazm's *Djāmiʿa*. They appear at critical junctures in the history of Islam, displaying the same unflinching and spirit of independence that had characterised their tribal ethos in pre-Islamic times.

Al-Ashʿath b. Kays (q.v.) led the delegation of Kinda to Medina and accepted Islam, and so did four other Kindi chiefs, Mighwas, Mighrah, ʿIḥarad and Abdaʿa, leading another branch of Kinda (in some sources the four chiefs are associated with the Ḥaḍramawt delegation); Tuḡlīb also sent a delegation and accepted Islam. In 9/630 the Sakūn Ukayyir b. ʿAbd al-Malik, master of the strategic point Dūmal al-Djandal in northern Arabia, submitted to ʿUthmān b. Waḥid. Perhaps the best measure of the continuing importance of Kinda in the newly-emerging world of Islamic Arabia is the fact that Muḥammad contracted marriages with two, possibly three, Kindi princesses, but these do not seem to have been consummated.

After the death of Muḥammad, Kinda led a furious insurrection in Ḥaḍramawt, in which al-Ashʿath and the four chiefs mentioned above were involved, and it was with great difficulty that the insurrection was finally put down; the four chiefs were killed, and Abū Bakr spared the life of al-Ashʿath, who espoused the cause of Islam enthusiastically, fighting at both al-Yarmūk and al-Kādisiyya and later with ʿAlī at Ṣiffin. Other Kindi distinguished themselves in the conquests: Shuraybīl b. Masana was one of the three or four main commanders appointed by Abū Bakr for the conquest of al-Shām or Syria and his front was al-Urdunn, which he conquered and later governed. Al-Samʿ h. al-Aswad, a member of Muʿāwiya, and al-Ashʿath b. Maʿnā, a Sakūn, took part in the conquest of Ḥims; the first is credited with the division of the city into quarters in which the Muslims settled.

It was during the caliphate of ʿUthmān that Kinda took part in what proved to be the turning point in the history of Islam, namely, the murder of the fourth Orthodox caliph. Many of the Sakūn had settled in Egypt, and in the rising against ʿUthmān they formed part of the Egyptian party of rebels which advanced against Medina. The weapon that actually killed ʿUthmān was wielded by a Tuḡlībī, Kināna b. Bisḥr by name, and two other Sakūn are also associated with the murder. A memorable event in the Second Civil War of Islam is also associated with a Kindi. It was al-Ḥusayn b. Numayr, a Sakūn, whose catapults rained stones upon the Haram when in 64/683 he conducted for the Umayyad Caliph, Yazid, the siege of Mecca, during which the Kaʿba caught fire and was burnt down. More revelatory of the staccato rhythm in the history of Kinda in Islamic times is the career of ʿAbd al-Rahmān, commonly known as Ibn al-Ashʿath (q.v.), a member of Muʿāwiya, vividly aware of his Kindi and South Arabian origins and worthy of his grandfather al-Ashʿath. After extending the boundaries of the Dār al-Islām by his invasion of Zabulistān in 80-1/699-700, he raised the standard of revolt and marched against al-Ḥaḍḍilīdī in ʿIrāk, where he was

finally beaten at the battle of Dayr al-Djamādīm.

It was, however, in the Islamic Occident, in far-away Spain and as late as the 5th/11th century, during the period of the *Mulūk al-Jarā'if*, that the Kindi, unruly and rebellious as ever, achieved what figures such as Ibn al-Ash'ath in the Orient had been unable to achieve, namely, the carving out for themselves of an independent political existence, however short-lived this proved to be. The Tughībids settled in Sarakusta (Saragossa), Daraw'ya (Daroça) and Kal'at Ayyūb, in which cities they ruled, as they did also in al-Bariyya (Almería), if the Banū Šumādīb were indeed Tughībids, as is probable. Claims made by such historians as Ibn Khaldūn that the Dhū 'l-Nūnids [q.v.] of Toledo and the Atfāsids [q.v.] of Badajoz were Tughībids, do not seem to have been substantiated by recent research, which affiliates them rather to a Berber ancestry.

(J. Smanin)

Appendix. The relations of Kinda with Saba and Himyar.

Pre-Islamic Sabaeen inscriptions furnish us with some useful references to Kinda in its epigraphic South Arabian form *Rdh*. Unfortunately, one of the earliest of those references is not at present securely dateable, since the precise chronology of the Sabaeen texts is still in dispute; however, a date in the 3rd century A.D. seems possible. This text, *Ja 576* (published in full by A. Jammé, *Sabaeen inscriptions from Mahan*, Baltimore 1962), according to a recent re-interpretation offered by A. F. L. Beeston (*Notes on Old South Arabian lexicography VIII*, in *Le Muséon*, lxxxvi (1973), 448-51), depicts for us a situation in which Ma'lik king of Kinda was head of a confederation in which a certain Imru' al-Qays b. 'Awf, called "king of the *KHST*", was a subordinate member; the latter committed an act of aggression against Saba, as a result of which the king of Kinda and his *ghayāḥs* were forced under duress to surrender the person of the actual offender, to pay an indemnity, and to give hostages to the Sabaeans.

In two other texts of approximately similar date (*Ja 660* and *665*) we find Kinda and Maḥbīl, together with other bedouin groups, placed under the overall control of a Sabaeen official with the title "*ḥabir* of the Arabs of the king of Saba, and Kinda, and Maḥbīl etc.", and evidently acting as bedouin auxiliaries of the Sabaeen army. In an inscription

published by Shamsaddin (Yemen, Ta'izz 1961, 44, bottom left), a mixed force of Sabaeans, Kindi Arabs and other elements, was commanded by two individuals bearing the title "*asās* of Saba".

In the early 6th century A.D., the Himyarite king Yūsuf (= Dhū Nuwās [q.v.]) was similarly employing Kindi, together with members of the Murād and Maḥbīl tribes, under the control of a Sabaeen commander belonging to the Ya'san (in Islamic sources Yazar) family, as auxiliaries in his campaigns in central Arabia; see Ry, 308.7; (G. Ryckmans, *Inscriptions sud-arabes X^e ser.*, in *Le Muséon*, lxxvi (1953), 296) from Kawkab, an isolated rock north-east of the Kārs mountains and on the edge of the Empty Quarter.

In the mid-6th century, the Himyarite king Abrahā [q.v.] claims to have installed a certain Yazid b. Kaḥba as "*his ḥaḥfa* over Kinda"; it appears that this Yazid later revolted, but was defeated by the Himyarites and forced to renew his allegiance in the year 657 of the Himyarite era (*Corpus inscriptionum semiticarum*, IV, 341). Five years later, in 662 of the Himyarite era, Kinda was again campaigning in support of the Himyarites, this time being given the particular mission of pinning down the 'Amir b. Ša'sa'a tribe [q.v.] while the king was engaged on military operations elsewhere (Ry, 306, op. cit., 277).

(A. F. L. Beeston)

AL-KINDI, 'ABD AL-MASIH b. ISHAK, the name given to the author of a defence of Christianity presented in the form of a letter written in response to that of a Muslim friend, named 'Abd Allāh b. Ismā'īl al-Hāshimī, who invited his correspondent to embrace Islam. The names of these two characters are supplied only by al-Bīrūnī (d. after 442/1050 [q.v.]) in a reference that he makes to this defence in his *Chronology* (ed. Sachau, 205). In fact, the author of the two letters, who states in the prologus that he does not wish to mention the names of the correspondents "for a certain reason", speaks only of a Hāshimī and a Kindī. But it should also be noted that the headings of certain manuscripts supply the name of Ya'qūb b. Ishāk al-Kindī, not to be confused with the name of the first Muslim philosopher (d. 256/870 [q.v.]).

The authorship of this defence is the object, among orientalists, of serious disagreements concerning his period and his sect. Taking as evidence the historical data supplied by the text, mention of the caliph al-Ma'mūn (198-218/813-33), of the sack of Mecca by Abū 'l-Sārīḥ (199/813) and of the revolt of Bābak al-Kharrāmī (204/819), W. Muir believes that the date of the composition of the letter can be fixed at 213/830. But L. Maslignon believes the composition to be later than the year 300/912, seeing that the author has borrowed from al-Tabarī (d. 320/923) his criticism of an opinion of the Hanbalī al-Barbahīrī (d. 329/940). Similarly, observing a parallelism between certain criticisms contained in the letter and in a work of the Muslim heretic Ibn al-Rāwandī (d. 298/910), P. Kraus concludes that the Christian author borrowed these criticisms from the latter and therefore the letter can only have been composed at the beginning of the 4th/10th century.

As for the sect to which the author of the apology belonged, the majority of orientalists make him a Nestorian, as is moreover indicated explicitly by his Muslim friend in his letter. The fact that he himself mentions the convent ("*wam*) of al-Karkh, a suburb of Baghdad, and Šabāt al-Nadā'in, near Seleucia-Ctesiphon, confirm this idea. But Maslignon, considering that the distinction between the essence and

the attributes of the act is an "adaptation to Christian theology of the tenets of Islamic *kalām*", is led to identify the author with the celebrated Jacobite philosopher Yahyā b. 'Adī (d. 364/974). Similarly, M. Th. de Alverny, on the basis of a passage in the Latin translation which treats the Nestorians as heretics, makes the author of the letter a Jacobite philosopher who, according to a concluding passage figuring only in the Latin version and a Karchūnī manuscript (Paris B. N. syr. 204), must have composed a work against Arius.

Now the publication of the work of a Jacobite theologian of the beginning of the 3rd/9th century, Abū Rā'ita Ḥabīb b. Khidma, shows that, contrary to the opinion of Masson, this distinction between the divine attributes dates from a period considerably before that of Yahyā b. 'Adī, since it is found in the work of Abū Rā'ita, from whom the author of the letter borrowed it, as well as the whole of the philosophical-theological section dealing with the unity of God (ed. G. Graf, CSCO, 1888, 5-10). As for the fact of a Nestorian author borrowing from a Jacobite a discussion of the unity of God, this is not surprising, since there was no difference of opinion between them on this point.

Similarly, the publication of the Latin version has shown that in this version, conforming to the original Arabic, the Muslim tells his correspondent that of all the Christians, the Jacobites profess the worst doctrine while the Nestorians, his friends, are closer to the Muslims (379); and it is clear that the passage in the Latin version which describes the Nestorians as heretics (413), and which is nowhere corroborated by the Arabic text, arises from the fact that the translator has 'revised' the text in a "Catholic" manner (400); as for the concluding passage where there is mention of a work against Arius, it seems, judging from its content and style, that it does not belong to the original text, and that it is a later addition.

Finally, it should be noted that in a Karchūnī manuscript (Paris, B. N. syr. 203), the text of the letter of the Muslim has been revised in manner favourable to the Jacobites, the name of the Jacobites being replaced by that of the Nestorians and vice-versa, and the writing of the name of Cyrillus being distorted (fol. 3b).

Presented as the work of a Nestorian Christian, a senior official at the court of al-Ma'mūn, this defence of Christianity is also a refutation of Islam, and is thoroughly documented, assessing the respective worth of the two religions from a historical and moral viewpoint. Translated into Latin in 1122, by Peter of Toledo and revised by Peter of Poitiers, the letter of al-Kindī played a very important role, in the East as well as in the West, in the polemic between Christians and Muslims.

(G. TROUHAU)

AL-KINDI, ABU 'UMAR MUHAMMAD 2. YUSUF AL-TUGLAI, historian of Egypt, was born on yaum al-nahr (20 Dhū l-Ḥijja) 23/12 January 897 and died on Tuesday, 3 Rabi'ulāw 150/Wednesday, 26 October 962. He heard al-Nasā'ī, the author of the *Sunan*, when the latter lectured in Egypt, and appears to have lectured on *ḥadīth* himself. Among his teachers and historical informants, Ibn Kuda'ayd (d. 312/924-5) seems to have been the most important one. His principal transmitters (cf. his *Judges*) was Ibn al-Nahhās (323-416/935-1025). This is about all that is known of his life. The authentic information goes back mostly to his contemporary, the historian al-Farghānī, who mentioned him in his continuation of al-Tabarī's *Ta'rikh*; this information has fortunately been preserved in biographical notices added in Ms. Brit. Mus. add. 23, 322. The name of the town where he was allegedly born is in fact to be read yaum al-nahr, thus shows that no independent biographical information is preserved in the notice on al-Kindī in al-Makrī's *Mushaffā*, reproduced by N. A. Koening, *The History of the governors of Egypt*, New York 1908, I, n. 5.

Al-Kindī's *Histories of the (1) Governors* (wulāt) and (2) *Judges* (ḥudūt) of Egypt are preserved in the above-mentioned Brit. Mus. manuscript. The definitive edition, provided with a careful introduction, is that of R. Guest, (GMS xix, Leyden-London 1912, reprinted in 1964, re-edition of the *Governors* by Husayn Naṣṣif, Beirut 1379/1959). The *Governors* end with the year 314/926; they were briefly continued in the preserved ms. for a few decades to the coming of the Fatimids. The *Judges* end with the year 246/861 in the preserved text; they were perfunctorily supplemented by two hands through the first third of the 5th/11th century. Both works contain important information, and are early representatives of provincial historiography. As to political history, they afford a glimpse into events as seen from outside the centre of empire. As to judicial history, they reveal a good deal about legal institutions and practices. We may suspect, however, that they do not really compensate for the loss of the older, and early Fatimid, literature on Egyptian history. In Mamlūk times, al-Kindī's works together with what was then still known of the literature now apparently lost, were much used.

Al-Kindī is further credited with works on (3) the *Mawāḍi* (known from a considerable number of quotations), (4) the *Khāṣṣ* of Egypt, (5) the *Khawāṣṣ* (the trench made by Ibn 'Ujāḍ around Fustāt in 65/684, cf. *Governors*, 46), (6) the *Great Mosque of the AM al-Rāya* (the mosque of 'Amr), (7) the *Western Contingents* (al-ḥudūd al-gharbiyya or al-ḥudūd al-gharabiyya), and (8) *Mawāḍi* b. al-*Djā'id*, presumably the last Umayyad caliph (unless it dealt rather with al-Sarf b. al-Makam). (5) and (6) may have been parts of (4). The assumption that he also wrote an independent history (see Brockelmann, in *EP*, s.v. al-Kindī) is quite uncertain.

A brief treatise on the *Faḍl'ī* Afīr was compiled by al-Kindī's otherwise unknown son 'Umar in the third quarter of the 4th/10th century. His authorship is indicated with some confusion at the beginning of the work and appears supported by the list of sources used, ending with Abū 'Umar al-Kindī and Ibn Yūsuf. Its transmitter was again Ibn al-Nahhās. Later authors took it for a work by Abū 'Umar himself. It was first edited with a Danish

translation by J. Østrup, in *Øversigt over det Kongelige Danske Videnskabsbernes Selskabs Forhandlinger*, Copenhagen 1896, 173-245. Another edition, by I. A. al-'Adawi and 'Ali M. 'Umar, appeared in Cairo in 1971 (including a reproduction of two pages of the 'Akka ms. supposedly dating from the 5th/11th century). Neither edition is complete with respect to the use of the available mss. material.

Bibliography: Given in the article, and Brockelmann, I, 235 f., S I, 229 f.; Sezgin, I, 358; Hassan A. Mahmūd, *al-Kindī al-mu'arriḡ*, Cairo n.d. (F. ROSENTHAL).

AL-KINDI, ABU YUSUF YA'QUB b. ISHAK, "The philosopher of the Arabs" whose distinguished philosophy is obligingly given by the bio-bibliographers, was born before the end of the 8th century and died in about the middle of the 3rd/9th (perhaps approximately 285-252/803-66).

An eminent universal scholar and philosopher, he lived in a period of intellectual ferment in the sphere of the sciences as well as in that of *kalām*: the period of the translations, and of the controversies concerning Mu'tazilism.

He was a companion of the caliphs al-Ma'mūn and al-Mu'tasim. To the latter he dedicated notably his *On first philosophy*, and to his son Aḥmad, who was a pupil of his, he dedicated a number of other treatises. His association with these two sovereigns, plus the fact that he fell into disfavour during the reign of al-Mutawakkil (and was even deprived temporarily of his extensive library), lead one to suspect at least a tendency towards Mu'tazilism on his part. This hypothesis is supported by several passages from his known works (where there are references to the negation of the divine attributes or to the excellence of the works of God), as well as by the titles of works which are known only from the bibliographies. The latter show the extent and the variety of the work of al-Kindi: almost 250 titles (according to the *Fihrist*) concerning all the sciences cultivated in his day (these include astrology but not alchemy, which he regarded as a form of trickery), also technical subjects of particular interest to the ruling classes with whom he was associated: the manufacture of glass, jewellery, armour and perfume.

It is impossible to give a complete account of al-Kindi's thought because of the relatively small number of documents which has survived (less than 40 extant titles, as many of them philosophical as scientific; the task of editing and evaluating a number of unpublished ones is as yet incomplete). In the meantime, one can sketch the general outline, or at least note certain significant features, on the basis of the available texts.

His general philosophical position is best expressed in the introductory chapter of *On first philosophy*. Besides certain definitions and technical statements concerning philosophy, sc. the principles of philosophy, the four "causes", the four "scientific questions", there is to be found there what is in effect both an advertisement for, and a defence of, philosophy (it should be remembered that this treatise is dedicated to the caliph).

Taking as his inspiration, and sometimes borrowing literally from, the opening of a book of Aristotle's *Metaphysics*, of which he quotes a passage (without, however, acknowledging his source), al-Kindi describes the progressive accumulation of true knowledge which has come about in the course of time, thanks to the efforts of the philosophers: from this he infers that "the truth must be acquired, from whatever source it comes", and the statements of

the philosophers must be re-examined and completed. He violently criticises the opponents of philosophy who attack it in the name of religion, while they themselves, he says, are without religion. The content of "the science of things and their true nature", that is to say philosophy, is identical to that of the message of the prophets: the science of divine sovereignty and divine unity, the science of morality and ethics. Finally, a brief quotation from Aristotle's *Protreptic* (again not acknowledged), according to which it is logically impossible not to be a philosopher, is followed by a prayer invoking the assistance of God in the pursuit of knowledge.

Thus al-Kindi sets forth an intellectual orientation doubly opposed to that of the traditionalists; according to him, knowledge can come from various sources and can still be expected to develop; but equally, he claims to respect the prophetic message. In precisely the same spirit his epistle *Concerning the number of Aristotle's works* compares human knowledge (*'ilm insānī*) with divine knowledge (*'ilm ilāhī*); whereas the first depends on prolonged effort and preparation regulated according to a precise scheme, God inspires the prophets, when He so desires, and without them having recourse to the methods of "human knowledge", with a type of revelation condensed into a few phrases whose sense the philosopher can only explain at the cost of a lengthy process of elucidation.

This position of al-Kindi's, with regard to the sciences and to philosophy, derived from various sources on the one hand, to revelation and religious speculation on the other, emerges also in some ways from the information supplied by the bio-bibliographers. These emphasise that al-Kindi had an unequalled acquaintance with the ancient sciences (Ibn al-Nadīm), that he of all the Islamic philosophers was closest to Aristotle (Ibn al-Djūdī), that he studied in depth the various branches of Greek, Persian and Indian wisdom (Kifīf); but also that he combined in his works the principles of the Law and those of the rational sciences (Bayhaḡī) and that he wrote an essay on *isāfī* according to the methods of the logicians (Ibn al-Djūdī).

Also, in a systematic list of his works such as is first to be found in the *Fihrist*, one notes the section of "books of dialectic" or of "controversy" (*Kitāb ḡadalīyya*), many of which must have dealt with specific problems of *kalām*, such as prophecy, *isfāḡ'a*, divine unity, the creation of the body, of the atom, etc.

As regards the Greek philosophers, al-Kindi mentions by name Plato and Aristotle and hardly any others. We know on the one hand that he used the *Treatise on the heavens* of Aristotle, that he commissioned a translation of his *Metaphysics* and revised the translation of the *Theology* which was attributed to him. But careful scrutiny of his works shows that he must have been acquainted, directly or indirectly, with certain others, such as Epictetus, Proclus and probably John Philoponus; we find also echoes of the last phase of the teaching of the school of Alexandria as it is expressed notably in the writings of David. These various references to other authors and implied borrowings pose many problems, both historical and critical, which are far from being solved. Without doubt there are questions still to be asked.

The variety of these borrowings poses in addition a philosophical problem, which could only be solved by examining the entire corpus of works of our author and his precise chronology, and examining the con-

ished up to the Mongol invasions of the 7th/13th century. At about that time, most of the *Salḡūḡ* remains were destroyed by fire, and there seems to have been virtually no building on the site from Ilkhānid to Timūrid times, and little under the Ṣafawids and Qājars.

In general, the Islamic geographers refer to Kinkāwar as *Kaṣr al-Luḡḡ* ("Robbers' Castle"). Al-Ṭabarī, I, 2649, says simply that it acquired this name because the Arab army on the way to meet the Persians at Nihāwand (21/642) had some of its baggage-animals stolen there. Centuries later, this reputation of the people of Kinkāwar still prevailed: Ḥamd Allāh Mustawfī, *Nuḡhat al-ḡulūḡ* (ed. M. Dabiriyāyī, Tehran 1336/1957) states that they were "first-class thieves" (Le Strange's translation in Ḥamd Allāh Mustawfī, *Nuḡha*, 107, is inaccurate). From the name *Kaṣr al-Luḡḡ* derived the *nisha* "Kāṣid" (see Barbier de Meynard, *Dictionnaire de la Perse*, Paris 1861, 450).

(R. M. SAVOY)

KINNASRĪN, an ancient town and military district in Syria; the name is of Aramaic origin and appears as *Kenneshrin* in the Syriac texts. Composed of *kinān* "nest" and *nasrīn* "of eagles", it is mentioned in the Babylonian Talmud in the form of *Kannashrayā* and the European historians of the Middle Ages called the area *Canestria*. A distinction must be drawn between the town and the *ḡund*.

1. The town. At the present day, Kinnasrīn is nothing more than a little village surrounded by ruins, a day's journey to the south of Aleppo, on the right bank of the Kuwayk which flows into the nearby marshy depression of al-Matkh. The Arab geographers place it in the fourth climate. Yāqūt, who gives various explanations for the origin of the name, says that the place was already populated in the period when the Amalekites, coming from the south, sought refuge there, and that the town had once been prosperous and strongly fortified, but that in his time (beginning of the 7th/13th century) it was nothing more than a village, owing its survival to its position in the centre of a district where a number of highways converged. In ancient times the town, founded by Seleucus Nicator, was called *Chaleis ad Belus*, and gave its name to the Syrian Arab *hima*. In the 4th century A.D. Kinnasrīn was a commercial centre and a prosperous agricultural market-town.

Set at a highway intersection and with a much-frequented *ḡund*, the town occupied an important position in the defensive system of the Syrian frontier from Antioch to the Euphrates and from the *hamad* toward Tadmur. It played a strategic role of some importance for the Byzantine empire and at the

end of the 6th and the beginning of the 7th century A.D. it came under attack from the Persians.

After their victory on the Yarmūk (636), the Muslim Arabs went on to conquer northern Syria. At Kinnasrīn, the garrison of local militia offered some resistance to the troops of Abū 'Ubayda, (636) and in *Shahān* 17/August-September 638, the town was taken. Under the reign of Yazīd b. Mu'āwīya, the town's defences were dismantled. Profiting by the experience of the Byzantines, the Umayyads, in their turn, installed a military headquarters at Kinnasrīn, which rapidly became the capital of the rich agricultural region of which it was the centre. Until the 4th/10th century, the history of the town was not marked by any event of importance.

In 332/943, it was one of the most solidly constructed localities of the region. Two years later, in the spring, the Ḥamdānid prince Sayf ad-Dawla was defeated there by the troops of the Ilkshid of Calat. In the second half of the 4th/10th century, Kinnasrīn became the object of contention in the struggle between the Byzantines and the Ḥamdānids. At the approach of the Byzantines, in 351/963, the inhabitants fled from the city in panic. After the Ḥamdānid period, Kinnasrīn began to decline to the benefit of Aleppo. In 355/966, when Nicaphorus Phocas advanced against Aleppo, Sayf ad-Dawla fell back upon Kinnasrīn, but being unable to defend it, he evacuated the town and the Byzantines came and burned the mosques. Part of the population settled to the East of the Euphrates and the rest took refuge in Aleppo. Shortly after, the town was repopulated, but in 383/998 it was burnt down and reconstructed once again. In 422/1030, it was again sacked by the Byzantines. Rebuilt at the end of the 5th/11th century by Sulaymān b. Ḳuṭlmush (q.v.), it was destroyed by his enemy Taḡī ad-Dawla Tuṭuḡh, (q.v.) brother of the sultan Maṭik Shāh (q.v.). It remained virtually uninhabited. Nasir b. Ḳusraw, passing that way in *Raḡab* 438/January 1047, saw nothing but a poor village.

In the period of the Crusades, Kinnasrīn was to play only a strategic role and was scarcely populated at all. In Muharram 523/April-May 1129, without occupying Aleppo, Ḳ-ḡhāzī installed himself in Kinnasrīn, made it a depot for military equipment and made raids against Ḥārim, the Ruḡḡ and Ḳabal Summaḡ.

Some years later, Tughlakīn of Damascus joined forces with Akṣakur and together they attacked Aleppo. Sewar, *amīr* of Aleppo in the name of Zankī, made Kinnasrīn an operational base. In 549/1154-5 Fors of Tripoli laid siege to the place, which was relieved by Zankī, arriving in haste from Hims. The traveller Ibn Ḳubayṣ (end of the 6th/12th century) describes the town as being in a state of abandonment and ruin.

From the time of the Ayyubid period (7th/13th century), Kinnasrīn is no longer mentioned as a town, but its *ḡund* is noted as a halting-place for caravans journeying from Aleppo towards the south, and, beyond the crossroads of al-Aḡḡīb, towards the west. Pilgrims continued to make their way to Taḡī Nabl 'Isā, one of the hills of the town, to the tomb (*maḡām*, *ḡabr*) attributed to the prophet Ṣāliḡ (q.v.) which is in fact the burial-place of the *amīr* Ṣāliḡ b. 'Abd Allāh b. al-'Abbās. In the Ottoman period, Kinnasrīn was nothing more than an impoverished village, bearing the name *Eski Haleb*. At the present day, it has returned to its original name.

2. The *ḡund*. Around Kinnasrīn there extends a

vast undulating plain (Ara); this is one of the most fertile regions of northern Syria where, with the aid of irrigation, cereals, fruit trees and vines are cultivated. In 375 Saint Jerome, visiting the province where at that time monasticism and asceticism were developing, testified to its agricultural prosperity.

On the horizon, there are visible to the south the Djabal Zawiya, to the west the Djabal Badīya, to the north the Djabal Sam'an and the plain of Mardī Dībik punctuated by tellis, while to the east there are the shining salt-marshes of Djabbāl. The Arabs penetrated at an early stage the territory of Kinnasrīn, which corresponded to one of the Byzantine administrative divisions of Syria, representing the Roman "Syria Prima" of which Antioch was the capital. In the 6th century, Arab tribes were encamped in the eastern part of the region between the Euphrates and Kinnasrīn. Among the battles which took place on this territory, one may note the victory won in 554 A.D. near the source of the 'Udhayya by the Ghassanid al-Hārith over the Lakhmid al-Mundhir of al-Hira.

After the Muslim conquest, Syria was divided into four *adūd*: the *ḡund* of Urdunn, that of Filāstin, that of Dimashq and that of Hims. The creation of the *ḡund* of Kinnasrīn is attributed by some (al-Jaharī and al-Dimashqī) to Mu'awīya, who installed refugees from Baḡra and Kūfa there in 22/643, by others (al-Balādhurī, Yāqūt) to Yazīd b. Mu'awīya, who detached some districts from the *ḡund* of Hims.

In the 'Abbasid period, following the coaquets of al-Manṣūr and his successors, the *ḡund* grew in size towards the north; at this time it covered its greatest expanse of territory. It absorbed to the north Kurḡ, Tisn, Dufūk, to the north-west 'Aynjab at a distance of two days' march, and Kal'at al-Rūm [q.v.] at a distance of five days' march from Aleppo. To the south, it included the districts of the two Na'arās (M. Mīrīn and M. al-Na'mān) and of Hamāt, and the territory of Samīnā.

Under the reign of Hārūn al-Rashīd (170-92/785-809), the *ḡund* of Kinnasrīn was deprived, to the west, of the territory stretching from Antioch to the coast, to the east, of the region lying between Aleppo and Maubīdī, and to the north, of the *ḡuḡār*, districts which were to constitute the region of the 'Awāṣīm [q.v.]. The *ḡund* was then limited to the area lying to the south of Aleppo. This was the end of its period of military importance, but economic activity continued, as is shown by the increases in taxation and in the tribute paid to al-Ma'mūn. In the 3d/9th century, the *ḡund* of Kinnasrīn paid 350,000 *dirhams* while that of Damascus paid only 120,000. In the mid-4th/10th century, the *ḡund* paid 400,000 *dirhams* of *ḡharāḡ*, the same as Dimashq, and 370,000 of *ḡharāḡ* [q.v.]. The capital was then Aleppo, and the principal cities Antākīya, Kinnasrīn and Maubīdī. Its limits were to the west, the coast from Lāḡhīliya to Bayās, to the north, Mar'ash and the 'Awāṣīm, to the east the Euphrates between Sumayyāt and Bālis, and to the south, the region of Hamāt with Shaysar and Rafaniyya, a region claimed by both Kinnasrīn and Hims.

In 349/961, Nicephorus Phocas attacked the region of Aleppo; he returned two years later to sow the ruins, and the population went in search of refuge elsewhere. The intervention of the Basilids led to the disappearance of the 'Awāṣīm, to the advantage of the Byzantines who occupied Antākīya. The reconstruction of northern Syria under the Salḡūqs scarcely touched the *ḡund* of Kinnasrīn. In the 12th century, the latter came under pressure from the

Franks of Antioch, especially in 455/1103 when Bohemond demanded tribute. In Saḡar 527/Dec. 1132, Fulk of Jerusalem and the armies of Antioch attacked the territory of Kinnasrīn and imposed a truce with the addition of tribute upon Sawār, the Aleppo representative of the *Atabeg* Zankī.

At the end of the 7th/13th century, the *ḡund*, which retained its name in spite of the dominance of Antākīya and the lands of Samīn.

Under the Ottomans, in the mid-11th/18th century, Hādīdī Khālīfe still speaks of "the province of Kinnasrīn of which the capital is Aleppo". Later, the *ḡund* of Kinnasrīn disappeared and was integrated into the *ḡund* of Aleppo.

(N. ELIASÉFF)

KINTĀR [see MAR'AYIL]

KİPÇAK, a Turkish people and tribal confederation; usually also written Kipčak or Kifčak; the totems Kifčak, Khufčak, Kishak and Kharčak are also found. The etymology of the name is uncertain: the origin of the Old Turkish word *kifčak* (Kifčak), which is known only in the form *kifčak* 'poor' 'unlucky' (Cleton, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972, 581), is conjectural, as well the connection with the Saḡal word *kifčak* 'irate, hot-tempered'. The proper name Kipčak is recorded in the Uyghur texts. See Radloff, *Vorwerk eines Wörterbuches der Türk-Dialecte*, St. Petersburg 1899, II, 843-5. In later popular and learned etymologies (first in Rashīd al-Dīn, *Djāmī al-tawārīkh*, ed. Berzin = *Trudy Vest. Otd. Arkh. Obšč.*, vii, 23, later in Abu 'l-ḡhāṣṣal, ed. Desmaisons, 10) *kifčak* is connected with *kobak* or *hobī* and explained as a "hollow tree trunk"; at the same time a legend is told of the birth of a boy from a hollow trunk; the boy is said to have been adopted by Oḡuz Khān [cf. KIMAK] and to have been given a separate territory as a *ḡiel*. The relation of the tribe Kipčak, emerging in the Western Siberian steppes, to the other Turkish tribes is unclear. Gardīzī (text in W. Barthold, *On the v. povodnits v. Srednyaya Azīya*,

82 – ed. 'Abd al-Hayy Habibi, Tehran 1347/1958, 258) mentions the Kipčak along with the Imik as a division of the Kimak (see *ghuz*) who lived on the Irtyš, (7.6.) although the earlier anonymous author of the *Ḥudūd al-'Alam* (f. 190 r. Minorsky, 101, § 21, comm. 315-17) says that the Kipčak had separated from the Kimak and dwelled to the north of the Pelenegs. Ibn Khuraddādhbih, 31, l. 9, and, following him, Ibn al-Fakih, 309, l. 3, tr. Massé 388, mention the Kipčak along with the Kimak as a separate people. Mahmūd al-Kāshghari, I, 273, describes the Yimāk (sic) on the Irtyš as a subdivision of the Kipčak, not of the Kimak. In another passage of the same work (III, 22) we are told that the Yimāk are a Turkish tribe (*dijl min al-turk*), the same "as we call Kipčak" (*zu-kum al-biffiḡāhiyya 'indunā*); the Kipčak themselves thought they were a separate branch (*ghumma atirāk biffiḡāh ya'uddūna anfasihim ḥizim ḡhānā*). The Kimak mentioned by Mukaddasī, 274 l. 3, al Šawrān must have been Kipčak. In connection with the advance of the Kipčak from north to south is the appearance (first in the 5th/11th century in the *Diwān* of Naṣīr-i Khusrāw; cf. Browne, *1st. hist. of Persia*, I, 297) of the name *Daḡst-i Kipčak* for *Maḡlāt al-ghuz*, cf. *ibid.*, II, 168. The Kipčak (*Khifāḡ*) are already mentioned by Bayhaqi, ed. Morley, 91, as neighbours of Khwārazm. According to Marquart, *Osttürkische Dialektstudien*, 202, the Kipčak appear in history for the first time in 514/1120-3 in Ibn al-Aḡlir, x, 399, as allies of the Georgians; according to Marquart (*ibid.*, 236) the kingdom of the Kipčak was founded by people who emigrated from Manchuria in connection with the rise of the Čurč (the Chinese Kin Dynasty); cf. thereon, P. Pelliot, in *JF*, ser. 4, 2v, 125 ff. That the term *Daḡst-i Kipčak* was also extended to South Russia is shown by the evidence of Ḥamd Allāh Mustawfi Ḥazwini, *Nuḡlat al-kulūb* ed. Le Strange, 21, 236, that *Daḡst-i Kipčak* is the same as *Daḡst-i Khazar*. Altogether it seems to be sure, that in the 4th-5th/10th-11th centuries a loose political unit of Turkish tribes (including the Kimak) existed under this name in the above-mentioned territories. In the middle of the 5th/11th century, the Kipčak tribes moved to the Russian steppes, pushing the Oghuz toward the western areas of the Pontus region. (see *ghuz*). After 1064 they became the lords of these territories, which they kept until the Mongol invasion. Among the Kipčak tribes, the Kuman (called Polovtsi by the Russians and Comani by Western Europeans) were the dominant element which played an important role in the history of Byzantium, Bulgaria and Hungary. They are often identified with the whole of the Kipčak tribal confederation. The Kipčak in South Russia were exposed not only to the influence of Islam but also to that of Christianity; a prince of the Kipčak (Chinese Kin-ŋa) in the time of the Mongol invasion (the same prince is mentioned in Russian annals) was called George (Russ. Yuriy, hence Chinese Yü-lf-ghī, in Bretschneider, *Mediaeval researches*, II, 297 ff. and Pelliot, *op. cit.*, 130). Ibn Baṭṭūṭa mentions Christian Kipčak at Keč (q.v.); the so-called "Codex Cumanicus" must be regarded as a memorial of the spread of Christianity among the Kipčak. The name Kipčak survived the Mongol invasion; it was later transferred to the empire of the Golden Horde. The Kipčak military slaves, coming to the Near East, especially to Egypt, played an important role in the history of this area as the *Baḡri Mamlūks* (see AL-BAGRIYYA and MAMLŪKS). The first scant information concerning the language of the Kipčak is due to al-Kāshghari. According to his

Diwān lughāt al-turk, II, 253, iii, 23, the dialect of the Kipčak had the same phonetic peculiarities as the dialect of the *ghuz*, with *di* for *y* at the beginning of a word. The first linguistic record relating to the Kipčak (Kuman) language is the Codex Cumanicus. From the Kipčak Mamlūks, several linguistic monuments are known. From the Armenians in Poland and in Ukraine, speaking a special Kipčak dialect, several literary and other documents have come down to us. One section of the Turkish languages, according to the ethnic and historical relation of these peoples to the Kipčak tribes and regions, is also called Kipčak. The Kipčak are no longer mentioned after the Mongol period; like many other early names of peoples (Kaduk, Uyghur, Nayman etc.) the name Kipčak is found as the name of a family or of a minor tribal unit among the Bashkirs, Nogai, Kirghis and Uzbek. The Kipčak are particularly associated with Farghāna in the modern history of Central Asia, cf. KHORRAM.

KIR, SHEHIR (see *ghinghish*).

KIRĀ' (أ), a legal term meaning the leasing or hiring out of things. This is a contract in every way like a contract of sale, but with this difference that a sale aims at transferring the possession of something in exchange for the sale price, whilst leasing or hiring out aims at the beneficial use or enjoyment of a thing for a fixed period to time in return for a hiring fee. It is accordingly the sale of a beneficial use (*bay' al-manāfi'*) and is built around the procedure for a contract of sale. The only differences are those which are inherent in the differing nature of the two contracts, but both of them come into the category of commutative contracts (*mū'awātāt*), of which sale is the leading example. The term "commutative contract" is used in practice for all procedures (sale, exchange, loan, leasing or hiring out, settlement, etc.) in which we have the transfer of property (*milki*) or beneficial use (*manāfi'*) in return for the handing-over of an equivalent.

The essential elements of a contract of leasing or hiring out are (a) the contracting parties, the lessor (*hārī*) and the lessee (*mukārī*); (b) the object in question (*al-mawṣūf al-ṭayyīn*), i.e. the thing hired out and the sum corresponding to its beneficial use (*adīr*); and (c) the form or embodiment of the agreement (*ṣiḡḡa*). The effects of a contract of this kind are those of a contract of sale, except for the differences arising out of the specific natures of the two contracts.

The contract is not dissolved by the deaths of either of the two contracting parties; the heirs have the power to re-negotiate the contract. Hiring or leasing can always be annulled when there is an excuse (*uḡḡr*).

The types of objects which may be leased or hired out. Whilst *ḡdāra* (see *ḡḡāra*) is the hiring out of a service and of movable objects, with the exception of ships and beasts which are used for

transportation, the term *kirā'* is used for these last and for immovable property. Hence in practice, *kirā'* may be a contract for transporting something. According to Ibn 'Arabi, it is in this case the sale of the beneficial use of an animal or of something else like a ship for purposes of transport. But the transporting of objects must be distinguished from the transporting of persons. Mālik sees there a *locatio operis*. Other Mālikites pronounce in favour of a hiring out of services. The Shāfi'ites consider this contract as a hiring out of objects. But in any case, the hiring out of beasts or burden and ships (*kirā' al-ramḥil wa 'aṣ-ṣuṣūn*) is perfectly admissible, whether the beasts are individually determined or not.

Hiring out can cover land (*kirā' al-arḍ*), and the leasing of rural properties existed before Islam, under two forms: (a) *kirā'* involving payment of money; and (b) *kirā'* involving the making over of a proportion of the produce of the property (*muḥabbabah*). This last form must have been the commoner one, in view of the scarcity of coinage.

The last type of hiring out of an object is *kirā' mu'abbad* or *conductio perpetua*, the lease in return for a quit-rent of ancient French law. It is the equivalent of our emphyteusis or emphyteutic lease. In Egypt, this institution is known under the name of *mudda jawila*, in Algeria as '*and*', and in Morocco as *kirā' al-k' fakkaya*; all these names indicate the idea of a perpetual lease.

(A. M. DELCAMPRE)

KIRĀ'A, reading. Applied to the Qur'ān, *kirā'a* also means recitation. In the present article the term *kirā'a* is used as follows: 1. in the general sense of the recitation (a) of single parts of the Qur'ān, as prescribed for the ritual prayer (*ṣalāt*), or the recitation (b) of the entire Qur'ān, which has become, in the course of years, an accepted spiritual exercise (*kirā'a* = recitation); 2. to indicate a special reading of a word or of a single passage of the Qur'ān (*kirā'a*, pl. *kirā'āt* = variant); 3. to indicate a particular reading of the entire Qur'ān (*kirā'a* = reading). In the third case one speaks of the *kirā'a* of Ibn Mas'ūd or of the *kirā'a* of the people of Kūfa as opposed to the *kirā'a* of other authorities or to the redaction authorised by 'Uthmān.

The recitation of texts proclaimed by Muḥammad as revelation played from the very beginning a prominent part in the Muslim community. This is already evident from the fact that the collection of these revelations was designated as *ḥur'ān* "recitation". However, the Qur'ān had not yet been codified at the death of the Prophet and the form of Arabic letters used to note down single parts of it and later on the whole collection was very incomplete; in a group of consonants a choice between two or more readings was possible. Consequently, disagreements soon arose on exactly how to read the revealed text. The promulgation of a canonical redaction of the Qur'ān under the third caliph 'Uthmān (soon after 30/650) was intended to remedy this evil. Copies of this redaction were sent from Medina to Kūfa, Basra and Damascus, the most important cities of 'Irāk and Syria. After a relatively short period, this redaction seems to have been generally accepted as the official text, finally even at Kūfa where Ibn Mas'ūd (d. 33/653), the distinguished Companion of the Prophet, who maintained a "reading" of his

own, had at first called upon his followers to resist.

On the whole, the text of 'Uthmān had a strong unifying influence, which was felt to an increasing extent. But a really uniform *kirā'a* was not thereby guaranteed. During recitation, which was essentially based on oral tradition, readings deviating from the official edition continued to be followed. In so far as these readings went back to recognised authorities of the early period and to trustworthy witnesses, they were also noted by commentators on the Qur'ān and philologists, and turned to exegetic or linguistic account. Thus variant readings of Ibn Mas'ūd, Ubayy b. Ka'b (d. 29/649 or 34/654) and other early "readers", which deviated from the official text, were transmitted in early scholarly literature and have therefore come down to us, at least in extracts. The *kirā'a* of al-Ḥasan al-Baṣrī (d. 120/728) was later even inserted among the "fourteen readings" (see below).

Further development was on characteristic lines. The untrammelled freedom with which the text had been treated in the earliest times was followed by a period of systematisation and limitation of the possibilities of the "readings" which the consonantal text and the oral tradition offered. However, complete unification was not achieved. People neither would nor could simply set aside the power of tradition. Thus the free choice of the *kirā'a* was limited, but not entirely forbidden. While reading the officially accepted consonantal text (already in itself constituting a limitation), the "reader" could still make a choice between a certain number of authorities. In its detail the history of Qur'ān reading is very complex. The scanty and sometimes unreliable sources leave much uncertain. In general, however, the course of development is clearly recognisable, thanks in particular to the penetrating studies of G. Bergsträsser (in collaboration with O. Pretzl) and E. Beck (see *Bibl.*). In this article only the essential aspects will be briefly mentioned.

Important progress in the standardisation of the "reading" was achieved by differentiating the letters *h, z, th, n, y*, etc. by means of strokes (later dots) and by introducing vowel signs. The redaction of 'Uthmān, being officially recognised, gained in importance by this clarification. With the passage of time, other differences were gradually eliminated. Such a levelling seems at first to have been accomplished within single cities (*amṣār*), and later on through the influence of one city on another. Majority readings tended to prevail over minority readings, thus leading towards a general consensus. In the first half of the 4th/10th century, Ibn Muḥājīd (d. 324/936), the influential *Imām* of the "readers" in Baghdad, publicly and with governmental support brought this process to its logical conclusion. He banned further use of the *kirā'āt* of Ibn Mas'ūd and other uncanonical readings. Ibn Ḥanbalūdhī, a contemporary and fellow-reader of Ibn Muḥājīd, complied with this ban only after he had been arraigned and flogged. In addition, Ibn Muḥājīd declared the reading of the 'Uthmānic consonantal text, standardised by tradition and consensus, to be obligatory, and compelled Ibn Miskān, an other fellow-reader, to renounce the claim which he had maintained until that moment that he could decide for himself on the punctuation and vocalisation of the text. As authorities on the traditional reading of the 'Uthmānic text, Ibn Muḥājīd recognised seven "readers" belonging to the 2nd/8th century, among whom were 'Asim of Kūfa (d. 28/745) and Naḥ' of Medina (d. 769/783), whose readings have both remained authoritative

to the present day, that of 'Āṣim in the east and centre of the Islamic world, and that of Nāfi'—with some exceptions—in North Africa from Egypt westwards. To the seven "readers" recognised by Ibn Mujaḥhid were added later on three others, and afterwards another four, but these never attained the same standing as the first seven. Furthermore, since Ibn Mujaḥhid, in mentioning 'Āṣim—one of the Seven—had often named two others, Abū Bakr Shu'ba (d. 193/809) and Hafs (d. 180/796), who transmitted 'Āṣim's reading independently of one another, it became customary to add also the names of two other traditionalists to each of the other six and of the "Three after the Seven". Thus originated the bewildering number of names in the list of readers recognised as canonical (*Gesch. des Qur.*, iii, 186-9; Blachère, 178-23; Bell-Watt, 49 ff.).

After the readings had been limited to the "Seven" recognised as canonical, and to the other "Three after the Seven" and "Four after the Ten", all the others were eliminated in the practice of recitation. The "readers" henceforward had to keep exclusively to the canonical readings. This however did not completely rule out the uncanonical "deviant" (*ghawāḥidh*) readings. They were later adduced as useful evidence in the practical interpretation of the Qur'ān and in the elucidation of linguistic problems. Besides his "Book of the Seven" (*Kitāb al-Sab'a*, ed. Sh. Dayf, see *Bibl.*) Ibn Mujaḥhid also composed a "Book of deviant readings" (*Kitāb al-Shawāḥidh*), which is not extant. The debate on the uncanonical *ghawāḥidh* was carried on throughout the centuries in a scholarly literature of growing importance. Ibn Abī Dāwūd al-Sijistānī (d. 366/983) *Kitāb al-Maṣāḥif* and Ibn Mujaḥhid's works already mentioned were followed—to cite only a few of the most important names—by the monographs on uncanonical readings of Ibn Khalewayy (d. 370/980) and Ibn Dīnār (d. 392/1002), by al-Dānī's (d. 444/1053) classical manual of the Seven Qur'ān-readings (verse version by al-Shāṭibī, d. 390/1194) and his works on orthography, punctuation of the vowels and other phonetic marks, by Ibn al-Djazarī's (d. 833/1429) works on the Ten readings and on the classes (*ḥudūd*) of readers, and finally by al-Bannā's (1177/1795) book on the Fourteen readings. For the practice of recitation, the literary tradition constituted, in contrast with early times, an almost indispensable complement to oral instruction.

The knowledge of Qur'ān-reading (*ḥikm al-ḥirā'a*) had become a distinct theological discipline and had many practitioners, few of whom, however, wrote books on it. In this connection, it becomes understandable that the official Egyptian Qur'ān of 1924 (following the reading of 'Āṣim in the tradition of Hafs) is not founded on early Qur'ānic manuscripts, but is the result of reconstructions derived from the literature on the readings (see Bergsträsser, in *Jsl.* xx (1932), 5 ff.).

In the recitation by professional "readers" (see above), a distinction is made between an incantatory, a rapid and a moderate tempo (*harīl* or *ṭahhīḥ*—*ḥadr*—*ṭahhīḥ*). The manner of execution can be designated as cantillation, but there are also intricate musical settings (see the studies by K. Huber and M. Talbi). The technique of reciting is laid down in detail in works on the *ḥirā'a*.

Special importance is attributed to the rules of pronunciation, including the theory of assimilation (*idghām* [e.g.], *idghīḥ*), the modification of a into e (*imāla*), extension (*mad*), forms of the pause (*waḥf*) and the conservation or alleviation (*tabḥīl*) of *hamza*

(see O. Pretzl's analysis of a typical treatise on the *ḥirā'a* al-ḥirā'a, in *Islamica*, vi (1934), 236, 292-331). The time required for private oral instruction is greatly increased by the fact that, since Ibn Mujaḥhid, several different *Imams* and Schools of Readers have been officially recognised. According to a distinctive method known as "assembling" (*djām*) the Qur'ān verse is divided into small fragments, each one of which is recited as often as there are variants of it, each time with another variant" (see the instructive passage, "Koranlesungsunterricht", by Bergsträsser, in *Jsl.* xx (1932), 36-42). When the whole of the Qur'ān is recited, the separate readings must be considered as self-contained units; the "readers" are thus not free to combine the text of their recitation from different *ḥirā'at* (Bergsträsser, *ibid.*, 29 ff.). These, however, are details which concern only an élite of "readers". The great mass of the *ḥirā'a*, consisting largely of blind men, would in any case limit themselves from the start to the study of a single reading (*ḥafṣ* 'an 'Āṣim, in the west *Wagh* 'an Nāfi'). In general, the originally large number of readings has given way in the course of centuries to a far-reaching uniformity both in the practice of recitation and in the theoretical *ḥikm al-ḥirā'a*.

The history of the text of the Qur'ān and of the *ḥirā'at* has also been studied by European and American orientalists, notably Nöldeke and Goldziher, followed by A. Jeffery, G. Bergsträsser, O. Pretzl and E. Beck (see *Bibl.*). Important sources have been published, and separate stages of development reconstructed. Jeffery, and likewise Bergsträsser in association with Pretzl, planned an apparatus *criticus* for the Qur'ān. Bergsträsser and Pretzl had begun a systematic collection of photo-stats of early manuscripts of the Qur'ān in the hope of discovering variants not registered in the literature. Because of their untimely death (1933 and 1941), this research came to a standstill. Jeffery also died (1959) without having realised his vast project. The task, however, remains to evaluate the known and still unknown variants for the study of old Arabian dialects and in general for a future historical grammar of Arabic. Whether much will emerge to the profit of the historical interpretation of the Qur'ān remains to be seen. The harvest so far obtained by Bergsträsser and Beck is rather meagre and promises no new results of any importance. During the last years of his life, Pretzl himself had apparently "retreated from the generally high appreciation of the manuscripts and readings of the Qur'ān". August Fischer, who noted this *en passant* in a posthumous article (*Jsl.* xxviii (1948), 5 f. n. 4), also cited a passage from Spitaler's obituary of Pretzl (*ZDMG* xcvi (1942), 163 ff.). In Fischer's opinion the Qur'ānic textual variants "for the most part (emphasis by Fischer) consist of no more than attempts at emendation made by philologically trained Qur'ān specialists on difficult passages in the 'Uthmānic redaction'".

KIRĀ'A (see TADRĪS).

KIRĀD (also *muḥāraḍa* and *muḥāraḍa*, cf. below), a commercial arrangement in which an investor (*ṣāḥib al-māl*) or group of investors entrusts capital or merchandise to an agent-manager (*ṣāḥib al-muḥāraḍa*, *muḥāraḍ*) who is to trade with it and then return it to the investor with the principal and previously agreed-upon share of the profits. As a reward for his labour, the agent receives the remaining share of the profits. However, in case of a loss resulting from an unsuccessful business venture, the agent is in no way liable for the return of the lost investment. He loses his expended time, effort, and anticipated share of the profit, while it is the investor who exclusively bears the direct financial loss.

The *ḥirāḍ* combined the advantages of a loan with those of a partnership (*sharika*); and while containing elements characteristic of both contracts, cannot be strictly classified in either category. In all Islamic legal writings, it is treated as a distinct and independent contract with a separate section or book (*kitāb*) devoted to it. As in partnership, profits and risks in the *ḥirāḍ* are shared by both parties, the investor risking capital, the agent his time and effort. However, in the *ḥirāḍ*, unlike a partnership, no joint capital is formed and the investor does not become directly or jointly liable with the agent in transactions with third parties; indeed, third parties need not ever be aware of the investor's existence. As in a loan, the *ḥirāḍ* generally entailed no liability for the investor beyond the sum of money or quantity of commodities handed over to the agent; and in the event of its successful completion, the agent returned the capital plus a share of the profits (the latter, corresponding to the interest in an interest-bearing loan).

The agent's complete freedom under normal trading circumstances from any liability for the capital in the event of partial or total loss and the disjunction between the owners of the capital and third parties are novel and distinctive features of the *ḥirāḍ* which made it a particularly suitable instrument for long-distance trade.

Although commercial arrangements resembling the *ḥirāḍ* were known in the Near Eastern and Mediterranean world from the earliest times, it appears very likely that its direct origins were indigenous to the Arabian peninsula, having developed in the context of the pre-Islamic Arabian caravan trade. With the Arab conquests, it spread to the Near East, North Africa and ultimately to Southern Europe. Its introduction in the form of the *commenda* in the Italian seaports of the late 10th and early 11th centuries A.D. was germinal to the expansion of medieval European trade. The *ḥirāḍ* was the subject of lengthy and detailed discussion in the earliest Islamic legal compendia (late 2nd/8th century). Its legal treatment in these early treatises bears the hallmark of long experience with the *ḥirāḍ* as an established commercial institution. Although not mentioned in the *Kur'ān*, numerous traditions attribute its practice to the Prophet and his leading companions (e.g. *Shurīnī*, *Muḥasab al-muḥāraḍ*, II, 309; *Sarakhṣī*, *Mabarrat*, xxii, 18-19; *Shaybānī*, *Asīl muḥāraḍa*, fol. 42). From the sparse indications available, it appears that this form of commercial association continued through the early centuries of the Islamic era as a mainstay of caravan and long-distance trade. In one of the very few medieval Arabic treatises of commerce, Dimashqī's *The bundles of commerce* (probably 5th/11th century), the *ḥirāḍ* is cited as one of the three methods by which trade is carried out;

Ḥarālī lists it among the six commercial contracts, "the knowledge of which is indispensable to anyone seeking gain in trade" (Ḥayāt, II, 66). The documents from the Cairo Geniza (5th-7th/11th-13th centuries) are replete with numerous examples of *commenda* agreements which account for a considerable share of the commercial activity reflected in these documents. Thus we may conclude that not only in law, but in practice as well, the *ḥarād* constituted one of the most widespread instruments of commercial activity.

Three Arabic terms are used to designate this contract: *ḥarād*, *muḥārafa*, and *muḥāraba* and the terms are interchangeable with no essential difference in meaning or connotation among them. The divergence in terminology was probably originally due to geographical factors. The terms *ḥarād* and *muḥāraba* apparently originated in the Arabian peninsula, and the term *muḥāraba* was of 'Irāqī provenance. Subsequently, the difference was perpetuated by the legal schools, the Mālikīs and Ḥanafīs adopting the term *ḥarād* and, to a lesser degree, *muḥāraba*, and the Ḥanafīs the term *muḥāraba*.

As in the case of several other commercial arrangements, Islamic law justifies the licitness of the *ḥarād* contract on the religious grounds of traditional practice (*sunnā*), the consensus of the community (*ijmāʿ*) and, more interestingly, on the practical grounds of its economic function in society. After quoting a series of traditions describing the *ḥarād*'s use in trade by the Prophet and his companions, Sarakhsī adds that it is also allowed: "Because people have a need for this contract. For the owner of capital may not find his way to profitable trading activity, and the person who can find his way to such activity may not have the capital. And profit cannot be attained except by means of both of these, that is, capital and trading activity. By permitting this contract, the goal of both parties is attained" (Sarakhsī, *Mabṣūṭ*, xxi, 19).

Sarakhsī's summary of the *ḥarād*'s economic function highlights one of the most important aspects of this contract's role in Near Eastern commerce, and helps explain its widespread use in mediaeval trade. For the investor, the *ḥarād* served as a means of hiring trading skill, and for the agent-manager, as a means of hiring capital. Since, in the mediaeval commercial context, profit could be realised only by the combination of capital and trading activity, the *ḥarād*, especially for the purposes of long-distance trade, became an ideal instrument to attain a profitable goal.

KIRĀN, in Islamic astrology "the conjunction". Without further qualification, this refers to the mean or true conjunction of Saturn and Jupiter. The conjunctions of these two planets were combined, apparently by Sassanid astrologers, with the Hellenistic doctrine of the triplicities to form the basis of one of several methods of predicting the course of history available to mediaeval astrology.

The four triplicities were associated with the four sublimar elements as follows:

Fire	Earth	Air	Water
Aries	Taurus	Gemini	Cancer
Leo	Virgo	Libra	Scorpio
Sagittarius	Capricorn	Aquarius	Pisces

Mean conjunctions of Saturn and Jupiter occur once in about every 20 years with a longitudinal increment of about 242°35'; for twelve or thirteen conjunctions, then, or about 240 or 260 years, they stay within the same triplicity, and it takes about 960 years (i.e. approximately a millennium) for the conjunctions to return to the triplicity in which the cycle started. The return of the conjunctions to the triplicity of fire (to Aries) in about a millennium was thought to indicate the appearance of a new prophet; the transfer of the conjunctions from one triplicity to the next in about 240 or 260 years was taken to signify a possible change in the dominant dynasty; and the occurrence of each individual conjunction was believed to portend lesser shifts in political, military, or economic status. The details of these predictions depended upon the horoscopes of the beginnings of the solar years in which the conjunctions occurred.

This theory of conjunctions usually appears in concert with various other elements of political astrology, all of which seem to have originated in the Zoroastrian millenarianism of Sassanid Iran. These other methods are: the revolutions of the world-years; the cosmic cycles—i.e. the mighty, big, middle, and small varieties of the *āzma*, the *miḥr*, and the *farḍ* of the planets; the mighty years of the planets; and the planetary lords of the millennia, centuries, decades, and single years. These elaborate systems for predicting religious and political change, together with the related theory of the conjunctions of the maleficent planets, Saturn and Mars, in Cancer every 30 years, appealed strongly to dissident groups in the early 'Abbāsid period and later, and especially to these with Iranian connections; in particular, one may mention the Karmāṭans and the Ismāʿīlīs. Many leading astrologers wrote expositions of the significance of the conjunctions, including Mashāʾalāh and Abū Maʾshār; through their writings, this form of political astrology was transmitted to Western Europe, where it became extremely popular during the Renaissance.

KIRĀT (see MAKĀYIL).

KIRD (Ar. fem. *kirda*, pl. *kurūd*, *ahūd*, *hīrad*, *hīrada*, *hīrida*), a substantive having the general sense of "monkey", but representing in fact, among the simians of the Ancient World, only the members of two families, the colobids and the cercopithecids, the only primates known in ancient Arabia. Egypt, Abyssinia, Somalia, the Yemen and 'Uman in fact constitute favourite habitats of baboons (genus *Papio*) and macaques or cynocephalous magots (genus *Macaca*). Both types live there in groups of which the total population can vary from a dozen to a hundred; each of these societies, which are based on polygamous family units, is subject to the authority of a male leader and this animal social organisation has not failed to attract the attention of those Arab writers who have spoken about monkeys. Since ancient times, the peoples of southern Arabia have looked with respect and circumspection (laced with an element of superstitious fear at the colonies of tamariad baboons (*Papio hamadryas*) and of green baboons (*Papio anubis*) infesting the areas of high ground. In the times of the Pharaohs, the Egyptians deified these monkeys, and there was certainly a time when, in pre-Islamic Arabia, these animals were taboo. Were they demonic incarnate, malevolent genii or metamorphoses of man? There was no shortage of questions for the credulous Bedouin to ask himself, and more especially, there was the even current legend according to which Solomon made a pact with the race of monkeys, setting them to guard the demons vanquished by the genii. Even in the 4th/10th century, Ibn al-Fakih al-Hamadī (q.v.) and al-Mas'ūdī report, with complete seriousness, that among these troupes of monkeys there is found one larger than the rest wearing at his neck the seal bestowed by Solomon. Apart from the involvement of the latter in the world of monkeys, there was alive in the minds of men the legend, of Talmudic origin (*Sanhedrin*, 209a), of the divine curse inflicted upon some of the builders of the tower of Babel; their expiatory punishment was to be changed into monkeys for all eternity. This curse was to be confirmed by the Qur'ān (II, 64/65; VII, 166; V, 65/66) where it is said: "those whom He has cursed, He has changed into monkeys and pigs". Popular belief in such metamorphoses (*mas'ūh*, pl. *mas'ūh* (q.v.)), encouraged by successful fables such as the *Thousand and one nights* (for metamorphoses of men into monkeys, see nights 9, 12, 295, 624), was to persist for a long time in the bosom of Islam, in spite of categorical refutations on the part of the Prophet reported in certain *ḥadīths* (see al-Damiri, *Hayāt*, II, 243-4), according to Ibn 'Abbās. More sceptical, al-Dāhūt did not omit to set these alleged retrograde mutations in the realm of fiction (*Hayāt*, I, 309).

By nature less inclined towards superstition than the nomads, the settled people of the Yemen and of 'Uman were familiar with the baboons of their region and also with other monkeys imported from East Africa, and were able at a very early stage to domesticate the young animals and to use them for such menial services as turning millstones; butchers and grocers used them to guard their goods (al-Damiri, *op. cit.*). The cunning and agility of the

monkey were also exploited by thieves for picking pockets and housebreaking. So the monkey became a part of the every-day life of man, to almost the same extent as the dog, and the term *kird* was no longer sufficient to differentiate between ages and sexes, a terminology based on exterior traits filled this gap. Thus the large male baboon was called *rubāḥ* or *rubāḥ* (whence the form II verb *rubāḥa* "to train monkey"); he was known also as *ḥurūd*, *ḥurūd*, *ḥurūd*, *ḥurūd*, *ḥurūd*, *ḥurūd*, and his thick fur hood earned him the epithets *ḥabbār*, *ḥabbār*. In the *Ḥijāz* he was known as *ḥijāz*, a name for the fox in other countries. The female and the young monkey, smaller in stature than the male and with less hair, were known, according to different places and people, as *ḥayya*, *ḥayya*, *ḥayya*, *ḥayya*. In spite of these cases of domestication, which were in fact limited in number, relations between men and monkeys were not always so peaceable, and it happened quite often that as a result of the proliferation of the simian species, rural populations had to take issue with destructive and aggressive hordes; speaking of baboons, al-Idrīsī (*Nasā*, . . . and *clime*, section 6) remarks that, in 'Uman, it is sometimes necessary to repel them with spears and arrows, and al-Makrī notes (*Ḥayāt*, and quoted in the *Musāḥ al-ḥayāt* of Ibn Taghribirdī) in referring to a *ḥayāt* of Mogadishu in Somalia, that in about the year 800/1398 this town was actually invaded by monkeys which installed themselves there firmly, and that in 839/1435-6, the date of his meeting with the *ḥayāt*, this permanent occupation was still going on, causing grave annoyance to the inhabitants.

In spite of a fundamental quality of mischief, encouraged by captivity and a sometimes extreme lewdness, stigmatised by the adage *amā min ḥijāz*, the Arabs recognised in the monkey qualities lacking in other animals, such as a concern for cleanliness expressed through a continuous and methodical process of delousing, its extreme agility, its astonishing ingenuity and above all its exceptional talent for imitation, these qualities were defined in proverbial expressions such as *al-iam min ḥijāz* "more cunning than a monkey", *akayā min ḥijāz* "more sly than a she-monkey", *amā min rubāḥ* "more pleasing than a baboon", *ahād min ḥirād* "more imitative than an ape", and they summed all of this up in the antithesis *al-ḥirād ḥabīb al-ḥinnahu malīḥ* "rascal though he is, the monkey is agreeable".

The maritime trade of slaves and of Arab and Persian merchants in the Indian Ocean made known to the Muslim world a number of new species of cercopithecids and a considerable trade in monkeys developed in the ports of the Red Sea and the Persian Gulf. The hunters, sea-farers from the coastal region of the Hadramawt, went by preference via the island of Socotra to the coast of East Africa (the country of the Zanj) and the country of Sufala) in search of the magnificent guereza colobes (*Colobus abyssinicus*) with its fine black pelt, an item of great luxury, exported at that time as far as Central Asia and Europe. Al-Idrīsī (*Nasā*, *cat. clime*, section 7) speaks of an "Island of Monkeys" (*al-ḥayāt al-ḥirād*), in the Indian Ocean (perhaps the island of Pemba or that of Mafia?), where the hunters from Khuria-Muria and of Socotra went to trap monkeys (that is to say, the green monkeys *Cercopithecus callitrichus*, the vervets *Cerc. pygerythrus*, the moustics *Cerc. cephus*, the grivets *Cerc. aethiops* and the minas *Cerc. pygmaea*) with the aid of small boats propelled to the coast by the tide and the currents. These boats contained delicacies for bait and on the guineas

there were towing ropes manoeuvred by cords attached to the ship. Attracted by the food, the quadrumans soon crowded together in the boats and it was necessary only to operate the recovery ropes and to bring on board the teeming cargo; depending on the species, some were killed and their pelts sent to the fur market, and others, with collars on their necks, were sold at a high price either to merchants or to aristocratic collectors of rare beasts or to itinerant animal showmen.

It is known, from the chroniclers, and al-Mas'ūdī (*Afṣar*, I, § 455) confirms it, that princes of India and of China kept trained monkeys, whose role was to detect poison in food and drink; the 'Abbāsid caliph al-Ma'mūn was advised by Chinese ambassadors to avail himself of the same precaution. But, a century earlier, the Umayyad caliph Yazīd b. Mu'āwīya already had his monkey which accompanied him in processions, mounted on an ass (al-Damīrī, *op. cit.*). The 'Abbāsid caliph al-Mutawakkil received, from a king of Nubia, two monkeys, of which one could sew and the other model in clay. On the other hand, the sea-farers of Sīrāf and of 'Uman, maintaining commercial links with India, the islands of Indonesia and China, were the principal source of information on Asiatic fauna and flora, information exploited by Arab geographers and encyclopaedists from the 3rd/9th to the 7th/13th century; these hardy adventurers brought back, on their return, specimens of quadrumans native to these regions, such as rhesus macaques (*Macaca sinensis*) and crab macaques (*Macaca rus*) and semnopithecus or langurs, including the hanuman entelles (*Presbytis entellus*), all of these being untouchable beasts to the Indians. Certain of these monkeys were offered, at the beginning of the 4th/10th century, by the amir of 'Uman, to the 'Abbāsid caliph al-Mu'tasim b. 'Uthmān to complete his menagerie (*Afṣar*, I, § 457); with hunting dogs and falcons, monkeys were regarded as princely gifts and they were to figure among the presents sent by Hārūn al-Rashīd to Charlemagne on the occasion of the two exchanges of ambassadors between the two sovereigns (181/579-80).

For its part, the Maghrib was well acquainted with monkeys through the numerous colonies of apes, known as Barbary macaques (*Macaca sinensis*) in the Atlas. Very tame and friendly animals, they are a tourist attraction in the valleys of the Chiffa, in Algeria, and it is well known with what vigilance the British keep their few specimens imprisoned on the Rock of Gibraltar.

The monkey has always and everywhere had, with its grimaces its mimicry, its mischief and its agility, the power of amuse crowds; among showmen and jugglers, the exhibitor of monkeys (*ḥarrād*, *ḥarrādī*, *ḥarrādī*) was assured, in the Islamic countries, of success in the company of strolling players, in public places, at fairs and in markets. Yemenis and Somalis were the experts in this profession, which, while relatively lucrative, was held in considerable contempt by the upper classes; so, according to Ibn al-Fakīh, Khālid b. Sa'wān, in the course of an oratorical contest between the people of North and South Arabia, threw this insult at Ibrāhīm b. Maḥmūd al-Kindī: "You other Yemenis, you are nothing but exhibitors of monkeys..." In spite of this disapproval of public entertainers who were, it must be said, in many cases rogues, the mass of the people, both rural and urban, were attracted to open-air entertainments and to exhibitions of rare and "clever" animals, whether these were monkeys,

dogs, bears, or goats. As trained quadrumans were a source of hilarity, the people readily abandoned the term *ḥarrād* to designate them, substituting expressions of a happier psychological effect; thus, in Syria and in Lebanon, the monkey was called *sa'dan* "lucky charm" and his trainer became the *sa'dān*, while in Iran, 'Irāk, Turkey and Egypt it was *maymūn* *maymūn* "fortune" which prevailed and which by a coincidence perhaps not fortuitous could quite well be linked to the Greek *μαῦν* "ape" from the verb *μαῖνωμαι* "insult, maim". In the same spirit, the entire Maghrib instinctively adopted, in parallel to the classical substratum, *ḥarrādī* (pl. *ḥarrād*, *ḥarrādīn*; *ḥarrād*, *ḥarrādīn*) and the Berber *shar* (pl. *sharan*) and *idda* (pl. *iddawn*), the arabised Persian adjective *ḥarrādī* (pl. *ḥarrādā*, *ḥarrādīn*, *ḥarrādī*) "gay, joyous" which must have been introduced by the Turks and which 'Irāk also made its own. Also in the Maghrib, the popular negro *Bā Sa'diyya*, parodying black megliana, to the terror of small children, is often accompanied in his acts by a trained monkey, which he makes dance to the sound of the tambourine or of the *ghayta* (q.v.).

Arab authors have said very little about the tricks which the exhibitors of monkeys trained their pupils to perform. Al-Mas'ūdī notes simply that the Nubian grivet exhibited in the fairs astonishes the audience by his surprising agility in climbing to the top of a spear fixed in the earth. As for al-Djāzī who, as an objective naturalist, enquired into the behaviour of monkeys employed by the *shāḥ* al-*ḥirāda* (*Haywāt*, *passim*), he makes no mention of the kinds of acrobatics that were displayed in public. It is nevertheless easy to imagine them for anyone who has witnessed the displays given in Morocco by the wandering troupes of the Uḥād Sīdī Aḥmad b. Mūsā, the native showmen of the Sus, with their performing monkeys, and this on the occasion of local petronal festivals like that of *Lalla Kasāba* (see E. Lécuyer, *Noms et cérémonies des fêtes de joute*, in *Hesperis* (1927), 44). In addition, the ambience of these travelling shows with their dense crowds of curious onlookers has been finely caught by Badī' al-Zumār al-Hamaḥḥānī (q.v.) in his delightful *makāma ḥindīyya* (*Maḥāsin*, Cairo 1923, 204-5; Fr. tr. S. de Sacy, *Chrestomathie arabe*, Paris 1827, III, 246-7) where the *ḥarrād* is none other than the vagabond Abu 'l-Faṭṭ al-Iḥṣānī constrained by vicissitudes to occupy this dismal condition. One of the most familiar street characters, the exhibitor of monkeys, is not absent from the stories of the *Thousand and one nights*, notably in the very salacious tale of the nymphomaniac princess who ravished one of his animals (*Nights* 353-7).

In Islam, as elsewhere, to liken a man to a monkey was one of the most degrading insults. Among the Muslims of Spain, in periods of friction between the communities, while the pig and the dog were used as epithets for the Christians, the name "monkey" was generally reserved for the Jews, in reminiscence of the Qur'ānic verses quoted above (see H. Pérès, *Poème andalous*, Paris 1953, 240-1). In 'Irākīya, under the Aghlabid dynasty, the *ḥarrād*, in his zeal for *ḥarād* (q.v.), enjoined upon Jews and Christians the wearing on the shoulder of a square of cloth bearing the picture of a monkey in the case of Jews, and a pig in the case of Christians; these same symbols were to be shown on a board nailed to the door of their houses (according to al-Mālikī, *Riyāḥ al-mufāt*, *agud* H. R. Idris, *Contribution à l'histoire de l'Ifrīkiya*, in *REI* (1933), II, 142). The satirical poets did not hesitate to use derogatory comparisons with monkeys to brand those whom they were attacking; this was

done by the Andalusian Ibrāhīm al-Ḥasānī in referring to the famous *amīr al-Manṣūr* Ibn Abī 'Amīr (Pérez, *op. cit.*), as was done before him by Abū Nuwās, proclaiming his hatred of the Barmakids (see *BARMAKID*) in this opening verse *hādhū nasāsū 'l-ḥurūdī*... "This is the age of the apes..." (*Diwān*, Cairo 1933, 373; Beirut 1962, 413).

Under the scheme of Kor'anic law, eating the flesh of the monkey is forbidden, since the animal is omnivorous and has canine teeth; an additional and fundamental reason for this prohibition is the instinctive revulsion, which is natural to the primates, the family to which the human race belongs, for the idea of devouring another member of the same family. For the evolved human being, eating the meat of the ape would be close to cannibalism. Nevertheless, ancient medical opinion held the flesh of the monkey to be an effective preventive agent against elephantiasis (*elephantom*). Certain other parts of the animal, such as the teeth, the hair and the skin, possessed "specific qualities" (*ḡhawṣṣ*) (see al-Damiri, *loc. cit.*), which modern science has relegated to the rank of absurdity.

Finally, regarding the term *ḡrūd*, it should be noted that in astronomy the asterism ζ, λ Cassio majoris and δ, κ, θ, γ, λ, μ, ε columbae is wrongly called al-*ḡrūd* "the Apes" in some treatises, a mistake arising from a misspelling of al-*Furūd* "the Hermits" (see A. Benhamouda, *Les noms arabes des étoiles*, in *AIEO*, Algiers (1951), ix, 161).

With *ḡrūd*, there has not so far been any reference to other than colobids and cercopithecids; it might also be asked what conception the Arabs had of the large anthropomorphic, or anthropoid, apes. These number no more than eleven species world-wide, seven gibbons, two chimpanzees, one gorilla and one orang-outang; none of these species exists in Arabia, and to find them one must go either to Indonesia or to central Africa. It is impossible, however, not to see in one or other of these primates the mysterious *nasāsū/ḡrūd* (pl. *nasāsū*) of the mediaeval Arab writers, and there can be no doubt that such a "demi-man" with human face, and vertical stance, without a tail and possessing the faculty of speech, but also covered with a thick fleece, usually russet-coloured, was originally nothing other than an anthropomorphic ape observed by sea-faring Arab merchants of the Indian Ocean, and only the gibbon (*Hylodactylus lar*), found in Malaysia, Indochina, Burma and the Himalayas, corresponds fairly accurately to this description. Ibn al-Fakhr, who is quoted by al-Kazwīnī (*'Aḡḡāḡ*, in the margin of al-Damiri, *op. cit.*, i, 791) and Muḥammad b. Zakariyyā al-Rāzī (*g.u.*) say, with reference to Sumatra (*ḡazrat al-Rāmas* = Lambir), that "there are found there human beings of both sexes, who go bare-footed and without clothing. Their speech is incomprehensible and they live in the tree-tops. They are entirely covered with hair and they live on a diet of fruit; they constitute an innumerable people who flee at the approach of man... these beings are four spans in height, their language is a kind of whistling and their faces are covered with russet-coloured down..." Al-fārīsī (*Nuḡha*, 1st ed., section 8) adds that their movement through the trees is accomplished by means of the arms alone and no use is made of the feet, which gives the impression that they are flying from one branch to another. In the 6th/12th century, Ibn Baṭṭūṭa (*Riḡla*, ii, 136) writes of the colonies of samang gibbons (*Symphalangus syndactylus*) with black faces and white mask which he encountered on the southern

coasts of the Indies. As for the recently-discovered Asiatic orang-outang, the gorilla and the chimpanzees of Africa, these remained on the peripheries of knowledge until the 15th/18th century. Besides, in so far as they were known, their height, greater than that of man, meant that they could not be identified with the half-man which the *nasāsū* is, by definition; the root *n.-s.-n.-s.* evolves in fact the idea of smallness and weakness. The reports of those who saw gibbons were rapidly distorted by the imagination of those who transmitted them to the point where the *nasāsū* became a monstrous semi-anthropomorphic creature, one-eyed and one-legged, moving with successive bounds at a tremendous speed, in times past hunted for its meat in the Yemen. With the *ḡrūd*, another half-human monster, the *nasāsū* is not without analogy with the *monoculus* and the *satyrus* of Pliney. Understandably, sceptical minds demanded visual proof of the existence of such phenomena and to this end the 'Abbasid caliph al-Mutawakkil, according to al-Ḥafṣīdī (*Murādī*, i, § 491), instructed the famous doctor and translator Hunayn b. Ishāq (*g.u.*) to find for him some of these curiosities; it seems that the scholar brought back from his explorations two authentic *nasāsū*, but nothing further is known of the episode.

Modern philologists, like P. Anastase-Marie, have gone so far as to see in the term *nasāsū* the Greek *ναῦος* "dwarf" (see Amin Ma'ūd, *Ma'āḡim al-ḡayrīn*, Cairo 1932, s.v. *Ape*, 13-18); it cannot be denied that the two words have the same sense and one would thus be led to see, in the origin of *nasāsū*, besides the gibbon, a human pygmy. Al-Ḥāḡibī, while not believing in them, lists a number of these fabulous beings which really existed in the popular imagination, and, this being an interesting fact, he assimilates the *nasāsū* to the *waḡ-waḡ* and to the people of Gog and Magog (*Ḥayawān*, i, 189; vii, 278). Now the Arab geographers recognised three countries jointly said to be the land or the island of the *Wāḡ-Wāḡ* (or the *Wāḡ-Wāḡ*), the first situated below the country of the Zangī (*g.u.*), beyond Sūfāla "of gold" (Mozambique); the second in the most eastern islands of Malaysia (the Philippines, Celebes, the Moluccas); and the third in the extreme north of the Sino-Asiatic continent, it is found that these three countries correspond quite closely to those inhabited by particularly small peoples, the Negrites and the Aḡlas in Africa, the Negritos in Malaysia, in Deccan and in the southern Himalayas, and the Lapps, the Samoyedes, the Tungus and other nomadic ethnic groups of the arctic and sub-arctic regions. It may thus be supposed that those who encountered these pygmy people by chance identified them in their accounts with the *nasāsū*, as had also been the case with the gibbon; and a detail which may corroborate this interpretation is the insistence of the authors on the faculty of speech attributed to the *nasāsū*. Nevertheless, there remains the mystery of the alleged existence of the *nasāsū* in the Yemen, and we can hardly be satisfied by the *ḡrūd* (see *L.A.*, under *u.-s.-n.*) according to which the *nasāsū* were the metamorphoses of men from the two cursed tribes of 'Ad and Ḥamūd (*g.u.*). Was there, in Arabia, a small anthropoid ape, or a race of human pygmies? The question and its solution belong to the realm of palaeontology and of prehistory.

In fact, in historical times, the Arab peoples, having never encountered this fabulous *nasāsū* in their own countries, quite naturally applied the term to all the small long-tailed flat-faced African monkeys with which the exhibitors made them

familiar (see al-Damīrī, *op. cit.*, II, 353-4), and modern systematic practice has simply ratified the vox populi in retaining the name "aknas" and applying it to the Somali *Cercopithecus pyrrhometus*. In conclusion, having been born out of confused images of the gibbon and a pygmy in travellers' tales, to become subsequently a monstrous human mutation blighted by divine punishment, the *aknas* has finally been placed, by common logic, in one of the families defined by *hīrd*.

KIRESUN [see CIREŠUN].

KIRGIZ, a Turkish people, mentioned as early as the oldest Chinese accounts of Central Asia (from the 4th century A.D.) under the name Kien-Kuen, which according to P. Pelliot (*J.A.*, Ser. 2, vol. xv, 137) goes back to a Mongol word, singular *kirgūn*. The lands of the Kirgiz are not exactly defined in these sources; according to a very reliable source, the land of the Kien-Kuen lay north-west of the land of the K'ang-Kiu, i.e. of Sogdiana. The name Kirgiz first appears in the Orkhon inscriptions of the 8th century; at that time the Kirgiz (as the contemporary Chinese annals also tell us) lived on the Upper Yenisei (Turkish Kem), north of the Kögmen or Sayan mountains. The same name (Kükman) is also mentioned in Gardizī (W. Barthold, *Ordes o gozāde v Srednyaznyu Asiiu*, 36 = ed. 'Abd al-Ḥayy Ḥabībī, Tehran 1347/1968, 262); according to this source, the capital of the *Khān* of the Kirgiz was 7 days' journey north of these mountains. There is also said that the Kirgiz had red hair and a white colour of skin (*turkhā-i rūy wa saḡīd-i pāst*), which is explained by their alleged relationship with the Slavs; the same anthropological features, of which there is no longer any trace among the modern Kirgiz, are mentioned in the Chinese T'ang-shih; linguistically, the Kirgiz were then already Turkicized. They did not come to the fore politically till about 840 A.D., when they succeeded in conquering the lands of the Uyghur in Mongolia. Nothing was known in Muslim lands of this event; Marquart's endeavour (*Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, 91-2) to connect with this the story in Dīlāsh of the defeats of the Toghrughiz, can be utterly rejected; like Ḥudāma (ed. de Goije, 264, l. 13) Dīlāsh only refers to the hostility between the Toghrughiz and the *Kharukh* (Karluq [q.v.]). Isṣakḥī (ed. de Goije, 9-10) and others mention the Kirgiz (*Kharukh*) as eastern neighbours of the Kimāk (see *Kimāk*) and as northern neighbours of the *Kharukh* and Toghrughiz; in the east their lands are said to have stretched to the ocean. The

most important article of export for trade with Muslim lands was musk. The ethnic and historical continuity between the Kirgiz and the people living today under the same name in the USSR is supposed but not proved. The Kirgiz were probably driven out of Mongolia in connection with the foundation of the empire of the *Khitay* in the beginning of the 10th century [see *KARĀ QUR'ĀV*] and the advance of the Mongol peoples; on the other hand, a body of Kirgiz must have migrated as early as this century southwards to the present abode of the genuine Kirgiz (Kara Kirgiz); according to the *Ḥudūd al-ʿĀlam* (l. 11a, tr. Minorsky, 98, comm. 293-4), even the town of Pančūt (the modern Ak-su in Chinese Turkistan) was in possession of the Kirgiz. The Kirgiz are not mentioned again in this region till the 16th century; what the Chinese Č'ang-te, who was there in 1259, records of the Kirgiz (especially on the use of dog-sledges, cf. Bretschneider, *Medieval researches*, I, 129) he had only been told, and did not see himself, and these stories probably do not refer to the people of the land he passed through. The main body of the people had probably remained on the Upper Yenisei; the Karā *Khān* when driven out of North China had to fight with these Kirgiz during their trek westwards. In the fertile region of the modern administrative district of Minusinsk the Kirgiz gradually adopted agriculture and a settled mode of life. According to the *Ḥudūd al-ʿĀlam* (l. 17b, tr. Minorsky, 97, comm. 286) there was only one town among the Kirgiz, called Kemīḡkāt, where their *Khān* lived, and no other towns or villages, but only tents; on the other hand, Rashīd al-Dīn says (ed. Berzin, *Traité Vost. Ord. Arak. Oghiz*, VII, 166-9) that the Kirgiz had "many towns and villages". From these and similar statements Radloff has drawn the conclusion (*J.A.*, Ser. 6, vol. II, 38) that the present state of Kirgiz culture is much lower than it used to be.

In the 13th century the Kirgiz on the Yenisei had to submit to the Mongols under Čingiz *Khān* (q.v.). Negotiations for their submission were already begun in 1207, but it was only settled in 1213 when the last rebellion was put down. After the decline of the empire of the descendants of Čingiz *Khān* the Kirgiz had sometimes to be under the yoke of the Mongols, sometimes of the Kalmucks, and sometimes of the Russians; in 1607 they recognised the suzerainty of the Kazāk, but by 1609 we find them killing a tax-collector sent by the Kazāk. In 1642 they were described by the Kalmuck *Khān* Batur at Kalmuck, in 1646 by the Russian plenipotentiary Danilov Arghinskii as Russian subjects. In 1703 they were transferred by the Kalmucks, by arrangement with Russia, southwards to the region of the modern Semirečye; they are then said to have numbered 3,000-4,000 tents. As mentioned above, a portion of the Kirgiz had migrated at a much earlier date; shortly after 1514 a certain Muḥammad is mentioned as being invested as *Khān* of the Kirgiz by Saʿīd *Khān* the ruler of the Mongols (*Taʾrīkh-i Rashīdī*, tr. E. D. Ross, London 1893, 141); in the 18th century the Kirgiz were for the most part under the rule of the *Khāns* of the Kazāk. The Kirgiz were called *Burud* by Kalmucks; they were nearly all driven out from Semirečye to Farghāna and Karātegin; it was only after the destruction of the Kalmuck empire by the Chinese (1758-9) that they returned to their old settlements in the southern part of Semirečye. At this date the name Kirgiz was transferred to the Kazāk by the Russians; to distinguish them from the latter, the true Kirgiz were called

Black Kirgiz (Kazak Kirgiz). The term "Kazak" was never adopted by the people themselves and is now definitely repudiated. In Scythiæ, the Kazak Kirgiz, outwardly at least, professed Islam; in their epic, which takes its name from the principal hero Manas, the wars against the Kalmucks are described as wars of religion. Unlike the Kazak, the Kazak Kirgiz had neither princes or nobles; the elders, called *Manas*, were not chosen by any kind of election but owed their position entirely to their personal influence. Owing to the continual state of war, the tribes of the Kazak Kirgiz did not break up into small subdivisions as was the case with the tribes of the Kazak; an *aul* (camp) of the Kazak Kirgiz comprised the members of a whole tribe and therefore occupied a much greater area than an *aul* of the Kazak. In the 18th century authority over the Kazak Kirgiz was claimed by the Chinese, in the 19th first by the Özbeks in Farghāna and later by the Russians; the final establishment of Russian rule dates from 1864. The prosperity of the Kazak Kirgiz has been seriously affected by the Russian colonisation and particularly by the rising of 1916, when a considerable portion of the people migrated to China; the Russian government resolved—but nothing came of it owing to the revolution of 1917—to take from the Kazak Kirgiz all their grazing-grounds except the valley of the Tekes and to throw these lands open for Russian colonisation.

Until recently in both Russia and Western Europe the name "Kirgiz" meant particularly the Kazak, they are sometimes called also "Kirgiz-Kaisak" (Kaisak, corrupted from Kazak, to distinguish them from the Russian Cossacks). On the separation of the Kazak, from the Özbek, cf. also *U-KHAYR* and *KAZAK*. The whole of the Kazak people was for long under the rule of one Khān who therefore had a considerable military force at his disposal; Khān Kāsim (d. 924/1518) was particularly powerful. In spite of several defeats from the Mongols allied with the Özbeks in the 16th century, the Kazak still had a strong nomadic kingdom at the end of this century under the rule of Khān Tawakkul, who, during the last years of the reign of Khān 'Abd Allāh b. Iskandar (q.v.) was able to make a successful incursion into Mā warā al-Nahr, and later still even held the town of Tashkent. In the 17th century the power of the Khāns only rarely extended over the whole people; but about this time Tashkent and Farghāna were usually in the possession of the Kazak, sometimes under nominal recognition of the suzerainty of the Khāns of the Özbeks. At this time must have taken place the division of the Kazak into three "Hordes" (called by the Kazak themselves *djuz* "hundred"); the great horde (*ulu djuz*) occupied the most easterly, the little (*kishi djuz*) the most westerly part of the so-called "Kirgiz steppes" and between the two the central horde (*oria djuz*). Towards the end of the 17th century this division was already an accomplished fact. Khān Tyawka, celebrated as the law-giver of his people (in 1694 a Russian embassy was received by him in the town of Turkistan and in 1696 one from the Kalmucks), still ruled all three Hordes and had a representative in each of them. In 1717 unsuccessful negotiations for the submission of all three Hordes to Peter the Great were conducted; in 1723 the towns of Sayram, Tashkent and Turkistan were conquered by the Kalmucks. For a short period after this, the suzerainty of the Khān of the Little Horde was recognised by all the Kazak and the agreement embodying this was sealed by the sacrifice of a white horse; but the treaty had no practical

results. In 1730, Abu 'l-Khayr negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the 18th century; but it was not till the 19th century, especially after 1847, when the Russians were firmly established on the southern frontier of the Kirgiz steppes on the Sir Daryā, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from Orenburg; regulations for the government of the Siberian Kazak were published in 1822 and again in 1868. Even after the abolition of the Khān's authority, the descendants of Kirgiz Khān or "Sultans" exercised a considerable influence over the people as a nobility (among the Kazak called "white bones", *aş silyek*); their authority has been gradually destroyed by the measures of the Russian Government. The last popular leader of the Kazak was Kenesari, who fought against the authorities in Siberia and Orenburg from 1843 in the mountains of Ala Tau; several risings were stirred up until 1873 by his son Sadik (so-called by the Russians, properly Siddik). Another son, Ahmad, later wrote the life of his father Kenesari and of his brother Sadik, entitled: *Sultani Kenesari i Sadik, Biografiyatskiye ocherki sultana Ahmadi Kenesarina. Otkrytiye dlya polati i snableniye primelaniyami E. T. Smirnovom, Tashkent 1889* (review by V. Rosen in *Zap.*, iv, 121-3).

The most southern part of the Kirgiz steppes was conquered in the 19th century by the Özbeks of Farghāna and Khiva and partly colonised; the advance of the Russians in this part was therefore assisted by the Kazak. After the foundation of the general-gouvernement of Turkestan (1867) and the general-gouvernement of the Steppes (1882) (Semi-république belonged at first to the latter, but was later again united to Turkestan), the government of Kirgiz steppes had less unity than before. On the other hand, after the Revolution an administrative unit was established called at first by the Russians the "Kirgiz Republic" and by the people themselves "Kazakistan". Today the Kirgiz form one of the Union Republics in the USSR. The number of the population in the Kirgiz Socialist Soviet Republic was 3,145,000 in 1973 (43.6% Kirgiz, 24.2% Russians, 21.3% Uzbeks, etc.). The whole number of Kirgiz living in the USSR was 2,452,000 in 1970. The number of Kirgiz living in China and Afghanistan is over 100,000. The Kirgiz language belongs to the northwestern (Kipchak) group of Turkic languages.

Bibliography: There exists the following guide to the bibliographies: E. E. Novitsenko, *Bibliografiya bibliografiy o Kirgizii. 1834-1957. Annotirovanniy ukazatel' literatury*, Frunze 1969.—The most important of earlier bibliographies are: A. N. Kharuzin *Bibliograficheskiy ukazatel' statey, issledovaniy i khudozhestvennykh opusov i Karagizov*, in *Études Kirgizesques Oubaniye* 12 (1891), N. Veselovskiy, *Dopolneniye k bibliograficheskoy ukazatelnyy statey, issledovaniy i khudozhestvennykh opusov i Karagizov*, sostavlennoye A. N. Kharuzinom, in *Études Kirgizesques Oubaniye*, 12 (1892); A. E. Alekterov, *Ukazatel' knig, knuzhnykh i gazetnykh statey i samozh o Kirgizii, in Izvestiya Obshchestva Arkheologii, Istoriy i Étnografiy pri Imperatorskom Kazanskoy Universite, xvi-xx (1900-4); Z. L. Amitin-Shapiro, Literatura o Kirgizii (1928-1934), Annotirovanniy ukazatel'*, Frunze 1965; idem, *Literatura o Kirgizii (1935-1936). Annotirovanniy ukazatel'*, Frunze 1965; idem, *Annotirovanniy*

ukazatel' literatury po istorii, arkhologii i etnografii Kirgizii (1750-1917), Frunze 1958. The fullest history of the Kirgiz steppes is that by A. Levdin, *Opisaniye Kirgizskikh orl i stepy*, St. Petersburg 1832; this is supplemented by many quotations in Velyaminov-Zernov, *Issledovaniye o kazimovskikh koryakh i yermilakh*, II, Cf general works, see W. Barthold, *Histoire des turcs d'Asie Centrale*, Paris 1945; R. Grousset, *L'empire des steppes*, Paris 1932; D. Sinor, *L'introduction à l'histoire de l'Eurasie Centrale*, Wiesbaden 1963; S. M. Abramson, *Kirgiz i ikh dognostitsel'skie i istoriko-kul'turnye svyazi*, Leningrad 1971. On everyday life (esp. of the Kazakh) in the 19th century: W. Istoriya razvitiya i kul'tura*, Moscow 1958 (with a lengthy bibliography). On language and literature: *Philologiae turicae fundamenta*, I-II, Wiesbaden 1959-64. (W. BARTHOLD, [G. HAZAI])

KIRID (see KIRGIZIA).

KIRIN, a peninsula jutting out into the Black Sea south of the Ukraine (Russian Krim; English Crimea; French Crimée; German Krim; with an area of 25,500 km²), connected with the mainland by the isthmus ca. 8 km, wide of Perekop (in Turkish Or Kapt), and ending to the east in the peninsula of Kerč (q.v.). The northern and central parts are flat; to the south lies a mountainous area consisting of three ranges, the most southern of which, Mt. Yaila (1,545 m. high), falls down steeply to the coastal strip. The climate is relatively mild and on the south-eastern coast similar to that of the Mediterranean area. The water of the few rivers and brooks—especially that of the Salghir—is used for irrigation. The flat grounds are cultivated; in the mountains there are pastures besides woods, and wine-growing is not without importance. Some minerals are found (iron ore near Kerč, fluor spar near Sevastopol) and at present there is also all kinds of industry.

In antiquity, the peninsula was inhabited by the Scythians. From the 6th century B.C. onwards, Greek colonies existed on the coasts. Around 480 B.C. these formed the Bosporean State, whereas in the 1st century B.C. they belonged for a short time to the Pontian kingdom. From 63 B.C. onwards, the Roman Empire wielded supreme rule (see *Paulys Realencyklopädie der klassischen Altertumswissenschaft*, new ed. by G. Wissowa, vi. Heftband, Stuttgart 1899, cols. 2254-69; H. G. Gundel, *Die Krim im Altertum*, in *Das Gymnasium*, Iii (1943), 217-38). In the 4th century A.D. first the Goths came, then the Huns. Until 1239 the Byzantine empire held the Chersonese (Old Russian Korsun'), while the main part of the peninsula belonged to the territory of the Khazars (q.v.). During the 10th and 11th centuries there was the Russian colony Tmutarakan' (probably near modern Faman'), important in relations with Byzantium. From around 1030 the peninsula was dominated by the Kumans or Kiptak (q.v.), and from 1239 by the Tatars of the Golden Horde. They also wielded a sort of supreme rule over the Genoese colonies that came into existence here (since 1281-5, especially in Kaffa, mod. Feodosiya, see KERTZ). These colonies took over the role of the Byzantine Chersonese and became of great significance for trade with Byzantium and the Mediterranean area until their downfall in 1475.

They were to a certain extent tributary to the Tatars. Occasional plunderings of these towns by the Golden Horde (see KARTIQA), e.g. in 1298-9, or sieges, e.g. 1343, seem incidental.

Kirin is only rarely mentioned by the Arab geographers (sood even then partly following the Italian reports, as by Idrisi). The first contact with Islam dates from a campaign of the Rüm Saljuqid sultan Kay Kubād 'Alā' al-Din II (q.v.) (565-34/1219-36). After the Golden Horde occupied the peninsula, first in 1223 and then, definitively, in 1235-9, the religious situation did not change immediately. At the instigation of the Egyptian Mamliks (who entertained trade relations with the peninsula) a mosque was erected at Old Kirin (also Solkhat/Solehad); another was built later by the Khān Özbek (712-42/1313-42) (q.v.).

During the latter's reign, Sunni Islam had gained a firm footing among the Tatars of Kirin, like among the rest of the Golden Horde. From Egypt shortlived influences of the *fuqahs* (q.v.) asserted themselves.

Next, there existed of old also Jewish settlements, but little is known about them in these centuries except from tombstones. Karaites or Karā'im (q.v.) were found at Çufut Kale, and the Orthodox Christians had a bishopric of Gothia at Old Kirin. Western or Latin Christianity, supported mainly by the Franciscans, was represented by the Genoese until the downfall of the latter in 1475. Already in 1261 a Latin bishop is mentioned, and in 1318 the bishopric of Kaffa was founded. Its jurisdiction stretched from Varna (in modern Bulgaria) to Saray (q.v.), the capital of the Golden Horde. The bishopric of Cherson, which came into being in 1303, was definitively established in 1335, with parishes in the individual towns. From here efforts were made to effect a union with the other Christians and to start missionary work among the Tatars, but at the end of the 14th century these attempts came to an end for lack of success. From 1351 until after 1370 there had even existed a Latin bishopric at Saray.

In the 14th century, during bitter fights with the Venetians in the Mediterranean and the Aegean Sea, the Genoese founded trading factories in Sughdak (Russian Suzet), in Balaklava (then Cembalo), in modern Sevastopol, in Tana (Azov, Turkish Azak (q.v.)) and in Moncastro (Ak Kirmān (q.v.)), Rumanian Cetatea Albă, since 1368) to the west of the mouth of the Dniestr. Until 1343 the Venetians had a colony at Tana (Azov). Besides Italians, who had their own rule and system of justice, there were living in these towns Arabs from various Near Eastern lands; Turks from Anatolia; Lurs (q.v.); Greeks; and above all, such a large number of Armenians that Kirin was sometimes called Armenia Magna or Armenia Maritima. About the Crimean Goths we are informed by reports of the 13th century, and later in the 16th century by Asqar Ghisla in de Busbecq, ambassador of the Austrian emperor to Süleymān II (see B. S. Foster, *The Turkish letters of Asqar Ghisla in de Busbecq*, Oxford 1927, repr. 1968; W. von den Steinen, *Vier Briefe Busbecqs aus der Türkei*, 1926). Since that time they have merged with the Kirin Tatars.

The Mongols of the Golden Horde had a governor on the peninsula (kashim or udai), who kept up his own diplomatic relations with the Nile valley. We hear also of an "amir of the right wing" and "of the left wing of the army". Until the middle of the 15th century Kirin, thinly populated except for the coasts, remained a centre, especially through Byzantine intermediaries on the Dardanelles, for trade with Egypt. For a long period via the Kirin slaves

(Mamluks) were sent to that country, while all kind of goods (fine shawls, perfumes and the like) found their way from there to Kirm, and further to the Volga along the road of Sugdakh, Old Kirm, and Perisop. Trade with Anatolia was also important. The traffic was later taken over by Trebizond, which had remained Byzantine until 1461. The Genoese brought European goods (linen and ceramics) to Kirm and to further on. In the 15th century especially, the commercial highway ran along the bank of the Bug via Luck and Lemberg to Breslau.

Both in Old Kirm, the peninsula's seat of government in these centuries, and in Eski Yart, many goods were warehoused. The currents of trade manifested themselves also in the artistic construction of buildings and in ceramics. These showed influences from Saray, Süleymanlı Asla Minor, Egypt and the Genoese colonies, as we know since the excavations of 1924-8. Besides trade, a part was played by the manufacture of salt, the gathering of honey (which went as far as Kh. [Kazem] and grapes, and by horse-breeding and tanning.

Notwithstanding, all these developments, Kirm remained until the 15th century only an annex of the Golden Horde and occasionally a refuge for ambitious claimants in their struggle for power, like Noghai in 1291 and Mamay in 1359. Around 1345-8, 85,000 persons allegedly fell victim to the Black Death, and in 1395 the peninsula was ravaged by Timur. Attempts of the double kingdom of Poland and Lithuania to push as far as the Black Sea and to endanger also Kirm were foiled in 1399 by the victory of the "mayor of the palace" Edigü (Russian Yedigüy) on the Vorokla. The latter had his base here during his struggle with Witold of Lithuania, until he died in 1419.

During the civil wars which ravaged the Golden Horde from 1359 onwards, princes of the Mongol ruling dynasty who were descendants of Čingiz Khān and his grandson Togha Temür (the son of 1260), had settled on various occasions in the peninsula. At the beginning of the 15th century they had apparently adopted the family-name of Giray [g.u.] or Kerey. Relying upon the noble family of the Shīrīn, Devlet Berdi had established himself in Kirm after 1426, and in 1427 he tried to enter again into relations with Egypt. But he (and since 1427 also his brother Hüdūdī Giray [g.u.]) encountered opposition from the ruler of the Great (until then, the Golden) Horde. In August 1449 Hüdūdī formally declared himself ruler of Kirm. With the help of the Turkish sultan and the Polish-Lithuanian King Casimir IV, he was able to hold out until his death in 1466, first in his residence Kırk Yar and later in the valley of Bağhe Saray [g.u.]. He and later his son again and again took in fugitives of the decayed Great Horde, and they thus became rulers of the strongest among the Tatar states that came into being. On the northern shore of the Black Sea a strip of land where the Noghays [g.u.] lived, and since 1484 also the Budjak [g.u.], came gradually under the rule of the Kirm Khāns.

After rather lengthy succession disputes, Mengli Giray I [g.u.], one of Hüdūdī Giray's eight sons, got the upper hand. He was to become the real founder of the independent Kirm state, in spite of the fact that he had to recognise Ottoman supremacy after the conquest of Kalfa in 1475 by the Sultan's troops. The Giray family was then recognised as enjoying in Kirm the sole rights of succession and immunity. Since İslām Giray II (1509-61/1514-8) [g.u.], their name was mentioned in the *Akhuḫa* after the Sultan's; they

had the right to strike their own coins and they could grant asylum. They remained independent in internal policy and had at their disposal a richly-ramified officialdom which followed more and more the Ottoman Turkish pattern. Under the continuous political preponderance of the Sultan, co-operation between the two states generally passed off without too much friction, in spite of many dangerous tensions at times. Joint military expeditions were regularly organised; in 1476 and 1538 into Moldavia, in 1543 for the first time into Hungary. From the time when the Turks had conquered Kilis and Ak Kirmān (1484) and the Poles had been defeated in Moldavia (1497), the khānate of Kirm was in direct contact with the Turkish dominions in the Balkan peninsula. In the north-east the Čerkes [g.u.] and Kabardī [g.u.] were subjects of the Kirm-Khāns, and thus the Black Sea became until 1739 a Turkish-Tatar inland sea.

Relations with the Christian powers in the north changed when, from 1470-2 onwards, Casimir IV decided to co-operate more and more with the Great Horde. The Kirm Khāns turned to the Grand Dukes of Moscow, who between 1468 and 1571 were exempted from paying tribute. With certain fluctuations in details, both states remained loyal to this alliance until the fall of the Great Horde in 1502, and even extended it, while the kings of Poland-Lithuania in 1480 and later repeatedly neglected their commitments to the Horde. From that period onwards, this double kingdom was exposed to attacks from both the Muscovites and the Kirm-Tatars, who again and again invaded Podolia, Volhynia and Galicia and more than once laid Kiev, Černigov and other towns under contribution (for the Tatar incursions between 1474 and 1509, see J. Ochmański, *Organizacja obrony przed Tatarami w Wielkim Księstwie Litewskim* ("The organisation of the defence against the Tatars in the Grand Duchy of Lithuania"), in *Studia i materiały do historii wojskowości* ("Studies for the history of the army"), v (1960), 349-98, esp. 362-4). Under these circumstances the Great Horde got into great difficulties, especially after the death of Khān Ahmed in January 1481. Until the very end of this state, officers, soldiers and even princes of the ruling house continued to desert to the Kirm-Khāns (see M. Malowist, *Kajfa: kolonia genueńska na Krymie i problem wschodni w latach 1453-1475* ("Kalfa, the Genoese colony in the Crimea and the eastern problem in 1453-75"), Warsaw 1917 [*Prace Instytutu Historiografii Uniwersytetu Warszawskiego*] ("Publications of the Historical Institute of the University of Warsaw"), II). Even after a temporary treaty of peace between the Grand Duchy of Moscow and Lithuania in 1493, the latter's contact with Kirm remained so close that the Khāns were able to mediate in 1496 for the establishing of diplomatic Russian-Turkish relations, initially in the main for commercial reasons (see V. B. Syroekovskiy, *Puť k smogorizmu Moskv s Krimom na rubezh 20 veka* ("Ways and relations of Moscow with the Crimea at the turn of the 16th century"), in *Izvestiya Akademii Nauk SSSR*, ix (1932).

When in June 1502 the Great Horde was finally defeated to the east of Kiev and close to where the Dnieper joins the Dniestr, and their last Khān was forced to flee to Lithuania (where he was executed in 1505), the Kirm Khān, in accordance with his claim, assumed the rights of the former Golden Horde and demanded tribute "without subterfuge" from Moscow and Lithuania. To the Grand Duke of Lithuania he offered a treaty "after straightening

out relations". In addition, Mengli Giray felt himself responsible for the security of the Khanates of Kazan [q.v.] and Astrakhan [q.v.] and thus ran into increasing difficulties with Moscow (K. Pulaski, *Mengli-Giray* [sic], *chan Tatarow perehopskich* ["Mengli-Giray, Khan of the Perekop Tatars"], Warsaw 1886). Under these circumstances, a treaty with Sigismund I Augustus (1566-48) of Poland and Lithuania was of great importance to Mengli Giray I. But the negotiations had not yet been concluded when the Kırım Khan died at a great age in 1535 (J. Pajewski, *Projekt przymierza polsko-tureckiego za Zygmunta Augusta* ["A project of treaty between Poland and Turkey under Sigismund Augustus"], in *Księga Ar. Cui Oskara Haleckiego*, Warsaw 1935).

Under Mengli Giray I, Kırım reached its cultural zenith. The area was opened up to Ottoman Turkish culture. Artists from the Islamic cultural environment and also Italian, often Genoese, artisans who had remained in the country after 1475, such as Augustino da Garibaldi and Vincenzo da Zugruffi, found work here, especially as architects and stone carvers. Intellectual and literary circles came also into being. Of special artistic importance was the Khan's palace at Başghe Saray [q.v.], whither Mengli Giray had transferred his residence from Old Kırım. It is actually in ruins today, but the Zengirli Madrasa has been preserved.

In view of the position of power which Mehmed Giray I (1515-22) [q.v.] had inherited from his father [V. E. Syroechkovskiy, *Muchammed-Giraj i ego vassaly* ["Mehmed-Giray and his vassals"], in *Učeniye Zapiski Moskovskogo Gosudarstvennogo Universiteta*, 1:1 [1940]), this new Khan also aspired to the position of the Golden Horde and wanted to unite all Tatars under his rule. His son Şahib Giray [q.v.] in 1521 succeeded in driving away a Khan of Kazan who was friendly to Moscow and, in spite of the resistance of Astrakhan, in incorporating his territory into that of his father. Having become Khan (1532-52) after his father had been murdered and İslâm Giray I [q.v.] had been put aside, he did not however succeed in holding out after a defeat inflicted on him by Moscow on the Oka in 1541 (Ö. Gökbulgin, *Tarik i Sahib Giray han (1532-1552)*, crit. ed., tr., notes and glossary, Izdaniye 1973 [Atatürk Üniversitesi yayınlari 212]). On the contrary, Ivan IV the Terrible (1533-84) who had born the title of Tsar since 1547, carefully collected his forces for a campaign which brought under his control Kazan [q.v.] in October 1552, and Astrakhan [q.v.], firstly in 1554 and definitively in 1556. Thus the Volga valley was opened up to Russia right down to the Caspian Sea, the waterway to Caucasus and the north coast of Persia lay free and the Russians got an extensive new region for settlement. Dawlat (Dewlet) Giray I (1551-77) [q.v.] finally saw himself confined to the Kırım Khanate and its northern hinterland. After the manifold disturbances of the preceding decades he tried to collaborate again with Poland-Lithuania, which saw itself more and more threatened by Moscow and both of which merged into one single state in the Union of Lublin in 1569 (Ö. Gökbulgin, *1532-1577 yılları arasında Kırım Hanlığı'na siyasi durumu*, Ankara 1973 [Atatürk Üniversitesi yayınlari 289]).

However, the Khan was dissatisfied, as was Sultan Süleyman II, by the fact that so many Muslims had become subject to Orthodox Christian sovereignty. The two sovereigns entered upon a close treaty of alliance and for the time being supported Tatar revolts against the supremacy of Moscow; these revolts are echoed in the legends around Çora Batır (Şa'adat

Şahir, *Çora Batır. Etna Legende in dobrušchastatovischer Mundart*, Cracow 1935). Dewlet Giray attempted to relieve them by marching against Russia in 1555. But his fear that the Sultan might enlarge his influence in Kırım by stationing his own troops there made him abandon a plan of supporting the Ottomans effectively. Thus the Sultan received little help from the Kırım Khan for his attempt to connect with a canal the Volga and the Don, at the place where they draw the nearest to each other (near modern Volgograd). He could rely only on the Noghays [q.v.]. Consequently, when in the winter of 1569 the Turkish troops were defeated between Astrakhan and the Sea of Azov, the enterprise of Selim II fell through. He had hoped to establish in Kırım a base for his campaign against Şih'î Safawid Persia, and to activists from there economic relations with Central Asia (H. Inalcik, *Osmanlı-Rus rekabetinin manevi ve Don-Volga kanalı tepehisi* [1569], in *Balkan* xii 146 (1948), 349-402; Eng. text in *AÜDTDF* (1947), 47-106; A. N. Kural, *Türkiye ve İslâm boyu. 1569 Adakhan seferi, Ten-İslâm kanalı ve XVI-XVII yüzyıl Osmanlı-Rus münahezeleri*, Ankara 1966 [AÜDTDF Yayınları 153]; P. A. Sadikov, *Pohod Tatar i Turok na Astrakhan v 1569 godu* ["The campaign of the Tatars and Turks against Astrakhan in 1569"], in *Istoricheskiye Zapiski*, xxi, Moscow 1947, 132-66). When in 1571 the Turkish fleet became decisively weakened by the defeat at Lepanto [see *ACMA-BAGIŞI*], any plan of a Turkish advance against Russia had to be abandoned. On the other hand, Kırım was thus freed from the feared guardianship of the Sultan, although it also lost his direct protection.

The Khan availed himself immediately of this freedom at his rear to march against Moscow. In 1571 the city fell for the last time into Tatar hands and was burnt down. The Tsar was forced to declare himself prepared to resume paying tribute (*İltig'iyah*). It was only Peter the Great who was able to free himself decisively from this obligation. At this point, the Tsar was unable to counter-attack, as a result of his military engagements in the west in regard to Livonia.

Kazan and Astrakhan thus remained in Russian hands. In order to change this situation, Khan Mahmed II, the Fat (Semiz; reigned 1577-84) made new endeavours (Kırım Abdulla oğlu Hasan, *İmci Mehmed Giray Han/Khan Mehmed Giray II, in Azerbaycan Yurt Belgisi*, iii (1934), 1). Since Turkish help failed to come because of the war with Persia (1578-90), the Khan sought an alliance against Moscow with Poland, Lithuania and even with Pope Gregory XIII. He held out a prospect of conversion to Roman Catholicism, which caused the Poles to send several ambassadors between 1571 and 1583. A Kırım embassy was honourably received at Vilna in 1579 (Stanisław Kryczyński, *Niudana misja katolicka wśród muzułmanów litewskich w XVI w.* ["A failed Catholic mission among the Lithuanian Muslims in the 16th century"], in *Pracegié Islamicki* (1935), 3/4, 22-14).

But not even in this way could Mehmed Giray II achieve a real success. He was forced to put ca. 5,000 soldiers at the disposal of the Sultan for the war against Persia. When the successor to the throne, the Kalghay [q.v.], was taken captive by the Persians, the Khan himself interferred in the war against the Shah. This led to friction with the Sublime Porte and in the course of the ensuing unrest in Kırım, the Khan was murdered in 1584.

The new Khan, Ghazi Giray II (1588-1608) [q.v.],

got the upper hand after lengthy disturbances. He also came forward as a poet (H. Eitaylan, *Gazi Geraş Han, hayatı ve eserleri*, İstanbul 1958; C. M. Kortepeter, *Gazi Gıray II, Khan of Crimea, and Ottoman policy in eastern Europe and the Caucasus, 1588-1594*. In *The Slavonic and East European Review*, xlv/103 (1966), 139-66) His attack against Moscow in 1591 failed, and during the Turkish campaign against Hungary of 1592-1606 he had, in the same way as his predecessor, to provide troops for the Sultan, which on various occasions led to friction (B. Kocowski, *Wyprawy Tatarskie na Węgry przez Polskę w 1594 r.*, Lublin 1948; M. Alekberli, *Borba Ukrainskogo narodu protiv turcko-tatarskoy agresii vo etapy poloviny XVII i pervoy poloviny XVII vekov* ("The struggle of the Ukrainian people against the Turkish-Tatar attack in the 2nd half of the 16th and the 1st half of the 17th centuries"), Saratov 1961).

During these various wars, Kırım itself remained free of military incursions, and so the administration there could follow its even course. Public roads and lanes were secure, and documents which survived the conflagration of the Kırım's palace (in 1736) testify to well-organised archives and the regular proceeding of the Islamic law concerning justice, inheritance and marriage. Customary law (*Adat* [g.v.]) also played a rôle. The horse trade and rates of exchange of foreign currency were officially supervised. As in other Islamic countries, the *diwân* [g.v.] was the supreme court of judicature. There were 48 judicial regions in the lowlands and 19 in the mountains, where, except for the infliction of the death penalty, convictions could be pronounced without right of appeal "insofar as the conviction was in accordance with the laws". However, in the administration of justice, corruption as always played a rôle that could not be disregarded.

The Tatars enjoyed personal freedom and, as in earlier centuries, passed for a friendly and hospitable people. Women were entitled to personal property, and took part now and then in public life, diplomatic negotiations or even in military expeditions; and occasionally they devoted themselves to poetry and literature.

Until the age of fifteen, the education of children of the ruling house was often left to Caikas [g.v.], who taught them riding and the use of weapons. Up to the 19th century other Caucasian peoples, including the Ossets, also had their children brought up by Caikas. The hardships thereby endured were supposed to influence many *khāns* up to their old age and to counterbalance Ottoman urban culture. In the course of time, however, rulers and high officials turned more and more to Istanbul for the education of their children; also, many a Giray prince lived there as a hostage. Thus Turkish cultural influence became more and more important during the 17th and 18th centuries. Ottoman Turkish gradually began to supersede Kırım Tatar as the written language; Turkish melodies (played on drums, clarinets and later also violins) may well have merged into local musical tradition; but confinement of women in harems increased.

In this way, the ties with Turkey were strengthened, but they also reinforced dependency upon the Sultans, who more and more intervened, by deposing, and occasionally reinstating, many a *khān*. Thus the stability of the regional government was undermined both by the power of Istanbul and by the growing independence of the Begs, who possessed wide powers within their fiefs and fought out among themselves many a personal feud. The noble

families, the prominent ones being the Şirîn, the Kahtuk, the Bârlın, the Manyûr and the Suleh, enjoyed tax freedom. The state revenues consisted largely of certain customs duties, payments by individual governors, indirect taxes (mainly on salt) and an annuity of the Sultan. Direct taxes, as far as they were levied, consisted (at least officially) of the *hırah* [g.v.] and *zakât* [g.v.].

The interventions of the Sublime Porte bound Kırım the more closely to Turkey because no other policy of alliance was now possible with any power to the north (B. Baranowski, *Polska a Tatarszczyzna w latach 1624-1689* ["Poland and Tartary in 1624-99"], Łódź 1948). Bad harvests in the Crimea, whose agriculture normally secured the subsistence of its inhabitants, may have caused the Tatars to plunder again and again the south-western regions of Poland and Lithuania (W. Czapliński, *Sprawa najazdów tatarskich na Polskę w pierwszej połowie XVII w.* ("The problem of the Tatar incursions into Poland in the first half of the 17th c."), in *Kwartalnik Historyczny* lxx/3 (1963), 723-30; M. Horn, *Skutki ekonomiczne najazdów tatarskich z lat 1605-1633 na Rusz Czerwoną* ["The economic consequences of the Tatar invasions in 1605-33 in Red Russia"], Breslau 1964; J. Goldberg, *Chronologia i zarys najazdów tatarskich na ziemie Rzeczypospolitej Polskiej w latach 1600-1647* ("Chronology and reach of the Tatar invasions into the land of the Republic of Poland in 1600-47"), in *Studia i Materiały do Historii Wojskowości*, vi/1, 3-71). Properly speaking, these incursions had no political motivation, but they were to such an extent prejudicial to relations with the neighbours in the north-west that there could be no more question of combined action against the common enemy Moscow, which now became more and more threatening to both parties; also, the Kırım Khāns themselves suffered repeatedly from the unrest of the nomads. When at the treaty of Pereyaslav in 1654 the Cossack hetman Bohdan Chmelnytskyi, who had been supported by the Tatars, changed sides and joined Moscow, the Tsar became a direct neighbour of the Crimean Khāns. Now at last the Polish-Lithuanian king sought alliance with İslâm Giray III (1644-54) [g.v.]. They undertook a common military expedition against Moscow, which ended in 1655 with the victory of Ochmatów (J. Rypka, *Das 1. Korrespondenz der Hohen Pforte mit Bohdan Chmelnytskyi, in Festschrift für Jar. Bidlo, Prague 1928*; idem, *Weitere Beiträge zur ... in Archiv Orientalni*, li (1935); idem, *Dalsi přispěvek ke korespondenci Vojtěcha Porýs a Bohdana Chmelnického* ("Further contribution to the correspondence..."), in *Časopis Národního muzea*, 1931; idem, *Brüfwechsel der Hohen Pforte mit den Krimtataren im II. Bande von Feridūn Münşî, in Festschrift für Georg Jacob, Leipzig 1932*, 249-69; O. Pyltsak, *Das erste türkisch-ukrainische Bündnis (1648)*, in *Oriens*, vi (1933), 366-98). The Tatars now also took part in the campaigns of the Poles against the allied forces of the Russians, Swedes, Brandenburgers, Transylvanians and Cossacks (in the period of the "Deluge") and fought in 1656 together with them before Warsaw, in Prussia and in Greater Poland. Many captives and rich booty were brought to the Crimea. Khān Mahmūd Giray IV (who reigned for the second time 1654-66) concluded a treaty with the Polish king over the partition of the conquered regions; the Islamic areas, like Kāskān and Astrakhān, were to fall to the Crimean khānate. Both peoples fought shoulder-to-shoulder against Transylvania in 1657 and against Moscow in 1660 (the Battle of Tsudnov) (L. Kubala, *Wojna brandenburska i najazd*

Rakieto i wojna moskiewska ("The Brandenburg War, the invasion of Rakóczy and the Moscow War"), Lemberg-Warsaw 1933; A. Hnilko, *Wyprawy sucho-wojska w 1660 r.* ("The campaign of Tsudnov in 1660"), Warsaw 1931. The Tatar army numbered at this time 20,000-30,000 troops at the most; higher accounts (up to 130,000 and even 200,000) are probably false (O. Górka, *Liczebność Tatarów krymskich i ich wojsk* ("The number of the Crimean Tatars and their armies"), in *Przegląd Historyczno-Wojskowy*, VIII/2, 1936). Single military units had their own standards, while the cavalymen brought spare horses along with them. Victuals consisted mainly of millet, which was milled in leather mortars. Prisoners of war were enabled to ransom themselves as far as possible; not infrequently they were humanely treated. In accordance with Islamic law, there may have been many freedmen.

The alliance between Poland-Lithuania and the Crimean khānate came to an end when Mehmed Girāy was deposed in 1666 and the armistice of Andrusovo, between Poland-Lithuania and Moscow, was concluded in 1667. The political situation changed further when Peter Doroshenko (1665-76), the hetman of the Cossacks "of the left bank", submitted to the Sultan out of dislike for the equalising policy of Moscow (D. Doroshenko and J. Ryplia, *Hetman Piotr Doroshenko a jeho turecka politika* ("Hetman P. D. and his Turkish policy"), in *Casopis Národního Múzea*, Prague 1933; Ch. Hilbert, *Ostseuropa 1648-1688 bei den Zeitgenössischen osman. Historikern*, typewr. thesis, Göttingen 1948).

At the instigation of the Turks, Khān 'Ādal Girāy (1665-71) had to collaborate with the Cossacks and therefore fell out with Poland-Lithuania. The ensuing war made Podolia in 1672 into a Turkish province, and thus the Sultan's empire reached its greatest expansion ever to the north of the Black Sea. Attempts by Khān Selim Girāy I (1671-8) at mediation failed because of the Sultan's uncompromising attitude (J. Wolinski, *Podredukcio iatarska i wojna polsko-turecka 1674-1675 r.* ("Tatar mediation in the Polish-Turkish War 1674-5"), in *Polityka narodów* IV (1954) 4). The new khān, Murād Girāy (1678-83), tried to free himself from subordination to Turkey and wanted to replace the *Shari'a* by "the Law of Gengiz Khān" (*Töre, Yasa*), a daring enterprise which naturally angered the 'Islamists'. In accordance with his political principles, he remained aloof during the Turkish march against Vienna in 1683, and his army corps did not take part in the battle of the Barren Mountain Kahlenberg. As a punishment, he was banished to Bulgaria (Kirimli Abdullah oğlu Hasan, *Viyana önünde Kırım savaşıdır, in Askeriyan Yurt Belgisi* II (1933), 21-2, 348-33). Nevertheless, relations between the Tatars and Poland-Lithuania remained tense until the Peace of Carlowitz (1699 [see KARLOVCA]).

The Tatars saved themselves of this disension. After the Cossacks of the left bank of the Dnyepir had come again under their control, two Russian armies marched against the Crimea in 1686 and 1687. While Khān Selim Girāy (who reigned for the second time in 1684-91) succeeded in defending the peninsula itself, Azōv was lost to Peter the Great in 1699, and thus the khānate was divided for several years into two parts, sc. the peninsula and the region towards the Caucasus. In order to counterbalance Azōv while it was in Russian hands, the fortress of Yenikāl'ie was founded near Kerč (B. H. Sumner, *Peter the Great and the Ottoman empire*, London 1949).

During this turbulent period, the cultural signifi-

cance of the khānate declined. Artistic creativity was small, although Islamic influences from the Crimea and from Turkey are clearly recognisable in contemporary Poland (T. Małkowski, *Sauka Islama w Polsce w XVII i XVIII wieku* ("Islamic art in Poland in the 17th and 18th centuries"), Cracow 1935; F. K. Spühler, *Seldens Repräsentationsstichpeche der mittleren bis späten Safawidenzeit; das sog. Polenstichpeche*, doctoral thesis, Berlin 1968).

The victory of the European coalition over the Sultan in the great war of 1682-99 was of serious consequence for Kırım. Pressure from the north made itself more and more felt. The planned co-operation with the Swedish king Charles XII (1697-1718) and with the hetman of the Cossacks Ivan Stepanovič Mazepa, in which Ghāzi Girāy III (1704-7) [q.v.] was very interested, failed owing to the Russian victory near Poltava in 1709. It is true that the allies succeeded in forcing Peter the Great, hampered by Turkish troops near the Pruth, to retrocede Azōv, but this was all that could be achieved—a protest of Khān Devlet Girāy II (who reigned for the second time 1708-13) remained unsuccessful (A. N. Kurat, *Prut seferi ve harapı* ("The Pruth campaign and peace"), Ankara 1951). More and more the Tatars began to fear and reject the adversary from the north (G. Veinstein, *Les Tatars de Crimée et la seconde élection de Stanislas Leszczyński, in Cahiers du monde russe et slave*, XI (1970), 24-92), especially when the Russians invaded Kırım in 1737 and 1738, destroying many cultural monuments, among them Bāghçe Sarāy [q.v.]. In 1739 the Tatars and Turks had to abandon Azōv definitively to the Russians (Z. Veselý, *Tureckij traktat ob osmanskih kreposti yakh svornogo Prideromora'ya v načale XVIII veka* ("A Turkish treatise on the Ottoman fortresses on the north coast of the Black Sea at the beginning of the 18th century"), in *Vostochnye issledniia po istorii narodov yugo-vostochnoy i central'noy Evropy*, II, Moscow 1960, 98-139). As in Poland-Lithuania, the strength of Kırım was diminished by the heavy toll of human life, the demoralising defeats, the increasing interference of the Porte in Crimean affairs, the manifold struggles among the princes of the ruling house, and a fairly protracted revolt of the Noghays [q.v.] around 1758 (see B. Kellner Heinkele, *Aus den Aufzeichnungen des Sa'fid Giray Khān. Eine zeitgenössische Quelle zur Geschichte des Chanats der Krim um die Mitte des 18. Jahrhunderts*, Freiburg i. B., 1975). An attempt at a new alliance between Poland-Lithuania, Kırım and Turkey remained without further result during the 18th century (W. Konopczyński, *Polska a Turcja* ("Poland and Turkey") 1683-1799, Warsaw 1936; D. Oljančyn, *Do istorii torhlovi Ukrainy a Kryman* ("Contribution to the history of the trade between the Ukraine and Kırım 1758-61"), Lemberg 1933). An offer of alliance made to the Crimean khān by Frederick the Great in 1761, at the most difficult moment of the Seven Years' War, led to no result either (H. Scheel, *Ein Schreiben des Krim Giray Khān an den Prinzen Heinrich, den Bruder Friedrichs des Grossen, in Jean Demy Armağan*, Ankara 1958, 213-20).

On the other hand, the devastations of the war years stimulated the zest for living of the Crimean Tatars which, during the last decades of their freedom, flowered into a second cultural bloom, and which found its most important expression in the reconstruction of the khān's palace at Bāghçe Sarāy in 1740-5. The Sultan made a present of a valuable library, and in 1763 a new stateroom (*Diyda*) was erected, richly decorated with paintings and sculp-

tures. Former hydraulic works, like aqueducts and canals, were restored and preparations made for a new period of prosperity.

But already in 1771, Russian armies had again marched into the Crimea. *Khān* Selīm Girāy III (second reign 1770-1) tried to make a stand against them, in vain, because the Sultan himself pressed hard by a war (1766-74), against the Tsarina Catherine II, was unable to render effective help. Many people perished and many places were destroyed. The Russians marched as far as Kaffa and the *Khān* had to flee to Istanbul (A. Mačakov, *Bořba Tatarskoj Rossii s Turčin za vladaenije Krimskim Chānatom* ("The struggle of Imperial Russia and Turkey for the domination of the Crimea"), Moscow 1929).

Thereupon the nobility decided to appoint a *khān* who was friendly to the Russians and to accede to the Russian occupation of the fortresses of Kerč, Yeñi Kaf'e and Kaffa. Thus the independence which the Sublime Porte was forced to grant to the Kirins at the peace of Küçük Kaynardжі [s.v.] in 1774 [E. I. Družinina, *Krytskij yandarlijskij mir 1774 goda: ego podgotovka i zakhvatlenije* ("The peace of K. K. in 1774: preparation and conclusion"), Moscow 1955], and the renunciation of its rights over these fortresses, on the Kabañ and on the Taman peninsula, were only fictions, the more so because Kerč and Yeñi Kaf'e were at that time already directly subject to Russia (V. D. Smirnov, *Sbornik vchera i sodayshnik dokladov i ofitsialnykh dokumentov otoslyannych k Turčin, Rossii i Kirinu* ("Selection of the most important reports and official documents with reference to Turkey, Russia and the Crimea"), St. Petersburg 1881 (bearing mainly on the period 1766-74); F. A. Unat, *Kırım tarikhı caya Nocañ gendinin Rusya safarınamesi 1769-75, in Tarix vesikaları III* (1944), 599 (with continuations in later issues); *Alubadele. An Ottoman-Russian exchange of ambassadors* [1775/76], annot. and tr. by N. Itzkowitz and M. Mote, Chicago-London 1970).

Even the Russian concession at the Treaty of Aynall Kevak in 1779 to declare the Sultan "in his capacity of caliph" to be the head of all Muslims could not prevent Crimean independence from coming to an end. Already two years earlier, the successor to the throne, *Shāhin* Girāy, had succeeded as *Khān* with the help of the Russians and the Noghays (F. F. Lashkov, *Shagin-Girey, posledniy krimskiy khān* ("Sh. G., the last Crimean *khān*"), in *Kiyevskaya Starina*, Sept. 1886, 36-80). He was educated in Salanka and Venice, had become acquainted with Russia while living there as ambassador, and was open-minded to European and especially to Italian culture. Like the last Polish king, he thought about reforming the state, mainly after the Russian example. He thus transferred the capital to Kaffa, on the sea coast, probably after the example of the Russian transfer of their capital to St. Petersburg. He invited foreign instructors to train his army of 6,000 troops, limited the *ushaks* [s.v.] while indemnifying the *ulusads* with a pension, and introduced under foreign supervision a new silver coinage. A council of ministers consisting of 12 members was created, and finances were set up anew by introducing financial registers. These reforms burdened the country with considerable debts, and Russia availed itself of the ensuing discontent. Besides, the *khānate* became upset by a new revolt of the Noghays in 1782 and a rebellion of two brothers of the *Khān*, who saw himself forced to flee to Grigoriy Aleksandrovich Potemkin, the governor of the regions newly conquered by the Russians in the south

(the Ukraine). After the *Khān* had returned to his country with Russian help, Catherine II pressed him under deceitful promises to abdicate. *Shāhin* Girāy saw no escape from giving in to this pressure and from abandoning his country to Russia, to which it has belonged ever since [A. W. Fisher, *The Russian annexation of Crimea 1772-1783*, Cambridge 1970; N. F. Dubrovina, *Prisoedineniya k Rossii Krima. Reskript, fur'ma, relizits i doneseniya* ("The union of the Crimea with Russia. Rescripts, letters, accounts and notes") i-iñ, St. Petersburg 1855; idem, *V'ed poslednyaya krimskaya khāna Shagin-Gireya k Rossii v Turtsiyu* ("The journey of the last Crimean *Khān* *Shāhin* Girāy from Russia to Turkey"), in *Zapiski Imperatorskago Odeskago Obshchestva istorii i drevnosti*, xiii (1883), 132-36].

The annexation of the peninsula to the Russian empire (first as the Tauris region, and then from 1796 onwards as the New Russia Government) brought about shufflings of the population which must be mentioned here. Already in 1779 the Orthodox Christians of the Crimea, for centuries subordinated to "the Bishop of Gothia", had been removed to Southern Russia at the latter's instigation: 31,280 people from 6 towns and 66 villages settled around Mariupol' (A. L. Berthier-Delagarde, *K istorii khristianstva v Krimu* ("Contribution to the history of Christianity on the Crimea"), in *Zapiski Imperatorskago Odeskago Obshchestva istorii i drevnosti*, xxviii (1910), 1-108; A. I. Markevič, *K voprosu o položenii khristian v Krimu vo vremya tatarskago vladchestva* ("Contribution to the situation of the Christians on the Crimea during the Tatar reign"), Samferopol 1910). Also the Armenians left the country (likewise with their own hierarchy) and settled in (New-) Nakhichevan, now a suburb of Rostov-on-Don. In order to be able to remain in their home country, many Christians, among whom were probably the last remnants of the Crimean Goths, embraced Islam. (E. I. Družinina, *Sévernos Prichernomor'e* ("The northern edge of the Black Sea"), 1775-1800, Moscow 1959). But also, many Tatars left the country at that period and in the 19th century to settle in Turkey (G. I. Levitskiy, *Priseleniye tatar v Krima v Turtsiyu* ("The settlement of Crimean Tatars in Turkey") in *Vestnik Evropy v 1882*), 596-639; A. Markevič, *Pereseleniya krimskikh tatar v Turtsiyu v izyazn i dvizheniem naseleniya v Krimu* ("The settlements of the Crimean Tatars in Turkey in connection with the movement of the population on the Crimea"), in *Izvestiya Akademii Nauk SSSR* (1928), 375-405). In the place of all these people, came first Russian newcomers, and then also Czechs and Serbs, but furthermore some 7,000 Tatars from the Kuban area (M. Pinson, *Russian policy and the emigration of the Crimean Tatars to the Ottoman Empire, 1854-1862*, in *Günay-Dogu Asya ve Arapirmalari Dergisi*, I, (1972), 57-62). Most of the Crimean Tatars who had remained were moved to Central Asia in 1945 (and have not until now been permitted to return—*New York Times*, 13 July 1972—in spite of their official "rehabilitation" (*New York Times*, 5 May 1967; *Frankfurter Allg.* 24, 23 Sept. 1967)).

Until February 1954, Kirim belonged to the Russian Socialist Federative Soviet Republic (RSFSR), but has since been combined with the Ukraine.

Chronology of the Crimean *Khāns*

(1449)-1456 Hādjdī Girāy I

1456 Haydar, son of the preceding

1456-1466 Hādjdī Girāy I (2nd time)

1466-1467 Nūr Dewlet, son of the preceding

- 1467-1474 Meagli Giray I, brother of the preceding
 1474-1475 Nâr Dewlet (2nd time)
 1475-1476 Mengli Giray I (2nd time)
 1476-1478 Nâr Dewlet (3rd time)
 1478-1513 Mengli Giray I (3rd time)
 1513-1523 Mehmed Gazi I, son of the preceding
 1523-1524 Çahrazî Giray I, son of the preceding
 1524-1532 Sa'adet Giray I, son of Mengli G. I
 1532 Islâm Giray I, brother of the preceding
 1532-1551 Şahîb Giray I, brother of the preceding
 1551-1577 Dewlet Giray I, nephew of the preceding
 1577-1584 Mehmed Giray II, the Fat, son of the preceding
 1584-1588 Islâm Giray II, brother of the preceding
 1588-1596 Çahrazî Giray II, brother of the preceding
 1596 Feth Giray I, brother of the preceding
 1596-1608 Çahrazî Giray II (2nd time)
 1608 Tokhtamış Giray, son of the preceding
 1608-1610 Selâmet Giray I, son of Dewlet G. I
 1610 Mahmud Giray III, grandson of Mehmed G. II
 1610-1623 Djanibek Giray, grandson of Dewlet G. I
 1623-1624 Mehmed Giray III (2nd time)
 1624 Djanibek Giray (2nd time)
 1624-1627 Mehmed Giray III (3rd time)
 1627-1635 Djanibek Giray (3rd time)
 1635-1637 İsmâyet Giray, brother of Tokhtamış G.
 1637-1641 Bahâdır Giray I, son of Selâmet G. I
 1641-1644 Mehmed Giray IV, the Pious (sofî), brother of the preceding
 1644-1654 Islâm Giray III, brother of the preceding
 1654-1666 Mehmed Giray IV (2nd time)
 1666-1671 Âdil Giray, from the collateral line
 Coban G.
 1671-1678 Selim Giray I, son of Bahâdır G. I
 1678-1683 Murâd Giray, cousin of Selim G. I
 1683-1684 Hâdîdîl Giray II, cousin of the preceding
 1684-1691 Selim Giray I (2nd time)
 1691 Sa'adet Giray II, brother of Hâdîdîl Giray II
 1691-1692 Şafâ Giray, cousin of the preceding
 1692-1699 Selim Giray I (3rd time)
 1699-1702 Dewlet Giray II, son of the preceding
 1702-1704 Selim Giray I (4th time)
 1704-1707 Çahrazî Giray III, son of the preceding
 1707-1708 Kaplan Giray I, brother of the preceding
 1708-1713 Dewlet Giray II (2nd time)
 1713-1716 Kaplan Giray I (2nd time)
 1716-1717 Dewlet Giray III
 1717-1724 Sa'adet Giray III, son of Selim G. I
 1724-1730 Mengli Giray II, brother of the preceding
 1730-1736 Kaplan Giray I (3rd time)
 1736-1737 Feth Giray II, son of Dewlet G. II
 1737-1740 Mengli Giray II (2nd time)
 1740-1745 Selâmet Giray II, brother of the preceding
 1743-1748 Selim Giray II, son of Kaplan G. I
 1748-1756 Arslan Giray, brother of Feth G. II
 1756-1758 Halim Giray, son of Sa'adet G. III
 1758-1764 Kırım Giray, son of Dewlet G. II
 1764-1767 Selim Giray II, son of Feth G. II
 1767 Arslan Giray (2nd time)
 1767-1768 Makşûd Giray, son of Selâmet G. II
 1768-1769 Kırım Giray (2nd time)
 1769-1770 Dewlet Giray IV, son of Arslan G.
 1770 Kaplan Giray II, son of Selim G. II
 1770-1771 Selim Giray III (2nd time)
 1771-1772 Makşûd Giray (2nd time)
 1772-1775 Şahîb Giray II, son of Selim G. III
 1775-1777 Dewlet Giray IV (2nd time)
 1777-1782 Şâhîn Giray, son of Selim G. III
- 1782-1783 Bahâdır Giray II, brother of the preceding
 1783 Şâhîn Giray (2nd time)
 A list of the Crimean *ghazn* can be found in A. W. Fisher, *op. cit.*, 138 (defective) and in Zambaur, 247 f. For genealogical tables of the *ghazn*, see H. Inalcik, in *JA*, IV, after p. 788; Zambaur, table S; and B. Kellner, *op. cit.*, after p. 265 (18th c.).

(B. Spuler).

KIRK KILISE, also Kirk Kilise and Kirkinisa (Ewliya Celebi, *Seyhhat-nâme*, Istanbul 1228, viii, 69) a town in eastern Thrace, modern Kirklareli. This region to the east of Adrianople or Edirne [q.v.] had a centre in classical times, but its name is unknown (for the view that this place was called Ileradea, see J. von Hammer, *Histoire*, I, 334). The Byzantine name of Kirk Kilise was apparently Sarante Ekklesia, and the name Kirk Kilise must mean the church of forty saints and not forty churches (F. W. Hasluck, *Christianity and Islam under the Sultans*, Oxford 1929, II, 391-2).

The later writers Katibi Celebi (*Djihan-nâmâ*, Rumeli section, Topkapı Sarayı Müzesi, Hazine kutuphanesi, no. 443, f. 17a) and Müneddin-Bağlı (ib. 195), record the date for the conquest of Kirk Kilise as 770/1368-9 (see Feridân Bey, *Mangır'da al-selâtin*, Istanbul 1274, I, 71-2). The early historians do not mention its capture, but the implication is that it was conquered few years after the conquest of Edirne in 763/1361 (for this, see Halil İnalık, *The conquest of Edirne* (1361), in *Archivum Ottomanicum*, II (1972)). The first Islamic building constructed in the town after its conquest was the 'Atik mosque (Başbakanlık arşiv genel müdürlüğü, Tapu defteri, no. 370; this building was in a ruined condition in 1226/1807). Nomads (*yürüks*) brought from western Anatolia were settled in the region of Kirk Kilise, and were during the 9th-10th/15th-16th centuries known as "the *yürüks* of Kirk Kilise" (M. Teyyib Gökbilgin, *Rumeli'de yörükler, tatarlar ve vâlid-i Edirne*, Istanbul 1957, 84, 180 and passim). Kirk Kilise was first attached to the Vilâyet sardârı of the province of Rumeli, but was then established as *misketler sardârı* (idem, *Kanuni Sultan Süleymân devri bağlanmaları Rumeli eyaleti, İhsarî, şerh ve hasabaları, in Dâirü'n-nüvvâ* (1956), 255, 269).

In the 10th/16th century, Kirk Kilise consisted of 6 quarters or *mahalles*: Dîâmî-i 'Atik, Dîâmî-i Kebir, Hâdîdîye Zekerîya, Sultân Bayezid Kışân Kethüdâsı, Yapraklı and Karagâ İbrahim, containing 283 households (Tapu defteri, no. 370). During the 11th/17th century, Kirk Kilise was a small town with a few shops and red tile-roofed houses set among the vineyards, and visitors noted the Old Mosque (Eski Dîâmî), the *bedesten* or covered market, the Köprübaşı fountain, and the coffee-house, meeting-place of the learned man, situated by a fountain (Ewliya Celebi, *Seyhhat-nâme*, Istanbul 1235, v, 79-80). For the remaining monuments of the town today, see *Sâhmed-i vilâyet-i*

Edirne, Edirne 1309, 145 ff., 247 ff.; A. Rıza Dursun-kaya, *Kırklareli vilâyetin tarih, coğrafya, kültür ve eski eserler yönünden tethik*, Kırklareli 1947, II; Osman Mert, *Kırklareli kütüphaneleri*, in TD, no. 25 (İstanbul 1971), 155-62. During the 12th/18th century, the Greeks in the town almost equalled the number of the Muslims (see Rucur Yusu Bekoğlu'nin 1766 tarihli İstanbul-Lefke'nin Seyahatine ait hatıra defteri, tr. İsmail Eren, in TD, no. 16, (İstanbul 1962), 98-9). In the caṣṣak of Kırk Kilise of the province of Edirne there was in 1899 an important number of Greeks and Bulgarians, and the population of the region was 18,325 (*Sâlmân-ı vilâyet-ı Edirne*, Edirne, 1317, 398-9). For a time, the town was included in the boundaries of Bulgaria after the treaty of San Stefano (3rd March 1878), but was given back to the Ottomans after the Congress of Berlin (13 June-13 July 1878). It again passed into Bulgarian hands for a short while during the Balkan War of 1912-3, but was recaptured on 8 July 1913. It was under Greek occupation for two years after the Mudros truce (1918), but was recovered by the Nationalist forces on 20th November 1918. The population of the town fell when the Greek population was transferred to Greece after the Treaty of Lausanne settlement in 1923. The name Kırk Kilise was changed into Kırklareli by a law taking effect from 24th December 1924. Under the Republic, Kırklareli has become the centre of a province or vilâyet of the same name. Its population was 13,000 in 1927, 19,097 in 1955, 27,431 in 1970 and 33,260 according to the latest census (1975).

KIRKLARELİ [see KIRK KILISE].

KIRK WEZİR [see ŞAYYAZKÖYÜ].

KIRKÜK, the biggest town of the region of Mesopotamia (44° 23' E., 35° 23' N.) bounded by the Little Zab in the north-west, the Dişab Hamrin in the south-west, the Diyâla in the south-east and the mountain chains of the Zagros in the north-east. It is identified by some (e.g. C. J. Gadd in *Rev. d'Assyriol. et d'Arch. Or.*, xxi (1926), 64, and by Sidney Smith) as the site of the ancient city of Ararapha, and so Kirkûk participated in the revolt of the son of Salmanneser II (850-844 B.C.) against his ageing father; again it rose up in the reign of Ashur Dan III (772-754 B.C.). It saw the victorious troops of Nabopolassar pass through in 626 B.C. before being taken by the Medes under Cyaxares at the end of 625 B.C. (G. Roux, *Ancient Iraq*, London 1964, 247, 251, 312, 312). From the time of the ancient Babylonian empire and during the Assyrian empire the town and its surrounding territories were very exposed to raids by the mountain peoples from the north-east.

Under the Sâssânids (226-651 A.D.) the province of Kirkûk was called Garmakân (Moses of Khorene) and in Syriac sources, Beḡ Garmal; here the town of Kirkûk itself is called Karḡā of Beḡ Sôḡḡh (G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtirer*, in *Abh. für die Kunde des Morgenlandes*, vi/3 (1860), 267 ff.). This name could have come from

the king Seleucus I Nikator (ca. 255-280 B.C.) who is said to have had constructed a tower in the citadel. During the Sâssânid period the town also was a famous centre for the Nestorians. The metropolitan of Beḡ Garmal had his residence there (J. M. Fiey, *Assyrie chrétienne*, iii, Beirut 1963). Christians suffered persecution under Şāhpūr II (310-79) (Fiey, *Histoire de Karḡā d'Beḡ Sôḡḡh*, in *Analecta Bollandiana* lxxxi (1966), 203-9) and especially in 443 under Yazdegerd II, who made victims of thousands of them. Their situation later improved when a Christian of the town of Yazdin became chancellor under Chosroes II (591-628) and achieved such fame that his native town took the name Karḡā Yazdin, (Fiey, *Assyrie Chrétienne*, iii, 23-8). Beḡ Garmal of the Syriac sources is called Bagdarmā by the Arab historians. Yâkūt speaks of a town Karḡhina (iv, 276) which Hoffmann (op. cit., 272) believes can be identified, correctly it seems, as Kirkûk. Even today the people of Şaklâwā and 'Ayn Kâwā, when setting out for Kirkûk, still say that they are going to Karḡhina (Fiey, op. cit., iii, 44).

In the 6th/12th century the region of Kirkûk belonged to the territory dominated by the Begteḡnîd dynasty (q.v.), who had their residence at Irbil. After the death of Nuzafar al-Din Kokbiri in 609/1232, the possessions of this dynasty reverted to the 'Abbâsîd caliphs, but not long afterwards were conquered by the Mongols. The name Kirkûk appears for the first time in the history of Tûmur of Şarâf al-Din 'Alî Yazdî (*Zâfir-nâma*, written ca. 823/1424-5, tr. Pétis de la Croix, *Defit* 1723, ii, 239). Then came the reign of the Ak-Koyunlu, followed by the conquest of Mesopotamia by Şāh Ismâ'îl I in the early years of the 10th/16th century. When finally Mesopotamia and Trak had fallen into the hands of the Ottoman sultans Selim I and Süleymân I (according to the first Turco-Persian truce at Amasya, 20 May 1555), Kirkûk again took on its rôle as an important bulwark against the enemy from the East.

The town fell again to the Persians after the fall of Baghdâd in 1032/1623, but was reconquered by Khosrow Pascha (q.v.) in 1038/1630; in 1048/1638 Murâd IV passed through the town on his march to reconquer Baghdâd. But the true masters of these regions were the local Kurdish borders, lords of the province of Ardlâk (Hâdîdî Khânîs, *Dîwân-nâmâ*, 445). But shortly afterwards the Ottoman power became established there by the activity of the *paḡas* of the *eyâlet* of Şāhrizûr (q.v.). This *eyâlet* was composed of 31 *sandḡas*, of which one was that of Kirkûk, and this town became the residence of the *paḡas* of Şāhrizûr after the castle in the town of this name had been razed by Şāh 'Abbâs (1574-1603) (*Dîwân-nâmâ*, loc. cit.). In 1752 the future Nâdir Şāh besieged the town in vain. A great battle took place near Kirkûk in the following year, when the Turks were completely beaten under the grand vizier Topal 'Oḡmân Pascha, who died there. In 1743 Kirkûk fell again into the hands of the Persians, but was returned to Turkey after the truce of 1746.

The town remained in the Ottoman empire until the end of the First World War; it was occupied by the British on 7 May 1918, but abandoned fifteen days later. It was re-occupied at the end of October and remained occupied until the time of the Mudros armistice. Having remained outside the sphere of activities of Şayyāh Mahmûd (November 1918 until May 1919), Kirkûk and its district were administered peacefully. There was even a Turkish newspaper published there and sixteen schools were opened. At the time of the referendum of July 1911 Kirkûk

rejected the Amir Fayṣal as king of 'Irāk, and from that moment Turkish propaganda developed in the region, supported by a Turkish committee founded at Kirkūk by the family of the Nattifāsids and other Turcophiles. On 17 March the Turks named a *ḥā'im-mahmūd* at Ruwanduz, and at the end of July, Col. 'Alī Shāfiḥ, who was called *Öz Demir*, "Pure Iron one", appeared and made some advances towards the territory; but he was unable to retrieve all the *vilāyet* of Mosul. The Turks tried again to claim it at the Lausanne Conference (30 November 1922 until a February 1923) but without success. The Treaty of Lausanne (24 July 1923) still left the question of Mosul undecided, and so it was referred to the League of Nations. A committee of enquiry was sent by them, and in its 34th session in Geneva on 16 December 1924, the Council gave a definite ruling: 'Irāk was given the territory south of the so-called "Brussels line". Thereafter Kirkūk was incorporated into the kingdom of 'Irāk.

The present day town is built partly on top of an artificial mound or *ḥaṭṭa* about 40 m. high, and partly at its base, on the two banks of the *Khassa* Cay. These waters join with those of the *Awā Sipi* to form the *Adḥaym* which flows into the Tigris 30 km. south of Balad. On the right bank of the *Khassa* Cay, in the middle of a fertile plain, rises the residential district of *Arrapḥa*. In 1912 the population was estimated to be 25,000 (by E. B. Soane, *The Mesopotamians and Kurdistan*, i, 220), in 1922 to be 25,000 (by C. J. Edmonds), and in 1965 official statistics, determined according to maternal language, gave 124,000 inhabitants, comprising 72,000 Kurds, 53,000 Turcomans and 41,000 Arabs, plus others. The present population is certainly over 200,000. It should be noted that, for many years, the authorities have made strenuous efforts to replace the Kurds by Arabs. Kirkūk is the centre of an administrative region, formerly a *ḥudūd* and now since 1975 a *muhāfaẓa*, and has had its name changed; it is now called *al-Taḥmil* ("Nationalisation") in honour of the nationalisation of oil on 1 June 1975 and also in the intention of "de-Kurdicising" the town (though the latter has however kept its Kurds). The population of the *muhāfaẓa* is rapidly increasing thanks to the development of the oil industry; its 588,900 inhabitants of 1957 increased to 523,000 in 1970, with a majority of Kurds. The Kurds, Arabs and Turcomans of the town are Sunni Muslims, but the Turcomans of the villages belong to an unorthodox and secret sect, the *Kilābīyah*. The Christians are mainly Chaldean (about 4,500) with an archbishop, and the Nestorians, who are less numerous, have a bishop at Harir. There was a small colony of Jewish merchants, one of whom was sent as a delegate to the Parliament in Baghdad and another was at the head of the Department of Finance of the *ḥudūd* of Kirkūk, but it has disappeared since the Arab-Israeli War of 1948. It is thought they were the descendants of the Jews who were deported to Babylon by Nebuchadnezzar after the capture of Jerusalem (586 B.C.) and they continued to speak Aramaic. The little mosque of Nabī Dāniyāl on the slope of the hill of Kirkūk commemorates the Hebrew Prophet who was deported at the same time. This must be an ancient church which existed until ca. 1700, just like the *Uḥa Djamī'* mosque. The oldest church in the world was that of the martyr Mar Tahmazgerd, built by the metropolitan ca. 470 A.D., to the east of the citadel of Kirkūk; it was known as the Great Martyrion, but during the Turkish retreat of 1918

it was being used as a powder magazine and was blown up (C. J. Edmonds, *Kurds, Turks and Arabs*, 267; Frey, *Assyria*, iii, 54).

Urban planning in Kirkūk has made the centre a large circle of broad streets. Christians have been established there since earliest times, and seem always to have maintained positions of greater or lesser importance. The presence of a Turcoman minority in Kirkūk, within its Kurdish majority, must go back considerably before the conquest by the Ottoman sultans; their origin could be sought in a Turkish garrison which the caliphs may have installed there in the 3rd/9th century, or in an immigration at the time of the Saṭṭūks, and the Bagtighids or Atabegs of Irbil (C. J. Edmonds, *op. cit.*, 267, has drawn attention to other opinions). Whatever may have been the circumstances of their coming to the region, the Turcomans of Kirkūk have always provided strong support for the Ottoman empire and its culture, and an abundant source for Ottoman officials (see *Türk Yurdu*, 1915).

Kirkūk's position as an administrative centre has varied through the ages: "In the 18th century Kirkūk was the chief town of the *eyālet* of *Shahrizūr* which included the modern *ḥudūd* of Kirkūk, Irbil and nominally of Sulaymān under a *mutasallim* appointed by Baghdad. With the reforms of Midhat Paṣha, *wāli* of Baghdad from 1869 to 1873, the name of *Shahrizūr* was given to the *sandjak* of Kirkūk, corresponding to the present-day *ḥudūd* of Kirkūk and Irbil, whereas the historic *Shahrizūr* remained outside, in the new *sandjak* of Sulaymān. The *vilāyet* of Mosul was formed in 1879 and Kirkūk remained an important garrison town" (Edmonds, *op. cit.*, 265-6). Under the Turkish régime, the *vilāyet* of Mosul was divided into three *sandjaks* or *ḥudūd*: Mosul, Kirkūk and Sulaymān; in 1918 three *ḥudūd* situated to the north of the Little Zab were detached from Kirkūk to form the *ḥudūd* of Irbil. In the constitution of 1923, the new Iraqi state was formed of three Ottoman *vilāyets*: Baghdad, which became the capital; Baṣra; and Mosul. The *ḥudūd* of Kirkūk was composed of four *ḥudūd*: Kirkūk, Kifri, Cāmḥamā and Gil. Today, the *muhāfaẓa* of *al-Taḥmil*, with a *muhāfaẓa* at its head, includes five *ḥudūd*, as follows: Kirkūk, Tur Khurmatu, Cāmḥamā, Huwayṣija and Kifri. Each *ḥudūd* has at its head a *ḥā'im-mahmūd*. The *ḥudūd* of Kirkūk has five *nāhiyas*, as follows: Tāze Khurmatu, Karā Hasan, Altun Kōpri, Dibs and Shuwān, and each *nāhiya* is administered by a *muḥṭar*. Kirkūk is the seat of the regional court and of a court of appeal, and it possesses a garrison and an airport. There is also an association of Turcoman writers.

Kirkūk is an important commercial centre and an agricultural market for the cereal and animal products of the neighbourhood. It is well served by good roads to Baghdad through Ta'ūk and Kifri to Mosul through Altun Kōpri and Irbil, to Sulaymānūliya through Cāmḥamā with branches to Saḥandjī and Hamadīn in Iran. A narrow-gauge railway links Kirkūk with Baghdad in the south and with Irbil in the north. The region around Kirkūk is undulating and it is populated mostly by Kurds. The Mesopotamian steppe begins to the west of the town and it is inhabited chiefly by Arabs. The immediately-surrounding district produces much fruit.

The region of Kirkūk abounds in sulphur and bitumen products and it is especially rich in petroleum deposits, extensively exploited even in ancient times. It should be noted that the petroleum had a

certain importance in Ottoman times, being used by the army (V. J. Parry, *Materials of war in the Ottoman empire, in Studies in the economic history of the Middle East*, ed. M. A. Cook, London 1970, 220. A *ferman* of 1649/1639 recognised the monopoly of rights over this petroleum to a group of Turks in the region of Kirkūk, the Nefîzîzâdeleir. But their systematic working dates from March 1925. At that time a concession was granted to the Turkish Petroleum Company (T.P.C.) which was founded in 1924 to exploit the deposits of the *mişakets* of Mosul and Baghdad; royalties of 4 gold shillings per ton of extracted petroleum were payable. Before the end of 1925, geological work was begun and roads were constructed, water supplies, pipe lines and buildings were installed in the *mişakets* of Mosul, and there were 50 British and 4,500 Iraqis employed in the work. The drilling sites were chosen in the Djabal Hamrin, near Tuz Khurmātu, in the neighbourhood of Kirkūk. The drilling programme was formally inaugurated in April 1927 by King Fayṣal I, and the first oil gushed forth on 27 October 1927 at Bābā Gurgur, near Kirkūk. The years 1927 to 1931 were given to preparing the whole region of Kirkūk for production by test drilling, scientific observation and arranging the necessary services; production units, reservoirs, workshops, housing etc. were established and at the same time negotiations were conducted with the Iraqi government to extend the period for selecting areas, according to the convention of 1925. In March 1931 the company, which had become the Iraq Petroleum Company (I.P.C.) in 1929, was able to operate in the whole territory in the north-east of Iraq, on condition that by 1935 they constructed a pipe-line to the Mediterranean with a capacity of 3,000,000 tonnes, with a branch at Hadīja on the Euphrates to Hayfa and Tripoli, and that they make an annual payment of £ 4,000 as an overall payment to the government.

It was also in 1931 that the operational headquarters of the I.P.C. was moved from Tuz Khurmātu to Kirkūk, and the headquarters for pipe-line operations was established at Hayfa. The drilling for crude oil at Kirkūk began at the end of 1934 and, from 1935 onwards, the annual production of 4,000,000 tonnes put Iraq in the eighth position among the oil producing countries. In January 1935 the double 12" pipe-line from Kirkūk to the Mediterranean was formally opened, but because of the Arab-Israeli war of 1948, the branch leading to Hayfa was closed. This caused a loss of almost 7,000,000 tonnes and the corresponding royalties. The Tripoli pipe-line was, however, doubled by a second (16") pipe in 1949 and this trebled the export figure. In 1952 a third (30") pipe-line was brought into service between Kirkūk and Banias (Syria). From then on the world market for Iraqi oil was to increase to 14,000,000 tonnes per year. On 3 February 1952 a new agreement was signed between the Iraqi government and the I.P.C. for the distribution of personnel, production and revenues. A minimum production of 22,000,000 tonnes was expected annually from 1953 and a revenue of £ 30,000,000, in 1952 to reach £ 60,000,000 in 1955. The profits gained from the oil workings would be shared equally.

The Iraqi revolution of 1958 did not change the agreements between the government and the petroleum companies. The objective was to obtain exports worth 100 m. in revenue from a capacity of 70 m. tonnes per year. This target was reached in four years, but a few problems of interpretation persisted. In April 1961 negotiations were begun and, after

different interruptions, they finally reached dead lock. They were concluded by Law 50 of 12 December 1961 which dispossessed the company of 99.5% of the territories where they had prospecting rights and left I.P.C. with only 25 sites, 12 of them at Kirkūk in an area of about 478.75 sq. kms., 6 at Bay Hassan of about 182.5 sq. kms., and 4 at Djabbar, of about 96.5 sq. kms. (Vernier, *L'Iraq*, ..., 435). New installations were planned between May 1964 and June 1965 and were completed, with future plans taking into consideration the Iraqi National Oil Company (I.N.O.C.) which had recently been founded on 30 October 1962. More new laws were enacted as a consequence: Law 97 (6 August 1967) forbade any new concessions to foreign companies and Law 123 (October 1967) authorised the I.N.O.C. to exploit the remaining sectors, which seemed to put an end to the monopoly of oil production which the foreign I.P.C. enjoyed. On 14 June 1972, the I.P.C. itself was nationalised, and thus Iraq gained for itself all the profits from its rich petroleum deposits. The annual production of crude oil in Iraq has regularly increased from the 47.5 m. tonnes in 1960; by 1975 it had reached more than 210 m. tonnes, 60 m. of which were from the Kirkūk region. In 1973 the Iraqi reserves of crude oil were estimated to be 4.243 billion tonnes.

If the petroleum industry with all its subsidiary operations gave a favourable social status to its workers, for their standard of living is superior to that of other workers in the country, it did not suppress all the movements for social reform. Several important strikes were called in Kirkūk among the oil workers. The most notable were those of 1937 which coincided with the workers' strikes at the Kūt barrage, the drillers of the B.O.F., the railways, the stevedores at Basra and the weavers of Najaf. These showed a hardening of class-consciousness and the discovery of a new political weapon (Longrigg, *Iraq*, 252). In July 1947 a serious strike aggravated by politicians of communist leanings broke out at I.P.C., and it claimed several victims (*Ibid.* 338).

Other demonstrations have had a more political tone. The mere announcement of the Treaty of Portsmouth (15 January 1948) produced a general strike for three days. At Kirkūk the British consulate was attacked, but the most tragic of these events was the so-called "purge of Kirkūk". On the occasion of the first anniversary of the republic (14 July 1959) Communist elements helped by bands of Kurds, massacred the Turcomans of the town, for they were considered to be anti-Communist. There were probably 120 killed and about 200 wounded. The participation of the Kurds in the affair was interpreted not as a sign of an antagonistic nationalistic rivalry against the Turcomans, but one of social competition. The Turcomans, who are more socially and culturally advanced, occupied more high-ranking positions in the I.P.C., while the Kurds had to content themselves with more subordinate work (cf. M. Khadduri, *Republic of Iraq*, 225).

It must not be forgotten that one of the obstacles to a definitive solution to the Kurdish problem is precisely the claim of the Kurds to the territory and the revenue of the Kirkūk oil-fields, which they would like to see included in the territory of an autonomous Kurdistan. These claims are categorically refuted by the central Iraqi government. In October 1970 a plebiscite was to settle this point of contention, but it was adjourned indefinitely (E. O'Ballance, *The Kurdish revolt*, 161f.). This at least in part provoked the outbreak of hostilities in

March 1974, just as the Kurdo-Iraqi agreement of 11 March 1970 was being implemented. The law of 11 March 1974 awarding autonomy to the region of Kurdistan defined this region in terms of the 1937 census, carried out under the monarchy. At that time, the Kurds were afraid to declare themselves as such, and thus the census did not give a Kurdish majority to Kirkūk; hence the town and the *muhāfaẓa* were accordingly excluded from the autonomous area.

A well-known personality of Kirkūk was the Kurdish poet *Shaykh Rūḡā Tālahānī* (ca. 1840-1910). More-or-less an agnostic character, but at the same time fanatical also, he had gifts of satire and improvisation and a sometimes obscene verve, and composed poems in Kurdish, Turkish, Persian and Arabic. They were published in Baghdād in 1935 and 1946 and he is remembered as one of the most popular poets of Iraqi Kurdistan (cf. E. B. Slane, *op. cit.*, 134-5; Edmonds, *op. cit.*, 37-8, 290-3; Edmonds, *A Kurdish lampoonist: Shaikh Riza Talaḥānī*, in *JRCS*, xlii/f (1933), 111-27).

KIRMĀN, the name of a Persian province and of its present capital. The name goes back to the form *Carmania*, which is found in Strabo (xv, 2, 14), and which is said to be derived from the name of an ancient capital, *Carmana* (Ptolemy, *Geography*, vi, 8; Ammianus Marcellinus, xliii, 4, 48. See further Marquart, *Erānshāh*, 30, on the name *Carmania*; and Browne, *Lit. Hist. of Persia*, i, 145, for the later popular etymology of the name).

The Province.—The province of Kirmān is situated to the south-west of the great central desert of Persia, the *Dasht-i Lūt*, which narrows to some 100 miles in width where it divides Kirmān from Sīstān. It is bounded on the north by Yazd and Khūzistān, on the east by Sīstān and Makrān (Bāhūtān), which was regarded by most of the early geographers as separate from Kirmān, though Hamid Allāh Mustawfī states that it paid tribute (*khandaḡ*) to Kirmān (*Nushat*, 141), on the south by Makrān and Fārs and on the west by Fārs. Its boundaries have varied slightly from time to time. Ibn Rusta states that Fāhrāḡ was part of the tax district of

Kirmān but that the ruler of Makrān claimed that it belonged to him (886). *Kh̲wāsh*, which is today included in Balūḡistān, and Rīgān were both reckoned by Iṣṭakhri to belong to Kirmān, though the former was, he states, part of the tax district of Sīstān (162). Iḍrīst, on the other hand, includes *Kh̲wāsh* in Sīstān (417). *Shahr-i Bābak* was at various times included in Fārs, at others in Kirmān. In 1258/1242 it was placed, for revenue purposes, under Yazd (Ahmad 'Alī Wazīf, *Diḡhāf-i-yā mamāleh-i Kirmān*, ed. Muḥammad Ibrāhīm Bāstānī Parfā, in *Farhang-i Irān Zamin*, xiv/2, 4, 163). Bāḡk, which had earlier belonged to Kirmān, was also placed under Yazd about the year 1774 (Wazīf, 175), though Khūzistān, one of its districts, continued to belong to Kirmān. During the reign of the Salḡūḡ *wālā* of Kirmān, Arslān Shāh (494-536/1100-41), Yazd and Tabas appear to have been under Kirmān (Aḡḡāl al-Dīn Abū Ḥamid Kirmānī, *ʿIqd al-ʿulā*, ed. 'Alī Muḥammad 'Amīd Nāʾin, Tehran 1311, 75). Furg and Tāum, both placed in Fārs by the *Ḥudūd al-ʿālam* (129), were considered by Aḡḡāl al-Dīn to belong to Kirmān (*ʿIqd al-ʿulā*, 75). Ibn Balḡhī states that Rūḡān, which had belonged to Fārs, was put on the Kirmān side of the frontier in the reign of Alp Arslān (*Fārs-nama*, ed. Le Strange, 121), but according to Iḍrīst, although it formed one of the dependencies of Kirmān, it was under Fārs for tax purposes (416). Hurmuz [q.v.] was sometimes counted as belonging to Fārs, sometimes to Kirmān, and has often been in different hands to its hinterland.

According to the Arab geographers, the western part of the province, which included *Shahr-i Bābak*, *Sirḡjān*, *Urmāya*, *Aḡḡā*, *Kushk*, *Ṣawḡhān*, *Isfāḡāka*, *Dīfrūt* and *Rūḡhūr*, was in the third climate, and the eastern part, including *Anṣr*, *Kūbānān* (*Kūbbānān*) *Zarand*, *Guwāshīr* or *Gawāshīr* (also known as *Bardīr* and later as *Kirmān*), *Rāwar*, *Khāḡh*, *Rāḡn*, *Sardūya*, *Basn* and *Narmāshīr*, in the fourth climate, while *Hummuz*, according to Hamid Allāh Mustawfī, was in the second climate (*Nushat*, 241).

In the variety of its topography the province is not dissimilar from Persia as a whole. A series of mountain ranges, with a general trend from north-west to south-east, runs through the province. Much is tangled broken country, but there are many fertile upland districts, pastures and mountain valleys with orchards, cultivated places, and many streams. Some of these have a high elevation: *Safīdābād*, near the site of the old city of *Sirḡjān*, lies at an elevation of 5,600 ft. and *Fārs* at over 7,000 ft. There are also numerous arid waterless mountain districts and desert tracts. The main desert area is in the north and north-east on the borders of the *Dasht-i Lūt*, and is encroaching on the neighbouring fertile districts. The *Lūt* is defined in the south by the *Bam-Zābīdān* road and thus excludes *Narmāshīr* and the desert regions of south-eastern Kirmān and Rīgān, though physically these belong to the *Lūt* proper. There are also some stretches of arid land between the south-west highlands and the *Ḥībal Bāris* which run south-east from *Sirḡjān* to east of *Dīfrūt*. Salt swamps (*ḡafā*) are found in isolated depressions, notably the *Kafā-i Kātrū* near *Sirḡjān* (for a description of this, see K. E. Abbott, *Geographical notes taken during a journey in Persia in 1849 and 1850*, in *JRCS*, xvv (1855), 64-7). In some parts of the province the towns and villages tend to be separated from each other by broad stretches of uncultivated land (cf. *Iṣṭakhri*, 163, Ibn Ḥawḡal, ii, 309). Along the nor-

thern littoral of the Persian Gulf and the Gulf of 'Umân there is a narrow coastal plain.

The most northerly of the mountain ranges stretches from the neighbourhood of Yazd to Khabiz (the modern *Shahdâd*) and south-eastwards towards Sarvistan. The fertile upland district of Kûbânân in the north, and, further south, the arid district of Râwar lie along its eastern base. A second range, further to the west, which contains Mt. *Djôpâr* (23,000 ft.) south of Kirmân city, and Mt. *Hazar* (24,500 ft.) to the south-west of Râ'ân, runs towards Bam, while a third, still further west, runs south-eastwards from north of *Shahr-i Babak* through Sirjân and Bâf, and contains Mt. *Chihân* (23,000 ft.) Mt. *Cahrgumbad* (13,000 ft.) and Mt. *Lâzar* (14,350 ft.). A lesser range, with Mt. *Câhharzâr* (9,480 ft.), lies to the south of Sa'dâbâd, while the Mt. *Dîn* range of Fîrs is prolonged in a south-easterly direction to near Bandar 'Abbâs. South of Sarvistan and to the east of *Djûrûf*, lies the *Djibâl Bâris* range [see *IRANIAN BÂRIS* in Suppl.], which also trends from the north-west to the south-east and rises to 23,000 ft. in the north and 12,450 ft. in the south. The *Djibâl Kûf* region of the Arab geographers [see *Istakhârî*, 164; *Yusuf al-'Alâ*, 124; al-Mukaddasî, 47; Ibn Hawkal, ii, 309-10; C. E. Bosworth, *The Kâfiks or Qûfs in Persian history*, in *Iran*, xiv (1976), 9-15] probably lay in the south-east in *Bâshâkard*, on the borders of Makrân and Rûdbâr.

In the upland districts, notably in the *Djibâl Bâris*, there exist remnants of a dry forest, consisting mainly of thin stands of pistachio trees, several species of almond, maple, oaks, juniper and other shrubs; stands of pistachio trees, almonds and other drought-resistant species are also found at lower levels. In the *garmis* the vegetation tends to be scattered trees and shrubs with a steppe-like ground cover. The *kusur* tree (*anuphis syria* Christ) has a wide distribution, as also do several species of acacia, myrtle, tamarisk and oleander. Deforestation from charcoal burning and animal grazing has taken place, and present day cover, though in places still considerable, would appear to be appreciably less than the "forests" of both the early and mediaeval geographers and the 19th century writers.

There are an important river reaching the sea. The largest of them, the R. *Mhâb*, rises in the hills of Bandar 'Abbâs. It has a considerable drainage and flows into the Persian Gulf some 30 miles east of Bandar 'Abbâs. The only considerable inland river is the R. *Halil*, which is joined by its tributary, the R. *Shûr*, in the neighbourhood of *Djûrûf* and disappears in the *Djâr Mûsân*. According to *Istakhârî*, it had enough water to turn 20 (166), or, according to Ibn Hawkal, 50 mill wheels (ii, 311). The province relies, for the most part, on *bandûs* (q.v.) and mountain streams for water. In many districts the sub-soil water is brackish and the soil is often impregnated with salt. Rainfall is low and decreases towards the south-east, though the relief of the land gives rise to many local variations. The maximum precipitation is in winter. Kirmân town has an annual average rainfall of 7.9 in., Bandar 'Abbâs 2 in., and Bam 3 in. Drought, sometimes accompanied by famines, has not been uncommon in the history of Kirmân. The *'Id al-'alâ* mentions one such in the *gharâzi* year 570 (97). In 1879 and 1880 Kirmân, like many other provinces, suffered severely from drought. Flash floods are also a hazard, such as the floods which occurred in Kirmân (and many other places) in 1001/1593 (Mahmûd b. Hidayat Allâh Natanzî, *Nahâyat al-'ahd*, ed. Ihsân Ishrâkî, Tehran 1971, 532).

According to the Arab geographers, some three-quarters of the province belongs to the warm regions (*djûrm*, *garmis*) and one quarter to the cold regions (*sarûd*, *sardis*). In the *garmis* the districts bordering the central desert have a hot dry climate, but in the southern parts of the province, especially in the Persian Gulf littoral, the climate in summer is hot and unhealthy. Bam is thus reckoned to have a better climate than *Djûrûf* (*Istakhârî*, 166). The latter is described by *Afdal al-Dîn* as a paradise for four months of the year but as hell for the rest of the year (*'Id al-'alâ*, 69). The 5th/10th century Persian translation of *Istakhârî* adds to the latter's text the statement that the climate of *Hurmuz* was noxious (ed. *Iraqi Afshâr*, Tehran 1340, 139). The upland country of *Aktâ* and Sirjân has a temperate climate, while Kirmân, Râsingjân, Zarand, Râwar and Kûbânân have a hot summer and mild winter. Barley is harvested in Rûdbâr at the Persian New Year (21 March) and wheat twenty days afterwards, in *Aktâ* barley is not harvested until five months after the New Year and wheat a month later.

Outside the coastal area, where the annual range of temperature is lowest, the difference between the coldest month, January, and the warmest, July, is considerable. At Kirmân, with an elevation of 5,680 ft., the average maximum temperature in January is 35.4° F and the average minimum 35.8° F, with an absolute maximum and minimum of 75.2° F and 7.6° F respectively and a mean monthly average of 42.8° F. In July the average maximum and minimum temperature is 95° F and 64.4° F respectively with an absolute maximum and minimum of 105.8° F and 43.2° F and a mean monthly average of 80.6° F. At Bandar 'Abbâs the average maximum and minimum temperatures in January are 73.4° F and 57.2° F respectively with an absolute maximum and minimum of 86.0° F and 41.0° F and a mean monthly average of 66.2° F, while the comparable figures for July are 102.2° F and 87.8° F, 113.0° F and 82.4° F and 95.0° F. In some parts of the province, notably Kirmân, high surface winds are common at certain times of the year, especially in spring. In the *Khabiz* district a poisonous wind (known as *bâd-i sîsur*) blows in the desert in the middle of the day for about forty days in summer.

Ibn Rusta states that Kirmân was divided into five *kiras*, Bardâr, Sirjân, Narmâghûr, *Djûrûf* and *Hurmuz*, each *kira* being called after its chief town (266). Mukaddasî also states that the province had five *kiras*, but lists them differently, omitting *Hurmuz* and including Bam (460). Hamed Allâh Mustawfî states that it consisted of fifteen districts (*ghohr*) (*Nusbat*, 139). By the 8th/14th century the province was differently divided. In the 19th and 20th centuries there appears to have been a further proliferation of districts (*balâdât*), the names of which are variously given. Wazîr in his *Djughrâfiyâ-yi mamâlat-i Kirmân*, written between 1874 and 1876, mentions the following districts: Gûwâshir (the modern city of Kirmân and its surroundings), Kûhpâya, *Khabiz* and Gawk (which two, he states, in reality formed one *balâd*), Bam, Narmâghûr, Râ'ân, Sardûya, *Djûrûf*, *Djibâl Bâris*, Isfandâqa, Rûdbâr, Kûpshk and Şawghân, Bardâr, *Aktâ* (earlier known as the district of Bâf), Uziyâ, Sirjân, *Shahr-i Babak*, Râsingjân, Bâf, Zarand, Anâr, Kûbânân (which, he states, had been administered with Yazd for revenue purposes for nearly a hundred years) and Râwar. Later the boundaries appear to have been slightly redrawn. *Aktâ* and Uziyâ were united into one district, as also were Bam and

Narmāghir; Bāfk was transferred to Yazd, the district of Kūbānān only remaining with Kirmān, Pārk and Rābur, which had formerly belonged to Sīrdjān and Akhā' respectively, both became separate districts, while Rūdbār was now called Rūdbār and Bāghakird (Houtum-Schindler, art. *Kerman* in *Encyclopaedia Britannica*, 1912, xv, 756). Under Rūdā Shāh the province was divided into six *shahristāns*: Kirmān (which included the sub-districts of Zarand, Kūhpāya and Kūbānān), Bam (which included the sub-district of Rāfān), Dīkrūt (which included the sub-district of Sārdūya, which in turn included Isfandāka, and Kahādūj, which in turn included Rūdbār), Bandar 'Abbās (which included the sub-district of Rūdān), Sīrdjān (which included the sub-districts of Pārk and Bāfk, which in turn included Urdūya, Rābur, Kūshk and Sawghān) and Rafsīndjān (Husayn 'Alī Razmārā, *Farhang-i duḡhrāfiy-i Irān*, viii).

Agriculture and Livestock.—The Arab geographers describe Kirmān as a rich and prosperous province. The Persian translation of Isṭakhri mentions that it produced all kinds of fruit (139), while Yāqūt states that it was rich in date palms, cereals, cattle and beasts of burden and that it produced fruits belonging to both the cold and the hot regions in great variety, including an abundance of walnuts and dates (Barbier de Meynard, *Dictionnaire de la Perse*, 483). The author of the *Hudūd al-'Ālam* notes that Dīkrūt, Bāfk and the mountain country between Dīkrūt and Māndūjān, known as the Kūhstān-i Abū Ghānān, were prosperous and pleasant places (124). According to Mukaddasī, the last-named district had many date palms (467). Rūdbār is described by the *Hudūd al-'Ālam* as consisting of woods, trees, and meadows (124). The mountain region between Sīrdjān and Bardisr was also very prosperous and pleasant according to the same authority, and contained 360 populous places. Mukaddasī mentions a multitude of orchards and an abundance of fruit in Sīrdjān (464), and many orchards and citrus trees in Mughūn (467). Aḥlā al-Dīn speaks of the excellence of the pastures of Rūdbār and states that animals thrived in them (70). He also praises the fertility of Narmāghir and states that it produced the fruit of both the *germuir* and the *sardisr* (72). Mukaddasī notes the great quantity of fruit belonging to the *sardisr* and the *germuir*—dates, walnuts and citrus fruits—in Dīkrūt (466; cf. Isṭakhri 166). Plenty prevailed in the Dīrbāl Bārk, which, like the Kūf Mts., were difficult of access (Isṭakhri, 164; Ibn al-Hawkal, ii, 310). Bam and Kū'ān had many date palms (Isṭakhri, 166; Ibn Hawkal, ii, 311), which also grew in great profusion in Hurmuz (Isṭakhri, 166; Ibn Hawkal, ii, 311) and in the Kūf Mts. Honey was also produced there (cf. Idriṣī, 429). Indigo and cuman were cultivated in Dīkrūt and the district which extended from Mughūn and Wāliqshīrd to the neighbourhood of Hurmuz, and also sugar cane (Mukaddasī, 467; Isṭakhri, 167; Ibn Hawkal, ii, 312). Idriṣī mentions the excellence of the quality of the indigo and states that the inhabitants of Mughūn and Wāliqshīrd occupied themselves much in its cultivation and took a great deal of trouble over it because it was a source of considerable profit to them (441). Wheat and barley were grown in the *sardisr*, but in Hurmuz millet was the staple crop and the food of the inhabitants (Isṭakhri, 127; Ibn Hawkal, ii, 311; *Hudūd al-'Ālam*, 124, Idriṣī, 444). Cotton, as well as grain and dates, were grown in Sīrdjān and Shāh-i Bābak (Nasabī, 121). Silk was produced in Bam ('*Iḥd al-'Ālā*, 71). Asafetida

and gum tragacanth were found in parts of the province.

In the Middle Ages, apart from a period of prosperity under the Saldjūqs of Kirmān, agriculture suffered a decline. There were temporary fluctuations and local variations, but in general the agricultural recession continued until the second half of the 19th century. At that time a wide variety of crops were cultivated. Wheat and barley, though grown in most parts of the province, were not important in terms of the amount grown and some districts had a deficit. In the province as a whole, the yield was low. Some millet, and a small quantity of rice was also grown. Pulses, roots and edible gums were also produced. Cotton was grown in Rafsīndjān (which was later, in the 1930s, to turn much cotton land over to the cultivation of pistachio trees), Kūhpāya, Dārdān (Dardjān), Bam, Narmāghir, Dīkrūt, Zarand and Anār. Dates were still one of the most important products of the province and came from Bāfk, Khābis, Bam, Dārdān, Rūdbār and to a lesser extent from Kūshk and Sawghān. Rawar was noted for its figs, Bāfk for its apricots and Khābis for its citrus fruits. Cumin was grown mainly in Kūshk and Aqā'. Pistachios, almonds (mainly from Sīrdjān and Shāh-i Bābak) and walnuts (from Sārdūya, Bardisr and Aqā') were important products. Sugar and indigo were no longer grown except on a very small scale, though an attempt was made by Wāli al-Mulk to re-introduce sugar cane together with indigo, pepper, ginger and various other Indian plants into Khābis (Houtum-Schindler, *Reisen im südlichen Persien 1879...*, in *ZG. Erd. Berlin*, xvi (1887), 357). Dye plants included henna in Narmāghir, Khābis, Dīkrūt, and Urdūya and madder in Sīrdjān, Rafsīndjān, Bāfk, Kūbānān, Anār and Zarand. By 1880 the cultivation of beans in Bam had brought about in some measure a revival of prosperity in that district (Pīroz Mirzā Farman Fārmā, *Safarnāma-i Kermān wa Bulghīstān*, ed. Manṣūra Nizām Mīlī, Tehran 1963, 6). Silk, though a little was still produced in Bam, Rafsīndjān, Bāfk, Dīkrūt, Bāghān and Kūbānān, had also lost its importance, though some attention appears to have been given to the cultivation of mulberry trees during the reign of Muḥammad Shāh (1834-48) (R. G. Watson, *A history of Persia*, London 1866, 354). Tobacco was grown in Zarand and Bāfk, and potatoes in the district between Sīrdjān and Pārk. From the late 1870s opium cultivation became important in Māhān, Dīkrūt, Narmāghir, Sīrdjān, Bāfk, Kūbānān and elsewhere. Honey came from Aqā', Bardisr and Sārdūya. (See further Wāzīd, who gives a list of the agricultural products of each district (*bulāk*), and also references in E. Stack, *Six months in Persia*, London 1882, i, 284-238).

Sheep and goats were important throughout the province. There was much movement of flocks from the mountain districts to the plains in winter. Those from Rābur, Isfandāka and the neighbouring districts went mainly to Rūdbār and Dīkrūt. Much wool was produced, including a fine soft wool (*karkā*) produced by a special breed of goat. In Rūdbār there were also many herds of cattle. Buffaloes were found only in Dīkrūt.

Minerals.—Various minerals existed in the province and many of these were exploited. Ibn al-Fakhrī states that there were mines of gold, silver, iron, copper, sulphur, and zinc oxide (106), but their location is not clear from his account. Mukaddasī describes how zinc oxide (*shāyā*) was mined and fired to produce tatty (459, 470). Ḥamd Alīsh Mustawfī describes the process as carried out in "the village

of the tatty makers" as follows: the crude ore was brought out from the mine, moistened and made into bars (width one gaz long, dried and put into a furnace, the action of the fire then causing the tatty to form in a thin film (*Nuskah*, 205). Marco Polo, who locates the mines in Kûbânân, gives a somewhat similar account. Mukaddasî also states that there were iron and silver mines in the province (870), the latter presumably located in the Silver Mine Mountains west of Dîrûft (cf. also *Hudûd al-'Islam*, 65). The *Hudûd al-'Islam* mentions lead, copper and indostear in the mountains between Dîrûft and Bam (65). Hâmid Allâh Mustawfî states that there was a turquoise mine and a lapis lazuli mine in Kirmân, but that the turquoises were immature and unformed and therefore not of much value (*Nuskah*, 204, 206). Marco Polo also mentions turquoise in the mountains of Kirmân, while Wâziri states that there was a turquoise mine near the mountains of Maymân in the Shâh-i Bâbak district (164). He also mentions lead mines in Sirdjân and Zarand, of which the former produced the best quality lead (156, 178). Abbott records the existence of a lead mine in the mountains of Zarand near the village of Tugrağîs and states that the government took 20% of its produce (*op. cit.*, 27). Wâziri mentions a sulphur mine in Kûbânân, which was in operation when he was writing (172); he also states that there were copper mines in Sardîya (113), a copper mine in operation in the mountains of Balûdjâ in Aşkâ' (139), and many closed copper mines in the mountains of Râbur (142-3). Salt was obtained from deposits near Khabîs, Sirdjân, Râ'in and elsewhere. Curzon mentions coal north of Kirmân city and in Kûbânân, manganese ore in Râbur, borax in Shâh-i Bâbak and asbestos in Kûbânân (*Persia and the Persian question*, II, 318). Extensive mining operations are being carried on in various parts of the province at the present day. Coal and other minerals are mined in the mountains between Râbur and Zarand and copper in the Pârîz district.

The cities of Kirmân.—The main city of Kirmân under the Muslims until the middle of the 4th/10th century was Sirdjân (the form *Shiradjân* is also found), which was situated some five miles to the east of the modern town of Sa'adâbâd (Le Strange, *Lands*, 300). It was here that the governor (*wâlî*) resided (Ibn Khurrâdhbih, 49). Ibn Rusta describes Sirdjân as the greatest city of Kirmân (286), as also does Iṣṭakhri (167), Ibn Hawkal (II, 312) and the *Hudûd al-'Islam*. The last-named states that it was the capital of Kirmân and the seat of the king (124), though by the time the *Hudûd al-'Islam* was written, Ibn Ilyâs, the Bûyid governor, had, in fact, moved the capital to Bardîr. Mukaddasî states that it was the biggest town in the province (although no longer the capital) and more extensive than Shirâs (464). Hâfiz Abû refers to Sirdjân as the second city of Kirmân (*Dughat al-Jayl*, I, 1408), although it had, in fact, been destroyed in 798/1396 (before he wrote) after a long resistance by the armies of Tîmûr. After the city was laid in ruins, the name Sirdjân was nevertheless still applied to the district of which it had been the centre. Towards the end of the 18th century Sa'adâbâd was founded near the site of the old city. Abbott, who visited it in 1850, describes it as one of the most flourishing towns in Kirmân (*op. cit.*, 63). In 1881 it had some 2,000 inhabitants and appeared to be in a flourishing condition (Stack, I, 281; cf. also Wâziri, 151). At the present day, the town of which Sa'adâbâd is the centre is known as Sirdjân.

Bardîr (Bardasî), which became the capital of the province under the Bûyids, is the mediaeval name of the city now called Kirmân (Le Strange, *Lands*, 303). It was also known as Guwâshîr. The two names, Bardîr and Guwâshîr, may represent the form Beh-Ardashîr, the name of the town built by Ardâshîr, the founder of the Sâssânid dynasty (Hemza Isfahânî, ed. Goetwald, 46; Ibn Baithî, *Fârs-nâmâ*, 303). Muhammad b. Ibrâhîm uses the names Bardîr and Guwâshîr indifferently. The copyist of Ibn Hawkal, writing in 550/1155, states that Bardîr in his time was a small town. It was, however, very prosperous and its surroundings, which had been brought under cultivation, were more flourishing than the town itself (II, 309). Afdal al-Dîn, writing some decades later, states that it was a large city with a wall (*rahâb*) and a suburb (*ḡamrîstân*). Adjoining the city outside the wall and surrounding it were orchards and villages. It had a temperate climate, good soil and good water (72). By the 10th/16th century the name Bardîr appears no longer to have been applied to the capital of the province, which, although still called Guwâshîr, was by this time more usually known as Kirmân. It had the *ṣafah* of *Dâr al-'Amân*. The name Bardîr, although it had thus ceased to designate the capital of the province, was still applied to a district (Zayn al-'Abidin Shîrwânî, *Bustân al-sayâh*, lith. Tehrân n.d., 164). This, however, did not include the town of Kirmân or its environs, but was bounded on the north-west by Râisingîlân, on the west and south by Aşkâ' and Sirdjân, on the south-east by Râ'in and on the north-east by Kirmân (Wâziri, 133). The main centre of this district, Mîghîs, is also known as Bardîr.

Bam (q.v.) was the second major city of Kirmân in the early centuries. The third, Dîrûft (q.v.), was a prosperous, commercial centre, having trade with Sîstân and Khurâsân (Iṣṭakhri, 166; Ibn Hawkal, II, 312; Mukaddasî, 466; Idrîsî, 422). According to Hâmid Allâh Mustawfî, when the Muslims conquered Kirmân, the region of Dîrûft was wooded and occupied by wild animals. The Muslims cleared the country and made villages (240). Dîrûft and its suburb *ḡamrîstân* flourished until the end of the Saljûq period. Its buildings decayed during the reign of Malik Dînr (582-97/1186-95), although the surrounding district continued to be cultivated (*Yâd al-'âdâ*, 40). Subsequently the district decayed also. Abbott, who visited it in 1850, states that it possessed only four or five collections of huts which could be termed villages, each of which had a mud fort; for the rest tribal groups from the mountain regions resided in scattered groups over the plain in winter (K. F. Abbott, *op. cit.*, 46). Today the town which has grown up round Sabzawîrân is also known as Dîrûft.

The fifth of the great cities of Kirmân in early and mediaeval times was Hurmûs (q.v.), situated on the Persian Gulf. It was the emporium of Kirmân. Its merchants, perhaps because of its bad climate, lived in the surrounding countryside (Iṣṭakhri, 166). In 700/1300, because of repeated raids by marauding tribesmen, the ruler of Hurmûs moved all the inhabitants to the island of Dîarûn where he founded the town of New Hurmûs (see further, J. Aubin, *Le royaume d'Ormuz au début du XVI^e siècle*, in *Mari Luso-indicum*, II, *Hautes études islamiques et orientales d'histoire comparée*, IV/5, Geneva 1973). Other important towns were Manûdjân, Zarand and Narmîshîr. Many of the towns and villages mentioned by the early and mediaeval geographers have disappeared or have not yet been identified.

Communications.—In the early centuries Sirjān was the main centre upon which the principal roads converged. This, no doubt, in part accounted for its importance until it was destroyed in the 8th/14th century. Three roads led from it to Fārs, one via Shahr-i Bābek, another through Šāhik and a third to Nayriz. Other roads went south to Farg, Tārum and Sūrt on the Persian Gulf, south-east to Bāft, Dīrūft, Manūdjān and Hurmuz, north to Ush in Rūdsn, north-east to Māhla, Bāghūn and Kirmān, north-north-east to Māhla, Khābis and Khurāsān, and east to Shāmāt and Ush. From Kirmān (Gowāshjir) two roads went north-west to Yazd, one via Zarānd, Rāwar, Kūbūdān and Bāfk, and the other via Rafsindjān and Anār. From Rāwar and Kūbūdān roads went north-north-east across the Great Desert to Tāhas and Khār respectively. South-east from Kirmān a road went to Māhla, Rā'n, Dārnā or Dārdjān, Bam and Narmāshīr, where it bifurcated, one branch going to Farāj and Zarāndj in Sistān and the other to Rīgān, where it again divided, one road going east to Khāsh and the other south-west to Manūdjān. From Dārnā another road went south to Dīrūft (see further Le Strange, *Lands*).

In the 19th and early 20th centuries communications were still very backward. Generally speaking, the roads were fit for pack transport only. Moreover, many were often shut for months at a time owing to the activity of bandits. In 1902 a convention was signed between Britain and the Persian government for a three-wire telegraph line on iron posts from Kāghān to Balūčistān via Yazd, Kirmān and Bam. It was begun in December 1902 and finished in March 1907.

Manufactures and Trade.—In the early centuries, the province had manufactures of silk, cotton and woollen goods, which were important articles of local and long-distance trade. A cotton cloth (*shā'ir*), which appears to have been used as lining for clothes, was produced in Zarānd and exported to Fārs and 'Irāk (Istakhri, 167-8). Ibn Hawkal states that it was called al-Zarāndiyya and taken to Egypt and the most distant parts of the Maghrib (ii, 313). There was also trade in cloth made in Sirjān (Mukaddasī, 470). The people of Bam were noted for their craftsmanship, and the cloths which were made in Bam were of great elegance and lasting quality. They fetched a high price and were exported to Khurāsān, Egypt and 'Irāk (Ibn Hawkal, ii, 312; Mukaddasī, 465; cf. also Istakhri, 167-8). Idri'ī states that the cloaks of goat hair made in Bam equalled the best to be found anywhere in the world (423). Turbans of fine material were also made in Bam and were in demand in Khurāsān, Egypt and 'Irāk (Ibn Hawkal, ii, 312). There had at one time been a royal workshop for jirāns in Bam (1844). Cotton cloths (*ashmīgha*) were still produced in Bam at the turn of the 8th/14th century (cf. Rashid al-Dīn, *Muhitabih*, ed. Muhammad Shafī, Lahore 1945, 190). In the middle of the century it was apparently still an important trading centre with India, Sistān, Khurāsān and Kābul (cf. Hāmid Allāh Mustawfī, *Tārīkh-i guzide*, ed. E. G. Browne, G.M.S., London 1910, 729). By the 9th/15th century, however, the textile industry appears to have no longer existed in Bam (J. Aubin, *Deux seyyids de Bam au XV^e siècle*, Wiesbaden 1956, 91-2).

Idri'ī states that there were leather workshops in Zarānd and that girths were exported to 'Irāk and Egypt (427). Marco Polo mentions the manufacture of saddles, bridles, spurs, swords, quivers and other

arms in Kirmān. Al-'Umari also states that swords were made in Kirmān (*Masālik al-aiyār*, ed. K. Lech, Wiesbaden 1968, 110). In the 17th century pottery (blue and white) was made in Kirmān. According to Du Mans, the best examples of this were difficult to distinguish from Chinese porcelain (*États de la Perse*, Paris 1890, 197).

There was considerable trade, local and long-distance, in agricultural produce. Indigo and cotton were exported to distant regions (Istakhri, 167; Mukaddasī, 470; Idri'ī, 424). Narmāshīr had trade with Khurāsān and 'Uman, and was a collecting centre for dates, which were exported to different parts (Mukaddasī, 463). Dīrūft also had a large export of dates to Khurāsān. Mukaddasī states that nearly 200,000 camels used to set out every year. The trade appears to have been carried out on a *munasafa* basis, i.e. the profit was divided equally between the producer and the camel-driver (469). Khābis also exported dates to distant parts (*'Iqd al-'ūd*, 74).

Afdāl al-Dīn states that much trade from India, Sind, Ethiopia, Zangibar, Egypt, the Arab countries, 'Uman and Bahrain entered the port of Tiz (which he places on the frontier of Kirmān, though usually it is reckoned as belonging to Makran). Imports included musk, ambergris, indigo, velvet, cloths, and other luxury articles. Hurmuz was also an important trading centre, to which merchants came from the most distant parts (71). Later, in the reign of Shāh 'Abbās (1596-1628/1587-1629), Bandar 'Abbās (Gombroon) [s.v.] became an important port, but this did not bring at first much additional trade to Kirmān, since goods appear to have gone into the interior mainly through Fārs rather than Kirmān. How early the long distance wool trade became important in Kirmān is not entirely clear, or when carpets became an article of export and carpet weaving became important. In the 17th century wool was being taken from Kirmān and Yazd to Europe. By the end of the century it was an important export of the East India Company from Persia and was used in feltings, suitings, and coverings for buttons, while in the 18th century Kirmān wool for hats and shawls was a commodity consistently sought after. This wool came from goats and in different colours, black, white and red. The last named was highly prized (see Gombroon diary for a discussion of the arrangements for obtaining Carmanian wool. See also A. A. Amin, *British interests in the Persian Gulf*, Liden 1967, 126-7). During the reign of Nadir Shāh (1148-60/1736-47) wool for export was in short supply because it was used for the clothing of his army, and some of the Zand rulers appear to have prohibited the export of wool because they wanted it for the internal manufacture of shawls. The situation was not improved by the desolation which Akā Muhammad Khān Kājār carried out in Kirmān in 1794.

In the early 19th century, the main manufactures of Kirmān were shawls, carpets, felts, silk and cotton cloths, leaf sugar, matchlocks and earthenware (Melcooke, *History of Persia*, London 1829, ii, 366). Macdonald Kinneir in his *Geographical memoir of the Persian empire* states that "the trade of Kerman is still very considerable, and it is celebrated for its manufactures of shawls, matchlocks, and carpets, which they chiefly export to Khurāsān and the northern provinces, receiving in return drugs, skins (from *Bochkare*), furs, silk, steel, and copper. These articles as well as pistachio-nuts, carpets, rose-buds for preserves, and bullion, they send to India; and import from hence tin, lead, iron, chintz, wrought silk, spices, indigo, muslin, khemsikhob, gold brocade,

china and glass-ware, broad-cloth, hardware, etc." (London, 1813, 198-9). Abbott, on the other hand, states in a report made in 1849-50 that the commerce of Kirmân was much restricted, though its woollen manufactures thrived. Such little importance as it had was due to the manufacture and trade in shawls and other woollen fabrics. He estimated the number of looms for shawls in Kirmân city at probably 3,200 (though some put the figure at nearly double that number), for other coarser woollen fabrics some 220, and in addition some 325 looms in nine of the surrounding villages (Great Britain, Public Record Office, F.O. 60, 165, *K. Abbott's report on commerce of the south of Persia. Trade report. Notes on the Trade, Manufactures, and production of various Cities and of Persia, visited by Mr. Consul Abbott in 1849-50*). Wazîf, writing rather later, states that shawls were exported to Transoxania, Anatolia, Arabia and Turkistan and that there were nearly 12,000 workshops in Kirmân (*Diwān-i-yāzār-yi mamākat-i Kirmân*, 33). His editor states that there was a great expansion at the end of the 19th century in carpet weaving, which displaced the manufacture of shawls, but that carpet-weaving declined again very shortly afterwards (33-4). *Karbās* (a kind of coarse cotton weave) was woven in many parts of the province, and there was some export from Zaranîd for the local market. The *karbās* of Rafsanjān was reported to be of excellent quality (171, 173).

In the mid-19th century some of the transit trade between Central Asia and India passed through Kirmân, and there was also some direct trade between Kirmân and India. Gums, asafoetida, madder, roots, caraway seeds, silk, saffron (from Khurāsān), wool, cotton and dried fruits were exported to India and Arabia via Bandar 'Abbās. There were also some imports of English goods via India, Tabriz and Yazd (Abbott, *Notes on the Trade, etc.*). Abbott states that caravans from Bîrdjān reached Khābīz several times a year. They brought wool, grain, dried fruits, silk, saffron (from Khān), and clarified butter, etc., a great part of which went on to Bandar 'Abbās for India. Returning caravans brought groceries, spices, indigo and English cotton manufactures for Khurāsān (*Geographical notes, op. cit.*, 34-5). Curzon states that Bandar 'Abbās in 1889-90 was the start of the important caravan route running north to Kirmân and Yazd and ultimately to Khurāsān. Kirmân and Yazd were mainly supplied from India with piece goods, prints and yarn, copper sheets, iron bars, lead, tin, sugar, tea, dyes, spices, glass and china; and exported in return opium, wool, cotton, madder, almonds, pistachio nuts, etc. (*Persia and the Persian question*, II, 371-2). According to Wazîf, various districts of Kirmân took part in the long-distance trade. Among the articles which went to Bandar 'Abbās and thence to India from Kirmân were cumis and wool from Ak'tā' and Bardsîr (*op. cit.*, 136, 138), and a variety of dried and fresh fruit and nuts, namely pears and apples from Ak'tā' and Rābūr, quinces from Ak'tā', and raisins from Gawk; almonds from Shahr-i Bābak, Gawk and Ak'tā', walnuts from Sardūya and Ak'tā', and pistachios from Shahr-i Bābak; cotton from Sirjān (to Bombay) and Anṣ, peas from Ak'tā', and Bardsîr and sometimes wheat from Ak'tā' and Urrūya, and barley from the latter district also.

Abbott mentions exports from Kirmân to Yazd and other neighbouring towns and villages, which included shawls, woollens, wool, opium, lead, soap, henna, indigo leaves, figs, gums and wild ass's skins (*Notes on the Trade, etc.*). There was also, ac-

cording to Wazîf, some internal movement of wheat from Zaranîd to Yazd and Rāwar and sometimes from Urrūya to Kirmân; Sirjān also exported wheat to Yazd and Kirmân. Peaches were exported from Gawk to Kirmân and other districts, dried apricots and dried mulberries from Bāfā to Kirmân, and dried figs from Rāwar to Yazd, whence they were exported to other parts of the country as *anjir-i yezdī*; dates from Khābīz to Yazd and Khurāsān; peas and lentils from Shahr-i Bābak to Yazd and Kirmân; henna and *rang* from Narmāshîr to Kirmân, whence they were distributed to neighbouring regions; sometimes henna was exchanged in Sistān for clarified butter and swansdown.

Milk products were an important article of local commerce. Rōdbār exported clarified butter (*rasghān*) to Kirmân. Bardsîr also supplied Kirmân with clarified butter and *aqāh* (a kind of whey). Shahr-i Bābak supplied Yazd, Rafsanjān, and Sirjān with clarified butter, *aqāh* and cheese, while Kūbānā exported *aqāh* to various districts beyond the bounds of Kirmân. Lastly, wood was exported from Ak'tā' to the surrounding districts and to Fārs (see further Wazîf).

In 1904-5 a British commercial mission visited south-east Persia in order to encourage British trade in the area. Russian efforts were also made to increase their trade, and Russian trade agencies were established in Kirmân, Bam and Rafsanjān.

Population.—The settled population appears to have been mainly of Iranian stock. Strabo states that the customs and language of the population of Kirmân were similar to those of the Medes and Persians (xv.2, 14). Tārtîst describes the inhabitants of Kirmân (apart from the tribal population) in favourable terms. He states that they were remarkable for the purity of their customs and the grace of their character and that the merchants especially were marked by an amiability, sincerity and docility greater than elsewhere (421). Stack, writing several centuries later, remarks on the quiet and orderly habits of the people (II, 182). Bārturāgh, on the other hand, gives an unfavourable account of the people of Kirmân and accuses them of being given to sedition (*Nafarīsh al-hulā'ā*, B.M., Or. 3499, I, 198a).

The geographers of the 3rd/9th and 4th/10th centuries mention a number of tribes as inhabiting Kirmân, namely the Kuf, (Kūfidjā, Kūf (see *kurš*)), Balūz (Balūz, Balūz (see *balūz*)), the Dībāl Bāmrāz, and the Agh'āgh, all of whom were harried, to some extent, displaced first by the Muslim armies, and then by the Saffarids, Būyids, Sāmānids and Saljūqs. When Mas'ūdī refers to Kurds (*Ahrād*) in the province it is probable that he meant semi-nomadic or nomadic tent dwellers rather than ethnic Kurds. The Kuf were a mountain people, as their name suggests. They possessed herds of cattle (*ghara*) and also practised agriculture. Their main occupation was alleged by Muslim sources to be highway robbery. The Kuf mountains in which they lived consisted, according to Istakhfī, of impregnable fastnesses. They were bounded on the south by the Gulf of 'Umān on the north by Dīkrūt, Rōdbār and the Mountains of Abū Ghānān, on the east by Kh'āgh and the desert of Makrān and on the west by Manūdjān and Hurmuz. There were seven different mountains each of which had a chief. The early Muslim governments, unable to bring the region under their direct control, gave the Kuf leaders allowances to keep them quiet, but they nevertheless raided the surrounding districts up to Sistān and Fārs. Istakhfī mentions that they were reported to

have accumulated much wealth. He states that they were lean and swarthy; and that some said that they were, by origin, Arabs (163-4; cf. Ibn Hawkal, II, 310; Muḥaddasī, 472). The *Ḥudūd al-ʿĪlām* adds that the government tax-collector (*ʿĀmil-i sulṭān*) did not go into the Kūf mountains and that their chiefs were responsible for the collection and payment of the government tax, which would appear to have been assessed by a *muḥāsib*'s contract. It also states that they spoke a special language (65).

The Balūs were, according to Isṭakhṛī, herdsmen and tent-dwellers living along the western base of the Kūf Mountains and were rich in flocks (164; Ibn Hawkal, II, 310; Muḥaddasī, 472). Idṛīsī, writing in the mid-6th/12th century, however, states that they lived at the base of the mountains to the north of the Kūf (429). They were the only people whom the Kūf feared. Isṭakhṛī's claim that they were peaceable and did not commit highway robbery like the Kūf (164) is not born out by the *Ḥudūd al-ʿĪlām* (124) or Muḥaddasī, who couples them with the Kūf in the matter of brutality and bloodthirstiness and in their propensity to raiding the caravan routes (488-90). Muḥaddasī states that the Balūs had been very numerous until the Būyid ʿAḍud al-Dawla [a.] destroyed them. The language of the Kūf and Balūs, according to Muḥaddasī, was incomprehensible and resembled Sindhi (472).

It would seem that, in general, Muslim writers made no clear distinction between the two groups, and frequently mention them together. Miskawayh states that the Kūf and Balūs, together with the people of Mamūḍjān, joined Sulaymān b. Muḥammad b. Ilyās when he attempted, with help from the ruler of Khurāsān, to seize Kirmān from the Būyids. They were defeated by a Būyid force in 360/970, with heavy losses, and suffered further casualties when the Būyid forces pushed down to Hurmuz. The Balūs, however, did not remain quiet for long. Spreading into the districts of Sīrdjān they made ʿAlī b. Muḥammad al-Bāriz their leader, and began to commit disorders. ʿAḍud al-Dawla then marched against them in person. They retreated into the Djabāl Bāriz, but were defeated in 361/972 (II, 298 ff.). Miskawayh states that those who were not killed were removed from the mountains by ʿAḍud al-Dawla, who replaced them with peasants who received the land on a crop-sharing agreement and with persons who were not well-off (*al-ahwāl al-munḍarʿin wa l-masārīf min adnā al-raʿiyya*) belonging to various races among his subjects (II, 300). There is mention of a detachment (2432b) of Kūf in ʿAḍud al-Dawla's army in 366/977 (Miskawayh, II, 368, and see further C. E. Bosworth, *The Kāghis al-Qūf in Persian History*, 9-18).

The decline in the power of the Kūf and Balūs as a result of ʿAḍud al-Dawla's operations was only temporary. By the beginning of the Saljuq period they were again in control of the *garmsir* from Džirūt to the Gulf of ʿUman, though, according to Muḥammad b. Ibrāhīm, their main location was in the Djabāl Bāriz (*Tarīkh al-ʿĪlā*, 66; Muḥammad b. Ibrāhīm, 6 ff.). They were reduced by Kāwurd b. Čaghrī Beg [a.] (Alfūd al-Dīn, *Badāʾiyat al-asrār wa ṣaḥāʾif Kirmān*, ed. Dr. Mihdī Bayānī, Tehran A.H.S. 1326, 6 ff.). By the end of the 6th/12th century they were again operating in Džirūt and the *garmsir* of Kirmān (Muḥammad b. Ibrāhīm, 5 ff., 182; *Tarīkh al-ʿĪlā*, 5 ff.). There are no references to the Kūf in the later Middle Ages, though there are, of course, many references to the Balūs, who were established in Makrān from the 5th/11th century

and who may or may not have been the descendants of the Balūs [see *AL-ŪSTĀN*].

Wazīr claims that the Mihni tribe were the descendants of the Kūf, but produces no evidence in support of this claim. When he was writing the Mihni numbered some 700 families. They had a separate assessment, i.e. they were not included in the assessment of Džirūt and Isfandāḡ, where they had their winter quarters—and this, perhaps, suggests that they had at one time been more important. Wazīr states that up to fifty or sixty years before he was writing the Mihni leaders had enjoyed a considerable degree of independence. In 1259/1843-4, the government seized Faṭḥ ʿAlī Khān, their leader, and confiscated the many estates which he held in Isfandāḡ and Džirūt (*Džugrafiyā*, 56, 113-14, 121). According to a tradition current among the tribe, however, the Mihni came originally from Khurāsān to Isfandāḡ in Safawid times, when a number of tribes formed a federation under their leadership. This would seem more probable, and would suggest that at most only some of those reckoned as Mihni today are the direct descendants of the Kūf. Their leaders claim to be descendants of Abū Saʿīd b. Abū ʿ-Ḥayr [a.]. In 1969 the Mihni consisted of the following eleven sub-tribes: the Sulaymāni, Luri (who are alleged to have come to Kirmān from the Mamassani in the reign of Nādir Shāh or, according to another account, in the reign of Shāh ʿAbbās), the Bahr Asmāni, the Marki, Muḥibbi, Sādr Barḡhūrī, Luri, Rūst Bāriz, Iskandari, Kābhūrī, Puḡḡkūhī, and Muṣaffari. Wazīr gives a list of twenty-three sub-tribes (199), which differs slightly from the above list.

The Djabāl Bārizs, according to Isṭakhṛī, were even worse robbers than the Kūf. They did not adopt Islam until ʿAbbasid times and he alleges that they persisted, in spite of their conversion, in their evil ways. They were eventually pacified by Yaʿqūb b. Layṭh and ʿAmr b. Layṭh and their leaders destroyed. They too had a special dialect (Isṭakhṛī, 164, 167; Ibn Hawkal, II, 310; Muḥaddasī, 471). Whether as a result of the operations of the Saffarids or because of the movements of the Kūf and Balūs, they appear to have been pushed out of the Djabāl Bāriz region. About the beginning of the 10th century the Nanjarī Tawakullī (ira of the Djabāl Bāriz) apparently moved to Bāzindjān, where they numbered some 4,500 persons in 1960. Wazīr mentions Djabāl Bārizs in Pārs (199), but whether they were the direct descendants of the earlier Djabāl Bārizs is not clear. Wazīr states that their prosperity and the numbers of their sheep, cattle and horses had decreased, especially from about 1860. They were engaged to some extent in trade, taking *kurk*, wool and cummin mainly to Bandar ʿAbbās for export to India and clarified butter and *kaḡā* to Kirmān (110). The *Gazetteer of Persia* records the existence of 50 families of Djabāl Bārizs in Akṭā in 1903 (IV [Calcutta 1910], 338). In 1960 there were a few families of Djabāl Bārizs who had summer quarters between Bāft and Rabur and winter quarters near Gulishgurd (Wāliḡshīd).

The Aḡh ʿWāsh, the fourth of the tribes mentioned by the early geographers, centred on Kh ʿWāsh, were said to be semi-nomads. They had camels and date palms and lived in houses made of reeds (Isṭakhṛī, 164; Ibn Hawkal, II, 313). They are not separately mentioned in later times.

Although there appears to have been some immigration of Arabs into Kirmān before the Islamic conquest (Nöldeke, *Gesch. der Perser u. Araber*, 57)

there does not seem to have been widespread settlement by Arabs in the province during the early Islamic conquests. For the most part, the Arab armies pushed on through Kirmân into Sīstān and Khurāsān. So far as settlement took place, those who settled became, as in other provinces, largely assimilated to the local population. Small groups may also have been settled in the province after the period of the conquests. Yāqūt records the existence of descendants of the Banū Adī (see *azop*) and Banū Muḥallab in Dīrūt (Barbier de Maynard, 185). Wazīr mentions the survival in Dīrūt of a few families who still spoke Arabic (*Diwāghrāfiyā*, 129). The village known as Karyāt al-'Arab, near the city of Kirmân, is believed to have been originally settled by the 'Amurī tribe, who came there from Sīmnān. In some of the coastal districts, such as Bandar 'Abbās, however, much of the population was of Arab origin, though not necessarily Arab-speaking (cf. Montum Schindler, *Reisen im südlichen Persien* 1879, 344).

Turkish tribes, Ghuz and others, came into Kirmân from the 5th/11th century onwards. It is, however, difficult, if not impossible, to trace the changes in their locations and numbers. Whether the Salāḡīka, who today are to be found in Rābūr, are descendants of the Salāḡīks is extremely doubtful. They do not appear to have any tradition among themselves of such an origin and are now Persian-speaking. They are mainly engaged in trade and for the past forty or fifty years have ceased to move from summer to winter quarters. The Shāḡī, centred on Rābūr with winter quarters in Shāstīf, whom Wazīr reckoned to be fifty families (*Diwāghrāfiyā*, 199), are related to the Salāḡīks. They are so-called because Faṭṭā 'Alī (during the lifetime of his uncle Aḡā Muḥammad Khān) took one of their women, Faṭīma Khānum, to wife after he had defeated the tribes of Rābūr. She in due course became his chief wife and was known as Sunbul Bāḡī.

On the break-up of the Great Salḡūḡ empire there was a new influx of Ghuz into Kirmân under Malik Dīnār. The Raṭā'ī tribe claim to be their descendants. In the middle of the 19th century they numbered 200 families and lived in black tents in Narmāshīr, Rīgān and Rūdbār. Their khāns lived in the fortress of Kakaḡ in Rūdbār, which had been built by Malik Dīnār (Wazīr, *ibid.*, 123). In 1903 they are recorded as comprising 700 families (*Gazetteer of Persia*, iv (1910), 337). In 1960 their winter quarters were in Mīnāb and Rūdbār and their summer quarters in Ustūr, Balward, Sīrdjān and Čahrgūnbad.

There was further movement of Turkish tribes into Kirmân during the Mongol, Timurid and Safawid periods. When exactly the Afshār (q.v.), who appear to have migrated westwards with other Ghuz tribes in the 5th/11th century, settled in Kirmân is not known. There was already an Afshār presence in the province at the beginning of the 10th/16th century (cf. *Ālamdar-yi Sākh Ismā'īl*, ed. Asghar Muntazir Šāhib, Tehran A.H.S. 1349, 326). Their khāns held governments there in the Safawid period. On the death of Nādir Shāh, Šāhrukh Khān Afshār, who was settled in Zaranī, temporarily extended his power over the whole province. In the 19th century the Afshār were the most important of the tribes of Kirmân. They consisted in Wazīr's day of 32 sub-tribes (*šīra*) and ca. 1,000 families (*ibid.*, 143, 198-9). Šheil, writing rather earlier, put their numbers at 1,500 houses (*Note on the tribes by Sir J. Šheil*, in Lady Šheil, *Life and manners in Persia*, London 1856, 358), which would suggest that Wazīr's

figures may be an underestimation. Today their summer quarters are between Bāft and Sīrdjān and their winter quarters in Urdūya and Daḡtā'ī Bar. Their numbers in 1960 were estimated at ca. 20,000 and they were divided into 18-20 *šīras*. Among other Turkish tribes in Kirmân in Safawid times there were the Karā Oḡlānā, a branch of the Karamānlu, whose khāns held governorships in Akṡā' and Urdūya towards the end of the period. By the time Wazīr was writing, the tribe had become much weakened (*ibid.*, 143). A few Tekelā are said to have fled to Akṡā' in the reign of Tahmāsp and to have been absorbed in due course by the Karā Oḡlānā (*ibid.*, 144). Of the various other Turkish tribes, the most important were probably the Karā'ī and the Buṭāḡkī. The former, according to Šheil, numbered 700 families (*op. cit.*, 398). Wazīr put them at 800 (*ibid.*, 199), but by 1903 they appear to have declined to some 600 (*Gazetteer of Persia*, iv (1910), 337). The Buṭāḡkī, according to a tradition current among themselves, were brought from Karā Daḡtā'ī in Fārs in Safawid times to act as wardens of the marches and later moved to Kirmân. According to Wazīr they numbered 200 families, and many of them were settled in their summer quarters around Balward (*ibid.*, 154, 199). Some of them had winter quarters in the neighbourhood of Bandar 'Abbās. By 1903 their numbers had changed little (*Gazetteer of Persia*, ix (1910), 337), but by 1960 they numbered some 2,000 families. Some of their *šīras* were Turkī-speaking, others Persian-speaking, and some of them were settled. The Šhāl, who formerly belonged to the Afshār federation, had by 1903 joined the Buṭāḡkī and numbered some 90 families (*ibid.*). In 1960 there were some fifty families of Šhāl Turks settled near Sīrdjān, who claimed that their forefathers had come from Fārs at the beginning of the 19th century. The *Gazetteer of Persia* mentions 150 families of Karā Koyunlu in Akṡā' in 1903 (iv, (1910), 338). It is possible that they were descendants of families left behind in Kirmân by the Karā Koyunlu in the 9th/15th century. They appear to have been subsequently absorbed into the Afshār and in 1960 were reckoned among the Afshār *šīras*.

In the early 18th century a number of Lak tribes moved from Fārs to Kirmân and established their winter and summer quarters in Urdūya and Akṡā' respectively (Wazīr, *Diwāghrāfiyā*, 144). They numbered some 2,000 families in 1903 (*Gazetteer of Persia*, iv (1910), 338-9). Šheil put the 'Aṡā'ī Lak, whom he described as Laks, at 3,000 tents and houses (*Note on tribes by Sir Justin Šheil*, in *op. cit.*, 398). According to Wazīr, the Aṡā'ī Lak had cultivated land and cattle in Sīrdjān and Šāh-r-ī Bībāk. They were Ismā'īlīs and numbered some 150 families (*Diwāghrāfiyā*, 157, 199). In 1960 there were some 2,500 Laks in the neighbourhood of Baxīndjān. There are, or were, various other tribes and sub-tribes in the province whose origins are difficult to establish. Most of them are semi-nomadic and their numbers very small.

The internal organisation of these various tribal groups appears to have been broadly similar. Most of the tribes had a *ra'īs* or leader, whose office appears usually to have been hereditary within a family. Larger tribes or federations, such as the Afshār, had an *khān*. Each tribe was composed of a number of *šīras*, under a *ra'īs*, whose office was sometimes hereditary but more often subject to election by the elders (*riḡā safīd*) of the *šīra*. The latter were composed of *shāw*, i.e. groups of, perhaps, 5-12 families, each under a *riḡā safīd*. The

number and size of the *ānā* varied widely with the prosperity of the tribe. Success brought new followers, while failure or weakness caused the dispersal of its existing followers. The collection of taxes from the tribe and the decision of disputes were usually carried out by the *ra'īs-i ānā*, though not infrequently an outsider became responsible for the payment of the taxes to the government. Thus Muḥammad Ibrāhīm Khān, the grandson of Zahr al-Dawla, became responsible for the taxes of the Mihāl tribe and for those of Isfandāga and Rahūt (*ibid.*, 56), while Muḥammad 'Alī Khān Wazīr was charged with the collection of the taxes in the Afshār of about 1370 and had the title *ihāgi* (*ibid.*, 62). In recent years the tribal structure has largely broken down.

In the present state of our knowledge it is not possible to give a breakdown of the population at different periods. From time to time, conquest brought about a transfer of power from one group to another, a redistribution of land and the emergence of new factions, but we are ignorant of the details of these events. It would seem likely, in view of the flourishing trade of Kirmān in the early centuries that the merchants formed a prosperous community, but that their importance declined with the decrease in trade. Aubin in his monograph entitled *Dras sayyids de Bam au XV^e siècle* has studied the functions and influence of local religious leaders in the Tāmid period. Some information on the leading families in the 19th century is to be obtained from Wazīr (*op. cit.*). In Kirmān, as elsewhere, in Persia, the *ā'yān* were composed of landowners, tribal leaders, religious dignitaries and merchants. The dividing lines were not always clearly drawn. Marriage alliances between them were common. Governors and local officials were also included in the *ā'yān*, and often used their official position to acquire wealth and land. In the 15th/16th and 16th/17th centuries the leading officials of the bureaucracy were rich and influential. It is not always easy to decide what was the basis of a family's influence, whether it was government office, trade, landownership or religious leadership, for all might be combined in one family. But governors changed frequently and though they sometimes settled in the province, the government of which they had held, the system did not make for the emergence of families who retained their pre-eminence over a long period. Some of the local *sayyids* were among those who could perhaps trace their influence back furthest. Wazīr states that there were families of *sayyids* in Bam and Narmāghūr who had held property there for over 400 years (*ibid.*, 102). One, the Kādi family of Bam, had held the office of *kādi* there from generation to generation (*ibid.*, 97). There appears also to have been some movement among *sayyids*. Thus, the Mirzā *sayyids*, who came to Bam about 1770, were by origin from Tabriz. One of their number, Ḥādīdī Sayyid 'Alī Khān b. Ḥādīdī 'Abd al-Wahhāb, was made *ra'īs* of Bam and Narmāghūr by Muḥammad Ismā'īl Khān Wakīl al-Mulk (who became governor of Kirmān in 1860) and put in charge of *ālmān* taxation and the *hādīdījādāt* of Bam. This, however, proved disastrous for the family: he was a spendthrift and was dismissed, and all his estates and those of his nephews were taken in lieu of arrears. But their fall was only temporary, and when Wazīr was writing they were again a rich and respected family (*ibid.*, 100-1).

As elsewhere, it was not uncommon for the religious classes and the merchants to be closely allied, either through marriage or by actual participation in trade.

Thus, Ḥādīdī Sayyid Muṭafā b. Ḥādīdī Sayyid 'Abī 'I-Ma'qīm, a Ridāwī *sayyid*, who owned numerous villages and hamlets and many herds of camels and flocks of sheep and goats, had agents and partners in Bandar 'Abbās, Yazd and elsewhere, who traded on his behalf (*ibid.*, 158-9). There was also movement from merchant families and craftsmen into the religious classes. Ḥādīdī 'Alī 'Abmad b. Ḥādīdī 'Alī Kirmānī, who belonged to a merchant family, studied *fiqh* and became a *muftīkād*. He owned much property in Rafsinjān and elsewhere (*ibid.*, 44-5).

Two families were especially prominent in Kirmān in the 19th and 20th centuries, those of Zahr al-Dawla Ibrāhīm Khān b. Mihdī Kūf Khān b. Muḥammad Hasan Khān Kādīr Kūwānlu and Muḥammad Ismā'īl Khān Wakīl al-Mulk Nūrī, both of whom had been governor of the province. Their fortunes illustrate the ease with which government officials were able to acquire wealth and property and become part of the local *ā'yān*. The first, Zahr al-Dawla Ibrāhīm Khān (d. 1240/1824-5), who became governor of Kirmān in 1216/1801-2, settled in the province, where he and his descendants acquired property (*ibid.*, 54 ff.). He himself bought some of the estates of the heirs of Ākā 'Alī Wazīr (see below) in lieu of arrears due from Mirzā Husayn b. Ākā 'Alī (*ibid.*, 170). His grandson, Muḥammad Ibrāhīm Khān, acquired villages in Isfandāga and Dīrūst through marriage to a daughter of Fath 'Alī Khān Mihāl. He also founded new estates in those regions (*ibid.*, 56). Ḥādīdī Mūsā Khān b. Zahr al-Dawla's daughter married Mirzā Abu 'I-Hasan b. Ākā Ibrāhīm of the Mirzā Husayn Khān family. Wazīr alleges that whoever in Kirmān married into the Zahr al-Dawla family tended to become pulled up with pride because of the wealth of his wife (*ibid.*, 69-70). The second, Muḥammad Ismā'īl Khān Wakīl al-Mulk, whose family came from Nūr in Māzandarān, was sent as *piṣhād* to Kirmān and Balūčistān in 1275/1858-9. In 1277/1860 he became governor of the province, holding office until his death in 1284/1867-8. He exerted great efforts in the development of Kirmān and Balūčistān. He made a number of *hānāhs* and gardens, and revived much *hādīdīn* land which had fallen out of cultivation or into a bad state of repair. He rented these for a lump sum, which transaction proved extremely profitable. He was also a great builder and made many caravanserais, *hamāms*, *roḥājs* and other buildings. His son Murādī Kūf Khān Wakīl al-Mulk was governor from 1286/1869-70 to 1293/1878 (see further Asad Allāh Nūrī Isfandiārī, *Tārīkh-i Khānānāda-i Isfandiārī*, Tehran A.H.S. 1329). Both Muḥammad Ismā'īl Khān and Murādī Kūf Khān acquired extensive estates in the province and established links with the local *ā'yān* through marriage alliances. Muḥammad Ismā'īl Khān gave one of his daughters to Mirzā Ghulām Husayn b. Ākā Ibrāhīm, who owned estates round the town of Kirmān. This Ghulām Husayn belonged to a family of *sayyids* originally from Dīrūst (Wazīr, *op. cit.*, 69), and his maternal grandmother was a sister of Mirzā Husayn Wazīr (see below).

In the local government offices there was often a hereditary tendency. For example, the office of *kalāntār* (g.v.) of Kirmān had been in the Kalāntār family since the time of Shāh 'Abbās. From towards the beginning of the 19th century they also held the office of *shāh* of Khābīs and Gawk and from about the middle of the century the collection of taxes of the environs (*shamā*) of the town of Kirmān was also entrusted to them. Muḥammad Zānān Kalāntār

and his father Mirzâ Kâzım Kalânîr were blinded by Âkâ Khân Mahallâh in 1257/1835-6. Hâdjî Mirzâ Abu 'l-Hasan b. Mirzâ Hasan Khân, a nephew of Mirzâ Kâzım Kalânîr, was the *kâsânîr* and *âmîl* of Sirjân, and also the head of the Ni'mat Allâhî order. Another member of the family, Mirzâ Husayn Khân b. Mirzâ Yûsuf, acquired many *ma'sûrî* and gardens in Khahls and Gawr, where he was for years in charge of the collection of *âmin* taxes. Mirzâ Mihdi Khân b. Mirzâ Muḥammad Khân was also an overseer (*mudhîr*) in the tax administration in Khahls, where he too acquired desirable estates. He was a capable man, but tyrannical in the matter of tax-collection (*âmin*) (*ibid.*, 63-5).

Another family which seems to have risen to prominence through the holding of government offices was the family of Mirzâ Khâllî, who was made *mudawwî* of Kirmân in the reign of Muḥammad Shâh. His son, 'Alî Akbar, became *kadhkhudâ* and *darûgha* of Kirmân city and *shâh* of Sirjân in 1258/1242-4. While holding the latter post he acquired riches and bought property in the environs of Sirjân and in Bardîr, but dissipated much of his wealth towards the end of his life. His son, Yahyâ, became *kâsânîr* of Kirmân. Another branch of the family held the office of *kadhkhudâ* of Kirmân. When Wazîr was writing, Mirzâ Zayn al-'Âbidîn was *kadhkhudâ* and known as the *kadhkhudâ-bâghî* although he did not have any authority over the *kadhkhudâs* of the other quarters (*ibid.*, 65-6).

Among the oldest families of Kirmân was the Wazîrî family, who traced their origins back to the Kutluğh Khân, Barâk Hâdjîb (see *surkh yâğrî*), the founder of the Karâ Khâtîr or Kutluğhkhânî dynasty (q.v.), who died in 632/1234 (see below). At the turn of the 18th century the family was mainly engaged in trade but also owned land, Âkâ 'Alî, the head of the family at the time, having many estates in Akîs, Kûşh and Khîmîn. He was taken as a hostage by Karîm Khân Zand to Shîrîz, where he became acquainted with Âkâ Muḥammad Khân. On the death of Karîm Khân, Dja'far Khân gave money to Âkâ 'Alî and sent him back to Kirmân on the understanding that he would bring Kirmân over to Dja'far Khân's side. After the death of Dja'far Khân, Âkâ 'Alî threw in his lot with Âkâ Muḥammad Khân and refused Luṭf 'Alî entry to Kirmân. The latter, when he subsequently took Kirmân seized Âkâ 'Alî's possessions, put two of his nephews, Hâdî Khân and Sâdîk Beg, in prison, and fined his son, Mirzâ Husayn, heavily. He also took one of his daughters to wife and gave another to his uncle, Naṣr Allâh Khân. The former was later married to 'Abd al-Rahîm Khân, the brother of Hâdjî Ibrahim Shîrîzî (q.v. in Suppl.). Âkâ 'Alî, who had been sent to Tehran by Bâhâ Khân (later Fath 'Alî Shâh), reported these happenings to Âkâ Muḥammad Khân and encouraged him to set out for Kirmân, which he did in 1203/1793-4, accompanied by Âkâ 'Alî. When Âkâ Muḥammad Khân, after defeating Luṭf 'Alî, gave the town of Kirmân over to pillage, he exempted from this the residence of Âkâ 'Alî, and several thousand persons are alleged to have taken refuge there and escaped slaughter. Âkâ Muḥammad Khân made Âkâ 'Alî's son, Âkâ Muḥammad Taqî, governor of Kirmân, which office he held until the death of Âkâ Muḥammad Khân, and another son, Mirzâ Husayn (d. 1270/1853-4), his treasurer (*muḥâḥib*). The mother of the latter, an Isfahânî, was a Mir Muḥammad Râfî sayyida on her father's side and a Şafawî sayyida on her mother's side. When Âkâ Muḥammad Khân returned to Shîrîz he took

Âkâ 'Alî and Mirzâ Husayn with him. The former apparently died in Shîrîz shortly afterwards. Towards the middle of the reign of Fath 'Alî Shâh, Mirzâ Husayn was appointed *wa'is* of Kirmân, which office he held until about the middle of the reign of Muḥammad Shâh. He had many estates in Akîs, Urdûya and Kûşh. The office of *wa'is* and *âmîl* (tax-collector) of the districts of Akîs, Urdûya, Kûşh and Sawghân remained in his family for many years, and his descendants owned villages, gardens, flocks and herds in these districts. Muḥammad 'Alî Khân, Âkâ 'Alî's grandson, was *âmîl* of the districts of Akîs, Urdûya, Kûşh and Sawghân and of the Afshâr tribe for over twenty-five years. From about 1270 he had the title of *îsâgî*. In addition to the properties he inherited, Muḥammad 'Alî founded many villages in Urdûya and Akîs. His position as tax-collector enabled him to usurp the estate of his uncle Mirzâ Husayn Wazîr and his cousin 'Alî Muḥammad Khân after their deaths (*ibid.*, 61). His brother, Abu 'l-Kâsım Khân also usurped some of the properties of 'Alî Muḥammad in Akîs and Urdûya. He founded other properties as well and gradually became a wealthy man. A third brother, Murîdâh Kulî, had numerous estates in Urdûya, Akîs, Kûşh and Bardîr, some usurped, some bought and some founded by himself. He put money out with merchants and others. He owned herds of horses and flocks of sheep (*ibid.*, 5 ff., 58 ff., 62). A grandson of Âkâ 'Alî, 'Alî Muḥammad Khân, married his cousin, Bibî Kâkîk, a daughter of Mirzâ Husayn b. Âkâ 'Alî: their son was Abmad 'Alî Khân Wazîr, the author of the *Drughâfîyâ-yi mamdhakât-i Kirmân* and the *Târîkh-i Kirmân*. 'Alî Muḥammad Khân is said to have brought back *âzâdân* in Sawghân into a flourishing condition (*ibid.*, 12). Abmad 'Alî Khân Wazîr, unlike his forebears, did not enter government service, but occupied himself running his estates. He appears, however, to have received a government pension (*muḥawwârî*) (Wazîr, *Târîkh-i Kirmân*, ed. Bâstânî Pârlîz, Tehran 1961, introduction).

Wazîr mentions another old family, the Âkâyan of Anâr, who traced their origins back to Bahâdur Idgû Barîs, who had been governor of Kirmân in the time of Timûr. For years this family had held the office of *wa'is* of Anâr, but by Wazîr's time they had fallen on evil days and become poverty-stricken (*Drughâfîyâ*, 183). For the rest, most of the families mentioned by Wazîr had risen to prominence in recent times.

In the middle of the 19th century, partly as a result of the increase in the price of agricultural produce and the revival of long-distance and local trade, there appears to have been a revival in the prosperity of the merchant class and also a strengthening of their links with the landowning class. This was notably the case in Raîsingjân. Wazîr relates that a certain Hâdjî Âkâ 'Alî of Raîsingjân had landed estates worth over 100,000 *nâman* and partners and agents in Bombay, Yazd, Isfahân, Tehran, Maḥhad, Tahrîr and İstanbul, whereas thirty years before he had not owned property worth 2,000 *nâman* (*ibid.*, 168-9, 173). Among merchant families in Kirmân city, Wazîr mentions that of Hâdjî Muḥammad 'Alî Amin al-Ra'ayâ b. Hâdjî Muḥammad Ibrahim b. Hâdjî Allâhvardî Kirmânî, who was the *wa'is al-hudûd* of Kirmân. His father and grandfather had built many caravanserais, baths and mosques in the city of Kirmân and elsewhere. He himself had acquired many estates in the district of Khahls and in Mâhîn. According to Wazîr, he

showed little care for the poor and the deserving (ibid., 78).

Waziri asserts that between about 1844 and 1874 there was a great increase in the wealth of those holding land, due, he states, to the high prices for cotton and madder which had prevailed for several years in India and for grain in Persia. Persons whose property thirty years before he was writing had been worth 1,000 *šahi* were then receiving an income of 2,000 *šahi* from their estates, and those who had formerly been prepared to sell a hamlet or piece of cultivated land for a song to pay their tax demands would not then sell for 3,000 or 4,000 *šahi*. This was especially the case in Sirjân, Rafsingjân and Ursâya. He alleges that the condition of agricultural labourers had also improved, so much so that they were better off than had been the owners of hamlets formerly. Many of the agricultural labourers of Rafsingjân had become *šahîrjâ*. Flockmasters, because of the rise in the price of *šurk*, had also become rich men (ibid., 168-9, 158).

Religion.—In Sāsānid times, there were in addition to Zoroastrians a number of Nestorian Christians in Kirmân. The bishop of Kirmân was under the metropolitan of Fîrâ. Conversion to Islam after the Arab conquest was slow. The province was exposed to Kharijî influence in the 1st century and to some Ismâ'îlî activity in the late 5th/11th and early 6th/12th centuries (see below). Mukaddasî states that the Khawârîjî had a Friday mosque in Bam. According to his account, the dominant rite was the Shâfi'î one except in Dîkaft. The *fuqahâ* were not numerous; among them the *ahî al-hadîth* formed the majority except in Hurmuz (466-9). Aḥmad al-Dīn praises the good religion and orthodoxy of the people of Bardsir. He alleges that Kirmân was free from every kind of heresy and that the people were either Hanafîs or Shâfi'îs. Yaḥyâ states that the inhabitants of Kirmân were virtuous, honest, and very attached to Sunnism and orthodoxy (483). Under the Sāwids, Kirmân, like the rest of the empire, accepted *fiḥn* 'aḡarî Shî'ism. In the 19th century the *Shaykhî* (q.v.) gained many adherents in Kirmân, as also did the Bâbîs (q.v.). The office of *Shaykh al-Islâm* in Kirmân was held in the middle of the 19th century by Rîḡawî sayyids, who were *Shaykhî* (Waziri, *Diwān*/194, 50-3). Factional strife between the *Shaykhî* and Bâkāsīs was common. Under the Timūrids the Nîmat-Allāhî dervish order, founded by *Shaykh Nîmat Allāh Walî* (d. 843/1438), gained many followers in Kirmân and elsewhere. *Shaykh Nîmat Allāh's* shrine at Mîhân, near Kirmân, has remained one of the main centres of the order.

Zoroastrians appear to have maintained themselves as a community in Kirmân city, though in greatly reduced numbers, until modern times. Tavernier puts their numbers at 20,000 in the middle of the 17th century. In the reign of Shāh Sulaymân (1077-1205/1667-94) they were removed from the city at the demand of the 'ulamâ'. They built a suburb to the north of the town. They were plundered by the Afghāns in 1233/1720-1 (Waziri, *Diwān*/194, 28; *Tārîkh-i Kirmân*, 354). Khanikoff states that there were 12,000 Parsi families in Kirmân before its destruction by Aḡâ Muḥammad Khân in 1794. Thereafter, their numbers declined. According to Abbott, there were only 150 families in Kirmân in the middle of the 19th century. Of these some 40 families lived in the villages around Kirmân, and the remainder in the town (*Notes on the trade*, etc.). Waziri put the number at 800 families (*Diwān*/194, 40). In 1903

the total number of Zoroastrians was said to be 2,700 persons (*Gazetteer of Persia*, iv (1910), 349). A small community of Hindus from Shikarpûr appear to have settled in Kirmân some time after 1810. They were engaged in banking and trade with Karachi, Bombay, Sind and the Punjab (Stack, i, 215; Curzon, ii, 244). The export trade of Kirmân was largely in their hands in the 19th century (W. M. Floor, *The merchants (šahîr)* in Qājār Iran, in *ZDMG*, cxviii (1976), 121).

History.—Kirmân many ways developed along different lines from the rest of Persia. It was distant from the early capitals of the caliphate. Its mountain fastnesses could not be easily controlled and local leaders were often able to assert their independence. Thus each of seven mountains which constituted the Djabal Kûfî region had a separate leader in early Islamic times. The Lāt prevented easy access from Khurāsān and Sīstān, while the inhospitable country to the north-west discouraged expansion from and into the Djabal. It was ideal country for dissident groups and was one of the regions where the Azārîḡa [q.v.] carried on their resistance to the caliphate. Its abundant pastures attracted tribal groups, but the broken nature of the country militated against the formation of large tribal kingdoms. Lack of communications tended to isolate the province but trade with Central Asia, India and the Far East and with other parts of Persia was, nevertheless, important, though subject to interruption by local outbreaks of disorder.

The Arab conquest of Kirmân is recorded by al-Baladhurî (*Futuh*, 315, 391 ff.) as begun about 17/638 by al-Rabī' b. Ziyād, who was sent by Abū Mūsā al-Ash'arî [q.v.], then governor of Basra on behalf of the caliph 'Umar. Al-Rabī' conquered Sirjân and made terms with the inhabitants of Bam. Another Arab expedition was sent about the same time by the governor of Baḡrayn, 'Uthmân b. Abi 'l-Aḡ al-Tyākafî, who killed the *marzbân* of Kirmân in the island of Abarkawân. The conquest of Kirmân was not, however, completed. In 29/649-50 Yazdagird, the last of the Sāsānid kings, fled from Isfahân to Kirmân and thence to Khurāsān. Most of the Arab army under Muḡlîsh' b. Ma'ūd al-Suaimî sent by 'Abd Allāh b. 'Amr in pursuit of him perished in the snow at Baymand (in the district of Sirjân). Muḡlîsh' appointed governor of Kirmân by Ibn 'Amr, subsequently took possession of the chief towns up to the Kûfî mountains. A counter attack by the Persians from Hurmuz was defeated. Further details concerning the early conquests are uncertain and variously recorded (see al-Ya'qubî, *Bulda*, 286).

Under the Umayyads, Kirmân became a theatre for the activities of the Kharijîs. In 68/687-8 the Azārîḡa fled to Kirmân. About 73/693 they reassembled and under Katarî b. al-Fudâ'a [q.v.] seized Fîrâ and Kirmân, being joined by a number of the local inhabitants. They extended their activities to 'Irâq. Harried by al-Muhallab, they withdrew again to Kirmân. By about 79/698-9 they had been exterminated by him. Kirmân nevertheless continued to be a hotbed of rebellions and a favourite asylum for rebels. Ibn al-Agh'ath [q.v.] took refuge there briefly ca. 82/701-2 or 83/702-3. In 101/719-20, the rebel Yazîd b. Muhallab, who, during his father's lifetime had for a period been governor of Kirmân, appointed a governor over Kirmân. After the failure of his rebellion, from about 102/720 the Umayyads (in whose name several coins struck at Kirmân survive) seem to have exercised control over the province, often through the governor of Khurāsān,

who would administer the province through a deputy. In 1207/38 Muḥarrir b. Nūṣā, a supporter of 'Abd Allāh b. Muḥāwya b. Dīnār, who had turned out Marwān's governors from Fārs, made incursions into Kirmān but was later routed by the supporters of Marwān. In 1215/28-9 an Umayyad army set out from Kirmān to oppose the 'Abbāsid army under Kaḥṭaba, which had advanced on Ray, and was defeated near Isfahān.

Under the early 'Abbāsids, governors were appointed over the province, which continued for the most part to fall under the general control of Khurāsān. 'Abbāsid coins struck in the province in the year 165/782-2 and 167/783-4 survive. During the reign of Ḥārūn al-Rašīd rebellion spread to Kirmān when Ḥamza b. 'Abd Allāh al-Sharī occupied Harat in 179/795 and extended his authority to Fārs and Kirmān, where there were still a considerable number of Khāridjīs, who appear to have recovered from the defeats inflicted on them in late Umayyad times (see further Gh. H. Sadighi, *Les mouvements religieux iraniens au II^e et au III^e siècle de l'histoire*, Paris 1938, 54 ff.).

Ibn Balḫī gives figures for the revenue of Kirmān at this period. In 200/815-26 Fārs, Kirmān and 'Uman were assessed at 2,600,000 *ḍīnārs*, a new assessment having been necessary because the registers had been destroyed in the civil war. Another assessment made by 'Alī b. 'Isā in the reign of al-Muḥtadīr was rather lower, namely 2,531,880 *ḍīnārs*, of which Kirmān and 'Uman accounted for 444,380 *ḍīnārs*. After various deductions the net sum going to the *diwān* was 364,380 *ḍīnārs* (Ibn Balḫī, *Fārs-nāma*, 171).

A succession of governors, some of whom from the time of al-Muṭaṣṣim onwards were Turks, ruled the province until the caliphates of al-Muḥtadīr, when Muḥammad b. Wāḡil al-Tamīmī rebelled in 350/862-3 and seized Fārs and Kirmān. Al-Muṭaṣṣim on his accession to the caliphate sent an army against him. The two armies met near Ahwāz and the caliph's force was defeated. About the same time Ya'qūb b. Layth moved into Kirmān and took possession of it. Some of the supporters of Muḥammad b. Wāḡil joined him, while the remainder set out for Fārs. Ya'qūb after spending some two months in Kirmān, marched into Fārs in 353/867. Both he and his brother 'Amr after him appointed governors over Kirmān. The latter, after he was defeated by al-Muwaffak in Fārs, retired to Sīstān in 374/887-8, but in 380/993-4 al-Muṭaṣṣim made peace with him and re-appointed him over Fārs, Kirmān and Sīstān. After the death of 'Amr, his grandson Ṭāḥir governed Fārs and Kirmān until 395/997-8, when it passed into the hands of Subḫarī (?Sebk-e-ri), who was defeated by a caliphal army in 398/991 or 399/993. In 317/929, however, the Ṣaffārid Abū Dīnār Aḥmad b. Muḥammad b. Khālaf b. Layth was able to send a military force to Kirmān to collect revenues.

Meanwhile, the Sāmānid kingdom was in the throes of revolt. One of Naṣr b. Aḥmad's sons, Abū 'Alī Muḥammad b. Ilyās, had seized Nīshāpūr. When Naṣr recovered the town in 320/932, Muḥammad b. Ilyās went to Kirmān and established himself there. In 323/934 Māḥān b. Kākī drove Muḥammad out and took possession of the province on behalf of the Sāmānids. In either 333/935 or 324/936 Māḥān left the province to undertake operations against Waghmīr in Gurgān. Muḥammad b. Ilyās returned and attempted to restore his authority. Meanwhile Aḥmad b. Bāyāz (later Muṭizz al-Dawla) had advanced on Kirmān and when he reached Sirjān in 324/936

the Sāmānid amīr, Ibrāhīm b. Sūndjūr, who was besieging Muḥammad b. Ilyās, withdrew to Sīstān while Muḥammad b. Ilyās retired to Khurāsān. Muṭizz al-Dawla then undertook operations against the Kuṣf and Balūṣ, the details of which are variously recorded (see above). In 326/937-8 he was recalled to Baghdād. After the withdrawal of the Bāyids, it appears that Muḥammad b. Ilyās returned to Kirmān. He acknowledged the Sāmānids in the *ḥajj* and received in 348/959-60 a banner and robe of honour from the caliph al-Muṭṭī. Somewhat later, quarrels broke out between Muḥammad b. Ilyās and his sons, and he was finally persuaded to abdicate in favour of Ilyasa'. In 356/967 'Aḍud al-Dawla took 'Uman and invaded Kirmān. Bardsīr fell in Rumaḥān 357/August 968 and Ilyasa' fled to Khurāsān. 'Aḍud al-Dawla, having received a diploma for Kirmān from the caliph, then appointed his son Abū 'I Fawāris Shīrīzī (later Sharaf al-Dawla) governor and returned to Shīrāz. In 359/969-70 an abortive attempt was made by the Sāmānids to regain possession of Kirmān with the help of Sulaymān b. 'Alī b. Ilyās. In 364/974-5 al-Husayn b. (?) Muḥammad b. Ilyās placed himself at the head of a group of malcontents in the *garmīr* but was defeated and captured (see further C. E. Bosworth, *The Banū Ilyās of Kirmān (320-57/932-68)*, in *Iran and Islam*, ed. idem, Edinburgh 1971, 107-24). The period of the Banū Ilyās was a time of disorder during which the revenues of the province were dissipated (Ibn Hawṣal, ii, 325). Under 'Aḍud al-Dawla the province appears to have been highly taxed compared to the reign of al-Muḥtadīr. According to Ibn Balḫī, the total revenue of Fārs, Kirmān and 'Uman, together with 'uḡr levied at Sirāf and Mīhrūbān on goods imported by sea (?*uḡr* = *maghrā'a-yi daryā'i*), in the time of 'Aḍud al-Dawla was 3,346,000 *ḍīnārs*, of which Kirmān, Ilz and the coastal districts of Fārs (? *bulūk*) accounted for 750,000 *ḍīnārs* (*Fārs-nāma*, 172). After the death of 'Aḍud al-Dawla in 372/982-3, his descendants began to fight among themselves for the province and a period of some confusion followed. Mahmūd of Ghazna in 407/1016-17 attempted to instal his nominee in the province but without lasting success and in 424/1033 Mas'ūd b. Mahmūd temporarily occupied it (C. E. Bosworth, *The political and dynastic history of the Iranian world*, in *Cambridge History of Iran*, v, 13; see also ABG KĀLĪGĀR).

In 431/1040 the Saljuqs defeated Mas'ūd at the battle of Dandānkān (see, in Suppl.), and some two years later in 433/1042-2 Kāwurd Karā Arslān Beg b. Caḡhri Beg b. Mīkīnīl b. Salḡūk (see) was sent by Toghrīl Beg to conquer Kirmān. This attack was repulsed by Abū Kāldjār in 434/1042-3. A second expedition in 440/1048 was more successful, the governor, Bahrām b. Laghīkar, surrendering the province without war. The Kuṣf, however, resisted but were defeated (see above). Kāwurd, who established his rule in Kirmān, made two attempts to usurp the sultanate. On the first occasion in 459/1066-7, Alp Arslān marched against him and defeated him, but reinstated him in Kirmān in his former position (Ibn al-Athīr, x, 367). After Alp Arslān left the province, Kāwurd went to Balūṣiṣtān, repaired the port of Tis and appointed governors over Nākrān. He also conquered 'Uman, which remained in Salḡūk hands until the death of Arslān Shāh in 536/1144. When Alp Arslān died in 465/1072, Kāwurd made his second attempt to claim the sultanate. According to one account, he wrote to Malik Shāh stating that he was more fitted to succeed on the

grounds that he was Alp Arslân's eldest brother [Sayyid Şade al-Din al-Busaynî, *Atâhâr al-dawâ al-Salâhiyya*, ed. Muḥammad Ibrâhîm, Lahore 1933, 36]. According to another account, some of Malik Shâh's *amirs* invited him to come [Muḥammad b. Ibrâhîm, 12-13]. He was defeated near Hamadîn, and taken prisoner and killed. The Saljuqs of Kirmân did not, however, come to an end with Kâwurd: the dynasty founded by him was to last some 130 years, during which the province enjoyed, on the whole, prosperity and peace.

The Saljuqs of Kirmân had a reputation for justice and caring for their subjects. Kâwurd took measures to establish security on the roads, and erected pillars at intervals along the Ban-Fahradj road so that travellers would not lose the way; he also built caravanserais and water tunnels (Muḥammad b. Ibrâhîm, 10-11). Kâwurd, Tâhîr Shâh b. Kâwurd, Arslân Shâh b. Kirmân Shâh and his wife Zaytûn Khâtûn, and Muḥammad b. Arslân Shâh were all great builders. The latter built a library for the Tâhîr Shâh *ghâwâs*, which contained 5,000 books on different branches of learning. Some of them were also patrons of the religious classes. In the reign of Arslân Shâh b. Kirmân Shâh, the *'ulama'* are alleged to have come to Kirmân from far and wide. His son, Muḥammad, gave pensions to the *fuqahâ* and during his reign there was, according to Muḥammad b. Ibrâhîm, a spread of learning and a tendency for craftsmen to send their sons to study *fiqh* (29). Some of the officials and *amirs* of the Saljuqs were also builders and patrons of the religious classes. Tîm utabeg, Mu'ayyid al-Din Rayḥân, made many charitable foundations and constituted *ashraf* for their upkeep (*Târiḥ-i Afḡân*, 36).

Although the Saljuqs of Kirmân were familiar with city life, their existence was closely bound up with the well-being of their flocks. They habitually spent seven months of the year in Bardisr and five (from Aḡhar (Nov.-Dec.) to Urdî Bihisht (April-May)) in Dîrûst, their flocks moving with them. Their financial position seems to have been favourable until towards the end of the dynasty, and Bahrâm Shâh b. Muḥammad, under whom the decline of the dynasty set in, succeeded to a well-filled treasury. Throughout Kâwurd's reign of 34 years the value of the coinage remained stable (Muḥammad b. Ibrâhîm, 4). Trade probably contributed to this favourable situation. Hamadîn, even towards the end of the period, was still an important centre of long-distance trade and was "a place where strangers from Anatolia and India and travellers by land and sea lodged, and was full of wealth" (*Târiḥ-i Afḡân*, 41, 69). Some of the ministers and *amirs* owned considerable estates. Mu'ayyid al-Din Rayḥân appears to have let his money out to merchants and others, who presumably worked it for him (cf. *Târiḥ-i Afḡân*, 40). The pay and allowances of the military following of the ruler (*qasham*) were controlled from the centre (cf. *Târiḥ-i Afḡân*, 34). The troops were mainly Turks, but there were also some Daylamis. They received allowances and *ihfâ's*, mainly, according to Afḡân al-Dîn, in the district of Strḡjân, where "a great *amir* with a large force was always stationed because it was on the frontiers of Fârs" (*'Iḡd al-'âid*, 74). The total number of the military following of the rulers and their *amirs* was not large. Kâwurd, when he came to Kirmân in 433/1041-2 had, according to Muḥammad b. Ibrâhîm a force of 5,000 or 6,000 (2). The rival groups who disputed supremacy in the province at the end of the period and during the period of Ghuzz ascendancy

were on the whole not large. Malik Dînâr is said to have ruled over 20,000 men (*'Iḡd al-'âid*, 20). Muḥammad b. Ibrâhîm credits Kutb al-Din Mubârîk and Niẓâm al-Din Mahmûd, the Shabankîra *amirs*, with having a force of 20,000 men, horse and foot, when they came to Kirmân in 596/1199-1200 (179).

Kâwurd was succeeded by his son Kirmân Shâh, whom he had appointed to act in his stead during his absence on the campaign against Malik Shâh. Sulṭân Shâh, who had been taken captive with his father Kâwurd, escaped from captivity and was brought to Kirmân. His brother had meanwhile died, and in 467/1074 he ascended the throne in Kirmân. In 472/1079-80 (or according to some sources rather earlier), Malik Shâh went to Kirmân and besieged Sulṭân Shâh in Bardisr. After some seventeen days the siege was raised, Sulṭân Shâh was confined in his government and Malik Shâh returned to Iṣṭahân. Sulṭân Shâh was succeeded by his brother Tâhîr Shâh in 477/1085. His reign was on the whole uneventful. In 487/1094 he made an abortive expedition into Fârs. He was followed by his son, Irân Shâh in 490/1097. The latter appears to have been won over to the Ismâ'îlîs. A number of *amirs* had recourse to the *Shaykh al-Islâm*, the *Madî Djamâl al-Dîn Abu 'l-Na'îl*, who issued a *fatwâ* for his death. Irân Shâh fled, but was overtaken and killed, and Arslân Shâh b. Kirmân Shâh placed on the throne in Muḥarram 495/October 1101 with the joint support of the *amirs* and the *khâṣṣ*. He reigned for 42 years and under him the dynasty reached its greatest heights. He married a daughter of Muḥammad b. Malik Shâh. He appointed, as had his predecessors, *ghâwâs* over 'Umân and attempted also to extend his dominion over Fârs. He defeated Cawîṭ Saḡdô in 508/1114-15, and on the death of the latter in 510/1116-17, Muḥammad b. Malik Shâh appears to have considered the threat posed by the Saljuqs of Kirmân to Fârs to be a real one (Ibn al-Aṭhîr, x, 363). Towards the end of Arslân Shâh's reign, disputes arose between him and 'Alî b. al-Dawla, the ruler of Yazd. Bahrâm Shâh b. Nasr'ôd, the Ghaznavid, when he was defeated by his brother Arslân Shâh, sought the help of Arslân Shâh b. Kirmân Shâh. The latter treated him with favour, but refused to help him on the grounds that he did not wish to interfere in affairs which properly concerned Saṣṣar. In 537/1142, Muḥammad b. Arslân Shâh set his father aside because of his advanced age and seized the throne, in spite of the fact that another son, Kirmân Shâh had been appointed *malik 'âid*. A third son, Saḡlûk Shâh, after making an abortive attempt to seize the kingdom, fled to 'Umân, where he continued to constitute a potential threat to Muḥammad. The fact that the latter is said to have appointed *niẓâḡ khâṣṣ* in the towns within his kingdom and to have had an excellent information service perhaps suggests that there was unrest or hidden opposition to him. However that may be, Kirmân continued to prosper under Muḥammad. He extended his rule over Tabas and his successors continued to appoint *ghâwâs* over that city for some years. There was also a proposal by Raḡhîd Dîmêdâr, the governor of Iṣṭahân, to hand that city over to Muḥammad, but the death of both parties in 551/1156 brought the plan to nought.

Muḥammad was succeeded by his son Toghrîl Shâh, a somewhat frivolous character, and there was during his reign a decline in public morals. However, Kirmân still enjoyed security and prosperity under his rule (*'Iḡd al-'âid*, 7; *Târiḥ-i Afḡân*, 30; Muḥammad b. Ibrâhîm, 35). There was a total eclipse in the month of Urdî Bihisht 557 *ahad*/April-May

1169 (*‘Ihd al-‘Uld*, 8; *Tārīkh-i Afšar* 30). In the last years of Toghril Shāh's reign, power was in the hands of the Atabeg Mu'ayyid al-Dīn Rayhān, who, on the death of Toghril Shāh in 565/1170, placed the latter's son, Bahrām Shāh, on the throne, though not before Turkish troops had plundered Dīlruft and carried off the cattle (*muwālīd wa suwān*) of the non-Turks and the bureaucracy (*Tārīkh-i Afšar*, 33, 36). His succession was disputed by his brother Arslān, who was joined by the Atabeg Kutb al-Dīn Muḥammad b. Burkluḡ, and a period of internecine strife ensued. A third brother, Tūrān Shāh, sought help from the Atabeg Zangī of Fārs and advanced on Sirjān, but was put to flight by Arslān, while Bahrām Shāh retired to Khurāsān to seek help from the Ghuzz leader, Malik Mu'ayyid. A second attempt by Tūrān Shāh to seize the province was also defeated. Bahrām Shāh, having obtained reinforcements from Malik Mu'ayyid, advanced in 566/1171 via Sistān and Makrān on Dīlruft and put Arslān's forces, which had been weakened by disease, to flight at Kamādīn, which the Khurāsān army then plundered. Subsequently, heavy impositions were laid upon the people of Bardīr, who were reduced to misery. Arslān, meanwhile, with support from the Saljuq ruler of ‘Irāk, Arslān b. Toghril, returned and besieged Bahrām Shāh in Bardīr. After six months, Bahrām Shāh and his supporters, who were short of supplies, made peace. Bardīr, Sirjān, Dīlruft and Khabb went to Arslān and Bam and Makrān to Bahrām Shāh. Peace, however, did not last; Bahrām Shāh again appealed to Khurāsān for help while Arslān had recourse to ‘Izz al-Dīn Laḡar, the ruler of Yazd. Bahrām Shāh was put to flight and Arslān entered Bardīr in 569/1174. Some years later, Bahrām Shāh retook Bardīr. In 570/1174 he died. A further period of strife and disorder ensued, the main roles being played by the atabegs and amirs acting in the name of one or other of the Saljuq princes; incursions into the province were also made by the forces of the atabegs of Fārs, Yazd and ‘Irāk. Under Tūrān Shāh, who eventually defeated Arslān, the Mu'ayyid *ghulams* (i.e. the followers of the Atabeg Mu'ayyid al-Dīn Rayhān) played a dominant role (cf. *Tārīkh-i Afšar*, 79). The Atabeg Rayhān was persuaded to return to Kirmān from Yazd, to which he had withdrawn some seven years earlier, but retired again almost immediately because of his advanced age. By this time, the province had become impoverished. Afšar al-Dīn describes its condition in the following words: "every year the unfortunate peasants used to take loans or sell their substance (*shūn wa māl*) to buy seed grain from Tabas or elsewhere. They would sow it only for another to harvest it and eat it" (81; Muḥammad b. Ibrāhīm, 99; cf. also *‘Ihd al-‘Uld*, 13 ff., 77 ff.). All kinds of impositions and fines were manovellable laid upon the population by the contending amirs in order to support their forces. Little money remained in the treasury, and in 575/1179 the Turks rioted and killed a number of leading officials of the bureaucracy (*Tārīkh-i Afšar*, 86).

New disasters were meanwhile in store for Kirmān. About 574 or 575/1179, Sulṭān Shāh turned the Ghuzz out of Sarakhs and some 5,000, with their families and flocks, came to Kūbānā, plundered the countryside and went on to Zaranj and Bāghīn. The Atabeg Tekelle of Fārs, who at the time held Sirjān and Furg, sent a force against them. Together with the Kirmān army, it was defeated in 575/1179-80 and the Ghuzz spread into the *garmīr*, where they committed pillage and waste. In the years 575-6/

1179-80 or 576-7/1180-1 there was a severe famine in Bardīr (*Tārīkh-i Afšar* 92; *‘Ihd al-‘Uld*, 97). In the winter of 577/1181-2, the Ghuzz again set out for the *garmīr*. Afšar al-Dīn states that since they had now come to stay, they began to develop and cultivate the districts of Dīlruft and Narmāghīr and paid some consideration (*muwālīr*) to the peasants (*ḡāzīr*), and brought from Iyāhān, Sistān and Fārs goods, beasts and booty which they took from caravans and accumulated in the *garmīr* and the *sardīr*, (*Tārīkh-i Afšar*, 93). They also took several fortresses into which the remnants of the Turkish forces had retired. The *sardīr*, however, to which the nominal rulers of the province were confined, remained in a state of distress. In 579/1183-4 Tūrān Shāh was killed by a group of amirs, who released Muḥammad Shāh b. Bahrām Shāh from the fortress where he had been imprisoned and placed him on the throne. In 580/1183-4 famine again broke out in Bardīr. In the following year 581/1185-6, Malik Dīnār came with some 80 men to Rīwar and Khabb from Kūbānā, intending to join the Ghuzz in Narmāghīr. Some 300 men from Bardīr set out to prevent his advance, but did not dare to join battle with him (*Tārīkh-i Afšar*, 105). In 582/1186 Muḥammad Shāh set out for ‘Irāk to seek help against the Ghuzz. The following spring, Bardīr surrendered to Malik Dīnār. Muḥammad Shāh, who had hoped to obtain help from either ‘Irāk or Tekelle in Fārs, returned briefly to Bam. He then went to Sistān and from there to the court of the Kh ‘Arāzum-Shāh Takīsh. He finally took refuge with Shihāb al-Dīn, the ruler of Ghūr and Ghaznī. In 583/1187-8 an abortive attempt was made to read the *khūba* in Bardīr in the name of a Saljuq prince, Khātūn Kirmānī, a daughter of Toghril (Muḥammad b. Ibrāhīm, 146).

Malik Dīnār, having established himself in the district of Dīlruft, struck coins and read the *khūba* in his own name. In Jumādā I 584/July-August 1186 he set out for Bardīr, but lack of pasture and the ruin of the countryside appear to have prevented him from establishing himself there, and the town remained for some time in the hands of the Saljuq forces until it surrendered on 5 Rabi‘ul 583/12 September 1187. During the next two years, Malik Dīnār was occupied in extending his power and putting down local pockets of opposition. He then made an expedition to the south, took Mamūdjān and extracted 2000 *shāms* tribute from the ruler of Humuz (Muḥammad b. Ibrāhīm, 154). Revenue was also collected from the Makrānī (*al-Muḥaf*, 5). Bam, which had been in the hands of an amir, Shāhī ‘Alī, did not however submit until ca. 583/1192. In 589/1193 Malik Dīnār was again in the south and met the ruler of Kays, who promised him tribute. The death of Malik Dīnār in 591/1195 was followed by new outbreaks of disorder. He was succeeded by his son Farīkh Shāh, who rapidly dissipated the contents of the treasury which Malik Dīnār had laboriously accumulated (ibid., 164). Unable to establish himself, he had recourse to the Kh ‘Arāzum-Shāh for help, but died in 592/1196 before this could arrive. Meanwhile, on the one hand the Ghuzz began to commit disorders and pillage on an unprecedented scale while on the other the amirs were rent by faction and disunity.

The period of Ghuzz ascendancy, was a time of misery and distress for the people of Kirmān. The province was subjected not only to the ravages of the Ghuzz, but also to incursions by the rulers of Fārs and Khurāsān, or their amirs, who from time to time established a temporary ascendancy in different

and set out for the province. On his approach, Rukn al-Din abandoned the province. After appealing in vain for help from the caliph al-Musta'lim, he went to the *urda* of Mengü Ka'ân, where the case between him and Kuṭb al-Din was referred to the Mongol court (1252). After examination, Mengü handed Rukn al-Din over to his cousin, who killed him and then returned to Kirman. Dhuwayni mentions that he saw Rukn al-Din in Almaligh in Ramaḍân 651/December 1253, January 1254 (*Ḥikāyat*, II, 217). When Hülegü crossed the Oxus in 654/1256, Kuṭb al-Din came to his camp at Tūt and was given permission to return to Kirman provided he came back with an army to join the Mongol forces in their march on Baghdād. He fell ill, however, in 655/1257 and died the following year.

Terken Khātūn, Kuṭb al-Din's wife, was put on the throne in Kirman amid general acclaim, and subsequently received, after she had had recourse to Hülegü in person, a *yarligh* authorising her to act for Kuṭb al-Din's sons, who were still children. She ruled some 25 years, during which time Kirman prospered. Many learned men among the *ulama'* and merchants resorted to Kirman during her reign. It was then also that Marco Polo visited the province. When the Chaghatay horde crossed the Oxus in 668/1270 to attack Abakā's domains, Terken Khātūn sent Ḥaḍḍajī Sultān b. Kuṭb al-Din to Kūrasān with an army to support Abakā. She also tried to strengthen her position by marrying her daughter, Pādīshāh Khātūn, to Abakā. However, when Ḥaḍḍajī Sultān came back to Kirman he sought to curtail the influence of Terken Khātūn. She repaired to Abakā's court to complain of this and was well received. On her return to Kirman, Ḥaḍḍajī Sultān retired to India, where he spent the next ten years. Finally, the sultan of Delhi provided him with an army to retake Kirman. He set out, but died en route and the army returned to India. (The *Simj al-'ulā* gives 690/1291 as the date of his death. This is presumably an error.)

Ḥajālī al-Dīn Suyūrghatmish b. Kuṭb al-Din, Terken Khātūn's step-son, who governed the western part of Kirman on her behalf, also apparently went, with her approval, to Abakā's *urda* while he was in Kūrasān. On his return to Kirman, Suyūrghatmish had his own name inserted in the *shayḥa* alongside that of Terken Khātūn. She complained to Pādīshāh Khātūn, and received a *yarligh* forbidding the interference of Suyūrghatmish in the affairs of Kirman. The latter then had recourse himself to the Mongol court. When Abakā died in 680/1281, Terken Khātūn immediately set out for Tabriz to ensure her position. The new Ilkhān, Ahmad Tegüder, however, dismissed her and appointed Suyūrghatmish in her stead. She was unable to secure her reinstatement, and spent the winter in Bardān's. The following summer, she went to Tehriz where she died. Suyūrghatmish, who reached Kirman in 681/1282, took possession of the province unopposed. After the accession of Arghūn (683/1284), Bībī Terken, Kuṭb al-Din and Terken Khātūn's eldest daughter, whose son, Nusrat al-Din Yülükshāh, was powerful at the Mongol court, accused him of peculation in the collection of taxes. He was dismissed, his accounts demanded, and officials sent to Kirman to collect the taxes. By the expenditure of considerable sums of money, Suyūrghatmish appears to have obtained permission to go to the Mongol court and there, by further expenditure, to have reached a compromise with the Mongol authorities. By this his half-sister, Pādīshāh Khātūn (who had been married to Abakā) was given

in marriage to Gaykhātū, while Suyūrghatmish was married to Kūrdūjīn, the daughter of Mengü Temür b. Hülegü and Abīgh Khātūn, the daughter of Sa'd b. Zangī, and Suyūrghatmish undertook to pay an annual sum for Kirman of 600,000 *dīnār*, against which, however, he was allowed as expenses (*ḥāḥḥ*-*ghāḥ*) for his administration and military forces, etc. 390,000 *dīnār* (*Simj al-'ulā*, 57). During Suyūrghatmish's absence, there was apparently an out-break of famines in Kirman. The price of wheat rose and the Turkomans rioted and plundered the city. He restored order on his return. He then proceeded to expend considerable sums of money on charitable works: he built a *madrasa*, a *khānkhāh* and a hospital, and constituted *wakfs* out of *khāḥiṣa* property for their upkeep. He also extended his patronage to the religious classes (*Simj al-'ulā*, 58). During his reign, Melrīn was reduced and tribute exacted. There were, however, renewed encroachments into the province by the Karāwūn (Nikūddārī), who had already in 677/1278-9 invaded Kirman from Sistān. In 680/1281-2 they penetrated to the Persian Gulf and in 683/1284-5 plundered the neighbourhood of Bardān (see further P. Pelliot, *Notes on Marco Polo*, I, 283-96 (art. *Caracanas*) and J. Aubin, *L'éthiopie des Caracanas*, in *Tourica*, I (1960), 85-94).

On the death of Arghūn in 690/1291, Suyūrghatmish, taking advantage of the disorders which had ensued, asserted his independence. In the winter of the following year he went to the *garnis* and took Hurmuz. Returning to Bardān, he reassessed the kingdom and laid down that the taxes should be collected in three instalments (*Simj al-'ulā*, 63). Meanwhile, Gaykhātū had sent Pādīshāh Khātūn to Kirman as governor. She immediately seized Suyūrghatmish and imprisoned him (697/1292). His wife Kūrdūjīn contrived his escape, but he was recaptured and killed in 693/1294 (the sources differ in their relation of these events). In 694/1294-5 Kūrdūjīn, encouraged by the rise of Baydū, laid siege to Bardān and captured and put to death Pādīshāh Khātūn. Kūrdūjīn then ruled the province, though there was beside her a Mongol *basāḥ* (*Simj al-'ulā*, 77).

Baydū was overthrown almost immediately by Ghāzān Khān, who while still in Kūrasān appears to have sent *ḥis* to Kirman to collect money for the Kūrasān army (*mal-i ʿirāq-i Kūrasān*) (*Simj al-'ulā*, 78). Once Ghāzān had established himself as Ilkhān, he appointed Muḥammad Shāh b. Ḥaḍḍajī Sultān, who had been at his court, over Kirman. During the early years of Ghāzān's reign, Kirman was the scene of internecine and factional strife between Muḥammad Shāh b. Ḥaḍḍajī and Suyūkshāh, one of the sons of Bībī Terken and brother of Nusrat al-Din Yülükshāh, and between rival *amirs* and officials (*Simj al-'ulā*, 79 ff.). Demands for ever more revenue, including taxes for the Kūrasān army, were made; on one occasion a *yarligh* was issued for the payment of two years' taxes from Kirman (*Simj al-'ulā*, 83). There were also renewed attacks by the Karāwūn in 698/1298-9. In the following year, Fakhr al-Din, who had been appointed *marir* of Kirman by Ghāzān, proceeded to the province accompanied by a number of *amirs*. His behaviour provoked an uprising and he and his followers were seized and killed. The revolt spread. The rebels took refuge in the town of Bardān and were besieged by the Mongol forces, which, although they received reinforcements from Fārs, Luristān and Yazd, were unable to take the town. Ghāzān, who at the time was in Diyār Bakr or the neighbourhood, summoned Muḥammad Shāh and sent

him back to Kirmân as governor with a number of other officials. The siege continued for ten months. The defenders were reduced by famine and finally, according to Wassa's account, the city's defences were destroyed by siege engines brought from Fârs, where they had been made by experts summoned from Muwail, and the city fell. The ringleaders were put to death and Süyûkshâh was sent to Tabriz, where he was executed (*Simt al-'alâ*, 65 ff.; Wassa, 426 ff.). The province was in a miserable condition and the treasury empty. The Karwûn meanwhile renewed their attacks. A substantial remission of taxation was given (*Simt al-'alâ*, 94), but the ensuing improvement was cut short by the death of Muḥammad Shâh in 703/1303-4 (Wassa gives the date of his death as 6 Dhu'l-hijja 702, 434). Shâh Dīshān b. Suyūghatmish, who was at the time at Ghazân's court, was appointed to succeed him. At some time during the reign of Ghazân or Öldjeitü, Rakhid al-Dīn's son Mahmūd appears to have been governor of Kirmân and to have committed extortion against the people of Bam (cf. *Mukhtabāt-i Rakhid*, ed. Muhammed Shâh, 10 ff., and also 261). On the death of Öldjeitü, Shâh Dīshān attempted unsuccessfully to establish his independence. He was dismissed after a reign of some two-and-a-half years, and with him the dynasty came to an end. He was replaced by Naḥr al-Dīn b. Muḥammad b. Burhân, a descendant of Shāhshāh al-Dīn Ghūrī, in 704/1305 (Kāghânī, *Tārīkh-i Öldjeitü*, ed. M. Hambly, Tehran 1969, 43).

Kirmân was ruled for the next few years by Mongol governors until it was taken in 740/1340 by Mubārīz al-Dīn Muḥammad Muzaffar, who was married to Kutluğ Khān, the daughter of Shāh Dīshān b. Suyūghatmish. An attempt made by Kutb al-Dīn b. Dīyāl al-Dīn b. Kutb al-Dīn to regain the city with the help of reinforcements from Harāt was repulsed and Mubārīz al-Dīn, who had temporarily withdrawn, retook the city in 741/1340. Bam, which was ruled by a governor appointed by Abū Sa'īd, held out and was not captured until three or four years later. Meanwhile, the Ilghān empire was rent by war and faction. In 748/1347 Abū Isḥāq b. Mahmūd Shāh, the Ilghānī ruler of Isfahān, attacked Sirjān and destroyed the town, but left the citadel unharmed. After continuing his march on Kirmân, he then retired to Shirāz without joining battle with Mubārīz al-Dīn. During a second expedition, he was defeated by Mubārīz al-Dīn and again retired to Fârs. Meanwhile the Dīrmāzīs and Ughānīs, some of whom may possibly have been the descendants of the Mongol detachment which had been sent to Kirmân in or about 683/1284 under the leadership of Ughān (*Simt al-'alâ*, 58), were committing renewed disorders in the south of the province. Mubārīz al-Dīn marched against them. The campaign was inconclusive and the Ughānīs and Dīrmāzīs continued for many years to disturb the province, in spite of the fact that they frequently served in the ruler's army (in which they proved to be an extremely unreliable element). In 753/1353 renewed encroachments into Kirmân by the Ilghānīs were repulsed near Rafsānshāh. Mubārīz al-Dīn then extended his power over Fârs and appointed his son Shudjā' al-Dīn governor of Kirmân in 754/1353-4 (though he did not reside permanently in the province, taking part in military expeditions in Fârs and 'Irāk-i 'Adjam). In 757/1356 Mubārīz al-Dīn was again briefly in Kirmân and undertook a campaign against the Ughānīs and Dīrmāzīs, who had been committing disturbances. Mubārīz al-Dīn's death in 765/1364 was followed by a period of internecine strife

and faction. In Kirmân, the governor Pahlawān Asad rebelled. After an inconclusive battle with Shāh Shudjā' near Kirmân, Pahlawān Asad retired into the city, but submitted after a siege of several months (Ramadān 775-Rajab 776/March-December 1374). On the death of Shāh Shudjā' (786/1384), his son, Sulṭān Aḥmad, went to Kirmân as governor. In 787/1385-6 he read the *shahāda* in the name of Timūr. When the latter set out for Fârs in 789/1387, Sulṭān Aḥmad repaired to Timūr's camp, was favourably received and given the government of Fârs, 'Irāk and Kirmân. Internecine strife, however, continued among the Muzaffarids in Kirmân and elsewhere, until finally they were overthrown by Timūr in 795/1393 and Idgū Bahādur Barīs appointed governor of Kirmân (see further, the supplementary chapter on the Muzaffarids in the *Tārīkh-i guzda*). The province was in a state of disorder, and Idgū had to establish his authority by a series of military operations. On Timūr's death in 807/1405, he recognised Shāhrukh. The province was nevertheless subject to pillage and disorder in the struggles which ensued between the various Timūrīd princes. Idgū died in 810/1407 and was succeeded by his son Sa'īd Sulṭān, who was assassinated almost immediately on the instigation of his brother, Sulṭān Uways. Disorders continued (see further, J. Aubin, *Deser sayyids de Bam au XV^e siècle*, 20 ff.). Agriculture declined; Hāfiz Abū states in the *Zuhd al-tawd-rīk-i Baysonghuri* that wherever the army of Mirzā Iskandar (d. 818/1415-6) passed through, no building or cultivation was left, and in the *Dughréfiyā* he says that wherever Mirzā Iskandar went he sacked everything, destroying buildings, cutting down trees and sending troops into all districts so that there was not a single corner of Kirmân which was not devastated (quoted by Aubin, *op. cit.*, 35-6). In 819/1416 Sulṭān Uways was besieged in Kirmân by a Timūrīd army, and at the following year there was a severe famine in Kirmân accompanied by a heavy loss of life. Shāhrukh then sent Sayyid Zayn al-'Ābidīn to the province to restore agricultural prosperity. He devoted his efforts to the revival of *awāqif* which had fallen out of cultivation. In the first year 250,000 *manus* of wheat were sown. Various tax reductions and remissions were also given to the peasants (Hāfiz Abū, *Dughréfiyā*, I. 173b, quoted by Aubin, 50). On the death of Shāhrukh in 850/1447, there was renewed anarchy until Dīshānshāh b. Karā Yūsuf, the Karā Koyunlu, sent his son Abū 'Iḥsān Kāsim Mirzā to take possession of the province. Conditions showed little improvement (see Abū Bekr Thirānī, *Kutāb-i Dīyār Bakriyya*, ed. F. Simer, Ankara 1964, II, 334 ff., and Aubin, 58 ff.). Heavy taxes and dues were imposed on summer and winter crops and irregular levies made on the peasants; many properties were usurped by the government and *awāqif* revenues asked for the payment of the military (Aubin, 59-70). Abū 'Iḥsān Mirzā adopted the practice of billeting his followers on the province with all the attendant evils of such a practice (*Kutāb-i Dīyār Bakriyya*, 302). On the death of Dīshānshāh, confusion and disorder prevailed in Kirmân until the Ak Koyunlu succeeded in establishing their rule. For a time Kirmân was governed by Zaynāl, the third son of Urūn Ḥasan.

In 909/1503 the province came into the possession of Shāh Ismā'īl. Some six years later, Kirmân was invaded by the Uzbeks and suffered much damage (*'Ālamnāma-yi Shāh Ismā'īl*, 326 ff., 333). According to Wazīrī, the first Safawid governor of Kirmân was Muḥammad Khān Ustādīlu (*Tārīkh-i Kirmân*, 265;

see also K. Rührborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 121. From 930/1524 to 1000/1592 the province was under governors belonging to the Afshār tribe (*ibid.*, 31, 37). According to the late Safawid manuscript, the *Tadhkirat al-mulūk* and the *Dastūr al-mulūk*, Kirmān was one of the thirteen *beglarbegis* of the Safawid empire (*Tadhkirat al-mulūk*, ed. V. Minorsky, G.M.S. London 1943, 263; Muḥ. Taqī Dānishpazhūh, *Dastūr al-mulūk-i Mīrzā-Rafī'a wa tadhkirat al-mulūk-i Mīrzā Samī'a*, in *Rev. de la Faculté des Lettres et des Sciences Humaines*, Tehran, xvi/1-2 (1968), 75). For one or two years from 968/1590, however, part of the province, and from 1068-9/1658 to possibly 1106/1694 the whole of the province, was *shāssā* (i.e. under the direct administration of the central government) (Rührborn, 120, 122). From 1005/1596 to 1031/1622 it was under the governorship of Gandī 'Alī Khān, though during that period he was frequently absent from the province with the Kirmān army on military campaigns with the *shāh*. During his government he built a number of caravanserais and bazaris in Kirmān city and elsewhere in the province.

During the reign of Shāh Sulṭān Husayn, Kirmān was subject to renewed incursions by the Balūč. In or about 1033/1722 the Kirmānis appear to have appealed to the Afghān Maḥmūd for help. He came to Kirmān and stayed for nine months, when he returned to Kāndahār because of disturbances there. In the following year he came back, but it seems that the people were not prepared to receive him on this occasion and resisted his entry. He laid siege to the citadel, which fell. After plundering the countryside he continued his march to Iṣfahān (Mīrzā Miḥdī Astarābādī, *Dīkhānughā-yi Nādirī*, ed. Sayyid 'Abd Allāh Anwar, Tehran A.H.S. 1301, 32). In 1139/1726 Mīrzā Sayyid Ahmad, who was descended from Shāh Sulaymān's eldest daughter, who had married Mīrzā Dawūd Mar'āshī, seized Kirmān and assumed the title of *shāh*. From there he went to Fārs, where he was defeated. He came back to Kirmān, but whatever support he may have had there had disappeared, and so he went via Bam and Narmāshīr to Bāndar 'Abbās, which he temporarily occupied. Eventually, after further adventures, he was captured by the Afghāns and executed in 1140/1728 (J. R. Perry, *The last Safavids, 1702-1773*, in *Iran*, 12 (1972), 59-70). After Nādir Shāh defeated Aghraī at Iṣfahān in 1141/1729, the Afghāns abandoned Kirmān.

Under Nādir Shāh, the province suffered further disasters. In the winter of 1149/1736-7 he marched through the province on his way to Kāndahār and so denuded the people of supplies that there was famine for seven or eight years afterwards (L. Lockhart, *Nādir Shāh*, London 1938, 121). Disturbances in southern Persia in 1156/1744 and in Sīstān in the spring of 1159/1746 brought the province into a state of confusion, and in the summer of that year a revolt broke out. It was on a small scale, and was speedily suppressed. In 1160/1747 Nādir Shāh again passed through Kirmān and treated the province with great severity (*ibid.*, 239). His death in that year was followed by anarchy and renewed encroachments by the Afghāns and Balūč.

It was not until 1171/1758 that Khudā Murād Khān Zād took possession of Kirmān on behalf of Karīm Khān Zād. During the period of his rule, Kirmān was less troubled by disorders and impositions by the government than had been the case under the Afghāns, and on the death of Karīm Khān in 1193/1779 remained little affected by the struggle

between the Zānds and the Kādjīs until 1205/1790, when Luṭf 'Alī [q.v.], the last of the Zānds, marched against Kirmān. Its governor, who had been appointed by Ākā Muḥammad Khān, agreed to submit but refused to come to Luṭf 'Alī's camp. The latter thereupon besieged the town. Lack of supplies forced him to raise the siege and leave the district. Subsequently, having been defeated by Ākā Muḥammad Khān near Shīrīz in 1206/1790-1, he fled to Tebas. Offers of support from some of the *khāns* of Narmāshīr induced him to return to Kirmān. He attacked the city and took possession of it in 1208/1793-4. Ākā Muḥammad meanwhile advanced and laid siege to the town. After some four months, the population were reduced by hunger and a group of the defenders opened the gates on 29 Rabi' I 1209/24 October 1794. The surrender of the city was followed by a general massacre—the culminating disaster in the long series of calamities which the province had suffered during some four centuries. Luṭf 'Alī escaped, but was captured in Bam and handed over to Ākā Muḥammad Khān. Meanwhile Ākā Muḥammad Taqī b. Ākā 'Alī (see above) became governor of Kirmān and held office until the death of Ākā Muḥammad Khān.

There appears to have been some fear that the disaffection caused by Ākā Muḥammad Khān's brutality towards the people of Kirmān, coupled with the failure of the government to control raiding and disorder by the Balūč might give rise to a desire for secession from Persia. Because of this, and partly, perhaps, as an result of the influence of Sunbul Bādī, Fath 'Alī's Kirmāni wife (see above), Fath 'Alī Shāh appointed Ibrahim Khān Zahr al-Dawla (see above) governor in 1218/1803. He held office until his death in 1240/1824-5 and was the first of a number of Kādjīr princes to be appointed governor of Kirmān. Under him the province enjoyed for the first time for many years a period of security. He repaired *handis*, fostered trade and agriculture (acquiring many estates himself in the process), and encouraged a revival of learning, inviting to the province 'ulama' from Bahrayn, Khurāsān, Fārs and elsewhere (Shaykh Yahyā Ahmadī Kirmāni, *Far-mūdshāh-i Kirmān*, ed. Bāstānī Pārizī, Tehran A.H.S. 1344, introd., 3). He also made a successful expedition into Balūčīstān. This favourable situation did not, however, last. His son, 'Abbās Kuli Khān, who succeeded him as governor, attempted to throw off control, and in the succeeding years there were a number of disturbances and personal outbreaks of disorder by the Balūč. In December 1831 'Abbās Mīrā was sent to the province to restore order. His efforts were only partially successful. After he left the province there were renewed disturbances by governors and others, and in 1835 further incursions by the Balūč. Meanwhile, Muḥammad Shāh bād succeeded Fath 'Alī Shāh and in 1835 or 1836 appointed Ākā Khān Mahallī, the leader of the Ismā'īlīs, as governor of Kirmān. On his withholding revenue from the central government, a force was sent to collect arrears. Unable to resist, Ākā Khān fled in 1837 to Bam, where he was besieged by Fīrās Mīrā Nuzrat al-Dawla. He surrendered and was sent to Tehran. Later he was allowed to return to Kirmān in 1840 and renewed his rebellion. After a number of skirmishes he was defeated, and took refuge in Afghanistan and later India, whence, it was alleged, he carried on a secret correspondence with his supporters in eastern Persia. His brother, Muḥammad Bākir, made a movement into Balūčīstān in 1844 or 1845 but was repulsed. Balūčīstān was

meanwhile gradually reduced by the governors of Kirmân, and by the middle of the 19th century Persian control had been extended southwards from Bampur over the Makrân east of *Djask*.

From about 1858 Kirmân once more had a period of security and good government, this time under Muḥammad Ismā'īl Khān Nūrī Wakīl al-Mulk (see above), first as *piṣṭār* during the nominal government of Gaydmarīz Mirzā, and then as governor from 1860 until his death in 1884/1867-8. His period of office was marked by an increase in prosperity which continued during the subsequent decade. During the government of his son, Murtaḍā Kulī Khān Wakīl al-Mulk, who was governor from 1869-1878, Cāh Bahār was brought under the control of the Persian government. In 1877 there was an outbreak of factional strife between the *Shaykhīs* and the *Bālsārīs*, which led to the resignation of Murtaḍā Kulī Khān and the despatch of a force from Tehran to restore order. Towards the end of the reign of Nāṣir al-Dīn Shāh there appears to have been considerable intellectual activity in Kirmân, and when the movement for reform became overt towards the end of the 19th century and in the early 20th century, a number of Kirmānīs, notably Mirzā Aḳā Khān Bardsīrī Kirmānī (who became the editor of *Aḥḥār*, the Persian newspaper published in Constantinople) and Nāṣim al-Islām, played an important part (see *nuṣṭa*), and also, Nāṣim al-Islām, *Tārīkh-i bidārī-i Irān*, ed. 'Alī Akbar Sa'īdī Sirjānī, Tehran A.H.S. 1343).

KIRMĀNĪ, AWHAD AL-DĪN HĀMĪD A. ABR 'L FAYḤ (not to be confused with Rukn al-Dīn Awhadī of Naragha in Ādharbāydzān who was also called Awhad al-Dīn al-Isfahānī and who died in 738/1337-8) was an eminent Iranian mystic (cf. Hamid Allāh Mostawfī, *Ta'wīḡ-i gurāda*, ed. 'Abd al-Husayn-i Nawā'ī, Tehran 1339/1960, 667-8; Djalāl, *Nafahat al-ams*, ed. Mahdī-yi Tawakkul Fir, Tehran 1331/1962, 388-92). He was a pupil of Rukn al-Dīn al-Sijāsī (Sijāsī), of the affiliation of Kuṭb al-Dīn al-Abhari and Abū Naḍīb al-Suhrawardī. On his numerous travels, he came to Damascus where he became acquainted with Muḥyī 'l-Dīn b. al-'Arabi, who mentions him in his *Fuṣṣat al-makkiyya* (ch. viii), and was deeply influenced by his ideas. Awhad al-Dīn knew Shams al-Dīn Tabrizī (cf. B. Furuzānfar, *Riḍā dar taḥḥiq-i aḥwāl wa sīnād-i āstādān* [Djalāl al-Dīn Muḥammad maḥṣūr ba-Mawānī, Tehran 1333/1954, 53-5], and probably met also Djalāl al-Dīn Rūmī, 'Uṭmān Rūmī, Sadr al-Dīn al-Kūnawī and Fakhr al-Dīn al-'Irāqī. He spent the last period of his life as a well-known mystical teacher in the neighbourhood of Baghdād and was honoured by the 'Abbāsīd caliph al-Mustaṣir in 632/1234-5. He died probably on 3 Shabān 632/21 March 1238.

Awhad al-Dīn belongs with Aḥmad Ghazālī and Fakhr al-Dīn al-'Irāqī to the representatives of *ghalibān*, the contemplation of the divine beauty in earthly forms, preferably in beautiful boys. The basic concepts of his mystical philosophy are *ḡirat* (outer form, image) and *ma'ād* (inner meaning, essence), in conformity with Ibn 'Arabi's key terms *ḡāḥ* and *bāṭin*. The famous *maḥṣūn* poem *Mabūḥ al-awḥād*, often attributed to him, was actually written by Shams al-Dīn Muḥammad Bardasīrī Kirmānī. The poetical heritage of Awhad al-Dīn is marked by short forms (i.e. only some *terzi* bands and a few *ghazals*, but a large number of *rubā'iyyat* which are grouped into 12 chapters), and is of a gnostic-mystical character. The *rubā'iyyat*, which are sometimes influenced by 'Umar Khayyām, are not always of the best literary quality, but they show a deep mystical thought and experience, (as is found in verses of Djalāl al-Dīn Rūmī, Aḥmad Ghazālī, 'Ayn al-Kuḍāt al-Hamadānī and Fakhr al-Dīn al-'Irāqī).

Bibliography: B. Furuzānfar (ed.), *Mamkāt-i Awhad al-Dīn Hāmid ibn-i Abī al-Fakhr-i Kirmānī*, Tehran 1347/1969, with an extensive introduction on the life and writings of Awhad al-Dīn; B. M. Weisacher, *Awhaduddin Kirmānī und seine Vierzeler*, in *Jah.*, lvi (1979); B. M. Weisacher and P. L. Wilson, *Hearts' witness. The sufi quatrains of Awhaduddin Kirmānī* Tehran 1978; (cf. also H. Ritter, *Das Meer der Seele*, Leiden 1935, 474-6). (B. M. WEISACHER)

AL-KIRMĀNĪ, HĀMĪD AL-DĪN AHMAD B. 'ABD ALLĀH, was a prominent *dhī* of the Fātimids during the reign of al-Ḥākim bi-Amr Allāh (386-411/996-1031) as well as the author of many works on the theory of the imāmate and on Ismā'īlī philosophy.

The life of al-Kirmānī is known only in its main outlines, which can be traced on the basis of statements contained in his own works. Some other details can be derived from unpublished Ismā'īlī sources, as has been done notably by Muṣṭafā Ḡhalīb (op. cit., 41 E) who, however, does not specify these sources. His *nishā* points to his origin from the Iranian province of Kirmān. It is evident from his works that he continued to be in touch with the

Ismā'īlī community in this area. It is not very likely that he was a pupil of the well-known *dhī* Abū Ya'qūb al-Sijāsī (q.v.), an Ḡhalīb states, for Abū Ya'qūb was not only al-Kirmānī's senior by half a century but there appears to have been a difference of opinion between the two on many doctrinal points as well. A great part of his life seems to have been spent in the service of the Fātimid *dhī* in the missionary district (*diḡra*) of 'Irāq. The title *ḡalīb al-'Irāqīya*, which is often added to his name by way of an honorific rather than as a designation of his rank (cf. W. Ivanow, *Nasir-i Khusraw and Jami'atun*, Bombay 1948, 44; W. Madelung, op. cit., 63 f., n. 117), implies that this district also included the parts of Iran known as 'Irāq-i 'Aḡamī. At least one of his larger works (*Kuṭb al-Maḥṣūn*) was composed in Iran, while two shorter *risālas* (*al-Hawāya fi 'l-layl wa 'l-nahar*, dated 390/1000, and *al-Nafīya fi 'l-radd 'alā 'l-Hārūnī al-Basānī*) were addressed to a subordinate in Dīrust (Kirmān). The title of his *Kuṭb al-Maḥṣūn* al-Baḡḡadīya wa 'l-Basriyya, which has not been preserved, refers to his personal activities in these cities of 'Irāq. Ḡhalīb ascribes to him a part in winning over the 'Ukaylids of Mosul to the cause of the Fātimids. In the early years of the 5th/11th century, al-Kirmānī came to Cairo, where a serious crisis had developed among the Fātimid *dhīs* concerning the nature of the imāmate as it was represented at that time by al-Ḥākim. Quite a few of them, among whom are the founders of the religion of the Durūs (q.v.), propounded the doctrine of the divinity of al-Ḥākim. Either at the request of the chief of the religious organization, the *dhī* al-*dhī* Khattān al-Dayl, or of the caliph himself, al-Kirmānī interfered in the controversy. In 403/6 1014-15 he wrote the *risāla* called *Mabūḥ al-biḡārī* upholding the tenet that the imāmate of al-Ḥākim was, in spite of its exceptionally blessed condition, of an ordinary kind and that the theory of his divine nature was incompatible with the Ismā'īlī dogma of the absolute transcendence of God. The *risāla* called *al-Wāḡim bi-nafy al-wāḡim al-ḡalīm bi-amr Allāh* (ed. M. Kāmil Husayn, in *Maḡallāt Kulīyyat al-Adab* (Cairo), xiv/1 (1957), 1-20), composed in 408/1017, was a reply to a pamphlet by al-Ḥasan al-Aḥram al-Farḡānī, one of the supporters of the extreme point of view. Apparently, al-Kirmānī returned afterwards to 'Irāq where he completed his major work, *Rasā' al-'aḡl*, in 411/1020-1. The latter date provides also a *dating post quem* for his death.

Works. The date of al-Kirmānī's work after his death has been determined by the further dogmatic history of the Ismā'īlīya. While the later writers of the Fātimid period appear to be hardly influenced by him, he left a lasting imprint on the religious literature of the Tayyibiyya (q.v.) which continued a part of the Fātimid tradition in the Yaman and in India. This influence can be traced from the time of the second *dhī* *muḥab* of the sect, al-Ḥamīdī (q.v.), up to the present day (cf. e.g. R. Strothmann, *Gnosis-Texte der Ismailiten*, Göttingen 1943). Thanks to this continuous tradition of Kirmānī studies, the main part of his works has been preserved, although all the copies that have been brought to light so far are very recent.

The defence of the theoretic basis of the Fātimid imāmate, which al-Kirmānī regarded as one of his most important concerns, was not only directed against deviations within the movement itself. He also attacked the claims of the 'Abbāsīds (in *Ma'āḡim al-'awḍā*, a refutation of al-Dīsharī's *Kuṭb al-'Uḡ*).

māniyya) and those of other Šī'ī pretenders (in *al-Kāfiya*, being a warning against the propaganda of the contemporary Zaydī imām Abu 'l-Ḥusayn al-Mu'ayyad bī 'l-lāh al-Hārūnī). In his *Kiṭāb Taṣbīḥ al-ḥādī wa 'l-muṣallih*, the polemics against these opponents are combined with a plea in favour of the validity of the religious law for anyone without exception, addressed towards the antinomian strain current in the Ismā'īlī movement. His fullest treatment of the theory of the imāmate, constructed as a support of the claim of al-Ḥākim, is contained in *al-Maṣābiḥ fi ḥikāmat al-imāma*. In the course of his argument, al-Kirmānī frequently resorts to Jewish and Christian scriptures, which he quotes in Hebrew as well as in Syriac (cf. Paul Kraus, *Hebräische und syrische Zitate in ismailitischen Schriften*, in *Isl.* xix (1930), 243-63, and A. Baumgart, *Zu den Schriftstücken al-Kirmānīs*, in *Isl.* xx (1932), 308-13).

Of equal importance in the work of al-Kirmānī is his preoccupation with metaphysical speculation, to which his most important works are devoted. In the *Kiṭāb al-riyāḍ fi 'l-ḥakam bayn al-ṣiddiqs ṣābiḥay al-ṭiḥān wa 'l-Nuṣra* (ed. by 'Aṭīf Tamir, Beirut 1960), he attempts to settle the debate over a great number of philosophical questions which had been going on among the Ismā'īlīs in Iran during the preceding generations. The starting-point of this discussion was the *Kiṭāb al-Maḥṣūl*, a work by al-Nasafī (d. 337/942), to whom the introduction of neo-Platonism in the speculations of the Ismā'īlīs has been attributed. Al-Nasafī had been criticised on several points, which according to al-Kirmānī are of fundamental importance, by Abū Ḥātim al-Warīmānī (fl. about 322-34/934-46) in his *Kiṭāb al-ṭiḥān*, but the tenets of the former had been defended by Abū Ya'qūb al-Sijḍī (d. after 350/972) in a work entitled *Kiṭāb al-Nuṣra*. Kirmānī, who on most issues takes the side of Abū Ḥātim, approaches these problems from a point of view to which he attributes an authoritative weight and which he denotes as "the canon of the guiding mission" (*ḥikmat al-da'wa al-ḥādīya*); see further W. Ivanow, *An early controversy in Ismailism*, Leiden 1943, 115-59; 2nd ed. Bombay 1955, 87-122.

The *Rikāṭ al-ṭiḥān* (ed. by M. Kamāl Husayn and M. Mustafā Ḥilmi, Cairo 1371/1952; ed. by Muṣṭafā Ḥalīb, Beirut 1967) contains a *summa* of Ismā'īlī philosophy written for adepts who have prepared themselves for the study of the fundamental truths both morally, through the fulfillment of the commands of religious law, and intellectually, by the study of less abstract works of earlier Ismā'īlī authors and of al-Kirmānī himself. The subject-matter has been arranged in chapters and paragraphs which have been styled "walls" (*arṣaf*) and "crossroads" (*maḥṣūl*) according to the allegory of the city of gnostic knowledge. By travelling along the fifty-six crossroads enclosed within the seven walls of this city, the searching soul acquires an awareness of the real structure of the universe, which consist of four separate but fully congruent worlds: the world of Divine creation (*'ālam al-ḥādī*), encompassing the purely spiritual beings, the world of bodily existence or the realm of nature (*'ālam al-ḡaym*, *dār al-ṭab'ā*), the world of religion (*'ālam al-dīn*), which is the hierarchy of the Ismā'īlī *da'wa*, from the *nāṣib* up to the lowest delegate (*ma'adūna*), and, finally, the world of the *ḥādī* where this universe returns to its primordial one-ness in its second perfection (*al-kawāf al-ḥādī*). In complete analogy to this macrocosmic process, the individual human soul, which by origin is only a virtually-existing first perfection, through

acquisition of this metaphysical knowledge, can realise itself completely as an intelligent being.

The *Rikāṭ al-ṭiḥān* is the earliest attempt at a complete and systematic exposition of Ismā'īlī philosophy. In comparison to older works, and even to al-Kirmānī's own *Kiṭāb al-Riyāḍ*, it shows a profound influence of the metaphysical theories of the *falāsifa*. This is particularly evident in his concept at the world of creation as a decade of intelligent beings which has come into existence by way of "being sent out" (*inḥiṣṣān*) from the universal intellect, the first created being (see further ISMĀ'ILĪYA, Doctrine).

Like many other Ismā'īlī *da'wa*, al-Kirmānī attacked the writing of the arch-harete Abū Bakr Muḥammad b. Zekariyyā³ al-Rāṣī. In the *Kiṭāb al-Aḥdī al-ḥāḥābiyya fi 'l-ṭibb al-naḥḥī*, he supported the criticism of his predecessor Abū Ḥātim on al-Rāṣī's ideas about the therapy of the mind expounded in the latter's *al-Ṭibb al-arḥānī* (cf. P. Kraus, in *Orientalia*, v (1936), 36 L; idem, *Rasā'ir falsafiyā/Opera metaphysica*, I, Cairo 1939, *lawḥa*, 7-13, and the excerpts from the first part of al-Kirmānī's treatise in the notes to the edition of *al-Ṭibb al-arḥānī*).

Bibliography: The editions of al-Kirmānī's works mentioned in the article all contain more or less extensive introductions to his life and work. Surveys of his works and of the manuscripts known to exist are given in W. Ivanow, *A guide to Ismaili literature*, London 1933, 43-6; 2nd ed. *Ismaili literature*, Tehran 1963, 40-5; Brockelmann, S. I, 325-6; Mu'izz Goriwala, *A descriptive catalogue of the Fyze collection of Ismaili manuscripts*, University of Bombay 1965, 37-57, nos. 32-65; Sezgin, *GAS*, i, Leiden 1967, 580-2. Fragments of some of the works of al-Kirmānī are contained in the great Ismā'īlī compilations of 'Imād al-Dīn Idrīs (d. 872/1468), *Kiṭāb 'Uyūn al-aḥbāb*, and Ḥasan b. Nūḥ al-Bharūcī, *Kiṭāb al-Aḥṣār* (written 931/1525), which are still unpublished. Excerpts from his *al-Rikāṭ al-ṭiḥān* fi *ṣawm ḡhar Ramaḍān* have been edited and translated into Urdu by M. F. 'Aṭmī, *Nigām al-ṣawm 'inda 'l-Fāṭimīyyīn*, Karachi 1962, 18-60. A work of doubtful authenticity has been edited by 'Aṭīf Tamir, *Arṣaf rasā'id usmā'iliyya*, Beirut 1952, 59-66. On the *Khawāṣṣ al-adilla*, which is really the work of a pupil of al-Kirmānī, see W. Ivanow, *A creed of the Fatimids*, Bombay 1936, 10-2. See further F. Gölner, in *ZDMG*, lxxix (1915), 87; H. F. Hamdān, in *JRAS* (1933), 370-5; idem and H. S. Mah-mūd, *al-Ṣulayḥiyyūn wa 'l-ḥanbal al-Fāṭimīyya fi 'l-Yaman*, Cairo 1955, 258-61, and *passim*; W. Maderling, in *Isl.*, xxxvii (1961), 119-27; Henry Corbin, *Trilogie ismailienne*, Tehran-Paris 1961, *passim*; idem, *Histoire de la philosophie islamique*, Paris 1964, 130-2; S. H. Nasir, in *Cambridge history of Iran*, iv, Cambridge 1975, 436, 440.

(J. T. P. ex Baurin)

KIRMĀNĪ, KAMĀL AL-DĪN (see ISMĀ'ILĪYA, KIRMĀNĪ).

KIRMĀNŠĀH, a town and province in western Persia. The province is situated between lat. 34° N. and 35° N. long. 44° 5' to 48° 0' E. It lies to the east and north of 'Irāk and Luristān-Kūčik (or Puṣht-i Kūh) and to the south and west of Kurdistan and Asadābād. In the early 20th century the province was divided into *mata'en* *duḥak*. These were Bāḥdīk, Wāṣṭān, Miyyān Darband or Bīḡawar, Puṣht-i Darband or Bāḥ Darband, Dīnawar, Kulī-yāḥ, Sābna, Kaṣṣawār, Asadābād, Harsīn, Čampā-māl, Durū Farāmān, Māhdehāt, Hārūnābād, Gūrān,

Kirind, Zuhāb, Aywān and Hulaylā (Government of India, General Staff, Army Headquarters, Intelligence Branch, *Gazetteer of Persia*, II, Simla, 1914, 358). At the present day it is bordered by Saandādj on the north, Asadābād on the north-east, Shihābād on the south, Nihāwand and Tāyisrīn on the east, Khurāmābād on the south-east, and Kāz-i Shīrīn and Rawāsār-i Dāwānūd on the west, and contains the following districts: Sunkur and Kuliyāṭ, Kanguwār, Sahnā, Harsīn, Sandjāb, Gōrān and Thālāḡh (Razmarā, *Farhang-i duḡhrāfiyā-yi Irān*, A.H.S. 1329-32, v). The town of Kirmānshāh (also known as Kirmānshāhān, a name which appears to be used first in the 4th/10th century) is situated approximately at lat. 34° 29' N. and long. 47° 5' E. at a height of 1322 m. on the Kāz Sū River, which runs to the north-east of the town in a south-easterly direction until it joins the River Gūmāsiyāb (Gawmāsa) (also known as the River Šaymāra) which flows into the River Karkjā. A series of mountain ranges, trending from north-west to south-east, run through the province. Between them there are extensive plains and valleys, containing pastures and cultivated lands. From Asadābād, with an elevation of 2,340 m., there is a gradual descent through a succession of peaks and valleys to Kāz-i Shīrīn, which is at 575 m.

The climate is mild in summer but cold in winter, except in the Zuhāb district and the plains near the 'Irāqī frontier and in the lower parts of the Kalhur country (in the region of Mandāḡh) where it tends to be hot in summer. Snow on the mountains is heavy in winter and spring rains are normally plentiful. The maximum July temperature of the town of Kirmānshāh is 37.2° C. and the minimum January temperature -3.5° C. Annual rainfall is 372.7 mm (H. M. Gair), *Climate*, in W. B. Fisher, ed., *Cambridge history of Iran*, Cambridge 1963, I, 247).

Parts of the province in the south, notably districts in Hulaylān, Bīlawar and Gōrān, are wooded. Oak, elm, sycamore and some coniferous trees and walnut trees are found in the mountains; willows, poplars and oriental planes are common throughout the province; palm trees are found in Sar-i Pul-i Zuhāb and Kāz-i Shīrīn. Fruit is abundant in some districts, especially in Kandūla, Harsīn and Sahnā; Kirind produces excellent seedless grapes, Rūdjāb is famous for its figs and Gāhwār for its apples. Gum tragacanth was formerly plentiful in the province, but indiscriminate tapping has caused supplies to diminish. Gum mastic (sāḡs) is obtained from Hulaylān and was formerly exported to Russia (Government of India, H. L. Rabino, *Gazetteer of Kirmānshāh*, Simla 1907, 153, 163).

Dry farming is practised in most parts of the province. In the valleys river water is used for irrigation. *Kandās* are not numerous. The province is rich in gram land. Formerly, in a normal year the province had a large grain surplus, though from time to time this would be cut by insufficient rainfall, ravages by locusts and other pests, and by disorders. Surplus grain was exported to other parts of Persia, Ottoman Turkey and, later, to 'Irāq. The proportion of wheat to barley was usually two-thirds wheat to one-third barley. Both are grown as unirrigated crops. Grain land is left fallow in alternate years or in many districts for longer periods. Rice is grown in some of the river valleys, including Rāziyān, Bīlawar, Dīnawār, Camāmāl, Zuhāb and Kalhur. It is of inferior quality and mainly consumed locally. Peas (*naḡḡad*) are produced in quantity and exported to other parts of Persia. Sugar beet has been an im-

portant crop since the 1930s and is grown especially in Māhdisht. Cotton, castor oil, tobacco, saffron, opium, the cultivation of which on a significant scale probably did not begin until the late 19th century (United Kingdom, Foreign Office, Diplomatic and Consular Reports, Annual series, 3189, *Report on the Trade of Kirmānshāh and district for the year 1903-04*, 22, and see further G. G. Silbermann, *The Persian Constitutional Revolution, the economic background 1870-1906*, unpublished Ph. D. thesis, University of London, 1974, 132 ff.), indigo, maize, clover, alfalfa, and vegetable crops, such as melons, water melons, cucumbers, egg plants and tomatoes, are, or were, grown for local consumption (see further Rabino, 153 ff.).

The province has rich pasture lands. Transhumance is widely practised. Formerly, nomadic tribes commonly migrated annually across the Ottoman-Persian frontier and later across the 'Irāqī-Persian frontier. Animal husbandry is of great importance, not only among the nomadic tribes but also among the settled peasants. After grain the most important product of the province is wool. Part of the spring wool crop was formerly exported. The autumn wool was less in quantity and inferior in quality and mainly used for the manufacture of felts (*namāḡ*). Formerly, the manufacture of carpets was a thriving industry in the villages and among the tribes, but declined towards the end of the 19th century. By the 20th century it had virtually disappeared. Goat's hair was made into tents, saddle bags, ropes and yarn. Goat skins were dried and exported and were used for coverings for clarified butter and water skins. The markets of Tehran, Hamadān, Qūm and Baghdad were largely supplied with sheep from Kirmānshāh (see further Rabino, 158-9).

Mules and horses were bred in considerable quantities in the 19th century. The horses, which had much Arab blood in them and were well adapted for both draught and saddle, were highly esteemed (cf. J. P. Ferrier, *Caravan journeys*, London 1856, 26; *Gazetteer of Persia*, 341).

The extensive oil belt extending from Kūrkūk in 'Irāq to Khūzīstān passes through the south-western part of the province of Kirmānshāh, and the extraction of oil has been carried on at various centres since antiquity (*Gazetteer of Persia* 343). Other mineral resources include marble, porphyry and lime.

The province is mainly inhabited by Kurds, nomadic and sedentary, and Lurs. Most of the tribes have their own winter and summer quarters (see further ILAT). A rough estimate of their numbers in the early 20th century put them at some 60,000 families or some 300,000 persons. Among them were the Kalhur, partly settled and partly nomadic, who were estimated at 22,000 families. They owned large stretches of irrigated land in the fertile plains of Māhdisht, Gilān and Kalūh Shāhin, the two last named purchased by the Kalhur chiefs from their Turkish proprietors at the beginning of the 19th century (United Kingdom Foreign Office, Diplomatic and Consular reports, Miscellaneous Series, 590 (1902) *Report on the trade and general condition of the City and Province of Kirmānshāh* by Mr. H. L. Rabino, 46). The Gōrān, also partly settled and partly nomadic, were estimated at 45,000, the Sandjāb at 4,000, the Kuliyāṭ, mostly sedentary in Sunkur, at 4,000 and the Zangana, who were mainly settled in Māhdisht, at 2,500 (*Gazetteer of Persia*, 339; Rabino 171 ff.). Apart from some tribes near the 'Irāqī frontier, who are Sunkur, most of the Kurdish tribes of Kirmānshāh are Shīrī. 'Alī Ilāhīs are also

found in considerable numbers (cf. Zayn al-'Abidin Shirwānī, *Dustān al-siyāh*, Tehran lith. 1315, 492; *Gazetteer of Persia*, 356).

The town of Kirmānshāh or Kirmān (var. forms Kirmān, Karmān, Kirmān, Karmānshāh) as it was known by the early Arab geographers was founded in the Sāsānid period. Ḥamd Allāh Mustawfī attributes its foundation to Bahrām IV (386-99 A.D.) (*Nuṣṣat*, 202), who had acquired the title Kirmānshāh as governor of the province of Kirmān (q.v.). The town founded by him was, however, more probably the small town of Kirmānshāh situated between Yazd and Kirmān (cf. Tabart, in Nöldeke, *Gesch. der Perser u. Araber*, 71). Another tradition attributes the foundation of Kirmānshāh to Kawādī b. Pīrūs (488-531 A.D.; cf. esp. Mukaddasī, 237 ff.). The Sāsānid kings often resided there, and their example was from time to time followed by later rulers, notably the caliph Ḥārūn al-Rashīd and the Būyid 'Aḍud al-Dawla, who built a palace there (Mukaddasī, 393). The province is rich in monuments of the Achæmenians and Sāsānids, such as the sculptures at Tāk-i Būstān, three miles east of Kirmānshāh, the rock inscriptions at Bisṭūn (q.v.) and various remains at Kangawār (see KIRKUK).

Kirmānshāh was peacefully occupied by the Arabs after the capture of Ḥolwān in 27/640 (Balāḡhūrī, *Futūḥ*, 302). It became part of the province of the Dīlībī and was known, together with Dinawar (q.v.) as Māb al-Kūfa. Although situated on the great Khurāsān road almost midway between Baghddād and Hamadān, it was less important in the early centuries than Dinawar or Hamadān. Ibn Hawkal does not mention it among the best known towns of the Dīlībī, though he describes it as a pleasant place with running water, trees and fruit, in which living was cheap, and as having abundant pastures, where numerous flocks grazed, and much water. Many articles of commerce were also to be found there (l. 359). Later, Kirmānshāh with Hamadān, Ray and Isfahān became one of the four great cities of the Dīlībī, though it did not rival them in importance. It was ruled successively by the 'Abbāsids, the Būyids, the Ḥasanīya (see ḤASANWĀYH) and the Sālds.

In 394/1197-8 Kirmānshāh was laid waste by the Khawārazmshāh amīr Miysāḡīḡ (Rāwandī, *Kāshf al-judār*, 398). After the Mongol conquest, the Dīlībī appears to have been divided into two unequal parts, the larger in the east being known as Persen 'Irāk and the smaller in the west, which included Kirmānshāh, as Kurdistan. Ḥamd Allāh Mustawfī states that Kirmānshāh (which, he writes, was known in books as Kirmān) had been a medium-sized town (*ḡabrī masī*) but that at his time it was a mere village (*Nuṣṣat*, 202). Camerānāl near Bisṭūn, because of its excellent pastures, was a regular camping ground of the Mongol establishments, and, according to Ḥamd Allāh, Ōḡaytū b. Arghūn built a town (*hasaba*) there (ibid., 227). It would seem from Ḥamd Allāh Mustawfī's account that there was a decline in production in Kurdistan as in the neighbouring provinces after the Mongol invasions (*Tārīkh-i ḡusāda*, 371).

During the 9th/15th century Kirmānshāh lay outside the main course of events in Persia, but with the rise of the Safawids Kirmānshāh became a frontier province facing the Ottomans. Many of the Kurdish tribes enjoyed a degree of local independence, and it does not appear that central control was established throughout the region in the early Safawid period. The sources make little mention of

Kirmānshāh, though there is mention of Safawid governors in Dinawar—Solḡh Husayn Tekdelā in the reign of Shāh Ismā'īl and Cīrāḡ Sultān in the reign of Tahmasp (Bīdāfi, *Shāraf-nāma*, Tehran A.H.S. 1343, 420, 270). Intermittent warfare with the Ottomans kept the frontier regions of Kirmānshāh in a state of instability and often disorder, though the main theatre of operations was Aḡhar-bāyḡdān. By the peace treaty made by Shāh 'Abbās in 993/1590 the western provinces of Persia, including Kirmānshāh, were ceded to Turkey, and it was not until the campaign begun in 1012/1602 that Persian rights were reasserted and the lost provinces recovered in the following year. After the death of Shāh 'Abbās an Ottoman expedition led by Khuraw Paḡa penetrated up to Hamadān (1039/1630). When peace was again signed in 1043/1633, Sultān Murād IV recognised the frontier more or less along the line which it occupies at the present day.

About the middle of the 11th/17th century, the Zangana family began to emerge as the most powerful of the local leaders, and from then on frequently held the government of Kirmānshāh, which usually included Sanḡar and, from the reign of Shāh Saḡī (1036-52/1629-45), Kalhur (K. Rohrborn, *Provinces and Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 9). Shaykh 'Alī Khān Zangana became governor under Shāh 'Abbās II in or about 1038/1628 (Rīḡā Kāf Khān Hīdāyat, *Rasādāt al-safā-yi Nāḡirī*, Tehran, A.H.S. 1359, viii, 473). Members of the family also held important offices at court, which further strengthened their position. Shaykh 'Alī Beg became amīr aḡhar to Shāh Sulaymān (1077-1105/1667-94). His son Shaykh 'Alī Khān, who also held this office, became governor of Kirmānshāh and finally 'Aḡad al-Dawla, which office he held for fifteen years. He died in 1201/1689-90 (ibid., viii, 490).

After the fall of the Safawids, Kirmānshāh was again occupied by the Ottomans in 1236/1723, the deputy-governor Hīseyṇ 'Alī Beg submitting without resistance. By the terms of the peace made by Aḡhar with the Ottomans in 1240/1727 Kirmānshāh, Hamadān, Sanandāḡ, Ardālān and Nihāwand and various other places were allocated in perpetuity to Turkey (L. Lockhart, *The fall of the Safawi dynasty*, Cambridge 1958, 292). Kirmānshāh was retaken by Nādir Kūsh (later Nādir Shāh) in 1242/1729-30 (Mirza Mūḡdī Astārābādī, *Tārīkh-i dīḡādāḡuḡd-yi Nāḡirī*, ed. Sayyid 'Abd Allāh Anwarī, Tehran 1962, 129 ff.), and when peace was again made in 1245/1732 Kirmānshāh remained with Persia. It was reoccupied by the Ottomans later in the year, but evacuated after a brief siege by Nādir. The Zangana khāns were still powerful, and in 1256/1743-4 Ibrāhīm Khān b. Zāhīr al-Dawla Zangana was appointed *sipāhsālār* of Kurdistan and Laristān-i Faylī (ibid., 400). On the death of Nādir in 1260/1747, Mirza Muḡammad Taḡī, who had been made governor of Kirmānshāh by Nādir, took the part of 'Aḡdī Shāh against his brother Ibrāhīm. The latter, sent an army to Kirmānshāh, which plundered the town and took temporary possession of the district (ibid., 429), but when Ibrāhīm defeated and dethroned 'Aḡdī Shāh, Muḡammad Taḡī made himself virtually independent. In 1279/1766 Karīm Khān took the town of Kirmānshāh after besieging the fortress for two years. The defenders were finally reduced by famine. 'Alī Murād Khān was then made governor of Kirmānshāh. (See further Abu 'I-Ḥasan b. Muḡammad Amīn ḡulistāna, *Muḡinal al-famāyīsh*, ed. Mudarris Rīḡawī, Tehran A.H.S. 1344.)

in the 19th century the commercial and strategic importance of Kirmānshāh increased. It became the capital of Persian Kurdistan. The latter formed a separate province from Ardābil [p. 6]. The capital of Ardābil, which was also known as Kurdistan, was Sinna. Already in 1800, Sir John Malcolm noted the importance of Kirmānshāh as a mart for trade between Turkey and Persia (Melville papers, quoted by C. Issawi, *The economic history of Iran 1800-1924*, Chicago 1972, 268). Sir John Macdonald Kinneir states that it was a flourishing town in 1802, containing about 12,000 houses (*Geographical memoir of the Persian empire*, London 1813, 322), which would have given a population of some 60,000 persons.

Fath 'Alī Shāh appointed his eldest son, Muḥammad 'Alī Mirzā, as governor-general of Kurdistan and Luristan in or about 1806, and it became one of the most thriving provinces of Persia. Muḥammad 'Alī disposed of a considerable army, mainly cavalry, composed largely of Kurds and trained by French officers, and under his rule Kirmānshāh formed a bulwark against the advance of the Ottomans. Because of the rivalry which existed between him and his brother 'Abbās Mirzā, the wāsi 'aḥd and governor-general of Āgharbaydījān, and the likelihood of a struggle between them in the event of Fath 'Alī Shāh's death, he felt the need to attach the population to his interests. Ferrier states that he "administered the affairs of his government in a truly paternal manner. His charities enriched the town and the people lived in the enjoyment of plenty" (*Casaman journeys*, 24). Zayn al-'Ābidīn also comments on the expansion of the town under Muḥammad 'Alī Mirzā's government. He states that the number of its buildings surpassed those of most other towns in Persia (*Bustān al-siyāḥa*, 492). In addition to buildings in the town, Muḥammad 'Alī Mirzā surrounded the town by walls, flanked by loop-holed towers, and by a most three miles in circumference.

Prior to the Turco-Persian war of 1822, the southwestern boundary of Kirmānshāh had been some seven miles west of Kirmān at Sar-i Mīl. Muḥammad 'Alī, having embarked on successful operations against the Ottomans, annexed Zuhāb and advanced on Baghdād, but was forced to abandon his advance by an outbreak of cholera, to which he himself succumbed. The war continued until 1823. By the terms of the treaty then concluded, the districts acquired by either party during the war were to be respectively surrendered and the frontier line was to be restored to where it had been in Šafawid times. Zuhāb, although claimed by the Porte, nevertheless remained part of the province of Kirmānshāh. Having been acquired in war, it became *ḥāḍiqa* [p. 6] and was farmed by the chief of the Gūrān tribe (H. Rawlinson, *March from Zohab to Kāuzistan*, in *JRGS* in (1839), 36).

After the death of Muḥammad 'Alī Mirzā, the town of Kirmānshāh decayed as a result of the extortion and tyranny of the governors who succeeded him. Zayn al-'Ābidīn, writing about 1832, states that there were then no more than 10,000 houses in Kirmānshāh (loc. cit.), while Ferrier, writing in 1845, states that its splendid bazaars were deserted, nine-tenths of the shops were shut and three-fourths of the population had emigrated, the townspeople to Āgharbaydījān and the nomads to Turkey (op. cit., 25). All sign of Muḥammad 'Alī's fortifications had disappeared by the 19th century. Cholera, plague and famine added to the misfortunes of the town, notably the plague of 1830, which is said to have reduced the population to 12,000 (*Gazetteer of Persia*, 355; cf.

also Zayn al-'Ābidīn, loc. cit.); and in 1832 floods washed away about one fifth of the populated area with heavy loss of life (ibid.). These disasters, coupled with the rapacity of the governors, reduced the province to a low ebb. Consul Abbott, writing in 1849-50 states that there were some 3,000 inhabited houses (United Kingdom, Public Record Office, F. O. 60: 163, *K. Abbott's report on the commerce of South Persia* . . .). This would have given a population of about 15,000. Another report written in 1868 estimated the population at 30,000 (*Report on Persia, accounts and papers 1867-68*, 19, quoted by Issawi, 28). By the end of the century there had been some degree of recovery, and in 1914 the population was put at 60,000 (*Gazetteer of Persia*, 355). This figure, which was probably a conservative estimate, was the same as that given by Sir J. Macdonald Kinneir rather over a century earlier.

Various Kādjār princes held the government of Kirmānshāh after Muḥammad 'Alī Mirzā. The first was his son Muḥammad Husayn Mirzā Hāghmat al-Dawla, who held office for some ten years. Another of his sons, Isām Kullī Mirzā 'Imād al-Dawla, also held the governorship for some twenty-one years under Muḥammad Shāh and Nāṣir al-Dīn Shāh. In 1842 relations with Turkey again became critical, and a mixed commission was appointed to delimit the frontier, an operation which was not finally completed until 1914 (see further C. J. Edmunds, *Kurds, Turks and Arabs*, London 1957, 125 ff.). When Nāṣir al-Dīn Shāh passed through the province on his way to Karbalā' and Najaf in 1871, a huge petition was presented to him complaining of the oppression of the governor. It was not answered. From 1882 to 1888 the province was included in the immense region coming under Ẓill al-Sulṭān, the governor of Iṣfahān [p. 6]. When he was deprived of all his governments except Iṣfahān, his nominees in Kirmānshāh and Kurdistan were dismissed. For some years after that the government of Kirmānshāh was given to the highest bidder, with the result that the people were greatly oppressed.

In the last quarter of the 19th century the volume of trade coming through Kirmānshāh markedly increased (*Gazetteer of Persia*, 343-4). With the opening of the Suez Canal in 1869 and the establishment of a steamer service on the Tigris, it became the port of entry for all goods entering Persia from Baghdād and coming from England and India via the Persian Gulf and the Tigris. By the end of the century the province equalled, if it did not excel, any other province in its general state (*Gazetteer of Persia*, 336-7). Consul Freese wrote in 1899 that "There are but few towns in Persia which show to-day so flourishing a condition, from a trade point of view, as Kermanshah, and this in spite of oppression by the local Governor, and badness and unsafety of the roads radiating from it" (quoted by Rabino, 106). There was a customs post at Kirmānshāh, which was normally farmed. In 1881 the sum paid was 20,000 *krans*. For the year ending 20 March 1897 the figure had risen to 480,000 *krans* and for the year ending 20 March 1899 to 670,000 *krans*. On 21 March 1899 the customs were taken over by the Belgians (see further *Gazetteer of Persia*, 350 ff.).

Kirmānshāh also benefited greatly from the pilgrim trade, lying as it did on the direct route from Persia to Najaf and Karbalā'. In the late 19th and early 20th centuries it was estimated that 150,000 to 200,000 pilgrims passed annually through the town. They brought money to exchange or tried to pay their way by selling things, and so gradually

added to the well-being of the town (*Gazetteer of Persia*, 344).

In 1924 there were about 200 merchants in Kirmānshāh dealing mostly in Manchester goods obtained direct from Manchester or through Baghdād, in sugar from Marseilles, and in opium, gums, goat skins, carpets and wool, which they exported to Baghdād and England. One of the most prominent of these was Hājīdī 'Abd al-Rahīm Wakīl al-Dawla, who combined trade with banking and landownership (for the career of his father and the rise of the family to wealth and influence, see Silbermann, 207). There were about twenty Ottoman Jews, who had in their hands the greatest part of the foreign and export trade. Kāshī merchants imported from Kāshān tobacco, native silk goods, copperware, to a total amount of some 200,000 *tīmāns*, which they covered by exports to Kāshān of prints and foreign goods received from Baghdād. Yazdī merchants imported *hemma* and Yazdī silk from Yazd to the amount of 20,000 *tīmāns*, and exported an equal amount of foreign goods to Yazd. Isfahānī merchants imported native prints and cotton goods, such as *kalāmārs*, prints, *lahafs*, *cabés*, etc., and *gar* and *glus* from Isfahān, and exported to Isfahān Manchester prints, iron, tea, cowbills, wool and *glūs*. Their imports came to 100,000 *tīmāns*, but were exceeded by their exports. Hamadānī merchants imported naphtha, rice, Russian prints, glassware and hardware (coming from Raghī), and exported to Hamadān dates from Mandānī, gull nuts, grease, ghee, raw hides, tea, spices, iron, lead, Manchester goods and window glass. The exports exceeded the imports. Some Hamadānī merchants worked exclusively as commission agents for releasing goods from the customhouse and forwarding them to Hamadān (*Gazetteer of Persia*, 355-6). There were also a few Persian Jews, who lived by small trade and hawking, and a very small number of Chaldean Christians, some engaged in trade and some living by the manufacture of *arak*.

Kirmānshāh played little part in the constitutional revolution, but in 1911 Sālār al-Dawla entered Kirmānshāh in the name of the ex-shah Muhammad 'Alī. In the following year he advanced on Tehran with a force of Kalhurs, Sanjābīs and other Kurdish tribes. He was defeated near Hamadān and government troops retook Kirmānshāh. Operations continued until the autumn, during which time Kirmānshāh repeatedly changed hands. In the first world war Kirmānshāh was one of the centres of the *muḥājirāt* movement. A local committee for national defence was set up (*komitā-yi diḡā'i mīlī*) and in December 1915 the central committee, which had retired from Tehran to Kum and Isfahān in November of that year, withdrew to Kirmānshāh. A provisional government had barely been established when the *muḥājirāt* evacuated Kirmānshāh in March 1916 in the face of a Russian advance. Turkish forces later occupied the town but evacuated it in 1917 (see further Yahyā Dawlatābādī, *Ḥayāt-i Yahyā*, Tehran n.d., iii, 313 ff., Ḥusayn Sam'ī Adīb al-Saltāna and Amīn Allāh Ardānī 'Az al-Manālik, *Awvalīn ḥijm-i muḥād-dās-i mīlī*, Tehran A.H.S. 1332, 30 ff., 75 ff., P. M. Sykes, *History of Persia*, London 1963, ii, 446 ff.).

(A. K. S. LAMTON)

KIRMĀSTI, chief-lieu of a *gāda* in Anatolia, 15 miles south-east of Mithradāt (cf. J. H. Mordtmann, in *ZDMG*, lxx [1911], 101) and 40 miles S.W. of Bursa with about 16,900 inhabitants (1960). The town lies on both banks of the Edronos Cay (Rhyndacus), now called the Mustafa Kemal Paşa Cay. The origin of the name, often wrongly written Kirmāstī, which points to a Greek *Κερμαστῖ or *Κερμαστῖ, is uncertain, nor is it known what ancient town was here. Perhaps the Krenastēs in the *Trones* (cf. Pauly-Wissac, ii, 743) mentioned in Xenophon, *Hist.* iv, 8, is to be connected with it. In the Byzantine period Aorata is said to have been here, where the troops of Alexius Comnenus under Kamyrtēs were defeated in 506/513 by the Saljuqs (cf. Anna Comnena, ii, 279 ff.). In any case there is close to Kirmāstī a Byzantine castle in ruins which resembles that 6 miles farther up the Edronos Cay at Kesterlek and presumably was intended with similar defences at Ulubad (Lopadhora) and Bursa to keep back the advance of the Ottomans. In the town, which has 6 mosques, including one large very old one with a *mihrab*, and 74 *maḥsūds*, there are ancient remains (sarcophagi, inscriptions on the walls, ornaments) which do not seem yet to have been studied. The history of Kirmāstī under the Ottomans is quite obscure, as there are no records. Ewliyā Celebi (v, 290) and European travellers (cf. W. Hamilton, *Researches in Asia Minor*, London 1842, i, 77, 80, ii, 93) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmāstī, which did not suffer from the Greek occupation, was in 1925 renamed Mustafa Kemal Paşa in honour of the Turkish President. Kirmāstī is the birth-place of Seyyid-i Wilāyet (d. 929/1522-3 in Istanbul), 400-in-law of the historian 'Aḥlī-Paşa-zāde (cf. Taḥkīrpaḥzāde-Moḥdī, *Shāh-nāma al-nūmāniya*, 352, 23), known from the *Menāḥil-i Tūḡ al-Arīḡ* (i.e. Sheykh Eblī 'l-Welā); cf. Pertsch, *Lat. Türk. Handschr. Götha*, 137, No. 166 and Tornberg, *Cal. Uppsäl.*, 211, No. 2071.

Two hours' journey from Kirmāstī are two hot mineral springs, called Dūmbūldak and Akardja.

KIRMISIN [see KIRMANSIN]

KIRSH [see KIRMA]

KIRSEHIR, modern Turkish Kırşehir (formerly *Kirghes* "town of the steppes", incidentally also called euphemistically *Gülşehir* "town of the roses"), a town in central Anatolia, ca. 490 m. above sea level, situated at 37° 9' N. lat., and 34° 10' E. long., on a small river called the Kızıl Özü which flows into the Kızıl İrmak [s.e.], the ancient Hatys. The town, with a total population of 24,668 in 1950, lies on the road from Ankara (195 km. distance) to Kayseri (140 km. distance). Another road leads after some 15 km. to the Keak Köprü, a long bridge over the Kızıl İrmak of 13 pointed arches, built in 640/1248 by a Saljuq vizier called 'Ata al-Din Muhammad (see Taeschner in *Festschrift Ernst Kühnel, Aus der islamischen Kunst*, Berlin 1959, 200-2, and A. Dietrich in *ZDMG*, cx (1967), 320-13). Close to the bridge, on the eastern bank of the river, is a *şadıh* or caravanserai, erected in 667/1268 by Nūr al-Dīn Dīlārā' b. Bahā' al-Dīn Dīlārā, amir of Kırşehir (see K. Erdmann, *Das anatolische Karawanennetz des 13. Jahrhunderts*, Istanbul Forschungen, xx/r, Berlin 1961, no. 21, 74-7). In the neighbourhood of the town are medieval springs.

Kırşehir is certainly an old settlement, as may be deduced from the *Asyuh* (a hill indicating ancient cultivation) in the centre of the town, which, however, has not as yet revealed its secrets. The ancient name of the town is not known; the deconnotations proposed for antiquity are disputed. So far as is recorded by inscriptions and architectural monuments, its history starts only in the early Turkish (Rüm-Saljuqid) period. Then and shortly afterwards, from the middle of the 7th/13th until the middle of the 8th/14th centuries, the town must have been an important cultural centre.

After the battle of Malazgirt (1071), the Turks took possession of great parts of Anatolia, and Kırşehir became also Turkish, but the control of the city changed more than once: sometimes it fell to an amir of the Danişmandids of north-eastern Anatolia (Sivas and Malatya), sometimes to a sultan of the Anatolian collateral line of the Saljuqids, the so-called Rüm-Saljuqids who resided in Konya. Under sultan Kılıç-Arslan II, the amirate of the Danişmandids was incorporated (ca. 1173) in the territory of the Rüm-Saljuqids, who remained the overlords of the town until the end of their power in 1307. Then governors of the Mongol Il-Khāns of Iran started to rule the whole region, including Kırşehir, which served as a place of coinage for them until 728/1328. In his *Nuṣṣat al-Jalāl* (ed. G. Le Strange, i, Text, London 1915, 99, ll. 13 ff., ii, Tr. London 1919, 99, ll. 22 ff.), Ḥamd Alfah Mustawfī designates Kırşehir as "a big town with high sacred constructions (*imārāt*), which enjoys a fine climate; the revenue of its *Dīwān* amounts to 57,000 *dirhams*".

After the disintegration of the Il-Khānid state, Kırşehir again became a controversial issue between independently-behaving governors, like those of the Eretnids (see *KIRMA*) and other dynasties, until it was taken by the Ottoman sultan Bāyazīd I. After the latter's defeat near Ankara in 1402, the town was at first added by the conqueror Timur to the territory of the Karamanids (Konya and Laranda), but afterwards changed masters several times until it became definitely Ottoman when Selīm I incorporated the principality of the Dulkadir, to which Kırşehir had belonged ultimately. As capital of a *liva* (*sandjak*), the town was attached to the *aylets* (*wilāyets*) of Karaman.

When the *wilāyet* system was reorganised in the middle of the 19th century, the *sandjak* of Kırşehir was assigned to the *wilāyet* of Ankara. The town became a *wilāyet* in 1924 when the former *wilāyets* were abolished and the *sandjaks* raised to *wilāyets*. But in 1954 the *wilāyet* of Kırşehir was suppressed; parts of its territory were added to the *wilāyets* of Ankara and Yozgat, but the greater part was assigned to the newly formed *wilāyet* of Nevşehir.

The heyday of Kırşehir was the late-Saljuqid and Il-Khānid period between ca. 1240-1340. The town must then have been really important; there was in any case an active intellectual life of a mystical-religious character, as may be seen from imposing architectural monuments which have survived until today (see Ali Sami Ülgen, *Kırşehir'de Türk eserleri, in Vakıflar Dergisi*, ii [Ankara 1942], 253-61, figs. 1-25; Halim Baki Kunter, *Kırşehir kütüphaneleri, in İbid.*, 432-36, figs. 4-13; W. Ruben, *Kırşehir'in dâhâimîsi fihri tan'atı abideleri. A*, in *Bellest*, xi [Ankara 1947], no. 44, 603-40, pls. CX-XCVI; *idem*, *B*, in *Bellest*, xli [Ankara 1948], no. 45, 473-93, pls. XXXVII-XLVI; *idem*, *Ergençnige Denkmeleleri Kırşehir*, in *İbid.*, 194-103; Cevat Hakkı Tarım, *Kırşehir tarihî eserinde anıtlar*, Kırşehir 1938; *idem*, *Tarihte Kırşehir - Gülşehri ve Babailer - Ahiler - Bektaşiler*, İstanbul 1948).

The oldest cultural institution in Kırşehir is possibly the *madrasa* of Malik Muṣṭafā b. Bahrāmshāh, called Malik Ghāzī, of the Mangökdynasty, whom sultan 'Alā' al-Dīn Kaykubād I had invested with Kırşehir as compensation for the principality he had taken away from Ghāzī's family. Of the *madrasa* allegedly built in 644/1246, only the relatively simple portal has been preserved. When the ruins of the *madrasa* were carried away, the portal was used in 1324/1393 for the reconstruction of the 'Alā' al-Dīn Mosque on the hillside of the town. The still-standing graceful mausoleum of Malik Muṣṭafā, the Malik Ghāzī Kumbēdi, constructed by his consort in the style typical for the high-Saljuqid period, indicates the original site of the *madrasa*.

For the next period, the *madrasa* of the amir Nūr al-Dīn Dīlārā' b. Bahā' al-Dīn Dīlārā served as a centre of intellectual life. It belonged to an extensive foundation on which a deed of foundation (*waḳfiyye*) in Arabic and Mongol, dated 670/1272, provides information (see Ahmed Temir, *Kırşehir amiri Cacaoglu Nūr al-Din'in 1272 tarihli Atapça Moğolca vakfiyesi*, Ankara 1959). Of the constructions belonging to this foundation, only a group of buildings in the centre of the town has survived. It consists of the *madrasa*, built in 671/1272-3 and presently used as the Friday mosque, its minaret and the tomb of the founder. The tomb is included in the north-eastern angle of the *madrasa* and can only be reached from the inside; on the outside, it is only marked by a window in the northern wall, of the same style as the portal of the *madrasa*.

To the north-west of the Malik Ghāzī Kumbēdi, at a distance of ca. 200 m. from the Dīlārā Beg Madrasa, lies the Lāla Cami ("Tulip mosque"). A tale has it that its name is derived from a tulip of particular beauty, which the builders received from a pupil of the Dīlārā Beg Madrasa; proceeds of its sale then allegedly enabled him to build the Lāla Cami. The building, which lies in ruins and does not bear any inscription so that nothing is known about its construction and original use, apparently was not a mosque at the outset; during the Il-Khānid period it served as the mint, but was used as a mosque later,

"papyrus", "roll of papyrus", but was used for "bag" and, in medical science, for "dressing", "a kind of absorbent gauze", and things like that (cf. Ibn al-Bayṭār, *op. cit.*, I, 87, and his sources, sc. Dioscorides, Galen, Ibn Sīnā, etc.), or else was applied to writing paper obtained from other materials, e.g. "parchment" [see *ḡibḡ*, *ḡaḡ*] and "rag paper" [see *ḡāḡiḡ*].

AL-KISĀT, ABU 'L-ḤASAN 'ALĪ B. ḤAMZA B. 'ABD ALLĀH B. DAHMĀN B. FAYRŪḌ, *mawālī* of the Banū Asad, well-known Ṭabāḡ philologist and Kur'ān-reader (ca. 179-89/737-805). Descendant of an Iranian family from the Sawād, he was born in Bāḡmāshā, Duḡlay, north of Baghdād (Yāqūt, *Mu'ḡam*, I, 258 s.v., M. Streck, *Die alte Landschaft Babylonien*, Leiden 1901, II, 226) and when still a boy, came to al-Kufa (Zuhayrī, *Ṭabaḡāt*, 138; Ibn al-Djazarī, *ḡibḡ*, I, 535). It is related that he had difficulties with the 'arabiyya and therefore sought to attach himself to the grammarian Mu'ḡh al-Farrā' (Ta'riḡh Baghdād, XI, 404). Al-Khaliḡ [q.v.] authority in the field of Arabic philology allegedly caused him afterwards to go to al-Basra; at his advice, al-Kisāṭ is said to have stayed for some time among the Bedouins in order to become fully conversant with the secrets of the 'arabiyya by direct association with them. As is shown by the explanations and interpretations of details which are to be found in grammars and lexicographical works of the native philological literature and which are to be traced back to al-Kisāṭ, it is in any case certain that he attributed more importance to linguistic usage than to learned systematisation, as was aspired to by Sibawayh [q.v.], another pupil of al-Khaliḡ, who laid this down in his voluminous al-Kisāḡ. Even if al-Kisāṭ, in his discussions and investigations, made use of the generally accepted method of analogy (*ḡayā* [q.v.]), he nevertheless, in his learned observations, left, as was fitting, wide space to the anomalous ways of speech as presented especially by colloquial speech or dialect, he took care not to squeeze into a system such anomalies, exceptions and discrepancies from the general rule [against Yāqūt, *Udhāṭ*, v, 190; Suyūṭī, *Buḡya*, 336]. In this way, he and those who followed him in this method preserved for us vestiges of the everyday language, which was not acknowledged by other scholars and therefore concealed and suppressed. Three or four generations later, in connexion with the controversy between al-Mubarrad and Ṭaḡāb [q.v.] in Baghdād, the more independent treatment of the Arabic language by al-Kisāṭ, and not least that of his pupil al-Farrā' [q.v.], became straightforwardly the method of the grammatical school of Kufa; *as mentis*, he and his teacher al-Ru'āṣ [q.v.] have entered the history of Arab philology as the real founders of that school. In his introduction to Ibn al-Anbār's *Kisāḡ al-Ṭaḡāf* (Leiden 1913), G. Weil pertinently characterised this method as the "anomalous" one, in opposition to the strictly "analogous" one of the school of Basra, which has generally prevailed among the Arab grammarians. Apart from the material preserved in the *Kisāḡ al-Ṭaḡāf* with respect to the school of Kufa and in particular to al-Kisāṭ's teachings, see also Ṭaḡāf,

Madāḡis Ṭaḡāb, Cairo 1960, index; al-Zaḡḡalī, *Madāḡis al-Ṭaḡāf*, Kuwait 1962, index; al-Suyūṭī, *al-Muḡh*, Cairo 1958, I-3, index; idem, *al-ḡibḡ* *wa 'l-maḡāḡ*, Haydarābād 1360/1941, II, 15, 18, 42; al-Sayyid Sadr al-Dīn al-Kaḡḡāwī (?) al-Iṣṭanbālī (1278-1349/1862-1931), *Kaḡḡāḡ*, *Mu'ḡam*, v, 17, 192; *al-Muḡh fī 'l-naḡ* al-ḡifī, ed. M. Baḡḡāt al-Bayṭār, in *MMIA*, XXIV (1949), 417-32, 560-82; XXV (1950), 223-46, 399-414, 511-34; XXVI (1951), 83-100, 299-322, 407-22, 577-86 (cf. 100 A. al-Himḡ, *Zāḡiriyya*, Nabw, 510; al-Kaḡḡāwī).

Al-Kisāṭ's learned studies, more concerned with a description of reality than with scholastic systematisation, apparently sprang from a basic attitude, which must also have enabled him to maintain for many years those manifold good and close relations with the 'Abbāṣid court in Baghdād, where he had moved. These the scholar, as original in knowledge as he was in ideas, was all the more welcome as teacher of the princes since he was also able to act as a Kur'ān-reader (Azhari, *Ṭabaḡāt*, 15). The caliph al-Mahdī had entrusted to him the education of the young al-Raḡḡ, who in his turn later caused his sons al-Amin and al-Ma'mūn to be taught by al-Kisāṭ (Yāqūt, *Udhāṭ*, v, 186, 194 ff.). Al-Raḡḡ promoted his teacher al-Kisāṭ among his personal companions and confidants (*al-ḡulāṣ*) *wa 'l-mu'āṣiṣ* and requested him to accompany him on the *ḡadā* and other journeys (Yāqūt, *Udhāṭ*, v, 183, 186), thus manifesting the intimate relation between pupil and teacher. During one of these journeys, probably the road to Khurāsān in 189/805 (Ṭabaṭ, II, 202 ff.), al-Kisāṭ died at the age of seventy (Kifī, *Inḡāḡ*, II, 269), probably in Raḡḡya in the neighbourhood of Rayy. Fragments of an elegy on him and on the jurist Muḡammad b. al-Ḥasan al-Shaybānī [q.v.] by his antagonistic colleague Yahyā al-Yazīdī [q.v.] have survived (Marzubānī, *Muḡḡas*, 290; Zuhayrī, *Ṭabaḡāt*, 149; Ta'riḡh Baghdād, XI, 413 ff., and II, 182; Yāqūt, *Mu'ḡam*, II, 824 f.; idem, *Udhāṭ*, v, 183, 199; Ibn al-Djazarī, *ḡibḡ*, I, 540); for the *lakaḡ* "Kisāṭ", see Ta'riḡh Baghdād, XI, 404 f.; Suyūṭī, *Muḡh*, II, 445; etc.; O. Roscher, *Beiträge zur Arabischen Poesie*, 1967-4, VIII, 708.

It is evident that the opinion of al-Kisāṭ's colleagues on a man who seemed to be favoured personally by fate because of his good relations with the court, was not always positive [Abu 'l-Tayyib, *Marāḡib*, 74], all the more so because—as indicated above—in controversial questions he preferred to rely on the reality of the spoken language rather than on speculative assertions of the learned (Yāqūt, *Udhāṭ*, v, 180). It was the Bedouins, undisputed authorities on the current language, who assisted him at the famous discussion with Sibawayh on the so-called *al-maḡāḡ al-muḡḡāḡ* (Zaḡḡalī, *op. cit.*, 8-20; Marzubānī, *Muḡḡas*, 288; Kifī, *Inḡāḡ*, II, 358 f., etc.; A. Fischer, in *A volume of oriental studies presented to E. G. Browne*, Cambridge 1922, 150-6). He is also reproached with being a pederast and fond of date-wine (*ḡabḡ*) (Marzubānī, *Muḡḡas*, 284, 289; Yāqūt, *Udhāṭ*, VI, 285, 294, 198).

Al-Kisāṭ's authority as a Kur'ān-reader was generally recognised, both at the court and among the public of Baghdād, al-Rakka and elsewhere (Ta'riḡh Baghdād, XI, 403). At first, he represented the reading of his teacher Ḥamza al-Zayyāṭ [q.v.], but in the course of time he developed his own (*Fihrist*, 30). How highly al-Kisāṭ's reading was appreciated is shown by the fact that it became the seventh of the seven canonical readings [see *ḡirā'a*].

Probably his reading was as little established by its reader, al-Kisā'ī, as were the others by their readers. This was first done by al-Kisā'ī's pupil Abū 'Ubayd (q.v.), when he compiled 32 *ḥikā'id*. As in parallel cases, the *Mufraḥat al-Kisā'ī*, which exists in Ms. Tehran University 4857, x (M. T. Dāniq: *Paṣṣūh*, xiv, 3897), could be a later extract from the *Shāhīyya*, the *Tayyis* or a similar work (see R. Sellheim, *Materialien zur arabischen Literaturgeschichte*, Wiesbaden 1976, I, 38 f.).

Of al-Kisā'ī's 14 or 15 works enumerated in the *Fihrist*, 65 ff., 165—for some of them, see Ashari, *Tahdhīb*, 13 ff. and Zubaydī, *Tabaḥṣūs*, 278 (or should we read Shibawayh here instead of al-Kisā'ī?)—nothing apparently has come down to us. According to the titles, they were devoted to questions of grammar, lexicography and the Qur'ān, and also of poetry, of which he allegedly did not have much knowledge (Yāqūt, *Udabā'*, v, 193; Ibn Khallikān, II, 457). According to Brockelmann, I, 126, S I, 178, three other treatises which are connected with his name and are lacking in the enumeration of the *Fihrist*, have been preserved: *Risāla fī taḥqīq al-'amma* (ed. Brockelmann, in *ZA*, xlii (1898), 29-46; cf. Th. Nöldeke, *ibid.*, 111-15; 'Abd al-'Azīz al-Maymūn, Cairo 1925, and R. 'Abd al-Tawwāb, *Lahū al-'amma*, Cairo 1907, 111 f.); *Katib al-Muṣṣaḥḥāt fī 'l-Kur'ān* (other mss. e.g. in Zāhiriyya ['Ikṣat Ḥasan, Kur'ān, 101], Chester Beatty [A. J. Arberry, 3165, i] or Baghdad, Awḥād ['A. al-'Jubūrī, I, 244, no. 433]; a remark on the *faṣṣā* formula in a verse (British Museum [Ch. Reu, Supplement 120, 121]), preserved in detail in *Taḥṣīb al-ḥikā'id*, op. cit., 338-42 (for similar traditions, see e.g. Marsubānī, *Muḥibbat*, 285, *Ta'riḥ al-Baghādī*, xi, 406).

KISĀ'Ī [see 1.1615].

KISĀ'Ī, MAḌDĪ AL-DĪN ABU 'L-ḤASAN, a Persian poet of the second half of the 4th/10th century. In some later sources his *ḥunja* is given as Abū Ishāq, but the form given above can be found already in an early source like the *Caḥṣ al-maddī*. The *Dumyat al-kāfir* by al-Bāgharī contains a reference to the "solitary ascetic" (*al-maḥṣab al-muḥim bi-nafsihi*) Abū 'L-Ḥasan 'Alī b. Muḥammad al-Kisā'ī of Marw who might very well be identical with this poet (cf. A. Ateş, *giriş* to his edition of *Kitāb Tarḥim al-belaḡa*, 37 f.). The pen name Kisā'ī would, according to 'Awfī, refer to the ascetic way of life adopted by the poet, but it can also be explained otherwise, e.g. as a *nisba* derived from the trade of tailoring. From the very beginning the title *al-bakṣw* has been attached to his name.

His origin from Marw is confirmed by the early sources. It is also certain that he made at least a part of his career as a poet in that city. In one of his poems, a lament of old age, he has inserted a precise dating of his birth: Ḥāshirgamba, 26 Shawwāl 341 (Wednesday, 16 March 953) as well as the statement that he had reached the age of fifty. From this poem, the conclusion has been drawn that he must have died in or shortly after the year 392/1000-1. The actual date of his death is, however, unknown.

The *ḥunja* of Kisā'ī was still extant in the 6th/12th century. After that time, its transmission appears to have been discontinued. Hardly any complete poem has survived. The fragments that have been collected so far from a great variety of sources are generally not longer than a few lines. It is, therefore, difficult to assess the statements concerning the nature of his work that have been made both by ancient and modern writers. It can be regarded as certain, anyhow, that Kisā'ī did enjoy a great reputation as a religious poet during the two centuries following upon his death as well as in his own lifetime. 'Awfī describes him in the first place as a poet who practised the genres of devotional poetry (*awḥād*) and religious admonition (*wa'iz*), and quotes a few specimens of his eulogies (*manāḥib*) on the members of the House of the Prophet. The *Kitāb al-Nahḥ*, an apology of the Imāmī Shī'a written about the middle of the 6th/12th century, establishes Kisā'ī with some emphasis as a Shī'i poet.

The Ismā'īlī poet Nāṣir-i Khusrāw (died ca. 465/1072), who cultivated the same genres as Kisā'ī, acknowledged his indebtedness to this predecessor, indirectly, by using a claim to the superiority of his own poems over those by Kisā'ī as a *topos* of the epilogue in a number of *ḥaṣidas*. As E. G. Browne has pointed out, these instances of poetical *faḥṣ* need not be taken as evidence of a sectarian controversy between these two poets (as it had been suggested by H. Ethé). The opposite conclusion reached by Sa'īd Naḥāḥ—namely, that they both belonged to the same branch of the Shī'a—is equally untenable. The exchange of poems between Kisā'ī and Nāṣir-i Khusrāw quoted by Riḍā-Kuṭb Khān Hidayat from the *Khudpat al-aḥḍār* by Taḥī Kāṣṣī, is an anachronistic forgery made up from poems that actually belong to the *ḥunja* of the latter only.

The paucity of the primary sources available now does not permit us to estimate how far Kisā'ī specialised in the writing of religious poetry. It is also impossible to define the social groups to which he addressed himself in these poems. It is evident, on

the other hand, that he did not stop aloof entirely from the profane practice of poetry. He was patronised by a minister of the Sāmūd amir Nūb b. Manṣūr, and in his later days he wrote at least one panegyric ode to Sultan Mahmūd of Ḥama. 'Awfī praises his descriptions and quotes several specimens which show that Kisā'ī used all the poetical themes current in his age.

Bibliography: The fragments of Kisā'ī's poetry were collected for the first time by Elhē, *Die Lieder des Kisā'ī*, in *SB. Byz. Akad.* (1874), II, 133-53. This collection, based on manuscripts of a number of *ṣaḥāḥas*, is now outdated. More material has come to light from various other sources, such as dictionaries and *maḥmūd'a*-manuscripts. New collections have been published, in particular by M. Dabir-Siyāḥi, *Gangīz-i ḥāṭir*, II, and *Fahdān-i ḥāṭir*, Tehran 1351/1972; see also *Lughat-nāma*, no. 182 (1351/1972), s.v. *Kisā'ī*. The most important primary sources on his life and work are of Naṣir al-Dīn, al-Kāwini al-Rāzi, *Kutāb al-Naṣā*, ed. Djalāl al-Dīn Muḥaddīdh Urmawī, Tehran 1331/1952, 252, 608; Muḥammad b. 'Umar al-Raddīyānī, *Tarjūmān al-balāgha*, ed. A. Ateş, Istanbul 1949, printed text 13, 22, 46, 47, 104; Asadī, *Lughat-i Furs*, ed. M. Dabir-Siyāḥi, Tehran 1336/1957, passim; Nāṣir-i Khusravī, *Dīwān-i ḥāṭir*, ed. Naṣir al-Dīn Takawī, Tehran 1348/1969, passim; Naṣirī 'Arūdī, *Calār Maḥāla*, Tehran 1955-6, note 44, 10-11, 89-97; 'Awfī, *Lubāb*, ed. E. G. Browne, II, 33-9; ed. S. Naṣirī, Tehran 1337/1956, 270-4, 10-11, 660-8; Asadī Aḥmad Rāzi, *Hafṣ ḥāṭir*, Tehran 1340/1961, II, 7-9; Luṭf-'Alī Beg Rāḡar, *Ataḥādā*, lith. Bombay 1299 A.H., 136; Riqā' Kullī Khān Hiddāyat, *Maḥmūd'a al-fuṣṣṣā*, lith. Tehran 1293 A.H., I, 482-5. See further Elhē, in *Gr. J. Pā.*, II, 281 f.; Browne, *LHF*, II, 160-4; B. Furūzkānī, *Kisā'ī-yi Mawana*, in *Arman*, I (1309/1930) 27-34 (= *Maḥmūd'a-yi maḥmūdāt wa aḥṣār*, Tehran 1351/1972, 1-7); idem, *Suḥḥān wa suḥḥamawān*, Tehran 1350/1971, 38-42; 'Abbās Iḥṣā, *Irāngshar*, I (1340 A.H.), 337-41; 'Alī Kawīm, *Armāghān*, xxiv (1328/1949) 241-51; Lūṭī Saḥā, *Kisā'ī-yi adabīyyat dar Irān*, I, Tehran 1342/1963, 442-9. (J. H. KRAMERS—J. T. P. DE BAUW)

AL-KISĀ'Ī, ŠAHIB KISĀS AL-ANBIYĀ', unknown author of a famous Arabic work on the lives of the prophets and pious men prior to Muhammad. Some small passages of this book were first edited in 1898 by I. Eisenberg in his thesis on Muḥammad b. 'Abd Allāh al-Kisā'ī. A complete edition was published in 1922.

In his thesis, Eisenberg tried to prove that the author of the *Kisāṣ al-anbiyā'* was the well-known philologist al-Kisā'ī, to whom Hārūn al-Raḥīd had entrusted the education of his sons al-Aḥmad and al-Ma'mūn. But what renders this identification impossible is that Ibn al-Nadīm in his *Fihrist* does not make any allusion to any book of the philologist, the contents of which could have been the legends of the old prophets; furthermore, the name of al-Kisā'ī the philologist is Abu 'I-Ḥasan 'Alī b. Mamza, and not Muḥammad b. 'Abd Allāh, as indicated in the text edited by I. Eisenberg. Thus the identity of the author of the *Kisāṣ al-anbiyā'* remains an enigma.

Moreover, recent enquiries into the subject have proved that the legends of the prophets as written down in the numerous manuscripts of al-Kisā'ī's *Kisāṣ al-anbiyā'* belong to the popular narrative tradition of mediaeval Islam and can be compared

with works such as the romance of 'Antar, so far as the narrative style is concerned. So it would be of little use to search for an individual author al-Kisā'ī who could have compiled the *Kisāṣ al-anbiyā'* at a certain date; he is as vague a figure as the narrator al-Aḥmad in the romance of 'Antar. The mediaeval story-teller (*ḥaṣṣī* [see Ḥaṣṣī]) apparently held al-Kisā'ī's *Kisāṣ al-anbiyā'* in high esteem; but they were not anxious to preserve one standardised text of the legends. It is for this reason that the manuscripts, the oldest of which date from the early 7th/13th century, differ considerably in size, contents, and even arrangement of the stories.

The legends of the pre-Islamic prophets as related in these compilations under al-Kisā'ī's name, or handed down unto us in many other anonymous manuscripts, must be considered as the vivid expression of the religious feeling of the average mediaeval Muslim. It is in this respect that al-Kisā'ī's *Kisāṣ al-anbiyā'* are sources of great value for scholars who want to carry out further investigations of the popular religious life of the Islamic world, a task which has been somewhat neglected up till now.

(T. NAGEL)

KISANGANI, the former Stanleyville, is a city now of well over 250,000 inhabitants, the third city in Zaïre, and the capital of the province of Upper Zaïre, formerly Province Orientale. The most important urban centre in north-eastern Zaïre, it is situated on the bend of the river Zaïre, formerly called Lualaba (upstream) and Congo (downstream from the city), just where it turns west and a few miles north of the equator.

In 1877, Henry Morton Stanley set up camp here to rest from the exhausting weeks during which he negotiated the seven cataracts still called Stanley Falls. In 1882, Hamed Muḥammad al-Murjebi, better known as Tippu Tibb [q.v.], founded a town on the northern shore of the island in the Zaïre river that was formed by a creek called the Abūlu. The new settlers, about 1500 in number and all nominal Muslims, called their town Kisangani, Swahili for "On the sandbank". In 1883, Stanley returned with instructions from King Leopold II to found a government station at the upper end of the navigable part of the Congo river. This became Stanleyville, with its centre as the right bank just north of the original Kisangani. By that time the Muslims (called "Les Arabes" by the administration) had settled on the left bank, calling their new town Kisingitini, Swahili for "On the threshold". Their language of culture and literature is Swahili; their tribal background is mainly Kusu, Tetela and Genia, the Genia (Wagania) being the original inhabitants of Wanje Rusizi or Wanje Lesali, the island of which Kisangani formed part. Stanleyville became an important trading centre, exporting coffee, cocoa, palm oil, timber and ivory. Modern Kisangani has a university; it was part of the policy of authenticity of President Mobutu to replace the name Stanleyville by Kisangani as the name for the whole city.

The Muslims flourished with the city. More adaptable to urban culture and more conscious of their cultural dignity than the tribal peoples, they were more self-confident in their attitude vis-à-vis the Europeans, since their religion claimed equality with Christianity. The Belgian Congo government tried to restrict the activities of the Muslim missionaries, but could not prevent Islam from spreading to the country districts south of the city. The Muslims called themselves Waungwana "free men", the name by which all the Swahili peoples once called themselves. Their language is called Kikungwana, a dialect of Swahili (q.v.). This Swahili became the lingua franca of the entire country east of the Lomami river.

Always rebellious against the colonial administration, the Muslims were among the first groups to form a nationalist party about the time of independence, i.e. the Mouvement National Congolais, from which the late Patrice Lumumba drew an important part of his support (he was a Tatela himself). No longer isolated, the Muslims in Kisangani, although they number only some 10,000, are in contact with, and receive support from, those in Egypt, Arabia and Pakistan. Two neighbouring states, Uganda and the Central African Empire, have been ruled by Islamic governments until 1979.

Rosse, *Bibliographie commentée de la communauté musulmane au Zaïre des origines à 1975*, in *Les Cahiers du CEFAP*, no. 6 (1976), 38 pp.; *L'Évolution de la communauté musulmane de 1964 à 1975 dans la presse Zaïroise*, in *ibid.*, pp. 29-37. On Tippu Tabb and Stanley, see F. Bontinck, *L'autobiographie de Hamed ben Mohammed el-Murjebi Tippu Tabb* (ca. 1890-1905), in *Académie Royale des Sciences d'Outre-Mer, Classe des Sciences Morales et Politiques, Nouvelle Série*, XLII/4, Brussels 1974, with bibl. on pp. 25-39. A specimen of the liturgical literature can be found in J. Knappert, *A Swahili Islamic prayer from Zaire*, in *Orientalis Lovaniensis Periodica* (1973), 157-206. Crawford Young, *Islam in Congo*, in *Études Congolaises*, x/5 (Kinshasa, 1967), 14-31, updates the following: A. Abel, *Les musulmans noirs du Zaïre*, in *Correspondance d'Orient*, Centre pour l'Étude des Problèmes du Monde Musulman Contemporain, Brussels 1960, 260 pp.; perhaps the most important work on the Muslims in Zaïre. F. M. de Thier, *Singidini, la Stanleyville musulmane*, Publications de Centre pour l'Étude des Problèmes du Monde Musulman Contemporain, Brussels 1963, is the only work that deals specifically with the history of Stanleyville-Kisangani. The Wagania (who call themselves Waenya) have been described by A. Y. Droogers, *De Genaarlijke Reis. Jongensinitiatie bij de Wagania van Kisangani*, Amsterdam 1974. (J. KNAPPERT)

KISĀS (A.), synonymous with *blood*, retaliation ("settlement"), not "cutting off" or "prosecution", according to Muslim law is applied in cases of killing, and of wounding which do not prove fatal, called in the former case *ḥudūd fi 'l-naḥs* (blood-vengeance) and in the latter *ḥudūd fi-mā dūn al-naḥs*.

1. For *ḥudūd* against the pagan Arabs see Wellhausen, *Recht arabischen Heidentums*, 286 ff.; Procksch, *Über das Blutrecht bei den vorislamischen Arabern und Mohammeds Stellung zu ihr*; the collection of essays *Zum ältesten Strafrecht der Kulturvölker. Fragen zur Rechtsvergleichung*, gestellt von Th. Mommsen, Sections v-vii; and Juynboll, *Handboek des islamischen Gesets*, 284 ff.

2. Muhammad takes it for granted that the

blood-vengeance of Arab paganism—in which in contrast to the unlimited blood feud, definite retaliation, although not always on the person of the doer himself, forms the essential feature of the vengeance (cf. Procksch, *op. cit.*, 5 and n. 5)—is a divine ordinance with the limitation assumed to be obvious, that only the doer himself can be slain: Kurʿān XVII, 35; XXV, 68; VI, 132 (cf. KATL, I, 2; in these passages only the *fas talān* can be understood by the right to kill another; already in XVII, 35 the avenger of blood is forbidden to kill any one other than the guilty one); II, 173 ff. (before Ramaḍān of the year 2): "To you who are believers the *ḥudūd* is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone is pardoned anything by his brother, he shall be dealt with equitably . . . and pay him compensation as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In *ḥudūd* you have life, you of understanding . . ." (the first verse says that a free man can only be slain for a free man, a slave for a slave and for a woman only a woman (but probably a slave or a woman for a free man, but this is not expressly stated and must be deduced), naturally, of course, only the guilty one, and that in all other cases the payment of compensation (*diya*) takes place. This is an extension of what is presumed in the earlier passages: the treatment of the free man in relation to the slave is a matter of course, according to old Arab views, and that of the woman, which cannot be completely explained from the passage with later developments (cf. below, 4). Only one explanation, thrust into the background and later completely abandoned, interprets the verse quite correctly, but makes it abrogated by v. 49 (see below). By "prescribed" is meant not a duty but a rule not to be transgressed; pardon is the abandonment of *ḥudūd* with a demand for compensation instead; the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood feud of pagan times, because only the guilty one is slain and the life of the innocent thus preserved); v. 49 (after the first encounter with the Medina Jews, but before the outbreak of open hostilities): "and we have prescribed for them (the Jews) in it (the Torah): a life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and *ḥudūd* for wounds; but if anyone remits it, it is an atonement for him (i.e. for his sins) . . ." (this verse of course does not cancel II, 173). In the years 3-5, with IV, 94 ff. there came the distinction between deliberate and accidental killing (cf. KATL, I, 2); in this the application of *ḥudūd* is excluded. In II, 190 (before the campaign of the year 6), *ḥudūd* is used metaphorically in the sense of retaliation of life with like (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the *Sīra*, the records of the life of Muhammad, are in agreement with this. In the so-called constitution of the community at Medina, which belongs to the early Medina period, it is laid down that if any one slays a believer and is convicted (proof of guilt in a trial before the authority—Muhammad—is therefore required as a condition for the carrying out of *ḥudūd*), talion takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the

murderer and must take an active part against him. Here the *ḥisāb* is brought from the sphere of tribal life into that of the religious-political community (*umma*), which finds an echo in the law, not however to be taken literally, that believers are one another's blood-avengers for their blood spilt for the sake of Allāh; but it is also throughout recognised as a personal vengeance, as is also laid down in the case of the Medina Jews, and no-one is to be prevented from avenging a wound. A limitation of *ḥisāb*, logical from the standpoint of the *umma*, lies in the fact that the believer is forbidden in the ordinance of the community to kill a Muslim on account of an unbeliever. On two occasions, when Muslims had killed heathens who had however treaties with Muhammad, he did not allow *ḥisāb* to be made "because they were heathen" (this does not in any way follow from the ordinance of the community), and even paid the compensation himself; his utterance regarding the possibility of *ḥisāb* à propos of the second of these cases is, however, illogical. On two occasions, also for political reasons, he obtained the acceptance of compensation when the avenger of blood undoubtedly had the claim to *ḥisāb*, but in one case he cursed the murderer—again an illogical attitude. Muhammad in his turn after the capture of Mecca, in keeping with the regulation of the ordinance of the community, abandoned his claim to compensation for the slaying of a nephew of his, which had taken place during the heathen period. In this connection, he is said to have laid down the principle that any blood-guilt attaching to a Muslim dating from the period of heathendom was to be disregarded (cf. *Kaṭi*, I, 2). But Muhammad also intensified the operation of *ḥisāb*, and on two occasions had the murderer executed, when there were aggravating circumstances, without offering the avenger of blood the choice between *ḥisāb* and compensation; the prescription and execution of murderers who were also *murtadda* (q.v.; cf. *Kaṭi*, II, 5), is however to be interpreted differently; from everything, it is clear that Muhammad also supervised the carrying out of *ḥisāb*.

Taking the evidence of the Kur'ān and the *Sira* together, it is evident that Muhammad did not recognise the blood-feud, but allowed *ḥisāb* to survive as personal vengeance. Moreover, he subjected its application to certain limitations and endeavoured to free it from tribal customs of pagan times, all important advances by which it was brought nearer in character to a punishment. That Muhammad at the same time, according to the demands of the individual case, sometimes gave decisions deviating from his own rules, is intelligible.

4. Among the traditions (*ḥadīṭh*) is one that must be genuine, according to which Muhammad had a Jew, who had smashed the head of a Muslim *ḡiriyā* (slave girl or young woman) with a stone, killed in the same way, because in this case there was no question of an avenger of blood. At a later period when Kur'ān, II, 173 (cf. 3. above) was interpreted in a new way, the attempt was made to see in it evidence that a man might be killed as *ḥisāb* for a woman, without observing that the tradition referred to an unbeliever while the Kur'ān passage was only concerned with Muslims. But this Kur'ānic prescription regarding the woman was very early neglected and interpreted differently; it is true that 'Umar b. 'Abd al-Azīz, al-Ḥasan al-Basrī, 'Aṭā' and 'Ikrima are quoted as representatives of the Kur'ānic view that a man cannot be put to death for a woman (al-Zamakhsharī on Kur'ān, II, 173) but Sa'īd b. al-Musayyab, al-Sha'bi, Ibrāhīm al-Najjāfi and

Ketāde had held the opposite view (*ibīd.*), and the latter opinion prevails in the law-schools without any opposition (al-Zamakhsharī's statements on the point are not quite accurate); at the same time it is remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the law-schools, the following is important. For the view that *ḥisāb* could be inflicted on several, on account of one individual, if they had committed the crime jointly, no unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the *ḥisāb* is to be executed is also disputed; the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muhammad's. There are also varying opinions as to whether a man can be put to death on proof by *ḥadīṭh* (cf. 5. below), and ancient authorities are quoted for both; the historical truth is perhaps that Muhammad wished to apply *ḥadīṭh* in a case of bloodshed and when it could not be managed, paid compensation himself; besides it is said (certainly wrongly) that he confirmed *ḥadīṭh* as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there was only *ḥisāb* and no possibility of paying compensation (this is wrongly cited in explanation of Kur'ān, II, 174) and that Muhammad granted the blood-avenger's request to abandon claim to *ḥisāb*, had great stress on forgiveness, and even asked him to do so (cf. above 3.—in these historically certain cases, however, his attitude was influenced by purely political considerations); finally, we are told that he who raises a claim for blood without cause is one of the men most hateful to God. Other traditions agree with the regulations mentioned and still to be mentioned, and need not therefore be quoted, especially as the *ḥadīṭh* on this subject are collected in Guilleume, *The traditions of Islam*, 107 ff.

Summing up the results of the traditions as the expression of opinion of authoritative circles of Islam in the early period, we must notice in contrast to Muhammad's period the important change in the treatment of women, which marks an undeniable advance, just as the request for forgiveness is evidence of a loftier point of view.

5. The *ḥisāb* *fi 'l-nafs* according to the *Shari'a*. In the cases of illegal slaying noted in the article *Kaṭi*, I, 5-7, *ḥisāb* comes into operation, i.e. the next-of-kin of the slain man, who in this capacity is called *waḥī 'l-dam* ("avenger of blood") has the right to kill the guilty man under certain conditions. From what has been said above, it is obvious that this punishment still partakes for the most part of the character of personal vengeance; this is also clearly seen in the regulations—disputed in points of detail—prescribed for the case when the avenger in any way mutilates the murderer and only occasionally the idea of punishment by an authority for the sake of justice crops up. (Thus in all cases of culpable, illegal slaying in which *ḥisāb* cannot take place, *ta'zir* intervenes; the competent authority is therefore regarded as the *waḥī* of one who has no *waḥī*; therefore anyone who kills a *ghaymi*, *murtadd* (an unbeliever connected with the Muslim state by a treaty) or a *musta'min*

(an unbeliever who enters a Muslim country after being given a safe conduct) must, according to Mālik, be put to death and the *wali* has no right to abandon claim to *ḥisāb*. On the other hand, however, it is laid down that anyone who kills a *muḥaf* slave goes scot-free. But that this point of view is found at all is a step forward, for Muhammad's decisions in this connection (cf. above, 3) were only dictated by the demands of the individual case; in other matters also, in certain points we see a loftier attitude adopted, at least in some of the schools.

For the application of *ḥisāb*, the fulfillment of the following conditions is necessary: (1) The life of the person slain must be absolutely secured by the *Shari'ā*; this is the case with a Muslim, *ḥimmi* and *mu'āḥad*, at least so long as they are in the *Dār al-Islām* [q.v.], and *Dār al-Sulṭ* [q.v.] (In the case of the slaying of a Muslim prisoner in the *Dār al-Harb* [q.v.], it is unanimously agreed that there is no *ḥisāb*, and for the slaying of another Muslim there is no *ḥisāb*, according to the Hanafi school; there are corresponding regulations for the *ḥimmi* and *mu'āḥad* in contrast to the *musā'min*, *murādd* and *ḥarbi* (but *ḥisāb* may be inflicted on a *murādd* if he kills another *murādd*, and Mālik makes *ḥisāb* the general rule if anyone kills a *murādd*, without the authority of the Imām). This point of view is to be distinguished from the conception of the illegality of the slaying (cf. *KAT.*, I, 5) although the two ideas have a certain amount in common; the killing of a *musā'min* is illegal, but there is no *ḥisāb* (apart from the special case just mentioned). (2) The slain man must not be a descendant of the slayer, nor the slave of the slave of one of his descendants, nor must there be a descendant of the slayer among the heirs of the slain man. (3) It is further taken for granted that the man when he committed the deed was of years of discretion and was in full possession of his faculties. (4) The further conditions are disputed (cf. below).

Any alteration in these relations of the *doer* after the deed makes no difference to the old blood-guilt (it is, however, to be noted that the adoption of Islam by a *ḥarbi* wipes out all previous blood-guilt) with the exception of tuncy (in which case *ḥisāb* cannot be inflicted), nor does, for example, an alteration in the relations of the slain man after the *doer* has decided on the deed but before it is actually committed (but there are various views on this point). If one of several men who have slain someone jointly cannot be put to death for one or other of these reasons, the others also escape *ḥisāb*; this is also the case if a further reason for killing leads to the action of the slayer. If the slayer dies before *ḥisāb* is carried out, all claim by the avenger of blood ceases according to Abū Ḥanifa and Mālik; according to al-Shāfi'i and Ahmad b. Ḥanbal, compensation can still be claimed.

Mālik, al-Shāfi'i and Ahmad b. Ḥanbal further demand, before *ḥisāb* can be allowed, in addition to the conditions mentioned, that the slain man is at least the equal of the slayer as regards Islam and liberty, so that they certainly uphold Muhammad's intentions, while the Hanafis—of course interpreting differently the evidence cited—take no account of this, and therefore occupy an undoubtedly higher position. A particular view of Mālik's has already been mentioned. According to Mālik, the slayer can further be put to death, if he has deliberately slaughtered his descendant, and this view is also admitted to the Shāfi'i school. Several may be put to death for the killing of one, according to Abū Ḥanifa,

Mālik and al-Shāfi'i, if they have done the deed together, provided the part taken by each was such that if he had acted alone, the result would have been the same (Mālik alone excluded *ḥasama* (cf. below) on the basis of which, according to him, only a single individual can be put to death). There is unanimity on the point that anyone who has killed several people is liable to *ḥisāb*; on the question whether compensation has also to be paid there are different views.

Kisāb can only be applied after definite proof of guilt is brought. The procedure of proof in a murder trial is essentially the same as in another case; in *Kisāb* *fi 'l-nafs* there is however also the old Arab institution of the *ḥasama* (cf. *ḥASAM* and Goldziher, *Zeitschr. für vergl. Rechtswissenschaft*, viii, 412 ff.; Wellhausen, *Recht arabischen Heidentums*, 107 ff.) which Islam allowed to survive (cf. above); according to Mālik, Ahmad b. Ḥanbal and al-Shāfi'i's earlier opinion, *ḥisāb* can be inflicted on the accused (but according to Mālik on one only) if the *ḥasama* is performed and the other conditions are fulfilled; according to Abū Ḥanifa and the later view of al-Shāfi'i, which became predominant in his school, he has only to pay compensation; among the Shāfi'is, with the limitation that he may be put to death if in the course of the trial the accused swears to his guilt twice with fifty oaths each time. If the person entitled to inflict *ḥisāb* does so without previous judicial proof he is punished with *ta'zir*.

The execution of *ḥisāb* is open to the avenger of blood, and according to Abū Ḥanifa consists in beheading with the sword or a similar weapon; if the avenger slays in another fashion he is punished with *ta'zir*, but not imprisoned. According to Mālik and al-Shāfi'i, the guilty person, with certain limitations, is killed in the same way as he killed his victim; both views are given by Ahmad b. Ḥanbal.

Kisāb takes place—among other conditions—only when the next of kin (*wali*) of the slain man or the owner of the slain man, if he was a slave, demands it. If there are several (equally nearly related) avengers of blood, all must express this desire; if one of them remits *ḥisāb*, the refusal affects all. Views are divided on the case where the avenger of blood (or one of several) can give no definite expression of opinion. The *wali*, or the wounded man before he dies if the case occurs, is permitted to remit the *ḥisāb* and he is even urgently recommended to do so, either in return for the payment of compensation or for another equivalent or for nothing. There are many special regulations on detailed points and many differences of opinion between the schools of law.

6. *Kisāb* *fi mā dūn al-nafs* according to the *Shari'ā*. If any one deliberately (with *'amd*, opposite of *ḥisāb*; cf. *KAT.*, I, 5) and illegally (this excludes the wounding of one who tries to murder or injure or rob a fellow-man, if it is not possible to repel him otherwise; it is for example permitted to strike someone in the eyes or throw something in the eyes of a man who forces his way into another's house without permission) has inflicted an injury, not fatal, which could be inflicted on the *doer's* person in an exactly similar way (what is meant by this is very fully discussed in the *Fikḥ* books), he is liable to *ḥisāb* on the part of the wounded man, (except that Mālik makes it be inflicted by an expert), if the conditions necessary for carrying out the *ḥisāb* *fi 'l-nafs* are present with the following modifications: according to Abū Ḥanifa, *ḥisāb* *fi mā dūn al-nafs* is not carried out between man and woman or slaves among themselves, but it is accord-

ing to Mālik, al-Shāfi' and Ahmad b. Hanbal; Abū Hanifa and Mālik further allow no *hiṣāṣ* *fī mīl dān al-nafs* between free men and slaves. According to Mālik, al-Shāfi' and Ahmad b. Hanbal, this *hiṣāṣ* is inflicted for one on several, but not according to Abū Hanifa. A sound limb may not be amputated for an unsound one; if the guilty person has lost the limb, there can of course be no *hiṣāṣ*. In the case where he loses it after committing the deed, there is a corresponding difference of opinion, as in the case of his death before the execution of *hiṣāṣ* *fī l-nafs*.

The further regulations correspond to those quoted in section 5.

7. If retribution is not permitted or if the person entitled to *hiṣāṣ* voluntarily renests his claim, compensation may nevertheless be demanded; for an unlawful slaying, the blood money (*diya* [p. 1]) is to be paid to the avenger(s) of blood, in an unlawful but not mortal wounding, according to the particular case either the full *diya* or a definite part of it or a contribution defined by the law (*arsh*) or a percentage of the *diya* laid down by the judge (the so-called *ḥukūma*) to the injured person; all this, of course, on the supposition that the slain or wounded man was a free man. If he is a slave, his value must be made good. If the culprit is a slave, his owner has to pay these contributions for him; he can however escape by handing over the slave (parallel in the Romano-Celtic institution of *innoxam delicti*, cf. e.g. Girard, *Nouvelle Revue Historique* (1887), 440 ff.).

8. Of the regulations of the Shī'a *fiṣḥ* books, which need not be gone into fully here as they are essentially the same as the Sunnī, we need only mention that among the Twelver Imāms, for example, it is taught that if a man has killed a woman, *hiṣāṣ* can be carried out if the wife of the woman pays the relatives of the man the difference between the bloodmoney on each side; an isolated interpretation explains Kūr'ān, II, 173, in that way. Here we can scarcely have a late effect of the Kūr'ānic rule regarding women, as similar calculations are also made in other cases.

9. On the practical carrying out of *hiṣāṣ*, cf. KARL, I, 20, in which we may note that breaches of his regulations are recorded of even the Prophet's companions.

KISĀS AL-ANBIYĀ', the "legends of the pre-Islamic prophets", is the title of several works relating the lives of the prophets of the Old Testament, the story of Jesus, and some other events into which pious heroes or enemies of God are in-

volved (on the etymology of *ḥiṣṣa* = "story", see KISĀS). Very famous and widely-spread books on this subject were the *ʿArāʾis al-maḥallīs* by Abū Ishāq Ahmad al-Thaʿlabī (d. 427/1036) and the different versions of the *Kisās* written down in the name of a certain Muḥammad b. ʿAbd al-Fīdh al-Kisāʾī [see AL-KISĀʾI].

The origins of this type of literature must be traced back to pre-Islamic Arabia. Knowledge of the tales of the Old and New Testaments and the apocrypha must have been transmitted to the Arabs through the Jewish influence in Yalḥrib and through Christian missionary work, the effect of which can be ascertained not only in the regions close to the Byzantine and Sāsānid empires, but also on the shores of the Red Sea and in South Arabia (see Baumstark, in *Islamica*, iv [1931], 552 ff.; Altham and Stiehl, *Die Araber in der Alten Welt*, iv, 306 ff.; v/1, 316 ff.). Mayyā b. Aḥī l-Ṣāli [p. 1], a poet of al-Thāʾif and contemporary of Muḥammad, seems to have made use of some of these oral traditions; there are pieces of poetry ascribed to him dealing with Abraham, Isaac, the Deluge, etc., though their authenticity remains doubtful.

It was the Prophet of Islam who gave to these legends an entirely new meaning, finding the events of his own life reflected in them; his vocation for prophecy, his being rejected by his own people, the impending punishment, which might have meant the destruction of his own people. All these psychological implications of the Kūr'ānic legends, and their didactic aspects, were studied at length by Khalaḥallāh in his book on the Kūr'ānic art of story-telling. From the Muslim point of view, the lives of the pre-Islamic prophets are awful examples (*ʿasār*) warning against the evil fate of those who are disobedient to God and His messengers. Thus the *Kisās al-anbiyā'* became part of universal history, as history in general was often considered as a series of *ʿasār* (cf. ʿIshārāt, *Ṭarḥ*, preface and pre-Islamic period).

The edifying character of the legends became even more stressed when they were separated from historiography; this was, so far as we know, first done by Thaʿlabī. Moreover, Thaʿlabī's narrative is mainly based on the *waṣīṭ*-literature. It must be mentioned that even in modern times the legends retained their importance for edifying sermons, as is proved by ʿAbd al-Wahhāb an-Naḡdīār's compilation, which was published in Egypt in the thirties of this century. The wide-spread and various versions of the *Kisās al-anbiyā'* which were written down in the name of al-Kisāʾī show another form of this type of literature; they are the result of the imaginative art of story-telling cultivated by the popular narrators (*ḥuṣṣā* [see KISĀS]), and they are an abundant source for the study of the religious feeling and thinking of the average mediaeval Muslim.

The historical sources allude to the activities of the *ḥuṣṣā* since the first Islamic century, but the oldest manuscripts of the popular legends date from the 7th/13th century. In certain circumstances, the activities of *ḥuṣṣā* and the legends of the prophets could acquire a political significance; thus the story about Moses and Pharaoh was used in the anti-Umayyad propaganda, and the early Shīʿis held that the history of the Muslim community was similar to that of the Israelites during Moses' lifetime, the Shīʿis being the equivalents of those few who did not apostatise from the true faith when Moses was up on Mount Sinai.

KIṢH, *Kishmān*, the later *Shahr-i Sāz*, a town of mediæval Transoxania, now in the Uzbekistan SSR and known simply as *Shahr*, but in early times in the region of Soghdia (Ar. *Sughd* [q.v.]). It lay on the upper reaches of the landlocked *Khashka Daryā* in an area where several streams came down from the Sayām and Buttāmān Mountains to the east, forming a highly fertile valley, intersected with irrigation canals. The town lay on the Samakand-Tirmidh high road, two days' journey from Samarkand; after passing through *Kish*, this road continued for four more days' journey to the famous Iron Gate, the Bozgaṭe defile (see *DAR-I AHRANIN*) which guarded the approaches to the Oxus. Further down the *Khashka Daryā* lay *Nakhshab* or *Nasaf* or *Kargh* (see *SARHUR*), a town with which the fortunes of *Kish* were often linked.

Kish was clearly an important town in pre-Islamic Soghdia, and had its own prince. According to Ya'qūbī, *Buldān*, 299, tr. Wiet, 122, at the time of the Arab conquests in the early 2nd/8th century, *Kish* was the chief town of Soghdia and was accordingly, by the common process of applying the name of a district to its main urban centre, actually known as *Sughd* also. It appears in several Chinese sources, e.g. in the travel account of the early 7th century Buddhist pilgrim Hsien-Tsang as *Kie-siang-na*; cf. E. Bretschneider, *Medieval researches from eastern Asiatic sources*, London 1888, I, 82, and Marquart, *Erkenntnis*, 55, 303-4, giving various Chinese renderings of the town's name.

When the Western Turks were defeated in Central Asia by the Chinese invasion of 645-8, the Chinese forces are said to have penetrated as far as *Kish* and the Iron Gate, after which the whole of Transoxania was nominally annexed to the empire and placed under the viceroyalty of Firds, son of the last Sāsānid Yazdgerd III. The raid across the Oxus of the Arab general Sa'īd b. 'Uthmān in 56/676, when according to Tabari, II, 179, the Arabs defeated the Soghdians and captured their city, may well have reached to *Kish* rather than to Samarkand (see H. A. R. Gibb, *The Arab conquests in Central Asia*, London 1923, 19-20, 22). When Qutayba b. Muslim [q.v.] became governor of the East, al-Ḥaḍḍajjāḍ ordered him to "crush *Kish*, destroy *Nasaf* and drive back [the local Soghdian ruler] Wardān" (Tabari, II, 1199). But he was unable in 83/707 to make headway against the Soghdian defending forces and had to fall back on Marw. It was not until 91/710 that he returned to subdue a revolt by the local ruler of *Shāmān* in upper *Caghāniyān* [q.v.], and then marched through the Iron Gate and reduced *Kish* and *Nasaf*. The Arabs seem thereafter to have held on to *Kish* during the period of the Turkish revanche in Central Asia, but the town did rebel in 533/730-1, at the time of the final appearance of a Turkish army west of the

Altai, in the expectation of Chinese aid. However, Abū Muslim's general Abū Dawūd Khālid b. Ibrāhīm killed the local prince or Khākhid (*al-Fākhid*) in the text of Tabari, III, 79-80) of *Kish* at Kandak just north of the Iron Gate, looted his treasures (which included many luxury goods from China) and appointed his brother Tārān in his place (Barthold, *Turkestan*, 196; Gibb, op. cit., 38, 96).

Two or three decades later, in the caliphate of al-Mahdī (158-65/775-85), the *Kish* district figured prominently in the anti-Muslim religious movement of Hāshim b. Hākim, known as al-Mukanna', "the Veiled Prophet of Khurāsān". The revolt began in the Sayām Mountains just to the east of *Kish*, and it was in the *Kish* and *Nasaf* district that al-Mukanna' drew strong support. Nārghakhl states that the first village to join the rebel leader was Sūbāgh in the *Kish* district (cf. Sam'ānī, *Awāḥ*, facs. ed. Margoliouth, f. 326b) under a local leader 'Umar Sābakhī, who killed the Arab *amir* there. *Kish* welcomed al-Mukanna' and supplied him with much wealth, and it was in a nearby fortress that al-Mukanna' finally shut himself up against the Arab general Sa'īd b. 'Amr al-Dīrāshī, dying there in 163/779-80. Even two centuries later, the common people of the *Kish* and *Nasaf* districts were still associated Mubayyida "wearers of white" and waiters of the messianic return of al-Mukanna' (Nārghakhl, *Ta'rikh-i Buhārā*, ed. Mudarris Ridāwī, Tehran ca. 1939, 77-89, tr. R. N. Frye, *The history of Bukhara*, Cambridge Mass, 1954, 65-75; Ya'qūbī, *Buldān*, 304, tr. 132-2; Barthold, *Turkestan*, 199-200; E. G. Browne, *Li, hist. of Persia*, I, 328-33; Gh.-H. Sadighi, *Les mouvements religieux ismaïlites au II^e et au III^e siècles de l'hégire*, Paris 1938, 163-86).

The geographers of the later 3rd/9th and the 4th/10th centuries give good descriptions of *Kish*. The town, whose buildings were of clay and wood, had the typically eastern Islamic tripartite division of a citadel (*ḥukmānī*), an inner city (*madīna d-dhikā*), in which lay the prison and Friday mosque; and an outer city or suburb (*ruḥāḥ*) called al-Musallā, where was situated the *Dār al-Imāra* or government headquarters. In Ibn Hawqāl's time (mid-4th/10th century) the citadel and inner city were both ruinous. The *madīna* had four gates, and the *ruḥāḥ* two. The whole administrative region or *'amal* of *Kish* contained 16 rural districts or *rustāḥs*, stretching up river to the mountains. It was watered by two constituent streams of the *Khashka Daryā*, so, the River of the Fulkers or the Butchers (*Kayṣārī* or *Qayṣārī*) on this ambiguity, present in both the Arabic and the Persian sources, see *Turkestan*, 134, n. 2) and the *Azrūḥ*, and was highly productive, its early fruits and vegetables being exported to Khurāsān. Also stemming from the region were *mannā*, therapeutic substances found in the mountains; red salt (the red rock-salt of the Oxus lands was known since the time of Pliny, see Marquart, *Wohret and Areng*, Leiden 1938, 76-7); and mules and other livestock. Mukaddasai nevertheless comments on the unhealthyness of the place, a judgement endorsed by later travellers. The salaries (*'aḥḥāṣṣa*) of the *Sābīh-Bariā*, the *Kāḍī* and other officials of the Sāmānid administration there amounted to 300 *dirhams* each per annum. The ruinous state of the inner parts of the town show that under the Sāmānids, *Kish* had declined in status and given place to *Bukhārā* and *Samarkand*, so that only the *ruḥāḥ* was occupied and a new town was being built on to it (see ISTAḠRĀḌ, 324; Ibn Hawqāl, II, 470, tr. II, 452-3; Mukaddasai, 282; *Hudūd al-'Alam*, tr. II, 3, § 25-15; *Turkestan*,

134-6; Le Strange, *The lands of the Eastern Caliphate*, 469-70).

In the period of the Karakhanids and Saljuqs, little specific is heard about Kish, which seems to have continued its decline into secondary status. In spring 1222 the Taoist holy man and traveller Ch'ang-tsun passed through what he calls Kie-shi on his way from Samarqand to Cingia Khān's encampment south of the Oxus; and in autumn 1255 Hulegü met Arghun, governor of Khurāsān, and certain Persian magnates, and spent a pleasant month at Kish (Djawayat-Boyle, II, 521; Bretschneider, *op. cit.*, II, 215, 247; Barthold, *Turkistan*, 452, 483).

Kish revived, however, under the Chaghatayids and Timurids, and Timur himself was born in the Kish district in 736/1336 (according to Ibn 'Arabshāh, at a village called Khōdja-Nāghān). Since the mid-7th/13th century, the region had apparently been occupied by the Barīds tribe of subsequently Turkicised Mongols, from whom Timur sprang and from whom he derived much support in his struggles to achieve power in Transoxania (cf. Barthold, *Ulugh Beg*, in *Four studies on the history of Central Asia*, II, London 1958, 14-16). He seized control of Kish from the chief Hūghū Barīds in 762/1360, and used it and the Kish tribesmen for further expansion. Timur's fondness for the Kish district perhaps depended less on a sentimental feeling for his birthplace than on his need to draw on the support of the Barīds there; after Timur's death, these were a numerous element in Ulugh Beg's army during his campaign into Mogholsistan of 824/1425. In 782/1380 Timur made Kish his summer residence and the second capital of his empire after Samarqand. He rebuilt the town, constructing a *madrasa* and a mausoleum for his dead first-born son Dshāngir, and above all, a splendid white-walled palace, the Ak Sarāy. This new importance of Kish doubtless accounts for the detailed description of K'o-shi in the Chinese Ming annals, which expatiate on its fine palaces and mosques; and the Spanish traveller Clavijo, who passed through Kish in 1404, mentions the still-unfinished mosque of Timur there (Sharaf al-Dīn Yazdī, *Zafar-nāma*, Calcutta 1887-8, I, 4, II, 28, 28; Bretschneider, *op. cit.*, II, 275-4; *Bābur-nāma*, tr. Beveridge, 83-4).

It is in the post-Mongol period that the old name Kish was gradually supplanted by that of Shahr-i Sabz "the green city". The 8th/14th century was the transition period; the Chaghatayid usurper Būyān Kuli Khān struck *dhimars* at Shahr-i Sabz in 752/1351, whereas other coins of his have Kish as the mint named on them. But the old name still persisted in literary usage for some time, since Bābur uses Kish as the primary name for the town (*Bābur-nāma*, loc. cit. and *passim*). The new name must derive from the greenness of the whole oasis, as Yazdī states, and was applied by the local people to the whole area, as well as to the town; local legend also gives other, fanciful explanations for the name. The identification of the recent Shahr-i Sabz with the older Kish seems fairly conclusive.

In the time of the florescence of the Özbek Khāns, the towns of Shahr-i Sabz and Kitāb just to its north were often semi-independent under a *beg* of their own. It was therefore the constant ambition of the Khāns of Bukhārā in the 18th and 19th centuries to bring Shahr-i Sabz under their own control, although the desert to the west and the mountains to the north acted as effective barriers against attacks from the directions of Bukhārā and Samarqand respectively. In the 19th century, the Mangit Khāns

Haydar Tūra, his son Naṣr Allāh and the latter's son Murtaḍā al-Dīn all repeatedly tried to reduce Shahr-i Sabz, and in 1856 temporarily captured it. It only lost its virtual independence in 1870, when the Imperial Russian General Abramov was sent by Kaufmann against it. He besieged Shahr-i Sabz, and captured it after fierce resistance. The Beg fled to Khokand, and the Russians handed over Shahr-i Sabz to the Khān of Bukhārā. See E. Schuyler, *Turkistan. Notes of a journey in Russian Turkistan, Khokand, Bukhara and Kuldja*, London 1876, I, 243 ff., II, 62-76 (who estimated the population of Shahr-i Sabz at approximately 20,000 and that of Kitāb at 15,000), and F. H. Skrine and E. D. Ross, *The heart of Asia, a history of Russian Turkistan and the Central Asian Khanates from the earliest times*, London 1899, 214-15, 220-20, 256.

In the 20th century, Imperial Russian and then Soviet scholars have shown considerable interest in the place and its antiquities, and a full-scale archaeological and architectural survey was commissioned in 1942; special attention has been directed to the imposing ruins of Timur's Ak Sarāy, to a mosque built by Ulugh Beg and to the two buildings known as the Dār al-Sayyda and the Dār al-Tilāwa. For a detailed account of these and the other surviving monuments, see M. E. Masson and G. A. Pugachenkova, *Shahri Syabz pri Timuri i Ulug Beku*, in *Trud' Sredneaziaticheskogo konvokatsionnogo Universiteta*, xlix (Tashkent 1953), 37-46, Eng. tr. J. R. Rogers, in *Iran, Jnl. of the British Inst. of Persian Studies*, xvi (1978), xvii (1980), and also *BSE*, xlviii, 557-8.

KISHLAK (tr. < *kish* "winter"), winter quarters, originally applied to the winter quarters, often in warmer, low-lying areas, of pastoral nomads in Inner Asia, and thence to those in regions like Persia and Anatolia into which Türkmen and others from Central Asia infiltrated, bringing with them their nomadic ways of life; *Kishghari*, *Dizda fughat al-tark*, tr. Atalay, I, 464-5, defines *kishlak* as *al-mughat*. Its antonym is *yaşlak* "summer quarters" (< *yay* "spring", later "summer"), denoting the upland pastures favoured by nomads for latening their herds after the harsh steps or plateau winters (cf. Radloff, *Vorwerk eines Wörterbuchs der Türk-Dialecte*, II, 837-8; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 670, 672-3, 980-1).

The basic terms *kish* and *kishla* "to spend the winter" are ancient Turkish ones, appearing in the Orkhon inscriptions. In the Chaghatay Turkish of Central Asia, the sense of *kishlak* evolved from that of "the Khān's residence, winter quarters of the tribe" into the additional one of "village". Within the Iranian world, the word spread into such tongues as Kurdish, Pashto and the Pamir languages; through Ottoman Turkish, it spread into Balkan languages, but here with the derived Ottoman sense of "barracks" and the form *kışla* (G. Doerfer, *Türkische und Mongolische Elemente im Neupersische*, iii. *Türkische Elemente im Neupersische*, Wiesbaden, 1967, 479-81, No. 1496). This meaning has in fact passed into the Arabic colloquials of Syria and Egypt, as has also that of "hospital, infirmary", so that in Egyptian Arabic we have both *fughla* "barracks" and *kishla* "hospital" (S. Spicq, *An Arabic-English vocabulary of the colloquial Arabic of Egypt*, 486, cf. Dozy, *Supplément*, II, 351).

In Arabic, we find such terms for "winter and summer quarters" as *mughat* and *mayfi*, e.g. in the 4th/10th century geographers (the original sense of

the name for the Umayyad palace in Jordan, *Mshatta* [s.v.], is presumably that of "winter residence", *mushatta*).

In Persian, approximate synonyms to *Khizān* and *yaylāh* are *sardis* (lit. "cold region") and *garmsir* ("hot region"). But as well as denoting the seasonal pasture grounds of nomads, these Persian words were early used as geographical terms to denote, on the one hand, cooler, temperate highland regions, and on the other hand, hot, desert-type or sub-tropical lowland climates. Already by the time of the classical Arabic geographers, these topographical terms had been borrowed into Arabic, e.g. by Ibn Hawkal and Mukaddas. Thus the geographers use *garmsir* or its arabised form *gharm*, pl. *ghuram*, for the hot, coastal region of the Persian Gulf shores and the regions bordering on the great central desert, and *sardis*, arabised form *sard*, pls. *surad* and *masarid*, for the mountainous Zagros hinterland of Fārs and Kirmān (cf. Le Strange, *The lands of the Eastern Caliphate*, 249). This distinction is carried further into the realm of their characteristic products, called by e.g. Mukaddas *al-ghayyā' al-mutadallilān* "products of the two opposing regions" (cf. A. Miquet, *Ahsef at taqdim ... traduction partielle*, Damascus 1963, Glossary 390, 404-5), and of local populations (cf. the *Djurmūniyya*, inhabitants of the part of Kirmān bordering on the Straits of Hormuz, attacked by 'Adud al-Dawla's forces in 360/960, Miskawayh, in *Eclipse of the 'Abbasid caliphate*, II, 299, 359, tr. v, 321, 392).

KISHM (*Djāzira-yi Kishm*, or in Arabic, *Djāzira al-Tawila*, "the long island") is the largest island in the Persian Gulf. It lies off the southern (Lāristān) coast of Persia between Ling and Bandar 'Abbās [s.v.], and is separated from the mainland by Clarence Strait, the width of which varies from three to twelve miles. The island measures nearly 70 miles in length, from north-east to south-west, and an average of seven miles in breadth (20 miles at its widest point). Its general formation is that of an eroded, sloping plateau, inclining northwards from a sharp, rocky scarp on the seaward side. The highest point, almost in the centre of the island, is 2,300 feet.

Kishm now is virtually a desert, though it once produced grain, vines, fruit and vegetables in quantity. Salt is still mined from the great salt caverns, and there are workable deposits of sulphur and ferrous oxide, along with some naphtha springs on the south coast, near Salikih. The population, some few thousand souls, mostly Arab and Sunni, lives by fishing, limited cultivation and salt-mining. Kishm town, at the north-eastern tip, is the only populated centre of any size.

The fleet of Alexander the Great, under the command of Nearchus, anchored at Kishm on its voyage from the Indus to the Euphrates in 326 B.C. The sporadic references to Kishm that appear in the next dozen centuries or so tell us nothing of its history. By the middle ages it was a dependency of the kingdom of Hormuz [s.v.], and it remained so until Hormuz fell to Portuguese in 921/1513. When the Portuguese were driven from Hormuz by Shāh 'Abbās I, with the assistance of ships of the English East India Company, in 1031/1622, Kishm was incorporated in the Šafawid empire. It was occupied in ca. 1132/1719-20 by Maskat Arabs who were in turn expelled by Nādir Shāh in 1150/1737-8. Some time after his death in 1160/1747, Kishm fell under

the control of the Banī Ma'īn (or Mu'ayn) Arabs, who held it, along with Bandar 'Abbās, in farm from Karīm Khān Zand (regn. 1163-93/1750-79). They retained possession of the island, despite attempts by the Kāwāsīm [s.v.] of Ra's al-Khayma and Linga to dislodge them, until 1208/1793-4 when Kishm, together with Bandar 'Abbās and Hormuz, was conquered by the Āl Bū Sa'īd ruler of Maskat, Sulṭān b. Ahmad. He was afterwards confirmed in possession of Bandar 'Abbās by a *firmān* from the Kijār court, granting him the lease of the town and its dependencies in return for an annual rental.

In 1219/1804-5 the Maskat garrison was evicted from Kishm by the Banī Ma'īn and the Kāwāsīm in combination. Subsequently, the Banī Ma'īn joined the Kāwāsīm in piratical attacks upon British-Indian shipping, and in reprisal their stronghold at Lāt, on the northern coast of Kishm, was attacked and destroyed in Shawwāl 1224/November 1809 by the British expeditionary force sent from India to subdue Ra's al-Khayma and the other Kāsimi ports. After the reduction of Lāt, Kishm island was returned to the authority of the ruler of Maskat, now Sa'īd b. Sulṭān (1221-73/1806-56).

Ten years later, after the second expedition to the Pirate Coast, a British military detachment was stationed on Kishm, from Shawwāl 1235/July 1820 to Rabi' II 1238/January 1823, to keep watch on the Kāwāsīm. The Persian government objected to its presence on the grounds that Kishm was Persian territory. Sa'īd b. Sulṭān, however, maintained that his father, Sulṭān b. Ahmad, had acquired title to Kishm by right of conquest, and that the island had passed to him in full sovereignty. It was not listed among the dependencies of Bandar 'Abbās in the original *firmān* granting the lease of the town to Maskat; nor was it mentioned in any of the annual receipts for the rental of Bandar 'Abbās. When the British detachment was withdrawn from Kishm—because of the island's unhealthiness and the danger of the detachment's becoming involved in military operations on the Arabian mainland—the sovereignty issue was left unresolved. In Rabi' II 1239/December 1823 a stores depot for the Gulf squadron of the Bombay Marina was established at Basidū, at the western end of Kishm, without protest from the Persian government.

The Maskat lease of Bandar 'Abbās and its dependencies was renewed in Shāhān 1272/April 1856, shortly before Sa'īd b. Sulṭān's death. Kishm and Hormuz were declared to be Persian islands, and were classed as "dependencies" of Bandar 'Abbās. The lease, which was restricted to Sa'īd and his sons, was terminated in 1283/1866-7 after Sa'īd's successor, Thuwaynī b. Sa'īd, had been murdered by his son, Salīm. A new lease of eight years' duration was awarded to Salīm in Djumādā I, 1285/August 1868, only to be rescinded two months later when Salīm was overthrown. Despite attempts by Turki b. Sa'īd after his accession in 1288/1871-2 to renew the lease, it was never granted again.

The British stores and coaling depot at Basidū fell into gradual disuse, and it was finally abandoned in Muharram 1354/April 1935 to bounture the wishes of Ridā Shāh.

KISHN, a small town on the south coast of Arabia, some 40 miles west of Ra's Fartak. Formerly it was the mainland capital of the Mahri sultanate of Kishn and Sukūtra (Socotra), which up to 1387/1967-8 formed part of the Eastern Aden Protectorate. After that date it was designated the sixth governorate of the People's Democratic Republic of Yemen.

The inhabitants of Kishn live mainly by fishing, pastoralism and trading, the principal exports being frankincense, dried fish and salt. The ruling family, now dispossessed, was the Bin 'Afrāz clan of the Mahra. The reigning sultan, from the senior branch of the family, traditionally resided on Sukūtra, while the head of the cadet branch acted as his deputy at Kishn.

Kishn was several times raided by the Portuguese during their operations off the Hadrami and Mahri coasts between ca. 929/1522-3 and ca. 956/1550-1. The period of Portuguese activity coincided with a successful war of conquest by the Kaghiri sultans of Shihir against the Mahra, which culminated in the capture of Kishn in 952/1545-6. The Bin 'Afrāz appealed for help to the Portuguese, who responded by expelling the Kaghiri from Kishn, reputedly in Safar 955/April 1545.

A revival of Ottoman interest in South Arabia after 1287/1870-2 led the British authorities in Aden to secure an undertaking from the sultan of Sukūtra and Kishn in Jhu 'l-Hudjja 1292/January 1876 not to alienate Sukūtra or its island dependencies to any foreign power. A treaty of protection followed in Rabi'ab 1303/April 1886, which was extended in Sha'bān 1305/May 1888 to include Kishn and the mainland dependencies. The treaties lapsed when British rule over Aden colony and protectorates ended in 1387/1967-8.

B. Seely, *The Portuguese off the South Arabian coast*, Oxford 1963, 54, 61, 71-2, 80, 102-2, 108-10, 155-6. (J. B. KELLY)

KISMA (A.), **KISHMET** (T.), a term used for "fate, destiny". In Arabic, *kisma* means literally "sharing out, distribution, allotment", and one of its usages is as the arithmetical term for "division of a number". It later came to mean "portion, lot", and was then particularised to denote "the portion of fate, good or bad, specifically allotted to and destined for each man". It is in this fusal sense, and especially via Turkish, that *kismet* has become familiar in the West as a term for the fatalism popularly attributed to the oriental (the first attestation in English being, according to the Oxford English Dictionary, in 1849; see also R. Lohetsch, *Etymologisches Wörterbuch der Europäischen... Wörter orientalischen Ursprungs*, Heidelberg 1927, 95, No. 1287).

As noted by H. Ringgren, the noun *kisma* does

not occur in the Kur'an in this sense (*Studies in Arabian fatalism*, Uppsala-Wienbaden 1955, 106), but only in its basic sense of "division, apportionment" (IV, 9/8, LIII, 22; LIV, 28). In a verse like XVII, 14/13, the word *ḥayr*, originally "bird of ill omen", seems to convey the idea of a man's personal destiny as decreed by God (elsewhere in the Kur'an, this word means rather "evil augury"), cf. Ringgren, *op. cit.*, 87-9; and T. Fahd, *La dévotion arabe*, Leiden 1966, 218, 436-8, 518). Concerning the more usual terms of early Islamic theology and philosophy for "determinism, predestination", see *kāḍ* and *al-kāḍ* 'WA' 'L-KADAR; however, it should be noted that *kisma* makes an appearance in Arabic poetry of the 1st century A.H. ('Umar b. Abi Rabi'a, [Jamil] in the sense of "the share of human life allotted to a man by God" [Ringgren, *op. cit.*, 154, 156]).

By Ottoman Turkish times, *kismet* was less a theological and philosophical term than one denoting a general attitude of fatalism, the resigned acceptance of the blows and buffetings of destiny (the same concept being often expressed in Persian and Turkish poetry by words like *fatah*, *garān* and *ḥayr* in reference to the blind, irrational influences of the heavenly bodies of mankind). The climate of popular belief in fate and chance is well seen in many stories of the *Thousand and one nights* (see *ALF LAYLA WA-LAYLA*) and in much of the Perso-Turkish moralistic literature, thus these attitudes loom large in the stories in chs. v and vi of Sa'di's *Bustān*, on *riḍā* "acceptance" and *ḥinā'at* "contentment" respectively.

Also in Ottoman usage, *kismet* was a technical term of the *hassadilik*, the official department of state responsible for the division of estates between the various heirs, the military branch of this being the *kismet-i 'ashemiyye mahkemesi*. For this service, a fee called the *na'im-i kismet* was exacted; for further details see *ĞARĀM*.

KISRĀ, Arabic form of the Persian name *Khusrāw*, derived from Syriac *Kusrō* or *Kōsrō* by the 6th century A.D. The consonant and vowel changes occurred because *ḥ* was used for both *h* and *kh* in Syriac, and used here for the Persian *kh*, became *k* in Arabic. The first *w* became *v* by vowel dissimilation in Syriac, and the final vowel became an *alif mahshura* by approximation to the *fiḥ* form. Arabic lexicographers said there was no Arabic word ending in *vāw* with *ḍamma* after the first consonant, so *Khusrāw* was put in the *fiḥ* form and the *kh* became *k* to show that it was Arabicised.

Although *Khusrāw* occurs in Arabic, *Kisrā* was usually employed for proper names, especially for the Sāsānid rulers Kisrā Anāshirwān (531-79 A.D.) and Kisrā Aparwiz (592-628 A.D.). Because these two Kusrās dominated the late Sāsānid period and Arab memories of it, their name was identified with the dynasty. Arabs came to regard Kisrā as the name (*ism*), surname or title (*laqab*) of Persian kings, the Sāsānid dynasty as the house of Kisrā (*al Kisrā*), and crown lands in 'Irāq as *arḍ Kisrā*. Women of the royal family were called "daughters of Kisrā". By the 2nd/8th century, the tendency to call all Sāsānid rulers Kisrā produced the broken plurals *akāsira* (the one most commonly used), *akāsira*, *akāsir*, and *akāsir*, all contrary to analogy.

Kisrā personified Sasanid royalty for the Arabs, who viewed him with an ambivalent combination of envy, awe and fear. They called Ctesiphon *Madā'in Kisrā*, the great audience hall there the *Iwan Kisrā*, the defensive ditch the *Khandaḥ Kisrā*, spoke of the crown, treasure, dazzling carpet, sword and armour of Kisrā, and associated polished manners, lavish hospitality, *haute cuisine*, golden tableware and the arbitrary exercise of power, with his court. Kisrā provided a symbol for Arab assimilation to Persian high culture, for feelings of common nobility, and represented the Persian monarch in lists of kings of the world and in the murals at Qusayr 'Amra. He was a poetic symbol of past glory and of fate that overtakes even mighty kings.

Kisrā's worldliness contrasted with Muslim spiritual values. *Ḥadīth* emphasised Muḥammad's lack of pretence, his avoidance of royal trappings, and his followers' greater respect for him compared to Kisrā and other rulers. Kisrā tore up Muḥammad's letter inviting him to Islam, and *ḥadīth* promised the destruction of Kisrā and Kayzar and that Muslims would spend their treasures. In the simile ascribed to Muḥammad, Kisrā is the main enemy of Islam (the head of the hostile bird).

A fictionalised Kisrā emerged by the 3rd/9th century as a vehicle for edifying tales, a person who conversed with a Bedouin on the virtues of camels or exchanged the lethal gift of a leopard for an eagle with Kayzar. He was quoted as a source of proverbs and someone who knew these stories might be nicknamed "Kisrā".

Relative nouns *Kisrawī*, *kisrī*, and *kisrawand* were formed from Kisrā. The form *kisrawandī*, directly from Persian, referred to the greatest of the *akhshars* and meant a kind of drink or a very fine, royal silk used for clothing and used to cover the Ka'ba in the late 1st/7th century.

AL-KISRAWI, ABU 'L-HASAN 'ALI b. MAHMUD AL-ḤIRANĪ AL-TABARĪ, *rahi* of the 3rd/9th century who was also a poet and man of letters. He was the teacher of Ḥārūn, the son of 'Alī b. 'Alī b. Yabūṣ al-Munajjimī, and transmitted historical and literary traditions, and especially on the authority of al-Dīsharī. He was in contact with Badr al-Mu'tadillī (q.v. in Suppl.) and exchanged verses with Ibn al-Mu'tazz. His knowledge of *adab* led him to compose several works, amongst which are cited a *Kitāb al-Khiṣṣ*, a collection of literary traditions, maxims, proverbs and poetry, a *K. al-A'yād wa l-nawādir* and a *K. Muḥāsali al-ḥikmah wa-maḥāsiri al-ḥikmah*. His poetry consists mainly of occasional verses which were improvised. He died at some point between 283/896 and 289/902, although *Ḥiḍḍīl Kharrāṭ*, ed. Istanbul, 1, 705, places his death in ca 330/942-3.

KISSA (أ. pl. *ḥisās*, the term which, after a long evolution, is now generally employed in Arabic for the novel, whilst its diminutive *uḥṣāṣa*, pl. *uḥṣāṣ*, has sometimes been adopted, notably by Maḥmūd Taymūr [q.v.] as the equivalent of "novella, short story", before being inappropiately replaced by a calque from the English "short story", *ḥisṣa ḥisṣa*). The sections of the following article are largely devoted to these literary genres as they are cultivated in the various Islamic literatures, even if the word *ḥisṣa* is not itself used by them. Although some Berber tongues use the Arabic term (*ḥisṣa*), it has not seemed necessary to add a section on the story in that language [see *anapaṣṣ*], but a brief section is devoted to the *ḥisṣa* in Judaeo-Arabic and Judaeo-Berber.

The ensuing article is accordingly divided as follows:

1. The semantic range of *ḥisṣa* in Arabic.
2. The novel and short story in modern Arabic literature.
- 3 (a) The *ḥisṣa* in older Turkish literature.
(b) The novel and short story in modern Turkish literature.
4. The genre in Persian literature.
5. The genre in Urdu.
6. The genre in Malaysia and Indonesia.
7. The *ḥisṣa* and its modern developments in Swahili.
8. The *ḥisṣa* in Judaeo-Arabic and Judaeo-Berber.

1. The semantic range of *ḥisṣa* in Arabic.

Judging by the contents of the articles in the Arabic dictionaries devoted to the root *ḥ-ṣ-ṣ*, one may consider this as the result of a convergence of several different "roots". Among the various meanings shown here, two of them seem to be totally distinct from each other: "to clip the hair, wiggle, etc." (cf. Hebr. **חָצַץ** and words made up of **חָצַץ**) and "to follow the tracks of a man or animal",

Taking into account the realities of Bedouin life, this last sense, to which *ḥiṣṣa* can easily be connected, is certainly old, if not the primitive signification. It is from the verb *ḥaṣṣa* taken in this sense that the name of the *ḥaṣṣ*, pl. *ḥaṣṣay* "a kind of detective responsible for examining and interpreting tracks and marks on the ground" (al Mas'ūdī, *Murūj*, iii, 343 = § 1227; cf. al-'Uṣayrī, *Kāmil al-ʿalīdī* . . ., 'Ammā 1973-4, iii, 85, who points out the use in Jordan of *ḥaṣṣay* with the generally-developed sense of *ḥaṣṣ* al-*ṭhar* [see KIRKĀN]) has evolved. Moreover, the Kur'ān provides two attestations of this old meaning of the root ḥ-ṣ-ṣ. Moses' mother says to his sister *ḥaṣṣihī* "follow his tracks" (XXVIII, 10/11), and in XVIII, 63/64, it is said that Moses and his page boy "followed their tracks back again, retracing them" (*fa radda ʿalā ḥiṣṣihimā ḥaṣṣā*). Nevertheless, the verb *ḥaṣṣa* is most frequently found in the Kur'ān with the derived sense of "to tell a story, narrate", or more exactly, "to give a circumstantial account of some happening, to recount an event by giving all the details successively"; this nuance is usually lost in translation, though it may sometimes be conveyed through an adverb like "exactly". One may note, with repetitions within the same verse, 19 occurrences of this verb: the account is given by God to the Prophet (IV, 162/164, VI, 57, VII, 6/7, 99/100, XI, 102/100, 121/120, XII, 3, XVI, 129/128, XVIII, 12/23, XX, 99, XI, 78), by the Kur'ān (XXVII, 78/76) and by Moses to Ḥuṣayb (XXVIII, 23); Jacob tells Joseph not to recount his dream to his brothers (XII, 3); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35); and God instructs the Prophet to recount "the affair" (VII, 173/176).

In this last verse, the word *ḥaṣṣa*, which has the general sense of "narrative, explanation, report, story" in its five other attestations (III, 55/62, XII, 3, 12, XXVIII title and v. 23), has been translated by "affair". Doubtless one should not neglect the nuance of precision and exactness contained in *ḥaṣṣa*, but it is perfectly certain that the term's sense tends to become attenuated in order to assimilate it to that of *ḥadīth*. It could be perfectly easily substituted for the latter word in at least five occurrences out of 23 (XX, 8/9, LI, 24, LXXIX, 25, LXXXV, 17, LXXXVIII, 1), and furthermore, the verb *ḥaddathā* is clearly equivalent to *ḥaṣṣa* in three verses (II, 71/76, XCIII, 12, XCIX, 4). Also close to *ḥaṣṣa* are *ḥabbar* (XXVII, 7, XXVIII, 29) and especially the pl. *ahḥabbar* (IX, 95/94, XLVII, 33/32, XCIX, 4), and also *nabaʿ*, with 12 attestations out of the 17 in the singular (V, 30/29, VI, 34, VII, 174/173, IX, 71/70, X, 72/71, XIV, 9, XVIII, 12/13, XXVI, 49, XXVIII, 2/3, XXVIII, 21/20 and L-XIV, 5) and 7 out of the 22 in the plural (III, 39/44, 31, 121/120, VII, 99, XII, 103/102, XXVIII, 66 and LIV, 4) corresponding fairly exactly to *ḥaṣṣa* in the sense of "narrative, story, tale". Thus four terms of very different origins converge here in the Kur'ān and tend to assume a common signification, whilst losing at the same time the nuances implied in their original etymologies (see KIRKĀN).

Kissa itself does not appear in the Holy Book, but one can point to some examples in the *ḥadīth* with a general meaning of "thing, affair" (= *amr*, *ḥaṣṣa*), close to one of the meanings of *ḥaṣṣa*; but this term seems however to have kept well its original nuance of meaning in the traditional vocabulary, to judge by the expression *siḥa al-ḥadīth bi-ḥiṣṣatihī* "he cited the *ḥadīth* in all its details, giving it word-

for-word" (Muslin, *Ṣaḥīḥ*, *Ṣaḥīḥ*, *Ṣaḥīḥ*, *Ṣaḥīḥ*, trad. No. 44). The word also very rapidly became a technical term of Arabic grammar. Sibawayh certainly uses the verb *ḥaṣṣa* in the sense of "to narrate" (i, 60) and the noun *ḥiṣṣa* in those of "narrative" (= *ḥadīth*, i, 60) and "affair" (II, 473, 478, 432), but above all he applies it (32 instances) to the idea of "state" (= *ḥāl*; see G. Troupeau, *Lesique index du Kitāb de Sibawayh*, Paris 1976, 270); consequently the expressions *ḥamir al-ḥaṣṣa* and *ḥamir al-ḥiṣṣa* are absolutely synonymous (W. Wright, *A grammar of the Arabic language*, index).

At the moment when Sibawayh wrote his work, the verb *ḥaṣṣa* meant, from the time of the Prophet onwards, "to practice as a popular preacher of sermons and edifying tales" (see § 183), this profession being called *ḥaṣṣ* or *ḥaṣṣay* (see Wensinck, *Concordance*, v, 391-2, 394, 395). The more serious among the *ḥaṣṣay* made a speciality of giving a commentary to their audience on the miraculous events referred to in the Kur'ān and of recounting, in particular, in reference to the lives of the prophets, edifying stories. The *ḥaṣṣay* of the Kur'ānic text was then specialised in meaning, as we have just seen, and replaced, in order to designate the material in the repertoire of the popular religious story-tellers, by *ḥaṣṣa*, pl. *ḥiṣṣa*, without the term having, at least at the outset, the least element of the pejorative in its sense. However, in the 3rd/4th century, al-Djāḥiḥ, following other authors, reserves for *ḥiṣṣa* the sense of "religious tale", but sometimes adds, with his usual irony, some fairly precise nuances of "story full of marvels and somewhat unbelievable", of "myth" and of "traditional explanation of a supernatural happening" (see *Tarbi*, index).

At this period, the *ḥaṣṣay* were already mingling with their discourses stories totally lacking in edification, but it seems that *ḥiṣṣa* did not yet mean a secular tale, and even in the next century, Ibn al-Nadīm does not use the word in the chapter devoted to stories in the *Fihrist*. Moreover, a few decades later, *ḥiṣṣa* appears with the religious sense which it had when used by the first *ḥaṣṣay*, in the title of al-Thaʿlabī's [?] popular work, the *ʿArāʾis al-maʿjālis fī ḥiṣṣa al-anbiyāʾ*; the expression *ḥiṣṣa al-anbiyāʾ* [?] was to become the title of quite a considerable number of works. Despite the precise meaning implied by this latter expression, the lexicographers, who devote quite a lot of space to the root ḥ-ṣ-ṣ, hardly give the precise sense of *ḥiṣṣa* at all. The *LA* limits itself to asserting that the term is well-known, and then glosses it by *ḥabbar*, *ḥadīth* and *amr*, though it does however give a pejorative nuance for *ḥaṣṣ*, in fact equivalent to "words, chatter", opposed to *ʿamal* "action". In the *Maṣṣab*, *ḥiṣṣa* is defined only by *ḥaṣṣa* and *amr*; and in the *Ṣaḥāḥ*, *amr* and *ḥadīth* are further used to gloss this term, whose plural *ḥiṣṣay* would therefore only be used for the *ḥiṣṣa* when it was written (likewise, also, in the *LA* and *Kāmil*). Assuming that we are probably not concerned here with the *ḥiṣṣa al-anbiyāʾ*, this rather enigmatic explanation is probably to be used with a technical sense different from that signalled in grammatical terminology; starting from the meaning of "affair", early attested and found from Kur'ānic times onwards, *ḥiṣṣa* very soon came in fact to mean "a written exposition of an affair or matter, a memoir presented to a judge, a request placed before a ruler, a petition". Quatrenière, in his *Sikḥat mamnuʿa*, i, 236 n. 12, gives a certain number of examples of this meaning and mentions the existence of an official, the *ḥiṣṣa dār*, who was

concerned with such requests (see also Gaudetroy-Demonbynes, *Le Syrie*, p. XLIV; Dossy does not appear to have interpreted the material in the dictionaries relative to the written *ḥissa* in the same way as we have done, since he includes this term in his *Supplément*). Al-Kalkāshandī, in *Subh*, III, 487-8, does not cite the *ḥissa-nār* but provides some details about the manner in which *ḥissas al-maḥallim* were treated.

Since some *ḥissas* began regularly to narrate stories which had no religious character at all, *ḥissa*, without ceasing at the same time to characterise a serious, even a historical narrative (e.g. the 27 mss. called *ḥissat ḥamawā*, "narrative of the expedition of ...") classified by Ahlwardt in his Berlin catalogue) tended to be applied to any story, sacred or profane, and to become a synonym of *ḥikāya*, and secondarily, of *ḥadīth* and *ḥikāba*. As an indication, the above-mentioned catalogue has a total of 226 works beginning with *ḥissa*; that of the mss. in the B.N. of Paris drawn up by G. Vajda has 115 (of which 73 have been restored according to their contents); *ḥikāya* appears there 47 times, *ḥadīth* 22 times and *ḥikāba* 4 times. In the group as a whole, there are certainly some edifying stories (e.g. the *Ḥissat Aḥl al-Kaḥf*), but titles like *Ḥissat Sulaymān wa'a Bilḥīt* or *Ḥissat Taḥawwūd* reveal true romances. In this way, the modern use of the term is to be justified, and this, conversely, has brought about a revival of *ḥissas*, now specialised in the sense of "narration", the narrative genre and the narrative art", leading to the creation of the word *ḥissasī* "narrative" (adj.). (CH. PELLAT)

2. In modern Arabic literature

The modern and technical meaning of this word: "fictional narrative", "novel" has come to be accepted without eliminating the more general, older sense of "story", "account". Furthermore, it should be noted that, in this case as in many others, the neologism has not been immediately accepted and does not cover the same semantic field for all those who use it, even today. From the start, it is seen to alternate with other words.

In an article appearing in *al-Aḥdām*, on 11 May 1881, where the *ḥayyūlī* Muḥammad 'Abdoh drew attention, without otherwise deploring it, to the taste of his contemporaries for the novel, we find the word *muḥawwiyāt*. The definition of the genre remains somewhat hazy since the emigrant reformer included under this heading *Kalīla wa-Dimna* and the stories of traditional *adab* along with the recent translation of the *Aventures de Télémaque* by al-Taḥṭawī and the serial stories then published in *al-Aḥdām*. Besides the borrowed term—which was not long to remain in use—there are words drawn from the Arabic vocabulary which come to mean the same as *ḥissa*. Understandably in the case of works on the borderline of the novel genre, the terminology appears uncertain: the *ʿAḥdām* (1884) of 'Alī Muḥarrak is presented by its author as a *ḥikāya* (story) while Ibrāhīm al-Muwaylībī gives the title *ḥadīth* (talk) to his very interesting *maḥallim*: *Ḥadīth 'Isā b. Ḥishām* (1907). It is all the same curious to note that in 1917 a certain Qubrān Khālī Djabrān, suggesting to the editor of the review *al-Niḥāl* the holding of a competition for the best story—to promote a genre that has proved its worth in Europe—uses the term *ḥikāya* to describe the genre. Little by little, however, *ḥissa* came to prevail, and Tāḥā Ḥusayn was seen claiming back his liberty as a creator and refusing to apply rules whose validity he did not recognise by saying in substance: the *ḥissa*

is taught nowhere, and besides, what I write is not a *ḥissa* but a *ḥadīth* (cf. Sāḥib, in *al-Muḥawwiyāt* / *al-ʿArāḍ*).

In fact, the lack of precision remains, mainly as a result of the differences in length among the various kinds of story. It is possible to account for these without departing from the root ḥ-ṣ-ṣ. For the abstract "narration", "narrative literature" we have *ḥissas*, while the "story" of indeterminate length is called *ḥissa*, the novel being distinguished from the "tale" or from the "novellette" by an adjective (*ḥissa jawīla* in the one case, *ḥissa ḥafīfa* in the other). The range of meanings may be conveyed in a still more precise fashion: a suitable adjective expresses the midway term, the long short story so popular with the British (*ḥissa muḥawwiyāt*), while *uḥṣṣa* (pl. *uḥṣṣas*) denotes the very short story, the short novellette.

But in practice, things are not so simple. The first Arabic story-teller to be universally known, Maḥmūd Taymūr, published successively two collections of stories, calling the first *uḥṣṣas* (*al-Shaykh Ḍaynā wa-uḥṣṣas* 1925) and the second *ḥissas* (*ʿAḥdām Muḥawwīlī wa-ḥissas* 1926). At the other end of the scale, there are some who prefer *muḥawwīya* to *ḥissa jawīla* to denote the novel; this neologism was more specifically reserved at the end of the 19th century to denote a "theatrical piece". Without it being an absolute rule, it may be stated that at the present day *uḥṣṣa* is more frequently used in Syria and Lebanon in the sense of short story, while *muḥawwīya* is preferred in Egypt with the meaning of novel.

Considerations of length are not the only ones to be of relevance. It should also be noted that some have tried to solve the ambiguity inherent in the word "tale" which exists also in English. If one wishes to differentiate the brief, realistic, truthful or plausible narrative (the short story) from a narrative of the same dimensions but imaginative, extraordinary or extravagant (the tale), one must call the latter by the name *ḥissa* (or *uḥṣṣa*) followed by an adjective (*ḥissat ḥayyūlīyya* or *ḥissat ḥayyūlīyya*), while being careful not to use the word *ḥawwīya* in isolation lest it be understood in a non-technical sense and with a pejorative flavour: "a cock-and-bull story".

The birth and evolution of Arabic fictional literature. The modern *ḥissa* owes nothing to Arab tradition. It is linked neither with the folklore of the *Thousand and one nights* nor with tales of chivalry nor with narratives of *adab*. The tradition of classical *maḥāma*, although taken up by two men of imagination and dual culture (Paris al-Shidyāk for *al-Sāḥib 'alī* 1885; and Muḥammad al-Muwaylībī, cf. above, 1907) has left no legacy. It is from Europe that the Arabs have borrowed this literary genre totally unfamiliar to them, sc. the novel.

The press, which has been remarkably prolific in Cairo and Beirut ever since its first appearance there in the middle of the 19th century, has in a short space of time put into circulation stories of various lengths translated from French and English. Some periodicals, like *Ḥadīth al-ʿAḥbār* (founded in Beirut in 1858) publish examples from time to time, others, like *al-Dīwān* (Beirut 1870) regularly devote a part of each issue to such translations, and the same applies to the reviews that the Lebanese resident in Egypt have subsequently launched in Cairo (*al-Niḥāl*, *al-Muḥawwīlī*, *al-Dīwān*). Even the daily *al-Aḥdām* founded in Alexandria in 1875 has its serial story. Furthermore, some weekly or monthly

entertainment publications are entirely devoted to them (*Silsilat al-fuhūkhā*, Beirut 1884; *Muntahabāt al-risāyāt*, Cairo 1894). A certain degree of decentralisation has even been achieved with the appearance of *Silsilat al-risāyāt al-ʿuthmāniyya* at Tanṭā in 1908 and *al-Samir* at Alexandria in 1911. The second stage is the editing of the translated novels in volumes.

The essential object of this type of literature is to entertain. Publishers and translators search out stories of extraordinary adventures, of unhappy love-affairs, of poignant grief, rather than works of established quality whose authors are universally known. Fidelity to the original text was not regarded as an obligation in the period where the translator most in demand, Tanyūs ʿAbdūh, a Lebanese who had settled in Egypt, was renowned for the imagination which he put into his work. The tendency was to adapt rather than to translate.

Quite naturally "original" composition has followed translation-adaptation and obeyed the same rules. It has even in some cases been exactly contemporary with it, and there are times when the translator is at the same time as author. This was the case with Salīm al-Bustānī, who published no less than five original works in serial form between 1870 and 1884 in *al-Dīnīn*, at the same time as he was translating French novels. His sister Alice and his cousin Saʿīd were also involved in the same sort of work. In serial stories of this kind as well as in the copied models there abound *scènes de théâtre*, unexpected meetings, unsuspected relationships, etc. In order to avoid offending a very sensitive public moral sense, the scene of the plot still tends to be exotic, or if the action takes place in Egypt, the whole or the majority of the cast of characters must be foreign (*Faḥāt al-ashām* by Muḥammad Maḥmūd, *Faḥāt Miṣr* by Yaʿqūb Sarāf). Saʿīd al-Bustānī discovered to his cost the powerful force of this unwritten rule: a resident of Egypt for ten years, a friend of Shaykh ʿAbdūh, this Lebanese was nevertheless savagely criticised in conventionally-minded circles for having published *Ḥāt al-ḥayr* (1894) which claims to show the disastrous results of an ill-matched marriage... In a wealthy family supposedly living in Alexandria

Obliged to show some degree of discretion, limited in its intellectual ambitions, this newly arrived genre would doubtless never have interested an enlightened Arab public had it not found sponsors and promoters. Shaykh ʿAbdūh took an interest to it, as has been seen, because he reckoned it capable of having a reformatory effect, of carrying a well-formulated message. For Dīrjīl Zaydān (1862-1914), it was the ideal didactic means to put into the service of history, and this Christian author of a *History of Islamic civilisation* therefore brought to the novel the caution of the scholar. Whereas Dījānī Mudawwar had published in Beirut in 1881 a single historical novel about ʿAbbāsīd Baghdād, he was to publish twenty-four such novels between 1889 and 1914, of which the majority appeared in serial form in Cairo in the review *al-Hudā* which he edited. Serious information being in his view the essential part, the amorous element of the plot would serve only to lure the reader; this element seems therefore to be somewhat stereotyped from one volume to another, but at least, the construction is solid and the language clear and precise.

After reason, sensibility. It would be impossible to overestimate the role of Munfalih (1876-1924) for, in his two collections (*al-Nasāʾit* (1910-1921)

and *al-Aḥwāt* (1915)), he superbly arabises French romanticism to the point where, under his pen, translations, adaptations and original creations seem to flow from the same source. Having found a style and a tone, he knows how to stir emotions while dealing, in a context of traditional morality, with the problems posed by the intrusion of European civilisation into the modern Orient. At the opposite extreme as regards content but with a similar degree of emotional intensity, is the message of "The American" Dūbrīn (1883-1931). Tears flow in abundance here too, but the romanticism is noble, protesting at the injustice practised by the powerful of this world as observed in the microcosm of the Lebanese village where the mayor and the priest seem to be constantly united in the effort to prevent the children from loving each other; *al-Aḡṣāḥ al-maḥassira* (1912) hardly deserves to be called a novel, it is rather a long poem in prose devoted to an unhappy love affair of the author. "Broken wings" and "Tears", these are the two works, of Egypt and the *meḥfīr*, which have moved or irritated several generations of Arabs all over the world.

But the first Arabic novel owes nothing to Manfalih or to Dūbrīn. It was written in Paris—and perhaps partly in Geneva—by a young Egyptian student, Haykal (1888-1956) was feeling homesick when he wrote *Zaynab* (1914), and it is the Egyptian countryside that he attempts to re-create with its poetry, its variety, and also its characters, simple and poverty-stricken. But this evocation is centred around two victims of injustice in Egypt, so: the peasant and the woman. Even though the first edition is signed under the pseudonym *Miṣri Fāliḥ*, the poverty of the farm worker hardly holds our attention, while the fate of two women, equally unfortunate, illustrates the sorry condition of an antique sex and recalls the courageous protest of Kāsim Amīn at the beginning of the century. The hero ultimately makes his indictment: life has no appeal in a land where youth passes too quickly, where love is not allowed, and where the individual has no time to look at what is beautiful.

Even if the problems of writing and construction are not always perfectly solved, even if the influence of *La nouvelle Héloïse* of Rousseau is too obvious, this rich composition does not only have a historical interest, for it conveys an authentic tone, that of a desperate confession.

In spite of these promising beginnings, other novels were not to appear for a further fifteen years. In the interval, it is only short story writers who make a name for themselves, putting forward within the dimensions of shorter narratives technical solutions borrowed this time from the best European specialists. The stories that they tell, on the other hand, always deal with the reality that surrounds them. In "wringing the neck of rhetoric", these young pioneers feel that they are laying the foundations of a new literature. The first of them,—and paradoxically the only survivor—Miḥāʾīl Nuʿayma (born in 1886) began publishing his stories at the beginning of the First World War in *al-Sāʾih*, then in *al-Furūḡ*, the two reviews edited by Syrian Lebanese settlers in New York. The best, later collected in an anthology (*Kāna maḥāḥa*, Beirut 1937), are striking for their simple language, the transparency of the characters, the significant choice of situations—where ancestral customs like the journey to America play a central role—and perhaps even more for the firmness with which the story is

told, a story where, however, emotion and humour make themselves discreetly felt. On Egyptian soil, slightly later, Muḥammad Taymūr (d. 1921) published in *al-Suṣūr* some stories of which the best-known dates from 1919—an important year for Egyptian nationalism of which this writer was a passionate advocate. Add to this element the interest taken in social injustice and in poverty, and we have the principal source-material of the stories of Muḥammad Taymūr and of his comrades-in-arms. This expression is not an exaggeration when applied to his brother Maḥmūd, who describes himself as taking the torch from the hands of his brother, dead at the age of thirty. It is without doubt Maḥmūd Taymūr (d. 1974), the greatest story writer of the time, who has exerted the strongest influence in Egypt and in the other Arab lands, one of the most prolific of modern Arab writers and one of the most widely-translated too. Following the school of Maupassant—to whom his brother introduced him—he learnt to construct a plot firmly centred on a character who is bizarre to say the least, or on an exceptional incident. But he does not ignore the dominant themes of Egyptian social life, to which the brothers 'Ubayd and Maḥmūd Ṭāḥir Laṣṣīn (d. 1955) also come to apply themselves, each according to his temperament and his special talent, Laṣṣīn being of the three the one whose palette would appear to be the best equipped both for varieties of subject and of resources of expression. Let it also be noted that this writer has written one of the few Arabic novels to appear before the Second World War. *Ḥawāṣṣ* *biḥ* *Adam* ("Eve without Adam"), 1934.

Furthermore, it may be appropriate to note that this novel is distinct from the others in that its subject (the pitiable failure of a feminist school-teacher who believed in love and social advancement) owes nothing to the life of the author, while Ṭāḥā Ḥusayn (d. 1973) *Ibrāhīm* 'Abd al-Kādir al-Māzīnī (d. 1949), al-'Akkād (d. 1964) and Tawfīq al-Ḥakīm (b. 1902) had written nothing before 1939 but works largely autobiographical in character. What these men have in common is that they are not true imaginative writers, but rather they are part of the Egyptian intellectual élite. It should therefore surprise no-one that they look for material for their stories in their own experience. Besides, for these great thinkers of their generation also, this is the means of assessing the exact condition of their country, for carrying on, in short, the worried analysis conducted by Ḥaykal in *Zaynab*. As chance would have it, the year 1929 saw both the second edition of this novel and the publication of the first part of Ṭāḥā Ḥusayn's *al-Ayyām*. The accuracy in tone of this book, written with finesse and modesty, explains its immediate success in Egypt and the rest of the world; one feels that the blind boy struggling in a world that is hostile or indifferent or stupid symbolises more than an individual destiny. Even before the appearance of the second part of *al-Ayyām*, *Adīb* (1935) represents a split in the personality of the author, whose Egyptian half looks on helplessly at the folly and wreck of the Europeanised part.

The debate between the two civilisations—with their customs and culture—also interests Tawfīq al-Ḥakīm in two of his autobiographical novels, while in the two others (*ʿAṣrat al-ṣūf*, 1933; *Yawmiyyat naḍīb fi 'karyūf*, 1937) we find a number of the elements of the doers opened on Egyptian society by the short story writers. Superficially,

the enquiry is less emphatic, there are times when the reader roars with laughter, but do not the laughter and the careless airs conceal a deep disquiet into which the faint-hearted lover and the Deputy Prosecutor are both plunged?

In drawing his self-portrait in *Ibrāhīm al-Ḥalīb* (1931), Māzīnī speaks of disappointments in love which may be fictitious, but he is most certainly honest when he shows himself irresolute and easily discouraged. As if in spite of himself, he gives us suggestive insights into the three milieux that he sets himself to evoke and, when he does not overstep the bounds, his glibness does not lack charm.

Outside Egypt, a single novelist deserves mention for this period; the Lebanese Tawfīq Yūsuf 'Awwād, who published *al-Raqīf* in 1939. It is the Lebanon of the period of the First World War, the Lebanon "in the hour of the Turk", ravaged by famine, that we find here, the repression of nationalist movements coming to an end on the gallows of Beirut's Place des Canons. With a great deal of sobriety, a very sure sense of crowd-scenes, a properly romantic conception of history and politics, here is a writer who knows how to give to his narrative a depth which nobody else, Ḥakīm included, has yet succeeded in obtaining.

'Irāq at that time was still at a hesitant stage, with Maḥmūd Ahmad al-Sayyid (d. 1937) publishing from 1921 onwards, in Cairo, stories which are admittedly rudimentary but where the effects of Turkish rule on 'Irāqī society are succinctly shown; with Anwar Shāḥal (first collection of stories 1930), the influence of Taymūr is clear. In his stories and those of 'Abd al-Majīd Luṭfī (b. 1908), influenced by Tolstoy and Gorky, one feels that the seeds of a promising harvest have been sown in 'Irāq.

Among the pioneers mentioned above, a certain number have lived on after the war. Their prestige has increased and they have attained immortality. Young Arabic literature has found in them its ancestors, its sponsors, its classics, it could be said. Each of them otherwise remains imperturbably faithful to his style. It is still the same self-centred man dissatisfied with home and love that Māzīnī indulgently analyses (*Ibrāhīm II*). From an incident of everyday life, the Lebanese Mikhā'il Na'ayma draws the material of an intimate diary (*Maḥāḥakāt al-arkak*, 1949), where meditations on good and evil, the solitude of the soul and its mystical vocation, count more than the narrative plot. In the same way that Tawfīq al-Ḥakīm hardly descends from his ivory tower to stigmatise feminine duplicity and to comment ironically on the sacred bonds of marriage (*al-Rubū' al-muḥabbad*, 1944), Ṭāḥā Ḥusayn pursues his dialogue with destiny, but through interposed characters, in a tragic family chronicle with slow tempo (*Shādīrat al-buṣā*, 1954). The famous Maḥmūd Taymūr still composes short stories—his last collection appeared in January 1967—but he also writes novels where he expresses in the same pure language the qualities for which he is well known; very close to his times in *Idā 'al-ḥidā' ayyūd* 'b ḥubb (1950), he is halfway to fantasy in *al-Maḥabib al-nur* (1960). In this group, it is without doubt Ḥaykal who has produced the least expected work for *Ḥakāḥāt ḥaykal* (1956) presents, on the eve of his death, a portrait of a woman that contrasts totally with the *Zaynab* of his youth; this cold, dominating female really existed, so well-informed contemporaries attest.

But the new-comers are henceforward very numerous, some of them belonging to Arab countries not

mentioned above. Reviews have been founded in Egypt of course, but also in Bahrayn, where a literary periodical of this name appeared when the first printing-press was installed in the Gulf (1939), most of all in Beirut where *al-Adab*, founded in 1953, and *al-Adib* gave young writers the opportunity to become known, in Tunis where, since 1944, the review *al-Mabqūh* awards a prize (*Bakāwān*) to a writer every year. Henceforward, Arabic fictional literature is sufficiently vigorous and varied to convey trends which are to be noted elsewhere in the world.

The romantics. It is clear that romanticism has solid roots at its disposal—it is enough to recall the genre of the first European novels translated, the importance of Manfalūjī, the tone of Zaynab. A younger generation dissatisfied with its condition finds at last the means of expressing its revolt and its dreams. Evidently it is love that polarises all attention. This lyricism is a phenomenon of youth in three senses: the youth of the writer, the youth of literature and the youth of the public. The theme of the impossibility of amorous relationships is treated at length by the Tunisian Rashīd Ghāli in the short stories that he has published in the review *al-Fīr* since 1960; an encounter without future constitutes the subject of *al-Baḥr lā nuṭ fīh*, a story which gives its title and dominant tone to a collection published by the Libyan A. Ibrāhīm al-Falḥ in 1966; the Sudanese Sabḥār (b. 1927) published ten years ago a novel on a small scale: *Sirr al-dumūʿ*.

It should not, however, be assumed that this type of novel is always attributable to an "indiscretion of youth." Writers of considerable renown who are no longer adolescents have built their success upon this specialised genre, and their prolific output shows that they know how to pluck the string of emotion. In this context, one could hope for no better example than the Egyptian trio of Yūsuf Sibīʿ (d. 1978), ʿA. H. ʿAbd Allāh (d. 1973) and Ḥisān ʿAbd al-Kuddūs. The systematic exploitation of sentimental problems is their common denominator, as well as their ability to impose their personal style. The first emphasises the dramatic, or melodramatic quality of the situations that he imagines, the second does not flinch from a certain moralistic purring owed for the most part to the very literary culture of his language; finally, the third flirts with scandal, and his gallery of pretty girls at once innocent and greedy for liberty has aroused many adolescent dreams.

Readers unmoved by the magic of these masters perhaps would allow themselves to be seduced by more subtle forms of romanticism. In Egypt, ʿAbd Allāh Jūhūr finds in his native countryside (*Fī dawʿ al-baḥar*, short stories, 1960) or in a cruise on the Nile (*al-Nahr*, a novel 1962) the appropriate setting that his dreams require, while Muṣṭafā Maḥmūd (b. 1932) studies the relationship of married people (*al-Muṣāḥib*, 1960) with much tact and sensitivity. In Syria, the short story writer Shāmil Rūmī (*al-Kaḥḥ*, 1960) even seasons his outpourings with a fair dose of fierce satire. Finally, we draw attention to a short story by the Algerian Tāhir Wattār (*Mamarr al-zyyān*, in *al-Fīr*, 1959) for this disillusioned statement by one of his heroes: "There is no youth in the Arab world. The Arab knows only two ages: childhood and adulthood." We shall have occasion to speak again of this sense of malaise.

The realists. These writers have inherited a populist or poverty-oriented tradition that is not

very old. On the eve of the war, the Syrians T. ʿAwwād, K. M. Karam, and the ʿIrāqī Djaʿfar Khāfī were concerned themselves with fraternity, tearful commiseration or indignant horror at the sufferings of the lower classes.

We find this same interest in poor people with a great number of writers of the following period and in countries that have come to the novel more recently. From Morocco, we may mention two collections of stories; *al-Saḥr* by Muḥammad Ibrāhīm Abū Allāh and *Reḡul as-marʿa* (1969) by Zaynab Fahmī. Taymūr has really created a school, for we witness an impressive parade of pitiable or laughable "cases": Y. Hekki's potty tradesmen, the chieristans of the Tunisian Muṣṭafā Fāris, the baggage carriers of the Syrian Samīm Sharrīf, the water-carriers of the Egyptian Sibīʿ. These specimens of an idle or poverty-stricken humanity, true to type even when they live on the fringe of society, clearly lend themselves to living in novels. Why could deny the vividness of the portrait of Tammamūh, idler and football fanatic, product of the imagination of Rashīd Hamzawī (Tunis, *al-Fīr*, 1959) or that of the "maker of grotesque cripples", the negro Zita who introduces a kind of Court of Miracles in the lane (*Zukāḥ al-mudakk*, 1947) described by the Egyptian Naḥīl Maḥfūz.

Apart from the hero, the writers strive to recreate a whole ambience to which they are deeply attached. Thus, thanks to the pen of a Tayyib Tarāḥ or of a Hamzawī, there appear before us the coloured quarters of Rabī and of Turbat al-Bay in Tunis, while the shrines of Old Cairo, Sayyidnā Ḥusayn and Sayyidatnā Zaynab, inspire the best works of Hākid and Maḥfūz, and the seascapes of the Shett ʿal-ʿArab is recreated in a story such as *Ḥāḥir al-madīna* (1975) by the ʿIrāqī ʿAbd al-Raḥmān Maḥdī al-Rubayʿ.

It would be surprising if the countryside were to remain outside the fictional repertoire, when we recall that, with Zaynab, the Arabic novel was born there. It is in fact the same love of nature that shines through in a simple account of olive-picking in Tunisia, told by Muḥammad F. Ghāṣī (b. 1947) in a short story (*al-Fīr*, 1961). But it is most of all in the novels of the Egyptian Sharrāwī (*al-ʿArab*, 1954, *Kalāl al-hayyān*, *al-Falāḥ*) that the rural life is conveyed in all its richness, at a time when new ideas are shaking the system of traditions that used to be thought immovable. On the contrary, Ḥusayn Naṣr (Tunisia) evokes the full force of the past in a few pages; this "Ox that my father left us" (*al-Fīr*, 1961) is slow to die and imposes his presence when the young men, rejecting the experience of the old, wish that the page had been decisively turned.

It will come as no surprise to find political involvement accompanying this meticulous survey of an entire people. At the same time that *al-ʿArab* appeared in Cairo, Hanna Mina published in Damascus *al-Maḥābīb al-nar*. We may thus see side-by-side two exemplary narratives: a peasant revolt in the Delta, and the resistance of the Latekians to the French Mandate at the end of the Second World War. The heroic times of such and such a country have inspired a considerable mass of stories. The Moroccan Khannūja Bannūna celebrates inter-Arab solidarity sealed in combat in a recent collection of short stories (*al-Nār wa l-ḥāḥīyāt*) and his compatriot Muḥarrak Rabīʿ makes the participation of Moroccan troops in the battle of the Golan Heights, in 1974, the central subject of his novel: *Ruḥat*

al-silāh... wa 'l-kawar (1976). Sometimes one finds them to be too verbose and not sufficiently alive. This is especially the case with the entire output of Muṭā' Ṣalāḍī (Syria), a real propagandist of the Arab Revolution (*Ṭib' al-mukhtarif; Dīl al-kadar; Aḥḥab aḥlī*, 1956). On the other hand, an 'A. K. ben Haddūka (Algeria) succeeds in interesting us in the conscience of a man who has just committed a political crime (in *Zilā ḡāsi'irayya*, 1960). It is the analysis of the social and psychological consequences of the war of liberation which interests him in his first novel appearing ten years later (*Rūḥ al-ḡāsiḥ*), of which the form catches the attention. His compatriot Ṭāhir al-Waṭṭār also distinguishes himself in his two recent novels by the originality of his vision of guerrilla warfare (*al-ʿaṣr*) or the traumatic after-effects of independence (*al-Zilāḥ*). Similarly, the Palestinian tragedy is presented, free of forced sentimentality, in fascinating novels by the Lebanese Ḥalīm Barakāt and the Palestinian Ḡhāṣan Kanāfānī (*Riḡāl fi 'l-ḡhams*).

Oriental society is evolving to a varied rhythm in its different aspects. Industrialisation, for example, has scarcely been reflected by the appearance of workers in romantic literature. To our knowledge, only two writers have taken an interest in this: H. Mīna (Syria) mentioned above, who has made a study of *la Gorky* of type-setters in a printing-press, *The invisible thread*, 1960; and Muḥammad Ṣidki (Egypt), who through the experience of a self-taught man trained in a number of occupations, gives us an insight into the daily life of the working classes (in the collections *al-Aḡḡar* and *al-Aḡḡal 'l-ḡhāṣa*, 1956 and 1958).

On the other hand, the number of Arab women writers is already remarkable. Quite naturally, they are interested in problems that are specifically feminine. Since professional involvement of women is still somewhat limited in their countries, it is most of all "psychological realism" that they adopt. The older ones—Bint al-Shāḡī and S. Kalamāwī in Egypt, Widad Sakākīn in Syria—have born witness to the deep transformation affecting the female mentality. The younger women writers—Samīra 'Aṣṭān in Iraq, Colette Suhayl in the Lebanon, Sūfī 'Abd Allāh in Egypt—seek to re-establish, with regard to their sex, the truth misunderstood or distorted by men. The Egyptian Laṭīfa al-Zayyāt does not claim to make any extraordinary revelations in her novel *al-Būḥ al-maḡḡab*, 1960, but points out succinctly that the noble protests of the sterner sex are not yet fully convincing.

So as not to distort the perspectives, it is important to draw special attention to the work of three Egyptian novelists whose renown extends over the entire Arab world: Yahyā Ḥakīm, Yūsuf Idrīs and Naḡīb Mahfūz. The name of the first, who was born in 1905, is linked with the difficult emergence of the Arabic short story in the years around 1925, but he has only become well-known since the war. His first collection *Kināḥ Umm Nāḡīm* dates from 1943. His collections of stories, his short novel (*Sakḥa 'l-nasw*, 1954) and his memoirs (*Kiḡāḥid 'aḡ' lāḥ*, 1959) have made him known to the public at large as a writer of prose that is firm but not prudish, and one who treats his characters with sensitivity and humour.

As for Yūsuf Idrīs, he has been writing "committed" stories since 1949. With the appearance of his first collection (*Aḡḡas laḡāl*, 1954), there is the feeling of a talented writer making himself known. His subsequent works (*al-ḡarām*, novel, 1959; *al-*

ʿAshar al-aṣṣad, a short story, 1961, among many others) testify to his dramatic sense, and his condensed style, on the borderline of grammatical correctness, counts as one of the most original of all.

Naḡīb Mahfūz enjoys an even wider readership. He owes this perhaps to his uncompromising adherence to the classical language but most of all to the seriousness and depth of his analysis and to a remarkably prolific output—some twenty novels and a dozen collections of short stories published to date. His *Trilogy* (1957, 1958) is considered to be the perfect masterpiece of Arabic realism. It gives us the key to an understanding of the generation of contemporary Egypt through a wealth of passions reminiscent of the Russian novelists, but with a concern for detail that is exclusively his own, and most important of all, from a perspective such that every Arab reader feels himself involved.

The existentialists. In a society in a state of flux, there are some who feel resentful, disillusioned, alienated, and who find in existentialism a philosophy in tune with their mood. The Lebanese Suhayl Idrīs has done much to install this philosophico-literary doctrine in the Orient. He has been the prime mover in a major series of translations that have introduced the Arabs to Sartre and Simone de Beauvoir in particular. But his role has not been limited to that of translator nor to that of editor-in-chief of the major review *al-Aḡḡ*. He is also the author of a number of novels. In the first (*al-ḡayy al-lāḡnī*, 1953) he too examines the reactions of the oriental to the European way of life, but the analysis is different from one given by Tawfīk al-Halīm in *Uḡḡar min al-ḡarḥ* nearly twenty years earlier. In spite of his love for a European sweetheart—shared this time—the Arab student returns to the Lebanon to place himself beneath the yoke, and perhaps the protection, of the customs of his homeland. His resigned acceptance of the absurdity of life shows that his stay in the Latin Quarter has left deep marks on him.

The Lebanon is thus the favoured land for existentialism. There are some who take pleasure in a type of fiction that is closer to the debate of ideas than to the novel as strictly defined, like Emīle B. Abī Nāḡir in *al-Farḡḡ* (1961). But the more interesting writers are able to bring to light in their plots the implacable character of life. A story by George Ṣhāmī shows to what extent a personal sentiment, however sincere and profound, is helpless in the face of the tyranny of the family spirit, and another by Jamāl Ḥabir (*Kaḡab*, 1961) finds the correct tone for describing, in the first person, an impossible love. The Lebanese novel does not however attain the level of despair except in the work of the woman-writer Laylā Ba'labakī, in *And aḡyā* (1958) and in *al-Aḡḡ al-maḡḡḡa* (1960) there is a vivid account of the revolt of a feminine sensibility stifling in a male society, oaths—taboos included—for men.

Although she has become known more recently, the Syrian Ḡhāda Samūḡā is closely akin to her. One of her collections of short stories (*Laylāt al-ḡharābā*, 1966) presents us with a study fundamentally of a single character in a variety of settings: the woman who feels herself involved neither with the family nor with the revolutionary ideal, a "stranger" always and everywhere, her too-clear intelligence and her too-vivid sensibility making of her a person who suffers and sees no other future than this suffering, which she broods over with a kind of masochistic delight.

'Irāq shows us another kind of existentialism, less intellectual, more visceral. Among story-writers of talent, the first place belongs to 'Abd al-Malik Nūrī (born in 1921). Between 1946 and 1954 (*Naghāf al-awḥ*) he has created a genre: from the first to the last line, his fiction expresses malaise, an infinite despair or a fatal torpor. With Mahdī 'Isā Ṣāḡr and Fu'ād Takarrī (*al-Ḥaḡik al-dhāḡir*, 1951) we are steeped in the same unrelieved black that seems to be the dominant colour of young 'Irāqī literature.

The basic problems. During its sixty or so years of existence, Arabic fictional literature has been obliged essentially to cope with two basic problems.

The one, purely internal, concerns language. For obvious reasons, the novelist must choose the type of language that he is to lead to his characters, dialect or *fuṣḥā*. A writer as eminent as Maḥmūd Taymūr has, to his credit, carefully tried each of the two alternatives and subsequently remained absolutely faithful to the academic language, of which he is besides a perfect master. The no less eminent Yehyā Ḥakīm has shown a quite original attitude, proclaiming everywhere his loyalty to Arabic and wringing in a delicious manner in his short stories the Calrose of his childhood or the Sa'ūdian petiole dear to his heart. These examples should not be misinterpreted; the question does not only apply to Egypt. Throughout the whole Arab world, from 'Irāq to Morocco, there are novelists who believe that they would be betraying their mission as creators and artists if they were to avoid using a type of language that is natural, living and immediately evocative of the correct sentiment, the spontaneous idea. Conversely, in every Arab country there are today writers who would consider themselves unworthy of their art and traitors to Arabism if they were to adopt—even in dialogues—a language other than "pure" Arabic obeying the rules of declension, more or less modernised in its vocabulary, but effectively unchanged in its syntax. The question of the two languages has been debated so often since the beginnings of the *nahḍa* that there is nothing to be gained by dwelling on it here. The adherents of one or other mode of expression may be confident of finding themselves in excellent company and having no shortage of arguments. In particular, the equation frequently proclaimed in the last fifty years (dialogue in dialect = literature in the service of the people) is no longer put forward today, when the purists too are "committed". At the most, we may attempt a risky generalisation: the tendency to use the spoken "popular" language is more widespread in countries where the literary public is greatest and which, believe, rightly or wrongly, that they have a better-established "Arab" character—thus in Egypt, rather than in Algeria. Whatever the answer may be to these formal—and important—questions, there is no likelihood of provincialism gaining precedence over a common Arab heritage that is easily recognisable through the entire spectrum of fictional literary production from "the Ocean to the Gulf" and through all the trends that we have attempted to unravel.

The other problem concerns the relationship of the Arabic novel to Europe, the master, in both senses of the word, pedagogic and colonialist. This relationship first applies on the level of content. The dialogue of a floundering East with a West that is too sure of itself constitutes one of the themes and sometimes the central theme of novels that have become famous. It is natural, with regard to

novels, that this ill-tated or violent confrontation should take the form of an amorous encounter between a pretorial or fickle or dominating European woman and an Arab emigrant, usually a student, convinced that he owns a share of the truth but naive and maladroit. Furthermore, the character of the latter and the general physiognomy of the work change in the course of the years. In *'Uṣṣir min al-ḡharḡ* by Tawfīq al-Ḥakīm (Egypt, 1933) Muḥsin is an incorrigible idealist, an incompetent pursuer of working-girls whom the author mocks and admires at once, while the hero of *al-Ḥayy al-lāṭif* discovers nausea in Paris, but returns to the fold of ancestral custom in Beirut. The English girl married by *al-Dukḡar Ibrāhīm* by Dhū 'l-Nīm Ayyūb (1946, 1939) is only the first stage of an ambition which comes to light on his return to his country. If Ismā'īl repudiates his God on leaving Mary's embrace, he finds Him again on the banks of the Nile (Yahyā Ḥakīm, *Kindīl Umm Ḥāḡim*, Egypt, 1949). The experience of Adīb (Tāḡa Husayn, *Adīb*, Egypt, 1935) is at the same time more profane and more desperate, but that described by the Sudanese al-Tayyib Ṣāliḥ in *Muḡsim al-ḡharḡ ilā 'l-shamāl* (1966) is violent, and it disconcerts because hatred here is innocent.

Nobody is deceived, whether sex and suffering intervene or not, it is always the impact of a culture that is in question, an invading, besieging, disruptive culture. Two Moroccan novels examine in detail its traumatic aspects: *Dafanā 'l-madī* by ḡhālīb (1966) and *al-ḡharḡ* by La'rēf (1971). Quite naturally, another level of connections with Europe appears. Has this literary technique been learnt, assimilated or, on the contrary, has there been constant re-adaptation to a model which, as time passes, remains indispensable? It is in reality impossible to answer this question. It may simply be stated that this common Arab heritage mentioned above adapts itself well to the most recent trends in universal fiction, that the surrealism of Zakariyyāḡ Ṭāmir (*Dīnāḡh al-ḡarḡḡik*, Damascus, 1973) with its nightmare universes, takes up and carries to an obsessional and hardly bearable degree, the taboos and desires of a sick society. It is madness—superficially, for what the mastery resides in the cascade of images and the narrative twists—that succeeds the meticulous and classic analysis of 'Abd al-Salām al-'Uḡayyīl and the cruel realism of Fāris Zarrūr, two Syrian novelists who have achieved renown in the sixties. Echoes of such trends arise from elsewhere: from Egypt, of course, where established novelists like Yūsuf Idrīs and Naḡīb Maḡfūḡ have begun in the sixties and at the present day to turn towards the short story in preference to the novel, a wild and implacable type of short story, to which the younger writers are also drawn: the Ḥusayn, the Tūbyās; but Algeria has not lagged behind with the stalling compositions of a writer such as Jaḡfr al-Waṭṭār; this is taken even further in Bahrain, where 'Abd al-Kāḡir 'Aḡl sets in motion with *al-Naṣif* a series of dream-like sequences that express his continuing anticipation of revolutionary liberation.

Finally, if such-and-such a name made famous by the European "new novel" suggests itself to the readership of one of these narratives, it should be recognised that the Arab intelligentsia is henceforth in sympathy with the evolution of ideas and tastes throughout the world, that purely internal lines of influence are clearly visible in Arabic fiction and that the contemporary proliferation of works, the

Babinger, *Die Geschichtsschreiber der Osmanen und ihre Werke*, Leipzig 1927; *İstanbul kütüphaneleri tarih-coğrafya yazınları katalogları. 4. Türkiye tarih yazınları*, İstanbul 1943 ff.; J. R. Walsh, *The Turkish manuscripts in New College, Edinburgh*, in *Oriens* xii (1959), 371-89, esp. no. 2; F. E. Karatay, *Topkapı Sarayı Müzesi Kütüphaneleri Türkiye yazınları katalogu*, İstanbul 1961; F. İ., *Eski Türk edebiyatında nesir. I*, İstanbul 1964; *idem*, *Eski Türk edebiyatında nesir. II*, İstanbul 1966-7; B. Flemming, *Türkische Handschriften*, Teil 1, Wiesbaden 1968. The impetus which the *hissa*, *siyas*, and *makal* genres gave to Turkish religious iconography can be seen in N. Atasoy and F. Çalman, *Turkish miniature painting*, İstanbul 1974, and the literature cited by them.

(B. FLEMMING)

3(b). More recent Turkish literature.

After the *Muhayyidat* of 'Alî 'Aziz [g.v.] (1796), which form a transition between the old and the new, a series of translations, mainly from the French, followed some sixty years later, e.g. Fénelon's *Télémaque* as *Tercüme-yi Telemak* (1862), Victor Hugo's *Les Misérables* as *Mağdûrân hikâyesi* (1862), Daniel Defoe's *Robinson Crusoe* as *Hikâye-yi Robinson* (from the Arabic, 1864), followed by Bernardin de Saint Pierre's *Paul et Virginie* (1870), Voltaire's *Micromégas* (1871), Alexandre Dumas père's *Le Comte de Monte Cristo* (1873), Lamartine's *Giustina* (1878), Abbé Prévost's *Manon Lescaut*, Octave Feuillet's *Le roman d'un jeune homme pauvre* (1880) and many others. Except for the *Télémaque*, which was translated in a most flowery and ornate style, in the best Ottoman *ingiliz* tradition, most of the rest were rendered in a comparatively simple language, not far removed from spoken Turkish. This translation movement or activity coincided with the emergence of the literary *Tanzîmî* school, and the first generation of modernist writers provided the early examples of Turkish short stories and novels in the modern sense.

1. The short story

The pioneer of the short story is the popular author Ahmed Midhat [g.v.]. Although he did not belong to the literary school initiated by Şinâî [g.v.] and his associates, and was looked down upon by them as a conservative in outlook, as informal in style and as lacking in technique, and was consequently unfairly judged, he was avidly read by the general public and youth intellectuals alike and greatly influenced the succeeding generation of writers as witnessed by many of them (see *YUSUF KAMİL GÜLLÜK PİRÂ*). Ahmed Midhat published two collections of short stories: *Kışadan hisse* (1870) and *Leğâz-ı rûdyâdî* (in 25 parts, 1870-93). His mostly romantic stories with an occasional touch of realism, some adapted from the French, became immensely popular and soon made the genre fashionable.

To this formative period belongs a collection of short stories in three volumes, the *Müsamme-i nâme* ('The Book of stories', 1873-5), inspired in structure, by Boccaccio's *Decamerone*, and written by one Ensh Büldend, a civil servant about whom we know almost nothing. These are entertaining stories of uncertain value, a mixture of traditional narrative and the new approach. Different from Ahmed Midhat's works, the *Müsamme-i nâme*'s language and style vary in places from the ornate to the straightforward colloquial. A younger member of the *Tanzîmî* literary period, Sâmî Paşa-Zâde Sezâî [g.v.], is also reckoned among the pioneers of the modern

Turkish short story. His modest output (two volumes, of which *Küçük şeyler* 'Little things', 1906 Rûmîl 1892), began the realist trend in the short story. He used a good technique and developed a tidier style and avoided ornate language. The great master of the Turkish short story is, however, Khâlid Dişli [g.v.] of the *Theravet-i Fânî* [g.v.] literary school, who perfected the genre, of which he made a study in his work *Hikâye* (1907/1892). Khâlid Dişli, who tends in his novels to concentrate on the life of İstanbul upper and upper-middle classes and to use a precious language, by contrast in his numerous short stories (collected in 20 volumes) describes mostly ordinary people of the middle and working classes, and uses a comparatively less ornate style. Among minor writers of the same school, the novelist Mehmed Ra'ûf and the critic and journalist Hüseyin Dîşlî [g.v.] also wrote short stories of uneven value. Two prominent writers who remained outside the *Theravet-i Fânî* school, the novelist Hüseyin Rahmî and the essayist Ahmed Râsım [g.v.] contributed realistic short stories which are vivid sketches of everyday life in İstanbul of the 1890-1920 period.

The restoration of the Constitution (July 1908) followed by the movements of Turkism (see *TURKÇÜLÜK*), Populism (*Kırsık doğru*) and the New Language (*Yeni Nisn*), sponsored by Dişli's Gökâlp [g.v.] and 'Ömer Seyf ed-Din [g.v.], revolutionised the whole approach to narrative in Turkish literature. Most short story writers (and novelists) switched from the capital (İstanbul) to the provinces and made an attempt to introduce colloquial Turkish into literary language and avoided, on the whole, elaborate psychological analysis for straightforward realism.

The prominent woman novelist, Khâlide Edîb [g.v.], wrote realistic short stories mostly based on her own experiences or observations. 'Ömer Seyf ed-Din (1884-1920), who left ten volumes of short stories (posthumously collected in book form), led the reaction against the precious language of the *Theravet-i Fânî* school and wrote in spoken Turkish stories on the reminiscences of his childhood or on episodes of the Turkish history. A hasty writer, his easy, even facile language is not always polished. But he deliberately direct style, avoiding the "literary", established a new tradition in Turkish narrative. The outstanding essayist and political satirist Refik Khâlid Karay [g.v.], wrote his famous *İhtilâk hikâyeleri* ('Stories from the provinces', 1919), during his five years' exile in Anatolia. These stories on the types and customs of the villagers and provincial townspeople are told with a rare virtuosity of natural style and powerful realism unprecedented in modern Turkish literature.

Most novelists of the period (e.g. Y. K. Kara-'Öğünçü, R. N. Gintekin, Peyzâî Safâ, etc.) also wrote short stories. But others excelled in the genre; Memdûb Şevket Esenzâî [g.v. in Suppl.], a politician and diplomat, wrote, at irregular intervals, stories which are different in subject matter, plot and style from the "classical" Maupassant-type stories of his contemporaries. F. Dîşlî ed-Din, a psychiatrist by profession, left remarkable sketches and short stories, written in a very personal style, about eccentric types and haraless maniacs of İstanbul, against an authentic "local" setting of the Hüseyin Rahmî tradition. They are character studies or sketches of the moods of ordinary people, with emphasis on women, written in spoken Turkish, without any elaboration or embellishment and imbued with human warmth and optimism. The

novelist Halikarnas Balıkcı (q.v. in Suppl.) who belongs to the same generation, but who published his work in the Republican period, after the age of fifty, wrote fascinating stories on the life and struggles of the sea folk of the Aegean.

The 1930s inaugurated a new era in contemporary Turkish literature, and witnessed the emergence of two prominent but very different story writers: Şabânî el-Dîn 'Alî (also a novelist (q.v.)), who pioneered social realism, writing powerful stories on the true life experience and hardship of the village and small town communities of Anatolia. Sa'îd Fâ'ik (1906-54), perhaps the greatest name in the Turkish short story, described, in his compelling stories and sketches, written in a forceful and romantic style, the life and milieu of the simple people, workers, fishermen, vagabonds, etc. of Istanbul, based mostly on his personal experiences, with a deeply human touch. Ahmed Hamdi Tenzinlar (q.v.), poet, critic and novelist, and adept of the neo-classicist Yahyâ Kemal (q.v.), wrote nostalgic, evocative short stories where unresolvable psychological issues are the *leitmotiv*. The playwright and essayist Kâmilân Taner (b. 1915) writes stories flavoured with humour and social criticism. İskân Tarus (1907-67), a civil servant, described in his stories the intricacies of bureaucracy in the provinces.

In the 1940s, 1950s and 1960s, most novelists (e.g. Kemal Tahir, Kemal Bubaşar, Orhan Kemal, Samim Kocagöze, Yaşar Kemal, etc.) also wrote short stories in which concentration is on the plight of the peasantry, provincial townfolk and suburban dwellers (see below). This is particularly true of writers of peasant origin (e.g. Fakir Baykurt, Talib Apaydın, etc.). Aziz Nesin (b. 1915) the great humorous writer of unsurpassed popularity, has been writing innumerable stories and sketches where he uses his art to fight social evils and bigotry by ridicule. Oktay Akbal (born 1923) writes individualistic and romantic stories, mostly based on personal reminiscences, full of nostalgia for things past. Necati Cumali (b. 1911), poet, playwright and novelist, differs from most of his contemporaries in not concentrating on any one given theme, but writing stories on a variety of subjects in a warm and flowing style.

Contemporary short story writers dwell as a rule on the social, political, economic and cultural problems of Turkey, a society in rapid transformation, linking them to the personal problems of the individual. From several dozen names (some of them also novelists), the following stand out: Mehmed Seyda (b. 1919), the poet S. K. Akal (b. 1920), Yusuf Nizami (b. 1921), Wis'at O. Benet (b. 1922), Muzafer Buynukca (b. 1928), Bîge Karasu (b. 1930), Tevhid Yücel (b. 1933) and Bekir Yıldız (b. 1933). Among women writers one notes Nezihe Meriç (b. 1925), Adalet Ağaoğlu (b. 1929), Leyla Erbil (b. 1931), Füzünan (b. 1935) and Sevgi Soysal (1936-76) who dwell on the problems of women of all classes in present day Turkey.

c. The novel.

The outstanding lexicographer and scholar Şems el-Dîn Sâmî (q.v.) wrote the first Turkish novel in the modern sense: *Ta'âşûh-ı Ta'at ve Fîhân* (1872). This is a love story used as a background to criticise the traditional marriage custom, marriage of partners unknown to each other. Nâzîkî Kemal (q.v.), the great poet and patriot of the *Tanzîmî* school, experimented with a romantic (*İnkışâf*, 1876) and a historic (*Dişme*, 1880) novel. One of his younger colleagues, Sâmî Pîşîde Zâde Seâdî (1860-1936), wrote an anti-slavery novel (*Sergüştü*,

1889), while another, Redîfî-Zâde Ekrem (q.v.) produced a social-satirical novel (*İzâde sâadîs*, 'Devotees of the heasom cab', 1889, published 1896), which is a forerunner of later novels where the "westernising snob", the blind imitator of European manners and customs, is ridiculed (see below); and Nûmî Zâde Nâzîm (1862-93) wrote examples of realist novels (*Kara Bâbâ*, a long short story, 1890, and *Zekâ*, 1895).

Outside this literary school of the 'élite', the most important representative of the genre was the prolific popular writer, publicist and journalist Ahmed Midhat who flooded the post-1870s period with several dozen novels on subjects of all types: adventure, history, social satire, science fiction, realist and naturalist narrative, etc. He owes a great deal of his narrative technique, his dialogue and his handling of episodes to the traditions of Turkish popular art and literature (i.e. *Karagöz*, the *meddah*, the *fahâşî* technique in the *Orta oyun* and folk tales of various kinds), and also to the French novels of adventure. Many of his novels, particularly *Hazan Mevlâh* (1875), *Hüseyin Paşâh* (1875), *Süleyman Muşî* (1876), *Henis on yedi yâşında* (1882), *Dürdâne Hânım* (1882), were enormously popular and read avidly by generations of readers of all classes until the 1920s. His novel *Efâtûn Bey ile Râhîm Efendi* (1896), pioneered a series of novels which satirise the *alla franca* way of life of Istanbul snobs.

In the following period of the *Theravet-i Fânûn* school, the great representative of the novel is Kâmilî Dîyâ'. Although as a boy writer, like most of his contemporaries, he greatly admired Ahmed Midhat, there is hardly any trace of the old Turkish popular narrative technique or the influence of the French novels of adventure and entertainment, even in his early novels of the formative period, which were romantic love stories with some elements of realism. He completely broke with traditional methods of story-telling and developed a well-disciplined narrative technique where there is no room for irrelevant digression or clues to the reader. Kâmilî Dîyâ' perfected this technique in his later novels (e.g. *Mâ'î ve rîyâh*, 'Blue and black', 1897, and *Ağâh-ı memnûn* 'Forbidden love', 1900), inspired mainly by the method and style of the French realists. His works remained the best examples of realism in Turkish literature until the mid-1930s. The setting and characters are often chosen from the upper and upper-middle classes of Istanbul, the type of people with whom he came into direct contact during the strict Memlûkân régime. He chose, in his novels, to write, like most of his colleagues of the movement, in an extremely precious and artificial language, thus deviating from the trend of the first generation of modernists (the *Tanzîmî* writers) who had made an attempt to create a style which could be understood by a larger audience.

As Kâmilî Dîyâ' dominated the scene in prose, minor writers were hardly noticed. One of them, Mehmed Ra'îf (1875-1935), a naval officer, wrote a (probably autobiographical) novel, a poignant story of desperate love: *Eylûl* ('September', 1900), which is the only work still remembered of his dozen novels.

Hüseyin Rahmî, who did not join any particular literary group, began his career during the time of the *Theravet-i Fânûn* movement, and remained one of the most popular novelists from 1890s until the late 1920s. At the beginning, he followed in the steps of his master Ahmed Midhat, but he gradually pol-

labeled the elements taken from Turkish popular arts and adopted them to his own purpose, blending them successfully with the technique of the French realists and naturalists, particularly of Maupassant and Zola. With his accurate observations of the life and types of Istanbul lower and lower-middle class families in the period approximately 1890-1920, his penetrating analysis of the burning social problems of his time and his acute sense of humour and satire, Hüseyin Rahmi is perhaps the most original of all Turkish novelists. Like his prominent contemporary the essayist Ahmed Rüşen (q.v.), his work is of great documentary value. He studied meticulously the everyday life of families and individuals and their development within disintegrating Ottoman society and all the social problems arising from the impact of Western ideas and customs. His best novel, *Şüphesiz*, "Always in love" (written and partly serialised in 1901, published in book form 1912) is a further development of the theme already treated by his predecessor and himself: a character study of the "Westernising snob".

During this period, two works were the pioneers of the so-called "village novel" (*köy romanı*) which was to develop during the Republican period: Nâzım Zâde Nâzım's long short story *Kara Bibik*, already mentioned, and Ebûbekir Hâzım Tepeyran's (1864-1947) *Kızıl Paşa* (1910), which describes life in a central Anatolian village during the last decade of the 19th century.

During the post-1908 era, with the freedom of the press restored and in the midst of warring ideologies (Ottomanism, Pan-Islamism and Turkism), we see that most writers of the young generation gather around a new trend called "National literature" (*Millî edebiyat*), led by the sociologist and guiding spirit of the intellectuals of the epoch, Dîyâ'î Gökâlp and his associates (particularly 'Ömer Seyfî el-Dîn, see above). In this period, the prominent woman writer Khâlide Edib's early novels have considerable autobiographical elements, and with their passionate, independent, strong-willed heroines, outline the author's ideal of the emancipated Turkish woman. Under the impact of the Pan-Turkish movement, she wrote *Yarık Türân*, 1912, and her contemporary colleague, a minor woman writer Müfide Ferid (Tek, 1890-1971) followed her example with a similar novel *Aydemir*, 1918. However, Khâlide Edib later rejected this ideology and espoused the new nationalism of the resistance movement in Anatolia which she joined in April 1920. She wrote novels on the national struggle and life in Anatolia, based on personal experiences or observations (e.g. *Ateşden gömlek*, "Shirt of fire", 1921; *Vursun kalkbeye* "Strike the whore", 1923). During her long exile abroad (1925-39) and after her return to Turkey, she continued to write, mainly period novels. Already by 1930s the approach to the novel was beginning to change (see below). Khâlide Edib's prominent contemporary, Ya'qûb Kadî Kâra-Öthmanoglu (1869-1974 (q.v.)) the most powerful novelist of his generation, excelled in studies of periods and institutions. In a series of novels he described the disintegration of a family caught between the old and the new towards the end of the Empire (*Kurultay konağı*, "Mansion to let", 1920); life in a convent of the decaying Bektâşî order of dervishes (*Nâr Baba*); party strife in the post-1908 period (*Hükûm zîrâsi*, "The night of the judgment", 1927), life in occupied Istanbul in the early 1920s (*Sodom ve Gomora*, 1928); a poignant description of the gap between an educated man

and the peasants (*Yaban*, "The stranger", 1932), a pioneer "village novel"; the life of a young Turk exile in Paris (*Bir sürgün*, "An exile", 1937), etc. He also experimented with a *roman-fleuve*, covering the second and the third decade of the Republican era (*Panorama*, 2 vols. 1953-4).

The humorist and essayist Refik Kılıdî Karay is the author of some twenty novels, mostly of mediocre literary value, except for the first, *İstisnâ-ı buharî el-yâsâr* (1920, Roman script edition as *İstisnâ-ı buharî bir yâsâr*, 1939). This is written in the form of a diary and is a series of masterly sketches of Istanbul "society" between 1900 and 1920, in which the last vestiges of the old régime, the influential magnates of the all-powerful Committee of the Union and Progress and the degenerate nonconformists of the war years are depicted with brilliant, merciless sarcasm. Peyzâmî Saîd (1899-1961), a self-taught writer, produced in the early 1920s novels which described various characters of the changing Turkish society, emphasising the clash between the traditional and the new (e.g. *Sârde âlemler*, 1922, *Mahşer*, 1924, *Fatih Harbiye*, 1931); later he studied cases of psychological stress and crisis and also supernatural phenomena. His partly autobiographical *günce haricîye hüfâsı* ("External ward No. 9", 1930) is one of the best examples of the psychological novel in Turkish literature.

The best-seller of the early 1930s was *Calibugha* (1912, Eng. tr. *The autobiography of a Turkish girl*, by Sir Windham Deeds, 1950) by Reşad Nuri Güntekin (q.v.), who published several similar novels (e.g. *Ağdam güneği*, 1926, Eng. tr. *Afternoon sun*, by Deeds, 1951). These were sentimental romances mixed with realistic observations of Anatolian life. With the publication of *Yeşil gecik* ("Green night", 1928), where the influence of religious fanaticism in Anatolia is studied, Reşad Nuri changed his manner and wrote a series of novels dealing with social change brought about by the reforms of the 1920s, (e.g. *Yaprak dökümü*, 1930). Güntekin perfected the literary language based on spoken Turkish initiated by 'Ömer Seyfî el-Dîn and was recognised as one of the masters of modern Turkish prose until the middle of the 1930s, when a profound transformation of the language, style and literary taste began to take place.

The early generations of novelists of the Republican era inaugurated a new approach to the novel which began in the 1930s, and gathering momentum in the 1940s, matured in the 1950s and 1960s. For the majority of contemporary writers, the novel is only a vehicle to convey ideas, to prove a point and to discuss the burning problems of modern Turkey. Except for sporadic cases, for nearly forty years novelists have been concentrating mainly on the following themes:

- (1) The background and various episodes of the War of Liberation; (2) The plight of the villagers and provincial townspeople; (3) The struggle of the peasants against exploiting land-owners and corrupt bureaucracy; (4) Unemployment in the villages, and peasant migration to labour areas (cotton fields, etc.); (5) The peasant migrations to the cities in search of work and its consequences; (6) Peasants turned brigands as a result of gross injustice; (7) The problems of the peasant populations of the shanty-towns (*gecekondu*) in city suburbs; (8) The problems of illiteracy and educating children (particularly girls) in villages; (9) The influence of religious exploitation on the masses in villages and towns; (10) The plight of peasant migrant workers in Europe,

particularly Germany; (11) Problems arising from long-sojourn of Turkish worker-families in Europe; (12) The exploitation of the defenceless citizens by the *nouveau-riches* business classes in the cities; (13) The ravages of partisan politics in villages and provincial towns; (14) The problems of women in general and working women in particular; etc.

In short, all the problems of a rapidly developing and industrialising, once mainly rural, society where a population explosion and a universal yearning for better living defy the dexterity of all government. The days of the "art for art's sake" principle of the *Tharwat-i Fânûn* days are left far behind: the contemporary Turkish novelist has no time or leisure for telling stories of personal woes.

Leading names of the modern period are: the pioneer Şâhik al-Dîn 'Âlî (1897-48), already mentioned whose novel *Kıyıcaklı Yusuf* ("Yusuf from Kıyıcak", 1937) is a masterly description of life in a small western Anatolian provincial town at the beginning of the century; Oshan Kemal (1924-70), who wrote with a warm and deeply human style the epic of the Turkish "little man"; and Kemal Tabir (1920-73 [q.v.]), who spent long years in Anatolian prisons where he collected his material on a series of novels on the life and problems of the central Anatolian peasantry and small town communities. He also wrote several period novels on episodes of early and modern Turkish history. Further, Samim Kocagöz (b. 1916) wrote on the peasant-landowner relationship in the Aegean area and also related episodes of the Anatolian resistance movement; Yaşar Kemal (b. 1924) excels in describing, with an epic style inspired by Turkish folk tales, the life and struggles of the peasantry in the Adana area; and Fakir Baykurt (b. 1929), of peasant origin himself, describes the life and problems of southern Anatolian villages, etc. (The majority of short story writers cited above are also known as novelists, and most of them should be counted in this category.)

Outside this category, there are novelists who belong to previous generations but who published their work in the 1930s or later: The short story writer Memduh Şevket Esenalâ (1883-1952), published a remarkable novel *Ayazlı vs. Hırsızları* ("The man from Ayazlı and his tenants", 1934), a powerful study of a group of disparate types during the early years of the new capital, Ankara. Midhat Dümâlî Kuntay (1885-1951), a minor epic poet and biographer, wrote a single novel, *Üç İstanbul* ("Three İstanbuls", 1938). Planned as a period novel, it is rather a series of loosely connected sketches on the life and character of Ottoman society and government in İstanbul during the period of decay and disintegration of the Empire (1890-1930). It is a fascinating panorama of events and of personalities, Ottoman, Levantine and foreign, told with a personal, elaborate and, in places, precious style. 'Abd al-Hakîk Şimâz Hısâr (1883-1963 [q.v.]), who published some poems and critical essays in the 1920s, produced his first novel in 1941 at the age of fifty-eight, *Fahim Bey ve his* ("Fahim Bey and our family"), a powerful character study of an İstanbul type at the turn of the century, an inefficient civil servant turned businessman. After the great success of this novel, Hısâr wrote several others, all in an anachronistic style which nostalgically evoke the İstanbul of 1900. Lastly, the unusual writer Halikarnas Balıkcı the famous exile of Bodrum (Halicarnassus), must be mentioned, who produced his first novel at the age of sixty (*Agenda, Burma, Berlinale*, 1946) and

devoted his entire work to the epic of the sea and seamen of the Aegean.

Bibliography: Mustafa Nihat Özün, *Türkçede roman*, İstanbul 1936; Ahmet Hamdi Tanpınar, *Önde gelen ve son Türk edebiyatı tarihi*, İstanbul 1936; Tahîr Alangu, *Cumhuriyetten sonra hikâye ve roman*, I, 1939, II and III 1965; Cevdet Kudret, *Türk edebiyatında hikâye ve roman*, 1970-1; Fethi Naci, *On türk romanı*, İstanbul 1971; Hilmi Yavuz, *Roman kavramı ve türk romanı*; *Türk Dili*, special numbers on the novel and short stories; *Roman bel sayışı I, Roman bel sayışı II, Türk edebiyatında bel sayışı, Türk romanında hürriyet kavramı bel sayışı*, Ankara, 1962-77. (Fahri İz)

4. In Persian literature.

In Persian the term *biyâ* (together with its approximate synonym *hikâyat*, *afşâne*, *dâstân*) covers a number of different literary forms, and while this article must be concerned primarily with the modern application, it is also true that the more traditional manifestations have had some influence on recent developments. One of the earliest uses of the term seems to have been in the sense of "biography". Examples of this range from the *Şiâs al-anbyâ*, the title given to a number of works, of which one of the earliest and most popular is that by Mewlânî Muhammed Djuwayrî, said to have been written in 352/963, containing biographies of the prophets from Adam to Muhammad, to, at the other extreme, the *Şiâs al-'ulamd* written by Muhammed b. Sulaymân Funakubî in 1290/1873 and consisting of accounts of leading *Şiâfî* divines, to which frequent reference is made in E. G. Browne, *Literary history of Persia*, IV, 334-449 *passim*. A condensation of this work was published in 1942 by Muhammed 'Âlî Djamâl-zâde under the title *Kıssa-yi kışa-kâ*.

A second group includes pseudo-biographical works of a largely fictional nature. A classic example of this genre is the *biyâ-yi Hamsa* or *Hamsanâme*, the hero of which was a contemporary of the Prophet Muhammad and the story of whose exploits is said to have been commissioned by a namesake who led a rebellion in Sîstân at the end of the 2nd/8th century. The story is extant in a number of versions, some parts of which, judging from their style, may well go back to the 3rd/9th century. Another example in a slightly different class is the *Dakîkîdr-nâme*, the account of the deeds of a putative descendant of the legendary hero Rustam, said to have been a contemporary of the Sâkîndî monarch Khusrav Parwîz; the earliest surviving version of this is the *Rûbâ al-arwâd*, composed (in prose) by Şams al-Dîn Muhammed Dakîkîdî Marwâzî in the 6th/12th century.

From this phase we move by a natural progression to the traditional romance with few or no historical or religious overtones. Some of these are by known authors—ranging from the famous *mathnawîs* of classical poets like Nizâmî, Amîr Khusrav Dihlâvî and Djamî, retelling the stories of Laylâ and Majnûn, Khusrav and Shirîn, Yûsuf and Zûlâykha, and so on—to the works of lesser or otherwise unknown writers, like Fağhr al-Dîn Gurgânî's *Wîs u Râmîn*, 'Ayyûkî's *Warha wa Gulshâd*, or the prose version of *Samak-i 'Ayyâr* by Farâmûz b. Khudîdîdî, all these dating from the 5th/11th century. Many such romances have been handed down orally in more or less corrupted versions, until they finally achieved permanence in manuscript or, most recently, in "chapbook" form. Characteristic examples are the stories of Husayn i Kurd, Bahrâm and Gulandân, Hâtîm-i Ta'î, Şîrîya, Falaknâk and Khurshîdîfarî,

Madik Djamshīd, Nadīr al-Šīrīn and Nūsh-Afarin. Many of these must be of considerable antiquity, while others (for instance, the story of Amir Arslān, known to have been composed, though doubtless on a foundation of traditional material, by Nāsir al-Dīn Shāh's storyteller, Mirzā Muḥammad 'Alī Naḍb al-Mamlik, during the second half of the 13th/19th century) are comparatively recent. Such stories, often qualified by such epithets as *ghirīn*, *ghirīr-gharāt*, are part of the stock-in-trade of the *naḥāl* or *ghissa-gū*, both professional and amateur, who provide entertainment alike for the clients of coffee-houses, the children of private households, and the peasants of rural villages. In a similar tradition are the humorous anecdotes of Mullā Naṣr al-Dīn and Mullā Būhlūl-i 'Aḳīl, whose Iranian versions have not yet been given the attention they have received, for instance, in the Turkish folk-literature area. This vast reservoir of oral narrative, which in addition to the long romances provides innumerable examples of every category of folk tale—animal tales, fairy stories, tales of magic, moral and satirical anecdotes—has been sadly neglected in the past (in spite of early collections like *Kaḥīla wa Dima*, *Mardān-nāma*, *Sinābād-nāma*, *Dīwān-i al-ḥakīyāt* and *Kiṣṣat al-ḥakīyāt*), and it is only within the present century that serious attempts have been made by scholars and anthropologists, both privately and officially-sponsored, to collect and preserve this treasury of popular literature.

This neglect may account for the fact that, when the art of story-telling and novel-writing was revived on the literary level during the early years of the present century, models were sought not in Iran's own literary tradition but rather from the flourishing storytellers of Western Europe. Indeed, it is significant that the Persian language does not yet have a word for 'novel', but still uses the French *roman* (*rumān*). In making this judgment, we are consciously leaving out of account such works as *Ruḥ-yi ḡāḥā* (1900), *Madālik al-muḥsinīn* (1903), and *Sīyāḥ-nāma-yi Ibrāhīm Bayg* (1903-8), since the story element in these is subordinate, the primary purpose of the semi-anonymous authors being to expose social and political abuses in pre-Revolution Iran through the medium of a fictionalised travelogue. The authors of the first novels proper may indeed have had similar motives in setting their tales in remote historical periods, but the European influence is unmistakable, not only in the clear debt owed to the historical novels of such writers as Alexandre Dumas (several of which had been translated into Persian), but even in the use of European forms of Persian names from the Achaemenid and Sāsānid periods. Among the more noteworthy of these novels are the trilogy by Muḥammad Bākir Khusravī, *Shams u Tughrīl*, *Mār-yi Wīst* and *Tughrīl u Humay*, published in 1909-10, three independent novels whose common link is their single hero and their setting in the period of the Mongol invasions of the 7th/13th century; another trilogy by Shaykh Mūsā Naḥdī, *Ṭāḥ u zāḥnā*, *Sikān-yi Līd* and *Sargudhān-i Shāhāda Khānum-i Bābulī*, published in 1919, 1924-5 and 1931-2 respectively, and set in the reign of Cyrus the Great; *Dāstān-i Bāstān*, by Hasan Badī', the Achaemenid background of which is a mixture of elements drawn indiscriminately from the *Shāh-nāma* of Firdawī and the works of Herodotus; and a long series of works by 'Abd al-Husayn San'adī-zāda Kirmānī, beginning with *Dāmpustārān*, a two-volume novel published in 1922 and 1926 and set in the period of the rebellion

of Masdak and the fall of the Sāsānid dynasty, and continuing with stories from such widely separated historical periods as the reign of Shāpūr the Great (*Dāstān-i Mānī-yi naḥḥāḡ*, 1927), the rise of the Sāsānid dynasty (*Salāḥshūr*, 1933), the overthrow of the Umayyad dynasty by the 'Abbāsids (*Sīyāḥ pūḡhān*, 1944), the reign of Nādir Shāh (*Nādir, fāḥḥ-i Dāhl*, 1956), and even the science-fiction future (*Rustam dar ḥarū-i dīst u dāwum*, 1935). Most of these works are noteworthy as pioneering efforts rather than through intrinsic literary value. Their language is literary, and even in the dialogues shows little attempt to adjust style to speaker, let alone to use colloquialisms; they are discursive and rambling, and historically full of inaccuracies and anachronisms. Their aspiration comes from the romantic historical novel of 19th century Europe rather than from any native source. If they do reflect any particular society, it is rather that of the writers themselves, and in this respect at least the novels throw interesting light on contemporary Iran.

However, the popular success of these early works encouraged many other writers to follow their example, and a long list of such books, of varying merit, have appeared and continue to appear up to the present day. A fairly comprehensive list will be found in Kamshād's *Modern Persian prose literature*, 52-3, and it is sufficient here to mention a few of the outstanding names. The list includes a number of recognised scholars—Sa'īd Naḥfī, Yahyā Karīm, Rīḡā-zāda Shāhī, Dīḥabī Būkrī—whose writing is marked by a greater attention to accurate detail than some of their rivals, like 'Alī Dījalī, Rahmāzāda Salawī, Husayn Masār, Haydar 'Alī Kamālī, Dīwānd Fāḡh, Shīrāzpur Partaw, and others whose novels show almost a tendency to revert to the style of the popular romances. Few writers have ventured into the field of contemporary history. A notable exception is Husayn Ruknāda Adamiyyat's *Dalīl-i Tangistānī*, first published in serial form in 1931 and recounting an episode in the southern tribal disturbances during the first World War; though it appeared a year or two later in book form, it was subsequently suppressed and only reappeared after the abdication of Rīḡā Shāh.

However, although contemporary history was too dangerous a subject for most writers, this did not apply to general social criticism, which indeed was quite consonant with the reforming mood of the years of Rīḡā Shāh's reign. The theme that attracted most attention, partly perhaps because of the opportunities it offered to less talented and scrupulous writers to exploit sensationalism, was that of the position of women in traditional Iranian society. One of the first novels to take up this subject was Muḥḥīk Kāpūr's *Tihār-i meḥāḥ* (1922), a somewhat rambling work woven round the subject of true love thwarted by family greed and social custom. Like a number of his successors, Kāpūr devotes a good deal of space to the discussion and description of prostitution. 'Abbās Khālūī, Raḥī Anṣārī and Dīḥānpur Dījalī are other writers of this period who base their criticism of social conditions and the frustrations of youth on the oppression and in particular prostitution of women. The chief merit of these works is the light they throw on Iranian society, particularly of the middle class, under the impact of modernisation and western influences. Otherwise their style is rambling and discursive, with frequent digressions into moralising, while the language is still literary and ponderous.

A few writers of this category deserve fuller

mention. Muḥammad Mas'ūd (Dihlī), who was assassinated in 1947 in consequence of his editorship of an outspoken and often slanderous newspaper, *Mard-i inqāz*, wrote a trilogy in 1932-4: *Tafahhūl-i ghāb*, *Dar talāh-i mas'ūh* and *Aḥraf-i mahabbāt*—in which he draws on his own experience of lower middle class life in the provinces and Tehrān. These novels were variously praised for their frankness and condemned for their pessimism and ribaldry. A later unfinished trilogy—*Gūshā-i ās dar jānānam mīrāy* (1942) and *Bākū-i 'umr* (1946)—is in the same vein, but shows a greater degree of maturity and objectivity. 'Alī Daḡhlī is also well-known as a journalist and politician, and in addition has achieved distinction as an essayist and literary historian and critic. He earns mention here, however, for his three novels *Fūma* (1943), *Dihlī* (1951) and *Hindū* (1955). Like the others, these take the position of women in society as their central theme, but here it is the women of the upper classes that are under the microscope, and Daḡhlī's work has been criticised for its concentration on a rather narrow and repetitive stratum of Iranian life. His language, while no better suited to his subject than the others, is enjoyable for his skill in the handling of words and for his admittedly sometimes rather forced employment of Arabic and European terms. Muḥammad Hījāzī is noted for a series of novels—*Husnā* (1927), *Pāwīshr* (1929), *Zīd* (1936-48), *Parvīna* (1952) and *Sirīgh* (1953)—which also, as the names of the first four imply, have a woman as the central character. Hījāzī's view of middle-class society, however, is less satirical and caustic than those portrayed by Daḡhlī and Dihlī, and sentimental philosophising expressed in high-flown language plays a greater part. Hījāzī may also be regarded as one of the pioneers of the art of the short story, which during and since his time has tended in Iran to overshadow the full-length novel, perhaps because of its conciseness and discouragement of diffuseness and prolixity. Hījāzī's many short stories are buried in some half-dozen collections of essays and sketches, notably *Āyina*, *Andiḡha*, *Nasīm*, published at intervals over the period 1932-60. Other novelists who deserve mention include Mahdī Hamidī, for his three-part novel *Tāh-i dar-bi-dar* (completed in 1940), though he is better known as a poet; Fakhr al-Dīn Shāhchān for his *Tāhī wa rangshā'ī* (1950); and 'Alī Muḥammad Afshār for his two encyclopaedic novels *Shauhar-i āh Khānum* (1961) and *Shāhshāhī-i darra-ye Kān-e-āh* (1966), the first of these being hailed at the time as a major breakthrough for the Iranian novel, though apart from its length it cannot be regarded as more than a worthy continuation of the tradition set by its predecessors mentioned above.

The true innovators are rather to be found in the field of the short story, and here the first name to be mentioned is that of Muḥammad 'Alī Djamālāda, whose first collection appeared in 1921 under the title *Yād bād wa yāki nobād*. The title itself is indicative of a new approach to the art of story-writing, for it is the conventional phrase used to open the traditional folk tale ("Once upon a time"). In fact Djamālāda's stories do not owe as much to folk-literature as this might suggest, though at least one of the six in this collection takes its basic plot from a well-known folk tale (*Dast-i yā Khālā Khīra*). His contribution to the development of Persian prose lay rather in his insistence on the importance of using language that the ordinary people can understand, and although he does not

go quite so far as to employ colloquial and dialect forms, except occasionally, his writings are nevertheless a rich mine of idiomatic and proverbial expressions. Indeed he has been criticised for using this stock rather in the manner of a card-index, instead of attempting to reproduce the tones and rhythms of common speech. Djamālāda, like most writers of his time, indulges in social criticism; but the effectiveness of this is largely discounted by the author's long residence abroad and his consequent ignorance of present-day conditions. After his first volume of stories, Djamālāda published nothing more for twenty years, but then there followed four more volumes of short stories, *'Amā Hurayn 'Alī* (1942, extensively revised as *Shāhshāh*, 1967), *Tāhī wa Shīrin* (1955), *Ḡayr az Khudā bīshā nobād* (1961), and *Asmān va Rīzādā* (1964), and six novels, *Dar al-maḡlūbīn* (1942), *Shāh-yi mahshār* (1944), *Kullāshān-i ālīm* (1945), *Rāh-i āb-nāma* (1947), *Ma'āna-yi Shāhīn* (1953), and *Sar va tak-i yak harbīs* (1955). Djamālāda's literary life of more than forty years has assured him a high place in Iranian literary history, even though the momentum of his original incursion into the field was not maintained in his subsequent writings.

The credit for changing the direction of Persian prose writing must go rather to a somewhat younger man whose literary career lasted only half as long, as well as to others who associated with him or followed his example. Šādiq Hidiyat's [p.n.] first published work dates from 1923, when he was only twenty, but his contribution to story-telling began in 1930 when, shortly after his return from studying in Paris, he published *Ziada bi-gūr*, a collection of eight short stories. The next four years marked the first fruitful period of creative writing; during this time he was the leader of a group of friends known to themselves and others as the *Reb'e*, the "Group of Four", who included in addition to Hidiyat himself Mas'ūd Farāzī, with whom in 1934 he collaborated on a volume of satirical sketches (*Wagh wagh shāhī*), Nudjātāb Nīnūvī, with whom he wrote an historical drama in three acts (*Māsūvr*, 1935), and Busurg 'Alawī, the only other member of the Four to achieve distinction as a writer of fiction (the other two had noteworthy careers as scholars). From Hidiyat's pen came two more volumes of short stories, *Sā'atā khūn* (1934), *Sāya-ye raushān* (1933), and a short novel, *Alawīyya Khānum* (1933), as well as a satirical play, *Afāna-yi Afarināgh* (written in 1930 but not published until 1946), books and articles on literary topics, folklore and magic, and translations from French. The range of this output shows the lines along which Hidiyat was developing. Like Djamālāda, he wanted to write in the language of the people; but he achieved this not by having at his elbow a stock of idiomatic expressions, but through an ear well-attuned to the speech of his contemporaries, particularly those of the lower social classes. Moreover, he did not confine himself to any one milieu or class, but wrote with equal insight of all, though his sympathies were always with the underdog. This period in his writing culminated in an astonishing work, *Bāf-i hār* (not published until 1937, and then only in a privately duplicated edition in India—full publication had to wait until 1947). So much has been written about this essay in surrealism that it would be futile to attempt to add anything here, and it is sufficient to say that this one work has established Hidiyat as a writer of international calibre.

After the change of régime in 1947, Hidiyat began

to write fiction again [the intervening six years had seen only a handful of literary articles and some translations from Pahlavi], and by 1947 he had published two more collections of short stories (*Sag-i wilzard*, 1943, and *Wizangiri*, 1944), a novel (*Hādīyāt al-hā*, 1945), and two long stories (*Ā-i sindad*, 1944, and *Fardā*, 1946), as well as a quantity of articles and translations. The work of this period shows a greater awareness of political questions and even for a time a degree of optimism quite out of character with the prevailing trend of his writing. However, this mood was not to last. In 1947 he wound up his fiction-writing with a searing and in places scurrilous satire on Iranian society, cast in the form of a mock history of the Pearl Cannon that used to stand in the centre of Tehran and served as a point of pilgrimage and petition for the uneducated women of the city (characteristically, the manuscript of that work, which has never been published, carry the "spoonerised" "byline" Hādī Sīdīqat). Also possibly from this period, though probably earlier, is another unpublished and undated work, *al-Bīrūnī al-islāmīyya al-ḥabīb al-afraṅjī-yya*, a satirical account of a fictional Muslim mission to Europe, in which he takes the opportunity to lampoon typical figures in the religious and political establishment. Four years later Hādīyāt died in Paris by his own hand.

His close friend and colleague, Buzurg 'Alawī, though sharing many of his aims and ideals, differed from him in a number of respects. He took less interest in literature and folklore, and was more deeply influenced by Freudian psycho-analysis and Marxist political theory. This latter enthusiasm led to his imprisonment in 1937 and to prominence in the newly formed Tūda Party after his release in 1941. Prior to that experience he had written only one volume of short stories (*Camadān*, 1934), apart from a single story contributed to the volume *Andān* (1931), one of the other two contributors to which was Hādīyāt. In 1941 he published a second volume of short stories (*Warāḥ-pīra-hā* *ya* *amādān*), and in 1951 a third collection (*Nāma-hā*) and a novel (*Caṣm-hāyagh*). In 1953 he left Iran for East Berlin, whence his output of fiction has been negligible. The fact that his reputation stands so high on such a small foundation is a tribute to the quality of his writing, which shows a strong sense of realism and a profound understanding of character.

The "school" of writing started by the *Ras'a* attracted a number of imitators and followers, some of whom achieved status as independent writers. Among these must certainly be mentioned Šādīk Čobak and Djalāl Āl-i Ahmad (q.v. in Suppl.). Čobak's reputation was established with his first book of short stories, *Khayma-i ghaffār*, published in 1943, and this was followed by a second collection, *Antarī in lafzagh murda bād* (1949). Like his colleagues, he is interested primarily in the lives and characters of members of the lower classes, and he depicts these with a strong sense of realism, which often leads him to use expressions and idioms that shock his elders. He is also one of the first writers to use colloquial language freely throughout. His second volume of short stories was followed by more than ten years of silence, but in 1963 he published a novel, *Tangir*, set in the Tangistan area of his home province of Fārs, which gives a vivid picture of the provincial and tribal life of the south of Iran. Two more volumes of short stories followed, *Rū-i fauwal-i kabr* (1965) and *Čavāḡ-i Ahkār* (1966), and finally (for so far nothing else has appeared) in 1967 a long

kaleidoscopic novel, *Sang-i sabūr*, written mainly in dialect, and with passages in dramatic dialogue form introducing characters from history, poetry, and so on.

Djalāl Āl-i Ahmad, who died in 1969, has a wider range of writing than Čobak, being interested in sociology, folklore, and political questions, on all of which subjects he wrote articles and books. In the field of story-writing he has four volumes of short stories, *Did u bandā* (1945), *Āi rangī ki mībarīm* (1947), *Sūdā* (1948), and *Zam-i ziyādī* (1952). A further five stories were published posthumously under the title *Pandj dāsūn*. He also published four novels or long stories, *Sargudāgh-i bandū-hā* (1954), *Mudir-i madrasa* (1958), *Nān an 'l-ḥalāl* (1961), and *Nirīn-i samīn* (1968). Āl-i Ahmad's sociological interests show clearly in much of his work, but this is not a criticism of his writing, which is concise and economical, allowing his characters to develop in their own words (which are usually in their colloquial form) rather than through the author's description. Other writers who may be considered as having been influenced by the same school of writing include Muḥammad 'Mīnāzāda (Bih-Āḡhī), Ibrāhīm Gulistān, Ḥsān Tabarī, Ruhmat Mustafawī, Shar'atmadārī (Dawwish), and Djalāl Āl-i Ahmad's widow, Šurā Dānshwar.

The interest in folklore shown by Šādīk Hādīyāt was shared by other writers, some of whom could indeed claim to have preceded him, for instance, Amir Kull Amīnī, Kūht Kīrmānī, and Šubhī Muḥtādī. Only the lastnamed, however, ventured boldly into the field of original fiction, with a short novel in folk-tale form, *Haḡḡī Mūsā Zulf 'Alī* (1947). The two threads rejoined in the writings of Šamad Bīhrangī (q.v. in Suppl.) and Ghulām Ḥusayn Sā'idī. Both these writers, born in Tabriz, use the folk-tale form as a medium for allegorical works commenting on contemporary social questions. Bīhrangī, who was drowned in 1968, is the author of a series of ostensibly children's stories, all published between 1966 and 1969, of which mention may be made of *Ūdāt wa bāgh-hā*, *Kaḡal-i ḡafar-hā*, *Alfāna-yi unāḡabbāt*, *Māli-yi ziyāḡ-i ḡāḡā*, and *Karḡāḡ wa Kaḡal-i ḡamā*. A posthumous collection of short stories, *Taḡḡān*, was published in 1970. Sā'idī, who writes his fictional work under the pseudonym Gawhar-i Murād, is best known for his plays, mime, and film scripts; his short story collections include *Alfāna-hā-yi ḡāḡ-i Rāy* (1955), *Šad-nāghat-yi bāḡḡāḡ* (1960), *Dandī* (1966), *Wāḡḡā-hā-yi ḡ-nām-unīghā* (1967), *Fas u ār* and *Tāp* (1968). Like Āl-i Ahmad, he is interested in sociology, and is the author of a number of monographs. Other writers in this category include Šādīk Ḥumayyātī, Djalāl Mīr-Šādīqī and Šāpūr Karīm.

The latest phase in fiction-writing shows a trend towards a more introspective approach, perhaps encouraged by current political and social conditions, which are felt to preclude open discussion of current questions. The writers of this category choose a somewhat obscure and allusive mode of expression, which leaves the reader free to make his own interpretation; they are also more concerned with inner feelings and psychological states. One of the first writers in this vein was Takī Mudarrīsī, whose novel *Yakāfay wa ranāḡ-yi* appeared in 1956. This was followed in 1966 by *Sharīf Dīn*, a novel of the 1300s. Bahman Fursī is known chiefly as a playwright, but his collection of short stories, *Zar-ā dandān-i rag* (1964), attracted favourable notice. Two poets, Maḡmūd Kiyā-Nūḡh and Maḡmūd

Jayyārī, are also known as story-writers. Two other writers deserve special mention: Hūshang Guhghīrī for his three novels *Shāhshāh Jūshūb* (1968), *Kāstīn wa Kīd* (1971), and *Mas̄yūm-i Dāwud* (1972), and Nādir Ibrāhīmī, who since the late sixties has published a steady flow of novels and short stories. Other names include Kāsim Sādāt-i Ighīswār and Bahārīn Sāddīd.

Bibliography. Apart from the works of the authors mentioned in the text, the following surveys may be listed. For the traditional literature, J.H. Coşpek, ch. *Iranian folk-literature*, in J. Ryppke et alii, *History of Iranian literature*, Dordrecht 1968, 607-709; William L. Hanaway, Jr., *Formal elements in the Persian popular romances*, in *Review of National Literatures* (New York 1971), 11ft, 139-60; idem, *Intro. to Love and war: adventures from the Fīrus Shāh Nāma of Shāhshāh Bīghāwī*, Delmar, New York 1974, 1-24. For the modern period: E. G. Browne, *LHP*, iv, 458-90; Rāghid Yāsimī, *Adabīyyāt-i mu'āṣir*, Tehran 1937; P. N. Khānīārī, *Nāṭh-i fārsī dar dāwra-yi akhīr*, in *Nāghūstīn Kumra-yi Nāw-sāzādāgān-i Irān*, Tehran 1946, 128-87; D. S. Komissarov, *Očerki sovremennoi persidskoi prozy*, Moscow 1960; R. Gelpke, *Die iranische Prosaliteratur im 20. Jahrhundert*, Wiesbaden 1962; Rozorg Alavī, *Geschichte und Entwicklung der modernen persischen Literatur*, Berlin 1964, 11. Kamshād, *Modern Persian prose literature*, Cambridge 1966; Muḥmād Kiyā-Nūḥ, *Bar-rāst-yi ghī'r u nāṭh-i fārsī-yi mu'āṣir*, Tehran 1967, 4th ed. 1976; Váta Kuhlīkovā, ch. *Persian literature of the 20th century*, in Ryppke, *op. cit.*, 355-418; L. P. Elwell-Sutton, *Recent developments in Persian literature*, in *Bulletin of the British Association of Orientalists*, New Series, v (London 1970), 12-18; Muḥammad Istī'lādī, *Bar-rāst-yi adabīyyāt-i mīrāṭ*, Tehran 1970, repr. 1971, etc.; ibid., *Nāzm u nāṭh-i dāwra-yi mu'āṣirā wa mu'āṣir*, Tehran 1973, 3 vols.; Mohammed Ali Jazayeri, *Recent Persian literature*, in *Review of National Literatures*, 11ft, 11-28; Ehsan Yar-Shater, *The modern literary idiom*, in E. Yar-Shater, ed., *Iran faces the seventies*, New York 1971, 284-320; Manoocher Aryanpur, *Retrospect and progress: a short view of modern Persian literature*, in *Books Abroad*, xlvii/2 (Norman, Oklahoma 1972), 200-20; P. Chalkowski, *The literary genres in modern Iran*, in G. Lencowski, ed., *Iran under the Pahlavis*, Stanford 1978, 333-64. (L. P. ELWELL-SUTTON)

3. In Urdu.

Until the beginning of the 19th century, prose literature was almost unknown in Urdu. A few prose works had been written in the Deccan as far back as the early 17th century, but they were mostly on religious subjects. A notable exception, however, was Waḡhīlī's story *Sab Ras* (1635). This is based on the Persian allegorical *maṭnawī*, *Dastūr al-ḥayāt*, by Vahyū b. Shīkh, who is generally known as Fāṭhīl Nisāpūrī (d. 852/1448). *Sab Ras* is written in ornate rhymed prose, and like its Persian source, it tells the story of the romance of Princess Husn (Beauty) and Prince Dil (Heart). All the characters bear similarly allegorical names. The work appears to have been an isolated piece, and it cannot be considered a progenitor of modern Urdu fiction.

There did exist a kind of versified Urdu fiction in the 18th century, namely, the narrative *maṭnawī*, of which the outstanding example is *Sīgh al-bayān*,

by Mir Hasan (q.v.). At its best, the *maṭnawī* included some of the essential elements of the novel—a story with a logical sequence of connected incidents; characterisation, however rudimentary; and vivid description of scenes and social customs. But the plots relied too heavily on the incredible and supernatural.

Another precursor of modern Urdu fiction is to be found in certain collections of short stories within a 'frama', which were recited to general audiences, as well as to royal courts and rich households. They are the Urdu equivalents of Arabic collections like *Alf layla wa-layla* and *Shat' Anīar*, and are termed *dastān* (pl. *dastān*). Ralph Russell (*op. cit.* in *Bibl.*, 107) refers his readers to E. W. Lane's *Manners and customs of the modern Egyptians* for a 'generally accurate account of how the dastāns were recited in India'. These cycles of legends were subsequently printed in Lucknow in the press established there in 1858 by Nawal Kishōr (d. 1895). *Amir Husnā Sāhib Kīrān kā kīssa* recounts the wonderful exploits of a famous uncle of the Prophet Muḥammad in 17 volumes totalling about 17,000 pages. The most popular sections were *Tāīm-i Hōḡrūd* (7 vols.) and *Naughārān-nāma* (2 vols.). Vying in popularity with this vast collection was the seven-volume *Bustān-i k̄hāyāl*. These works are generally considered to be of Persian origin; but it is not clear whether the reciters employed by Kishōr to produce his Urdu versions were actually translating Persian texts themselves, or using existing Urdu versions which had been passed from mouth to mouth. The language is highly-coloured and uses rhymes; but the stories recounted were apparently well known and appreciated in India. The *dastān* were tales of chivalry, and, like the *maṭnawī*, contained a strong element of the supernatural. But whereas a *maṭnawī* might have a well-formed story, the *dastān* consisted of a series of short stories or incidents, with little attempt at characterisation.

In the evolution of the Urdu novel, we find the *dastān* gradually giving way to the European-style novel. Indeed, in some measure the one gradually merged into the other. But the prelude to this transformation takes us to Calcutta, where, in 1800, the British East India Company established Fort William College, to train British officials in the languages, laws and customs of India. The first Principal, John Borthwick Gilchrist, assembled a number of Indian writers, whom he commissioned to produce prose works which could be used as text books for Urdu and other languages. While not discouraging a sense of style and a modicum of linguistic embellishment, he required fairly simple language. A number of Urdu books were written, some of them fiction, which became popular classics. They were all adaptations from other languages, chiefly Persian but occasionally Sanskrit. The emergence of the Urdu novel later in the century diminished the importance of these works, though they served until the Second World War as text-books for British officials and army officers.

The best-known was Mir Amman's *Bāḡ-e-bakār* (1801) based on a Persian tale by Amīr Khusrāw (q.v.). It tells the story of four dervishes who are supernaturally guided to a city. There, aided by the King, they discover their long-lost loves. The scene is supposedly Istanbul; but it is described like Delhi in the last years of the Mughals. Since the original Calcutta edition, this book has been frequently reprinted, and an English translation by Duncan Forbes appeared in London in 1862. S. A. B.

Suhrawardy (op. cit., in *Bibl.*, 18) describes it as "the first prose classic in Urdu... still read for enjoyment". Like other Fort William products, it is written in reasonably straightforward language, and includes good dialogue and characterisation. Amongst other Fort William fiction were 'Arā'ish-i mahfil by 'Alī Afsōs, and Mirzā 'Alī Kāẓim Dīwān's *Shakun-talā*, based on the drama by Kāfi Dās. Not all the fiction written for John Gilchrist was published at the time. Two previously unpublished ones have recently been edited by 'Ibādāt Barīdī. They are by Maẓhar 'Alī Khān Wili. *Haft gulshan* (Karachi 1964) is a collection of fables; while *Maddhūnā aur Kām Kandālī* (Karachi 1965) is a short *adāsīnā*, in 20 chapters. Finally, mention must be made of another Fort William publication which provides a link with the *maghnām*—Mir Bahādur 'Alī Husayn's *Nāṭh-i dīwānī* (Calcutta 1803). It is a prose version of Mir Hasan's *Sifr al-bayān*, including verses quoted from the poem from time to time. Strange to relate, it was published two years earlier than the *maghnām* itself.

Whether the fiction produced at Fort William forms a definite stage in the evolution of the Urdu novel and short story, or was merely an interlude, is a matter subject to dispute. Muḥammad Sadiq (op. cit. in *Bibl.*, 212) denies that it was a "formative factor in the development of modern Urdu prose". He adds that, and it never existed, Urdu prose would not have developed any differently. On the other hand, Suhrawardy (op. cit., 22) maintains that it not only furthered the simplification of Urdu prose, but also popularised prose romances. It is certainly arguable that the simpler prose fostered by the 'Allagh Movement, and exemplified by the writings of Sir Sayyid Ahmad Khān and Aṭīm Husayn Khān, and even 'Abd al-Halīm Sharar, is at times reminiscent of "Fort William prose". But of those three, only Sharar wrote fiction.

Whatever the merits and demerits of the Fort William products, they were important enough to stimulate controversy as to what features constituted good Urdu literary prose. Many considered the Fort William prose style too simple to be literary. In fact, the first original prose romance in Urdu, *Fasāna-yi-'aḡā'ī* by Mirzā Raḡīb 'Alī Dēg Surūr (d. 1867), was regarded, and perhaps intended, as a reply to the Fort William style. He wrote it in about 1824, but it was not published until between 1830 and 1842. It may fairly be described as a *dāstān*, for it is a series of stories of chivalry, with a certain amount of the supernatural, set in a "frame"; but it is in one volume only. The frame is the love-story of Prince Dījān-i 'Alam and Princess Anḡuman-ārā. The stories or incidents describe the dangers, and fights with men and magicians, that the hero has to face in order to win her. The frame is a familiar one, and recurs in Sarīshar's *Fasāna-yi-Āzād*. The language contains much rhetoric and rhyme, and it is interesting to note that Surūr wrote it in Urdu only because he feared that his command of Arabic and Persian was inadequate.

However, it was not until the 1860s and 1870s that the Urdu novel, in the European sense, emerged. There were good reasons for this. English became not only the language of government and higher education, but also a common medium of communication between the various peoples of India. English novels became familiar in the original language. Later, a number were "translated", or, more accurately, adapted into Urdu, as were selections of short stories. But as far as can be ascertained, these

"translations" did not become common until after the First World War, by which time the Urdu novel was already flourishing. Another factor favouring Urdu fiction was the appearance of numerous newspapers and magazines, which published novels either in instalments, or as supplementary special issues. Fiction therefore became cheap enough to attract a wide readership. Thirdly, the 'Allagh Movement made prose a respected literary medium, and also demonstrated that prose need not be artificial, full of rare words, balanced sentences and chymes, to be artistic. During the last thirty years of the life of Sir Sayyid Ahmad Khān (1813-93), the novel became an established form.

Of the three great novelists writing in this period, the first, chronologically, was Naḡhūr Ahmad (1836-1924). But it is more logical to discuss Pandit Ratan Nāth Sarābhī (1845-1903), first, as his stories retain some features of the *dāstān*. Born in Lucknow, after a sketchy education he worked for the newspaper *Awadhī pānī*, then for its rival, the *Awadhī aḡbār*, of which the proprietor Nawal Kishōr appointed him editor. His gigantic picaresque novel *Fasāna-yi-Āzād*, on which his fame rests, appeared in this newspaper in instalments in 1878 and 1879, and was then published in book form in Lucknow in 1880, in four volumes totalling about 1700 double-columned pages. It is more like a collection of short stories and anecdotes than a novel, reflecting both Sarābhī's untidy and disorganised way of life and the demands of serialisation, which required him to produce regular instalments with or without inspiration. According to Khāshīd (op. cit. in *Bibl.*, 183), the idea of the work arose from a discussion about *Don Quixote* among members of the staff of the paper. Sarābhī's book was a tremendous success, and it was imitated by many subsequent novelists.

The "frame" of *Fasāna-yi-Āzād* is that the noble and chivalrous Āzād, of the city of Lucknow, falls in love with the beautiful Huma-ārā. In order to win her hand, he has to go and fight for the Turks against the Russians, and his adventures are recounted in the book. He has a companion, Khōḡlī, who is a figure of fun. In fact, in many ways, the roles of Don Quixote and Sancho Panza are reversed in Āzād and Khōḡlī. The work is so rich in characters, incidents and scenes that it defies description in a brief account. There are major sub-plots as well as the main "frame", and the incidents described are both numerous and varied, ranging from fighting and flirtation to discussions of poetry. It is notable for its pictures of Lucknow life. But above all, it is full of dialogue, often racy, and aiding the language to the speaker. A Western reader picking it up for the first time might think, from many pages, that it is a drama, with each speaker's name in bold letters at the beginning of the line, followed by "stage directions" and then what he or she says. This method of setting out dialogue was followed by a number of Urdu novelists—for example, 'Abd al-Halīm Sharar.

The hero, Āzād, resembles the *dāstān* hero—handsome, brave, a great lover and a champion of what is right. The realistic pictures, however, are modern, sometimes reminding us of Dickens; and there is very little of the supernatural. Thus it is a transitional work, between the *dāstān* and the novel; though by the time it was published, three of Naḡhūr Ahmad's novels had already appeared, with their realistic contemporary social themes. However, Sarābhī wrote to entertain his readers. The abundant variety of characters, including many from the underworld

and the demi-monde; the wit and humour; the basic realism, despite a veneer of exaggeration—all these appealed so strongly to the readers, that it is said that when it first appeared in serial form, each new instalment was avidly awaited, and people rushed to buy the *Azād al-Akhbār* because of it.

Such a tour-de-force is hard to repeat, and Sarshār's Bohemian life-style, especially his addiction to alcohol, seems to have affected his work. Of his later novels, *Khawāṭir-i Jawāhidir* is an abridged and adapted version of Cervantes' novel. His *Kānūn* is his only novel with a Hindu background—which is rather surprising, since he was himself a Hindu.

Nadhr Ahmad (1836-1912) is considered by many to be the first modern novelist in Urdu, especially by those who prefer a novel to be a study of contemporary social life, and who like it to have a message. Strange to relate, he became a novelist by accident. Educated at Delhi College, he worked first as a schoolmaster, then an inspector of education, and subsequently in various posts in the Revenue Department. His first "novel", *Mirāṭ al-Arās* ("The bride's mirror") (1869) was written for his own daughters to read privately; it was a moral tale to teach them the qualities required of a good and successful wife. A British Director of Public Instruction saw the manuscript, and urged Nadhr Ahmad to have it published. Because of its educational value and high moral tone, the Indian Government bought a thousand copies. Nadhr Ahmad achieves his didactic aim by describing two sisters and comparing their married life. Akbari is a spoilt girl who proves incapable of running a house; while Aghbari is efficient and practical, almost a model of all the virtues. In 1871 he followed it with a sequel, *Bināt al-Naṣīb*. Its subject is girls' education, but it is more like a series of lessons than a story. *Tarbat al-Naṣīb* (1877) is a more ambitious family tale. It tells how Naṣīb, while ill, repeats; and, having previously allowed his children to do as they like, he now tries to reform them as well as himself. *Faṣṣa-yi-Mubtālā* (1885) treats of the evils of polygamy. *Im al-waṭṭ* (1888) describes the troubles of an Anglicised Indian who shuns his fellow Indians. But when his only British friend leaves the country, he finds himself isolated. All these novels, then, are stories with a moral, and the very names of many of the characters are descriptive of them: thus Naṣīb (repentant) and Mubtālā (afflicted).

These novels struck a new note and have many attractive qualities. They are straightforward stories of manageable (one-volume) size, in uncomplicated yet elegant style, dealing with the contemporary social scene and its problems. Their high moral tone, somewhat reminiscent of Victorian England, made them suitable reading for people of all ages and both sexes; and they were widely read, and frequently re-printed up to the Second World War. Nadhr Ahmad improved with experience, and his later novels are superior to his earlier ones in both character development and plot construction. But his earlier ones remained the most popular—especially *Mirāṭ al-Arās* and *Tarbat al-Naṣīb*. More recently, *Im al-waṭṭ* has attracted attention, because of its relevance to the last years of the British Raj.

The main objection to these novels has been on grounds of the domination of the didactic aim; so much so, that it has been suggested that they are not real novels at all, but pleas for social reforms in the guise of novels. There is also a lack of humour in them. Nevertheless, they mark the advent of the social novel in Urdu.

Two distinct genres of novel, then, had emerged by the last quarter of the 19th century—the picaresque type of Sarshār, and the social type of Nadhr Ahmad. Both writers were imitated, and there was a burst of activity in both genres. The picaresque type gradually lost its appeal, and though many later examples could be mentioned, none achieved anything approaching Sarshār's success. The social novel, however, was continued unabated until the present time, and in 1899 an outstanding example appeared—*Umūd Dīn Adī*, by Mirāṭ Muḥammad Hādī Roswā (1838-1931). Ralph Russell describes it as the first true novel in Urdu (*op. cit.*, 232). It is the story of a retired high class Lucknow prostitute, whose name forms the title, and who tells her life story to the author. Like Sarshār, Roswā tells much of the story in dialogue form, and the book is very readable and entertaining. As Muḥammad Sadiq says (*op. cit.*, 353), the didactic element emerges before the end. But what is remarkable in Roswā's approach is his sympathetic and perceptive attitude to his heroine. He does not blame her, neither does he condone her sinful life, which has made her virtually a social outcast. He shows understanding without being sentimental. Roswā wrote several other novels, but was unable to repeat the success of *Umūd Dīn Adī*.

As the 19th century drew to its close, a third genre of Urdu fiction appeared, the historical novel. Its pioneer was 'Abū al-Ḥalīm Shāhār (1860-1926), a journalist and historian, and a leading figure in the 'Aligarh Movement. Born in Lucknow, he worked there for 5 years as Assistant Editor of the *Azād al-Akhbār*. In 1887, he started the magazine *Dal-i-Gudda*, which he continued, with interruptions, until his death. His earlier novels were first published in serial form; but later ones were published whole, and sold cheaply as supplements to the magazine. The idea of writing historical novels came to him while reading Sir Walter Scott's *Talisman* during a train journey. Struck by this unfavourable light in which Scott depicted Muslims, he decided to try to redress the balance, and produced *Mahmūd-i-Jalāl aur Wāṣṭiyān*. He had previously published a social novel, *Dulhast*. But though he did not completely abandon this genre, the majority of his novels, numbering about 35, are historical. They contain unabashed propaganda for Islam, and paint Christianity in a poor light; but they are vivid and exciting stories of heroism and romance, with brave heroes, cruel villains, and beautiful heroines—the latter often Christian girls who fall in love with Muslims. They achieved enormous popularity, because Shāhār knew how to write a good story and sustain interest. His descriptive passages are convincing without being over-long, and there is considerable dialogue. But the drama often deteriorates into melodrama. His denouncements are frequently bloodthirsty, and he lingers too long over cruelty and killing for modern tastes. Historical veracity is often lacking, and there are anachronisms. Still, there is no doubt that he could draw characters credibly if not subtly. His language is eclectic and attractive, without being forced; and it still reads well. And though overlaid with Arabic expressions for some tastes, this suits his themes.

His novels span the Islamic world from Spain to Africa, Turkey, the Middle East and India; whilst in time they range from the 7th to the 19th centuries. *Firās Fārīndī* (1897), a tale of Christians and Muslims in medieval Spain, is regarded as one of his best novels. The heroine, FKra, is the daughter

6. In Malaysia and Indonesia

In dictionaries of older Malay, *Kissa* is defined as 'story, narrative episode'. It occurs regularly in this sense in literary words from the 17th century onwards, and, in addition, is used in Malay historiographical works and romances as a kind of pericope marker to introduce a new stage or episode in a longer narrative.

It appears in the title of a Malay adaptation of the Stories of the Prophets, *Kissa al-anbiya'* (largely the version of al-Kisā'ī) which became popular from the 17th century onwards, and in more recent times was the title of an Indonesian magazine, *Kisah* (Jakarta 1953-8) devoted to the short story. It appears in the title of a collection of short stories, purely western and totally secular in theme and content by Armijn Pane, *Kisah Antara Manusia*. Nevertheless, it did not establish itself as the title of a genre. For shorter length narratives, the Sanskrit-derived *cerita* (story) was preferred, with an imitation of European usage, the qualifying adjective *pendek* ('short'), the two words now being abbreviated to *cerpen*.

The short story is currently the most popular literary form in Indonesia and Malaysia. Its roots are to be found in local fables and animal stories, in short narratives of Perso-Arab origin, especially those set within frame collections, and in the flowering of the genre in late 19th century Europe. Although none of the great Arabic collections of stories such as *al-Bukhārī*, *al-Aghāḥ* or the *Alf layla wa-layla* has accompanied the Islamisation of the Malay world, one of the very oldest Malay MSS (ca. 1615) is a fragment of the Persian *Tah-nama*: a rendering in Malay of a Persian version of the *Sukhasaptati* or 'Tales of a parrot'. Other frame-stories such as *Kalila wa-Dimna* and the *Sinbad-nama* established themselves in Malay renderings relatively early. The large number of MSS. of such works is an adequate index of their popularity.

All of these stories belong to the popular domain. The composition by individuals of realistic short stories did not begin until the 20th century with the development of a popular press, and the possibilities that newspapers and periodicals offered for the development of such a form of narrative fiction. It established its present popularity in both regions during the 1930s.

In Malaysia, during the 1930s, the authors of short stories were graduates of Malay stream education and religious schools. The majority of their stories were moralistic, concerning such issues as the backwardness of the Malays, the problems of forced marriage, and the need for a reformist understanding of Islam. In Indonesia during the same period the secular stream was dominant. But just as since Malayan independence in 1957, the short story in Malaysia has become secularised, in Indonesia some short stories by Muslims have brought a consciousness and sensitivity to the perception of religious experience which is characteristically modern. In many cases, the concern is purely with man as man, and while a religious dimension is suggested, it is not worked out within the dogmatic framework of a single identifiable religious tradition. In a few, however, and A. A. Navis (see *Bibli* below) presents the best example, a religious problem lies at the very heart of the story, and is the reason for its existence. Nevertheless, apart from contributing the word *kissa* to the Malay vocabulary, the Muslim religious and literary tradition has played only a limited role in the shaping of the short story in

Malay. The Western secular tradition has been, far and away, the most important single influence.

7. In Swahili

In Swahili literature, the word *kissa* was first used in the context of the *Kissa al-anbiya'* (s.v.). The numerous Swahili authors (i.e. writers as well as composers of oral traditions) had at their disposal rather more elaborate versions than those of al-Kisā'ī or al-Tha'labi from which to borrow their themes for the prophets' legends, extremely popular in East Africa. Also, several of the Swahili versions of the legends have their parallels in Indonesia; see J. Knappert, *The Qissay al-Anbiya' as moralistic tales*, in *Proc. of the Seminar for Arabian Studies*, vi (1976), 103-16.

In written Swahili literature, the legends of the pre-Islamic prophets are always treated in verse. Full-length epic poems are extant about Adam and Eve, Job (Ayyūb) and Joseph (Yūsuf), but fragments have also come to light dealing with Mūsā, Yā'qūb, Yūnus, Sulaymān and Dāwūd, Burhānu (Ibrāhīm), and Zakariyyā and 'Isā; see Knappert, *Four Swahili epics*, London 1964, *idem*, *Traditional Swahili poetry*, Leiden 1967, ch. 2; *idem*, *Swahili Islamic poetry*, Leiden 1971, i, ch. 3. Many of these legends, and especially those with miraculous elements, circulate in oral tradition, see Knappert, *Myths and legends of the Swahili*, London 1970. It is

probable that these tales have come to the Swahili Coast with sailors from Arabia, Persia and India; the latter country in particular seems clearly to have influenced Swahili literature.

From this semi-religious usage, the word *kipisa* (now spelt *kisa* with purely Swahili plural *visa*) acquired an extended range of meaning to that of "miraculous tale in general", "fairly tale of the type found in the *Alf layla wa-layla* collection" [p.v]. The connection here is obvious, since many of the latter tales are variations on *Kipisa* or *al-biyya*² themes or employ their characters, e.g. the tale of the fisherman who found a bottle that had been sealed by King Solomon, a tale well-known amongst the Swahili. These prose stories were not written down by the Swahili themselves, but missionaries with folkloric interests collected them in the 19th century; see e.g. E. Steere, *Swahili tales*, London 1859, and C. Velten, *Märchen und Erzählungen der Suaheli*, Berlin 1893. These *visa* were never composed in verse, until very recently, whereas the *hadithi*, traditions about the Prophet Muhammad or other holy men, were often composed in verse and written down, in Arabic script of course. As well as the above two genres, traditional Swahili storytellers distinguish also the *ugoma*, an invented tale or fable, of which last there are several in Swahili oral literature, some apparently derived from the Indian treasure house of fables, of the type represented in Islamic literature by *Kalila wa-Dimna* [p.v] and the *Amr-i Suhayli* [see Knapert 3].

It is only in the last thirty years or so that the word *kisa* has come to be used in the meaning of the modern novel, though Swahili novels have neither the extended treatment nor sophistication of European-language novels. Indeed, secular Swahili prose literature as a medium for artistic expression is still very much in its infancy. In the earlier, traditional society, prose was the vehicle for the conveyance of factual information, such as topics of history, law and theology. Artistic expression was channelled exclusively into poetry, even for subjects that in the West have not been represented in poetry for a century or so, such as theology and the rules of personal behaviour. Fable and fairy tale belonged to the realm of the (often illiterate) story-teller. The short story and novel have only come to the scene a generation after the influence of English literature, bringing with it an entirely new appreciation of the possibilities of prose writing, has affected the minds and creative faculties of Africans educated in mission secondary schools. Hence a major problem is now the adaptation of the Swahili language—previously largely a trade language, apart from its function in didactic and epic literature, where it has been bound by rigid conventions—into a flexible, modern medium for literature and belles-lettres.

The names of some recent Swahili novelists, with details of their works, are given below. No claim to completeness nor to any attempt at ranking in importance can be given, in view of the uncertain future course of development of Swahili prose. Muhammad Said Abdullah has written the first Swahili detective novel, *Msimu wa mwa wa kale* "The ghost of the old people" (1960), with a sequel *Kisima cha Gwini* "Mrs Gwini's well" (1968); in both, the chief character is Bwana Msa, a taciturn, pipe-smoking detective, obviously inspired by Sherlock Holmes. A. J. Amir's *Nakala fahirini* "A captain in thoughts" (1971) is a semi-historical novel describing life on the Swahili Coast and at sea. Hajj Chum's first novel is *Kisa cha ndege saba* "The

tale of the seven brothers" (1969), after his two epics *Vita vya Uand* "The battle of Uand" and the unpublished *Utensi wa Nashuri* "The Day of Judgment"; born in Zanzibar, he writes within the Islamic tradition. David Diva is a writer of short stories (*Hadithi*) in the Islamic tradition, and one of the first modern writers in this genre. Abdullah Saleh Farsy, from a prominent family of Islamic scholars in Zanzibar, has written *Kurwa na Nado* "K. and N." about two young people getting married, with a concentration on the rites and ceremony of the Swahili wedding. Selim A. Kibao's *Matatu ya thamani* "Three priceless proverbs" (1975) describes how these proverbs save the life of a young man who buys them and makes him into a king; the story has echoes of the Qur'anic Yusuf story so popular in Swahili. G. Ngugi wa Thiong'o's novels are set in central Kenya and have the life of the Kikuyu as their background: *Mtoto mwenye* "The black hermit" and *Ukiki mwenye* "Don't cry, my darling". F. V. Nkwera's *Mishi wa haki ana radhi* "The one who buries his father will receive his blessing" (1967) is partly autobiographical. Abdullah Sharifi Omar's *Kisa cha Hasan al-Basiri* "The story of Hasan al-Basiri" is an adventure story in the Arabian Nights mould, still very popular in Swahili. Shaaban Robert is the only Swahili author of more than local fame, a poet, essayist and storyteller, and a writer of fine prose with a strong religious philosophy behind it; his *Kusadikika* "The credible country" (1951, 1960) and *Utubora* "Human excellence" both have moral implications behind their stories. John Ndeti Somba's *Alipanda pepo na kuvuna ufani* "He planted the wind and reaped the storm" (1969) and *Kusisiri kwenye* *kuhona mwenye* "To live long is to see much" (1968) both deal with the author's own experiences in up-country Kenya.

(J. KNAPERT)

8. In Judean-Arabic and Judeo-Berber.

The written and oral Judeo-Arabic and Judeo-Berber literature is a genre of intellectual activity which has a place in the cultural field of the Muslim West which is by no means negligible. In this sphere of the expression of Jewish thought, the *kipisa* enjoys a certain favour both among the educated and among the wider public and the masses. The themes and genres are very varied: shyned versions of Biblical stories or liturgical poems, songs of joy or of lament (*kinot*), eulogies, and panegyric and hagiographical pieces glorifying the saints of Palestine in Jewish antiquity (Rabbi Shimon Bar Yohai, buried at Meron in Galilee, and Rabbi Meir Ba'al Hana, buried at Tiberias) or local saints (Milly Ighighi, Rabbi Iyya Lakhdar, etc.), venerated by means of *hizufas* and by local pilgrimages. Also connected with the *kipisa* are the songs of folklore celebrating family ceremonies (e.g. *ritas de passage* such as circumcisions, burials and periods of mourning), except that these form a genre devoid of any literary or intellectual pretensions, made up in a language closer to the local spoken tongues, whilst the *kipisa* proper has a more studied form and a more precise expression. It is written in a special language, comparable to the *malshin*, a kind of poetic *haine* in Arabic dialect given literary touches, largely stripped of Hebraisms or outside linguistic influences, and generally to be understood by the Jewish communities of the Maghrib as a group, even though differing from the current spoken language.

As well as the folkloric setting which it describes

and the precious linguistic materials which it represents, the *ḥiṣṣa* reveals an examination deep structures and a content attaching it, on the one hand, to the general cultural ambience of the Maghrib, but on the other, to universal Jewish thought. A rigorous and minute analysis of the written text or the oral discourse, and of their direct or allusive references, throws light on their literary foundation on a cultural substratum of great richness.

The present author has given a sketch of all this in various publications (*REI*, *REJ*, *JA*, *ROMM*, etc.). Thus *L'histoire de Job en judéo-arabe du Maroc*, in *REI* (1968), 279-315, surveys a considerable number of Jewish, Arab-Muslim, Morisco and Coptic chronicles and legends, the (Greek) apocryphal text of the Testament of Job, as well as the conflicts and speculations of the Biblical text.

The pieces involving parodies, published in *REJ*, cxxviii (1969), 377-93, as *La parodie dans la littérature hébraïque et judéo-arabe, folklores de Purim au Maroc*, borrow from local ceremonies, the Jewish homiletic literature of the *Midrash* and *Aggadah*, and Arab-Muslim legends. *L'hymne à Bar Yohai*, in *REJ*, cxxvii (1968), 366-82, is a *ḥiṣṣa* from Tinghir of the Todgha which derives its sources from local mystical folklores combined with the texts of the Zohar, the Kabbalah, the Talmud and the *Midrash*.

(H. ZAFRANI)

KIST [see MAKĀYIL].

KI-SWAḤILI [see SWAḤILI].

KIT'Ā [see MUKATTA'Ā].

KITĀB (A., pl. *kitāb*) "book". The beginnings of the Arabic book go back to the early Islamic period. According to traditions, sheets (*ṣaḥif*) with verses of the Qur'ān were collected and put between wooden covers (*lawḥayn*, *darfatayn*), kept thus and called by the Ethiopic word for "book", *mesḥaf/mesḥaf* (q.v.). Following Christian and Jewish patterns, this form of a codex was generally maintained for the Holy Book since the authoritative redaction done under 'Uthmān; by that means, the Qur'ān was distinguished, by its material form, from profane writings in rolls made of papyrus [see *ḤIKMĀ*] and from the *ḥiṣṣa* pure and simple which meant, in that early period, "something written", "notes", "list" or "letter". As writing material, sheets of parchment [see *ḤIKMĀ*, *ḤAḤ*, *ḤIṢṢA*] were used, which, folded into four pages and placed within one another, became quires (*ḥudūd*); it is uncertain whether these quires were sometimes stitched. Presumably covers made of wood or papyrus were covered over and kept together with leather and, like contemporary Coptic or later Islamic covers, decorated with coloured wood, bone or ivory.

With the rise of the 'Abbāsid caliphate, books and book knowledge, additional to knowledge of the Qur'ān, became a general aim of Islamic society. The interest of the government was evoked by questions concerning the legitimization of its power and by problems of administration connected with these questions, as a background to the theocratic claim to power [see *ḤIṢṢA*]. During this period Arabic learning concerning problems of theology [see *ḤIṢṢA*], *ḥadīth*, *fiqh*, history, philology, etc. and medicine, alchemy, etc., had its heyday, and this florescence was connected with the emergence and spread of rag paper [see *ḤIKMĀ*] from the end of the 2nd/8th century onwards. These scholars wrote books at the suggestion of or on order from the caliphs and the ruling classes, in the expectation of being honoured by presents and payments, in opposition to the organs of state and their policies,

or just for the sake of belief (cf. *Sūra LXVIII*, 1; *XCVI*, 4). Apart from treatises on different subjects, general works were written by authors who were employed as secretaries or *ḥāfiṣ* in state chanceries and offices, where the rather expensive writing materials were at their disposal. Others copied books not only for personal purposes, but for their living; moreover, they dealt in paper, ran a bookshop or a book bindery, or combined one with one the other. It is surprising to note how quickly books were widely disseminated and did not remain confined to schools and learned institutions [see *MADRASA*], where also notes taken in lectures, enlarged by additional material, were made into books. Certain kinds of transmission of books and their authentication, including lists of students in a lecture audience, were formed [see *ḤIKMĀ*]; adaptations or quotations from other works were often marked by special terms, texts and copies were compared with each other, collated, complemented and glossed. In writing rooms which were sometimes associated to public libraries [see *MAKTABA*] books were multiplied commercially. An author could safeguard himself against dubious activities of scribes in these writing rooms through issuing his books by authorisation, only; e.g. al-Ḥarfī (d. 516/1122 [q.v.]) himself wrote a note in 700 copies of his *Mahāmī*, during a period of ten years. The production of such books and their trade was immense in quantity and was widespread. Titles of books which had in the past been simple and short became ornate and flowery in the course of time, consisting of two phrases rhyming with one another (*saḍḍ*). First the titles were given in the prefaces, which usually contained the author's name and which started on a b-page; later the previous page (a-page) became the title page with the author's name. Already in this period, autographs or copies made by learned men or calligraphers [see e.g. *ḤIKMĀ*, *ḤAḤ*, *ḤIṢṢA*] were sold for high prices. There was a big demand for the libraries of learned men; some of them went to pious bequests [see *WAKF*], others were put into the stacks of an academy when an attachment to heretical ideas of their deceased owner was known. Bibliophiles, from the caliph to the craftsman, competed in searching for valuable or rare books. As early as the *Fihrist* of Ibn al-Nadīm (d. 380/990 [q.v.]), compiled in 377/987, we find that this work gives, before its information on books and biographical notes on their authors or compilers, informative details about these matters. There is also the voluminous biographical literature, with its innumerable names of learned and literary men, secretaries, calligraphers, etc., and the multiplicity of manuscripts with their countless, often very personal, notes of the owners and readers, to be found in libraries situated even in remote places and containing thousands or tens of thousands of volumes. These considerable survivals, give us an ample idea about books and their quality in the Islamic Middle Ages, these books have in common one thing only, *sc.* the *ḥiṣṣa* (q.v.) at the beginning.

The upright quarto size was widespread, sizes in folio or oblong sizes being usually reserved for special occasions, e.g. presentation copies for high-ranking persons. The cover, writing materials, format and type of script [see *ḤIKMĀ*] were determined by these purposes. The kinds of leather used for the covers, their colouring, workmanship and decoration sometimes refer to patterns of the Pre-Islamic period, e.g. in Egypt to Coptic, and in Persia to Sāsānid ones; they were developed in forms charac-

teristic for the respective countries, e.g. regarding the different kinds of workmanship in leather. Moreover, in regard to the arrangement of the areas on the covers, there are, apart from general principles like lines parallel to the edges of the book, features characteristic of certain places or periods, e.g. the treatment of the centre, and the application of innumerable geometrical patterns and ornaments in certain variations by using brasses. The triangular flap to protect the edge and the clasp and eyes, appear at an early period. Asphodios paste was used in the Syrian-Palestinian area, and paste made of wheat in South Arabia. While rag paper was used for books in general, parchment was sometimes used for copies of the Kurʾān and other de luxe editions. Fine paper imported from China was reserved for books valuable to their owners, like books of sects. These books were not written with the usual ink (see KITĀBA) only, but also with ink made of silver and gold, and their pages and lines were decorated with coloured ornaments (arabesques [q.v.]). There were always illuminations (see ʾIRĀ, RAṢṢA), in spite of the prohibition of depicting living beings with a *raḥ* or soul, but these were exceptional. A quire (*kurʾāsa*) usually consisted of five double sheets, and several quires combined together, sometimes by chain stitches, made a sewn book. The quires were marked by consecutive numbers which were written out in words, and the right order of the sheets was controlled by catch-words, which appear early. The pagination of sheets or, sometimes, of pages, is only found later or in modern times; the pagination of sheets was more widespread. Many books ended with a colophon containing the name of the scribe, and often the date as well as, though not so often, the place; but in certain cases, the dates given there are not correct, e.g. when taken from texts which had been copied. For the post-Mongol period, the following features of the books should be noted. The sizes and the writing became smaller, and the kinds of paper became thinner, stronger and smoother. Coloured paper was used and, from the Ottoman period, imported paper from Europe also, firstly from Italy, and with watermarks. The ink became darker and more shiny; the writing surfaces were framed with lines in different colours or in gold, and an *ʾamṣar* (q.v.) was drawn on the first page of a book. Owner's stamps appear in considerable number for the late period; and bookbinders' brasses with their names shaped like a medallion, can be found on the covers, even on lacquered ones. Splendid, calligraphic specimens of large size, with covers superbly wrought (these being mostly works of Persian poetry, often illuminated by unique miniatures), were produced mainly at the courts of the Timurids, Safawids, Mughals and Ottomans; splendid copies of the Kurʾān were produced also at the court of the Mamlūks. The painter is often identical with the decorator, the "gilder" (*muḥabbab*); he came next in prestige to the hibrankning calligrapher. The bookbinders formed their own guild from the time of Bāyazīd II (886-918/1481-1512 [q.v.]) onwards. Even after the introduction of printing (see NAṬAʾA), books were written by hand, increasingly by European ink and nibs, and bound in the traditional way until the beginning of this century.

KITĀB AL-DJILWA, one of the two sacred books of the Yazidis (q.v.), which with the *Maḥṣaf-ṭagh* contains the fundamentals of their religion. As the religious language of the Yazidis is Kurdish and all the prayers of the Yazidis known to us are in Kurdish (for example, the chief prayer, the morning prayer, the formulae used at baptism and circumcision, the proclamation at the assembly of the *sanjak*, and God Himself in the apocryphal continuation of the *Maḥṣaf-ṭagh* speaks Kurdish), it is rather remarkable that their two sacred books, the existence of which has long been known and of which copies of the originals have come into the possession of Europeans, should be in Arabic, namely the *Kitāb al-Djilwa* (*Kitāb-i Djilwā*), the "Book of Revelation" (the form *Djilwā* which Sharaf al-Dīn gives from the manuscripts available to him, seems to be a slip on the part of the copyist), and the *Maḥṣaf-ṭagh*, the "black book"; "black" obviously means something sacred: for example God descends upon the "Black Mountain" (*Maḥṣaf*, xvi). The explanation of the name from the forbidden words, said to be covered over with black wax, is wrong, as in this case the Kurʾān is substituted as the sacred book of the Yazidis.

Father Anastase Marie of Baghdad was the first to succeed in getting exact tracings of the alleged

original parchment copies of the two sacred books by bribing the keeper of the books of the *Sindjār* in 1904-6; they were written in Kurdish in a simple transposition cipher. The text written in this cipher shows clearly that it was copied from an original written in Arabic script. The possibility of a fraud was, however, not excluded especially as, stimulated by the interest of European scholars in Yazidī beliefs, sharp guardians in Mawli were always endeavouring to discover new texts. Mingana endeavoured to show that a former Nestorian monk of the Alkosh monastery, named Shamrūs Erems Šāmīr of the diocese of Kirkūk, who died in 1906, forged all the texts published by Chabot, Glanville, Isya Joseph and Browne, but the authenticity of the Kurdish text was accepted in Bitterm's monograph, *Die heiligen Bücher der Jesiden oder Tausfahndeter*, with Nachtrag, in the *Denkschriften d. Wiener Ak. d. Wiss.*, lv, Vienna 1913. The syntax of the text is, according to Edmonds, basically that of the present-day dialect of Sulaymānī Kurdish. Both Bitterm and Edmonds agree that the Kurdish version is not the original, but must be a translation from the Arabic, as some linguistic peculiarities suggest (plays on words which are unintelligible in Kurdish).

The *Kitāb-i Djalwa* might nevertheless conceivably have been originally written in Kurdish, as the Kurdish text is in many passages more lucid and coherent than the Arabic, while in the *Maṣḥaf-raṣḥ*, the Arabic text is better than the Kurdish. According to Sharaf al-Dīn, the *Kitāb al-Djalwa* in its present form could not have been written by an Arab, as the language is modern; there are a number of expressions which are either not used in classical Arabic or only came into use very late. In places also the construction is un-Arabic. These considerations could, of course, be arguments in favour of a recent forgery. The Arabic of the *Maṣḥaf-raṣḥ* is even more modern, as it shows undeniably the influence of the spirit of Ottoman Turkish.

So far, we know of at least four versions of the two sacred books: one in the possession of O. Parry in 1895; one in the hands of Isya Joseph, who possessed two versions in addition to the one published in *AJSL*, xiv; two procured by Father Anastase Maré, one of which, the so-called *Sindjār* version, was copied in 1899 by a *Sindjār* Yazidī for a Yazidī apostate, while the other was copied in 1904 by Anastase himself from the original in the possession of a Mawli.

The *Kitāb-i Djalwa* (also *Kitāb-i Djalwa*, *Djalwa*), the original of which according to Joseph was in 1892 still in the house of Molla Haydar in Bā'ūriyya and was taken twice a year to the tomb of Shaykh 'Adī, is quite short. In book form it covers 8 pages and has 109 lines. It is ascribed to the reputed founder of the religion, Shaykh 'Adī (d. 355/1160 or 357/1162; see 'Adī n. 1, *supra*) who is said to have dictated it to Shaykh Fakhr al-Dīn.

The fact that the *Kitāb al-Djalwa* is not mentioned in the *Radd 'ala 'l-Rāfiḍa wa-Yazidīyya al-muḥāḍiḍin li 'l-milla al-islāmīyya al-muḥammadiyya* written in 725/1325 by the well-informed Ibn Djamāl (Abū Fīrās 'Ubayd Allāh) who belonged to the Euphrates district, nor in al-Makrizī in connection with his description of the destruction and burning of the tomb and bones of Shaykh 'Adī in 827/1424, makes Sharaf al-Dīn think its date of composition cannot be put earlier than 725/1325 or 827/1424. As Evliya Çelebi does not mention the work, this would bring the date even further down, to 1635.

The above facts seem rather to indicate, however,

that the Yazidīs have been able to maintain the secret of the book with success. In spite of the advantages which might have accrued to them as *ahl al-kutāb*, they have preferred to deny their possession of sacred books. Only in the Catechism of the Shaykh Mīrān Ismā'īl Bek 'Abdī Bek Qūhlu Nazlī Rāḥānī Yazid for the Russian Yaskīls is there a reference to "the glorious *Djalwa*", *Gylānīm*, as a source of the tradition.

The contents of the *Kitāb-i Djalwa*, the form and text of which are in keeping with its high purpose, are as follows: Melek Tāwūs who existed before all creatures sent 'Abdīlāwūs (= 'Abd Tāwūs = Shaykh 'Adī) into the world in order to guide rightly his chosen people, the Yazidīs, by oral instruction and later by means of the *Kitāb-i Djalwa* which an outsider may read (preface). He then speaks in the first person of his pre-existence and eternality, his omnipotence over all other creators and gods (not "creatures" as in the Arabic), of his omnipresence and providence, the erroneousness of other sacred books and the clear perceptibility of good and evil, his rule over the world and his inscrutable decree, to which in every age we owe the sending of a great man upon earth (ch. 1). Further, he deals with his power of rewarding and punishing, which also allows those who do not deserve it to receive benefits; with the dying of a true Yazidī and the migration of souls (ch. 2); he says that he alone has power to dispose of the creatures and things of the world (ch. 3). He warns against strange doctrines, so far as they contradict his own ones, and against three unnamable things, and promises his followers his powerful protection if they keep together (ch. 4). He asks that his cult and the orders of himself and his servants should be followed (ch. 5).

The *Maṣḥaf-raṣḥ* is more comprehensive. The Yazidī *Kitāb* original is in the form of rolls and contains 152 lines in cipher. It is much more mundane and banal and less coherent than the *Kitāb Djalwa*. It is full of contradictions and breaks off abruptly. According to tradition, it was composed about 200 years after Shaykh 'Adī (ca. 743/1342) by the great Ḥasan al-Baṣrī (q.v.). The original was said to have been at one time in the house of the Kahāya 'Alī in Kaṣr 'Azz al-Dīn near Samāl on the Tigris, but it seems now to be in *Sindjār* like the *Kitāb-i Djalwa*.

Cosmogony. In a very confused fashion, without divisions into chapters, the *Maṣḥaf-raṣḥ* deals with the creation of the world in three contradictory versions. According to what seems to be the more original story of the creation, God completed the creation alone. He made a white pearl which he put on the back of a bird Anfar (in many manuscripts, Angar) created by him and was enthroned on it for 40,000 years. He then created the seven angels of God who are identified with the mystic *shayḥs*.

On the Sunday, God created 'Azrā'ī (Azāzīl, Zazā'ī) = Melek Tāwūs, who is supreme over everything; on the Monday Melek Dardā'ī = Shaykh Ḥasan (al-Baṣrī). The Yazidī pronunciation is *Shēkhā'ī*, as the invocation in the chief Yazidī prayer shows (Sydjādīn *Shēkhā'ī* = Saḍḍīd al-Dīn Shaykh Ḥasan) (the conclusions which have been drawn from an alleged *Shaykh Sīn* who is compared with the moon-god Sīn, e.g. by Messignon, *Essai sur les origines du langage technique*, Paris 1954, 200 n. 2, are quite wrong); on Tuesday he created Melek Isrā'īlī (Isrā'īm) = Shaykh Shams (al-Dīn); on Wednesday Melek Mikā'īl = Shaykh Abū Bakr;

on Thursday Melek *Djibrāʾī* = *Sadīdīdīn* (*Skādīn*, *Sadīdīd al-Dīn*); on Friday Melek *Shamāʾī* (*Shamāʾī*, *Shamāʾī*) = *Nāṣir al-Dīn*; on Saturday Melek *Tārāʾī* (*Nārāʾī*) = *Faḥr al-Dīn*.

Then he created the seven heavens, the earth, sun, and moon, whereupon the last-named angel of God *Faḥr al-Dīn* took over the rest of the work of creation and created man and the animals.

God now came out of the pearl with the angels and caused it to burst into four pieces with a loud cry. On the sea which was formed by the water rushing out of the pearl, God sailed for 30,000 years in a ship created by him. *Djibrāʾī*, created in the form of a bird, created from the pieces of the pearl sun, moon and stars, the mountains, plants, fruit-trees and the heavens (cf. on the rôle of the pearl, M. Mokri, *Le symbole de la perle dans la folklore persan et chez les Kurdes frères de vérité* (*Ahl-e Haqq*), in *JA* (1960), 463-81).

Parallel with this is the rather different conception of the seven deities, who arising through emanation, are light of the light of God just as light is lit from light, and among them the supreme god, *Khudā*, only appears as *primus inter pares*.

The statements regarding the creation of the religious community of 'Azīʾī (= Melek *Tāwūs*) i.e. the Yazidis, to whom God sent *Shaykh 'Adī* from *Shām* (Syria) to *Lālib* (q.v.), are fragmentary, as are the statements regarding the descendants of *Shāh b. Sāfir*, the son of Adam and Eve, the ancestors of mankind. After God had been worshipped for 40,000 years by the 30,000 newly-created angels, he created Adam out of the four elements with the active assistance of *Djibrāʾī* and put him to Paradise, ordering him to eat of all the fruits of the earth, except wheat (according to one Yazidi legend, the prohibition concerned grapes).

When, after 100 years, Melek *Tāwūs* reminded God that there could be no increase in Adam's race, God gave him permission to do what he thought fit. Melek *Tāwūs* induced Adam to eat of the forbidden wheat, whereupon Adam who had as yet no opening in his bowels was driven out of Paradise by Melek *Tāwūs* and suffered great discomfort until God sent a bird to pick an orifice in him. After another 100 years, God sent *Djibrāʾī* to create Eve from the lower part of Adam's left armpit.

Another story of the creation in the *Maḥṣaf-nagā* says that God, who was sailing about on the ocean on a ship created by Him, created a pearl but crushed it after 40 years; from its cry of pain arose the mountains, from the noise the hills and from its vapour the heavens. God then created six other deities by emanation from His light. Each of these deities in their turn then created something: the first the heavens, the second became the sea, the third the moon, the fourth created the horizons, the fifth the morning-star and the sixth the atmosphere.

There are further a few confused statements regarding the very early history of the Yazidis in the *Maḥṣaf*, which include a few features worth noting: after Melek *Tāwūs* had given Eve to Adam as a companion, he descended to earth to the Yazidis who, as descendants of Adam alone, had nothing in common with the rest of mankind. He appointed for them as for the Assyrians, who had been in existence from the earliest times, rulers namely: *Nasrūb* (*Nasrūb*, *Assyr*, *Nisroch*) = *Nāṣir al-Dīn*; *Djambūh* (*Kimūh*) = *Kamos* = Melek *Faḥr al-Dīn* and *Artēmanūh* (*Artimūh* = *Artemis*) = Melek *Shamā al-Dīn*. After them *Shābūr* (*Shāpūr*) I and II reigned

for 150 years. From him, all their notables are descended, especially the family of the Yazidi princes. The Yazidis had four rulers not definitely named. One of their kings, *Āḥāb*, ordered names of their own to be given to them (which names is not stated). *Ilāh Āḥāb* (i.e. *Ba'izābūb*) is now called *Pīrūb*. Among other Yazidi rulers were *Bukhtnāsar* (*Nebuchadnezzar*) in Babel, *Akhashwerōsh* (*Akhash-perōsh*) in Persia and *Aggrinkātōs* (*Agrīkātōs*) in Constantinople.

The *Maḥṣaf* further contains prohibitions. The forbidden foods include lettuce (*Yaz. āḥāb*, Arab. *ḥāḥāb*, which is prohibited on account of the resemblance of the name to that of the prophetess (*ḥāḥāb*); beans (*lobāb*); fish (*maḥī* = *māḥī*, on account of the prophet *Yūnus* = *Yūnus*); gaselles (*ḡaḡ*); for the *shaykh* and his disciples, the flesh of poultry (*ḥāḥāḡ*) and gourd (*ḥāḥāḡ*) are forbidden.

As among the Sabians, the colour dark blue is prohibited. The following are also expressly forbidden: to micurate standing, to dress while sitting down, to use a closet and to wash in a bathroom (bath and closet are regarded as the abode of evil spirits). It is forbidden to pronounce the following words: *shayḥān* ('the name of their god'); *ḡayḡā* (noose); *ḡaḡ* (stream); *ḡar* (evil); *maḥā* (accursed); *ḡāna* (curse) and *naḡ* (horsehoe).

Not mentioned in the *Maḥṣaf*, but traditionally regarded as forbidden, are words beginning with *ḡā*; also *ḡarab* ('crab'); *ḡarḡ* ('hedger'); *ḡarḡ* ('vegetable garden'); *ḡaḡ* ('duck'); *ḡaḡ* ('jump') and others; reading and writing, shaving and complete removal of the moustaches are also forbidden, as are the use of combs and razors belonging to others, taking wood from sacred forests, the rearing of bastards and drinking from gurgling vessels.

KITĀB (see Supplement)

KITĀBĀT (A.), inscriptions.

1. Islamic epigraphy in general.

The study of Arabic inscriptions today constitutes a science full of promise, an auxiliary science to be sure, but a science indispensable to the scholarly exploitation of a whole category of authentic texts capable of throwing light on the civilisation in the context of which they were written. From a very early period, seeing that the first dated Arabic inscription available to us goes back to the year 31/652 and that we are aware of previous inscriptions and graffiti known as 'proto-Arabic', there appeared in Islamic circles the practice of engraving, on stone or other hard material, in a more or less skilful fashion, the symbols then used in so-called archaic Arabic writing (see *EMAT*). This practice subsequently spread, benefiting from the prestige soon to be enjoyed by a writing capable of giving material embodiment to and preserving the very letter of the Qur'anic revelation while responding to the needs of the new society born simultaneously with the Arab-Islamic empire and state. This corpus

of inscriptions drawn up in the Arabic language, disseminated and preserved up to the present day throughout a particularly vast geographical region, that of the Muslim countries, where Arabic writing was practised, may today be suitably considered in its entirety, in spite of the difficulties inherent in the massive scale of the regions in question and in the inadequacies of the researches hitherto undertaken.

In its capacity as an original discipline, Arabic epigraphy, in common with the subsidiary sciences which it more or less borders on, like numismatics, glyptic or diplomatic for example, or even those which it partially overlays, like palaeography *stricto sensu*, was among the disciplines subjected to specific study, at the end of the 19th century, by enthusiastic Western scholars curious about Oriental civilisations. Its methods, inspired principally by those of classical epigraphy, and the first attempts at their application, were owed to their zeal. It enabled various Western Arabist and Islamic scholars to obtain historical and archaeological results which guaranteed its vigour. It was not however until several decades later that it came to be recognised as a science by Arabic-speakers themselves, in regions where the traditional taste for calligraphy had hitherto reigned unchallenged but had never taken the form of the searching out or the study of texts of this type decorating the walls of buildings or the surfaces of pieces of furniture; it is in fact no accident that the early Arab sources, anxious to describe the stages in the development of writing and to give the names of its eminent exponents, mention only the names of copyists or scribes distinguished in their use of the pen, while remaining silent on the issue of so-called lapidary writing and refer only exceptionally to the existence of the monumental graphic compositions that are so remarkable.

A modern science therefore by its very definition, Arabic epigraphy saw some of its rules codified as a result of the personal efforts of the Swiss orientalist Max van Berchem. The attention which this passionate enquirer tirelessly brought to bear on the remains of Arabic inscriptions preserved in Egypt and in Syria was in fact accompanied by a detailed consideration on his part of the fundamental principles according to which their study should best be conducted; some spectacular initial progress was marked in his lifetime and under his inspiration by the establishment of the first corpus of Arabic inscriptions.

This progress went far beyond anything that had been previously attempted. They should not, however, condemn to oblivion those earlier efforts which can be set back as far as the 18th century with reference to Tychoen, but which owed most of all, at the beginning of the 19th century, to the personality of J. J. Marcel, the French palaeographer, a member of Bonaparte's expedition to Egypt, who devoted his energies to deciphering, reproducing and annotating in tentative fashion some Kūfic inscriptions of Cairo with the aim of gaining insights into the evolution of ancient Arabic writing. His studies, like the works of other pioneers upon whom there is no space to expatiate here (see J. Sourdel-Thomine, *Quelques étapes et perspectives de l'épigraphie arabe*, in *SI*, xvii [1962], 5-22, also the references to epigraphy in the detailed historical chapter entitled *Die Entwicklung der arabischen Paläographie im Abendlande*, in A. Grohmann, *Arabische Paläographie*, I, Graz-Vienna-Cologne 1967, 32-65), gave clear indications of what was to follow.

They even gave birth, alongside the ambitious and fruitless efforts of Lami for example, to works that remain, even today, as indispensable for reference purposes as is the catalogue of inscriptions on objects d'art drawn up by Reinaud in connection with an important collection of his time (Reinaud, *Monuments arabes, persans et turcs du cabinet de M. le Duc de Blacas*, 2 vols., Paris 1828). The uneven quality of the results obtained emphasised even at this early stage the difficulties of a sphere where the best-conceived programmes—and this was the case with J. J. Marcel's programme at the dawn of the 19th century—most often came into confrontation with insurmountable obstacles of a material order and where the enthusiastic work of numerous specialists failed on every occasion to satisfy requirements, the importance of which they themselves had understood and asserted.

In fact, it was not at that time solely a case of showing that Arabic inscriptions deserved to be collected in the same way as Greek and Latin inscriptions. There was also a need to work rapidly in the field of new research, where the volume of exploitable documentation was remarkably copious. The initiative was taken by Max van Berchem when, having produced a large number of manifestos in commendation of Arabic epigraphy, he published, in the early years of the 20th century, the first volume of his *Matériaux pour un Corpus Inscriptionum Arabicarum*. But his ambitious and authoritative project of publishing systematically, region by region and monument by monument, a corpus of hitherto neglected epigraphic material soon had to be abandoned. The exemplary collections of inscriptions which he himself accomplished or supervised with regard to Cairo (M. van Berchem, *CIA Egypte*, I, Cairo 1894-1903, *Mém. mission arch. fr.*, vi), Tripoli (M. Sobenheim, *CIA Syrie du Nord*, I, Cairo 1909, MIFAO, xrv), Siwās and Dīwrigi (M. van Berchem and H. Edhem, *CIA Asie mineure*, I, Cairo 1920-27, MIFAO, xxix) and finally Jerusalem (M. van Berchem, *CIA Syrie du Sud*, Cairo 1920-2, MIFAO, xlii-4iv), were followed, after his death in 1922, only by a later supplement on Cairo (G. Wiet, *CIA Egypte*, II, Cairo 1925-30, MIFAO, III) and the publication still later, in the form of posthumous work taken over by other hands, of the results of a survey of Aleppo begun by Moritz Sobenheim, in the lifetime of Max van Berchem, and subsequently resumed by Ernst Herzfeld and Etienne Combe (*Syrie du Nord*, II, Cairo 1954-6, MIFAO, lxxvi-lxxvii).

The terrain prospected on this basis remains, at present, minimal in comparison with that approached by less complete studies. Certainly there are other works of broad scope, undertaken in a different spirit, which also deserve mention. These have striven for example to deal with the question in their own way with regard to countries where Arabic inscriptions attracted attention of a very early stage: the inventories of Michele Amari for Sicily (*Le epigrafi arabiche di Sicilia, Iscrizioni adili*, Palermo 1875, *Iscrizioni sepolcrali*, 1879-81, *Iscrizioni mobili e domestiche*, 1885, re-edited by F. Gabrieli, Palermo 1971) or of E. Lévi-Provençal for Spain (*Inscriptions arabes d'Espagne*, Leiden 1931), not to mention the various fascicules published in Calcutta under the title *Epigraphia Indo-Moslenica*. But beside these, of far greater number are studies that are currently out of date, such as the *Corpus des inscriptions arabes et turques de l'Algérie* (G. Colin, *Département d'Alger*, Paris 1907, and G. Mercier,

Département de Constantine, Paris 1902), works that have quite recently been supplemented by the various published fascicules of the *Corpus des inscriptions arabes de Tunisie* (1st part, S. M. Zbiss, *Inscriptions de Tunis et de sa banlieue*, Tunis 1955, *Inscriptions du Gorfassi*, Tunis 1962; *Inscriptions de Menastir*, Tunis 1962), or the volumes devoted to various epigraphic collections of the Iberian region (M. Ocaña Jimenez, *Repertoire de inscripciones árabes de Almería*, Madrid-Granada, 1964; G. Rosello-Bordoy, *Corpus balnearum de epigraphia árabe*, Mallorca 1975; F. Valderrama Martínez, *Inscripciones árabes de Tetuán*, Madrid 1975). Moreover, there are numerous tentative works which are still at the project stage, although more than ever there is an awareness of the fundamental need for studies conducted on a regional basis, taking advantage of opportunities for verification on the spot (see in this context, the remarks of Sourdel Thominé, *Perspectives nouvelles dans le domaine de l'épigraphie*, in *Boletín de la asociación española de Orientalistas*, v [1969], 183-90, and M. Sharon, *Un nouveau corpus des inscriptions arabes de Palestine*, in *REI*, xlii [1974], 185-91).

As a consequence, the uneven quality of results obtained and their partial insufficiency remain the principal defects of collections made up to the present day. This assertion, banal though it may be, cannot be passed over in silence, even if the reasons for it are easily explained in a world stretching from India to the Pyrenees and from Anatolia to Black Africa, covering an immense territory that is little-known from an archaeological point of view and of which certain parts are particularly difficult of access, and which in any case considerably oversteps the limits assigned today to the Arab world as strictly defined. It is not only that Arabic inscriptions are dotted throughout areas that have since reverted to a desert state and that some provinces blossomed at a late stage, like Anatolia, are not the least rich in hitherto unsuspected treasures; but there is also the fact that these inscriptions that have remained so long outside the canon of research are also distinguished by their diversity of appearance according to the regions, as witnesses to a society where writing, spread broadly throughout all areas, was subject to numerous stylistic variations (see *EMATE*). The difficulties of decipherment are thus magnified by the effect of these local practices, and the traits and qualities peculiar to Arabic writing itself from the time of its appearance, which have subsequently conditioned its development, continue to be partially responsible for the shortcomings of a discipline where scientific progress is confronted by uncertain readings and by problematic interpretation of scripts, since there are numerous instances where letters are easily confused and uncertainties are further multiplied and complicated by a concern for ornamentation, which in most cases takes priority over legibility (cf. R. Ettinghausen, *Arabic epigraphy: communication or symbolic affirmation*, in *Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles*, ed. D. K. Kouymjian, Beirut 1974, 297-317).

Such conditions were hardly favourable to the intensive and systematic publication of documents in the series of *Matériaux pour un Corpus* inaugurated by van Berchem. They were no more favourable to the establishment of the other fundamental study-apparatus envisaged a little later by Etienne Combe, Jean Sauvaget and Gaston Wiet in the form of a *Repertoire chronologique d'épigraphie arabe* which had the object of assembling, year-by-year and in

an approximately geographical order, the texts of Arabic inscriptions already published, accompanied by their French translation and indispensable bibliographical information. To be sure, sixteen successive volumes of this *Repertoire* (Cairo, PIFAO, 1931 ff.) have so far appeared and more than six thousand inscriptions have been edited covering the first eight centuries of the Muslim era. But since 1931, the date at which the enterprise was begun, the rhythm of discoveries has been more rapid than the rhythm at which the inventory has been assembled; the latter remains incomplete and today it swarms with inaccuracies in its most ancient sections, making it a vehicle for defective copies and sometimes of duplications. Even to consult it, in its present state of incompleteness, is to encounter difficulties which are barely alleviated by the publication of the *Index géographique* to its first six volumes, quite recently brought about through the good offices of the Centre d'Épigraphie Arabe of the École Pratique des Hautes Études IV^e section of Paris. Even if it may be hoped that forthcoming volumes (vol. xvii prepared by L. Kahis, in press), profiting from experience acquired and designed to respond to more precise critical objectives in an age where our knowledge of Arabic inscriptions has considerably developed, will avoid some of these defects, they will continue to be no less restricted by the inadequacies of the previous publications on which they cannot help being based.

The *Repertoire chronologique d'épigraphie arabe* is, in any case, the only existing attempt at systematic grouping of inscriptions, in a sphere where the means employed are, to this day, seldom sufficient for the extent of the tasks to be accomplished. Also to be asserted is the almost total absence of studies of Arabic epigraphy constructed on the principle of the series, the non-existence of functional corpora, organised according to material and category (for example, the only means permitting a thorough investigation of the limited types of documents which inscriptions are, by definition. It is appropriate to mention in this connection, insofar as concerns the signatures of craftsmen, the inventories, designed to form a *Corpus of Muslim artists*, with which L. A. Mayer hoped to bring about a re-evaluation of our knowledge concerning the artistic schools as well as the functioning of their influences, and the publication of which was, also, interrupted soon after the death of the inaugurator of the collection (see Mayer, *Islamic architects and their works*, Geneva 1956; *Islamic metalworkers and their works*, Geneva 1958; *Islamic metalworkers and their works*, Geneva 1959; *Islamic armourers and their works*, Geneva 1962).

The bibliographical guides and the synthesised surveys are also inadequate to enable a confident orientation in a mass of studies that are too often indebted to fortuitous discoveries and consequently scattered through the most diverse of volumes, ranging from "epigraphic appendices" accompanying reports of explorations, accounts of journeys or archaeological publications to museum catalogues or monographs dealing with themes such as Islamology, history, palaeography or even aesthetics. Such in fact is the variety of subjects covered by Arabic inscriptions of an equally varied interest. Such also is the slow progress of research, which has been principally concerned with a copious proliferation of notes, correspondences and brief articles of unfortunately uneven quality.

Not do we have at our disposal, it should finally

be made clear, manuals providing an introduction to Arabic epigraphy and guiding the efforts of those who wish to become conversant with it; familiarity with the works of their predecessors, especially with the articles of Max van Berchem, loaded with methodology (*Notes d'archéologie arabe*, i and ii, in *JA* [1891], i, 411-495, and [1892], i, 377-407; *Recherches archéologiques en Syrie*, in *JA* [1895], ii, 485-525; in particular, *Inscriptions arabes de Syrie*, in *Mém. de l'Inst. égyptien*, iii, 417-520), with the volumes already mentioned of the *Matériaux pour un Corpus* and the specimen publications of sublimely deciphered and annotated inscriptions offered by some articles of J. Saavaget (such as his publication of the *Décrets nomenclés de Syrie*, in *BEO*, ii [1932], 1-52, iii [1953], 1-29, and xii [1947-8], 5-60, as well as his *Quatre décrets seljoukides*) remains for the aspiring student the only possible path to follow, apart from various items of specific information provided here or there. More regrettable, however, is the fact that numerous aspects are to be distinguished in a body of inscriptions influenced simultaneously by regional practices and by the disparities between schools marked by the proliferation of dynastic centres. We know in fact that diverse currents presided, according to places and periods, over the drafting of inscriptions, the text of which evolved in parallel with the development and stylistic ramifications of so-called lepidary writing (which has in fact applied to various materials), a writing the history of which is an important chapter of the history of Arabic writing (see *EGAT*). Influences of every kind were manifested here equally in the form of politico-social transformations and historical events which it would be impossible to evoke in this article in the context appropriate to each, geographically distinct, group of inscriptions.

But this continually-renewed variety should not cause one to forget certain traits characteristic of Arabic inscriptions which may be underlined here, in regard to their nature and customary content, and which will enable us to stress the value of the conclusions to which their study leads.

One important feature to be emphasized is the frequency and significance of religious inscriptions, which have sometimes tended to be overlooked in cases where they are not accompanied by documents judged to be of historical interest and which, for this reason, do not figure in their own right in the *Répertoire* and are only briefly mentioned in the *Matériaux pour un Corpus*. These are sometimes isolated inscriptions also capable of supplying an ornamental function on buildings, tombstones or even household objects, sometimes elements belonging to texts where in spite of the profane purpose there is an inevitable collection of pious expressions and customary doctrinal preoccupations. Here we shall assemble in particular examples of Qur'anic quotations, professions of faith, isolated or linked to the texts of epitaphs, prayers, invocations and blessings.

These religious inscriptions appeared at the very beginning of the Islamic era among the primitive graffiti which covered a large number of the rocks of the desert (see the bibliographic references of Sourdel-Thomine, *Inscriptions et graffiti arabes d'époque umayyade, à propos de quelques publications récentes*, in *REI* [1964], 215-20). But they were also early situated in ornamental bands forming an integral part of the architectural decor, as admirably illustrated by the interior of the Kubbah al-Sakhra (q.v.). From this period, their essential theme has been the glorification of the Muslim faith, which

could be associated with the personal nature of the testimony left behind by each traveller in the course of his wanderings, as much as with the majestic impassiveness of epigraphic compositions on a grand scale. It would not be enough, however, to say with Max van Berchem, that the dominating feature here is principally the notion of divine power which is one of the two main concepts of the Muslim spirit. Some of these texts, regarded in the most ancient cases as useful means of access to the deity, continue to act as representatives of the dominant religious feeling of the period and their formulae of praise and trust, varied to a greater or lesser extent with requests for pardons, blessings and favours, for a long time remained free of the constrictions of a stereotyped vocabulary. But even when they obeyed more rigid rules, they still maintained an authenticity enabling them to share in the expression of genuine religious options, and texts of commonplace appearance thus continued to reflect diverse doctrinal tendencies in the bosom of the Islamic community; allusions to sectarian beliefs, in the form of eulogies of a Shi'i flavour for example; echoes of theological arguments like references to the created Qur'an in professions of faith accompanying Egyptian epitaphs of the 3rd/9th century, maxims bearing the marks of philosophical wisdom and of mystical self-denial observed for example in the inscriptions of *ghumārīsh* at Kāzwa at the beginning of the 6th/12th century. Even the poetic quotations so frequent for instance in later Sicilian texts could concur to the same design, and variations in formula came to be associated with the fragmentation, of a religious as well as a political nature, which the Islamic world suffered towards the end of the Middle Ages (note the originality of the theological texts which adorned at that time the sanctuaries of the Twelve Shi'i conducting the prayers on the basis of a cult of *imams* unknown in other Muslim circles).

A common denominator to all these inscriptions may assuredly be found in the constant use of Qur'anic quotations, multiplied to the extent that they sometimes take the place of any other form of devout reflection. But even here the choice of verses copied in whole or in part obeys specific intentions, which are discernible, if not clearly asserted, and their arrangement is sufficient to indicate the theological or judicial implications of texts which have a doctrinal value for anyone who is able to interpret them. References to *hadiṭh*, the use of extracts from the Qur'an of a recognised prophetic nature (the "Throne" verse, for example), the insertion of certain types of prayer, also constitute revealing elements (see in this connection, D. Sourdel, *À propos des "Dix Élus"*, in *REI*, xxi, [1963], 111-14).

It is to be regretted, however, that few Islamic scholars take an interest in material that too often continues to be strange to them, while on the other hand there is a vigorous and widespread school of thought seeking, in the light of illuminist doctrines popular in certain circles of initiates, to decipher every ancient inscription as if it were an esoteric riddle, tinted with "traditional" gnostic philosophy both Shi'i and frānian. In fact, besides the intentional use of certain formulae that are legible and loaded with meaning beneath the flamboyant style of the writing—such as for example the remarkable stucco composition in "square Kufic" on the names of the Twelve *Imams* preserved in the sanctuary of Fir-i Bakrān at Līdīn near Isfāhān—one might hesitate to see a hidden sense in the quasi-mechanical

repetition, on certain monuments, of formulae such as *al-ma'lik li-llāh* 'the power is God's', or, on certain pieces of pottery, of expressions of the *al-ʿāfiya* type sometimes evolving towards pseudo-inscriptions. These formulae, reproduced in the manner of respected graphic combinations, doubtless preserved no theological significance more precise than the succussions of appeals, such as "fortune, prosperity, blessing ... to him who possesses it" *al-yasun wa 'l-ḥabīb wa 'l-ḥaraka*, etc. ... *li-ḥibibiki*, which at that time were invariably inscribed on manufactured objects. The connections between sign and signified which may still be legitimately read here, are thus shown to be especially typical of a psychological climate peculiar to Muslim society in the sense of a society marked by religiosity, and correspond to the tight liaison that we have already emphasised between the character, Muslim in tenor and ornamental in appearance, of the majority of the inscriptions in this category: these are works of art endowed in this sense with a fundamental ambiguity as means of expression, both aesthetic and symbolic, of the sensibilities of their period.

A second category of inscriptions that is no less copious is subsequently represented, that of historical texts which have the object of commemorating the individual and his acts, whether the case in question is of a senior government official or of the obscure occupant of a village tomb. To this category we may add construction texts fixing the date of a certain building, title deeds and other documentation of private transactions, foundation texts indicating (according to terminology originating with van Berchem and adopted by the *RCEA*) attestations of pious donations given in perpetuity through the custom of *wakf* [q.v.], funeral texts of all kinds and even, the straightforward signatures of master craftsmen and artists which will also be considered here. If these texts partially reflect the notion of "absolute political power" wherein van Berchem saw, according to an insufficiently-qualified assertion, the second major concept of the Islamic spirit, and if their principal gravitation is such that the same epigraphist expressed it, evolving around the names of the sovereign, his titles, his major deeds and his continuing praise, they also contain much more; through the evolution that they have undergone in the course of the centuries, they give information on popular beliefs, opinions current among the wealthy or academic classes of society and the functions served or the degree of respect attained, after their death, by certain of their members, as well as on the nature of the buildings, utilitarian or decorative, that the latter took pleasure in constructing. Some of this information of obvious value in the reconstruction of the social, economic and intellectual history of the Islamic world, is accompanied also by precise revelations touching no such-and-such a point of circumstantial history or such-and-such an archaeological detail: these amply compensate for the bledium that sometimes emanates from the stereotyped phraseology and the excessive enumeration of titles that are characteristic of documents tending towards a standard official formality rather than towards any personal touch, which is rarely encountered.

Of all these texts, the most copious category is undoubtedly that of epitaphs, collections of which, either remaining *in situ* in the ancient cemeteries or transferred to museums, are on such a massive scale as to discourage the most enthusiastic researcher and in consequence have seldom been catalogued in

a systematic way. The specimens published since the unique example of 316/632 and the Egyptian steles of the end of the 2nd/8th century are nevertheless sufficient to give an idea of the progressive transformation, according to places and periods, of fairly simple types of texts, where the significant features have always been religious maxims and the professions of faith already mentioned (for supplementary details and bibliography, see *ḡāṣṣ*). Their references to certain currents of thought deserve in fact to be given more attention than the study of the dates of inscriptions or the genealogies of the deceased where statistics directed towards neomastic and prosopography, according to local perspectives, would alone be capable, in the longer term, of maintaining interest. But neither should one ignore the titulary inscriptions which are to be noted from the 6th/12th century onward, in a period where the devaluation of titles formerly reserved for sovereigns led to the attribution, to "men of religion" and other representatives of the upper urban classes, of honorific phrases, the history of which has not yet been written and which ought to be studied in the same way as the titles of individuals serving in the higher echelons of the administration (see *LAḤṢ*).

Besides these epitaphs, marked by a discretion of vocabulary which is maintained up to the time of the royal epitaphs of the Chahnavid Sebüktaḡin (d. 387/997) or of the Artukid Belak (d. 518/1124), there are other funerary texts which belong more emphatically to the canon of inscriptions intended to celebrate the glory of the sovereign. These are those which, from the 4th/10th century onward, accompany monumental mausolea varying considerably in architectural structure. A greater freedom of composition, already perceptible in the dated and dedicatory epigraphic friezes of the Iranian tower-tombs, is shown when the opportunity offers, notably in the original version of inscriptions specially designed before his death in 607/1220-21 by 'Aḥ al-Harawī [q.v.] for the decoration of his tomb. These texts are as valuable for the history of monuments as they are for that of the sovereigns, officials or military chiefs who chose them for the commemoration of their graves. Moreover, they become especially significant when the tombs in question are those identified by popular piety as objects of pilgrimage and supplication, whether in *ḡhāṣṣ* circles where the buildings of *ṣaḡīr ṣāḡīr* [q.v.] were widespread at a very early stage, or to a certain extent throughout the Muslim world from the 6th/12th century, when the practice of *ziyāra* [q.v.] developed to the proportions of a veritable "cult of saints" in honour of pious individuals renowned for their posthumous miracles, or of celebrities from the early periods of Islam commemorated now for the first time by newly-built sanctuaries; only inscriptions of sufficient antiquity may in fact give information about the original period of these devotions, inaccurately described in the literary sources, while at the same time supplying the names of rulers or wealthy patrons who promoted them. These data are also useful for the reconstruction of the complicated history of the multi-purpose architectural complexes which became numerous around the tombs of saints from the end of the 7th/13th century and which grew up a little later around royal graves, as is proved by well-known Tinnīd and Mamūk examples (see *ḡḡḡḡ*, *ṣāḡḡḡ*).

The formulae employed in this particular category of funerary texts also belong partially to that attested by the innumerable construction texts en-

graved on Muslim monuments since the Umayyad period. These latter texts in fact obeyed from the start strict obligations, which imposed the following elements: definition of the work undertaken, name of the initiator responsible, sometimes located between the name of the reigning sovereign and those of the authorities who supervised the progress of the work, and date of the construction or restoration, the whole incorporated within a series of variable additions: variously distributed pious formulae which included Qur'anic quotations appropriate to the nature of the work, but which most of all were requests to God for reward in respect of the work accomplished in his honour more or less detailed appeals on behalf of the founder and optional complementary notes, including the names of the author-scribe and the architect-mason. This was the constant framework, and the additions made in ensuing centuries were only such as to incorporate subsidiary details affecting in particular the titles of the builder or those of the various authorities on whom he depended: thus one may find, in the 5th/11th and 6th/12th centuries for example, successive mentions of the caliph of Baghdad, of the Saljuq sultan, of the local sovereign, and the humble figure of the builder is introduced simply as *al-'abd al-faqr ila rahmahi rabbihī* "the poor slave imploring the goodwill of his Lord". Furthermore, such rigidity of formulae provides the exact scheme that may be expected of inscriptions of this genre, texts that are easily reconstructed where there are lacunae in the details of ritual etiquette or in the order of succession of the various elements, but of scope limited by the constraints of their subject. Only on two points are we likely sometimes to be agreeably surprised: their archaeological interpretation, on the one hand, when care is taken to note their precise location in the building, to the dating of which they contribute; on the other hand, their richness in titles, from which one sometimes perceives the reality of Islamic government institutions which continue to pose numerous questions to the historian.

Comparable information is furthermore to be obtained, in the majority of cases, from foundation texts where the list of the titles of the legators obeys the same rules of precedence and is often clarified when account is taken of the more theoretical notions supplied by some Arabic texts dealing with chancellery practices. But the more original data contained in the disposal of these *waqfiyyas* are of a topographical or toponymical order, on account of the large number of localities and regions listed as sources of revenue, or of an economic and social order, relating to daily life, sometimes also to urban life in general when the generous benefactor has decided for example to underwrite the excavation of *ḥanda* (q.v.) or the improvement of some municipal work. The profoundly Islamic character of these arrangements, as well as the attitudes that engendered them, is linked, through the solemn proclamation of the devotional work, to the psychological process according to which the construction of a building took on its true dimension when an inscription text preserved its memory and placed the builder or benefactor in his just position within the Muslim community.

This tendency was superimposed on a concern for the glorification of the individual concerned, which appears to a still greater extent in the inscriptions on material objects, which constitute the final category of Arabic commemorative inscriptions. The texts of these most often consist in fact of nothing

more than greetings added to the name and titles which enable the owner to be identified, whether it was a case of a caliph ordering the manufacture of a *ḥiṣṣ* (q.v.) in a royal factory or of a Mamlūk *emir* acquiring a bronze or a ceramic plate bearing his monogram. The mention that such an object has been manufactured on the orders of a certain powerful dignitary is sometimes the only information to be conveyed, in the form of a motif that is both epigraphic and decorative. But the sense of pride of ownership also sometimes finds an echo in the professional pride of the craftsmen who at an early stage adopted the practice of signing their works, even if in the briefest manner possible (see in this connection the writings of L. A. Mayer mentioned above).

It remains to consider, in the third and final place, the group which, while being definitely the least important, is nevertheless extremely rich in information of all kinds, the group constituted by administrative texts. Linked to the functioning of the machinery of power, they are not designed to glorify, except indirectly, the holders of this power, but rather to make certain government decisions known. Represented in early times by inscriptions stamped on coinage, or on weights and measures of glass paste which appeared from the Umayyad period onward, they made way somewhat later for decrees of abolition of taxes. Mamlūk specimens are among the best known: these are, once again, valuable documents of economic and social history, comparable with title deeds and records of donation, to the extent that they provide precise and detailed information regarding fiscal policy or give accurate descriptions of bureaucratic procedures. But the quaint symbolic notations that they preserve are shown in their turn to be extremely rich when one attempts, as Sauvaget has done, to glean from them certain data on the spot and to deduce from them, especially in the sphere of topographical studies, elements of assistance in the reconstruction of certain aspects of urban evolution.

So here we find once more this golden rule for the utilisation of Arabic inscriptions, which seems to be always to consider them as concrete documents, which are not to be separated, beyond the official formulae and the pious expressions that characterise them, from the local and monumental context within which their most original significance is expressed. Some such epigraphic commentaries, even when they deal closely with the purport of the various texts the principal tendencies of which we have reviewed above, thus remain subordinate to that which constitutes the prime quality of the documents with which they are concerned that of having been composed to occupy a particular location in lasting fashion and to be integrated into the exterior appearance of the objects or the monuments that they accompany. Nor should one neglect those inscriptions which were capable of being enclosed in the interior of the most varied types of framework (panels, scrolls, friezes of all dimensions, the entire surface of an object or a tightly-limited section), entrusted to the most varied materials according to equally diverse processes (stone engraved or sculpted in depth, stucco elaborately worked on several surfaces, experiments with bricks in relief, mosaic, painting, moulded or incised metal, wood, ivory, ceramic, etc.), sometimes reduced to the subsidiary role of motifs underlining with their shapes the principal lines of the architecture or joining with covering linear *décor*s composed of arabesques and

lattice-work. These details are to be considered with as much attention as the formulae of the inscriptions or as the stylis as revealed by the idiosyncrasies of the writing. For the reasoned study of this body of facts, with which, in order to be complete, any survey of Islamic epigraphy ought to begin, is the only means that will enable the scholar to put into their just place, for an introduction to the realities of mediaeval Islamic civilisation, the inscriptions which up to the present day scholars have been content to examine in a fashion that is still too incomplete and inevitably superficial.

Bibliography: Given in the article.

(J. SORDEN-THOMINS)

2. In the Near East.

It is in the Near East, the cradle of Arabic writing, and more precisely in Syria (Nāmāra, Zebed, Harrān, Umm Dīnāl), that the oldest known inscriptions written in the Arabic language have been discovered. These so-called proto-Arabic inscriptions, sometimes bilingual (Greek-Arabic), have contributed to our understanding of the ancestry of the Arabic characters, which in the final analysis, derive from Syriac characters and not from Nabatean, as was previously believed.

The privileged place accorded by Islam to writing allowed the letter to undergo a rapid evolution and a rapid diffusion. From the time of the Umayyad era, inscriptions proliferated in all the provinces of the young Islamic empire. Construction texts, religious texts, milestones, epitaphs, and simple graffiti dating from this period have been and still are being discovered in the archaeological sites of Syria, Lebanon, Palestine, Egypt, and Iraq.

The formula of these inscriptions was probably influenced by that of the Greco-Roman inscriptions, very numerous in these regions. It is simple, sober and varies in tenor according to the function of the text. It serves as a prototype for later periods which enrich it, while remaining faithful to its broad outlines. Official texts are generally composed as follows: almost always the *basma*, one or more Kur'anic verses, religious invocations, the dispositions of the work, the name of the caliph followed by his title *amir al-mu'minin*, sometimes the name of the overseer responsible for the work, and generally, the date.

The study of these inscriptions reveals the rapidity with which the crude and maladroit writing of the proto-Arabic inscriptions was transformed to the point of attaining, in the monumental inscriptions, a high level of aesthetic perfection. Engraved on rock in finely drawn lines of equal breadth, usually incised, very seldom in relief, sometimes executed in mosaic or in painting, Umayyad writing obeys the same norms: characters composed of simple geometric elements—verticals, horizontals, obliques, circles or segments of circles—set out on a base line which is strictly horizontal. This horizontal base line plays an essential role in Arabic writing. The latter was in fact conceived, after the pattern of Syriac characters, as resting on a foundation, as opposed to Nabatean characters, which appear to be suspended from an upper line. This role is such, that in certain types of archaic and crude writing, the base line is itself an integral part of the characters. These latter are in such cases formed of small simple lines, vertical or oblique, and of rings, resting on the horizontal of the base line, of which the continuity is unbroken (cf. Pl. VIII, 1).

In Umayyad epigraphy, the combinations of these

geometric elements give two types of characters: tall letters with vertical strokes and short letters with notches or rings, connected by horizontal segments. This double typology constitutes one of the essential elements of the aesthetic quality of Arabic writing. In fact, it provides the artist with two areas where he can exercise his genius differently: the lower register, the more dense, where the artistic effect obtained results in a simple inter-play of characters, and the upper register where the spaces between the vertical strokes provide an ideal place for the artist to indulge his taste for multiple creations.

In the Umayyad period, this upper register was not used, but the stone-masons succeeded, by using the lower register alone, in creating "a harmony at once rhythmic and linear" which makes this form of writing a genuine work of art. The rhythm is obtained by the opposition and alternation of high and low characters, while the linear harmony results from the arithmetical reckoning of the proportions. This reckoning answers a need for equilibrium as much in height (the proportion of short characters to long varies generally between $1/3$ and $1/2$) as in width. It is to satisfy this latter need that the mason does not hesitate to extend his characters in width and to lengthen the joining segments. The standard of calligraphy definitely varies according to the type of inscription and it is especially in official texts that fine specimens are to be found. We shall mention simply as examples the inscriptions of the caliph 'Abd al-Malik in the Kubbāt al-Sakhra in Jerusalem and his milestones (cf. Pl. VIII, 2 and IX, 3).

During the first two centuries of the 'Abbasid régime, the Arabic inscriptions of the Near-East underwent an evolution corresponding to that of the socio-cultural development of the entire ancient Baghdad and that of the palaces of Samarra'. The fact that these were constructed of brick, a perishable material, has deprived us of the monumental inscriptions which probably adorned the official buildings and which disappeared as a result of these destructions. On the other hand, we have dating from this period a large number of epitaphs and inscriptions on movable objects, especially on fabrics which benefited from the expansion of state factories (*hiḍāz*) supplying the needs of the caliphs and their court. The formula of these inscriptions, often found on the edges of the fabric, is stereotyped. It begins with the *basma*, generally followed by the phrase *basma min Allāh bi-'Abd Allāh* followed by the name of the caliph and his title, and the expression of a wish for his long reign, then the name of the individual who ordered the fabric, the name of the workshop where it was made and the date of manufacture. These inscriptions are executed in archaic, angular characters whose typology corresponds, in broad outline, to that of the characters of the stone inscriptions.

In this area, undoubtedly the most interesting evidence is provided by the epitaphs, most of them of Egyptian origin, engraved on marble or on sandstone, of which a considerable number of specimens have survived to the present day. The formula of these epitaphs is constituted of different elements of which the combinations vary according to a variety of patterns; the *basma*, a verse of the Kur'an, one or more religious invocations, the profession of faith, more or less developed, the dedication of the tomb, the verb introducing the name of the deceased followed by his titles and

profession, the date of his death and an appeal for God's mercy upon him.

These epitaphs provide valuable materials for following the evolution of inscriptions on stone during the first 'Abbasid centuries. The change of dynasty did not immediately change the practices of the stonemasons and the characters of early 'Abbasid epitaphs are similar in outline to those of Umayyad inscriptions. Nevertheless, differences soon appear in the reckoning of the proportions. The characters diminish in length and correspondingly the joining segments between the letters become shorter. As a result, 'Abbasid Kūfic presents a more cramped and less harmonious aspect appearance than Umayyad Kūfic. On the other hand, this evolution is inclined toward a concern for the ornamentation of characters. This is expressed first in the lengthening of the terminal segments in the form of a bevel which tends to grow larger and larger. In the crude types it is sometimes replaced by a small hook or even a riaz. To the development of the bevel there correspond a thickening of the outlines of the letters and a more frequent adoption of the technique of engraving in *champlevé* (cf. Pl. IX, 4), which allows two parallel expressions of the evolution of characters, corresponding to the duality of engraving techniques. Thus, in incised inscriptions, the vertical strokes of the letters are decorated with hooks, simple, double or triple, pre-liguring the palm-leaf (cf. Pl. X, 5), while in inscriptions in relief, the bevels evolve into foils, double foils or triple foils which later open out into leaves, fleurons and palm-leaves, a style of décor much in vogue in the mid-8th/9th century (cf. Pl. X, 6).

Various other processes of ornamentation are encountered in this period: symmetrical indentations in the parallel vertical strokes of the *alif* and the *lām*, softening of the lines and the appearance of curves (in the *lām-alif*, the *hāf*), transformation of the lower appendices into rising tails, fleurons arising from mouth-shaped letters (*mīm*), the intertwining of contiguous lines, (cf. the knot formed by the *alif* and the *lām* of the word *Allāh*, Pl. X, 6, 1, 2). The indentations and arcs which sometimes adorn the joining segments, especially in the word *Allāh*, roses and fleurons at the end of a word, frames in linear décor (braids, zigzags, mouldings, spirals) or in a décor of plant motifs (plant palm-leaves alternated on one side and the other by a sinuous line, leaves and symmetrical fleurons), sometimes an even more subtle composition (an arc delineated by a flat moulding with spandrels adorned by an outline in arabesque), combine towards the embellishment of the script.

With the Fatimid conquest of Egypt in 358/969 and its sporadic expansion in Syria-Palestine, new practices are introduced into the inscriptions of the Near East. The formula varies little in its basic elements, but the name of the caliph is almost always followed by mention of his links with the "Family" in a phrase such as *ṣalamāt Allāh 'alayh wa-'alā ṣalāt-hi al-fakirīn*, and the name of 'Alī is often mentioned with that of the Prophet (*Muḥammad rasūl Allāh 'Alī waḥd Allāh ṣalamāt Allāh 'alay-himā*).

The effort at the embellishment of calligraphy continues, and a real proliferation of types of decorative inscriptions is seen. As characteristic examples, we mention the inscriptions of the 4th/10th century mosque of al-Hākim in Cairo (cf. Pl. X, 7) and those of the cenotaph of Fāṭima in Damascus (dated 439/1047, Pl. XI, 8). In the former, the linear element maintains a predominant place. The characters show

a vigour of design which accentuates their relief on the excised base, completely here in the lower part, decorated in the upper register by an independent, foliated scroll which glides alternately above and below the vertical strokes and which gives a free run in the empty spaces to the development of spiral designs which open out in fleurons (cf. Pl. X, 7).

In the cenotaph of Fāṭima, the foliated scroll is sometimes linked to floral elements issuing from the characters and develops in such a fashion as to form a more dense composition (cf. Pl. XI, 8).

In the Fatimid period, the typology of the characters is considerably enriched. Curvatures, counter-curvatures, knots and indentations are numerous in the interiors of the characters, offering the stonemason infinite opportunities for improvisation. Purely for the sake of example, let us note the ten different types of *lām-alif* in the single inscription of the cenotaph of Fāṭima.

It would of course be wrong to attribute to Fatimid artists alone all the epigraphic innovations in the inscriptions of the 5th-6th/11th-12th century in the Near East. The conquest of Syria by the Saljūqs, who imported with them the techniques and the graphical forms used in the eastern provinces of the Islamic empire, was accompanied by the intrusion of a number of the features mentioned in the Fatimid inscriptions, such as knots and right-angled bends in the vertical strokes of certain characters. There was probably a phenomenon of osmosis between these various regions where exchanges were frequent.

The inscription on the cenotaph of Sūkayn in Damascus (and of the 6th/12th century; cf. Pl. X, 9) is an interesting specimen of the evolution of monumental Kūfic in the Saljūq period. The inscriptions engraved in the wood of the cenotaph are distributed on three levels, in two bands superimposed and separated by a fine braid. The main inscription occupies the full height of the broadest band, while at half-way up, the second is intertwined among the vertical strokes of the first. The third, quite independent, occupies the small upper band. These three bands stand out against a background decorated by a fine network of arabesques which cover all of the part crudely excised.

Among the specifically Saljūq types of monumental inscription, mention should be made of epigraphic bands with geometric décor where the vertical lines of the characters are extended in the upper area giving rise to the interweaving of stars and polygons. The inscription of Ṣafwat al-Mulk at Damascus is a living illustration of this.

The Saljūq influence is also shown in the evolution of the formula of inscriptions of small Syrian dynasties of Saljūq allegiance where the titles become swollen with pomposity (cf. for example the titles of the *atāḡāh* sovereigns in the construction texts of the great mosque of Damascus).

It was in the first half of the 6th/12th century that there was effected the most important transformation regarding the evolution of Arabic script as stone, when Nūr al-Dīn ordered the adoption of the cursive script in official inscriptions, to the detriment of the angular script, which, without disappearing completely, was reduced to repetitions of ancient types. Some fragments of cursive script are mixed, as an intrusion, in the Kūfic inscriptions of the bands of the minaret of the great mosque of Aleppo in 483/1090. There is found also at Buxtā in Syria an inscription dating from 484/1088, where the characters, while still crude, are neatly rounded; but it is not until the first half of the 6th/12th century

that there appears the full flowering of cursive writing expressed in stone, with its full and its slender lines, its supple ligatures and the introduction of points and diacritical lines, not used in the inscriptions of angular type. A parallel transformation is effected regarding the base line which loses its rigidity and its horizontal continuity. The listels which delimit the bands of writing are not however eliminated, and they continue to compress the lower appendices, the latter being forced to develop below the base line. To remedy this inconvenience, the stone-masons divide the words and engrave the segments thus obtained on different levels, based on an oblique fine descending from the centre of the band towards the listel of the base. This procedure permits a freer development of the lower appendices. The base line appears as a discontinuous line reduced to a series of oblique overlapping segments (cf. Pl. XII, 10). This procedure is accentuated in the Ayyūbīd period, and already there appear inscriptions where the words are divided and staggered on two or three levels, almost parallel and superimposed. The word generally begins on the lower line and continues above (cf. Pl. XIII, 11).

In the Mamlūk period, this technique of engraving reaches its apogee. The characters are so interwoven that their decipherment becomes difficult all the more so as the characters used in the majority of the inscriptions of this period are of small dimensions, thick and squat. It is to this type of inscription that belong the Mamlūk decrees, engraved in profusion on the walls of official buildings and constituting precious documents regarding the socio-economic life of the Near East in this period (cf. Pl. XIII, 12).

There exists, moreover, a type of Mamlūk *naṣṣīḥ* where this dense writing gives way to an elongated graphic style prefiguring the Ottoman script. This last gives the appearance of a transposition on to stone of manuscript writings, in particular the style known as *ṭhulūṭ*, in which the Ottoman calligraphers excelled (cf. Pl. XIII, 13).

3. In Muslim Spain.

At the time of the Muslim invasion of the Iberian peninsula (92/711), the *ḥaṣṣ* or Kūfic script had already existed in the Islamic world, as an official and sacred script, for 60 years. It was this script that the conquerors used from the start in their inscriptions. The most ancient evidence that we have of it is constituted by the bilingual coinage struck by the governor al-Ḥurr b. ʿAbd al-Rahmān al-Thakafī (98/716-17); the uninterrupted continuity of its use is confirmed by all the coinages struck by subsequent governors and amirs. From the time of the amirate of ʿAbd al-Rahmān II, this writing figures in pious foundation texts, in funeral and other inscriptions which corroborate this numismatic evidence, as well as testifying clearly to the development of the usage of the Kūfic characters in al-Andalus before the Almohad invasion (546/1157). Following this event, a struggle developed between *ḥaṣṣ* and *naṣṣīḥ*, ending in victory for the latter which subsequently took the status of the official script of epigraphy, while the former lost ground and its use became limited to religious or profane inscriptions of little importance and intended for purposes of general ornamentation.

The Kūfic features which appear in the oldest Arabic inscriptions of al-Andalus are virtually the same as those which were used during the last decade of the first century A.H. in all the lands conquered by Islam, that is to say, the symbols originating from the city of Kūfa, with scarcely any evolution in design. This Kūfic, on account of its clearly primitive nature, is generally called archaic. It was reproduced, with more or less fineness over the years, by the traditional craftsmen of Spain who never succeeded in mastering it fully and in consequence introduced no novelty of design by virtue of which it might be considered characteristic of, or exclusive to, al-Andalus. In the last years of the amirate of Muḥammad I, a new generation of rather more arabised craftsmen began to turn the more extreme features of Kūfic script into stylised plant-forms. At first, this innovation was used very timidly because it applied only to a very small number of letters; nevertheless, little by little it found acceptance to the point where it was applied to all the symbols which permitted it. The craftsmen thus succeeded in creating the Hispano-Muslim version of floral Kūfic, while it must be admitted that the development of this variant of Kūfic never attained, in al-Andalus, the level reached by contemporary Kūfic writing in other Muslim territories.

In the reign of the second caliph of Cordova, al-Ḥakam al-Mustaṣfir bi-ʿAlāh, the religious puritanism and stern austerity which characterised the conduct of this powerful sovereign at the head of the government of al-Andalus made itself strongly felt, needless to say, in the epigraphy of the period. Decorative floral additions were suppressed and attempts made to restore the Kūfic letters to their primitive and classical design. But this was not entirely possible, because the letter-forms possessed henceforward a certain elegance which was lacking in them before; this elegance, far from disappearing as a result of this suppression, manifestly increased. Thus there was born a new Kūfic with streamlined, elegant shapes, stripped of all ornamental addition, commonly called simple Kūfic, which flourished until the downfall of the Caliphate of the West. Previous to this important historical event, there certainly existed a consistency in the style of writing Kūfic

in the whole of al-Andalus—as a consequence of the political unity of the region, freely introduced by the governors and subsequently definitively enforced by the monarchs of the dynasty of the Banū Umayyā —and a single cultural centre regulating its art, the metropolis of Cordova. After the downfall of the caliphate, a number of schools of design sprang up, for, with the end of the hegemony of Cordova, each province of al-Andalus followed its own political direction and developed its own artistic practices under influences of very diverse origin. Among the schools the most important were those of Seville, Toledo, Saragossa and Almería, without counting that of Cordova. At Seville, simple Kūfic continued to be used in inscriptions; but the characters developed in height, which made them extremely elegant and distinctive. At Toledo, the craftsmen returned to floral Kūfic, with forms excessively overlaid with plant-forms alternated with the use of simple Kūfic forms. Of these two variants, two distinct versions appeared: one traditional, firmly Cordovan in origin; the other authentically Toledan, which consisted in adding to characters carved in relief a central groove, giving them considerable force of expression. The Kūfic of Saragossa had a particular importance. It is known today through the inscriptions preserved at the Palace of Aljaferia (al-Dīʿfariyya), built by the prince Abū Dīʿfar Ahmad al-Muktadir bi 'Bāh (438-74/1046-87); it is known that in the building of this monument, originally called Dār al-Surūr or House of Rejoicing, the craftsmen experimented with numerous innovations, architectural as well as decorative; and inscriptions—an ornamental element of first importance in Islamic art—were no exception. They stylised Kūfic characters to an incredible extent, and by sometimes making them slide on a floral base or at other times cleverly interlacing them with geometric motifs, they succeeded in composing epigraphic bands of great beauty and an originality unusual for the period. As for Almería, principal base of the Umayyad fleet in the Mediterranean, it had been intimately linked with the metropolis of Cordova during the caliphate. Its craftsmen had always represented Kūfic according to the model of Cordova, and they did not change their style when the latter lost its political status. They continued to use the simple Kūfic which was in use at the time of this event; later, this Kūfic evolved very slowly and its most brilliant period, corresponding to the importance and splendour of this naval base, was reached under the aegis of the Almoravids. From the study of the Arabic inscriptions of Almería, of which a fine selection survives, it may be deduced that the Almoravid invasion brought no change in the shape of the Kūfic of al-Andalus. By contrast, as mentioned above, the Almohad invasion had very significant effects on epigraphy. At first, the latter respected the Kūfic script and used it, as is well-known, in the first building that they constructed at Marrākush; but, when they were obliged to put into practice a policy of reconciliation of the peoples whom they had subdued by force, they very soon realised that the Kūfic script, with its difficulty of interpretation, was not suitable for the development of their policies, and they replaced it with *nashī* or cursive in all texts relating to new foundations of a public character. For the craftsmen of al-Andalus in particular, this change had the effect of enabling them to acquire a thorough knowledge of the Arabic characters and to distinguish, in each one of them, that which was essential and invariable from that which

was secondary and could legitimately be altered according to the taste of the designer. Thus they came to appreciate the true significance of Kūfic forms hitherto reproduced more or less mechanically. They were no longer content with drawing their designs according to the good taste of the Almohads, but little by little they transformed the shapes. First of all, with the idea of making them attractive and graceful; then by building up their upper portions with complicated interloops, while increasingly filling up with stylised plant-forms all the interstices not covered by the letters in the lines of inscription. In the end, they created ornamental motifs of a type which, on account of its incontestable decorative worth, was subsequently copied by the Mudjjar craftsmen, including those who worked in the Alhambra of Granada, thus undoubtedly conferring upon it a long-lasting prosperity. For it is certain that it is by virtue of these copies, made with extreme care and fidelity, that we are acquainted today with the Arabic epigraphy of al-Andalus current in the period of the Almohads, since the original inscriptions of this historical period surviving to the present day are very few in number, and discoveries have not been made on the scale which could have been desired. The motif-types mentioned above were incorporated into Mudjjar decoration without further consequence, and through incessant use over the course of the years they patently degenerated and became a parody of what they had originally been. On the other hand, their inclusion in the ornamentation of the palace of the Banū Naṣr had the effect of inspiring the craftsmen of Granada to the creation and the development to hitherto inconceivable limits of the geometric Kūfic which is admired today in the Alhambra and which is, beyond doubt, one of the finest ornamental creations contributed by Andalusian craftsmanship to the art of Islam. It was also in the Alhambra that the *nashī* script achieved the highest point of its development within Muslim Spain. In fact, it is known that among the most important elements contributing to the ornamentation of the Nasrid palace there are epigraphic friezes composed in this script and containing the best works of the most prominent poets of the period, Ibn Zamrak and Ibn Ḍiyyāb, which are thereby available to us in "the most sumptuous edition in the world", to borrow the apt expression of E. García Gómez.

4. in North Africa.

The oldest inscriptions known to us in North Africa show no originality compared with those of the Near East in the Umayyad and, in particular, the 'Abbasid periods. The evolution of styles in Ifriqiya was to follow a course generally parallel to that of the styles known in Egypt which seems to have constituted the natural link in the chain connecting the Muslim East and West. The Maghrib al-Akṣā, by contrast, and especially from the time of the Almoravid period, was influenced by al-

Andalus, which for a long time remained faithful to archaic forms of Kūfic but which, under the influence of the 'Abbasid East, submitted to the prevailing taste. Nevertheless, Muslim Spain was to interpret in its own fashion the styles of writing and their evolution such as were familiar in the Orient in the Fātimid period. This piece of the Orient set in Andalusian soil was to influence Morocco, and then with the victory of the Almohads, the whole of North Africa.

The style of monumental inscriptions in the Aghlabid period differs according to whether it is a case of carvings in relief, or incised engravings, on stone or wood, or of painting. The Kūfic carved in relief on stone may well be compared to that of the Nilometer of Rawda (109/814-15), notably on the marble at al-Kayrawān (the capitals and the interior of the mihrāb). It may equally be compared to Fātimid Kūfic, but some of the details characteristic of the West appear to be quite original, for example the aṣf with a horizontal appendage towards the right in the lower part of the letter. The writing, whose essential value lies in the message to be transmitted, tends gradually to become a part of the ornamentation (for example, the inscription painted on wood at the base of the cupola of the Great Mosque of al-Kayrawān where the misshaping of the 'ayn gives a fleuron with three folds while the background is decorated with isolated floral motifs). The fine inscription on the façade of the Mosque of the Three Gates at al-Kayrawān also provides an example of this tendency which is emphasised in the marble plaques of the mihrāb of the Zaytūna in Tunis, where the inscription in very fine Kūfic characters forms a decorative framework.

The Kūfic of the foundation-plaque of the ribḍ of Sousse (206/821) appears very archaic in comparison with these inscriptions.

Funerary inscriptions are mostly engraved; the formula varies little, the main element being a few Kur'ānic verses, usually taken from Sūra CXII. These inscriptions perpetuate, in the 3rd/9th century, forms which are more emphatically archaic than those of the monumental inscriptions; this is especially notable in epitaphs on pillars, occasionally crudely executed in spite of some fine creations, and in the fine funerary inscriptions engraved on marble plaques or on tall columns. The similarity between the Aghlabid incised inscriptions and contemporary examples from Egypt and the Sudan is quite striking.

There can be no doubt that the arrival of the Fātimids in Ifriqiya and their installation at Mahdiyya, then at Šābra al-Manšūriyya, accentuated the orientalising of the country. The evolution of Kūfic in the Near East in the 5th/11th century, then in the 6th/12th century, was to be reflected almost immediately in the Maghrib. In the latter as in the former, the problem faced by the artist was how to alleviate the difficulties inherent in Arabic writing, very dense in the lower part of the line of inscription, but leaving important gaps in the upper areas. The solutions adopted consisted in the development of the vertical strokes and in their evolution, sometimes their distortion, in the intertwining of letters, and most of all, use was made of stylised floral patterns in decorating the background. These inscriptions are often divided in two parts by a rigid horizontal band, the lower part being occupied by the body of the letter while the upper register is decorated with a complicated floral design against which the vertical lines stand out. At Sfax, from the end of the 4th/10th century, the letter is seen to develop, the terminal

clashes of the vertical strokes opening into floral shapes or curling so as to occupy the empty spaces. The influence of Fayyum Egypt is undeniable. The characters in general affect a refined elegance. The bordering strips contribute to the décor of the façades (Sfax, Great Mosque) or to that of the *mihrābs* (Sfax, Zirk *mihrāb*), mosque of Sayyida at Monastir (beginning of the 5th/11th century). At Constantine (*mihrāb* of the Great Mosque, dating from the 6th/12th century), the epigraphic décor reaches a high degree of ornamental quality, recalling that of the finest Fātimid *mihrābs* of Cairo.

Funereal epigraphy also abandoned the archaisms of the Aghlabid period, but after a perceptible delay. Incised inscriptions practically disappeared. The form of the tombs evolved towards prismatic marble steles, notably at Monastir and at Tunis (cemetery of the *ghurāsāids*). The writing, of refined elegance, recalls, by the development of the letters and by the appearance and proliferation of stylised floral designs, the style of the monumental inscriptions.

As for epigraphy on furniture, we have, in the magnificent *maḥḥara* of al-Mu'izz b. Bādīs, one of the finest examples of floral Kūfic, with complex intertwining of letters and a background of plantiforms comparable to the Kūfic of Aleppo or to that of Diyār Bakr.

In the Maghrib al-Akḍā and in the western region of the central Maghrib, very few inscriptions are to be noted before the Almoravid period. That of the Karawiyyin, dating from 263/877, is in Kūfic of the al-Kayrawīn type, but, with the reign of 'Alī b. Yūsuf, there appears the Andalusian Kūfic, characterised by well-proportioned letters with long and curved vertical strokes. However, the writing itself is very sober and stands out against a background flowered with arabesques and fleurons and palm-leaves with deep and multiple radiating divisions (Karawiyyin, Great Mosque of Tlemcen), or against a background of palms, of pineapples and of half-fleurons divided in two parts horizontally by a straight line.

The epigraphy on furniture shows, on the contrary, an attachment to the old tradition, whence a surprising conservatism in the Kūfic inscriptions of the *mihrābs* of Nedroma and of Algiers, and in those of the *maḥḥara* of Tlemcen.

But the most important event of this period is the appearance of the cursive script (*maḥḥā*). This style appears in Ifrīqiya from 490/1096, in funeral inscriptions where it is presented in a very elaborate form (the characters are fine, large and supple and well-proportioned, framed with a border and standing out against a rich floral background of oriental type). It is to be supposed that it was by this oriental route that the new alphabet penetrated to the Maghrib al-Akḍā in the Almoravid period (the inscriptions of Tlemcen and of Karawiyyin) in about 531/1136-7. It is in fact impossible, in the absence of precise documentary evidence, to propose an Andalusian influence, as it seems that cursive writing did not appear in Andalusia until much later.

Whatever the case may be, the victory of the Almoḥads had as a consequence a certain unification of styles in the whole of North Africa with an inclination towards sober, angular Kūfic in the monumental inscriptions and, on the contrary, a preference for cursive in the funeral inscriptions. It is worth noting that no foundation inscription appears in this period in the religious buildings, pious works through which the great caliphs of the dynasty were able to bring honour to themselves.

One consequence of the Ottoman domination of Tunisia and Algeria was a new "orientalisation". The inscriptions lose their decorative quality and adhere to the requirements of the message to be transmitted. They are inscribed in frames or in scrolls in cursive characters, often with diacritical points, sometimes with vowels, on several lines which may overlap. The execution is rather casual, and the use of the Turkish language is limited.

On the other hand, Morocco remained faithful to the Andalusian models and followed their evolution in the period of the Nasrīds of Granada. The type of Kūfic script which distorts the letters, twisting and stretching them into wreaths and fleurons, is hardly distinguishable from the background, where geometric and floral elements are mixed. The cursive begins to take the place of the Kūfic script in the line framing strips of the *mihrābs* of the Marīfud period. After the disappearance of the kingdom of Granada, Morocco tended to withdraw within itself, apparently shut off from outside influences.

At no time did the artists of the early Middle Ages make so much use of Arabic writing as an element of decoration. It appears everywhere, in religious buildings, in funeral pavilions, in the houses of citizens or in the palaces of kings, on furniture, on tableware and on the most minor objects of daily life, where the ornamental role is often more important than the meaning of the language. The result is a pseudo-writing without precise meaning, or a constant repetition of a word or part of a phrase, in ornamental friezes, where ease and routine take the place of refinement and, above all, of faith.

3. In West Africa.

Proof is still awaited that any system of writing was in use among the Negro civilisations of West Africa before the introduction of written Arabic. An animal drawing on a sherd found by F. Willat at Old Oyo in Western Nigeria was considered representational rather than pictographic, whilst R. Hau's search for linguistic interpretations of recurrent motifs in the art of Benin proved inconclusive. Gold weights from Ashanti and neighbouring districts seem to represent a proliferate stage, some of the designs symbolising proverbs and injunctions and others perhaps conveying metrological data. Inscriptions in Punic, Greek, Latin or similar Classical languages have not yet been reported from tropical West Africa.

The Saharan Berbers (Tuareg, "People of the Veil") devised their *ṭifinagh* alphabet from the Libyan script used in North Africa during the second century B.C. and subsequently (see *BERBERS*, vi). *Graffiti* in *ṭifinagh* are known to extend from Tibesti and Djado westwards to the Niger bend, and even into Mauretania, Maury (1954) providing the most convenient survey of the literature. A complication in the reading of these inscriptions is the problem of determining their direction. They may run from left

6. In eastern Africa.

So far some 250 inscriptions have been reported from the eastern coast of Africa lying between Mogadishu, in Somalia, and the mouth of the R. Zambezi, in Mozambique, as well as from the offshore islands, including also the Comoros (see KURR) and Madagascar. The principal sites of most of the coast have been surveyed and some partly excavated; but very much remains to be done, and quite likely more inscriptions will come to light. Especially is this the case in Mozambique and the Kerumbé Islands close to its coast, whose Islamic historical archaeology is still virtually unknown, albeit that the existence of mosques and widespread adherence to Islam is attested by 16th century Portuguese writers. Other than those of the present century, no inscriptions have been reported inland. Only one inscription is known completely in Swahili, even though some Swahili words occur in Arabic inscriptions of the 17th to the 19th centuries of the epitaphs of the petty Sultans of Kunduchi, 27 miles north of Dar es Salaam. With these exceptions and a group of 26th and 17th century Portuguese inscriptions in Fort

Jesus, Mombasa, with a solitary one in Zanzibar, all the inscriptions are in Arabic.

The two earliest known inscriptions are an epitaph in the Friday Mosque at Barawa reported by Cerulli, dated 498/1104-5, and a Kufic dedicatory inscription in the Friday Mosque at Kilimkari, Zanzibar, dated 500/1106-7, which, if not carved in Strät itself, would appear to have been the work of a Shafi' craftsman in Zanzibar (see KILIMKARI). Apart from these, a small number of inscriptions in Kufic or floriate scripts have been found in small numbers in or near Mogadishu, and at Malindi, Mwanani and Mombasa in Kenya. The remaining inscriptions are all in *nashī* or cursive scripts. No comprehensive attempt has so far been made to identify or classify their style or provenance so far as it was not local, but at Kilwa certain decorative inscriptions have been thought to have Fātimid affinities. On these subjects it would probably be wisest to reserve judgment until more is known of the inscriptions of the Yemen and of the Īladrāsawī. The greatest number of inscriptions found in eastern Africa are epitaphs, very many of them of persons otherwise unknown. Quite exceptional are sixteen dedicatory inscriptions commemorating the foundation of mosques in Lamu between the 14th and the 19th century, which demonstrate the stages of growth of the town (see LAMU). At Mombasa a number of inscriptions, mostly funerary, illustrate and provide a solid dating for the varying fortunes of the Mazar'i family, of whom a number of members served as *waik* under the suzerainty of 'Uman from ca. 1734 until 1837. At Kilwa there are a number of inscriptions in the Great Palace known as *Husuni* (Swa. from Ar. *himm*), but all undated, and on whose date agreement has not yet been reached. A curiosity is a carved ivory statuette (*mshu*) with an inscription in Swahili, which has been ascribed to the 19th century; but a reference in the traditional Swahili *History of Pate*, from which town it came, would suggest, however, that its approximate date of manufacture was ca. 1650/1650.

7. In Turkey.

The Muslim epigraphy of Turkey has not yet been the object of methodical research. It is true that there exist a large number of editions, but most of these are isolated undertakings.

The history of Muslim monumental epigraphy in Turkey does not in fact begin until the middle of the 6th/12th century. There had been building activity in Anatolia before, in the Tuccoman states of the Dāghmānkids, the Artukids, the Saltukids and the Meğüddēkids, but most of the constructions of that time were destroyed as a result of the continuous fighting in the area.

Muslim epigraphy in Turkey can be divided essentially into three categories: commemorative inscriptions, pious inscriptions, and epitaphs. The most important of these, both from the historical and the

artistic point of view, is the former, which includes inscriptions commemorating the constructions or restorations chiefly of foundations for the public good—mosques, fountains, *sabils*, etc.—and, in later times, also of government buildings (offices, hospitals, schools, barracks, etc.). The pious inscriptions either contain only the names of God, Muhammad or the four *ṣaḥāb* caliphs, or consist of *ḥadīths* or citations from the Qurʾān that suit the purpose served by the object which they decorate. Thus in mosques one may find such Qurʾānic verses as IV, 59 or XV, 46; on fountains LXXVI, 18 and 21 or the words *wa al-midh kullu shayʾin hayy*, from XXI, 31; and on libraries the words *fiḥḥ kutub hayyima* (XCVIII, 2). Pious texts may also serve as mottoes over commemorative inscriptions. Hence in foundation inscriptions of mosques one may find such sayings of the Prophet as "Whoever builds for God a mosque, even if only like the nest of a sand grouse, for him God builds a house in paradise". The number of inscriptions surviving on tombstones is very large. Especially in Istanbul very fine ones can still be seen. Unfortunately, the amount of research done in epigraphy is still less than that done in the other Muslim epigraphy of Turkey (see also *qasas*).

The typical Muslim inscription, including that in Turkey, is a rectangular slab with one or more lines of text, which are separated by narrow lines, the whole being enclosed in a narrow frame. In the *Ṣāliḡiḡ* and early Ottoman periods the inscriptions were often also in the form of bands along the borders of porches, or, inside mosques, of *miḥrābs*. Some inscriptions from this time consist of one line in *ḡiḡiḡ* *ḡiḡiḡ* with elongated shafts through which runs a second line in *Kūfī*, these together against a background of spiral arabesques. In the Ottoman period the lines (in verse texts, the hemistichs) of most inscriptions are enclosed in cartouches with the left and right extremities elaborated in different manners; these inscriptions are sometimes decorated with such motifs as flowers (either separate or in vases), fruits, arabesques, rosettes and, especially in later times, *tughras* and crescent-and-stars. In the relief inscriptions the (raised) letters and decorations may be gilded, and the (sunken) backgrounds painted—mostly green or blue; it is uncertain whether these colours were used in the older inscriptions too, because the original paint of these has mostly worn off.

On the tile inscriptions, it is not the relief but the colours that present the necessary contrast between the text and the background. Inscriptions of this kind are mostly of pious content and undated. They are found in buildings from very early times; after the 11th/12th century their number gradually diminishes. Very fine examples of this kind of inscription are found inside the Selimiye Mosque (completed 982/1574-5) in Edirne and in the Eḡḡat Kūḡḡ (11th/17th century) in the Topkapı Palace in Istanbul.

Since, under the Great *Ṣāliḡiḡ*, *Kūfī* was very much used for inscriptions in Iran, it was also in the early Muslim epigraphy of Anatolia. This script, which was employed, roughly, in the period and areas of the above-mentioned Turcoman states, was, under the Rūm *Ṣāliḡiḡ*, largely replaced in inscriptions by *ḡiḡiḡ* *ḡiḡiḡ*, although it continued to be used for more decorative purposes by them and by the Ottomans up to the reign of Meḡḡmed II (855-86/1451-81). *Nastaʿlīq*, which was brought to Turkey by Persian calligraphers in the period of Meḡḡmed II, became common especially in the commemorative inscriptions and epitaphs made

after the middle of the 11th/12th century. (The earliest inscription written in this script is perhaps that of the Mosque of *Ṣaḡḡiḡ* *ḡiḡiḡ* (dated 860/1455-6) in Edirne (Dijkema, No. 16). This script became so popular because (a) by this time most of these inscriptions were in Turkish verse, which (as is demonstrated in the manuscript *ḡiḡiḡ*) it was traditional to write in *nastaʿlīq*; and (b), since this script uses far less different auxiliary signs than does *ḡiḡiḡ* *ḡiḡiḡ*, it is much simpler to handle for the stone carver. Such scripts as *nastaʿlīq*, *ḡiḡiḡ* *nastaʿlīq* and ordinary *ḡiḡiḡ* are very rare in inscriptions. *Ruḡʿa* was used occasionally in the last period of the Ottomans mainly, mostly on buildings of secondary importance.

Little is known about the calligraphers who designed the inscriptions in the *Ṣāliḡiḡ* and early Ottoman periods. Later, the more reputed calligraphers used to sign their works, with such stereotyped formulas as *ḡiḡiḡ* *ʿabḡ al-ḡiḡiḡ* . . . or *ḡiḡiḡ* *ʿabḡ al-ḡiḡiḡ* . . . They might omit their signatures, however, if on the same building there was another inscription written by one of the sultans (as is the case, for instance, in the inscriptions on the front of the two fountains of Sultan Aḡḡad III in Istanbul).

Under the Rūm *Ṣāliḡiḡ* and the early Ottomans, the general Muslim tradition was followed of writing inscriptions in Arabic. The earliest inscription in Turkish is perhaps that of the *madrasa* of Yaʿḡḡb Celebi (dated 814/1411) in *Kūḡḡḡ* (I. H. Uzuncarḡiḡ, *Kūḡḡḡ* *ḡiḡiḡ*, Istanbul 1932, 79); later, especially from the end of the 10th/16th century, this came to be the language of most of the commemorative inscriptions and epitaphs, the cause of this rather radical change being probably an increase of the prestige of Turkish vis-à-vis Arabic following the Ottoman occupation of the Arab lands in the 16th and early 17th centuries. The Arabic inscriptions are mostly prose, the Turkish ones usually verse. The wording of the Arabic prose inscriptions closely follows the models of the Mamlūk and earlier Arabic epigraphy of Egypt and Syria. In most commemorative verse inscriptions, both those in Arabic and those in Turkish, the dates of the events commemorated are not expressed in figures or words but hidden in chronograms (see *ḡiḡiḡ* *al-ḡiḡiḡ*). There do exist also Persian inscriptions, but they are very rare.

The redactors and calligraphers of the Muslim inscriptions in Turkey seem to have had a special liking for mystifying the reader—mostly in such a manner, however, that with adequate knowledge one can discover the true meanings of the texts. Not only is there the chronogram and, in verse texts, the often intricate language, but, for instance, in the inscriptions commemorating the 1282/1865-6 restoration of the Eḡḡi Cami (Dijkema, No. 16) in Edirne, some words are written phonetically. Calligraphers might add to the intricacy of inscriptions, often already sufficiently difficult to read through the interlacing of the letters, by several means: the inscription of the Muradiye Mosque (dated 899/1435-6) (*ḡiḡiḡ*, No. 7) in Edirne, for instance, contains unusual ligatures of letters; in the inscription of the Mosque of Sitt *ḡiḡiḡ* (dated 889/1484) (*ḡiḡiḡ*, No. 23), in the same town, some letters are written *mikror-wise*; and in the inscription of the *ḡiḡiḡ* Most (dated 876/1471) (ed. by P. Witte in *Byzantion*, xviii [1946-8], 327, n. 2) near Kustendil [g.w.] in Bulgaria, letters and words are arranged in an unnatural manner.

Damaged or lost inscriptions were often replaced by copies. The student of Ottoman epigraphy can mostly recognise these easily, for they are generally in a better state than originals dated in the same period. Also, the wording may give a hint. Knowledge of the history of calligraphy and decorative art may provide a means to ascertain the period when a copy was made. (The foundation inscription of the Darü'l-hadis Mosque in Edirne, dated 838/1435 (Dijkema, No. 6), for instance, is written in a *sadika* of a kind not used in Turkish epigraphy until the middle of the 18th/19th century.)

Bibliography: For a general appreciation of the significance of Turkish epigraphy, see R. Mantran, *Bilan et perspectives de l'épigraphie turque pour les périodes pré-ottomane et ottomane*, in *Revue d'histoire maghrébine* iv (1973), 27-20. For editions of Ottoman inscriptions, see the works of G. Colin, M. van Berchem, Khalil Edham, J. H. Merdmann, F. Taeschner, P. Wittek, Ismail Hakki Uzunarslan, Mübârek Çallı, H. B. Kunter, M. Mujicicovic, A. P. Vekilov, A. Zajackowski, P. Mlyatov, R. Mantran and F. Th. Dijkema (bibliographical details in F. Th. Dijkema, *The Ottoman historical monumental inscriptions in Edirne*, Leiden 1977, introd., § 1); some of their editions include also pre-Ottoman inscriptions. Among the editions containing more specifically pre-Ottoman inscriptions, there should be mentioned: Cl. Huart, *Épigraphie arabe de l'Asie Mineure*, in *Revue étimologique*, ii (1894) and iii (1895); J. H. Löytved, *Konst: Inschriften der seldschukischen Basiten*, Berlin 1907; the numerous articles of Ahmed Tewfik in *TOEM*, esp. those in Nos. 29 (1330), 83 (1340), 86 and 87 (both 1341); P. Wittek, *Inscriptions*, in R. M. Riefstahl, *Turkish architecture in southwestern Anatolia*, Cambridge (Mass.) 1932, 77-116; J. Sauvaget, *Inscriptions arabes*, in A. Gabriel, *Voyages archéologiques dans la Turquie orientale*, 1, Paris 1940, 287-356; W. Hintz, *Steinerinschriften aus dem mittelalterlichen Orient*, in *Beitrag*, xii (1949), 745-69. The voluminous studies which F. H. Konyali has devoted to the monuments and inscriptions of a number of towns in (mainly western) Anatolia are unmethodical and possess little or no value for epigraphical research. See further the *RCEA*; the sections VIII in the different parts of J. D. Pearson's *Index Islamicus*, Cambridge (later London) 1958; H. J. Kornrumpf, *Osmantische Bibliographie mit besonderer Berücksichtigung der Türkei in Europa*, Leiden 1973, 1183-6, the bibliographies of the articles devoted in this encyclopaedia to towns of the Ottoman empire and to dynasties and important families in the area. Finally, many local histories of towns formerly under Ottoman domination contain records of inscription texts, even though this may not always be indicated in the titles.

(F. TH. DIJKEMA and A. ALPARSLAN)

8. In South-East Asia.

Islamic epigraphy is distributed very unequally in South-East Asia, it being understood that islamisation, although it did take place, was not accomplished everywhere at the same time or with the same intensity. The survey which follows can give only an idea of the importance of documents from Indonesia (*Republik Indonesia*) and from the Federation of Malaysia (*Persekutuan Tanah Melayu*). We shall have only a few words to say about the other regions.

A. Indonesia and the Federation of Malaysia

The majority of epigraphic documents consist of tombstone inscriptions. Next in number are charters and related texts, and finally there are some brief legendary pieces on various subjects.

These three groups will be subdivided into four geographical regions, although the exigencies of history will not always allow a rigid separation. (a) Java (b) Sumatra (c) Malaysian Peninsula (d) Eastern Indonesia.

Regarding the Javanese year, since the introduction of the purely lunar calendar in 1633 A.D., it should be noted that the latter does not always correspond to the so-called "Arabic" system, because of a different distribution of "full" years of 355 days, and also as a result of local variations which are not all known to us. On this typically Javanese chronology (abbreviated *Saka* Jav. or S.J.) and the theoretical conversion of its dates to the Gregorian system, reference should be made to the article *Tjdrakening*, in *ENP*, v (= Suppl. I), 73-9, which is accompanied by tables. For the pre-Islamic chronology (still in use in Bali) which consists of lunar-solar years, we shall use the term *Saka* (abbr. S.).

1. Tomb inscriptions.

(a) Java. It is on this island that the oldest known Muslim tomb in Indonesia has been found. It is the burial-place of a girl whose personal name is uncertain or is not indicated, but who is called Bunt Maymūn. Without recalling here the arguments concerning the year of her death (there is an error in the writing of the word denoting tens), let us say that it may be read as 475 A.H. or 2 December 1082. This tomb stone is at Leran in eastern Java.

Eastern Java possesses a large number of tombs, among which we shall mention those of the cemetery at Trilāyā (usual orth. Trowlojo). Here there are found, besides a number of undated or uninscribed tombs, ten dated inscriptions ranging from 1298 to 1533 *Saka*, that is 1376 to 1611 A.D. It is seen that here the *Saka* chronology is still used for Muslim tombs, except in one case where we have a *hijri* date expressed in Arabic numerals. Moreover, some of these tombs have a purely Javanese type of ornamentation and symbols which seem to link the interred persons to the court of Majapahit.

It is also in the east of Java that there is found the tomb of an individual reckoned by tradition to be one of the nine *Walis* responsible for the spreading of Islam to Java. His name is Melik Ibrahim, but his title cannot be established with certainty. The date is 822/40 April 1419.

In the cemetery of Trāwulan (usual orth. Trowulan) a few kilometres from Trilāyā, is the famous tomb said to be that of the Putri Campā (a title interpreted as meaning Princess of Campe), a figure well-known in legend, but the date, inscribed on the tomb in old Javanese numerals is 1370 *Saka* = 1488-9 A.D. which does not correspond to the year of her death given by the literary texts. The same cemetery contains a very simple tomb dated 1290 *Saka* = 1368-9 A.D., which is therefore more ancient and dates back to the glorious period of Majapahit.

There is furthermore in the Gedung Dawar complex, still in the east of Java, an inscribed wooden pole bearing the date 1407 S. (not 1507 as read by Stutterheim), again in old Javanese numerals. In another cemetery at Gedung Ler (in the region of Tulung Agung) there is a tomb bearing the date

1470 S = 1548-9 A.D. In these two latter cases, the numerals are to be read from right to left, a mode of writing numbers unknown to epigraphy in the Arab lands but found in a number of cases in Indonesia (though rare in Sumatra), which doubtless arises from the system current in the Hindu period of expressing dates through chronograms.

Finally, in concluding this brief survey of the principal Muslim monuments of Java, let us note that in the burial complex of the famous Queen of Jāpāra (usual orth. Djapara), Ratu Kali Nyamat, is a chronogram giving the date 1481 S = 1559-60 A.D.

(b) *Sumatra*. As a result of a systematic survey carried out between 1912 and 1937 in the region of the ancient kingdom of Samudra-Pasai and in the extreme north of the island, in Atcheh to be precise, the Archeological Service of Indonesia possesses a rich collection of photographs and casts of epitaphs, most of which however offer us nothing more than pious texts without historical value. Of the sixty dated inscriptions, wholly or partly legible, which we have been able to examine from Samudra-Pasai, the majority (more than thirty) are from the 9th/15th century; ten are from the 10th/16th century; four date from the 11th/17th century; and only one from the closing years of the 7th/13th century. Among these tombs, of which about half belong to women, a dozen or less are of persons of royal or princely rank. Only a few of these epitaphs have been published, and a systematic study has yet to be made.

We may mention among the historically more important, that of the first sultan of Samudra, Sulṭān Malik al-Sāliḥ who died in 696/1297, and that of his son al-Sulṭān b. al-Sulṭān al-Malik al-Zāhir Shams al-Dunyā wa 'l-Dīn Muḥammad b. al-Malik al-Sāliḥ, which is of a completely different style and dates from 726/1326. Among the other tombs, we may mention those of a descendant of the penultimate caliph of Baghdad, named 'Abd Allāh b. Muḥammad b. 'Abd al-Kādir, who died at Samudra in 809/1406; that of a queen of Samudra, great-granddaughter of the first sultan of the kingdom, dating from 837/1438; the epitaph of a princess with a Persian name, Mihr Shāh, daughter of Khōdja Ahmad al-Sulṭān al-'Adil; and finally, the tombs of two individuals, one named Rājā Khān dating from 834/1430 and the other, his son, Khōdja Rājā Khān b. Rājā Khān, buried in 865/1460-1.

One tomb, of unique type, is that of a person named Nāṣir Husām al-Dīn b. Nāṣir Amin. As well as conventional texts, the tomb bears a poem by Sa'ādī and dates from 823/1420.

Of two particularly interesting inscriptions apparently belonging to the same tomb, the one gives us a text in Old Malay written in palaeo-Sumatran characters, the epitaph of a queen whose name is uncertain but who died in 785/1380; the other stone bears an epitaph in Arabic of a princess, with a date almost identical to that of the former, the same day of the week, the same day of the month, the same month, but ten years later, 792/3 December 1398. It is probable that there is an error in the dating of one of the two inscriptions. In any case, the text in palaeo-Sumatran characters is very important, since it gives us evidence of the use of this script, which belongs to the pre-Muslim period, in the Islamic era and in the 8th/14th century, a hundred years after the Islamisation of the region.

(c) *Federation of Malaysia*. Among the tombs discovered here are that of the sixth sovereign of

Malaka, Sulṭān Maṣṣūr Shāh b. Muṣaffar Shāh, who died in 882/1477, and that of the first sultan of Pahang, Sulṭān Muḥammad Shāh, son of Sulṭān Maṣṣūr Shāh the conqueror of Pahang, who was the son of Muṣaffar Shāh, son of Muḥammad Shāh. The latter tomb is dated 880/1475, and it is noticeable that the genealogy here goes back further than in the previous example. The vast majority of tomb inscriptions are in Arabic, but one case is known where the epitaph proper is in Malay. It is that of a step-daughter of Sulṭān Ahmad, the second sovereign of Pahang; she was in fact the daughter of the seventh sovereign of Malaka and sister of the seventh and last, who was forced to flee before the Portuguese invasion. There are various other royal tombs of the different sultanates, as well as those of eminent individuals dating from the 9th and 10th/15th and 16th centuries.

At Brunel, two tombs from the 13th century A.D. have been discovered. They are totally different from those of the Peninsular as regards the form and the style of the inscription.

(d) *Eastern Indonesia*. The island of Bali, where there is a small minority of Muslims in the north, has not hitherto yielded a single ancient inscription. There is one, however, on the island of Lombok, of which roughly half the population is Muslim. This inscription is bilingual: the *ghāṣida* in Arabic and a chronogram in Balinese script. The latter has been interpreted by Stutterheim as representing 1242/1727.

II. Charters and related documents.

(a) and (b) *Java and Sumatra*. On a *minbar* from the east of Java, of which we have only a facsimile, there is the date 1487 Sāḥi/1565-6 A.D. inscribed in palaeo-Javanese numerals; but a chronogram which accompanies it causes difficulty. A small stele on at the centre of the island, in Javanese, is dated 1624 S.J./1700-1 A.D. There are a number of texts in existence which are related to charters. They are written in Javanese and in Javanese characters, sometimes in Arabic characters (*pegon*).

In western Java (the Sundanese country), we have eleven charters dating from the 17th and 18th centuries A.D. (they are dated according to the Javanese Sāḥi chronology).

From Banten there are similar texts using both types of script, but dated according to the *hiġra* system. They date from the same centuries and are twice in number.

Finally, from Palembang (southern Sumatra) there are various documents of which most are dated by the Javanese Sāḥi chronology. They are written in Javanese language and characters and date from the 17th to the 19th century.

The appointment of a chief of the Bedouy (the as yet Hindu population of the Sundanese country) dates from 1224/1712-13. This document is furthermore endorsed by the seal of a sultan of Banten (the "Bantam" of the maps) which gives the date of the accession of this sovereign as 1202/1690. There are a number of other documents existing from the Lampung country, some written on bark, one on cattlehorn.

At Atcheh, documents of various kinds but generally authenticated by a seal, are called *sarakata*. None of those which have been preserved is very old.

(c) *Federation of Malaysia*. The most important document from this region is an inscription, unfortunately incomplete, of a type totally different and unique in this part of the world. The text includes a proclamation of Islam, followed by a list of ten in-

fractions, with the penalties laid down for each. The date is unfortunately incomplete but we can at least be sure that it belongs to the 8th/14th century. In this text there are very few Arabic words; and even the name of Allāh is rendered by an expression Hindu in origin, *Dewata Mulya Raya*.

(4) *Eastern Indonesia*. Especially interesting in this region are texts written in Arabic script but in the language of Ternate, emanating from the sultanate of the same name. They are all recent (19th century), but give valuable evidence concerning this language, which is not part of the Indonesian linguistic family (which henceforward may usefully be called Noutsanarian), but which alongside Malay played the role of a lingua franca in the eastern parts of the Indonesian archipelago.

III. Inscriptions on various objects.

1. Cannon.

(a), (b), (c). *Indonesia and the Federation of Malaysia*. Cannons of diverse origin have been found (of French, Dutch or Indonesian manufacture) bearing inscriptions in Malay or in Arabic. They date from the 17th and 18th centuries. On one of these is inscribed the name *Yakerira* (variant of Djakarta) written in Javanese letters. It also bears a date, which is, however, problematical.

(d) *Eastern Indonesia*. A cannon of Indonesian manufacture, dating from the start of the 18th century, has been found at Soulewest. It bears the name La Patau, the nephew of the famous Sultan of Pont, Aru Palakka.

2. Other objects.

(a) *Java*. There are various brief inscriptions on mortars and on carved wooden panels, all of them from the 19th century.

(c) *Federation of Malaysia*. From this region there are a number of *gantang* (measures for rice) bearing the name of the sultan of the period. They are mainly from the 19th century, and one of them even dates from the beginning of the 20th.

B. Thailand

From this country we have only one inscription, which is now in the museum of Sudbhothal. It consists of five lines in Arabic (the name of the four archangels and the *ghāhidā*) as well as two lines in Urdu. It is dated 1338/1399 and has therefore no historical value, but it bears interesting witness to the behaviour of an Indian Muslim in a Buddhist country.

C. Cambodia

One inscription only has been found in the area of Phnom Penh. The first three lines consist only of pious texts and the fourth, which perhaps contains more interesting details, unfortunately cannot be deciphered.

D. Campa

Two tombstone inscriptions have been found at Campa, in Arabic with Kufic characters. One is from 431/1039. The other is undated, but judging by the palaeography, is of roughly the same age as the first.

Bibliography: For convenience, the sources have been divided in the same way as in the text of the article, sc. in three groups: I. Tomb inscriptions; II. Charters and related documents; and III. Inscriptions on various objects. Each of these groups is subdivided also according to the article proper into (a) Java, (b) Sumatra, (c)

Federation of Malaysia (including British Borneo) and (d) Eastern Indonesia. In general, only books and articles discussing the epigraphic data are listed here.

f. Tomb inscriptions.

a. *Java*. For the inscription of Malik Ibrahim's tomb et Greek, see *TBG*, index 1910-13, under the name of Ph. S. van Ronkel, Th. Juynebol, J. P. Moquette and H. Djajadiningrat, anon., *Graze, Graze, in ENP*, i (1917), 819; G. P. R[oussier], *Liran, in ENP*, ii (1918), 570; Moquette, *De oudste Mohammedaansche inscriptie op Java, in Verhandelingen van het Eerste Congres voor de Taal-, Land- en Volkenkunde van Java, gehouden te Solo, 1919, Weltevreden, 1921, 391-9*; P. Ravaisse, *L'inscription coufique de Liran d Java, in TBG*, lxx (1923), 668-703; D. A. Rinkes, *De Heiligen van Java. I. De maqam van Sjeich 'Abdoelnuhji, in TBG*, lii (1920), 356-69; idem, *De Heiligen van Java. Iv. Ki Pandan arag te Tembajal, in TBG*, liii (1921), 435-381; Sur le tombe de Selā Sirab. J. L. A. Brandes, *Enkele oude stukken . . . te Leiden, in TBG*, xlvii (1904), 457-1; on the complex of Ratu Kail Nyamat: F. D. K. Bosch, *OV* (1930), 52-7 with pls. 12-23; on Saḍdan Duwus and Gerdan Lor: W. F. Stutterheim, *OV* (1939), 10, n. 1 and fig. 34; L. C. Damais, *Études javanaises I: Les tombes musulmanes datées de Tridjaya, in BEFEO*, xlviii (1937), 353-415 with 20 plates.

a/b. *Java and Sumatra*: Moquette, *De grafsteenen in Pasé en Graze vergeleken met dergelyke monumenten uit Hindoestan, in TBG*, liv (1915), 536-48; Moquette and H. D. Djajadiningrat, *Oudheden (Mohammedaansche), in ENP*, lii (1919), 201-3; Djajadiningrat, *In Memoriam Jean Pierre Moquette, in TBG*, lxxv (1927), 1-35.

b. *Sumatra*. The official Reports of the prospecting mission undertaken since 1912 in northern Sumatra will be found in: J. J. de Vink, *Uittrak uit het verslag over de oudheidkundige werkzaamheden in Pasé, in OV* (1912), 53-6; 68-75, 118-20, (1913), 11-2, 53-5, 70-2, 111-2 (1914), 41-2; idem, *Uittrak uit het verslag over de oudheidkundige werkzaamheden in Atjeh, in OV* (1914), 81-3; 217-9, (1915), 40-1, 127-8; 167-8; (1916), 21, 61-2, 97-8, 158; (1917), 65-70.

f. *Campa*: M. P. Ravahse, *Deux inscriptions cuniques du Campa*, in JA, xl/xx (1922), 247-89.

[L. CH. DAMAIS]

g. Iran and Transoxiana

Before the advent of Islam, the regions of Iran and Transoxiana had long-established traditions of

literacy. On the one hand, use was made of various scripts derived from the Imperial Aramaic of the Achaemenid chanceries during the 5th and 4th centuries B.C. These employed a largely historical spelling for Iranian words, and combined with this, ideographic writing-elements formed from Semitic roots, but with added Iranian terminations (known as phonetic complements) to indicate the inflexions. On the other hand, in the regions of Balḫ, Tukhārīstān and Rukhkhāḡ, there had been current the cursive Eactrian script, a slightly modified form of the Greek alphabet, which like its parent employed for this Iranian dialect straightforward phonetic spellings. This survived on the so-called Arab-Hephthalite coins until the coming of Islam. Here and there, among the Buddhist communities, Indian Kharoṣṭhi and even Brahmi scripts had formerly been known; but with these, as with the Runic Turkish of Eastern Turkistan, and the undeciphered Kushan linear script of Daḡli-i Naver, we are not here concerned.

To the first group, the descendants of Aramaic, belonged Parthian, Sogdian and Kh̲wārazmian, besides a little-known variant of the same type used in Māzanderān. Sogdian and Kh̲wārazmian lingered on, again on coins, well down into Islamic times. More prominent, however, was (Sasanian) Pahlavi, which, in its cursive form known as Bōok Pahlavi, co-existed with Islam for centuries as a vehicle of Zoroastrian scriptures. It is found beside Arabic in bilingual Islamic inscriptions of the Caspian region at Rādkan (Neka), Lāḡīm and Rasgīt (Reshet), and perhaps was the only melik of writing the Persian language in the earlier Islamic period. Until the time of al Maḡdīdī in 76/695-6, Pahlavi had been the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kalkhandī, *Subḥ al-ʿaṣr*, I, 423) converted the chancery of al-ʿIrāq, and ultimately of the Iranian east, to Arabic script and language. In 84/703-4, Bōok Pahlavi and Cursive Bactrian occur together with Arabic on a coin of the Gōrgan district in Aḡḡānīstān issued by Yazīd b. al-Muḡallab. Sogdian and Kh̲wārazmian script continue to occur on coins of Būkhārā and Kh̲wārazm, and Bōok Pahlavi on the issues of Tābaristān, well into 'Abbasid times. Otherwise, the language of the Umayyad "Reformed coinage", and succeeding Muslim issues, is uniformly Arabic, apart from the Marw issue of 79/698-9, which has the city-name in Pahlavi.

The four earliest varieties of the Arabic script, according to Ibn al-Nadīm, al-Fihrist (ed. Flügel, 8) were *maḡḡī*, *maḡḡanī*, *ḡarī* and *ḡaḡī*. The implied differences between these forms still elude modern commentators, who today use the term *Kūfī* (as opposed to *ḡaḡī* in Ibn al-Nadīm's sense) with general application to all varieties of monumental, regular, and (usually) unpunctuated Arabic script, employed for the writing of Qur'āns, in lapidary inscriptions, and in coin-legends. It can be observed that the Umayyad "Reformed coinage" actually shows five distinct styles of script; that of Damascus with its related mints; that of the earliest issues from Iranian cities; that of Wāsiṭ, with the developed Iranian issues; that of Sijistān, a curiously awkward script with "thorny" letter-terminals; and the thin and delicate script of the closing Umayyad, and revolutionary 'Abbasid coinages.

Apart from inscriptions on the coins, the dated Arabic inscriptions of Iran, as at present known, begin surprisingly late. The earliest are a still unpublished series at Bahānāndīz, near the border of

Fārs and Isfahān Provinces. The clearest text reads 'amrāhīd Kāḡīm b. Muḡammad b. Dīḡāb (?) *ʿamrāhīd Kāḡīm sūfīn wa-mīʿatayn*. Another records the birth of Muḡammad b. Yūsuf b. Kh̲wāzīm on Monday, 27 Šaʿbān 309. The same site has one poorly preserved Bōok Pahlavi inscription, and many other short texts in Arabic. A substantial list of the known Arabic inscriptions of Iran to 600/1203-4 was compiled by Miles. The earliest of consequence are the famous texts of the Būyid 'Aḡḡ al-Dawīa Famī-Khusraw (q.v.) in the Tachara at Persepolis, recording the defeat of Muḡammad b. Makīm in Šāfar 344/ May-June 955 and the 'Amīr's interest in the decipherment of inscriptions. One of the texts has been shown to contain several Persian words (R. N. Fiye, *The heritage of Persia*, London 1962, 251, 259, with fig. 63). Nearby is the inscription of Bahāʾ al-Dawīa (q.v. in Suppl.) dated 392/1002-3. Earlier in fact than any known Arabic inscription of Iran or Aḡḡānīstān is the enigmatic text from the Tochi Valley in Wakrīstān, now in the Peshāwar Museum, which is dated Djumādī I 243/August 857. This seems to contain a mention of "the land of 'Umān", which, with the early date, could imply a connexion with the Kh̲wāzīmī amirate at Gardīz (q.v.), since judging by the *Taʾrīkh-i Sīsāḡ*, caliphal control could not then have extended so far east.

Decorative varieties of Arabic script were equally slow to appear in the Islamic East. The texts of 'Aḡḡ al-Dawīa show no more than occasional barbed terminations, and characters linked by small loops beneath the base-line. Folliation of letter-terminals seems to have developed first in Egypt, and to have been quickly followed there by Floriated (by which is here understood the use of attached, but extended, leaf-decoration, as well as that of circular flowers, either attached or separate). Such features, as Grohmann showed, were known in Egypt as early as 216/833-4, and must have travelled thence to the East; not, as Van Berchem maintained, on the avoidance of a restored inscription at Tashkent, from Central Asia westwards. In Iran, strongly foliated Kūfī often tending to floriation is found in undated (probably 4th/10th century) inscriptions of the Maḡdīdī Dīḡāmī al-Nāḡī. The earliest dated examples of floriation appear to be the inscriptions of Badr b. ḡasanawayh, a Kurdish ruler in Luristān: one at each end of the Pul-i Māmūlān near Kūramābād, alike dated 374/984-5, and another from the Pul-i Kaḡḡān completed in 399/1008-9, which all record the building of the bridges. Very fine specimens of Floriated Kūfī are those of the minaret of the Pā-yī Mīnār mosque at Zawāw (462/1068-9), and the tomb-tower of Hormīdīyār at Rasgīt (Reshet). From a reading of its date that was uncertain, Godārd sought to ascribe the letter to the 5th/11th century, but its thick, heavy script and florid decorations are more comparable with the legends of the Kh̲wārazmī-Šāhī coins of the 6th/12th century; and in any event, the closing words can hardly be taken for a date. In fact, the principality of Kh̲wārazm had been slow to develop an ornate calligraphy. That region during the 5th/11th century had adopted an austere and elegant style, unusual only for the sweeping curves of the *ḡīm*, *ḡā* and *ḡāḡ*, which is exemplified by the foundation text of Maʾmūn b. Maʾmūn (dated 402/1010-11), in lead, from a minaret at Urgandī, or Gurgandī (q.v.), now at Tashkent. With this may be compared the silver tray of the unidentified prince Tīḡh al-Umma wa-Sirāḡī al-Mīlā Kh̲wārazmī-Šāh b. Ibrāhīm, reproduced by Semirnov. Further to the west in the Ziyārid kingdom,

the inscription of the Gumbad-i Kābūs (395/1004-5) is in a masterfully simple, yet wholly undecorated script. Such austere forms were well-adapted to rendering in the brickwork of the many minarets and domes erected under the Sāldjūqs in Iran: such, for example, as the plain and elongated lettering of the founder's inscription of the minaret Nizām al-Mulk in the sanctuary of the Djamī' at Isfahān (*AMI*, vii, 2-3, 23) or that in the name of the Sultan Muḥammad b. Maḥk Shāh at Gulpāyagān.

More adventurous calligraphic developments had meanwhile been taking place in the Sāmīnid territories of Transoxania and Khurāsān, no doubt stimulated by the introduction of paper-manufacture from China, and the stimulus consequently given to penmen. On the slip-painted "Nīghāpūr" pottery, magnificent lettering is found in black or chocolate over a pale ground, and plaited or interlaced letter-forms soon become widespread. In the absence of dated specimens, chronology of the pottery depends on examples in other media. Interlaced letters appear on a *diwān* of Naṣr b. Aḥmad dated 324/935-6 from al-Muḥammadīyya (Ray), and similar forms are found frequently on subsequent Būyid coins of North Iranian mints. Thus Plaited Kūfic seems to have been diffused from east to west across the Islamic world, in the opposite direction to floriation. In Iran, the classic example of the plaited style is the epigraphic frieze of Abū 'Alī 'Aṣṣayr Muḥammad b. Wundarīn on his tomb-tower at Rādkīn in Māzandarān, commenced in 407/1016-17 and completed in 411/1020-1. The outstanding specimen to combine floriation with plaited decoration is the script at the tomb of Vabyā b. Zayd (known as Imām-i Khurd), at Sar-i Pul in Afghānistān. Undated, it mentions one Abū 'Abd Allāh Muḥammad b. Shāddān, evidently a relative of Abū 'Alī Aḥmad, wazīr of the Sāldjūk Çağrı Beg, and so should be several decades later than the Sāldjūk occupation of Baljḥ around 433/1041-2. Plaited script appears also on the celebrated arch of Bust in southern Afghānistān, which though ascribed by commentators to the 6th/12th century, has greater affinities, both architectural and epigraphic, with the Ghaznavid period. In view of this last fact, its fragmentary date could suitably be restored merely as *arba'ūn* (400/1009-20), which would thus be the earliest specimen of Plaited Kūfic in the Ghaznavid area, and belonging consequently to the reign of Mahmūd I.

More typical of the lettering of the Ghūrīd period, in contrast to the previous examples, is a Bordered Kūfic which descends from that of the later Ghaznavid minarets, those of Mas'ūd III (492-508/1099-1115) and Bahrām Shāh (511-52/1127-57) at Ghazna. Here the decorative border is independent of the actual lettering, though both stand on a floral background. A forerunner of this convention may be the so-called shrine of Bābā Ḥātīm or Sāḥir Khālī, near Andkhoy, which may even predate the Sāldjūk occupation there, and has bordered decoration of a simple kind. These monuments of the mature Ghūrīd period (late 6th/12th century) show a great variety of scripts, which include a stiff, archaizing Kūfic, and a flowing Naskhī (*Ḥuṭh*, see below). The most characteristic, however, both at Čīstī, and in particular at Shāh-i Mashhad, is a form with broad decorative borders developed into complex geometrical forms. Further to the west, under successors of the Sāldjūqs in Iran, Bordered Kūfic is seen resembling that of the minarets at Ghazna on that at Nīgār in Kermān province. Enhanced with sparse turquoise tiling, it is presumed to date from 613/1218-19.

The Kūfic inscriptions so far discussed are all couched in Arabic. The small number of Persian epigraphs known which were written in this character were discussed by Bombaci in his examination of the long and fragmentary Persian verse-inscription of marble slabs, found in the palace of Mas'ūd III at Ghazna (built in 505/1111-12). He notes Persian verses also on the tomb of an unknown person at Ghazna. However, the earliest example of such a text is on the portal-arch of Ribā'i al-Malik near Buljshār (Pope, *Survey of Persian art*, Pl. 272B), ascribed to the Karakhanīd Shams al-Mulk Naṣr b. Tamghaḥ Khān Ibrāhīm (471/1078-9). Other monumental Persian inscriptions are at the tomb of Muḥmina Khātūn at Naḡshīvān (N. Khanikoff, *Mémoires sur les inscriptions musulmanes du Caucase*, in *JA* [1862], 113-15); and especially that at the mausoleum of the later Karakhanīd Iḡlāl al-Dīn al-Ḥusayn b. al-Ḥasan b. 'Alī at Uzgend (547/1152), where the Persian foundation-text is in sinuous Naskhī, and the largely Turkish protocol of the ruler, below, in a rigorously geometrical Bordered Kūfic. In unpointed script Persian has always been found extremely difficult to read, and it was only with the advent of fully-pointed Naskhī that the monumental use of Persian became extensive.

In any event, by the close of the 5th/11th century, decorated Kūfic was passing out of favour, both by reason of its difficult legibility, and perhaps on account of associations with the Fātimid dynasty, considered hostile by the Sāldjūks. Cursive hand-writings, the rounded Naskhī, and the flowing and ligatured chancery hands, had always co-existed with the angular script, and now emerged with full monumental status. A Naskhī text on the tombstone of Mahmūd I at Ghazna contains the date 427/1030, but is often considered a later addition, as are the Kūfic inscriptions on the wooden doors from that tomb. Nevertheless, Ghazna played a leading part in the innovation, for the specimen there on a marble panel naming the Sultan Ibrāhīm b. Mas'ūd is unlikely to be later than his death in 492/1099, in view of its wording. At Dandānkān (q.v. in Suppl.), a Naskhī text is placed before 494/1100. A small panel in Naskhī appears on the Čībī Dūshkārīn minaret at Isfahān (dated 501/1107-9), as also on that of Muḥammad b. Maḥk Shāh at Sāva (504/1110-11), where the main text is Kūfic. The minaret at Dawlatābād near Baljḥ is ascribed to the year 508/1125-9. Besides a band of Kūfic it has a fine epigraphic frieze of Naskhī type (of a style which some designate *Ḥuṭh*). At the Imām-i Kelm shrine at Sar-i Pul nearby, the entrance inscription is in sprawling Naskhī, but unhappily only the units figure of the date is legible (p. 9). Thereafter, the historical inscriptions of Muslim monuments were regularly in the rounded script, as at the Imām-zāda Karrār at Buzin (528/1133-4), which provided Herfeld with the occasion to prepare a list of Kūfic and Naskhī inscriptions noted in his time. Recent discoveries enable us to add to his list the *madrasa* of Shāh-i Mashhad already mentioned, and the mausoleum of Qorveh (Kurwa) near Kāzwin, ascribed to 575/1179-80. Arabic manuals of calligraphy, followed by several recent commentators, apply special terms (*Ḥuṭh*, *muḥaḥḥaḥ*, *ṣayḥanī*, *raḥ'a* and so on) to varieties of Naskhī script. Yet since the application of these in succeeding periods is inconsistent, and the categories appearing on monuments do not always correspond, it is safer to use only the general term. From the second half of the 6th/12th century, Naskhī inscriptions exist in substantial

numbers in Iran. The best general study, no longer, of course, up-to-date, is that of Kratchkovskaya (in Pope, *Survey of Persian art*, iv, 1770-84). Often the Nāshkī characters stand, without attachment, on an overall background of vegetable scrolls, a convention found also in the latest phase of Kōfic. In the period of the Ilkhāns and later, wide variations are found in the forms of script under the Nāshkī "label." As outstanding specimens, mention must be made of the mihrab of Oljeytū in the Dīlāmī of Isfahān, and the mihrab of the Muṣaffarid Aḥmad at Sirhān, with its massed verticals typical of the fuḡrā style. Yet the fashion for Nāshkī, in numerous forms and varieties, with increasing use of diacritical points and signs, persists down to the time of the Safawids and still more recently. In later centuries, monumental inscriptions stand closer to the traditions of the manuscript copyists. Besides foundation-texts, they often include the detailed provisions of waḡf-endowments. However, from the point of view of script, they hardly make the same call as the examples of the Kōfic period for separate treatment.

10. India.

The Indian sub-continent is very rich in Muslim inscriptions, the study of which affords valuable information not only to the archaeologist and historian but also to the geographer, the economist, the student of religions, the linguist, and of course the calligrapher. Most of them are found on religious buildings (tombs, mosques, ḡdāḡā, imāmḡāḡā, madrasas) and military works (forts, gates, bastions, cavaliers, towers), or on works of public utility (bridges, tanks, ḡā'ibīs, dams, sluices, sarā'īs); some are also found on palaces, gardens, pavilions, etc.; and another class is found on movable objects such as guns and swords, ornamental metalwork including Bidri ware (see alban), and on crystal and jade (see WILLAWN and VAGRU). The greatest part of the public inscriptions is carved on stone; often of a stone identical to that of the main building material, but not infrequently a specially selected fine-grained stone is used for the inscription and cemented into the structure.

Here the question of authenticity must be considered. An inscription may indeed be exactly contemporary with the building on which it appears. But it may also be earlier, preserved through the reverence accorded to the written word or through the ascription to it of some special sanctity, and set into a later unrelated building; or else later, marking say the completion of a building project essentially constructed perhaps half-a-century earlier, as at the Dīlāmī masjid of Bidliḡpur (p. 1). A late 'Adil Shāhī building whose inscription records its completion by Awrangzib; or recording a restoration (as in many works in Dīhli of Firūz b. Rājā, whose inscriptions have to be studied in connexion with the problems of interpretation in his own accounts of his restorations in the Fūḡḡat-i Firāz-Shāhī: see p. 111). Monuments; or it may be fictitious—not necessarily mischievously: for example, the Persian inscription of the Masjid Kuwwat al-Islām at Dīhli is probably a *pis fraus* of sixty or seventy years after the conquest.

The technique of carving stone inscriptions in Arabic, Persian or Urdu is conspicuously different

from that of inscriptions in other Indian languages, where the characters are engraved into the surface of the stone; in the Muslim inscriptions the outline of the letters is first written on the stone, and the ground between the letters then chiselled away leaving the inscription level with the original surface. A similar technique may be applied to inscriptions on crystal and jade, and also to the larger metal pieces, although on any of these fields the letters may be incised and the grooves filled with another material to leave an inscription flush with the surface; in the case of Bidri ware this is regularly of silver bar laid into the base metal. Inscriptions in ceramics may be either of letters in a contrasting colour fired integrally in a regularly-shaped tile (*ḥaṣṣrangī*: see *GHATAK*), or consist of the individual letter-shapes let into a contrasting ground by a mosaic technique. The former ceramic technique is more commonly employed for simple repetitive motifs (e.g. the names *Alī* or *Muḥammad*), sometimes combined with a moulded base on which the letter-shapes are raised, as on the merlons of *Rūn-i 'Ālam*'s tomb in Multān; mosaic tile inscriptions, which do not appear until the 15th/16th century, are best exemplified in the Mughal buildings of Lahore (see *LAHAWR*).

The language of the earliest inscriptions is invariably Arabic. There are no inscriptional records of the 'Abbāsid presence in Sindh, although a few were engendered by the Muslim communities which lingered on in Sindh and the Panjāb, with their occasional offshoots to Kāth and the north coast of Kāshghar (see *GUNJAN*), to which were added the small communities which grew up around the *ḥabṣhās* of individual *Ṣūfī* saints who drifted in to India before the Ghūrid conquest, especially in the Panjāb and the Ganges valley. After the Ghūrid conquest of Dīhli, dating inscriptions remain in Arabic regularly until towards the end of the 7th/13th century, when they are replaced by Persian; non-historical epigraphs tend to remain in Arabic somewhat longer, and of course Arabic persists up to the present day for Qur'anic quotations on mosque and tomb inscriptions. This does not, however, apply to the sultanates of Bengal, where the preferred language of dating inscriptions remains in Arabic until Mughal times. In late Mughal times, in north India Urdu inscriptions appear beside Persian. Away from Dīhli, there are many bilingual and trilingual inscriptions, especially in the Deccan (Persian/Sanskrit, Persian/Marāṭhī, Persian/Kannada, etc.); there are a few inscriptions in the Deccan regions in Dakṣiṇī (q.v.). Not infrequently the date is written in Arabic words in a Persian inscription; and often the Arabic, and to a less extent the Persian, is grammatically incorrect. The date in north Indian inscriptions is regularly expressed in *Ḥijrī* years, except for a few inscriptions of the time of Akbar and *Djāhangir* which use the *Dūr-i Ilāhī* (q.v.) system, or are dated by regnal years. In the Deccan, various solar calendars are occasionally used, especially the *Shahār san* (well studied by Marie Martin, in an unpublished M.A. thesis of the University of Colorado) in the *ʿĀdī Shāhī* sultanate of Bidjāpur, and a *Fajl san* in Golkondā and under the *Nizāms* of *Haydarābād*. In Mysore under *Haydar 'Āli* and Tipu Sulṭān, the *Nawabī* era is used. For these eras, see *TA'ZIM*.

The scripts in use are the common *Kūfī*, *nasḥ*, *ṭughā*, and *maghā*. *Kūfī* is used only in the earliest dating inscriptions, and retained long after its period of active use in Qur'anic quotations. *Nasḥ*

and *ṭughā* are in common use for both Arabic and Persian inscriptions all over India, with some regional modifications. *Nasḥ* is regularly used for Persian inscriptions in and after the Mughal period, and for inscriptions in Urdu. Of the regional styles, the most striking is that of Bengal, where the vertical strokes of *ḥaf*, *ḥif* and *ḥim* are much elongated and spaced evenly across the length of the inscription, leaving the significant parts of the remainder of the letters to occupy the lowest quarter or third of the band; sometimes the tails of final or detached *nām* or *yā'* are so disposed in the top part of the inscription to produce the "bow and arrow" effect. A similar style is seen also on some of the coins of *Djāwnpur*. Elaborate *ṭughā* fall more in the domain of *fārmāns* and other such documents rather than in public epigraphs, although they are certainly known in ceramic tile inlay and in *pietra dura* in Mughal buildings; but simpler *ṭughā*, in the square seal-script, are not uncommon, consisting usually of repetitions of the names *Muḥammad* or 'Alī, or both, or the *ḥalima*. None of these seal-script inscriptions approaches the complexity of the Iranian examples. Simple dating inscriptions are usually unadorned; but many mosque inscriptions, starting with the *maṣṣara* arches of the first stage of the *Masjid Kuwrat al-Islām* in Dīhli, are engraved against an arabesque (q.v.) pattern also carried in relief on the ground. The finest example of this, however, is a dating inscription of the governor *Tughrlū* from a lost building at *Bhār Sharīf*. Similar arabesque patterns may also set off inscriptions in tilework or painted plaster, and occur also on coins of the Mughal period (see *SUKKA*). Many inscriptions are of a high order of calligraphic excellence, and the names of many calligraphers in many regions of India are recorded.

The information which the inscriptions provide for the historian is sometimes very valuable; at times, they furnish the only sources for doubtful points of dynastic chronology; they supply missing details from the literary histories, or enable confusing points to be resolved where the other documents are in conflict, they enable more complete lists to be made of rulers' families, of the local nobility or court and town officials; and they are a valuable source of information on the history of the buildings on which they are found (subject to the reservation on their authenticity referred to above). Indirectly, too, their location enables the political status of border regions at certain confused times to be determined, such as the regions in dispute between the *Mālwa* and *Djāwnpur* sultanates (q.v.), or the *Rayṭūr* *deṣ* (see *INDO. HISTORY*); in many cases, an inscription is the only evidence for a fort or stronghold having been occupied by a particular power at any time. Even when rulers and governors are known from chronicles, the inscriptions often provide essential information on details of their careers, their promotions and postings, their achievements, even on their families. Tomb-inscriptions frequently mention their subject's birthplace, and thereby provide evidence for the extent of immigration and for the settlement pattern of foreign groups.

Administrative and economic details contained in or implied by the inscriptions can also be invaluable: information on details of departments, names of offices, and designations of office-holders; on the imposition or remission of taxes, and their varied application to certain classes or trades; on the nature and conditions of grants of land, both to

holders of an *iqṭāʿ* [q.v.] and to charitable institutions such as mosque or *madrasa* as *waḥf* [q.v.]; on land cultivation or irrigation (well inscriptions, or records of repairs to tanks and dams, often refer to the amount of land intended to be irrigated); on regional boundaries; on markets. Records on works of public utility may include a schedule of expenses or the wages to be paid to employees. Geographical details, including distances, occur in inscriptions relating to roads and bridges, which also provide information on their builders—besides recording the correct forms of place-names, which seem singularly liable to corruption by copyists of the chronicles. Building inscriptions often indicate the cost of construction as well as details of the architects; an unusual inscription in the tomb of Hūshang Shāh at Māndū [q.v.] records a tribute by visiting Mughal architects of the family of master-builders who were later responsible for the Taj Mahal. Gun inscriptions, as well as prescribing essential instructions on the quantity of charge and shot required, frequently provide information on gun founding and the gun-founders—often Turks or Europeans—involved in the industry.

The literary contribution of the inscriptions must not be overlooked. Many inscriptions are in verses composed *ad hoc*, some of considerable beauty and skill; but it must be admitted that the verse of a lot of inscriptions is no better than doggerel. This is especially the case with verses containing a chronogram, where taste is often sacrificed in favour of ingenuity. There are occasional quotations from well-known Persian poets, but frequently the authors are local poets not otherwise recorded. Specimens of Dakhni poetry are preserved in some Deccan inscriptions. Some prose inscriptions also advance literary merit, and may contain traditions not found in the usual collections of *akhṣarī*, such as the saying ascribed to Jesus in the *Ḥamīd* masjid of Raṭhpur Sūrī (Persian), or the variations on a tradition (Arabic) in the mosque inscriptions of Bengal, basically: "The Prophet, God's peace be upon him, said 'He who builds a mosque to God, for him God builds a *paradise* in Paradise' ". Sentiments expressed range from strict and self-conscious rectitude through quietist mysticism to wistful nostalgia.

There is also the linguistic contribution of inscriptions. The occurrence of local words (Hindi, Bengali, Marāṭhī, Gujjarāṭī, Urdū and Dakhni in particular) is useful in reconstructing the history (and social conditions of use) of Indian languages. Bilingual inscriptions provide evidence on the extent of use of local languages and their place in communication of official instructions to the public, and the status of a particular local language in a border area; this is especially the case in the Deccan, where Muslim inscriptions in Kannada, Marāṭhī and Telugu are not uncommon besides the usual Persian and Dakhni.

The Indian sub-continent has been fortunate in the attention which has been paid to Muslim inscriptions for well over a century. Hundreds are recorded in orientalist publications, besides those in specialist journals devoted to epigraphy alone; and India has been well served by highly competent Government Epigraphists appointed specially to oversee Arabic and Persian inscriptions, of whom Ghulam Yazdani and Ziauddin Desai are pre-eminent. The work of exploration, interpretation and publication is still active.

Bibliography: A complete bibliography would be enormous in view of the great corpus of Indian

Muslim epigraphs published so far. Inscriptions which relate to particular regions of India are listed under regional articles on History. In the 19th century epigraphs were mostly published, usually with translations and notes, in *JASB*. From 1907 the invaluable *Epigraphia Indo-Nepalica* appeared, which continued until the independence of India and Pakistan. Pre-*EIM* inscriptions are listed in J. Horowitz, *A list of the published Mohammedan inscriptions of India*, in *EIM* (1909-10). Since the cessation of *EIM*, Muslim inscriptions of India have appeared in *Epigraphia Indica Arabic and Persian Supplement*, and valuable comments appear also in *Annual Report on Indian Epigraphy*. Articles and studies are recorded in Creswell, *Bibliography*, and its Supplement, and in Pearson and Supplements. Many of the earlier *EIM* articles collect the epigraphs of individual sultans, but recent discoveries have rendered many of these out-of-date. V. S. Bendrey, *Studies in Muslim inscriptions*, Bombay 1944, extracts some historical information from epigraphs published in *EIM* to that date, but since the author knew no Arabic or Persian many significant details were not appreciated, and the work suffers from the limitation of its corpus. There is a valuable chapter on Arabic and Persian epigraphy in the Deccan by Z. A. Desai in H. K. Sherwani and P. M. Joshi (eds.), *History of medieval Deccan*, II, Hyderabad 1974. (J. BURTON PAGE)

KITĀBHĀNA [see MAKTABA]

KITĀMĪYYA [see SHĀHĪMĪYYA]

KĪTĪR, one of the MOST COMMON NAMES for the biblical Potiphar in Islamic tradition. It is probably a corruption of *Ḥitir*, based upon an early scribal error. Other forms of the name based on confusions of similar letters in Arabic script are *Ḳitfin*, *Ḳitʿa*, and *Ḳitfin*. The form *Kitfir* is frequently corrupted further to *Itfir* (so generally in Tabarī, *Ṭaʿlabī*, Zamakhsharī, Bayḍawī, and others), and in some manuscripts *Itfin*. He is given the patronymic *Ibn Rukayb* (also *Ibn Rukayb* and *Ibn Rūhīl* in mss.). There is considerable confusion regarding his name, and Tabarī, for example, uses several forms. *Kisāʾ* alone calls him *Ḳitfir*, which is closest to the original Hebrew. In the *Ruʾāṣ*, he is merely referred to by his title *al-ʿAzīz* (XII, 30, 51).

Kitfir was the treasurer of Egypt. Because he immediately discerned Yūsuf's [q.v.] fine qualities, he is considered one of the three most insightful individuals (*ayyās al-nās*) in the judging of men, along with Shuʿayb's daughter, who asked her father to hire Mūsā, and Abū Bakr, who chose ʿUmar as his successor (Tabarī, *Ṭaʿlabī*, Zamakhsharī, Bayḍawī).

Several reflections of the Maggidic Potiphar are found in Muslim legends. *Kitfir* dies after Yūsuf's release from prison. Yūsuf in most Muslim sources marries *Kitfir*'s wife and finds her a virgin. This is never explained by the fact that *Kitfir* was a eunuch, as is common in the Judaeo-Christian tradition (based on a later interpretation of *Biblical Heb. sdris*), but rather that he was a homosexual as in some Jewish midrashim (comp. Tabarī, I, 396, with *Sofa*, 13b, and *Genesis Rabba*, bxxiii, 3). According to *Kisāʾ*, *Kitfir* had been unable to have sexual relations with his wife because he was an alcoholic (*ṣāndūḥ*). Yūsuf's marrying *Kitfir*'s wife probably reflects the association of Potiphar with Potiphara (Gen. xli, 45) in the midrash.

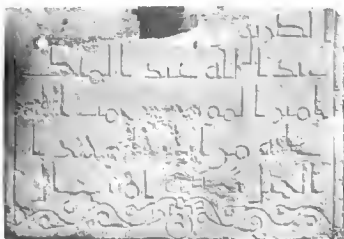

Kitfir is a minor character about whom little is related in Islamic tradition.

(B. HELLER · N. A. STILLMAN)

KITHĀRA, KITĀRĀ, a musical instrument of the lute family. It first appears in Arabic literature on music in the 3rd/9th century to denote a Byzantine or Greek instrument of this type. It was made up of a richly-decorated rectangular sound box, two vertical struts fastened together by a yoke and strings which were left free at their greatest width. Ibn Khurraḍādhbih in his *K. al-Luḥā* (ed. I. A. Khalīf, Beirut 1969, 19) and in his account appearing in the *Murāṣid al-ghhāḥ* of al-Maʿūdī (viii, 91 = § 3216) says concerning the *kithāra*: "They (sc. the Byzantines) have the *lūrā* which is a *ṣabāb* (sc. viol), which is made from wood and has five strings; they also have the *kithāra* with twelve strings". Al-Kharrāzī in his *Maʿāṭīḥ al-ʿulūm* writes that "the *lūr* (*lura*) is the *ṣandī* (harp) in Greek; the *kithāra* is one of their instruments, and resembles the *ṣunbūr* (lute with a long neck)". The approximation of the two instruments in the sources corresponds indeed to reality, because the *lūrā* and *kithāra* were two variations of the same instrument type in vogue since classical times and up to the first centuries of Islam. The *lūrā* was a smaller instrument played by beginners and by amateurs, whereas the *kithāra* was the instrument for professionals who towards the Islamic period used it to show off a virtuosity frequently displayed freely. It is possibly to this that a musical aphorism alludes, this figuring *inter alia* in the *Adab al-falāsifa* of Ḥunayn b. Isḥāq, the *Risāla fī al-ḥikma* of Khawarizmi al-mūsīqī of al-Kindī, the *K. al-Luḥā* of Ibn Khurraḍādhbih and the *Risāla fī al-mūsīqī* of the Ḥawān al-Ṣāfi: "A philosopher (Orpheus, according to Ibn Khurraḍādhbih), having heard the sounds of a *kithāra*, said to his disciple, 'Take me along to this musician, and possibly he will give us the benefit of a noble image'. But when they came upon him, they heard an unmetrical rhythm and a defective tune. So the philosopher then said to his disciple, 'The sooth-sayers assert that the raven's voice portends a man's death; if this is true, then the sound from this musician portends the raven's death'".

It seems that, at a later period, the term is used to denote a different instrument, the guitar, since this is the state of affairs in the *K. al-Imād* ʿa *ʿl-mūsīqī*, where the *kithāra* is one of the 31 instruments described in the second chapter (ms. Madrid, Res. 216). In the same realm of ideas, we believe that the name of the North African lute, the *kithāra*, derives from the interpretation of the *kithāra* evolved by the authors of the 9th/10th century who compared it to the *ṣunbūr* (lute with a long neck) or to the *murābbaʿ* (lute with a quadrangular sound box).

KITMĀN [see KHĀRTIṬIYYE, TAḤIYYA]

KITMİR [see AḤMĀN AL-KANF].

AL-KIYĀ AL-HARRĀSĪ, SHAMS AL-ISLĀM ʿIMĀD AD-DĪN ABU ʿĪ HASAN ʿĀLI b. MUḤMAD b. ʿĀLI AT-TANĀSĪ, known especially as al-Kiyā, jurist-consult of the Shāfiʿī school and Ashʿarī theologian, a dialectician known in his days as one of the best practitioners of the art of disputation. (The name al-Harrāsī = "a preparer of the food called *harīra*", wheat and meat pounded together and cooked.) A class-mate of al-Ghazālī and of the same age (they were born in 450/1058), al-Harrāsī died in 504/1110-11, one year before al-Ghazālī.

He first studied in Tabaristān, which he left at the age of twenty to study under the direction of the Imam al-Haramayn al-Djawaynī (q.v.) in Nishābūr; he was one of his most successful disciples and became one of the most able repertories (muṣṭafī). He excelled in the field of law, both positive law (*fiqh*) as well as its theory and methodology (*uṣūl al-fiqh*). From Nishābūr, al-Kiyā went to Bayḥaq where he taught Shāfiʿī *fiqh*; this was very likely after the death of his teacher Djawaynī in 478/1085. His class-mate al-Ghazālī had gone to Tūs to the court of the Salghūq vizier Niḥām al-Mulk. From Bayḥaq, al-Kiyā went to Baghdād to assume the chair of law in the Shāfiʿī *Madrasa Niḥāsiyya*, a position which he kept until his death in 504/1110-11. He also taught *ḥadīth*, and one of his pupils in this field was the famous tradition-expert al-Sīfi (d. 576/1180-11).

Al-Kiyā was accused of Ismāʿīlī sympathies and was in danger of losing his life, but was saved by a petition signed by notable scholars of Baghdād, among whom his older colleague and sparring mate in disquisitions, the Hanbalī jurist-consult and theologian Ibn ʿAḥī (q.v.).

Among his works, biographers cite the *Shāfiʿī al-murshid*, considered by Tāḥī al-Dīn al-Subkī as one of the most excellent works in the field of *ḥadīth*; and the *Nashāʾ muṣṭafāh al-Imām Ahmad*, points of law on which he differs from Ahmad b. Hanbal. Al-Kiyā was in turn criticised by the Hanbalī Shams al-Dīn Muḥammad b. Kudāma al-Makdīsī (704-44/1304-43). In his *al-Radd ʿalā ʿl-Kiyā al-Harrāsī*, as well as by the *Kāfi ʿl-Kudr* al-Hatan b. ʿAbd Allāh, a student of Ibn Taymiyya (see Ibn Radjab, *Ḥayr*, II 438 (l. 14) and 454 (ll. 3-4), respectively). Biographers also attribute to him a work on *uṣūl al-fiqh*, and this is borne out by a discovery made by G. Makdīsī of a manuscript in the library of the University of Ankara, several years ago, during a search for works on *uṣūl al-fiqh*. Indications on the title page show that this work of al-Kiyā had three recensions: great, medium and small, the extant copy being the medium recension. The title is given as *Taʿlīq fī uṣūl al-fiqh*, and appears to be the work by the same title cited by Suyūṭī in his *Muḥīṭ*, I, 23. It is not to be confused with his work on *uṣūl al-dīn* as suggested in Brockelmann, *GAL*, I, 674 (l. 11), a manuscript of which is in the National Library in Cairo, for the work is definitely on *uṣūl al-fiqh*.

(G. MAKDĪSĪ)

KIYĀFA (A.), the science of physiognomy and the examination of traces on the ground.

In their concern for the purity of race and the

correctness of genealogical lines, the ancient Arabs perfected a technique which permitted them to verify, and, where necessary, to research into, lines of parentage. This technique consisted partly in experience and partly in divinatory intuition. In primitive times, a specialised personnel maintained the practice; but the progressive decline, in pre-Islamic Arabia, of personnel skilled in cultic and divinatory matters led to the accumulation of numerous mantic disciplines in the repertoire of the *shāhī* (q.v.). But there were numerous individuals skilled in this sphere of activity who were not necessarily *shāhīs* (cf., for example, Ibn Hishām, 115); certain tribes were noted for their practice of this art (the Banū Muddiq, *Khayyām* and *Khuzā'a*).

Kiyāfa, ancestor of the Islamic *firāsa* (q.v.), comprised two branches:

(i) *Kiyāfat al-baḥār*, 'physiognomancy', which has the object of disclosing the lines of parentage between the child of an unknown father and his presumed father, with a view to his legitimisation. Thus by virtue of traditional *kīyāfa*, Mu'āwīya was obliged to recognise, as his consanguineous brother, Ziyād b. Abīhī (q.v.). The principle on which *kīyāfa* is based is the necessary resemblance between the infant and his father. Certain parts of the body serve as points of reference, notably the sole of the foot, because, in most cases, the child has the same foot as his father (al-Mas'ūdī, *Murūj*, III, 338 = § 1221). But these points of resemblances are not always evident; discovery of them requires a faculty of perception and a perfect memory (al-Rāzī, *Firdas*, 13). The acute eye for detail possessed by the Bedouin contributed greatly to the perfection attained by the Arabs in this art.

(ii) *Kiyāfat al-aḥsār*, the faculty of minute observation which the Arab displays, most notably in the course of everyday life. The examination of footprints permits him to find a stray animal, a fugitive chief, a lost path, etc.; he distinguishes the footprints of a man from those of a woman, those of a young man from those of an old man, those of a white man from those of a negro and those of a stranger from those of a local resident. He can even tell if the woman is a virgin or not.

This astonishing faculty of observation and deduction extended to the behaviour of animals. The legend of the sons of Nizār, interpreting, in each case according to a particular point, the traces of a camel, on their road, and the origin of the honey, the roast meat and the wine offered to them by their host (Mas'ūdī, *op. cit.*, III, 228 ff. = § 1092 ff.), is a perfect illustration of the minuteness with which the *shāhī* dissected the most insignificant facts.

As a spiritual faculty surpassing human intelligence, *kīyāfa* possessed, as early as the pre-Islamic period, a sacred character which ensured its survival, as a judicial proof, in legal cases concerned with establishing the paternity of a child born of a slave (Ibn Kayyām al-Ḥawwāziyya, *al-Furūq al-ḥikamiyya*, 208, 195-213). *Shuraph*, the famous *shāhī*, was a *shāhī* al-*shāhī* wrote a *Risāla fī 'ilm al-kīyāfa* (Hādīdī Khālīa, I, 452; ms. Süleymaniyye, Mühürhah Sultan, 185, 4, in Turkish).

A product of nomadism and the milieu of the desert where it was applied under many different circumstances, *kīyāfat al-aḥsār* rather lost some of its *raison d'être* in the Islamic city, where it was to be eclipsed by *firdas*, which evolved on totally different principles.

KIYĀMA (A.), the action of raising oneself, of rising, and of resurrection. The root *k-ṣ-m* is employed very frequently in the language of the Qur'ān. *Kiyāma* occurs there seventy times, always in the expression *yawm al-kīyāma* 'the day of resurrection'. The resurrection of bodies follows the annihilation of all creatures (*al-janāt al-muḥlāt*), and precedes the 'judgment' (*al-dīn*), the 'day of judgement' (*yawm al-dīn*). This will be the Last Hour (*al-sā'a*). *Al-sā'a*, *yawm al-kīyāma* and *yawm al-dīn*, taken as a whole constitute one of the 'necessary beliefs' which determine the content of the Muslim faith. It may be noted that the word *nashr* is an equivalent (in the Qur'ān) of *kīyāma*.

The works of 'Im al-halāl and of falsafa deal with the whole subject of eschatology under the general title of *al-ma'ād* 'the return', a word which appears only once in the Qur'ān (XXVIII, 85) in the localised sense of 'the place to which one returns'. Hence very often, in learned discussions, the idea of resurrection will be expressed by 'return'. We may add that it would be inappropriate to deal with judgement as such and its modalities, or with retribution, under the term *kīyāma*. In this respect, the present article needs to be supplemented by the articles reserved for *al-ḥisāb*, 'the reckoning', *al-ma'ād*, *al-sā'a* and *yawm al-dīn* (q.v.). We shall confine ourselves here to considering (1) the succession of eschatological events which precede and accompany resurrection; (2) the Qur'ānic arguments which demonstrate its possibility; and (3) the setting in perspective of the philosophical-theological problems which arise as a result.

1. The succession of eschatological events.

(a) Prophetic signs. Resurrection will be preceded by the end of the world, by 'annihilation'. The Meccan sūras are insistent on this. 'Signs' will foretell the end; 'the earth will be shaken with its earthquake' and will 'yield up its burdens' (Qur'ān, XLIX, 1-2); the sky will crack, the planets will be dispersed, the seas 'poured forth', the graves overturned (C, 9; LXXXII, 1-4; cf. LXXXI, 1-14; especially LVI, 1-6, etc.); the mountains (will fly) like 'tufts of carded wool' (CI, 5), etc. The *Sūrah* of Miṣr (viii, 179) gives a systematic list of these 'signs'. Al-Nasāfi, in his *ʿAḥād*, lists five of them, and the *Tafsīr* of al-Taftāzānī enumerates ten 'major signs' (see the list in L. Gardet, *Les grands problèmes de la théologie musulmane—Dieu et la destinée de l'homme*, Paris 1962, 262, n. 61).

(b) The annihilation. On that day 'the Sound shall ring out, and a second shall follow it' (Qur'ān, LXXIX, 6-7). This 'sound' will be the 'sound of the trumpet' (LXXIV, 8), which according to tradition will be blown by the angel Isra'īl. Then there will not be, it is sometimes said, a single living being that does not die—'every soul shall taste death' (XXIX, 37). This is the final annihilation, where God alone remains in His absolute power, for 'all shall perish save His countenance' (XXVIII, 88). In the course of time, this vision of the absolute *fanā* came to be modified. From commentary to commentary, the number grows of the beings who shall escape annihilation: not because they are endowed with natural immortality, but on account of a 'principle of permanence' (*ḥukm al-bāqā*) which the will of God shall concede to them (Iṣṣi in L. Gardet, *op. cit.*, 264-6).

(c) The resurrection. When the "second blast of the Trumpet" has sounded, the whole of mankind, long dead or annihilated in the "great *fanā'*", will be revived in body, soul and spirit. "The day when the crier shall cry out from a nearby place, the day when they shall in all truth hear the cry, that will be the day of resurrection" (L, 41-2). Stress is always laid on the suddenness of this "return" to life. Resurrection is a rising up, the immediate passage, without reference to time, from non-life to life.

(d) The gathering (*ḥaḡḡ*). God "shall gather" (L, 44; LIX, 2). He shall gather men together "as if they had stayed (in their tombs) only one hour of the day" (X, 45). He will gather the believers (XIX, 85). He will gather the impious (XX, 102; XXV, 17; etc.). He will gather men and *ḡinn* (VI, 130), men and demons (XIX, 68). He will gather the angels (XXXIV, 40). This is the universal gathering. Also taking part in this, it is decided at a later stage, will be those protected from *fanā'* by divine mercy; and even, according to al-Nawawī, pack-animals and wild animals. This will be the "standing" (*al-maḥḡḡ*) in waiting for judgement. Some traditions maintain that the first who will "rise" and arrive at the place of assembly (*al-maḡḡar*) will be the Prophet of Islam. According to the most widespread beliefs, the prophets, the angels and the virtuous will be spared the terrors of waiting. But humanity in general "will sweat with agony"; they will be drenched in their sweat (*al-sarāḡ*), which will "bride" them, as the bit brides the horse (cf. al-Ghazālī, *ḡyāḡ* 'ulūm al-dīn, Cairo 1352/1933, IV, 436-7).

The Kur'anic texts are abundantly glossed by *ḡadīḡ* (al-Bukhārī, IX, 46-61; Muslim, VIII, 265-210, etc.). A whole didactic literature is grafted on to this stem. For example, in al-Ghazālī, *shīd*, the last book of the fourth volume, entitled *ḡhīr al-mawḡ al-madḡ* *ḡadāḡ*, 381 ff., in particular on the *yawm al-ḡiyāma*, 437-9; and the text attributed to the same author (wrongly, it appears), *al-Durr al-faḡhīra* (ed. Cairo 1347/1928). See on this subject, as indicated in *EP*, Hughes, *Dictionary of Islam*, 539 ff., taking up the "Preliminary discourse" of Sale, section 4, 73-103 of the 1734 edition (the latter itself being based on Edward Pococke, *Forta Mesia*, II, 435-313 of the Oxford 1654-5 edition, which deals at length with Arabic passages and expressions).

Popular imagery abounds with descriptive details and continually builds on the foundations of tradition. But such imagery is irrelevant to faith. On the other hand, the very fact of the resurrection of the body is a cardinal element of the Muslim faith. A meta-historical and unique fact, linked, as if to an "opposita correlative" (*mudḡḡal*), to the fact, also meta-historical, of creation.

We may further note that the Shī'ī beliefs refer to a first "return" which will precede the universal resurrection and gathering; only the virtuous will take part in it under the guidance of the *Mahdī* of the last times. This is the *raḡ'ā* ('return to life'), a kind of millenarianism. The Rāfīḡī, in the early centuries of Islam, insisted on this. It continues to be one of the perspectives of Islamism, linked to the "return" of the 12th *imām*, Muḡammad al-Mahdī, the "vanished one" (*al-ḡāḡib*), who, with this "first return", will be al-Kāḡim, "the risen". The ismā'īlī "hidden sense" has more than once transposed the foretold *parousia* on a gnostic and extra-temporal basis.

The Mu'tazilī opposed the Rāfīḡī and declared this first resurrection to be "vain". Al-Khayyāt

returns to it in his refutation of Ibn al-Rāwandī (cf. al-Khayyāt, *Imāḡīd*, ed. Nyberg, French tr. A. Nader, Beirut 1957, *passim*, in particular 95-97/218-20). The Ash'arī reaction no longer held the idea of *raḡ'ā*. Saadī thought as a whole denies or ignores the expectation of a preliminary "return" of the virtuous, a golden age on earth preceding the day of judgement. For Sunnism, the only "return" is that of the last hour which will follow the "great *fanā'*", sc. that of the resurrection (*ḡiyāma*) and of the gathering (*ḡaḡḡ*).

II. *Kur'anic arguments*. As suggested by D. Masson (Kur'ān tr., Paris 1967, index, under "Resurrection"), these arguments may be grouped around three themes:

(a) A constant comparison of the creation (*ḡhāḡ*) with the resurrection, which then appears to be a "new creation" (Kur'ān, XVII, 49; cf. XVIII, 48; XXI, 104; XXVII, 64) or "the second creation" (LII, 47). It is the creative power of God which is invoked in reply to the man who would doubt the resurrection (XXII, 5); and to produce a second creation is "easy" for God (XXIX, 19; XXX, 27). He has created man and "formed him harmoniously" (LXXV, 38): "Is he who has done these things not able to bring the dead to life?" (LXXV, 40; cf. LXXXVI, 5-8).

(b) A second "sign" of the resurrection is the analogy of the production of vegetables and of fruits, and the reinvigoration of the soil by water (XLI, 39; LXIII, 11). "Thus we restore life to the earth after its death. Observe how resurrection (*mudḡḡ*) comes about" (XXXV, 9; cf. L, 11). "God ... brings forth the living from the dead and the dead from the living" (VI, 95; X, 31; XXX, 19): "thus we shall cause the dead to arise" (VII, 57). And resurrection after death is compared to the day that follows the night (XXV, 47).

(c) Finally, the example of miracles with reference to a dead man revived by God (II, 72-3 and 259). R. Blachère compares this last account with the Ethiopic version of the *Book of Baruch*. It should be noted that the Kur'ān does not speak here, like the *Book of Baruch*, of a waking after a miraculous sleep (cf. "the Seven Sleepers"), but of a new life after death.

III. *Problems posed*. The most diverse "professions of faith" (*ḡahāḡ*) steadfastly proclaim the resurrection of the body. But very soon problems of a philosophico-theological nature arise. The influence of the *falsafī* is predominant. Not only the *Fahḡīf* of al-Ghazālī, but every *Kūḡḡ al-Maḡad* of the major treatises of *ḡim al-kalām* has the intention of refuting them, and, for this very reason, to a large extent adopts their methods of examining problems, and sometimes their vocabulary.

(a) The "punishment of the tomb" (*ḡadḡḡ al-ḡabr* [q.c.]). First question: is there a survival of the soul or of the spirit? Will the predicted resurrection be of the body alone, or of the whole man, body, soul and spirit? The Kur'ān does not talk explicitly of a survival of the soul or of the spirit after death. Man dies, then is recalled to life on the day of resurrection. Three texts, however (XI, 45-6; XI, 11; III, 169-70), are advanced by the *maḡḡal-ismāḡ* as evidence for the "punishment of the tomb"; at a later stage, "the pleasures of the tomb" are reserved for the virtuous. In conjunction with these texts, there are many *ḡadīḡ*, recognised as authentic (*ḡaḡīḡ*), which are quoted, such as "I take refuge with You against the punishment of the tomb" (cf. further, al-Bukhārī, xxiii, 87; lxxx, 37-9). The

punishment of the tomb and the interrogation that precedes it, the formulation thereby of a "first judgment" are mentioned in the majority of professions of faith. The Ash'aris accuse the Mu'tazilīs of denying them. 'Abd al-Djabbār, on the contrary, affirms them; he locates them, however, not immediately after the "first death", but between the "two blasts of the Trumpet" (of annihilation, and of resurrection) that will sound at the last Hour. And his arguments in support of the punishment of the tomb are very close to the arguments habitually propounded by the Ash'aris (cf. 'Abd al-Djabbār, *Sharḥ al-usūl al-ikḥṣām*, ed. 'Abd al-Karīm 'Uṭṭmān, Cairo 1384/1965, 732-3).

But what is at issue here is not the survival of a separate soul, by nature immortal. What is being discussed is a first and transitory resuscitation, at once corporeal and spiritual, which is not a true resurrection. It is not necessary, say some authors, that the entire body should revive; it is enough that some fundamental part or other, heart, kidney, etc., be animated afresh. Moreover, if the body has been completely devoured or reduced to ashes, it will not be difficult for God to reassemble it and restore to life a sufficient quantity of matter (cf. al-Ghazālī, *Iḥyāʾ*, Cairo n.d., 88-9). Besides, this survival of the tomb is brief. After being thus examined and punished (or rewarded), the man experiences "the second death". For a resume of the question, see al-Djurdānī, *Sharḥ al-Mawḍūʿ*, ed. Cairo 1325/1907, viii, 378. It is also declared that the prophets and the *ghuḥād* who have died fighting for God are excused from the interrogation and from the punishment of the tomb.

Under various influences (Mazdaean? Christian? The *falāsifa*?), or through a simple endogenous development, the belief in a survival of the soul or the spirit is developed: whether in the tomb, with, according to the circumstances, appropriate punishments or rewards; or in other places; or even in Paradise for the spirits of the prophets, of the *ghuḥād*, and, according to some, of the Muslim children who have died before the age of reason. These spirits, in Paradise, are provided with a temporary body symbolised by "the gazzards of green hieids". Furthermore, an axegesis that has come to be accepted of Kur'ān, XVII, 84 "the spirit proceeds from the commandment of your Lord", points to the directly divine origin of the spirit, hence to its immortality (cf. al-Ghazālī, *al-Risāla al-laduniyya*, the second of the short treatises linked together under the title *al-Djawābir al-ghawḍiyya*, ed. Cairo 1353/1934).

We have here a brief revival (body and soul), prolonged or not by a survival of soul or spirit, and what is at issue is, in any case, only a transitory state. The eschatological hour of the *yaum al-ḥiyāma* and that hour alone, retains its absolute quality.

(b) The *falāsifa*. The "punishment of the tomb" could hardly be accepted in anything other than a metaphorical sense in the view of the *falāsifa* in general. In their habitual concern to integrate all the articles of faith, they refrain from rejecting it, but interpret it according to the major frameworks of their anthropology. For them, in accordance with their Hellenistic sources, the reasoning soul, a spiritual substance, is by nature incorruptible; it belongs by nature to the sphere of separate substances. It is thus that Ibn Sīnā, describing the lot of souls after death, speaks of pleasures, or of purifications, or of intellectual punishments; with this explicit statement that the souls which, on earth, have taken

pleasure only in physical enjoyments are now found to be irremediably deprived of them; they will be eternally at grips with tormenting and insatiable desires of lust and anger, and will draw from the celestial bodies the view within their imaginations of their torments (cf. *Nadwī*, Cairo 1337/1938, 297). Their "hell" is to be barred from joining the higher angelic world—which we may take to be the world of separate substances—"where are found supreme happiness and accomplished splendour" (*Sharḥ K. Uḥūḍūḍ*, published by A. Badawi, in *Arṣīḥ* 'ind al-'Arab, Cairo 1947, 43). It is true, the "humble of spirit" (*ḥakīf*), who have sought after good to the best of their ability, will enjoy a happiness that is subjectively absolute, objectively relative; an imaginative, not purely intellectual happiness, and the celestial bodies, here too, will supply them as if with an additional body. Thus, according to Ibn Sīnā, for the mass of humanity, what should hold is that which is said in the prophetic revelation about the judgment of the tomb, about punishments and potential rewards (cf. *Nadwī*, 298; parallel texts in the *Sharḥ*).

Are these spiritual torments and joys of the life to come connected with the *yaum al-ḥiyāma*, the day of resurrection of the body foretold by the Book? Resurrection is an article of faith too central to Islam to be explicitly and overtly dismissed by the *falāsifa*. Their position is nonetheless highly ambiguous.

It is appropriate to set aside Abū Yūsuf Ya'qūb al-Kindī, "the philosopher of the Arabs". He is the only *falāsifa* who explicitly maintained that philosophical research could be and should be strengthened and guided by prophetic revelation. Consequently, he professes, from a specifically philosophical point of view, the fact of the creation in time, and the possibility of the resurrection of the body; the latter is possible, he says, since that is what the creation was—thus he adopts the major Kur'ānic argument (cf. *Rasā'id al-Kindī*, ed. Abū Rida, Cairo 1369/1950, I, 372 ff.). In works aimed at the "humble philosophers" (see *Mawḍūʿ al-maḥṣūḥ*, ed. Cairo 1328/1910, 3), Ibn Sīnā confines himself to affirming belief in the resurrection on the basis of Kur'ānic testimony: "The revealed law [*shar'*] maintains, and reason does not deny, that the body also will enjoy pleasures" (or will be plunged into misery and suffering); cf. *Tis' rasā'id*, Cairo 1326, 274-6; analogous texts in the *Sharḥ* and *Nadwī*. Such is, moreover, approximately the position of Ibn Rushd. It is for the sake of his respect for prophecy and the revealed law that he opposes with such vehemence the accusations of the *Tahfūṭ al-falāsifa* (*Tahfūṭ al-tahfūṭ*, ed. Bouyges, Beirut 1930, 350-6; see translation by S. Van den Bergh, London 1954, notes on vol. II, 203-5).

But in fact, Ibn Rushd confines himself to a statement of principle, without replying to the arguments and objections of al-Ghazālī. Now it seems probable that the latter was familiar with the esoteric treatise of Ibn Sīnā, *al-Risāla al-adhuniyya fi awr al-ma'ād*, which was translated into Latin (*Libri Mahad*) by André Alpago (Venice 1546) and has been edited recently in Arabic by Sulaymān Dunyā (Cairo 1368/1949). In this work, Ibn Sīnā attempts to demonstrate explicitly that the resurrection of the body, which he does not mean to deny, should be understood as a symbol or an allegory which has the object of inducing the mass of humanity to persist in virtuous behaviour. In reality "it is known that the true well-being of man is

opposed by the very existence of the soul in his body, and that physical pleasures are other than true pleasures, and that the fact of the soul returning to the body would be punishment for the soul" (*Risāla aḥwāʾiyya*, 53). We can understand how al-Ḡhazālī was able to accuse the *falāsifa* of not admitting in its explicit sense, and according to all its demands, the teaching of the Qurʾān concerning resurrection; this is the 20th question of the *Tahāfut al-falāsifa*, Beirut 1927, 334 ff.).

(c) Responses and attempts at explanation of the *Mutakallimūn*. Later *kalām* was to judge the *falāsifa* much more by the esoteric treatise of Ibn Sīnā than by their statements of respect towards the religious law. When al-Djurdjānī lists the various attitudes which were or could be adopted (*op. cit.*, viii, 297; cf. Fakhr al-Dīn al-Rāzī, *Muḥaṣṣal*, Cairo n.d., 269), he seems to assimilate the *falāsifa* to those "demonic philosophers" who only accept "spiritual return", the *ruḡʿa*, in the sense found in the pseudographia *Theology of Aristotle*; while the men "with certainty of truth" (*muhakkikūn*), like al-Hallāj or al-Ḡhazālī for example, profess a *maʿād* that is both spiritual and corporal. It is in this sense that developments of *kalām* will tend to prove the rational possibility of the "return", then of the "gathering", and to study its conditions. We cannot follow in detail the whole series of discussions, arguments, objections and responses in all their intricacy and multiplicity (cf. L. Gardet, *op. cit.*, 266-9, and refs.). Nevertheless, we make some comments:

(1) Curiously enough, Fakhr al-Dīn al-Rāzī (*Muḥaṣṣal*, 170) declares that all the earlier prophets preached only the "spiritual return" and that it is the Qurʾān that proclaims the return of the body. His opponent, the Imāmī Shīʿī Naṣīr al-Dīn Ṭūsī (in the margin of the *Muḥaṣṣal*, *ibid.*) states furthermore that the Gospel does not preach the resurrection of the body, and quotes Matthew, xxii, 30 "they are like the angels in heaven". Ibn Ruḡdā (*Tahāfut*, 580) seems to have had a better knowledge of Judaism and of Christianity.

(2) In his *Tahāfut al-falāsifa* (*loc. cit.*), al-Ḡhazālī, under the heading of a third hypothesis, and in the form of an argument *ad hominem*, concedes to his opponents that the soul may be of a wholly spiritual nature and that in it alone the human personality may reside (in the *Itihād*, 83, he declared that this opinion "does not accord with what we believe"). Even in this case, he says, the resurrection of the body is still possible, and so it will take place, since the religious law foretells it. Also, he replies meticulously to three objections of a philosophical order (for the details of this debate, see L. Gardet, *La pensée religieuse d'Avicenne*, Paris 1951, 87 n. 3).

(3) Numerous explanations of the "return of the body" are proposed by the *ʿilm al-kalām*. The *Mutakallimūn* seem to have professed the "annihilation", then the "return" of substances and of "durable" accidents (real accidents) which are necessarily linked to them (see summary in al-Djurdjānī, *Itihād*, ed. and tr. Luciani, Paris 1933, 212/316). Al-Djurdjānī himself (*ibid.*, 213/318) and al-Ḡhazālī (*Itihād*, 87) envisage either the "annihilation" of substances (and therefore of accidents which could not alone remain in the being), and their "return"; or the "annihilation" of accidents, then their "return", the substances remaining. For al-Ḡhazālī, either hypothesis is possible (*maṣṣūm*). According to the followers of Ashʿarism as finally evolved, such as al-Rāzī (*Muḥaṣṣal*, 171) and al-Djurdjānī

(*op. cit.*, viii, 297), either God brings back to life (*ʾiḥyā*) an "annihilated" (*maʿdūm*) and the "return" is thus preceded by a reduction to non-existence (*ʾadam*), or else the return follows a total dispersion (*tafrīq*).

Discussion of these last two hypotheses led to developments concerning the relationship between substances and accidents, concerning an atomistic or non-atomistic view of the world, and concerning notions of being and of non-being. Three terms are constantly being repeated by the pon of the scholars: the being according to its first existence (*mubdāʾ*), to the "annihilated" (*maʿdūm*) and to the "similar" (*muṣāwī*). For it is not a "similar" being that returns on the day of resurrection, it is the being itself, the same one that was "annihilated". No difference between the first creation (*ibdāʾ*) and the "return" (*ʾiḥyā*) is spoken of by al-Ḡhazālī (*Itihād*, 87-8), al-Rāzī (*Muḥaṣṣal*, 169-70) and al-Djurdjānī (*Sharḥ al-Mawāḥib*, viii, 292, 294). Henceforward, declares al-Djurdjānī (*ibid.*, 293-4), the subject of the first creation and the subject of the return are not at all to be distinguished in terms of their ensemble of determining characteristics (*maḥiyya*), but only in terms of the essence (*awṣiyya*) which places them within the being. There is between these two "subjects", that is between the thing and itself having "returned", an "interference" (*taḥakkul*) of non-existence, which al-Ḡhazālī and no doubt al-Rāzī on the one hand, and al-Djurdjānī on the other would explain rather differently. But the consensus continues to rest on the return to existence of the same being that was annihilated.

This dialectic, subtly conducted, and originally devised as a reply to the *falāsifa*, is characteristic of the procedure of the "modern" *mutakallimūn* (in the sense used by Ibn Khaldūn, *Muḥaddima*, Cairo n.d., 326-7, tr. de Slane, iii, 60, 62), and of the type of problems that they study. Also to be noted is their extreme sobriety in regard to traditional and descriptive data. We have, thus, in Sunni Islam, as it were two lines of development, an expression of popular faith, employed to a large extent in the sermons of preachers and of a type to strike the imagination; and an explanatory effort at rational justification. Elementary manuals of a later period take inspiration from both one and the other. To this could be added various "hidden meanings" of Shīʿī traditions. But in opposition to the *Risāla aḥwāʾiyya* of Ibn Sīnā and his allegorising theses, the existential reality of the basic fact of the resurrection of the body has not ceased to be vigorously maintained.

(L. GARDET)

KIYĀS [ar.], reasoning by analogy, the fourth source of Muslim law.

1. In law.

This word is derived from the Hebraic term *kibbāḥ*, infinitive *kibbāḥ* and from the Aramaic root *k-b-ḥ* which signifies "to beat together". It is employed with reference to (a) the juxtaposition of two subjects in the Bible and the demonstration that they should be treated in the same manner; (b) the action of the exegete who applies the comparison suggested by the text; and (c) the conclusion of the reasoning by analogy which relies on the existence of a common characteristic in the "basic case" and the "analogous case" (J. Schacht, *Origins*, 99).

In a broad sense, *kiyās* can indicate inductive reasoning (*istisnāʾ*), and even deduction (*istinbāḥ*, *istiḥṣān* al-*ḥaḥḥ*). It is thus that in *kalām*, *kiyās*

al-ghayb 'ala 'l-shahād (Mafāhim, i, 333) indicates the syllogistic procedure which consists in induction from the known to the unknown; it is the *ḥiyās* 'aḥlī that is inspired by Greek syllogism. While the Ma'azilī Abū Ḥāshim al-Djubbār retains this meaning for the *ḥiyās* ghayrī, his disciple Abū 'l-Ḥusayn al-Baṣrī rejects it (Mawāḥiḍ, ii, 597). In the terminology of *fiqh*, *ḥiyās* is "judicial reasoning by analogy". It is the method adopted by the Muslim jurists to define a rule which has not been the object of an explicit formulation: a verse of the Qur'ān, a *ḥadiṭh* of the Prophet or *qiyāḥ*. It is *ḥiyās* *ḥukmī* or *ghayrī*, different from the former in the sense that it "has its own structure and its own complexity" (R. Brunschwig, *Values et fondement du raisonnement juridique*, 61). This specific structure results from the particular nature of the mode of reasoning by analogy; the absence of a middle term in the primitive form of *ḥiyās*, then definition of an explanatory principle (*qiyāḥ*) which is not a logical norm, but the prescription of a rule (*ḥukm*) established by God or His Prophet, this is the judicial-religious norm. The complexity of *ḥiyās* ghayrī results from the diversity of cases to be taken into consideration and from the detailed reflections of the *uṣūls* on the different procedures that may be adopted in the execution of *ḥiyās* ghayrī. The elaboration of the major treatises concerning *uṣūl al-fiqh* [q.v.] develops the notion of *ḥiyās* in a systematic manner, conferring upon it a very strict and elaborate form. This work leads in the work of an author like al-Ghazālī (d. 505/1111) to a much-expanded concept of the fourth source of law, embracing the perspective of "Greek logic and traditional exegetical method" among the Muslims (R. Brunschwig, *op. cit.*, 57).

The problem. The establishment of *ḥiyās* as a new judicial source responds to the need to find solutions not foreseen in the texts and to define rules applicable to new situations. The problem of *ḥiyās* comes therefore to consist in determining "grounds of procedure" (*baṣarīyāt*) which respect the spirit of rules dictated by the text. The putting into effect of *ḥiyās* ghayrī must, in consequence, appeal to principles of analogical deduction which enable the discovery in the rule of the derived case (*farḥ*) of the grounds which determine the rule of the basis (*asl*).

Like *qiyāḥ* [q.v.], *ḥiyās* was instituted after the demise of the Prophet. With the death of Muḥammad, the community of the faithful was deprived of the "organ of revelation" and of its political and religious chief. *Idmāḥ* was born of the need to ensure the coherence of the nascent doctrine of Islam, in the face of the dispersion of the believers and the proliferation of sayings attributed to the Prophet. The institution of *qiyāḥ* had the purpose of preserving the social and doctrinal unity of the parent-community (*umma*). In origin and in its "summary and primitive" form, *ḥiyās* in 'Irāq was employed as a means of giving the force of law to certain *ḥadiṭhs* attributed to 'Alī which had not met with success (Schacht, *Origins*, 106-7); the extension of this practice may be considered not so much a factor of unity as of divergence. The putting into effect of *ḥiyās* would appear more and more to respond to a need for diversification and clarification of the divine law. Also, the risk of divergence (*ikhtilāf*) was the essential motivation of the Shī'ī opposition to the use of *ḥiyās*. The partisans of the Shī'a do not accept the rule which considers that every *muḥtad* speaks the truth (*maṣḥūb*), a rule

implied by the practical application of *ḥiyās*. Nevertheless, the continuing crop of new cases (*ḥamāliḥ*) that the believer is obliged to cope with justifies in the view of the *muḥtad* recourse to personal reflection, the practice of which is encouraged by the Qur'ān and the Sunna (Qur'ān, XIII, 3; XVI, 11, 67; XXX, 21; XXXIX, 41; XLV, 12; cf. Ahmad b. Hasan Fāzlaḥ, *Uṣūl*, iii, 595). The Prophet said: "The study of knowledge (*ḥisāb al-'ilm*) is a duty (*farīḍa*) incumbent upon every Muslim; and the knowledge that must be studied is that of the rules which shed light upon the divine law" (*ḥikm al-ḥiyās*; *Muḥṣaṭṭ*, xvii, 278). *Ḥiyās* is one of the means whereby reflection leading to this awareness may be exercised.

Development. The practice of *ḥiyās* thus comes to be established as a means of establishing a judicial ruling not provided for in the texts. However, reasoning by analogy is, in the view of the faithful, to be treated with caution, for the simple reason that it is exercised by a fallible being who is liable to error. *Idmāḥ* must therefore intervene to ensure the credibility and the cohesiveness of the opinions of the *muḥtads*. Only the information provided by the Qur'ān and the prophetic tradition is a source of integral truth (*ḥikāfa*). Such is the view of al-Šāfi'ī (d. 204/820), who may be regarded as the first of the *uṣūls*. The ruling that consists in believing that every *muḥtad* speaks the truth (*maṣḥūb*; *Ḥisāla*, ed. Šākir, i, 1330; *Muḥṣaṭṭ*, xvii, 277) will authorise the specialist to make a decision according to that which conforms most closely to the divine intention. By means of *ḥiyās*, a search must be made, not for certainty (*yaḥṣin*) but the proof which will permit the deduction of a peremptory ruling (*ḥukm ḥaḥī*). *Ḥiyās* must be a determinant in a practical sense (*muḥṣaṭṭ* b. 'Uṣama; al-Sarakhsī, *Uṣūl*, Beirut 1973, ii, 150; *Muḥṣaṭṭ*, xvii, 297-2). There is thus a need to elaborate a theory of *ḥiyās* sufficiently precise for its use to confer upon the specialist's decision the greatest possible integrity. In the practice of the Ḥanafī, Mālikī and Šāfi'ī schools, *ḥiyās* ghayrī cannot provide certain knowledge, it amounts only to a "strong putative probability" (*ḥikm al-ḥiyās*; al-ʿAṣṣā, i, 256; al-Sarakhsī, *Uṣūl*, ii, 140; *Muḥṣaṭṭ*, xvii, 277).

It was at a very early stage that *ḥiyās* ghayrī began to be practised. As early as the 2nd century A.H., Ḥammād b. Sulaymān b. Raḥī'a, master of Abū Ḥanīfa and Ibn Abī Laylā, and judge at Baṣra, inaugurated its use. But the first to employ it systematically was Abū Ḥanīfa (d. 150/767), for which reason the practitioners of his school are known as those who use reason (*aḥlāb al-ra'y*) to distinguish them from pure traditionalists (*aḥlāb al-ḥadiṭh*). The latter do not accept *ḥiyās* except as a last resort; according to them, analogy is like carrion, to be eaten only when no other food is available" (L. Millot, 135). Dawūd al-Zuhri (d. 270/884) avoided wherever possible reasoning by analogy, preferring the literal content of the Qur'ān and of *ḥadiṭhs*. In the same way that he restricts the notion of *qiyāḥ*, he imposes limits on recourse to analogy, without however rejecting it absolutely. According to him, one must bow the head before the inexorable law that the finite cannot contain the infinite and admit analogy in some cases (L. Millot, *op. cit.*, 135; al-Sarakhsī, *Uṣūl*, ii, 118; al-Šaymārī, *Masa'īl al-ḥisāb*, i, 482-b). With Ibn Ḥazm (d. 516/1124), the Zāhiri school replaces *ḥiyās* with the explicit sense of the text (*maṣḥūb*); according to this last, the notion of analogy is vague and arbitrary. *Ḥiyās* is

rejected by the Hanbalis and the Shāfi'is, but adopted by the other schools of law. In practice, it is the Hanafī doctrine which prevails.

In his *Risāla* on the foundations of law, al-Shāfi'ī provides the first stage in systematisation of the theory of *kiyās*. Having established precisely the role of the Qur'ān, of the Sunna and of *ijmā'*, he neatly defines that of reasoning by analogy. It is to him that is owed the fundamental distinction between *kiyās 'illa* or *ma'nā* and *kiyās ḡabāh*. The first bases analogy on an explanatory principle ('*illa*'). This form of *kiyās* considers a thing according to its original meaning (*asli*). In this case, there is no need for disagreement. *Kiyās ḡabāh* considers the thing in its similarity (*ḡabāh*) to others; those who employ it may disagree (al-Shāfi'ī, *Risāla*, § 2334). Al-ʿAmīdī (d. 631/1233), a Hanbalī *muftī* who went over to Shāfi'ism, is at pains not to confuse the ruling of the basic case (*asli*), with that of the derived case (*farʿ*). The ruling of the former is given by the text of the Qur'ān or of *ḥadīth* or by *ijmā'*; it is certain. The ruling of the latter is deduced (*ḥamara naṣiḡa*); it is pulsative (al-*kiyās lā yuṣidu ḡayr al-ṣanṣ*; *Iḥkām*, III, 264). For this reason, the conclusions of *kiyās* cannot in their turn provide deductive principles (*rukūn*; *op. cit.*, 277). Analogy on the basis of analogy is not acceptable. Such is not the opinion of the Mu'tazilī 'Abd al-Djabbār, who adopts the Shāfi'ī teaching and enlarges it. According to him, "there is no difference between the ruling of the basic case which is known through explicit evidence (*bi-dīnār*) and that which is known through discussion (*bi-dīnāq*); in fact, it is possible to extract a new ruling from the latter when there is a similarity between the reasons for which each of them is adopted. So there is not, in regard to knowledge ('*ilm*), a need to take account of the different means whereby the ruling of the basic case is established. That which is known in an explicit manner may, in fact, be assimilated to that which is known through acquisition (al-*ḡarīrī fī-ḥiḥ* ka '*l-muktasab*). The explanatory principle ('*illa*') is fruitful; although dissociated from the basic case which has inspired it, it may be taken as operative, for it finds its own guarantee within itself. Thus, God (IV, 25) lays down that the punishment inflicted upon a slave woman should be half that applied to the free woman. As soon as we are aware that the reason for the existence of this *ḥukm* is the fact of slavery (*riḡb*), we may apply this ruling to the male slave. Similarly when we know that the reason for the prohibition (Qur'ān, II, 219; V, 90) of all fermented drink (*ḡhamr*) is the existence of wine (*maḡdīq*), we shall forbid the consumption of wine. For the Mu'tazilī 'Abd al-Djabbār, *kiyās*, when applied to scriptural or rational material, is dependent on a similar process, that of intellectual effort (*ijtihād*). Here the role attributed to the action of the subject in interpretation of the Shari'a is predominant.

Foundation. The various objections raised to the practice of *kiyās* which are known to us through the different treatises of *uṣūl al-fih* divide into two types of argument: an argument of fact and an argument of law.

(a) The verses of the Qur'ān and of prophetic tradition which forbid recourse to reasoning by analogy are numerous: "We have presented to you the Book to make all things clear" (XVI, 89), "We have neglected nothing in the Book" (VI, 38), "Your Master is not forgetful" (XIX, 64). Recourse to personal opinion (*ra'y*) to extract a ruling from it amounts to imputing inadequacy to the Holy

Book. The Prophet, in his turn, accuses of aberration and error those who deduce a non-existent rule from an existing rule (Pardawi, *Uṣūl*, III, 991; al-Sarakhsī, *Uṣūl*, II, 120).

(b) The argument of law consists in denying that legal status (*ḥukm*) may be founded on reason. The "*raison d'être* of law" ('*illa*') is attained through its erroneously convincing nature (*ḡubḡa fī 'l-ḡaḡb*). The text (*naṣṡ*) has never determined explicitly the 'properties' (*awṣāf*) which might provide a foundation for legal precepts. The latter are obligatory on the grounds that they result from divine decision (al-Sarakhsī, *Uṣūl*, II, 121; Abu 'l-Ḥasan Pardawi, *Uṣūl*, III, 992). Reason has no competence to exact that which only the All-Powerful is entitled to impose. The object of law is beyond reason. The content of a number of divine precepts cannot be subject to personal opinion; these *ahkām* have no foundation other than divine decision; such is the case with regard to ritual ordinances ('*ṣalāt*). The practice of *kiyās*, in substance, far from providing a guarantee of rectitude, can lead only to a misunderstanding of rules (*dīḡḡāḡ*; al-Sarakhsī, *Uṣūl*, II, 122). In the argument of authority there is no place for personal assessment.

According to the Mu'tazilī al-Naṣṣām, the process of *kiyās* is far from always respecting the rational model. It is not compatible with reason to impose fasting on the menstruating woman and to excuse her from prayer, when she is better able to pray than to fast. The same applies to the prohibition laid upon the man against gazing at an aged free woman, with repulsive features, while he is permitted to look at an attractive young slave. It is contrary to good sense to cut off the hand of a petty criminal (*ṣarīf al-ḡaḡb*), while the judicial rule spares the man who robs on a large scale (*ḡḡḡḡ al-ḡaḡb*; al-ʿAmīdī, *Iḥkām*, IV, 9; *Mu'tamad*, II, 746). In other words, in ethical questions, analogy is insipid. It has the effect of linking together dissimilar cases and dissociating similar cases, which precludes passing from the basic case (*asli*) to the derived case (*farʿ*); cf. al-Saymari, *R. Ma'nā' al-ḡḡḡḡ*, f. 48a. It is interesting to observe that the Hanbalī objection to the principle of similitude in religious questions (Ibn Ḥazm, *Iḥkām*, VII, 82) is the same as that of al-Naṣṣām. Such is the criticism of *kiyās* raised by these two authors. Classical Mu'tazilism, as represented by the *ḡaḡb* 'Abd al-Djabbār, replies to the objection of ancient Mu'tazilism in declaring that "neither *kiyās* nor *ijmā'* should, in the last resort to reason or to 'aql, figure in the arsenal of judicial-religious thought... as regards *kiyās*, there is the need to detach, among the elements of basic prescription, the invariants on the basis of which *kiyās* will be legitimate, if account is taken of the indication (*amāra*) which specifies them" (R. Brunschwig, *Rationalité et tradition chez 'Abd al-Gabbār*, 214). The convincing validity (*ḡaḡḡḡḡḡḡ*) of *kiyās* is, like that of *ijmā'*, based on a text; reason only intervenes in order to put the analogical deduction into effect.

The Shāfi'ī criticism of *kiyās* is directed against the diversity of opinion which is liable to result from it. The Qur'ān condemns divergence of opinion in many places (IV, 82; XLII, 13; VIII, 46; XXX, 32; II, 205). A number of *ḡaḡḡḡḡ* attack those who profess divergent doctrines (al-ʿAmīdī, *Iḥkām*, IV, 20).

To these objections, the scholars of *kiyās* reply in their turn with scriptural and rational arguments in favour of judicial analogy.

(a) God said: "Learn from this, O you who are clear-sighted" (LIX, 2). To learn a lesson is to associate a thing with its "homologue" (*nasir*); such is the process of *ḥiyāz*. "If you are capable of interpreting dreams..." (XII, 3); *ḥiyāz* does nothing other than interpret the rule. "These verses are addressed to thinking people" (XII, 3; X, 24; cf. Abu 'l-Ḥasan Pandawi, *op. cit.*, 995); what is more, the Qur'ān (IV, 146) employs analogy in authorising ablution with sand (*layammum*) when water is lacking.

It is well-known that the Companions of the Prophet employed *ḥiyāz* and dialectical discussions (*munāḡarā*) and that they practised judicial consultations (*mughāwara*). In a general fashion, the partisans of *ḥiyāz* appeal to the *ḥādīth* where it is related that when the Prophet sent Mu'ādh b. ʿAbbad to the Yemen as *ḥafīz*, the former asked: "How will you reach a judgement when a question arises?" Mu'ādh replied: "According to the Word of God."—"And if you find no solution in the Word of God?"—"Then, according to the *sunna* of the Messenger of God."—"And if you find no solution in the *sunna* of the Messenger of God, nor in the Word?"—"Then I shall take a decision according to my own opinion (*adḥakimu rayyī*). Then the Prophet of God struck Mu'ādh on the chest with his hand and said: "Praise be to God who has led the Messenger of God to a solution that pleases him" (Abū Dāwūd, *Ḥādīth*, i, 11; al-Tirmidhī, *Ḥādīth*, b. 3; al-Dārimī, *Sunan*, Introduction; A. J. Wensinck, *KIVÁS*, in *Et'*).

(b) The person endowed with reason, the *mukallaf*, is naturally inclined to assess the invisible (*ghā'ib*) on the basis of the perceptible tokens of experience (*ḥādīth*). Cracks in a wall foretell its collapse, a cloudy sky and fresh wind are signs of rain, etc. (al-ʿAzīdī, *Ḥādīth*, iv, 3). Similarly, in matters of religious law, *ḥiyāz* puts into effect "the cause-norm association" (*'illa-ḥukm*) to assist the exercise of reflection on two similar cases, the second not being defined by this association.

The nature of *ḥiyāz*. According to al-Shāfiʿī, *ḥiyāz* and *ḥijāz* [ḥ.ḡ] are two terms expressing a single notion; when the rule concerning a specific case is not dictated by a particular indication (*dalīla*), this indication must be sought by a means conforming to truth with the aid of *ḥijāz*. Now *ḥijāz* is *ḥiyāz* (*Risāla*, § 1323). The specific nature of *ḥiyāz* is not yet detached, it is subjective opinion (*ra'y*). With the elaboration of the science of the *uṣūl al-fihh*, the concepts are defined and fixed. *ḥiyāz* can then be defined as the method which consists in assimilating the derived case (*far'*) to the basic case (*asl*) in virtue of their similarity with regard to the *raison d'être* (*'illa*) of the norm (*ḥukm*). *ḥiyāz* is thus a form of reasoning which proceeds from particular to particular, linking a new case to an old case: "It cannot... be considered as inductive reasoning, since it does not aim at applying to all cases of the same kind the observations made concerning one of them". (C. Chehata, *Logique juridique et droit musulman*, 20). Such is the character of the reasoning which concludes that in a case of fornication, a confession repeated four times on the part of the guilty party may be considered a sufficient proof of the offence. The basic case is defined by a Qur'ānic text which prescribes the execution by stoning of the guilty party in the presence of the four witnesses. This assimilation (*taḥṣīn*) of ancient origin belongs to a still simplistic concept of *'illa*. With the development of the theory of

ḥiyāz, *'illa* takes on a more logical quality. Whereas the penalty that reduces by half the punishment applied to female slaves as compared with free women (IV, 25); the *'illa* of the reduction in penalty is slavery. By analogy, this reduction will be applied to male slaves as compared with free men. Of the same type is the *ḥiyāz* that prohibits the lending of dry dates or raisins at interest (*ribā*), on the basis of the prohibition of lending grain (wheat, barley), with the demand of eleven measures against ten. The reason for the prohibition is that usury is forbidden.

For *ḥiyāz* to be effective, four elements are necessary: (1) the appearance of a new case which causes a problem; (2) a basic case (*asl*) governed by a *ḥukm* defined by a text; (3) a *raison d'être* of the law (*'illa*) which can provide the line (*ma'rad ḡaym*) justifying the assimilation of the derived case with the basic case. This *raison d'être* is the "sign" (*'aldawā*) which permits the knowledge that the ruling from a text may be applied to a case not envisaged in these terms. Once this reason is known, the jurist, proceeding by analogy, applies the law thus motivated to the case in which he sees a similar reason to pronounce judgment. This is the *ta'wīl* (L. Millot, *op. cit.*, 128); (4) finally, a result which is the *ḥukm* applied to the derived case. Such is the prohibition against striking one's parents drawn from the prohibition against saying to them "lie!" (XVII, 24). As regards the third condition, "the Hanafis only recognise *'illa* as endowed with a "transitivity" (*ta'dīya*), that is, susceptible to being put into effect in a derived case on the basis of a basic case (al-Sarakhsī, *Uṣūl*, ii, 161). The Shāfiʿis, on the contrary, accept that an *'illa* may be intransitive (*ḥāṣṣ*), intransmissible to a derived case". In reality, the opposition between these two doctrines depends on the different manner in which the *'illa* is conceived in relation to *ḥukm*. According to the Shāfiʿis, on the contrary the *'illa* is that which confers upon the *ḥukm* its "validity of origin". According to the Hanafis, the *'illa* of the basic case justifies itself by the derived case (R. Brunschvig, *Valeur et fondement du raisonnement juridique*, 79-80).

From the point of view of modality, several types of *ḥiyāz* are distinguished: (a) *ḥiyāz 'illa* or *ḥiyāz al-dalīla* (al-ʿAzīdī separates these two) which consists in associating (*ḡaym*) the basic case with the derived case with the aid of the indication of the *'illa* and the qualifications which the latter entails (cf. Ibn Kayyim, *Fihm*, i, 128-9). An example is the association of wine (*ma'wūḡ*) with alcoholic drink (*ḡaym*), giving as "middle term" the faculty of upsetting good behaviour.

(b) *ḥiyāz ḡayb* is an analogy by "simple similarity" which requires no intervention of motive or of common indication (*min ḡayri dalīl ḡaym*; *Fihm*, i, 148). An example is the similarity established between the slave and the free man for the assessment of the *ḡayr* [g.r.] when the slave is the responsible for the offence, and that which assimilates his compensation when he is the victim (*ḡayr* [g.r.], ii, 692).

(c) *ḥiyāz al-far'* is a co-extensive *ḥiyāz al-'illa* and its contrary is *ḥiyāz al-'aks* or "reversibility", "reverting to non-*ḡayr* → non-*ḡaym*" (R. Brunschvig, *op. cit.*, 81; al-ʿAzīdī, *Fihm*, iii, 261). *ḥiyāz ḡayr* would thus appear with *ḡaym* to be a decisive criterion for the interpretation of Islamic law. It permits the establishment of new rules. But in the extent to which it is a process of reasoning which excludes the possibility of having recourse to a purely logical

norm, *hiyās* *ḡarʿ* belonging definitively to personal opinion (*raʿy*), it is for this reason limited in range. From this results the need to resort in certain cases to other methods of reasoning: *istiḥṣān* (g.n.) or *benignitas* and *istiḥṣān* (g.n.) or *utilitas publica*.

In the modern period, the theory of *hiyās* is generally applied in the different schools which adopt it in the spirit of the Hanafi doctrine. Because of the major role accorded to personal effort by the Hanafi *maḥḥab*, the modern *muḥḥab* is generally eager to draw from this the norms enabling him to deduce new rulings; historically, the importance accorded to Hanafism results from the fact that the Ottoman empire followed the Salḡīḡīk sovereigns in imposing it as an official doctrine. This ascendancy, which prevailed over a large proportion of the Muslim world, had the effect of conferring upon the Hanafi *maḥḥab* an official status in a number of countries "where the majority of the native Muslim population follows another school, e.g. in Egypt, Sudan, Jordan, Israel, Lebanon and Syria" (J. Sehaucht, *MANAʿIYYA*, in *Etʿ*, II, 163).

2. IN GRAMMAR.

In grammar, the word *hiyās* indicates the "norm", meaning the instrument which enables the grammarian to "regulate" (*kāna*) the morphological or syntactical behaviour of a word, where this is not known through transmission (*naḥḡ*) or audition (*ṣamʿ*), on the basis of the known behaviour of another word, by means of a certain kind of analogy; it is synonymous with *miḡyās* (pl. *maḡyās*). The term is well attested in the *Kiḡāḡ* of Sibawayḡ (cf. G. Troupeau, *Lexique-index*, 199); Sibawayḡ does not define it but he says that it may be bad (*raḡīf*, *ḡaḡīf*), constant (*muḡāḡibb*, *muḡāḡim*), flowing (*ḡāḡīf*), stable (*muḡāḡim*) and that it is indispensable (*ḡāḡim*); he insists that one does not "regulate" a thing on the basis of that which is rare (*ḡāḡīf*) or exceptional (*ḡāḡāḡīf*), but that one "regulates" it on the basis of that which is in frequent use (*ḡāḡīf*). The expression *ʿala ḡ-ḡiḡyās*, which he often uses, indicates "according to the norm, normally".

It is the Mu'tazilī grammarian al-Rumḡāḡī (d. 384/994) who supplies the first definition of the

term, in the *K. al-ḡiḡyās* (ed. M. Diawāḡ, 50); "*ḡiḡyās* is the combination (*ḡamʿ*) of two things, whence results necessarily their combination in principle (*ḡāḡim*)".

Ibn Dīnīf (d. 392/1002) devotes to *hiyās* five chapters in the *K. al-ḡiḡyās* (ed. M. A. al-Nadīḡī, 1, 209-32, 357-69, 391-9). He asserts that the Arabs love affinity (*ḡaḡāḡ*) and resemblance (*ḡaḡāḡ*) and that this leads them to assimilate things that are close to one another, and to trace (*ḡamʿ*) a secondary thing (*ḡarʿ*) to a primary thing (*ḡāḡ*), he comments that this penchant of the Arabs for assimilation (*ḡaḡāḡ*) sometimes leads them to trace a primary thing from a secondary thing, and that a rare thing can be the "norm", while a more common thing is not. As regards the links between the "norm" and audition and usage (*ḡaḡāḡ*), he distinguishes four cases: (1) that which is generalised (*muḡāḡim*) according to the norm and according to usage; this is the optimum; (2) that which is generalised according to the norm, but exceptional according to usage; one adopts the word of most frequent usages; (3) that which is generalised according to usage, but exceptional according to the norm: one adopts that which is commonly heard (*ḡāḡāḡ*), but does not "regulate" anything else according to it, and (4) that which is exceptional according to the norm and to usage; this is faulty (*maḡḡāḡ*) and should be rejected (*maḡḡāḡ*). Finally, he observes that the grammarians considered that that which is "regulated" according to the language of the Arabs, constitutes a part of their language, even if the Arabs have not used it in speech.

In the *K. Linnu' al-adīlla fī uṣūl al-naḡh*, Ibn al-Anḡārī (d. 577/1181) subjects *hiyās* to a lengthy examination (ed. A. Amer, 44-86). He considers that it is impossible to do without it in grammar, since the latter may be defined as being the science of "norms" (*maḡyās*) drawn (*muḡāḡāḡ*) from exhaustive study (*ḡiḡḡāḡ*) of the Arabic language. He defines it as the tracing of a secondary thing from a primary thing, by virtue of a cause (*ʿilla*) which demands the application of the principle of the primary thing to the secondary thing. He distinguishes three kinds of *hiyās*, according to its basis upon (1) a cause to which the principle is attached; (2) a resemblance (*ḡaḡāḡ*) other than the cause to which the principle is attached; and (3) a generalisation (*ḡāḡ*) of principle. Where the assumption (*ḡaḡāḡ*) of the cause is lacking in this case, only the two former kinds are utilised by the grammarians.

Al-Suyūḡī (d. 911/1505), in the third chapter of the *K. al-ḡiḡyās fī uṣūl al-naḡh*, classifies all the data concerning *hiyās* supplied by previous grammarians (ed. Haydarāḡād, 38-72). He divides his study into three parts: (1) the primary thing, on the basis of which one "regulates" (*maḡī* *ʿalayḡ*); (2) the secondary thing, which one "regulates" (*maḡī*); (3) the principle; and (4) the cause that unites them (*ḡāḡim*).

Finally, it should be noted that, in the *K. al-Radd ʿala ḡ-muḡḡ*, the Zāḡīrī grammarian Ibn Maḡī al-Kurḡāḡī (d. 592/1195) objects to the use of *hiyās* in grammar and calls for its abrogation (ed. Š. ḡayḡ, 156).

Bibliography: given in the text of the article.

(G. TROUPEAU)

KIZ (v.), basically "girl, unmarried female", but often used with the more restricted meanings of "daughter, slave girl, concubine". It is already found in the Oikhoḡ inscriptions in the phrase *ḡāḡ ḡāḡ* "daughter", as opposed to *uḡ ḡāḡ* "son".

and subsequently appears in most Turkish languages. Through Türkmen forms it passed into Iranian languages like Kurdish and Ossetian, and through Ottoman usage into Balkan languages like Serbian and Bulgarian, often via the Ottoman technical expression (for which see below) *âşlar aghası* (see Radloff, *Versuch eines Wörterbuchs der Türk-Dialecte*, II, 818-9; G. Doerfer, *Türkische und Mongolische Elemente im Neupersische*, vii. *Türkische Elemente im Neupersische*, Wiesbaden 1967, 569-70, No. 1601; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 679-80).

In mediaeval Islamic usage, one of its denotations was "Christian woman", doubtless influenced by the meanings "slave girl, concubine"; *Ḍuwaynā*, tr. Boyle, I, 257, calls the Georgian King David IV "the son of Kiz-Malik", i.e. son of the Queen Rusudan. Under the Ottomans, the term *Kizlar Aghası* "Ağa of the maidens" was generally used to denote the chief of the black eunuchs in the Imperial Palace, more correctly entitled *Dör al-Sa'adāt Aghası* "Ağa of the House of Felicity". This officer was in charge of the sultan's harem, and was in practice the principal officer of the whole palace. From the last years of the 16th/17th century onwards, he enjoyed the prestige of vizierial rank, as a *pasha* of three *fuṣṣ*, with the title of *Muḥfir*, coming in order of precedence only after the Grand Vizier and the *Shaykh al-Islām*. After 995/1587 he also displaced the Chief of the White Eunuchs from his control of the *ḥesāf* or pious endowments of the *Haramayn*, Mecca and Medina (see N. M. Penzer, *The Harem*, London 1965, 128 ff.; I. H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 272 ff. and index; Gibb and Bowen, *Islamic society and the west*, 4/2, Oxford 1950, 76-7, 329-31).

The element *kiz* also occurs in two well-known topographical features in the city of Istanbul and vicinity. First, there is the *Kız-lağhı* "Maiden's stone", the column of the Emperor Marcian (450-7), in the Pâtiy quarter, so-called from its alleged power to distinguish virgins (in fact, the genuine "virgin's column" from near the Church of the Holy Apostles was incorporated in the Sülaymāniyye Mosque, whose rose on that church's site after 1456); see E. Mamboury, *The tourists' Istanbul*, Istanbul 1953, 339-40, 41, and Baedeker, *Konstantinopel, Balkanstaaten, Kleinasien, Aegypten, Cypern*, Leipzig 1914, 280. Second, there is the *Kız-kalesi* "Maiden's tower", the signal station and lighthouse built on a rock in the Bosphorus just south of Üsküdar in the entrance to the Bosphorus, popularly called "Leander's tower", referring to Leander's death by drowning while trying to reach his beloved Hero (though this occurrence is usually located in the Dardanelles between Cestus and Abydos). The classical name for this rock was Danaids (from the wife of the Athenian general Chares), but the Turkish name is connected with the story of Nebhemmed II's daughter, allegedly shut up there in a fruitless attempt to preserve her from death by snakebite (see Mamboury, *op. cit.*, 496-7, and Murray's *handbook for travellers in Constantinople, Brusa and the Troad*, London 1893, 107).

For the social status of women in Turkey, see *MAKRA* (C. E. BOSWORTH).

KIZIL AHMADLI [see İSPENDİVAR OĞLU].

KIZIL ARSLAN [see ULDOĞRUSLU].

KIZIL-BASH (r. "Red-head"). The word is used in both a general and a specific sense. In general, it is used loosely to denote a wide variety of extremist *Shīʿī* sects [see *GAULAR*], which flourished in

Anatolia and Kurdistan from the late 7th/13th century onwards, including such groups as the *Alawīs* ('*Alawīs*'), see A. S. Tritton, *Islam: belief and practices*, London 1951, 83).

The '*Alawīs* were closely connected with the Nusayrīs [q.v.] of northern Syria and Cilicia, and the *ṭāḥīnīs* (*ṭāḥīnīs* [q.v.]), in order to protect themselves from persecution by the Ottoman government as schismatics, later "gained the right of asylum under the all-embracing and tolerant umbrella of the Bektāshī organization" (J. Spencer Trimingham, *The Sufi orders in Islam*, Oxford 1971, 83; see also *AKKATIRCIYA*). The *kizil bash* did not constitute a *Sūfī* order as such, but rather a religious sect (Abdūlbāki Gölpınarlı, *IA* art. *Kizil-baş*). The common characteristics of all those designated as *kizil-baş* was the wearing of red headgear. Gölpınarlı, *op. cit.*, sees the *kizil bash* in this respect as the spiritual descendants of early *Shīʿī* *ghaṣṣī* groups such as the *Khurramīs* [q.v.], who were also known as the *Muhammānira* from their practice of wearing red hats and robes, and even of pre-Islamic heretical sects of the Sāsānīd period, especially that of *Mazdak* (see also Browne, *LHP*, I, 370-13). In its specific sense, the word *kizil-baş* was a term of opprobrium (often *kizil-baş-ı avdāḥ*, "scurrilously *kizil-baş*", etc.) applied by the Ottoman Turks to the supporters of the Safawid house (see *SAFAWID*), and adopted by the latter as a mark of pride.

In Safawid usage, the term derived from the distinctive scarlet or crimson hat (*ḥalāq*) with twelve gores (*ṭāḥ*) commemorating the twelve Imāms of the *Ithnā ʿAsharī* *Shīʿa*, worn by the disciples (*murīd*) of the Safawid *shaykh*s. According to Safawid tradition, in 893/1487 *Shaykh* Haydar (q.v.), instructed in a dream by the Imām 'Alī, devised this headgear (British Museum MS. Or. 3248, ff. 27a-b). When Haydar first showed this "Soft *ḥalāq*", as it became known, to the Ak Koyunlu ruler Uzun Hasan, the latter kissed it and put it on his head (if the date 893/1487-8 is correct, this story is clearly apocryphal, because Uzun Hasan died in 882/1478). His son Yaʿqūb, however, refused to wear it, and this was the origin of the enmity between Haydar and Yaʿqūb which resulted in the breakdown of the Safawid-Ak Koyunlu alliance. After the death of Haydar, Yaʿqūb not only forbade his subjects to wear the *kizil-baş* *ḥalāq*, but also tried to prevent the *Sūfīs* of the Safawid *farīḥ* from wearing it (R. M. Savory, *The struggle for supremacy in Persia after the death of Timur*, in *Jal.*, XI (1964), 34 ff.).

Strictly speaking (as noted by Chardin; see V. Minorsky, *Tadhkirat al-mulūk*, London 1943, 288 and n. 3), the term *kizil-baş* should be applied only to those Turcoman tribes inhabiting eastern Anatolia, northern Syria and the Armenian highlands which were converted by the Safawid *daʿwa* and became the disciples of the Safawid *shaykh*s at Ardabīl. However, the term was also loosely applied to certain non-Turkish-speaking Iranian tribes which supported the Safawids, for instance the tribes of Tālish and Karāgh-dāgh (Siyāh-kūh), and Kurds and Lurs. The great *kizil-baş* tribes (*oymāq*) were subdivided into as many as eight or nine clans (the list in Minorsky, *op. cit.*, 16-17, is by no means complete). The most important *oymāqs* included the *Ustādīlūs*, *Rūmīūs*, *Shāmūs*, *Dulghadras* (arabice: *Ḍhu ʿl-Kadars*), *Takkālūs*, *Alshār* and *Kādīlār*; other tribes, such as the *Turkmānūs*, *Warāḥūs* and *Bahārīūs*, are occasionally listed among the great *oymāqs*. During the reign of *Shāh* Ismāʿīl I (q.v.), the *Shāmīūs* were the most powerful of the *kizil-baş*

oymaqs. The provenance of some of the great *oymaqs* is clearly indicated by the name of the tribe: for instance, the names *Shimlî*, *Rûmî* and *Bahârî* consist of a place-name with the addition of the possessive particle *-î*; others, such as *Afshâr*, *Warsîk*, and *Dulghadrî*, are the names of old Oghuz tribes. The origin of some names, such as *Ustâdjîlû*, is still obscure.

From the middle of the 9th/15th century, Ardabil was the nerve centre of an extensive organisation designed to keep the Safawid leadership in close touch with its *kizil-bâsh murids* in eastern Anatolia, Syria and elsewhere. This organisation was controlled through the office of *khalîfat al-khulafâ*, felicitously called by Minorovsky (op. cit., 225) "the special secretariat for Sûfî affairs". The *khalîfat al-khulafâ*, who was necessarily a *kizil-bâsh* and usually a Turcoman, appointed representatives termed *khalîfa* to the region in which the Safawid *defwa* was active, and the *khalîfas* in their turn had subordinates termed *pirs*. The presence of large numbers of *kizil-bâsh* Safawid supporters in eastern Anatolia constituted a serious threat to the Ottomans. In 907/1502, Sultân Bâysalâ II transferred large numbers of *Shî'îs* from Asia Minor to the Morea, yet in 917/1511 there was another serious *kizil-bâsh* revolt at Tekke (see *âlavâz* II), and Sultân Selim I, before lavaging Iran in 920/1514, massacred 40,000 of them in order to secure his rear (see Savory, *The consolidation of Safawid power in Persia*, in *Id.*, xli (1965), 86-7).

The *kizil-bâsh*, as the *murids* of the Safawid *shaykh*, owed implicit obedience to their leader in his capacity as their *murshid-i mâvîl* ("supreme spiritual director"). After the establishment of the Safawid state, the Safawid *shâhs* transferred this *pir-murid* relationship from the religious to the political plane, since they were now not only their followers' *murshid-i mâvîl* but their king (*shâhshâh*) as well. As a consequence, what had formerly been an act of disobedience on the part of a Sûfî against the orders of his spiritual director now became an act of treason against the king or a crime against the state, and as such, punishable by death. The term *sâfiqarî*, "proper conduct for a Sûfî", was extended to mean, "conduct becoming to a *kizil-bâsh* officer"; the converse, *nâ-sâfiqarî*, came to mean "failure to obey orders; rebellious or treasonable conduct". As late as 1023/1614-15, for instance, when Shâh 'Abbâs put to death some *kizil-bâsh* who had defected to the Ottomans, the charge was *nâ-sâfiqarî* (Savory, *The office of khalîfat al-khulafâ under the Safawids*, in *JAOI*, lxxv (1965), 502). A passage in the *Târîkh-i 'Âlam-âra-yi 'Abbâsî*, Tehran 1334/1955, I, 68, where an officer is described as *marid-i sâfi wa yâkshâs wa dawlatshâhshâh*, makes it clear that being a Sûfî and a *kizil-bâsh* was considered to be tantamount to being loyal to the shâh and the régime.

When the Safawid state was established in 907/1501, the *kizil-bâsh* constituted the military aristocracy. Since they had been largely responsible for bringing the Safawids to power, they considered it only right and proper that they should both fill the principal offices of state in the central administration and also hold the most important provincial governorships. The use of such terms to describe the Safawid empire as *khulamau-i kizil-bâsh* ("the *kizil-bâsh* realm") (*Târîkh-i 'Âlam-âra-yi 'Abbâsî*, I, 106); *dawlat-i kizil-bâsh* ("the *kizil-bâsh* state") (*Id.*, I, 153); and *mamûlat-i kizil-bâsh* ("the *kizil-bâsh* kingdom") (*Id.*, I, 123), makes it clear that, in the

view of the *kizil-bâsh*, the Tâdjîk or Persian elements did not count for much in the new order of things. Similarly, the shâh is commonly referred to as *padishâh-i kizil-bâsh*, again a term which appears to ignore the existence of the Tâdjîks altogether.

Initially, the two principal offices of the central administration, that of the *wakîl* and that of the *amir al-umara'*, were both held by the same *kizil-bâsh* officer. Under Tahmâsp I (q.v.), the office of *amir al-umara'* declined in importance, and was superseded by the office of *shâh-bâsh* (see *âvâz*), which was also a *kizil-bâsh* prerogative. The government of the provinces of the Safawid empire during the early period was allotted almost exclusively to *kizil-bâsh* *amirs*, who ruled as petty princes in their provinces. The provincial governors had courts which were replicas of the royal court, and the system of provincial administration in many respects resembled that of the central administration. These provincial governorships were assigned to the *kizil-bâsh* *amirs* as fiefs known as *hyûl* (q.v.). The governors, in return for the obligation to provide the king with a stated number of fully-equipped troops when required, were allowed to consume locally the greater part of the revenues collected in the provinces under their jurisdiction; such provinces were known as *mamûlât* or "state" provinces.

After the conquest of Khurâsân in 916/1510, Shâh Ismâ'îl made Herât the second city of the Safawid empire, and it became the seat of one of the Safawid princes and frequently of the heir apparent. The royal prince was placed in charge of the *kizil-bâsh* governor-general of Khurâsân who, in his capacity as *talâ* or *alâb* ("guardian") of the prince, was responsible for the moral and physical welfare of his ward. It was his duty to see that the prince was trained in archery, horsemanship and the like, and also to see that he received his apprenticeship in statecraft.

Since the *kizil-bâsh* were "no party to the national Persian tradition" (Minorovsky, op. cit., 188), their assumption that the principal offices of state would automatically fall to their lot led to immediate friction with the Persian elements in the administration. The Persians, or "Tâdjîks" as the *kizil-bâsh* contemptuously called them, were the "men of the pen" who had traditionally filled the ranks of the bureaucracy in Iran and had provided administrative continuity under a succession of foreign rulers, Arabs, Turks, Mongols, Tatars and Turcomans. In the Persian view, the *kizil-bâsh* were "men of the sword", and were not expected to have any knowledge of statecraft. On the other hand, in the *kizil-bâsh* view, "Tâdjîks" were fit only "to look after the accounts and *diwân* business. They had no right ... either to maintain private bodyguards or to command troops in the field. If *kizil-bâsh* were asked to serve under a Persian officer, they consider it a dishonour" (Savory, *The qizilbash, education and the arts*, in *Turcoica*, vi (1975), 169). Ismâ'îl I attempted to maintain a balance between these two forces by appointing Persians to the all-important office of *wakîl*, but this merely aggravated the tension between them, and the *kizil-bâsh* brought about the death of three of the five Persians appointed to that office under Ismâ'îl I (see Savory, *The significance of the political murder of Mirzâ Salâmân*, in *Islamic Studies, Jnal.* of the Central Institute of Islamic Research, Karachi, iii (1964), 281-91).

When Shâh Tahmâsp succeeded his father in 920/1524, at the age of ten-and-a-half, the *kizil-bâsh* took advantage of his youth to assume control of the

state. Their mystical belief in the quasi-divine nature of Ismā'īl I as their *murshid-i kāmīl* had been shattered by the latter's disastrous defeat at Çaldıran [q.v.], and they now reverted to their primary loyalty to their tribe. This led to almost a decade of civil war as the great *İslāh-bāsh* *öymāks* fought for political supremacy, and between 932/1526 and 940/1533 either individual *İslāh-bāsh* tribes or coalitions of tribes ruled the state. In 937/1530-1 the Takkālūs attempted to seize the person of the *shāh*, but the other great *öymāks* rallied to his defence and, in the ensuing fighting, large numbers of Takkālūs were killed. The survivors fled to 'Irāk-i 'Arab; some of them subsequently entered Ottoman service, and one of their chiefs, the renegade Ulama (Ulāma), was involved in the rebellion of Alkās Mirlā [q.v.]. These events virtually ended the political influence of the Takkālū *öymāk*.

In 940/1533 Shāh Tahmāsp managed to reassert the authority of the crown, and for some forty years remained in control of affairs, but in 982/1574, when he fell ill, there was immediately a recrudescence of dissension among the *İslāh-bāsh*. The political situation, however, was very different from the situation obtaining in 932/1526, at the outbreak of the civil war between the *İslāh-bāsh* tribes. The new factor was the introduction of a "third force" to the political scene in the form of Armenians, Georgians and Circassians, who became *ghulāmān-i khāssa-yi shāhiya*, "slaves of the royal household". These men, many of whom had been taken prisoner in Tahmāsp's campaigns in Georgia between 947/1540-1 and 962/1553-4, or were the offspring of women brought to Iran at that time, adopted Islam, and were given special training to fit them for service either in some branch of the administration of the royal household, or in one of the newly-constituted *ghulām* regiments. The *ghulāms*, instead of being paid on a quasi-feudal basis like the *İslāh-bāsh*, were paid direct from the royal treasury, and their primary loyalty was therefore to the *shāh* and not to any tribal unit. When therefore there was a fresh outbreak of factionalism in 982/1574, "it was no longer a struggle to determine which tribe could outstrip its rivals in a state in which the *Qizilbāsh* tribes as a whole enjoyed a dominant and privileged position, but whether the *Qizilbāsh* tribes as a whole could maintain their privileged position against the threat from the new elements in Persian society, the Georgians and Circassians" (Savory, *Safavid Persia, in Cambridge History of Islam*, i, 407-8). This struggle was not resolved during the remainder of Tahmāsp's lifetime, or under his successors Ismā'īl II and Sulṭān Muḥammad Shāh [q.v.].

When 'Abbās I [q.v.] was placed on the throne in 996/1588 by the powerful *İslāh-bāsh* amīr Murād Kullī Khān Ustājlū, he realised that not only his personal future but the continued survival of the Safavid state depended on his being able to establish his authority over the *İslāh-bāsh* as rapidly as possible. The Ottomans, taking advantage of *İslāh-bāsh* factionalism, had made large inroads into Persian territory in the west, as had also the Özgözes in the east. 'Abbās's solution of curbing the power of the *İslāh-bāsh* and increasing that of the *ghulāms*, though successful in the short term, ultimately seriously weakened the military and political effectiveness of the Safavid state. The *İslāh-bāsh* regarded the *ghulāms* with contempt, and dubbed them *kand-oghān*, "sons of black slaves". The *ghulāms*, though some great commanders emerged from their ranks, did not have a fighting élan comparable to that of

the *İslāh-bāsh*, the only troops in the Islamic world who had earned the grudging respect of the Ottoman janissaries. Essentially heavy cavalry, the *İslāh-bāsh* carried a formidable arsenal of weapons—bow, lance, sword, dagger and battle-axe, in action, the *bāsh* was replaced by a helmet with mail cheek-pieces (Minorsky, *op. cit.*, 32); as they charged, they set up a rhythmic chant of "Allah! Allah!" (*Tārīkh-i 'Alam-ārā-yi 'Abbāsī*, ii, 599). The basis of their fighting spirit, however, was their fierce tribal loyalty (*la'azub-i öymākīyyat*, *la'azub-i İslāh-bāshīyyat*). Shāh 'Abbās I was well aware of this and, in pursuance of his policy of curtailing the power of the *İslāh-bāsh*, not only reduced the strength of the *İslāh-bāsh* regiments but also deliberately weakened the all-important attachment of the *İslāh-bāsh* soldier to his tribe. He did this in a variety of ways. He placed an officer in charge of a tribe who was not himself a member of that tribe; in certain cases, alleging that a particular tribe did not possess an officer worthy of holding the rank of *amīr*, he appointed a *ghulām* as *amīr* of the tribe; he transferred groups of men from one tribe to a district belonging to another tribe. The continuance of these policies by his successors ultimately undermined the military strength of the Safavid empire.

In Afghanistan, there exists a substantial Shī'ī minority group of *İslāh-bāsh*, living mainly at Kābul and in the high valleys of Fōlādī on the western edge of the Hazārjāt [q.v.]. These people are the descendants of garrison troops left behind by Nādir Shāh [q.v.] in 1150/1738 during his Indian campaign. The *İslāh-bāsh* hold clerical posts in government offices, engage in trade or are craftsmen. In short, they constitute an important and politically-influential element in the population. Estimates of their total number vary from 60,000 to 200,000 (see H. W. Bellw, *The races of Afghanistan*, Calcutta 1880, 107; D. N. Wilber, *Afghanistan*, New Haven, Conn., 1962, 29-30; and V. Gregorian, *The emergence of modern Afghanistan*, Stanford 1969, index s.v. *Qizil-Bash*).

As recently as 1945, the fact that the name *İslāh-bāsh* still had an emotive power in Āghar-bāydjān, the nerve-centre of the Safavid organisation in earlier times, was demonstrated by the choice of this name for the regular troops recruited by the short-lived autonomous republic of Āghar-bāydjān.

Bibliography: Given in the text. For a detailed description of the rites and ceremonies of the Anatolian *İslāh-bāsh*, see article *Kizilbas*, in *IA*. For additional textual references, see G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, iii, *Türkische Elemente im Neupersischen*, Wiesbaden 1967, 470-2.

[R. M. Savory]

KIZIL-ELMA (or **KIZIL-ALMA**), "Red Apple" is an expression which occurs in written sources from the 16th century onwards; it also occurs in Turkish oral traditions from Anatolia and Āghar-bāydjān as well as in modern Greek, Bulgarian and Rumanian folklore, current to this day. It refers to a legendary city which was to be the ultimate goal of Turko-Muslim conquests, and some versions explain the term from the resemblance between a red apple and the golden dome of a building—in this latter case it refers to a large church situated in the area. In the Ottoman period Kizil-Elma tended to be identified with the large cities associated with Christianity—Constantinople, Budapest, Vienna and Rome—which the armies of the *Pādīshāh* were hoping

to conquer (see J. Deny, *Les pseudo-prophéties concernant les Turcs au XVI^e siècle*, in *REI*, 8/2 (1936), 207-20; E. Rossi, *La legenda turco-bizantina del Pomo Rosso*, in *Atti del V^o Congresso internazionale dei studiosi bizantini*, Roma 1936, 542-55).

Another tradition, which must have developed before the Ottoman one, identifies Kizil-Alma with Daghistan, beyond Demir-Kapu. It has been supposed that this legend originated from the ceremony for enthroning the Shambhali of Daghistan, in which the claimant to the throne is involved in throwing a "golden ball"; because of this ball, Daghistan was called 'The land of Kizil-Alma' (see Fahrreddin Çelik, *Kizil-Almanın yerleri*, in *Çarşamba*, Jan. and March 1942; Banuçiçek Kırnoğlu, *Kars ül ve peşin-deklere göre Kizil-Alma, in Türk folklor araştırmaları*, No. 181, Aug. 1964). The idea of Kizil-Alma being situated in Daghistan as the furthest point of Muslim expansion has persisted in the oral tradition of Eastern Anatolia among the residents of Kars, Ardahan, Kağzman and both parts of Ağharbâydân. The legendary place is mentioned in the 18th century by two poets from the fringes of the Caucasus. The one, 'Aşık Şaî, speaks of it in a song composed to celebrate an expedition of Nâdir Şâh (1736-47) against the Russians in Daghistan (see F. Çelik, *op. cit.*). But drawing on information given by a certain Bahrâm of Damascus in his geographical work which was translated from Latin (Nâ-i 'Oymânîyya Library, ms. 2996), Çelik suggests that the country of the Khazars was called Kizil-Alma since the 4th/10th century.

A popular legend, which probably rose in the oral tradition of the Janissaries, has survived in written recensions. One version is dated 13 Şa'ân 1084/23 November 1673 and is found in the National Library at Ankara ("cökn" collection, No. 79). A second, dated 15 Rûmâdâ 1179/29 November 1765 is in a collection of folk narratives from manuscripts brought together by P. N. Boratav. The narrative is written in the form of a letter and it combines the motif of 'Kizil-Alma, the ultimate goal of the Ottoman conquests' with that of a Christian king who, having been vanquished and wounded by 'Alî b. Abî Tâlib, was plunged into a deep sleep, and is waiting for a favourable day to revive and to take his revenge on the Muslims. In this version of the legend, an attempt can be seen at an identification and a localisation, which has ended in contradiction and anachronism. The Christian king is called Rûm Papa 'The Pope of Rome', so Kizil-Alma is thus being identified with Rome. But the narrative also locates the same legendary place at Bee (Vienna), and links this legend with the account of the Ottoman raid carried out during the reign of Süleyman II in 1532 by the historical person Kâsim Voyvoda (see P. N. Boratav, in *Annuaire de l'École Pratique des Hautes Études*, IV^e section, 1966-7, 263-4). The motif of the resurrection of a king is certainly Christian and probably Byzantine. It is linked with the cycle of pseudo-prophecies at the end of the period of Turkish domination (Deny, *op. cit.*), but later on it must have been integrated into Turkish tradition.

Oral versions of this narrative are still being told today. The present writer has recorded five versions in Turkish folklore (1) İspartalı Hakkı, *Köymüden geyirum*, Ankara 1971, 34-5 (the material in this book dates from 1916); (2) H. I. Erginöl, in *Gediz*, No. 33 (1944)—cf. P. N. Boratav, in *Journal de la Société des Africainistes*, xxviii (1958), 26; (3) Kurt Büttel, *Legenden vom Kerkenes-See (Kapadokien)*, in

Oriens, xlii-xiv (1960), 33, (4) a version noted by Boratav in the villages of Han Köy and Ak-Dere (Afyon province) in 1950; and (5) a version noted by Oğuz Tansel in the village of Meyve (near Baskir, Konya province). The two last versions are part of Boratav's own manuscript collection and are unpublished. A Greek version from Asia Minor has also been recorded; it comes from a village in the region of Ephesus (see Dido Sotirou, *D'un jardin d'Anatolie*, a novel translated from Modern Greek, Paris 1965, 22). For an Arabic version, see Yakoub Artin Pacha, *Sess haddoun, contes populaires racontés au Caïre*, Cairo 1903, 11-12.

Bibliography: A full bibliography is provided by J. Deny and E. Rossi in their articles. Apart from works cited in the article, see for the motif of the Kizil-Ilma Elmas Yılmaz, *Kizil-Elma efsanesi in Türk folklor araştırmaları*, No. 246, Sept. 1967. (P. N. BORATAV)

KIZIL-IRMÂK (r. "Red River"), the ancient Halys ("Alyç) or Alys ("Alyç), the largest river in Asia Minor. It rises in the mountains which separate the *şifâyet* of Sivas from that of Erzurum, waters the towns of Zazra (4,330 feet high) and Sivas (4,160 feet high), then enters the province of Ankara where it meets the mountain of Arğış and the Kocdağ range which force it to make an immense detour of over 100 miles. Its course is at first south-east, then it turns northwards, and finally it reaches the Black Sea below Bâfrâ in the middle of marshes. It is nearly 600 miles long. Its waters, of a dark yellow colour when they are in flood, diminish enormously in the summer; its bed is wide and its banks high. Its principal right-bank tributaries are the Khân-yöyu and the Değir-Çay; those on the left are the Şirinsâk-Çay which flows by Kayseriyye, the Dewrek-Çay from Tosya, the Gök-Irmâk which comes from the Iğdır-Dağ (the ancient Olgasos) and waters the town of Kastamûni (q.v.). According to Strabo (xii, 561), the river Halys ("Alyç) took its name from the mines of rock-salt, the product of which was exported in the form of large blocks; these mines thirty miles to the north of Yüzgâd (Yozgat) near the village of Şirî Kâmilî, are worked among the red sandstone, covered with clay and marl of a reddish colour; this soil washed down by the heavy rains gives the river a reddish colour, whence its name.

In ancient times, this river marked the boundary between the autochthonous peoples of Asia and those who had come from Europe to colonise the country. Herodotus (i, 72) makes it a frontier between Lydia and Media. It seems to have been known to the Arabs by its ancient name, if it is this river that is referred to by the name *Alis* in a verse of Abu 'l-'Alî al-Mu'arrî (S. de Sacy, *Chrestomathie arabe*, iii, text, 45, tr. 109, gives by mistake "Alous", an error reproduced by Defrémery, *Mémoires d'histoire orientale*, ii, 221).

Bibliography: 'Alî Dîwânî, *Dîwânî-ye Jughâh*, 609; Hâdîdî Khalîlî, *Dîwânî-nâm*, 626; Ch. Texier, *Asie Mineure*, 538; V. Guinet, *La Turquie d'Asie*, i, 19, 272, 639, iv, 433; Fr. Spiegel, *Iranische Altertumskunde*, i, 183 ff. (CL. HUANT*)

KIZIL-KUM (r. "Red sand"), a desert between the Str-Daryâ and Amû-Daryâ rivers (q.v.), and also KARĀ-KUM, lying within the modern Uzbekistan and Kazakhstan SSRs. The country is less uniform, especially in the central part, than in the KARĀ-KUM; the sand desert is crossed by several ranges of hills, and in some places is rocky. The Kizil-

Kum becomes more and more inhospitable as one goes southwards. The region called Adam-Khūlghān ("where man perishes") between the Amu-Darya and the cultivated region of Bukhārā, consisting of sandhills (barhān), is considered especially uninviting and dangerous. In summer, there is absolutely no life in the desert; in the winter, there is vegetation, such as the saksum shrub, and a few springs and wells are visited by Kazakh nomads. Schuyler noted that "Kirghiz" (sc. Kazakh) nomads crossed into the Kizil-Kum from north of the Sīr-Daryā on the river ice and returned in the spring when there were still ice floes in the river. Moreover, the medieval Islamic sources show that the winter, when the desert was carpeted with snow, was normally the time for military and other movements across the Kizil-Kum. Thus the Ghaznavid historian Bayhaqi noted that it was the absence of snow which prevented the Oghuz ruler of Dīand, Shāh Maḥk, from restraining the rebel in Khāram Hārūn and his Saljuq allies from invading Khurāsān in spring 496/1035 (Ta'rikh-i Mas'ūdī, ed. Ghāni and Fayyāḍ, 683-4); and in the 6th/12th century the raids of the Khāram-Shāhs to Dīand and against the Kipčaks were always made in winter (see *gharb* in Suppl.). At the south-eastern extremity of the Kizil-Kum lay the Katwān Steppes, to the north of the Samarkand-Khujand road, where in 536/1142 Sultan Saḡdjar was defeated by the Karā-Khūlghā (q.v.). In recent times, the desert sands have encroached on the cultivated fringes, and in the later 19th century several villages on the lower course of the Zarafshān river became buried in the sands.

(W. BARTHOLOM - C. E. BOWORTH)

KIZIL-ÜZEN (in Azeri Turkish "Red River"), the ancient Amardus, arises which flows through Adharbāydjān and enters the Caspian Sea forty miles east of Sefīd-Rūd, "White River", at its junction with the river Shāh-Rūd at Mēndjī. Its source lies in the province of Ardilān, and it begins by crossing 'Irāq 'Adjamī to the north; its right-bank tributary is the Zandjān, on the left it receives the Kara gōl al Miyāne, then it runs along the southern slopes of Elburz, describing a great arc 125 miles long and crosses this range through the defile of Rūdār and the narrow valley of Rūstambād, a kind of colour through which rush violent winds from the south in winter and from the Caspian in summer. It was known to the Arabs as Nahr al-Abyad "White River" (tr. of the Persian Sefīd-Rūd) (cf. Dimashki, *Cosmography*, tr. Mehren, 145); at one time the Turks called it the Hōllān (Hāḡlī) Khūllā, *Dīhān-namā*, 304).

(CL. HUART)

KIZIMKAZI, in full, KIZIMKAZI-DIMBANI, a small hamlet in south-west Zanzibar situated in lat. 6° 26' S, which possesses the earliest datable mosque in East Africa. Its mihrāb has a dedicatory Kufic inscription recording its foundation by Shaykh Abū 'Imrān Mūsā al-Ḥasan Muḥammad in 500/1206-7. This is flanked by Kufic verses and two inscriptions in roundels, all of great elegance. The nearest analogy is with a grave cover found at Strāf; the *ensemble* was either imported from there or executed in Zanzibar by a Shāfi' mason. This Persian connection accords with traditions of trading relations attested by inscriptions in Somalia and by the Kilwa histories. Otherwise, the mosque is an undistinguished rectangular structure. H. N. Chittick excavated it and the adjacent site in 1960. The huddled settlement dates from the 12th century or earlier: a ruined stone house and defensive enclosures are probably 18th century, when, as is commemorated by another inscription dated 1184/1772-3, the mosque and mihrāb were largely rebuilt, the earlier inscriptions being incorporated into the fresh structure. An oral tradition claims that it was the capital of Bakari, a 17th century Swahili ruler of southern Zanzibar, but this seemingly contradicts the archaeological evidence, the fortified residence and the rebuilding of the mosque are more congruent with the 18th century development of the eastern African slave trade.

KIZKĀHĀN (see KILAT).

KIZLAR AGHĀSHI (see 382).

KOC HIŞAR, a name of several towns and villages in Asia Minor, derived from Kōlja-Hişar; compare such names as Kōc Hişār, Koyan Hişār, Koyul Hişār, Ketī Hişār and Toklu Hişār. Confusion is often prevented by the addition of the name of the nearby provincial capital or of another word, e.g. Çankiri Kōc-Hişār, Şerefilī Kōc Hişār. For the same reason, the toponyms of places with this name have been changed in recent times.

1. **ŞEREFLİ KOC HIŞAR** (in modern usage *Şerefilī Köpçisan*, centre of an *ilçe* (previously *hadsr*) formerly called Eski köpçisan, in central Anatolia nowadays within the *il* (wildly) of Ankara (formerly of Konya), 8 km east of the northeastern shores of the Tuz Gölü (q.v.). The town is situated on the road connecting Ankara with Adana via Aksaray, nowadays a major line of communication. The countryside around it is watered by a mountain stream and yields a varied agricultural produce; there is also sheep-raising. Since ancient times salt has been produced at Kaldırım on the lake. In 1950 Şerefilī-köçisan town had a population of 4,458 and the

İlçe (then called a *kaza*) one of 46,300, the latter including within its boundaries 97 villages.

Bibliography: B. Dörköt art. *ev. in IA*; F. Taeschner, *Das anatolische Wegenetz*, Leipzig 1924 6*, Table 6*; *Ankara il yillığı*, Ankara 1967; İ. H. Konyalı, *Şereflihişar tarihi*, 1972.

II. **Çankırı Koç Hişar**, in modern usage Çankırı Koç Hişar, since ca. 1923 centre of an *ilçe* (*hüdud*?) in the *il* (*vilâyet*) of Çankırı (Çankırı [g.v.], Kâğırlı before 1923) in central Anatolia, nowadays called İlgaz. In the 19th century it was a *nâhiye* in the *sandjak* of Kâğırlı, in the *vilâyet* of Anadolu, and since 1864 in that of Kastamonu. Situated in the valley of the River Devrez (= Devrek) on the southern slopes of the İlgaz Mountains at an altitude of 903 m, the town is an agricultural market centre, lying near the crossroads of the routes from Ankara to Kastamonu via Çankırı and of that from İstanbul via Bolu and Tosya to Erzurum and the east. Islamisation came after the conquest by the Dânişmend *amirs* in ca. 468/1075. Afterwards the region became part of the dominions of the İsfendiyyârîoğlu [g.v.] or Djandârid dynasty of Kastamonu (Kastamûnî [g.v.]). The Ottoman Sultan Bâyezîd I took it in 793/1393. After the invasion and restoration of the *amirats* in Anatolia by Tîmûr after 804/1402, Koç Hişar definitively became Ottoman territory in 835/1431. It then became an important halting-stage in the Ottoman network of routes of the so-called "left wing" (*sol kol*) of Anatolia. In 1950 the town of İlgaz itself had a population of 1,783, and the *ilçe* (then called a *kaza*) one of 24,000, the latter including in its boundaries 76 villages.

Bibliography: [R. Bozkurt] *Osmanlı imparatorluğunda köller ilâk ve fâse menâzil*, Ankara 1966, 22, 25, 22 and map; Çankırı il yillığı 1967, Ankara 1967; R. Leonhard, *Paphlagonia. Reisen und Forschungen im nördlichen Kleinasien*, Berlin 1925, 69, 120 f., 392, 398; F. Taeschner, *Wegenetz*, I, 26, 198, table 26; O. Yalçın, Çankırı, İstanbul 1967; Y. Yücel, *Kastamonu'nun ilk İslâmî Kader Osmanlı-Candar münaazirleri*, in *Tarih Araştırmaları Dergisi* (1963), I.

III. **Koçhişar (Sivas)** nowadays Hafik, centre of an *ilçe* in the province of Sivas situated on the old main road and caravan route from Sivas to Erzurum [g.v.] and the East 37 km. N.E. of Sivas on the right bank of the Kızıl İrmak at an altitude of 1340 m. The population of the town in 1970 numbered 3,256. Nearby is Lake Toderğa (Tödürge, now Kaz Gölü or Demiryurt Gölü). Koçhişar is identical with Hafik Kalfesi (Hâwîk), a stronghold of some importance during the *amirate* of Sivas of Kâdî Burhân al-Dîn [g.v.], in the 19th century the town had a mixed Armenian and Turkish population.

Bibliography: V. Cuinet, *La Turquie d'Asie*, Paris 1892, I, 695; B. Dörköt, art. *Sivas in IA*, with list of older sources; H. W. Duda, ed. and tr., *Die Seltschukengeschichte des İbn Bîbî*, Copenhagen 1959, 248 and n.b.; F. Taeschner, *Wegenetz*, II, 2 f., 12 n. 3, 3, table 36; Y. Yücel, *Kadı Burhaneddin Ahmed ve devleti (1344-1398)*, Ankara 1970, 32 f., 43 f., 52, 73.

IV. **Koçhişar (Mardin)** nowadays called Kızıltepe, the centre of an *ilçe* of the province of Mardin in southeastern Turkey (*Djâzirâ*) on the Zerkân Sayı, a tributary of the Khabûr, to the south-west of the city of Mardin [g.v.]. Its population numbered 16,376 in 1970. In early Islamic times this, Koçhişar was called Dunayısır (Dunaysar) [g.v.]. During the rule of the Artukids [g.v.], the town was an important caravan centre, and a medical school existed here.

The present ruins of the Ulu Djâmî are a monument of that period (ca. 602/1204-3). At the time of Sultan Selim I's campaigns against the Şafewids, an Ottoman army commanded by Bîyîkîl Mehmed Paşa, *beglerbegi* of Diyar Bakr, defeated a Persian force under Karakış Ustâdjâdî near the town in 922/1516. Afterwards the whole region came under Ottoman rule, with Mardin as a *sandjak* (*himâ*) of the new *vilâyet* (*beglerbeglik*) of Diyar Bakr [g.v.]. Koçhişar was a part of the *hüdud* of Mardin in 924/1518 and remained a subdivision of that district, being a *nâhiye* of the *sandjak* of Mardin during the 19th and 20th centuries and a *hüdud* of the *vilâyet* of Mardin since the Republic was founded.

In 1766 the well known traveller Carsten Niebuhr visited Koçhişar ("Kodsje hissar" in Arabic "Gumâsar" or "Dunassar"), finding five minarets still standing (cf. *Reise naar Arabie*, Amsterdam-Utrecht 1776-80, II, 366-7).

KOÇI BEG, also called **Gömrüçü KÖRİA MUSTAPÂ BAO**, Ottoman writer of treatises on statecraft.

Koçi Beg was a native of Gôridje (Gorâ, Korytza) in Macedonia. He entered the Palace service as a *değherme* [g.v.] during the reign of Ahmed I and served under successive sultans until his retirement to his native place in the early years of Mehemmed IV's reign. He seems never to have served in any capacity outside the Palace. He gained the especial confidence of Murâd IV and İbrâhîm, and it is for his memoranda to these sultans that he is famous. He was also tutor to the historian Naîmî [g.v.] (for a full biographical account see M. Çelebi Uluçay, *IA art. Koçi Beg*).

Koçi Beg's best-known work is his *Risâle*, presented to Murâd IV in 1040/1630, where he analyses the causes of Ottoman decline and suggests remedies. There are several printed editions of the work: Ahmed Vefik Paşa (ed.), *Koçi beg risâlesi*, London 1279/1862-3, İstanbul 1303/1885-6; A. R. Aksit, *Koçi bey risâlesi* (in Latin script), İstanbul 1939; German translation by W. F. A. Behrmann, in *ZDMG*, xv (1861), 492 ff., with comments by Fleischer in *ZDMG*, xvi (1862), 271. The work is summarised in J. von Hammer, *GOR*, v, 293. A second *risâle* attributed to Koçi Beg was apparently compiled from memoranda submitted to Sultan İbrâhîm on that Sultan's order. There is no critical edition of the work. The first published version is an incomplete but fairly full

German translation by Behrhauser, entitled *Das Naythandine*, in *ZDMG*, xviii (1864), 699 ff., based on manuscripts now in the Nationalbibliothek, Vienna (Mix. 477. A. P. 185, Hist. Osman. 150). The translator states that the author is anonymous. The second published edition is in A. K. Aksüt, *op. cit.*, 78 ff. (in Latin script), based on a manuscript in Millet Library, Istanbul, no. 474. In a third published edition, based on a manuscript in Nurucmaniye Library, no. 4950, the editor attributes the *risâle* to the Grand Vizier Kemâlnüşî Kara Mustafa Paşa (F. R. Unat, *Sakrâsım Kemankas: Mustafa Paşa İdrâkîsî*, in *TV*, II, no. 6, 443 ff.). There are divergences between the published versions and between them and other existing mss. (for details and discussion, see M. Çagatay Uluçay, *Koçi Bey'in Sultan İbrahim'in İktidârı İhtifâzı risâlesi ve aralar*, in *Z. V. Togan's armağanı*, Istanbul 1950-3, 177 ff.).

The contents of Koçi Beg's *risâle* presented to Murâd IV resemble those of an earlier analysis of Ottoman decline, the anonymous *Kitâb-ı misâle-i âlâ*, (ed. Yaşar Yücel, Ankara 1974) and are entirely conservative in outlook. The spread of corruption, he argued, had brought about a decline in the old institutions and bred disrespect for the *şarî'a* and old laws (*âdân* [9.5.]). Remove corruption, restore respect for the *şarî'a* and *âdân*, and the Empire would return to its former glory. In the old days before the reign of Süleymân I, the sultan had attended the *Dîvân* personally. Süleymân had abandoned this practice. Before the year 981/1574-5 the Grand Vizier had been independent, with no intermediary between him and the sultan. The sultan's favourites (*şühedâ*) had never interfered in affairs of state. Bribery was unknown and *begs* were never unjustly dismissed. There was strict control over the emoluments of Palace officials and they never received lands whose rightful use was as *timars* or *arâmets* [9.6.].

After 981/1574-5 Palace officials and Sultan's favourites were able to engineer the dismissal of Grand Viziers, *beglerbegs* and *sandjak begs* and acquire lands rightfully allocated to timariots, as freeholdings (*temlik*) or fee-holdings (*şahmâlik*, *arpatik*). As a result, the state lost its worthiest officers and no longer had the timariots available for war. A similar decline occurred in the *ûlûmîye* hierarchy. After 1003/1594-5 *şeyhülislâm*, *âkâdî* *şahers* and *âkâdîs* [9.7.5.] frequently suffered wrongful dismissal. *Mulâzımet* and *âkâdî*-ships were offered for sale, allowing ignorant men to enter the profession. Promotion, too, had come to depend on age, rather than ability. In the old days, the *şühedâ* had been upright men. Because they had feared God, the people had feared them, and the integrity of the *şarî'a* had been preserved.

The *timar*-system had underlain the Empire's former military strength. In 991/1584-5, however, Özdemiş-oghıl 'Othmân Paşa had allocated *timars* to deserving *re'âyâ*. After him, the principle was extended, and unworthy *re'âyâ* and Palace nominees had received *timars*. These made bad and rebellious troops. Few bothered to present themselves for campaigns. Many had contradictory *berâdis* [9.8.], giving rise to disputes and a decline in the respect due to the sultan's decrees. Finally, the abolition of the *yürüks* and *musclemes*, who had acted as a pioneer corps on campaigns, meant that the timariots, the picked troops of Islam, now had to perform menial tasks. The Janissaries and other *kapıkulu* corps (see 9.8.9.) had also become corrupt. It was again Özdemiş-oghıl 'Othmân Paşa who, in 991/

1584, had admitted suitable non-*şahs* into these corps, and after 1003/1594-5 this had become a flood. The *şahmâlik* system broke down; tradesmen and others secured posts lawfully due only to *şahs*, and admitted their relatives to the corps. The number of so-called *şahs* increased enormously, many of them retiring early without performing their military or other duties, and consequently they became a heavy burden on the treasury. Previously, they had resided only in Istanbul, Edirne and intermediate villages. They now resided throughout the empire, often exercising dictatorial powers in a region.

The swollen number of *şahs*, together with a decline in *âkâdî*-i *şühedâ* lands (see 9.8.14.4.), which had either passed to enemies or else been allocated as *şahmâlik*, *waşf* or vizier's *âkâdî*, meant a vastly increased burden of taxation on the *re'âyâ*. The sale of tax-collecting rights exacerbated the situation. Excessive taxation had impoverished the *re'âyâ* and this, in turn, led to insufficient treasury revenue. This led to military weakness which undermined the authority of the sultan. The result was internal dissension and military defeat.

Koçi Beg's remedy for the decline was as conservative as his analysis of its causes: a return to the imagined perfections of the era before Süleymân I. Bribery should be removed by restoring the independence of the Grand Vizier and neutralising the influence of Palace favourites in affairs of state; by keeping *begs* in their posts without fear of unjust dismissal; by dismissing ignorant *şühedâ* and replacing them with learned men; by distributing *timars* only to men worthy to receive them, and ceasing the practice of distributing *timar*-lands as *şahmâlik*, *waşf* or other form of tenure. Only *beglerbegs* should appoint timariots. They should make a roll-call (*yollama*) of present incumbents in their provinces (*eyâlet*), renewing the *berâdis* of qualified timariots and removing the unqualified. *Kuls* with high pay should receive *arâmets*, thus creating a warrior's life (*âkâdî*) and removing a burden from the treasury. Able-bodied timariots should serve on campaigns with the number of retainers (*şahâid*) which the old *âdân* specify. This would produce 400,000 to 500,000 troops and provide a counterbalance to the influence of the *kapıkulus*. Similarly, all innovations (*bid'at*) in the Janissary and other *kapıkulu* corps which contravene the old *âdân* should be abolished. There should be a graduation (*âkâdî*) from the Palace once in every seven years, and at these times the *kapıkulu* corps should receive only enough recruits to replace dead members. Officers (*dâvâ*) of these corps should never be unjustly deposed.

Koçi Beg's second *risâle* is a straightforward description of various state institutions and governmental practices, interspersed with political maxims. Its purpose was to guide the new and totally inexperienced sultan, İbrahim, and its language, in accordance with that ruler's mental capacities, is extremely simple (see M. Tanyir Gökbulgin, *IA*, art. *İbrahim*, and 12.1.1.1.1.).

KODJA ELI, modern Turkish *Kocaeli*: a region between the Black Sea and the Sea of Marmara, covering a part of ancient Bithynia with its centre İzmit [g.u.] (ancient Nicomedia), and the name of a *sandjak* of the Ottoman empire. Nowadays it is the name of a province (il) of Turkey (population 385,408 in 1970), with İzmit as its capital. In 1954 the eastern part of the province Kocaeli was separated to form the Sakarya (Sağarya) province with its capital Adapazarı. Since this administrative reform, Kocaeli has comprised the *ilce*s (formerly *kazâ*s) of (İzmit) Merkez, Gebze, Kandıra, Gölçük (before 1936, Değirmentepe) and Karamürsel. The province is traversed by the main route of communication between İstanbul and Ankara and the East, nowadays by the Anatolian railway (since 1873) and the motorway No. 1/E5. Modern industries have been founded along the Gulf of İzmit (İzmit Körfezi) in the Republican period, complementing the already existing ones (e.g. the Imperial Ottoman textile and carpet factory at Hırke). Thanks to the large forests prevailing in the region (in 1970 42.1 % of the area was still considered as forest-land), the province became a centre for ship-building already in ancient times (cf. the mediaeval type of (rowing and sailing) transport vessel, *Karamürseli*, Turkish *Karamürsel*, called after the port of Karamürsel).

The Gulf of İzmit was a base area of the Ottoman navy from the 16th/17th century onwards. A dockyard and naval establishment existed at İzmit till World War I. Since 1926 Gölçük has been one of the main bases of the modern Turkish navy.

Kodja Eli was one of the earliest Ottoman *sandjak*s, formed during the reign of Orkhan in the years 1327-38. Its name is derived from that of one of the *ghazi* leaders of the first two Ottoman rulers Alkâkodia, who with Kara Mürel and Konur Alp first raided this then Byzantine region, and was buried on Baba Tope near Kandıra in 728/1327. During the Ottoman interregnum 1402-13 the Byzantines were able to regain their territory, but in 1429 Timurtashoglu Umur Beg reconquered Kodja Eli definitively for the Ottoman Sultan. Before the end of the 16th/17th century, the *sandjak* became part of the *eydet* of the *kapudan paşa* and its *sandjak-begs* a commander of a naval squadron. In 1867, within the framework of the new system of provincial administration, Kodja Eli was incorporated in the *vilâyet* of Kütahya (1867). From 1883 till the end of the Ottoman period it became the independent *sandjak* (*mutasarrıflık*) of İzmit, with the 5 *kazâ*s of Adapazarı, Kandıra, Geyve, Karamürsel and İzmit-Merkez. In ca. 1890, V. Coinet (*La Turquie d'Asie*, Paris 1894, IV, 303 ff., 372) estimated the population of the *sandjak* at 223,000, of which 129,000 were Muslims, 49,000 Armenians, 41,000 Greeks and 7,500 Jews.

(A. H. DE GROOT)

KÖHAT (v., "mountains"), a directly administered District of what was the North West Frontier Province of British India and of Pakistan till 1955, covering some 2,594 sq. miles and with its administrative centre at the town of Köhât. The District is bounded by the Khyber Agency [see KHAYBAR PASS] on the north, by the Kurram and North Waziristan Agencies in the west, by the Bannu District [g.u.] on the south, and by the Indus River and the *Qila Khat* [g.u.] of the Pandjâb on the east.

The terrain of the District is that of a rugged tableland lying at an average of 2,000 ft., with low ranges of arid hills which rise to 3,000-4,000 ft., and with more fertile valley bottoms in which agriculture, sometimes by irrigation, is possible; the climate shows considerable variations in temperature and rainfall averages only 15 inches per annum. The region is connected with the Kabul River valley and the Khyber region by the Köhât Pass, called locally the *Darra* (2,866 ft.), whose control was in British times much disputed by the local Afridi tribesmen; the area round the Pass, a strip of unadministered territory, has for long been the site of a flourishing Afridi gun-making factory. An important commodity of the Teri village neighbourhood of Köhât has always been rock salt, of which there are extensive deposits at Bahadur Khat; until recent years, these were owned by the *Nawab* or titular head of the Khatak tribes. The Government of India's increase of the tax on Köhât salt in 1896 to a level with that on cis-Indus salt was one of the pretexts for the tribal rising along the Frontier in 1897.

The population of the District is essentially Pathan, mainly of the Bangash in the western parts, the Khatak [g.u.] in the eastern tracts down to the Indus shores, the Orakzay and Adam Khat Afridis in the northern parts, and the Nizals along the Indus in the south of the district; of these, the Bangash speak the northeastern or "hard" variety of Pashto, and the Khatak and Nizal the southwestern or "soft" one (see *ARGENT*, III. The Pashto language).

The Khatak seem to have moved into Köhât from the west in the 18th/19th century, whilst the Bangash entered the district in the following century as allies of the Khatak against the Orakzay. The Mughal adventurer Babur [g.u.] made his first foray into India in 910/1505 down the Kabul River valley to Peshawar, then into Köhât and Bannu and through the Deradjaal to the Indus; he scattered the local Pathans, and built towers of skulls of the slain in Köhât (*Bâbur-nâma*, tr. A. S. Beveridge, 230-2). In 1029/1620 the Mughal Emperor Jahangir's general Mahabat Khan [g.u.] campaigned in Köhât against the Roshaniyya sectaries [g.u.] amongst the local Pathans.

In the early 19th century, Peshawar, Köhât, Bannu and the Deradjaal came under the control of the Sikh ruler of the Pandjâb, Randjit Singh, although Sikh authority was contested by the local tribes. The British envoy Mountstuart Elphinstone passed through Köhât in early 1809 on his way to the Durand court in Kabul, and waxed lyrical about the green valleys and the fruits of "Cohaut" (*As account of the kingdom of Candahar*, London 1842, I, 49 ff., II, 50-1). After the downfall of the Sikh empire

and the annexation of the Panjāb in 1849, the British penetrated through the low Khatak hills and Kohāt to the Kurra River valley at Thāl. The regions of Peshāwar, Kohāt and Hazāra were then briefly placed directly under the Board of Administration for the Panjāb. In 1876 these three northern regions of the Frontier were formed into the Commissionariat of Peshāwar. Then after the frontier tribal wars of the late 1890s and in the Viceroyalty of Lord Curzon, the North West Frontier Province was formed in 1901 as an administrative unit separate from the Panjāb, with Kohāt as one of its four trans-Indus districts; Kohāt District itself comprised the three *talqas* of Kohāt, Terl and Hangū. A road was made in 1901-2 connecting Peshāwar and Kohāt via the Pass, and a narrow-gauge railway was also begun to connect Khushālgāh on the Indus with Kohāt town, Hangū and Thāl, thereby stimulating local trade with Tirāh and Kābul. Kohāt town had already become an important garrison centre from which control was exercised over the turbulent Pathan tribes, and Sir Louis Cavagnari, who for more than a decade had been Deputy Commissioner in Kohāt, had built himself a fine official residence there.

During the inter-war period, Kohāt was, with Peshāwar, Bannū and other parts of the Frontier, the scene of disturbances caused by the political movement of the *Khadmatgarān* or "Redshirts" of 'Abd al-Ghaffār Khān. The postpartition position has not been greatly altered since British days. The District continues to be divided into three *talqas*, with the names Kohāt, Hangū and Kamk; Kohāt town is an important military base for the Pakistan Army and there is also a military airfield. A plan for a barrage across the Toi River, the "Banda Tanda Dam", in order to harness flood waters, has long been mooted. The 1901 census enumerated a total population for the District, including the attached tribal areas in the north, of 627,993, a 45% increase since 1951, with a population for Kohāt town and cantonment of 75,000.

(C. E. BOSWORTH)

AL-KÖHÊN AL-'ATTÄR, ABU 'I-MUKÄ (DÄWÖN) B. ABÜ NAJR B. HAFĪZ AL-ISĀ'ILĀ AL-HĀRĪNĪ, Jewish pharmacist who in 658/126 wrote in Cairo "for himself and his son" a pharmacopoeia under the title (changing slightly in the manuscripts) *Minhād al-dākhān wa-ashār al-'alyān fī tarkīb al-adwiyā al-nāfi'a li'l-'abād*, which became very widely spread. About his life almost nothing is known, and his relation to Abū Mansūr Sulaymān b. Haffāz al-Köhēn, the author of a *munshā'āt* from which al-Köhēn al-'Attār quotes, is uncertain (see Steinschneider, *Die arabische Literatur der Juden*, 233 f.; M. Plesner, in *Oriens* xxi-xxiv [1970-1], 454. The *Minhād* has the following 25 chapters: 1. The duties of the pharmacist, 2. Drinks (ca. 1/6 of the whole work), 3. Concentrated fruit-syrups, 4. Pre-

served fruits, 5. Pastes, 6. Electuaries, 7. Powder, 8. Lozenges, 9. Remedies to be sucked, 10. Pills, 11. "Hallowed substances" (*ṣūrahāḍḍ*), 12. Eye-powder, 13. Eye-salves, 14. Pomades, 15. Oils, etc., 16. Plaster, 17. Tooth-powder, 18. Suppositories, 19. Compresses, settings, sternutatories, 20. Substitutive drugs, 21. List of simple drugs, 22. Apothecaries' measures and weights, 23. Admonitions for a sensible way of living, 24. Professional instructions, 25. Test of the usefulness of the simple and the composite drugs. At the end, the author promises a monograph on generally-known simple drugs, which was probably not written.

Thus the work is a typical dispensatorium (*sharḥ al-dhān*, from Greek ὑπαγόγιον via Syriac graphigān), in which, after the Galenic example, the composite drugs (*al-adwiyā al-murakkaba*) are grouped according to classes (*ḥarrā' rā'iq*). In the present work, the simple drugs (*al-adwiyā al-adwiyā al-mufrada*), usually dealt with in separate works, have equally been treated from certain view-points in chapters 21, 24 and 25. The recipes are partly of the author himself, but the majority come from sources mentioned by name. Most conspicuous among the latter are the *Dustūr al-himāriyāt* of Ibn Abī 'I-Bayān [q.v.], teacher and somewhat older contemporary of al-Köhēn al-'Attār, and the *ṭibb* of Ibn Qunay' al-Isrā'īl, another pupil of Ibn Abī 'I-Bayān. In the introduction, al-Köhēn claims to be the first to compose an extended pharmacopoeia especially for chemists; the earlier ones, Ibn Abī 'I-Bayān's book included, are said to have been written for physicians in the traditional manner. This specialisation has possibly been one of the reasons for the wide dissemination of the work, a second one apparently being the very conveniently arranged survey of the current measures and weights (ch. 23), which must have met a generally felt need. For an officially-regulated standard did not exist, and the units of measures, so countless varying, were overseen with more or less care by the *mukhtasib* only. A third reason for the popularity of the work may have been its useful indications for the chemist's profession (purchase, efficient storage, cleaning, protection of the drugs against blight etc., chapter 24). Finally, the abundant use of popular Arabo-Egyptian names of drugs made the work easily accessible to every user.

Bibliography: The numerous manuscripts are listed in M. Steinschneider, *Die arabische Literatur der Juden*, 237 f.; Brockelmann, *GAJ* I 648. S I 697; A. KONAKRY (usual orthography, Conakry), capital of the Republic of Guinea.

With its site fixed in the tables of latitudes of Ptolemy, Konakry has only been regularly inhabited since the second half of the 18th century. It is situated on the west coast of Africa in lat. 9° 31' N. and long. 13° 45' W., and occupies three distinct natural sites, part of the Kaloum peninsula, the island of Tumbo and the archipelago of Loos. Manga Dambo, chief of the Susu people, founded Kaporo there in 1780, after having subjugated the Baga and the Mandenya. The Loos islands, originally occupied by the Portuguese (Los Idolhos), were occupied by Britain in 1848. After the "Mulatto War" of 1853-70, there were four villages, so. Kaporo, Bulbinet, Tumbo and Camayenne, which were placed together at the time of the first French post's foundation, when the corvette "Goëland" passed there on 26 January 1887. On 1 August 1889, Conakry became the capital of the colony of the Rivières du Sud and Dependencies, and then in 1890 of French Guinea, of which Ballay was the first governor.

It became the departure-point for roads into the interior after 1895, and then for the Conakry Niger railway completed in 1914, and the town and its port enjoyed a rapid development facilitated by the filling-in of the Tumbo channel. Its vitality was shown by the increases of population: 13,000 in 1899, 78,000 in 1958 and 250,000 in 1975. The Loos islands were attached to it in 1904, and also the convict settlement of Potoba, where the Wali of Gumbin, Tierno Allou, leader of the revolt of the Houboums, died in 1922.

It became a Commune Mixte in 1913, with full powers in 1955, and then on 1 October 1958 Conakry became the capital of the Republic of Guinea. It has 1,853 m. of docks, 10 hectares of platforms, a volume of traffic amounting to 1 1/2 million tonnes and an airport with a 3,300 m. runway; it is thus a lively industrial centre. Despite the ending to the mining of Kaloum's iron deposits in 1966 and the slackening of the exploitation of the bauxite of Kassa, it remains the main outlet of the Fris Company, and also possesses many factories, including for tobacco and matches, furniture, tanning, shoes, plastics, brewing, fruit juice, etc. Since 1963 Conakry has had the Gamal Abdel Nasser Polytechnic Institute, with seven faculties, including one for medicine, and it also has several Écoles Nationales (Arts and Crafts, Meteorology, etc.).

The majority of the population is Muslim (71 % in 1955). The conversion of the Baga and Susu was achieved at the beginning of the 19th century by the Yattara family, the Dioula. Christianity came with the Anglican mission at Potoba in 1864, and the Catholic mission, which built the cathedral of St. Mary, in 1890. On 18 October 1897 Conakry

became an Apostolic prefecture, on 18 April 1920 an Apostolic vicariate, and on 15 September 1955 an Archdiocese. The diocese contained 13,400 Roman Catholics in 1965, two-thirds of these in the capital. The strength of Islam is easily discernable from these figures. The main *fori* there remains that of the Kâdiriyya, which resisted the penetration of the Tijâniyya in the 19th century under the double influence of the *sâmiya* of Touba and of the Senegalese auxiliary troops of the French who adopted Muridism. These last built a mosque on the island of Tumbo, still called the Senegalese mosque.

Despite the efforts of Malinka scholars, Wabbâbism has remained only embryonic. One should further note a certain persistent strain of animism among the Baga population, characterised till 1963 by the cult of the tree of Bassikole, on the isthmus of Tumbo, cut down then to allow the building of the People's Palace at the expense of the People's Republic of China.

KONG, corruption of Kpou, name of a place in the northern part of the Ivory Coast near to the watershed between the basins of the Comoe and that of the Nzi which flows into the Bandama. Kpou was founded in a very ancient period by the Senoufo of the Falafala tribe who to this day have retained their predominant rights over the land, while playing now only an unobtrusive role.

Kong is an illustration of the advance of the Malinka towards the south and towards the regions producing gold and kola. This immigration took place in the period following the 15th century and these Dioula who supposedly came from Macina founded Bobo Dioulasso on their way. Having established themselves in Kong they were reinforced at the beginning of the 18th century by contingents of Sokondji Malinka pagans, with whose help they were able to police the trade routes. There can be no doubt that it was at the end of the 18th century that a Malinka chief, Sekou Ouattara, whose family was linked with the inhabitants of Borea on the Bandama, united a group of Malinka families coming from the north. From Macina he passed through Dé near Bandagara, Téwé near Bobo Dioulasso, then Teninguara near Kong where he ousted a red-haired *ekiefien* named Lassiré Gombé, taking his place and establishing Islam. Lassiré Gombé would no doubt have been a Mandé, ruling over the autochthonous Falafala and the Parafala (Koulango).

Sekou Ouattara established his twelve sons so firmly in the villages that when his brother Famarna attempted to gain power, the resistance offered by the sons forced him to leave and to settle in Bobo Dioulasso, opening a long series of quarrels between the two cities.

From the city of Kong the power of this Dioula aristocracy spread throughout the neighbouring country, largely as a result of the superiority of their cavalry. To assure themselves of a supply of remounts, they founded on the Bani the village of *So fara* (stallions).

While the children of Sekou Ouattara received various appanages, the sixth son, Sambakari, at-

tempted to conquer Lohi and spent several years fighting interminable campaigns against the Léa, the Tegoussé and the Dian. The authority of the Dioula over the land of Lohi seems to have been purely nominal.

Among campaigns involving external powers, one was repulsed by the *Toussion* of Biton Koulibali in 1725. Also, the Ashanti army which, according to Dowditch, had reached as far as Kong, was defeated there and its leader injured by a lance-blow at a place which is still pointed out in the vicinity of the town.

Abo (1720-46), the ruler of the Abrou, was pursued by the Ashanti king Opopou Ouare and took refuge in Kong, where the sovereign's mother handed him over to the Ashanti who put him to death.

With its control over the gold and kola routes, the city of Kong took on greater and greater importance, and the authority of the sovereigns extended over the whole of the land from the Corné to the Marahoué and, towards the Djimini in the south, where the Dioula had constructed terraced dwellings in the Sudanese style. Five mosques with twin pyramid-shaped minarets dominated the quarters of the city.

The military power of Kong depended on contingents of pagan soldiers. But commercial prosperity induced the more gifted elements to turn away from military pursuits, to such an extent that when the Pallaka pagans rebelled and closed their territory to caravan traffic, the punitive expeditions mounted by Kong came to nothing.

Although Mungo Park had heard tell of Kong, it was Binger who, on 20 February 1888, arrived in the town and stayed there until the 12th March. In December of the same year, Treich-Laplène made the sovereign of that time, Karamoko Oule Wattara, sign a treaty placing Kong under French protection. This treaty was signed on 10 January 1889 in the presence of Binger, who had occasion to return to Kong in 1892.

Two years later, Kong was visited by Captain Marchand, *Kpaki Bo* (= "feller of the forest"), who had heard of the threats made by Samori against Kong. It was then that Lt-Colonel Montell was recalled to the area; he had been preparing to attempt a regrouping of forces on the Upper Nile. Mustering at Grand Bassam in August 1894, the column encountered the utmost difficulties in making progress. Joining battle with the armies of Samori in March 1895, it was forced to retreat and on 23 May 1897, Samori razed the city to the ground and massacred those of the inhabitants who had not succeeded in escaping towards Bobo-Dioulasso. Only the houses of the Falafala were spared.

In January 1898, a French detachment established a post there, which was soon laid under siege but was relieved by Commandant Ceudrellier. With Samori captured, and peace re-established, the French administration invited the refugees to return. Some accepted, but the majority remained in Bobo-Dioulasso. Kong was never to regain its former importance. It was to remain a mere regional capital with some 3,000 inhabitants, and an important centre of Muslim proselytism.

KONYA (Arabic and Turkish orthography, Kaniya), known in antiquity as Iconium, an important town lying on the edge of the Anatolian plateau, on a diagonal line connecting the Dardanelles with the Taurus passes leading into Syria.

1. History.

Konya was, during the centuries of Arab invasion, a Byzantine military base which the attackers seem for this reason to have more or less deliberately avoided and circumvented, in preference either for Tarsus (see Tarsus) to the south or especially for Cappadocia by the northern routes; this would seem to explain the fact that the town is seldom mentioned in military histories. It is probable, however, that Konya, like other towns, had suffered previously in the Persian invasion, and that it occupied only a section of its former territory. It is difficult to describe with certainty its history in a period for which no archaeological investigation has been performed, but the common and widespread re-use of older material in the Seljuk monuments would seem to indicate that many buildings were in ruins and the town only partially reconstructed. It reappears, however, in a better light at the time of the Turkish invasions of the 5th/11th century and at the time of the Crusaders who passed that way in 1097. The latter found no serviceable fortifications there, but were able to derive benefit from the gardens in the vicinity of the town.

It was the Seljuk régime which marked the zenith of the history of Konya. The sultan, well irrigated in contrast to the neighbouring desert, commanded the southern route at a time when the *Dinîshmendids* [q.v.] denied the Seljuks access to the northern route to the Dardanelles, and it must have found favour with the new masters when they became aware of the need for a secure political and military base as a focus for their still semi-nomadic peoples. The real development of the town dates from the reign of Mas'ud (513-50/1118-55), who resolving to make Konya a capital, built a mosque there and other monuments which his successors must have completed. It was already a city of note when in 1190 the German army raised in Cologne by Frederick Barbarossa passed through it. The progressive unification of Turkish Asia Minor under the rule of the Seljuks evidently contributed to the prosperity of the capital. Besides the principal mosque, from about 1200 onwards the city possessed a number of smaller ones, as well as *madrasas*, *dhikrânâhs* [q.v.], flourishing markets and reconstructed ramparts. The development of the power of the sultans in the first half of the 7th/13th century was also reflected in the town, where apparently social hierarchy was judged by the importance and height of houses rather than by the allocation of separate quarters to the various ethnic groups. In Konya there were evidently Greeks (with their monasteries, reputedly dedicated to Plato), Armenians and some Jews; the records make few references to Turks, a term reserved in this context for the Turcomans of the plains, but rather speak of Muslims, a designation normally embracing both indigenous Turks, who in a town of this kind were largely Iranised, and Iranian immigrants, arriving especially in the period following the Kh'wasman and Mongol invasions, who, besides their involvement in craftsmanship, were sometimes promoted to the most important civil posts of the régime. Three social groups deserve special attention, the *sâghis*, the *sâhis* and the

Sūfīs or dervishes. The *ıfzğ* were a kind of militia recruited among the half-breed sons of indigenous fathers converted to Islam and married to Turkish women; the *ahğs* [q.v.] were a Turkish form of the Muslim *futwra* [q.v.], and were to play an important role especially in the period of the Mongols and their immediate successors; as for the Sūfīs, there were a number of different orders, but, from the middle of the 7th/13th century the prestige of *ıfzğ* al-Dīn Rūmī must have drawn numerous disciples to him, although this was not an organised order (that of the Mevlevī or Mewlawiyya, from Mawānā/Mawānā) until the 5th/14th century. Naturally, Konya also had a military garrison, composed to a large extent of slaves of Byzantine stock captured on the north-western marches of the kingdom. The sultans lived in the palaces which they had built in Konya and the surrounding area. The ramparts of the town had been extended and strengthened in the time of the great sultan 'Alā' al-Dīn Kay Kūbūz [q.v.] with the compulsory co-operation of the senior *amirs* of the region. The buildings erected in this period are studied below, but the abundance and importance of the mosques, *madrasas*, *ahdnhāts*, hospitals, *ahğs*/caravanserais, etc. testify to the considerable development of the Saldjūk capital, which the present-day remains continue to evoke, in an original and compelling style.

The progressive establishment of the Mongol protectorate over Saldjūk Anatolia in the second half of the 7th/13th century was naturally prejudicial to the importance of Konya, although in a slow and partial fashion. The rivalry between the brother sultans 'Izz al-Dīn Kaykūbūz and Rukn al-Dīn Kūlūğ Arslan represented in fact the struggle between the partisans of collaboration with the Mongols, the naturally dominant force in eastern Asia Minor beyond Kayseri, and the partisans of resistance, whose headquarters was at Konya and who relied to a large extent on the Turcomans of the southern and western frontiers. The decline of central authority was accompanied by a boost to the prestige of peripheral Turcoman principalities in such a way that centres of political activity, etc. were transferred to new regions, to the detriment of Konya in particular. The episode which marked this evolution for the first time was the temporary occupation of Konya in 675/1277-8 by the Karamānids [see KARAMĀN-ÖĞÜLLĀR] of the western Taurus, who installed there a bogus Saldjūk known by the name of *İzzet*. Their independent government survived however until 713/1313; but in that year it was definitively annexed, although the Karamānids did not lose their capital, henceforward to be situated at Laranda/Karamān [see LARANDA]. The cultural and religious importance of the town and the relative importance of its population ensured, however, that it retained a certain vitality, as is attested by a number of buildings and pious foundations erected by Karamānid princes and dignitaries. Once occupied by Bāyezīd Yıldırım, the town was definitively annexed to the Ottoman state, together with the remainder of the Karamānid state, in 680/1475, and Ottoman documentary archives give evidence that *wağfs* and Saldjūk and Karamānid institutions were in general maintained there. Naturally in this vast empire, far removed from all the important areas, Konya could no longer be more than a provincial centre. The fact that it was under its walls that the Ottoman army of Reşād Paşa was crushed by the Egyptian army of İbrāhīm Paşa, the son of Muḥammad 'Alī, at the end of 1832,

proves that the town could still occasionally play a strategic role.

A number of travellers have visited and briefly described Konya. One of the most valuable accounts is that of Henri de Laborde, who has left us plans of the town as it was in 1828, a period in which many buildings today in ruins were still standing. The population of the town, which in the time of Cūnat (end of the 19th century), was about 30,000, passed the 100,000 mark in the middle of this century (119,841 in 1960) and has continued to increase slowly since then.

Bibliography: An exhaustive bibliography of the geographers, travellers and historians was given in 1934 by Besim Darkot in his *İA* art. a.v. The most recent works include especially those of İsmail Hakki Konyalı, *Konya tarihi*, Konya 1963, and Mehmet Önder, *Mevlana şehri Konya*, Konya 1971. See also C. Cahen, *Pre-Ottoman Turkey*, London 1968; Osman Turan, *Selduklular zamanında Türkiye*, 1971; S. Vryonis Jr., *The decline of medieval Hellenism in Asia Minor*, Berkeley and Los Angeles 1971; E. Elekhoff, *Friedrich Barbarossa im Orient*, 1977; Faruk Sümer, art. KARAMĀN-ÖĞÜLLĀR. (C. CAHEN)

2. Monuments.

There are some eighty monuments surviving in Konya, but many are so heavily restored that only fragments of decoration survive of the first foundation. An example is the Hoca Hasan Mesid, ca. 1200. Major buildings lost but recorded include the *bedesten*. The number of houses and *hamams* dating from the 18th to the 20th centuries is declining rapidly, but the private Koyunoğlu Museum survives. A study of relative documents was made by I. H. Konyalı, *Konya tarihi*, Konya 1963, and of ceramics by M. Mainecke, *Fayencedekorationen seldschukischer Sakralbauten in Kleinasien*, Tübingen 1976. His datings are here accepted unless otherwise stated, while an asterisk indicates buildings dated by inscriptions.

Walls and palaces. The walls were destroyed within living memory. C. Texier, *Asie Mineure*, Paris 1882, and others recorded the wealth of antique and Saldjūk decoration incorporated in them, especially in the vicinity of the 108 towers, including fabulous beasts, a decapitated Hercules and extensive verses, all of which were gilded. The grandeur of the city is confirmed by the ruined *kiosk* of Kūlūğ Arslan II (1155-62), which was once a square chamber clad in ceramics with balconies carried on large consoles above a vaulted hall. Illustrated in F. Sarre, *Der Kiosk von Konya*, Berlin 1936, it is situated in the citadel area which has yet to be excavated in depth and where such remains of the *kale* as exist are attributed by Konyalı to 618/1221, although it was founded in 569/1173.

Mosques and complexes. Adjacent is the Alaeddin Cami begun by Kaykūbūz I [q.v.]. The consequences of frequent repairs are as important as the damage they mask. The area immediately round the *mihrāb* is the oldest dated by the inscription to Sultān Mas'ūd on the outstanding *mihrāb*, ca. 1155. The west half of the prayer hall was completed in 617/1220* and the east pillared hall was added in 1235 when the *mihrāb* (its heart mutilated irreparably) in the typical Anatolia ceramic manner was added. Among inscribed names are those of Usūd Hādīdī Mengubrti (reading provisionally al-Kūlūğī on the *mihrāb*), Muḥammad b. Khawān of Damascus, an overseer, and of Atabeg Ayāz, the official in charge of work 1219-20.

Contiguous with the enlarged mosque and now entered from it is the duodecagonal *türbe* named after Kılıç Arslan and dated 616-17/1219-22. The cenotaphs are covered in white inscriptions on deep cobalt blue grounds. Except for Kaykubâs I, buried at Sivas, from 1222 onwards this was the mausoleum of the dynasty.

Externally, the courtyard wall is monumental, with two marble portals in a style developed from that of 12th century Zangid Damascus. The İplikçi Cami, 1220-30, was first rebuilt in 733/1332*, but the *mihrâb* survived. The central aisle has three domes, and the three on each side are vaulted. The mosque is now the museum. The Larende or Sahip Ata Cami, 656/1258*, has lost its second brick minaret in the Iranian or Central Asian style. The staccato porch, incorporating detritus from Christian monuments, is 13th century workmanship at its apogee, which was increasingly heavy and flamboyant. The fine faience *mihrâb* and semi-domed *tavân* survived rebuilding. It is united with the *âşânogâh* (of the four-*iwân* type retaining some original decoration) by the family tomb in a manner suggestive of ancestor worship. This mausoleum is of the domed *tavân* type with a crypt, where the cenotaphs retain some of their faiencework. The inscription on the mosque to the master Kalûk b. 'Abd Allâh (reading provisionally) makes this his only dated building. The Süleyman Konevi Cami, 673/1274-5*, has lost two deeply-carved shutters to the Türk ve İslâm Eserleri Museum, Istanbul.

Kaykubâd I (c.9.), as patron of Qalâ' al-Dîn Rûmî (c.9.), created Konya's greatest spiritual memorial, which is expressed materially as the Mevlevî complex and museum, to which the mosque of Selim II is related. The *takke* originated in 628/1231 (Meinecke, 342; Konyalı, 630), but the earliest *avâs* which contains the cenotaph of the poet is dated 672/1273-4. Its scalloped dome was re-covered in Kütahya tiles externally in 1288, 1299 and 1299 (Konyalı, 634) and the wooden cenotaph, 674/1277, completely covered in inscriptions, is hidden under the gold embroidered velvet cloth donated by 'Abd Hamîd II. A second dome was built over the tombs of the successors of the *Mewlânâ*, but the complex is largely 16th century in date. Bâyezîd II restored the mausoleums and added three domed units together with a typical Ottoman minaret in 910/1504, while Selim I installed the garden fountain, 928/1522. Süleyman I rebuilt the *marşûd* and *samâ'â* *âhna*, 973/1565, and Selim II the *Çimäre*, now destroyed. The cells of Murâd III were transformed in the 19th century. Important repairs were effected by Murâd IV, 1044/1634 and 1048/1659, and by Mehmed IV, 1060/1659. Four typical Ottoman *türbes* in the garden court are dated 934/1527, *Khürem Paşa*; 981-2/1573-4, Sinân Paşa; 994/1585, daughters of Köçük Marâd Paşa; 1006/1597, *Shaykh Khallîl*. This museum houses textiles and other treasures of the order which is active again. The Selimiye Cami, begun by Süleyman I and completed by Selim II, has a seven-domed portico carried on six Byzantine limestone columns. Its plan is based on that of the Fatih mosque in Istanbul, but without a *mihrâb* apse. Erroneously attributed to Sinân, it is typical of the stark style that preceded his appointment as *mi'mâr bâglî*. Beside the mosque is the library of Yâsuf Agha, 1209/1794. Pir Paşa Cami, ca. 926/1519, is a typical Ottoman mosque, but with a *türbe* incorporated into a corner of the portico. Şerefeddin Cami was founded 1220-30, rebuilt by the Karamanoglu İbrahim II, 848/1445, and transformed in

1046/1636 into an imitation of Kılıç 'Ali Paşa mosque, Topkapı, Istanbul. Fragments of 13th century ceramic can be seen in the mortar, and there are patches of brickwork amid the ashlar. Heavily restored, 1299/1882, the interior painting is in the 19th century fairground manner and includes a typical folk art representation of the Süleymaniye Cami, Istanbul, over the *mihrâb*. Kapt Cami, 1060/1650 (Konyalı, 429), owes its light, open style to the repairs in 1226/1812*. Abdülâzîz Cami, *mihrâb* 1293/1876; also replaces an older building, and its florid Ecole des Beaux-Arts appearance is likely to be the work of Sarkis Balyan of the 19th century dynasty of court architects.

Colleges or medreses. The Sıralı Medrese, 640/1242-3, is a partially ruined two-*iwân* type. The outstanding faience *mihrâb* is set in an *iwan* which retains a quantity of its décor. The carving of the portal is also notable. Inscriptions include those to the founder Badr al-Din Muhiş and the master Muhammad b. Muhammad b. Ughulân al-Jûdî.

The Karatay Medrese, 649/1252-2*, ruined, but retaining its famous marble portal, which was an Anatolian variant of the Damascus style (see Alaeddin Cami), and also the starscape dome with an oculus over the pool of the court-hall supported by deep fan-shaped tiled pendentives. This monument now houses a collection of Selçuk ceramic. Only the *iwân* remains of the Köçük Karatay Medrese nearby, 649/1248-9.

The İnce Minareli Medrese, ca. 663/1264-5, built by Kalûk (Köleg) b. 'Abd Allâh, heavily-restored, lost two-thirds of its brick minaret in 1277/1899. It was a foil to the portal's giant inscriptive bands developed out of simple established decorative forms more appropriate to wood. Overweighted decoration which masks structure was the *Achilles heel* of later Selçuk architecture.

Marşûds. These include Beyarebey Mescid, 610/1213 (inscription disputed), and Abdülâzîz Mescid, 611/1214-5, both rebuilt with fragments of original ceramics remaining, as with Şekerîrûs Mescid, 617/1220*. The Taş (Stone) or Hacı Feriâh Mescid, 612/1215 (Konyalı, 364), has an inscription to the master Rumaşân and idiosyncratic carved stone porch and *mihrâb*. The Hatuniye Mescid, 627/1229-30*, retains most of its thick Güdük Minaret, built of glazed brick. The Bulgar Tekke Mescid 1240-50, still has its plain, hexagonal dado tiles, as does the Karatay Mescid, 646/1248-9, but the Sıralı Mescid of the same date retains its brick minaret and its renowned *mihrâb*. The *mihrâb* of the Beyhikim Mescid, 1270-80, is now in the Staatliche Museum (Islamische Museum, Cat. No. 81), Berlin. Both the Karaslan and the Tahir ile Zühre Mesids, ca. 1280, have restored *mihrâbs*.

Of many later examples, the Kadî Müsel Mercid, 812/1409, has lost its dependencies which once were distinctively Karamanîd in style, including the *mihrâb*.

Lesser monuments. The Hasbey Darûlhuşâ, 824/1421* built by Karamanoglu Mehmed Bey, has a traditional ceramic *mihrâb*. The marble panels have fallen from the façade below the sixteen-ribbed dome. A rare, extant *namazgâh* is the Musalla, 948/1547.

Among several, a typical *ivân* type *türbe* is the Güneç Hattın, 674-84/1275-85, built of brick above ashlar with an ornamental tile façade and crenellations. It has two triangular buttresses and double stairs raised over the sepulchral vault. Fakîdede Türbe, 824-60/1478-56, built of stone is transitional in style.

Of the fountains, Kapu Çeşme rebuilt in Ottoman times has claims to Seldjuk origins. A standard Ottoman example is the Akçeşme, 936/1555*. The Bahkî Çeşme incorporates a Byzantine plaque depicting two fishes.

Monuments in the vicinity. The large, pillared mosque at Meram of Karamanoglu Mehmed Bey, 805/1402*, stands beside the *hammam* of İbrahim Bey, 837/1444*, which is fed by the lime springs.

Local mid-13th century caravanserais each with portal, court and hall and all partially ruined, are Kaşemir (Yamış) Han, 603/1206*; Kıl Ören Han, ca. 604/1207; Dokuzun Han, 607/1210*; Altunba (Altınapa) Han, early 13th century. The Zazadın (Sadadın) Han, 633/1235-6*, is in better repair and noteworthy for the extensive re-use of classical material and early Christian tombstones.

KOPAK [see SIKKA].

KÖPRÜ [see VARI KÖPRÜ].

KÖPRÜ MİŞARİ 'fortress of the bridge', a village in the Ottoman province of Khudavendigâr [i.e.] in northwestern Anatolia, and situated on the Çürük Şu river near Yeşilhisar. It owes its historical fame to its being the site of a Byzantine fortress taken in 688/1289 by 'Oghmân b. Ertoghrul, chief of the 'Oghmânî group of Türkmen based on Eskişehir, after the previous capture of Bileğjik and during the course of the extension of Ottoman influence within the province towards Bursa [i.e.]: cf. H. A. Gibbons, *The foundation of the Ottoman empire*, Oxford 1916, 32-3.

Bibliography: Simî Bey, *Kâmûs al-'alâm*, v, 3906; Von Hammer, *Histoire*, i, 87-9; HUART, *Konia, la ville des deriches tourneurs*, Paris 1897, 18 (Illustr. of bridge). (CL. HUAR?)

KÖPRÜLÜ, a family of Ottoman viziers who rose to prominence in the latter half of the 17th/18th century and dominated Ottoman life for much of that period, bringing a halt for some time to the decline of the empire, instituting internal reforms and gaining new conquests. The name derives from the close association of the founder of the family, Köprülü Mehmed Paşa, with the town of Köprü [i.e.] (then in the sanjak of Amasya), which, in turn, was later called Vestr-Köprü through its as-

sociation with the family (and to distinguish it from the near-by Taş Köprü). That Mehmed Paşa was born in Albania, however, is clearly shown by his *vakfiyya*, drawn up in Edirne in Radjab 1070/ March 1660, in his own lifetime, in which it is stated that his homeland was the village called Rudnik, attached to the *kafe* of Arnavut Belgrade (Berat). His first visit to Köprü appears to have occurred only when he departed the palace service to go there as a *sipahi*, but he thereafter settled there, marrying and establishing a home to which he repaired when out of office.

The leading members of the Köprülü family are the following:

1. Köprülü Mehmed Paşa (1586-1072/1578-1661), the Ottoman Grand Vizier who gave his name to the family. If, as his contemporary, Fındıklı Mehmed Agha asserts (Silâhdâr, *Ta'rih*, Istanbul 1928, i, 226), he died at the age of 86, he must have been born in ca. 986/1578 (for other estimates of Mehmed Paşa's age, see Defterdar Şarî Mehmed Paşa, *Zuhd al-ma'âd* al-'Oghmânîyya, Süleymanîye-Hisad Efendi 2382; Râşid, *Ta'rih*, Istanbul 1282/1865, i, 6; 'Atî', *Ta'rih*, Istanbul 1291-3/1874-5, ii, 69; Ahmed Refik, *Köprülüler*, Istanbul 1337/1924, 29; Usunçarpalı, *Osmanlı tarihi*, *ii*, Ankara 1951, 420) in Albania (see above). Brought to Istanbul in his youth, he was taken into the palace and by 1623 was a cook in the palace kitchens. He secured the backing of Khosrew Agha [see KHOSREW PAŞA, BOSNIAK], then in the *hâdiss-ode* [i.e.], and entered first the *büyüklük ode*, then the *hâzîne-odası*. His quarrelsomeness and disobedience led to the termination of his career within the palace, and he went out to the provinces as a *sipahi*: it was thus that he first went to the town of Köprü in Anatolia where he settled and married 'Â'îsha Khâdim, the daughter of the valvode of Köprü, Yünlü Agha, from the Kayadilî çiftlik in Hava. During Khosrew Agha's tenure as *agha* of the Janissaries, Köprülü again entered his service, and when Khosrew became Grand Vizier (1037/1628) Köprülü became his treasurer (*hâzînedâr*). Following Khosrew's execution (1041/1632), Köprülü served in certain provincial posts, as valvode or *agha*, probably in or near Köprü: according to Hüseyn Husâm al-Din, for example, he was *sandjak-beg* of Amasya for some eight months in 1044/1633-3 (*Amasya ta'rihi*, iv, Istanbul 1928, 61). He subsequently came again to Istanbul where he held a variety of posts such as those of Inspector of the Guilds (*hüsûd ağası*), Inspector of the Arsenal (*Tophâne nâsiri*), Commander of the *Sipahîs* (of the *alâi bölük*: *Sipahîler ağası*) and Commander of the Armoureds (*Dükkânî-bağlı*). Taking part as *sandjak-beg* of Çorum in the siege of Baghdad (1048/1638), in which he was wounded, he became attached to the Grand Vizier Kemâlsiz Kara Mustafa Paşa and was appointed *Kapıldılar-kethüdâsı* and, later, *Mu'ddâr*. In 1053/1643-4 he held the post of *sandjak-beg* of Amasya a second time, for some five months. Kara Mustafa Paşa's successor, Sultan sâde Mehmed Paşa, gave Köprülü the governorship of Trabzon with two *tuğs*. How long he remained in that post is unknown, but he later resided for a time in Köprü and then, in 1057/1647, became *mutesselim* for the *eyâlet* of Damascus when that province was given to the seventh *hâdîpekî* as a *bostankâhî* by Sultan İbrahim ('Imâm, *Ta'rih*, Istanbul 1281-3/1864-7, iv, 243; Silâhdâr, i, 225). While in this post, he was ordered to campaign, acting as *beglerbegi* of Karamân, against the rebellious

will of Sivas, Warwar 'Ali Paşa, who was advancing on Istanbul. Having fallen prisoner to 'Ali Paşa in the battle which ensued near Çankırı, he was rescued by İbrahim Mustafa Paşa (q.v.), who had also been deputed to deal with 'Ali Paşa (1058/1648; cf. Ewliya Celebi, *Seyahat-nâme*, Istanbul 1314-8/1896-1900, ii, 452). The following year Köprülü was sent against Boyun-Yarall (Boynu-Eğri) Mehmed Paşa, for whose execution an imperial rescript had been issued because of his oppression of the peasants. Köprülü avoided bloodshed by sending him a letter recommending that he immediately seek pardon from the Wālide Sultān, which advice Boyun-Yarall Mehmed Paşa took and thus was forgiven and spared (Na'imā, iv, 459-60).

During the Grand Vizierate of Gurgū Mehmed Paşa (1061-2/1651-2), the architect Kāsim Agha (q.v.), *Rehşād* to the Wālide Sultān, knowing of her dissatisfaction with the Grand Vizier, recommended Köprülü to her, but the initiative led only to Köprülü's holding the office of *şabbe alid vizier* for a week or so before the jealous Grand Vizier brought about his virtual banishment as *şanşah* beg of Kōstendū (Kara Celebi-zāde 'Abd al-'Aziz, *Rasail al-abrār* [Hay], Istanbul University T3292, fol. 65; Na'imā, v, 178). He was later dismissed and, according to Süllühār (i, 115-6), scraped a living during this period to certain minor posts, suffering imprisonment for debt. While spending some time in Köprü, he met in Kütahya (February 1655) with İbrahim Paşa, who was on his way to take up his appointment as Grand Vizier and who appointed him governor of Tarabulus al-Shām. Before Köprülü could take up his post, however, İbrahim had fallen; and Köprülü, dismissed, returned to Köprü (Na'imā, vi, 22, 125). Although Kāsim Agha advised the Grand Vizier Süleyman Paşa to seek Köprülü's help (February 1656), Süleyman Paşa did not heed the recommendation (Na'imā, vi, 129). Köprülü met with the newly-appointed Grand Vizier Boyun-Yarall Mehmed Paşa in Eskışehir a few months later and came with him to Istanbul; some time afterward he was once more appointed governor of Tarabulus al-Shām. But as the result of efforts made on his behalf with the Wālide Sultān by such as Kāsim Agha and the *reis al-hudūd* Şihmūsāde Mehmed Efendi, Köprülü was himself proposed for the Grand Vizierate, which post he agreed to accept on four conditions, which were such as to guarantee him absolute independence and freedom from interference. The Wālide Sultān accepted these conditions on oath, and the sultan appointed him the next day (26 Dhu 'l-Kāda 1066/15 September 1656).

Köprülü's appointment to the Grand Vizierate aroused great astonishment at first, since his career thus far had not been characterised by any great success (Mehmed Khāfi, *Ta'rih-i Çihilmi*, ed. A. Refik in *TOEM*, supp. [1340], 44), but before long his considerable abilities came to be widely recognised. Among his first acts was to deal with the Kādīzādele, who, since the time of Murād IV, had been engaging in troublesome sectarian quarrels in Istanbul and who attempted to provoke such a quarrel after Köprülü had been in office only eight days. Having tried persuasion, Köprülü caused their ringleaders to be banished to Cyprus (see Kātib Celebi, *The balance of truth*, tr. G. L. Lewis, London 1927, 134-4; Na'imā, vi, 227 ff.; Süllühār, i, 57-9). Köprülü continued his efforts to bring peace and order to Istanbul. Along with causing the executions of certain individuals, among them Abūza Ahmed Paşa, accused of laxity in the defence of Bozğja-ada

which he had surrendered to the Venetians, and the Orthodox Patriarch Parthenius III, who was accused of seditious activities, he succeeded in quelling a rebellion of the sipāhi dissidents (*torbas*) and purging their number (18 Rabi' I 1067/4 January 1657; for details, see *Ta'rih-i Çihilmi*, 44; Na'imā, vi, 246 ff.; Süllühār, i, 62 ff.).

Köprülü then set about preparations for a campaign to end the Venetian threat to the Straits and in particular to recover Bozğje-ada and Limnos. Having sent the fleet out first, under the Kapudan Paşa Topal Mehmed Paşa, he himself set out, as commander-in-chief, on 1 Ramaḍān 1067/13 June 1657. The Ottomans fared badly at first in the clashes at sea, but their fortunes changed when, on 19 July, a bell fired from the Anatolian shore struck the powder magazine of the flagship of the Venetian admiral Mocenigo, destroying it and throwing the Venetian fleet into confusion (*Ta'rih-i Çihilmi*, 44 ff.; Na'imā, vi, 279 ff.; P. Rycant, *The history of the Turkish empire from the year 1677*, London 1680, 54 [Mehmed IV]). Köprülü rewarded the successful gunner and others who had fought bravely but executed a number of high-ranking commanders held responsible for the earlier failures. This action disquieted even his supporters in Istanbul and led to agitation for Köprülü's removal by Kara Hasan-zāde Müseyn Agha, an influential member of the Janissary corps; his efforts were in vain, however (Na'imā, vi, 295 ff.). The Grand Vizier meanwhile continued his efforts to take Bozğje-ada, which goal his forces achieved on 21 Dhu 'l-Kāda 1067/31 August 1657 (for a letter sent by Köprülü to the Kizlar-ghash Mehmed Agha, see *Ta'rih-i Çihilmi*, 47; for other details, see Na'imā, vi, 289 ff.; Süllühār, i, 69 ff.), an event which caused great joy in Istanbul. In an imperial rescript sent to Köprülü, the sultan ordered him to remain until Limnos was taken, and Köprülü's existing forces were strengthened by timariots from Bursa and other *şanşahs*. Having repaired, supplied and garriooned Bozğje-ada, Köprülü dispatched Topal Mehmed Paşa to Limnos. After a 60-day siege from both sea and land, the defenders surrendered the fortress on 8 Şafar 1068/15 November 1657 on condition that those in the fortress be allowed to leave with their goods.

Having countered any danger to the state by opening the Straits and recovering the two islands lost to the Venetians in his predecessor's time, Köprülü went to Edirne (25 November 1657) where he had been summoned by the sultan on account of pressing problems in Transylvania (see *SENED*). The ambitious George Rákóczi II, prince of Transylvania since 1642, had, as a result of an agreement made with the King of Sweden in December 1656, marched against Poland with Transylvanian forces; and when he incited the begs of Wallachia and Moldavia to set with him, in defiance of the Ottomans, the imperial *divān* felt it necessary to take measures against him, deciding that a campaign should be undertaken, first by the *Khan* of the Crimea, and later under the command of the Grand Vizier (for details, see Süllühār, i, 57-9). The begs of Wallachia and Moldavia were also replaced (N. Iorga, *Histoire des Roumains et de la romanité orientale*, Bucharest 1940, vi, 226 ff.; Na'imā, vi, 321 ff.). Köprülü left Edirne on 22 Ramaḍān 1068/23 June 1658 and went to Belgrade. His army was strengthened by Crimean and Cossack forces, by the provincial forces from Buda and Silesia, and

by a force of 12,000 men sent by the King of Poland. Entering Transylvania, he moved first against Yanova (Kis Jénő), a key point taken in Kántini Süleyman's time but subsequently lost, and received the surrender of the fortress on 31 August. Rákóczy, who, under Ottoman pressure, had been replaced at the end of 1657, had returned and driven out the Ottoman-backed prince and re-established himself (see Szilády Áron and Szilágyi Sándor, *Török-Magyarokori állam-elméleti vázlat*, Pest 1870, iii, 442 ff.; Hódman Balint and Szekély Gyula, *Magyar történet*, Budapest 1935-6, iv, 80; Decel-Gükbüyük, *JA* art. *Erdély*). After the taking of Yanova, Köprülü caused the Crimean and Cossack forces to plunder Erdel Belgrad (Fehérvár), the centre of government, in order to seize Rákóczy, but the latter was understood to have escaped to a fortress on the Austrian frontier. Köprülü's desire to pursue him was thwarted by a summons from the sultan because of a revolt in Anatolia. He therefore appointed Akos Barcsay as prince on condition that he pay *harak* and that he hand over the areas (*mülhak*) of the fortresses of Sebeş and Lugoj, together with the cannon and munitions within them, and at the same time he charged the *beglerbegi* of Buda, Ken'an Paşa, with the oversight of that area (for the appointment of Akos Barcsay, see Uzunçapılı, *Ekoş Barcsay'ın Erdel kraliçasına tayini hakkında bir hac vesika*, in *Balint*, vii [1943]; idem, *Barcsay Akos'ın Erdel kraliçasına ödetti bazı orijinal vesikalar*, in *Tarih Dergisi*, iv [1952-3]; Na'imâ, vi, 354 ff.; Sübhâr, i, 126 ff.).

For some time a revolt of serious proportions had been building up in Anatolia. To the long-standing causes of unrest there were added the uncertainty and fear inspired in many *sipahis* and commanders by Köprülü's harsh behaviour. The leader of the dissidents was the *beglerbegi* of Aleppo, Âbâza Hasan Paşa (q.v.), who realised that his past actions constituted a cause for the sort of punishment which Köprülü had meted out to the *soroks* in the capital. With him, in Konya, gathered a number of commanders, among them the *vali* of Damascus, the vizier Tayyâr Paşa-zâde Ahmed Paşa; the *beglerbegi* of Anatolia; and some fifteen other active or retired *beglerbegis* who, fearing for their fates, sought to replace Köprülü with Tayyâr Paşa-zâde Ahmed Paşa. At first replying to the summonses from the capital to join the Transylvanian campaign with excuses, they subsequently openly declared their rebellion, saying that they could not join a campaign with Köprülü, who had caused the deaths of so many Janissaries and *sipahis* (Na'imâ, vi, 344 ff.). Ignoring an imperial command that they should either disperse to their several places or engage in the defence of Baghdad, the rebels came as far as the vicinity of Bursa. Summoned by the sultan, Köprülü arrived in Edirne on 24 Mubarram 1059/24 October 1658 and was present at an *ayak dâvâsı* three days later in the sultan's presence at which the *faruk* given by the *Şaykh al-Islâm* for the punishment of Âbâza Hasan was read out. Though a punitive force under the *beglerbegi* of Diyar Bakr, Murtağ Paşa, was already in the field, it was decided that Köprülü himself should campaign; and, accompanied by the sultan, he crossed to Üsküdar on 13 November 1658. Âbâza Hasan, meanwhile, using the pretext of the distribution of pay to the army in Istanbul, dispatched some 3000 *sipahis* to Üsküdar, ostensibly to collect their pay but in fact to assassinate Köprülü. The latter, however, apprised of the plot, removed the names

of 7000 *sipahis* from the rolls and executed about 1000 who were caught. The unrest caused in the army by this fresh show of force led him to abandon the campaign and leave the matter to Murtağ Paşa. Although Âbâza Hasan defeated the latter near Ilgın (15 Rabi' I 1060/11 December 1658), he was compelled to winter in 'Aynâb. Murtağ Paşa, having received reinforcements, pressed the rebels closely from Aleppo, depriving them of provisions and other necessities. When Âbâza Hasan's forces began gradually to desert to Murtağ Paşa, the rebel leaders went to Aleppo to submit to the government, only to be deceived and executed (23 Jumâdâ I 1060/26 February 1659: *Ta'rih-i Çihilâk*, 54 ff.; Na'imâ, vi, 378 ff.; Sübhâr, i, 127 ff.).

Following this outcome, Köprülü busied himself with the solution of internal problems like the local *hal* soldiery in Damascus who had been acting disruptively for some time, whom he struck from the rolls and replaced with five edas of garrison Janissaries from Istanbul; and the revolts of Çerkes Mehmed Beg in Egypt and of Mustafa Paşa, known as Kır Beg, in Antalya. Coming to Bursa with the sultan (19 July 1659), Köprülü instituted a sweeping attempt to bring order to Anatolia by summoning Isma'il Paşa, who had been left as *Ad'ım-mahdum* in Istanbul, and charging him with carrying out investigations (*taftiş*) throughout Anatolia, 'from Üsküdar to 'Arabistan', specifically to seize and punish any whom he found to have been involved in the Djâlâli revolts (see DJALALI in Suppl.), whatever their rank or station; to restore to *re'âyâ* status those falsely claiming to be 'askeri; to deprive those unable to prove their claim to be *sayyids* of their distinctive turbans; and to seize and send to the imperial arsenal any arms or weapons found in the possession of the *re'âyâ* (Na'imâ, vi, 415-6). But during these years he was also guilty of certain injustices such as bringing about the execution of the famous Deli Hüseyin Paşa (see MUSA'YIN PAŞA DELİ), in spite of the opposition of the *Şaykh al-Islâm*, by connecting false complaints (Rabi' II 1059/December 1658); and of Seydi Ahmed Paşa (1071/1660-1), long in state service and most recently active in the continuing struggle in Transylvania (for the defeat and death of Rákóczy in this period and for the conquest of Oradea by Köse 'Alî Paşa (Dhu 'l-Hicde 1070/August 1660), see *JA*, art. *Erdel*).

Köprülü divided the remaining months of his life between Edirne, to which he returned with the sultan in November 1659, and Istanbul. Age and illness greatly weakened him, and while journeying with Mehmed IV to Edirne in July 1661, Köprülü recommended, and the sultan agreed, that his son, Fâdî Ahmed Paşa, should succeed him on his death. Ahmed (Köprülü-zâde) was immediately brought from Damascus and made *Ad'ım-mahdum* in Istanbul. When his father's condition worsened, he was summoned to Edirne and acted as *Ad'ım-mahdum* for his father for 48 days until Köprülü's death on 7 Rabi' I 1072/31 October 1661. His body was brought to Istanbul and buried in the mausoleum near the *dâr al-hadîth* which he had built near Çemberli Taş (Sübhâr, i, 219 ff.).

During his five years in power, in a period when confusion reigned in all the institutions of state, Köprülü succeeded in crushing the prevailing spirit of rebellion and disorder through harsh and merciless acts. On this latter count, certain historians have characterised him as cruel and bloodthirsty (Sübhâr, i, 226; 'Oghlân-zâde Tâib, *Hadişat al-usnâ'î*, Istanbul 1271/1854, 166); but while he was not

guiltless of unjust acts, such judgements must be tempered by the recognition of the disabling turmoil which had afflicted the state since the death of Murad IV and of the great services which he performed in office ('Aja', II, 69 ff.). In fact, historians like Mehmed Khalife, 'Abdî Paşa, Na'ima and Râşid are united in praising Köprülü. When Köprülü came to the Grand Vaziriate, he said to those around him that the state expected service, not show from him, and he remained true to this principle to the end of his life (cf. the relation of Dürüş Efendi, the *âzâd* of the *Div al-sâde agâsi*, in Râşid, I, 18).

Köprülü caused the straits at Çanakkale to be strongly fortified (see ÇANAK-KALE SÖĞRAZI). His benefactions, estates, and endowments are to be found in a great many places: for example, a mosque, a school and shops in Yanova; a mosque and school in Râşid; and a mosque and a school in the town of Terakili in the *sandjak* of Bolu (see further the listing in *JA*, art. *Köprülüler* (Gökbelgin), vi, 897b). His sons-in-law, Kiblicî Mustafa Paşa, Kaplan Mustafa Paşa, Kara Mustafa Paşa (Mersinli) (q.v.) and Siyâvush Paşa, all held high positions during his own and his son's Grand Vazirate.

II. Fâdil Ahmed Paşa (Abu 'I-'Abbâs) (1045-82/1635-76), the elder son and successor of Köprülü Mehmed Paşa, was born in Köprü in 1635. Brought to Istanbul at the age of 7 by his father, he studied under the leading learned men of the period, first under 'Othman Efendi, later under Kara Celebi-zâde 'Abd al-'Âzîz Efendi (see KARA-CELEBİ-ZÂDE (4)). Through the influence of his father he was, while only 16, appointed a *müderris*, first at *âdâbiyye*, then at *dîvânî* level. Now known as Paşa-zâde, his lessons proved popular, and in 1657 he was raised to the *Şeyh-i İsmâ'îl*. Shortly after, however, upset by gossip amongst the *ulama*?, he abandoned the learned profession and took up an administrative post. In 1669/1659 he was, at the request of his father, appointed to the governorship of the *eyalet* of Erzurum with a *vizierate*. One year later he was transferred to Damascus. There he won great popularity by causing an imperial rescript to be issued removing two taxes, called *dâğık* and *karlık*, which his predecessors had levied on the people of Damascus and which had sometimes risen as high as 3-4 million *akças*. Under orders from the central government he moved against the Durûz (q.v.) and defeated the Mu'nis and Şihâbids, thereby securing the payment of a tribute of 500 purses and the abandonment of the brigandage in which they had been engaging for some time. He also caused to be made into a *beglerbeglik* the region where the Mu'nis and Şihâbids lived together with the areas of Saydâ, Bayrût and Şafad which till then had been governed by a *valide* (1660: for details, see *Diavûhir al-tavârih der ahvâl-i Fâdil Ahmed Paşa*, Süleymaniye-Esad Efendi 2242, fol. 4; Silâhnâme, I, 214-16). Although he was later appointed *beglerbeg* of Aleppo, he was summoned to Istanbul as *pa'im-makâm* before he could take up the post and subsequently succeeded his father as Grand Vizier (see above).

Amongst the new Grand Vizier's first concerns was the continuing unsettled situation in Transylvania. Some measure of order was established there, however, without Köprülü-zâde's direct intervention, by the victory in January 1664, near Sighişoara, of the *beglerbeg* of Yanova over Rakoczy's successor, János Kemény, which ensured the control of the Ottoman-supported Mihály Apafi. Though a campaign against Venice was mooted for 1663, this was

abandoned in favour of a campaign against Austria, which had constantly been attacking Ottoman frontier forts and outposts and which was seen as the more dangerous enemy. The army moved out from Edirne on 5 Ramadân 1073/13 April 1663. During discussions in Belgrade and Osijek with Austrian ambassadors, Köprülü-zâde demanded the destruction of a newly-built Austrian fortress (Zerinvár) facing Nagykanizsa in western Hungary; the withdrawal of Austrian troops from Transylvania; and the restoration of the annual 30,000 florin tribute which the Austrians had paid from the time of Süleyman I until 1606 (later, to Huda, modified to a demand for a single 200,000 *ghurush* payment like that agreed at Zsitva-Torok in 1606). The Austrians were unable to accept the last of these conditions, and Köprülü-zâde set off from Buda against the fortress of Nové Zámky (24 Dhu 'l-Hijja 1073/30 July 1663; see Kâtib Mustafa Zâhid, *Târîkh-i Uyyar*, Istanbul University TY2488; Râşid, I, 23 ff.; *Diavûhir al-tavârih*), to which he laid siege on 17 August and which finally surrendered on terms on 21 Şafar 1074/24 September 1663 (22 September in Montecuculi, *Mémoires de Montecuculi*, Paris 1712, 332 ff.). Having defeated subordinates to take several near-by fortresses, among them Neugrad and Nitra, Köprülü-zâde returned with the army to winter quarters in Belgrade, intending to move out from there against the Austrians in the spring. The campaign by the Hungarian commander Zrínyi and General Hohenlohe in January 1664, during which Bence, Debrecen and Pecs were occupied (*Magyar Irtelmei*, IV, 168), led the Grand Vizier to move toward Osijek; but on hearing that the local commanders had gained control of the situation, he returned to Belgrade (21 February 1664).

The fall of Nové Zámky, regarded as the last major block to the Turkish advance into Europe, had aroused great anxiety in Europe and led to contributions of men and money to the Habsburg cause from the Papacy, Spain, some of the German princes and even France and to the formation of a sizeable force under the command of Montecuculi. A Christian force laid siege to Nagykanizsa, in response to which Köprülü-zâde advanced on that fortress. The siege having been lifted at his advance, he took and destroyed Zerinvár (6 Dhu 'l-Hijja 1074/30 June 1664), the building of which had been one of the ostensible causes of the present campaign, and then moved northward, his forces taking Kiskomárom (14 July), Egervár, Egervár and Kemendvár (*Diavûhir al-tavârih*, fols. 82 ff.) and advancing to the river Rába (Raab). Here, near the village of St. Gotthard, they came face to face with the imperial forces under Montecuculi. Though Köprülü-zâde was actively engaged in peace negotiations with the Austrian ambassador, he decided to cross the river and engage the enemy. The bridge proved inadequate, however, and only a part of the Ottoman forces got across. In the battle which ensued (8 Muḥarram 1075/1 August 1664), these at first had some success but were ultimately driven back, both sides suffering heavy losses (for details, see Montecuculi, 426; Hammer-Purgstall, *Histoire*, XI, 281 ff.; Ahmed Muhtar, *Sen Gâ'ide-i 'Osmânîli ordusu*, Istanbul 1326/1908).

This defeat, though by no means decisive, forced a more defensive policy on the Ottoman army, which had previously moved as it willed (*Diavûhir al-tavârih*, fols. 90 ff.). But within ten days the two sides had signed the Treaty of Vasvár (17 Muḥarram 1075/10 August 1664) which largely satisfied Ottoman

ains and, in particular, left them in possession of Nové Zámky and assured their influence in Transylvania (for a Hungarian view of the treaty, see *Magyar történelm*, IV, 169; for the treaty, see Baron de Tetta, *Recueil des traités de la Porte Ottomane*, ix, Paris 1890, 50 ff.; *Ta'rikh-i 'Osmanî*, 90 ff.; Sütlükdâr, I, 361; Râşid, I, 78 ff.). After advancing to the area of Nové Zámky, which he had heard was to be besieged, Köprülü-zâde received there the confirmed copy of the peace treaty from Vienna and therefore returned to Belgrade where he wintered in order to oversee the implementation of the treaty. He returned to Edirne only in July 1665, and from there to Istanbul, inspecting the fortifications of the Dardanelles in company with the sultan on the way.

At a consultative assembly in December 1665, Köprülü-zâde proposed a major effort to take Kandiya (q.v.) in Crete, the siege of which had for years been the cause of heavy losses; and it was agreed that preparations for such a campaign should be put in hand. Departing from Edirne in *Dhu 'l-Kâda* 1076/May 1666, Köprülü-zâde crossed from Monemvasia, chosen as the mainland base for the campaign, to Canza in early November. The fleet was strengthened during the course of the winter and spring, and on 1 *Dhu 'l-Hijja* 1077/25 May 1667 Köprülü-zâde convened an assembly of the leading commanders in which the plans for the conduct of the siege were laid (*Diwanîr al-tawârih*, fol. 122; Defterdar Şari Mehmed Paşa, *Sübdât al-wakâ'if*, Süleymaniye-Besad Efendi 2312, fol. 4 ff.; Râşid, I, 164 ff.). The siege was pressed vigorously, with varying fortunes, until mid-November when Köprülü-zâde, who had lived in the trenches from the beginning of the siege in order to encourage the troops, suspended operations for the winter. During this period Köprülü-zâde received Venetian commissioners and was in correspondence with both the Doge of Venice and the Venetian captain-general Morosini with regard to negotiations about the fate of the fortress (*Diwanîr al-tawârih*, Köprülü Fazl Ahmet Paşa, 231; Râşid, I, 183 ff.). Both sides gathered reinforcements in the spring and, with Köprülü-zâde entering the trenches once more on 22 Muharram 1079/22 June 1668, the issue was again hotly contested through the summer (for details, see *Diwanîr al-tawârih*; Râşid, I, 203 ff.; Hammer-Purgstall, *Histoire*, xi, 321 ff.). Knowing that Köprülü-zâde would accept only the surrender of Kandiya, the Venetians approached the sultan, then in Yenihöhr (Larissa), in Thessaly, for more favourable terms, as a result of which Mehmed IV demanded to know of the Grand Vizier the situation, warning that it would be impossible to raise men and supplies were the siege to last another year. At an assembly convened by Köprülü-zâde on 8 Râjâb 1079/12 December 1668, it was agreed that the fall of Kandiya seemed close at hand, and arrangements were made to winter in the trenches (Râşid, I, 218 ff.). Friction amongst the Venetians and their allies led to the withdrawal of the allied fleet at the end of August 1669, which act left the Venetians little choice but to surrender. After six days of discussion, terms were agreed on 8 Rabi' II 1080/5 September 1669 (see Râşid, I, 240 ff.; Mu'ahadât *Meghmû'at*, II, 241 ff.; Noradounghian, *Recueil d'actes internationaux de l'empire Ottoman*, I, Paris 1897, 121 ff.). Köprülü-zâde received the 80 keys of the evacuated city and fortress of Kandiya on 27 September. He remained through the winter to repair the fortress and to have a new land survey (*ta'zir*) made in the Mediterranean islands. He also pacified

the Mainotes with a letter which he sent, and he forgave their outstanding taxes (for details, see *Diwanîr al-tawârih*, fol. 122 ff.; Köprülü-Mehmed Asım Bey 724, fol. 231-6; Bayvekalet arşivi, tahrir defterleri; Ewlyâ Çelebi, *Seydikhat-nâmâ*, viii, 498 ff.; Sütlükdâr I, 338). Returning by way of Tekirdağ, he arrived in Edirne in mid-Şafar 1081/early July 1670 and surrendered the sacred standard to the sultan.

(For diplomatic relations with France in the early 1670s, leading to a renewal of the capitulations on 5 June 1673 (19 Şafar 1084), see J. Chardin, *Voyages en Perse et autres lieux de l'Orient*, Paris 1811, I; A. Vandal, *L'odyssée d'un ambassadeur. Les voyages du Marquis de Nointel (1670-80)*, Paris 1900; Saint-Priest (ed. Schœrer), *Mémoires sur l'ambassade de France en Turquie*, Paris 1877; A. Galland, *Journal d'A. Galland pendant son séjour à Constantinople (1671-1673)*, Paris 1881; L. d'Arvieux, *Mémoires du chancelier d'Arvieux*, Paris 1735, IV; Hammer-Purgstall, *Histoire*, xi, 341 ff. See also İsmetizâde in *The Ottoman empire*, esp. at p. 1185a).

In 1670 a campaign was undertaken against Poland on behalf of Peter Doroshenko, hetman of a group of Ukrainian Cossacks, who had accepted Ottoman suzerainty in 1669; and on 7 Şafar 1083/4 June 1672, Köprülü-zâde left Edirne with the army, accompanied by Mehmed IV, who was to take an active interest in the campaign (for correspondence between Köprülü-zâde and the King of Poland in May 1672, see Râşid, I, 261 ff.). The principal object of the campaign, the fortress of Kamienets Podolskiy (see KAMENETS), was taken on 3 *Dumâdâ* I 1083/27 August 1672 after a nine-day siege (Nâbi Yûsuf, *Ta'rikh-i Kamînâti*, Istanbul University TY2418; al-Hâdidi (Hâdidi) 'Alî, *Ta'rikh-i Kamînâti*, Süleymaniye-Lala Ismail Efendi 308; 'Abdî Paşa, *Wakâ'it-nâmâ*, Süleymaniye-Halet Efendi 615, Topkapı Sarayı-Bağdat köşkü 217). The rapid Ottoman advance in Poland, and particularly the siege of Lewow, compelled the Polish King, Michael Wisnowiecki, to sue for peace; and terms were agreed at the recently-taken fort (*palanka*) of Buchach (18 October 1672; 'Abdî Paşa; Râşid, I, 284 ff.; Noradounghian, I, 52). The harsh terms of the treaty, which included the loss of Podolia and the Ukraine and the payment of tribute, made it unacceptable to the Polish Diet. Their refusal to ratify it and implement its terms led to further Ottoman campaigns in the following years, of which Köprülü-zâde, once again accompanied by Mehmed IV, directed those in 1673 and 1674. In the main action of the former year, Köprülü-zâde was appointed commander to save Khotin (q.v.) from the attack of John Sobieski, but the fortress was lost before he could arrive. The latter year saw a successful campaign into the Ukraine (Khotin having been retaken by the Khan of the Crimea) in response to Russian incursions. Köprülü-zâde, now in poor health, returned to Edirne with the sultan on 22 Şa'ban 1083/21 November 1674 (see Râşid, I, 317 ff.), and the campaigns of 1675 and 1676 against the Poles were left to others.

In his last years, Köprülü-zâde's illness worsened through his addiction to drink. Although he followed the sultan when the latter left Istanbul for Edirne with the army in early Şa'ban 1087/mid-October 1676, he was too ill to get even as far as Edirne and died on the Kara Biber *çiftlik*, near Eugene köprüsi (between Çorlu and Kırkağaç), on 26 Şa'ban 1087/3 November 1676 at the age of 41 ('Abdî Paşa), his death resulting from acute

dropsy brought on by drink (Sübhâr, I, 659). His body was brought to Istanbul and buried in his father's mausoleum near Çemberli Taş.

Köprülü-zâde's tenure in the Grand Vizierate was one of the two or three longest in Ottoman history. Tall and stout, with a round face and large eyes, he is described as dignified and inspiring respect. Especially significant is the high praise accorded his virtues by Sübhâr (I, 659) in view of that historian's harsh judgements on Köprülü Mehmed Paşa. Köprülü-zâde saw to the completion of pious foundations begun by his father, such as a half-finished *âdân* and mosque in Rumeli, and also of his foundations in Çemberli Taş in Istanbul (*Diwânü al-îmâriyyâ*, fol. 14); and, as evidence of the great value which he himself placed on learning, one may cite the library which he established near his residence (formerly that of 'A'isha Sultân, daughter of Sultan Ibrahim and wife of İpehîr Paşa) in the vicinity of Aya Sofya (Usunçarslı, *Osmanlı tarihî*, III/1, 438) and which he enriched with many very valuable books acquired both while as *müderris* and in later times. The *vakfiyye* for the library, which was drawn up two years after his death, in 1089/1678, and which makes provision for students and the teaching of certain subjects there, is now in the Köprülü library (no. 4 of the *vakfiyyas* of the Köprülü family; M. Gökmen, *Köprülülerimizden notlar*, İstanbul 1952, 32; Şaykhî, *Wâdî' al-fuâid*, İstanbul University T.Y.81, fol. 691). His other foundations include a mosque in Kandiya (for a copy of the imperial grant of the land (*mukâdime*) given him in Kandiya, dated Rabi' II 1081/August-September 1670, as well as other documents demarcating boundaries, see the above collection of *vakfiyyas* in the Köprülü library); mosques in Nové Zámky and Kamenets; and an unplanned *âdân* (later completed) in Izmir (Sübhâr, I, 659).

Fâdil Ahmed Paşa was also the patron of a number of men of learning and the arts, among them his private secretary (*mühürdar*), Hasan Ağa, author of the *Diwânü al-îmâriyyâ*, which is based on the documents committed to his charge (there exists in the Nationalbibliothek, Vienna, a Latin translation of this work, made in 1686 and entitled *Annalium gemma, auctore Hasanaga* ... Cf. A. Galland, *Journal*, t. N. S. Örik, *Hatıralar*, Ankara 1949, 197, n; Babinger, 216-17); Mazâkî, who was with him throughout the siege of Kandiya; Nâbbî Zuhdî, the author of the *Târîkh-i Uyan*; the *ra'îs al-kutub* Tâhib Ahmed Fendî; the poet Fennî; and Hüseyin Hestelerî (j.v.) (cf. Safâî, *Tağâkka*, İstanbul University T.Y.325, fols. 189 ff., 242 ff.; Şaykhî, fols. 680-786).

III. Fâdil Mustafa Paşa (1047-1102/1637-91), Ottoman Grand Vizier, the younger brother of Fâdil Ahmed Paşa. Born in Köprü in 1047/1637, he began *medrese* education together with his elder brother. Whether he received a *medrese* appointment is not known, but in 1079/1659 he is seen to have received a *se'adet* and to have entered the ranks of the sultan's guards as a *mâleferûşe* (Usunçarslı, *Osmanlı tarihî*, III/2, Ankara 1954, 431). In view of the facts that he was in Crete, together with his mother, for the whole of the final siege of Kandiya (1667-9), that he was at Fâdil Ahmed's side when the latter died and that he bore the Grand Vizier's signet ring to the sultan for the *berât* granting him a *se'adet* at this time, see Bayvekalet arşivi, Ali Emiri tasnifi, period of Mehmed IV, 129), all may suppose that he spent most of his time with his elder brother, on campaign. On 1 Dûmâdî II 1090/

29 June 1680 he became seventh vizier at the instigation of his brother-in-law, the Grand Vizier Merdîhoğlu Kara Mustafa Paşa (see KARA MUSTAFA PAŞA, MERDİHOĞLU). In November of the same year he served as guard (*muhafız*) to the Walide Sultân and the princes Süleymân and Ahmed when they went to Edirne; and he performed the same function the following year, now as sixth vizier, when they remained in Edirne after the departure of the army for Istanbul (Rabi' II 1092/March 1681) following the conclusion of peace with Russia. At the time of the army's departure on the Austrian campaign of 1683 (Rabi' II 1094/April 1683) he remained in Edirne as guard to the Walide Sultân, with the posts of fifth vizier and *hâ'im-makâm* of Edirne. He was later appointed to the governorship of the *âyâlet* of Silistria with the addition of Nicopolis (i.e. the *Öst muhâfîzât*) and became commander at Babadaghl (j.v.). With Kara Mustafa Paşa's dismissal and execution (December 1683) following the failure of the second siege of Vienna, and on the report that John Sobieski, King of Poland, was making preparations against Kamenets and Moldavia, it was decided to replace Fâdil Mustafa with a more experienced commander; he was summoned to the capital as *hâbe' al-vizier*, but kept the estates (*âkâr*) he then possessed (Rabi' II 1095/March-April 1684; Sübhâr, II, 127). Reaching Edirne in mid-May, Fâdil Mustafa occupied the position of third vizier in the *divân*; but before long he chose retirement, no doubt grieved by the enmity of the new Grand Vizier toward the Köprülü family. One year later, as the war with the Venetians in the Morea intensified, he was appointed commander (*muhtâfî*) of Chioce (according to Sübhâr, II, 222, transferred there from the command of Boghaz [Hîrâ] = Sedd al-bahr), subsequently being transferred to the command of Boghaz Hîrâ on 4 Rabi' II 1097/28 February 1686 (Sübhâr, II, 230).

On 30 Dhu 'l-Ka'da 1097/October 1687, shortly after a rebellious army had made his brother-in-law, Siyâvush Paşa, Grand Vizier and begun a march on the capital, Fâdil Mustafa was summoned to Istanbul as second vizier and *hâ'im-makâm*. Though Mehmed IV had some hope that Fâdil Mustafa might help him save his throne, past slights by the sultan made Fâdil Mustafa unsympathetic, and the latter was in fact closely involved in the deposition of Mehmed IV (2 Muharram 1099/8 November 1687). He soon fell out of favour with the army, the instruments of the deposition, however, through resisting their demands for donatives and attempting to establish discipline; and though his position was once saved by the new sultan, Süleymân II, he was subsequently effectively exiled by being appointed again to the command of Boghaz Hîrâ (7 Rabi' II 1099/10 February 1688; Sübhâr, II, 318 ff.; Zuhdî *al-wa'dî*, fols. 87 ff.; Râşidî, II, 25). He was spared a worse fate by the refusal of the *Şaykh al-feldm* to sanction his execution. A little later he was moved to the command of Cana, then to that of Kandiya, then, in Şafar 1100/December 1688, to that of Chioce.

With the war against the Holy League going badly for the Ottomans in 1688-9, particularly on the Austrian front, it was agreed by the *ulama'* to recommend to the sultan the appointment of Fâdil Mustafa Paşa to the Grand Vizierate, and he was accordingly summoned to Edirne (11 Muharram 1101/25 October 1689). His first act was to issue a declaration (*beyân-nâme*) designed to restore morale and to encourage the willing performance of military service. He also took steps to ease the lot of the tax-paying

subjects (*re'âyâ*) by removing a number of onerous extraordinary taxes such as the *resm-i âhşam* or 'arâş, a recently-imposed tax on drink which had led many Christian subjects in Rumeli to make common cause with the enemy (cf. *Zubdat al-wakâ'id*, fol. 122). During the winter he was engaged in preparations for a campaign which he himself was to lead; and on 6 Shawwâl 1101/13 July 1690 he left Edirne. He succeeded in recovering Pirot (10 August), the fort (*galanaka*) of Mîna Pasha, and, after a 23-day siege, the important stronghold of Nîh (9 September). Despite the lateness of the season and the opposition of his commanders, Fâdil Mustafa determined to march to Belgrade. Semendria fell after a three-day siege, on 23 Dhu 'l-Hijja 1101/27 September 1690, and Belgrade after an eight-day siege, on 4 Muharram 1102/8 October 1690 (*Silâhîdâr*, II, 301 ff.; *Zubdat al-wakâ'id*, fols. 169, 171, 173; *Râşîd*, II, 123 ff., cf. I, H, Danişmend, *Jahis Osmanî tarîhi Arzostokisi*, Istanbul 1947-55, III, 470). Detachments sent out from Belgrade succeeded in taking Boghuz-delen (Sabac) and re-establishing control over the Danube at Orşova but failed to recover Osijek. Having seen to the repairing and supplying of Belgrade, Fâdil Mustafa set out for Jetanbul (4 November 1690). During his return he was mindful of the *re'âyâ*, sending prisoners to their homes at the treasury's expense and also restoring lands and goods and providing the means of agriculture to those who had lived between Nîh and Belgrade but had been moved across the Danube by the Austrians and now wished to return. He spent the winter of 1690-1 dealing with matters such as uprisings in Egypt (by Ibn Wânî) and Cyprus (*Zubdat al-wakâ'id*, fol. 182) and instituting reforms in the Janissary Corps, the imperial stables and the imperial harrier whereby expediture was cut (*Silâhîdâr*, II, 559-60).

Though Fâdil Mustafa proposed that he remain in Istanbul in 1691 in order to oversee all fronts during the year and that another commander be sent to Hungary, it was thought best that he lead the campaign. By the time the army was ready to move (Shawân 1102/May 1691), Süleyman II was near death, and a faction opposed to Fâdil Mustafa was making efforts to restore Mehmed IV to the throne. Having taken measures to forestall these, Fâdil Mustafa left strict instructions, on departing from Edirne (18 Ramadân/15 June), that, in the event of the sultan's death, his brother, Ahmed, should be placed on the throne. When, on 25 Ramadân 1102/22 June 1691, Süleyman II died, Ahmed II ascended the throne without incident and confirmed Fâdil Mustafa Pasha in the Grand Vizierate.

Having reached Belgrade on 23 Shawwâl/20 July, Fâdil Mustafa bridged the river Sava; and when the Austrians, encamped at Varadin (Petrovaradin), advanced and then retreated, the Grand Vizier set off in pursuit, overriding the advice of his commanders that he should await the arrival of the Crimean Tatars and the provincial forces. When the Ottomans took up a position before the fort of Slankamen, the Austrian commander, his road to Varadin threatened and fearing being caught between the Ottomans and the Tatars, engaged the Ottomans in battle (24 Dhu 'l-Ka'da 1102/19 August 1692). The Ottoman right wing having been broken, Fâdil Mustafa himself led the attack to restore the position; but just as this was about to be achieved, he was struck in the forehead by a bullet and killed: the confusion consequent on his death led to the defeat and withdrawal of the Ottoman forces. The

battle of Slankamen thus saw not only a serious military reverse but also the death of an able Grand Vizier from whom much might have been expected. Despite a thorough search, Fâdil Mustafa's body was not found. (For details, see *Silâhîdâr*, II, 383 ff.; *Zubdat al-wakâ'id*, fols. 184 ff.; *Râşîd*, II, 161 ff.; Hammer-Purgstall, *Histoire*, xii, 319 ff.).

Fâdil Mustafa Pasha, though Grand Vizier for less than two years, grasped the true needs of the state and demonstrated the ability to implement necessary reforms. He appreciated the political necessity of countering European hopes of defections from amongst the Christian subjects by taking account of their interests and by making reforms in connection with the *diyya* and other obligations laid upon them (for the effects of the *diyya* reforms, however, cf. *gürva* II—Ottoman, especially 363b). To ensure the independence of the Grand Vizierate, he took steps to limit the number and influence of the *hâbbâsî* viziers. The practice of giving gifts (*'âdiyya*) to the sultans at *âyatims* by state officials was ended. In every provincial city he created councils of notables (*majlis-i a'yân*), modelled on the imperial *shûrâ*, to prevent the growth of local despotisms and to check abuses by keeping an eye on the judgements and procedures of *kâdis* and *mâhîs*. In Istanbul, however, his failure to enforce the *narh*, or fixed prices, on the grounds that the practice was not justified in the *ghar* and that trade should rest on the consent of the two parties, resulted in an increase in profiteering in his time of office. His learning, particularly in the fields of *hadîth* and lexicography, his devotion to the *ghar*, his dignity and his sense of justice are widely attested. He had three sons: Nu'mân, 'Abd Allâh and Es'ad (*Silâhîdâr*, II, 286, 387 ff.; *Zubdat al-wakâ'id*, fols. 187 ff.; *Râşîd*, I, 530; II, 215, 248 ff.; Hammer-Purgstall, *Histoire*, xii, 307; Saint Priest, *Mémoires*, 242 ff.; Shaykhî, II, 326 ff.; *Amasya ta'rihi*, IV, 22 ff.; U. Heyd (ed. Ménage), *Studies in old Ottoman criminal law*, Oxford 1973, 135).

IV. 'Amûdja-zâde Husayn Pasha (nephew of Köprülü Mehmed Pasha)—see 'Amûdja-Zâde HUSAYN PASHA.

V. Nu'mân Pasha (11081-1131/1670-1719), Ottoman Grand Vizier, the eldest son of Fâdil Mustafa Pasha. Born in Istanbul, he studied under Demir Kapılı Fâdil Süleyman and Kayserîlî Hâfîz al-Sayyid Ahmed Efendi, among others, and became *mutawallî* of the Köprülü *sekh* after his father's death. While Mustafa II was preparing for his second campaign against the Austrians, in 1696, he decreed that Nu'mân, like the administrators of other rich foundations, should take part in the campaign, providing 150 infantry. In Muharram 1112/ July 1700, Nu'mân Beg became sixth vizier and was betrothed to 'Â'îsha Sultân, a daughter of Mustafa II (*Silâhîdâr* *ghayil*). He became *beglerbegi* of Erzurum in Ramadân 1112/March 1701 and then, in Djumâdâ I 1114/October 1702, of Anatolia. His marriage to 'Â'îsha Sultân, set for the spring of 1703, was delayed in the confusion surrounding the uprising known as the *Edirne wa'k'af* which led to the deposition of Mustafa II (9 Rabî' II 1115/22 August 1703), who was replaced by Ahmed III. Following this event, Nu'mân Pasha was appointed commander (*muhtâf*) of Eğriboz (Rhodes), and by June 1704 he had become *muhtâf* of Crete, being charged with making a land survey (*tahrîr*) of the fields on the island (*Râşîd*, III, 137). Transferred to the command of Boghaz Hisâr on 26 Shawwâl 1117/10 February 1706, he was shortly after returned again to Crete. Though

the marriage ceremony with 'Āṣṣḥa Sultan was celebrated in Muharram 1120/April 1708, it was still to be several years before the marriage was consummated.

Appointed again to Eğriböz in Džumādā II 1121/August 1709, he was summoned to Istanbul four months later (Ramadan 1121/December 1709) to consummate his marriage (Rāṣhid, iii, 317-2; cf. ibid., iii, 317-8, however, where the consummation is said to have occurred in Muharram 1122/March 1710). He was made *beglerbegi* of Bosnia on 8 Shawwāl 1121/11 December 1709 but was then appointed to the command of Belgrade on 3 Dhu 'l-Ka'da 1121/4 January 1710 (Rāṣhid, iii, 313; cf. Uzunçarşılı, *Osmanlı tarihî*, iv/2, Ankara 1959, 291, who dates this appointment on 17 Rabi' I 1122/26 May 1710). On 18 Rabi' II 1122/26 June 1710, Nu'mân Paşa was elevated to the Grand Vizierate in the hope that he would be more resolute against the Russians and better able to handle the problem of the suppliant Swedish king, Charles XII, than his predecessor, Çorlulu 'Alî Paşa, had been (see 'ALÎ PAŞA ÇORLULU; Akdes Nimet Kurat, *İsvç Kıralsı Karl XII.'in Türkiye'de kalışı* . . ., Istanbul 1943, 227, 229); his appointment was met with general satisfaction. Despite a strong movement in the government to concentrate attention on the Black Sea and the Polish question, Nu'mân Paşa, trying to maintain peace with Russia, contented himself with announcing simply that a large army would see the Swedish king to his own country in the spring (see Rāṣhid, iii, 327; Ahmed Refik, *Memâlik-i 'Osmanîyye'de Demirbaş Şehri*, Istanbul 1332/1913-14, 30 ff.; A. N. Kurat, *op. cit.*, 232 ff.; idem, *XVIII. yüzyılın Avrupa sınımlarına harbine Türkiye'nin taraf-ıdır*, in *Bulletin*, vii, 1943, 268 ff.; Saint-Priest, *Mémoires*, 120-1).

Disappointed in his handling of both external and internal affairs, Ahmed III removed Nu'mân Paşa from the Grand Vizierate on 21 Džumādā II 1122/17 August 1710; he was subsequently appointed *muhâfız* of Eğriböz (*Silâhâr âḥayî*; Rāṣhid, iii, 330-1. For a relation concerning his wish to resign from the Grand Vizierate, see Behçetî, *Ta'vîh-i sultân-i Köprülü*). In the nine years before his death he held administrative and military positions continuously in various parts of the empire. He became *muhâfız* of Canca in Shawwāl 1122/December 1710, and of Kandiya in Dhu 'l-Ka'da 1123/December 1711, while on 19 Shawwāl 1123/8 November 1713 he was given the *sandjak* of Yanya (Ioannina) as an *arpaḥk* (*Silâhâr âḥayî*). The next year he was given the *eyâlet* of Bosnia together with the military command of the Karadagh (g.v.) area. While in this post he moved against the rebels of Karadagh, who were receiving aid from the Venetians, hunted them down and drove those who escaped to take refuge with the Venetians (Shawwāl 1126/October 1714; Rāṣhid, iv, 22-3. For the decree sent to him about this problem, see Bayvekalet arşivi, İbnülemin, dâhiliye, 2417).

Following this success, he was moved to the command of Belgrade (January 1715; *Silâhâr âḥayî*), where affairs were at a delicate stage; but under him, as in his predecessor's time, disorder in this frontier fortress increased, as did desertions from the local levies and the *kaptân* soldiery. Dismissed because of this in Rabi' II 1127/April 1715, he was transferred to the governorship (*muhâfızlık*) of the *sandjaks* of Işıl and Mentēṣha and given the task of following the activities of the *handis* who were profiting from the absence on

campaign of the *viziers* and *beglerbegis* of Anatolia (Rāṣhid, iv, 237, 240 ff.). In Shawwāl 1128/September 1716 he was made *beglerbegi* and *muhâfız* of Cyprus (*Silâhâr âḥayî*); and three months later he became commander (*sardâr*) in Bosnia while retaining the governorship of Cyprus (for part of the *firman* of appointment, see Uzunçarşılı, *Osmanlı tarihî*, iv/2, 294, n. 1). During the period when the Austrians gained Belgrade (Ramadan 1129/August 1717), Nu'mân Paşa beat back the enemy attack on Bosnia and forced the raising of the siege of Izvornik (October 1717). He remained active in the defense of Bosnia until after the signing of the Treaty of Passarowitz (22 Shawwāl 1130/22 July 1718) (see Rāṣhid, iv, 383; and for a copy of a decree sent to him in mid-Ramadan 1130/August 1718, see Bayvekalet arşivi, İbnülemin, dâhiliye, 2436) and was then transferred at his own request to the governorship of Crete in Ramadan 1130/August 1718. Falling ill as soon as he reached the island, however, he died in Kandiya on 16 Rabi' I 1131/6 February 1719 and was buried beside the mosque of Faḍlî Ahmed Paşa.

Nu'mân Paşa was accounted an honest and pious man of whom one author remarks that he would have been better suited to the office of *Şaykh al-Islâm* than to that of Grand Vizier (Charles de Ferriol, *Correspondance du Marquis de Ferriol*, Antwerp 1870, 120). He is said to have taken nothing from the estates attached to the various offices he held, but rather to have met his expenses exclusively from the income of the estates which he had inherited from his father (Behçetî).

Both his younger brothers and, of his sons, particularly Hâfîz Ahmed Paşa (d. 1183/1769) made a mark in public life, as have other descendants of the family down to the present day (see KÖPRÜLÜ MEHMET FUAḌ).

(M. TAYYIB GÖKALP, R. C. REYN)

KÖPRÜLÜ, MEHMET FUAḌ, until 1934 KÖPRÜLÜZADE MEHMET FUAḌ (1890-1966), prominent Turkish scholar and the pioneer of Turkish studies in the modern sense in Turkey. Born in Istanbul, he was the son of İsmâ'il Fa'iz Bey, a civil servant, a descendant of the sister of the famous Ottoman grand vizier Köprülü Mehmed Paşa (g.v.) who married Kibeli Mustafa Paşa, one-time vizier of Mehemmed IV. His mother Khadija Khânım was the daughter of 'Arif Hükmî Efendi, a member of the 'ulama' of İslâmiye in Rumeli (Sliver in present day Bulgaria). He was educated at Ayâspâşa junior high school (*rüşdiyye*) and at Merdân high school (*tîhâdî*) in Istanbul. Later, for two years he attended the School of Law (*İktisâdî Fihriyye*), which he left in 1909, but he was mainly self-taught. After teaching in various schools, he was appointed in 1913, with Diyyâ' (Ziya) Gökalp's support, to the chair of Turkish literature in the University of Istanbul, vacant upon the resignation of Kâzîm Diyyâ' (g.v.), a position which he kept until 1939. He also taught at the School (later Faculty) of Political Science (*Siyasî Bilgiler*) and in the Ankara Faculty of Arts (*Dâ'ir ve Tarih-Coğrafya Fakültesi*) (where he covered Ottoman history and institutions). He served for eight months as under-secretary at the Ministry of Education in 1904 and was elected deputy from Kars in 1936. After 1939 he settled in Ankara and joined political life. In January 1946 he became one of the four

founders of the Democratic Party (see DEMOCRAT PARTY). Following the 1930 elections he became Foreign Minister (1930-5) and Minister of State in 1935, but resigned from the party on account of a rift with the other leaders. Following the revolution of 27 May 1960, he was arrested and briefly detained on Yahuada (in the Sea of Marmara) where all Democratic Party leaders were being tried, but he was acquitted on all charges. In 1961 he founded the short-lived Yeni Demokrat Parti ("The New Democratic Party") and soon afterwards retired from political life. He died in Istanbul on 28 June 1966 as a consequence of an earlier traffic accident in Ankara.

Fu'ad Köprülü started his career as a poet and literary critic. His name began to appear towards the end of 1908 in various papers and periodicals particularly in the *İhtisat-ı Fünûn* [q.v.]. As a poet he belonged to the *Fecir-i Âti* group [q.v.], an extension of the *İhtisat-ı Fünûn* school. In 1912 he mainly contributed to the daily *Hakk* and its literary supplement. He gradually switched to research and in 1913 he published in *Bilgi Mecmuası* (I, 3-52) his "Method in the history of Turkish literature" (*Türk edebiyatı ta'rihiinde usul*). Like many young talents of his generation he came under the impact of *Diya'* (Ziya) Gökalp [q.v.] and of the Turkist movement which he led (see TÜRKÜDİZ), and contributed many articles to *Türk yurdu* (1913), the organ of the movement and to the daily *İkdam* where he serialised a study on folk poetry (February-June 1914). In 1915 he founded the journal *Millî İncelemeler mecmuası* ("Journal of National Research"), where he published some of his early important study on *Şekîl* poetry (I, 5-46). In July 1917 *Diya'* Gökalp founded the famous *Yeni Mecmuası* ("the New Review") which gathered together all the leading young writers of the period and where Fu'ad Köprülü published his new-style poems (in spoken Turkish, syllabic metre and on "national" topics as required by the new *Millî edebiyatı* trend) and his articles of literary criticism and research. After the publication in 1918 of his epoch-making monograph on "Early mystics in Turkish literature" i.e. Ahmed Yesevî and Yunus Emre (*Türk edebiyatında ilk mistik eserler*) and of the first two parts of his history of Turkish literature (*Türk edebiyatı ta'rihi*, I, 1920 and II, 1921), Köprülü concentrated his research on the origins and development of classical Turkish literature and culture in Anatolia; the evolution of Turkish Islam and Ottoman institutions; the Turkish legal system; and the development of Turkish literature in other literary dialects e.g. Azeri and Chaghatay. His work shed new light on the formative period of Turkish literature in Anatolia; very little research had been carried out in this field before him. But his greatest contribution is to have treated the evolution of the many branches of Turkish literature and culture as one unit and to have studied its development as a whole. In 1924 he founded in Istanbul University the Institute of Turcology (*Türkiyyatı Enstitüsü*) and its organ the *Türkiyyatı Mecmuası*. Apart from his many articles (some of which are independent monographs) published in various scholarly journals, particularly *Hayât*, *Türkiyyatı Mecmuası*, *Edebîyyatı Fakültesi Mecmuası*, *Belleken*, *Türk hahâk ve ihtisat ta'rihi mecmuası*, and the Turkish edition of the *Encyclopaedia of Islam* (*İslâm Ansiklopedisi*), Köprülü is the author of the following major works: *Türkiye Ta'rihi*, I ("History of Turkey"), Istanbul 1923 (covers the period up to the settlement of the

Turks in Anatolia); *Bugünkü edebiyatı* ("Literature of today"), Istanbul 1924 (collection of early articles on literary criticism and book reviews); *Türk edebiyatı ta'rihi*, I, Istanbul 1926 (revised and enlarged edition of the two parts published in 1920-21); *Millî edebiyatı gureyanların ilk mübahiseleri* ... ("Forerunners of the national literature movement"), Istanbul 1928 (contains selections from the 16th/17th century poet Edirneli Nazmî who experimented with "pure Turkish"); *Türk dil ve edebiyatı üzerine araştırmalar*, Istanbul 1934 (a collection of research articles and book reviews); *Les origines de l'empire ottoman*, Paris 1935; and *Türk saz şairleri*, in 3 volumes, the first of which is published for the first time (Istanbul 1966).

KOPUZ (see 'ÖN)

KORĀ or **KORĀ DJAHĀNĀBĀD**, an ancient town of northern India in the *Khadjuha* *shahī* of *Fathpur* District in the former British United Provinces, now Uttar Pradesh. It lies in lat. 26° 7' N. and long. 80° 22' E. on the Rind River some 12 miles/20 km. from the *Djannā* (Jumna) River between *Kānpūr* (Cawnpore) and *Fathpur*.

In early times it was apparently held by the *Rājput* line of the *Rājās* of *Agar*, and the fortress there may have been their ancestral centre. Under the *Mughals*, *Korā* (sometimes spelt in *Marāthi* and Persian sources as *Kurrah*, and to be distinguished from *Kāra* *Manikpur*, an adjacent but separate *sarkār*) formed a *sarkār* or district of *Allāhābād* *shāh* or province, with a revenue of 17,400,000 *damas* (Abu 'l-Fadl, *Ā'in-i Akbari*, II, tr. Jarrett and Sealcar, Calcutta 1949, 178). The great *Mughal* highway connecting *Allāhābād* with *Āgra* ran through *Korā*, and a bridge was built in ca. 1770 to carry the road over the *Rind*. During the fighting of the middle decades of the 18th century between the *Marāthi* invaders and the troops of the titular *Mughal* emperors and the *Nawab*-*Wāls* of *Awadh* or *Oudh*, *Korā* played a considerable rôle. A copper coin of *Akbar's* is known from the *Korā* mint, and it was a mint town of the later *Mughals* from *Shams al-Din Rafi'* al-Daradāt (1131/1719) onwards.

During the 19th century, the population of both *Korā* proper and of *Djahānshād*, the township adjoining it to the north-west declined (populations of 2,806 and 4,359 respectively on 1901, the proportion of Muslim to Hindu being then 44% and 27%).

KORĀA, modern Turkish *Korça*, Greek *Korymba*, Ottoman *Gürridje*, all from the Slavic toponym "Gorica", the only urban centre of importance in southeastern Albania, situated at the edge of the homonymous plain at the foot of the *Moravë* Mountains, which constitute the natural barrier

between the Korça plain and Macedonia. Korça was one of the most important towns founded by the Ottomans in Albania. Throughout the Ottoman period (late 14th century till 1912), Korça was a local administrative centre (*nâhiye*, *hüdud*), and later the capital of a *sandjak* in the *vilayet* of Manastir (Bitola) and a small Islamic centre.

The Ottomans annexed the eastern part of the present-day Albania in the last decade of the 14th/15th century and established their regular administration there, with the castles of "Görice" and Premeti (Permet) as bases. A *terminus ad quem* for the conquest, not recorded it seems by the Ottoman chronicles ('*Âşâhîpaşa* azade, Ortâ, Anonymus-Giese, Negârî, Sa'd al-Din), is the church of the village of Mborje 3 km. east of Korça on the first spur of the Moravë, which church was, according to its well-preserved inscription, built by Bishop Niphon in the year 1350. Throughout the entire 15th century the name "Görice" seems to have been used for a castle on the spur or the Moravë between the village of Mborje and the place where the town of Korça lies today. The Ottoman documents from the early period use "Enborye" (from Emperion) and "Görhje" indiscriminately. A fragment of a *hüsnü* register from Şafar 886/April 1481 mentions a *finde* of an "İshâk the Albanian" situated in the "*nâhiye* of Görice". This *finde* included eight small villages (mostly with Slavic names), of which one numbered six Muslim households and two households of Christians. (Sofia, National Library, Orient. Dep., No D 649, p. 26). The document is an indication for the early start of the Islamisation of the district of Korça, an Islamisation which was not solely restricted to members of the old native nobility. The castle of Görice was maintained throughout the 15th and the first half of the 16th century. When it disappeared is apparently not recorded. A *kapu defter* (Bashkakanlık arşivi [= BBA] T. D 70, p. 257) from 925/1519 (mentions a *diwan* of Christian *müslim* of the castle. The village of "Enborye, dependent on Görice" numbered, according to the same document, 28 households of Muslims, 7 Muslim bachelors, and 88 households of Christians as well as 10 Christian bachelors and 21 widows. According to a *kapu defter* of 930/1529-30, the same village numbered 15 Muslim households, 4 Muslim bachelors, 4 people with a *berâde*, 1 *spâhî*-side, and 101 Christian households and 25 Christian bachelors (BBA. T. D. 267, p. 172). The same document states that there was a *diwan* of Christian *müslim* in the castle of Görice consisting of 22 households and 9 bachelors. These *müslim* were freed from *ispence*, *acarsid* and *tehdilif* in exchange for the fulfilment of the duties of repair and maintenance of the castle. Besides these privileged Christians, there was a *diwan* of 5 Christian families in the castle who had to deliver yearly 1,500 arrows, for which service the state freed them from paying the *avârîd* and the various *tekâlif*at, but they had to pay *âğâr*, *gizây*e and *ispence*. The *diwan*î Aydin, son of Dimitri, this a recent convert, was freed from *âğâr*id, *ispence*, *acarsid* and *tekâlif*at-*î* *şeyh*ye for the service of keeping the water supply of the castle in good order.

The actual town of Korça is an Ottoman foundation, intentionally founded in order to form a Muslim urban centre in the district. The history of the foundation of Korça can be reconstructed with help of some Ottoman documents. In 891/1486 the Master of the Imperial Stables (*Afîrâhâr*), İlyâs Beg, received from Bâyezîd II the village of Bosotinë (Boboëticë, 7 km. south of Korça), dependent on Görice, as full

possession (Gökbilgin, *Edirne ve Paşa İdarisi*, 426). In 901/1495-6 the same person constructed a mosque and some other buildings in the village of Piskopiye near Görice. In 910/1504-5 İlyâs Beg drew up the *waqf-nâme* for his mosque in Istanbul, (the former Studion Basilica near Yedi Kule) and for his foundations in Piskopiye: a mosque, an *imâret* (in the sense of a building for the distribution of food to the poor), and a *madrâsahâne*. For the upkeep of these foundations, he allotted the tax revenue of four villages in the district of Korça (including Bosotinë and Piskopiye), the revenue of a village near Premeti, a *hammam* and seven shops in Istanbul, and another *hammam* and a mill in Janina (Yanya) in Epirus (extract of the *waqfiyye* by Gökbilgin, *Paşa İdarisi*, 427-8). The full extent of the foundations of İlyâs are not known, with certainty. According to a late 18th-century source, the *Hadîsat al-djendâri*, Istanbul 1281/1864-5, I, 196, İlyâs Beg founded "benevolent works like an *imâret*, a mosque, a *madrâse*, and a *mekteb*" in Korça. The *Kâmis al-a'âm*, (v, 3919) mentions: "a blessed mosque, a *madrâse*, an *imâret* and a *tekke*." Local tradition also attributes a *hammam* to İlyâs Beg. The *Kâmis* states explicitly that the Beg "laid the foundations of the town" by building the above-mentioned objects. It is possible that İlyâs Beg, or his sons, added to the foundations of 910/1504-5 at a later date.

The *Kâmis* further states that İlyâs was one of the dignitaries of the time of Mehmed Fâtih and tutor and *madrâhâr* of Bâyezîd II. The *Hadîsat* noted that he was an Albanian by birth and that he was buried in Görice. In a *waqfiyye* of 925/1509-10 (see Gökbilgin, *Paşa İdarisi*, II, 222), he styles himself "İlyâs Beg b. 'Abd Allâh". He was thus of local Christian origin. İlyâs Beg was married to the Ottoman princess Hürri Khatûn, daughter of Murâd II and Umur Kulîdîn Khatûn. The place where he erected his buildings, Piskopiye, explicitly styled a "village" in the 910 *waqfiyye*, must have been the seat of a local bishopric in pre-Ottoman times. The *Kâmis* states that İlyâs Beg constructed his buildings on the site of a destroyed old monastery. The name "Görice", sc. Korça, came to be used for the new urban settlement which developed around the nucleus formed by İlyâs's buildings. In the Istanbul *Tahrîr* of 953/1546, edited by Barkan and Ayverdi (Istanbul 1970, 375), the buildings of İlyâs are situated in the "*hasaba* of Görice." The new settlement thus supplanted the old one and probably absorbed its population, as it did with that of Mborje or Enborye 3 km. away from the new centre. The latter sank down to a hamlet of a few houses around the preserved Byzantine church of 1390.

The development of Korça in the 16th and 17th centuries cannot have been a spectacular one. Hâdîdî Khatûn (tr. Von Hammer, *Rumeli und Bosna*, 141) mentions it in the first half of the 17th century as an administrative subdivision of the *sandjak* of Ohrid. Ottoman lists of the *Mâdîlîs* of Rumeli from 1078/1667-8 and 1203/1788 mention Görice as the seat of a *hâdîlîk* of one of the lowest orders (Çazgîn in *Uzunçarşılı arnavatları*, Ankara 1976, 265, 300). Neither Muhammed-i 'Âşâhîk nor Ewliya Celâbi describes Korça, nor does Marc Bizal or other travellers, without doubt because it lies almost 60 km. off the Via Egnatia, the main road through the country.

In the second half of the 18th century, the development of the town received a strong impetus from the immigration of inhabitants of the Welachian trade metropolis of Voskopojë (Moschopolis), 20 km. due west in the mountains. Between 1766 and 1779 this

large urban settlement fell prey to the disorder which at that time reigned supreme. The French consul of Thessaloniki, Félix Beaujour, and the British traveller Colonel Leake, both writing in the first decade of the 19th century, describe Korça as a place with 450 houses and a population of 3,000 souls. After that time the development of the town increased in speed. J. G. von Hahn (*Albanische Studien*, Jena 1854, 55) spoke of "dem rasch aufblühenden Gjortscha." Other sources mention 10,000 inhabitants in 1859. In the eighties of the last century, Sâmî Bey describes the town in his *Kâmil al-sûlâm* as a place with 18,000 inhabitants, 757 shops, 23 *âkâs*, two mosques, one *medrese*, one *tekke*, one *imâret*, two *hamâmâs*, a clock tower and four churches. At the end of the century the town was burnt down in a general conflagration. It was rebuilt under Ahmed Eyyüb Paşa according to a new and modern plan with wide and straight streets which crossed at a right angle, a plan which still characterises the place. Between 1887 and 1903 Korça possessed a special Albanian school, the very first school where lessons were given in the Albanian language. As such, the place played a role of first importance in the development of Albanian nationalism.

From the sixties of the 19th century, Korça was the capital of a sizeable *sandžak* which comprised much of south-eastern Albania and a part of present day Greek Macedonia. Around 1900, Heinrich Geler numbered 2,027 houses in Korça, of which 1,420 were inhabited by Albanian Orthodox Christians, 102 by Vlachs and 505 by Muslim Albanians (*Vom Heiligen Berge und aus Makedonien*, Leipzig 1904, 100). Other sources also mention population two-thirds Christian and one-third Muslim. During the upheavals of the Balkan Wars (1912-13), the town suffered particularly from the struggle between pro-Greek Albanian-speaking Christians and Albanian nationalists, both Muslim and Orthodox. During the French occupation, in 1916, a short lived "Republic of Korça" was proclaimed. After the First World War, Korça remained within the frontiers of the new Albanian state. According to a French census of 1916 it numbered 22-23,000 inhabitants, of whom 17,779 were Orthodox and 5,464 were Muslim, all Albanian-speaking (Justin Godart, *L'Albanie en 1922*, Paris 1922, 94). The total number in the district of Korça was 39,533 Muslims and 17,671 others. At present, the number of inhabitants of the town has passed the 50,000 mark.

Korça is the native town of the "Ottoman Moustekieu", Koçi Beg (q.v.). His family lies buried in the yard of the Mirâkhor Mosque. The famous man himself rests, according to Bursalî Mehmed Tâhir's *Öğütânîl me'ârifleri*, in the graveyard along the Manastir Road, but according to Babinger (*Geschichtsschreiber*, 183), in the yard of the Korça mosque itself. The family of the famous viceroy of Egypt, Muhammad 'Alî (q.v.) also came from Korça.

Korça is today a modern industrial centre, manufacturing textiles. The mosque of Mirâkhor İlyâs Beg remains standing and is, together with the *Hibe* of the Beg, an officially-recognised Monument of Culture. It lost its tall minaret during the fury of the Albanian Cultural Revolution of the spring of 1967. The mosque is one of the best examples of early classical Ottoman architecture in the country, a building which contributed considerably to the formation of Islamic architectural forms in Albania in the succeeding centuries.

Bibliography: Given in the text, but see also A. Büken, *Die Provinzen des osmanischen Reiches*,

Wiesbaden 1976, 71. (The *Tapu defters*, preserved in Istanbul and Sofia, have not yet been published).

(M. KIEL)

KORDOFÂN (Kurdofân) a region of the Democratic Republic of the Sudan lying west of the White Nile roughly between lats. 16° and 10° N. and long. 32° and 27° E.; it is now divided into two provinces, Northern and Southern Kordofân, with a population of 3,103,000 (1973 census). The name, often pronounced locally and earlier written as Kordofâl, is said to come from a small hill some ten miles south-east of al-Ubayyid (lat. 13° 11' N., long. 30° 14' E.); before the present century the name referred to the central settled area rather than to the whole region.

1. GEOGRAPHY AND ETHNOLOGY

A vast (about 147,000 square miles) open plain, forming a segment of Africa's Sudanic Belt, Kordofân may be divided into a number of ecological zones; the semi-desert in the north, a central *for* (stabilised sand dune) zone and the Nuba Mountains of the south-east. The mean annual rainfall ranges from less than 100 mm. in the far north to between 6 to 800 mm. in the south; the human ecology reflects this transition from camel and sheep nomadism in the northern zone which itself merges into the Bayûda Desert, to mixed hoe agriculture and pastoralism in the central zone and cattle nomadism in the south. Only in the Khayrân depression north of Bâra is irrigated agriculture practised.

The ethnography of Kordofân is complex, being historically the result of an Arab or Arabised component immigrating and intermingling with a discrete indigenous population; Arab nomads and semi-nomads, predominantly Kabâbîh, Dâr Hâmîd, Hâmar and Bîdayriyya live in the north and centre, while in the south the cattle nomads (*Baḥḍarai*, *Mîḍriyya*, *Humr* and *Hawazma*, form but a part of the "Baḥkîra belt" that stretches west to Lake Chad and east across the White Nile. The towns, established in the 18th century mainly by *Djafaliyyân* and *Dankîla* immigrants from the Nile Valley, are found in the central zone, al-Ubayyid, Bâra, Umm Rawḥba and al-Rahad, an area of rain-fed agriculture which produces Kordofân's main export, gum arabic from the *aghâb* tree (*Acacia senegal*). The Nuba Mountains are inhabited by a medley of ethnic groups, whose generic name, Nuba, conceals a linguistic and ethnic diversity which defies generalisations; at least thirty languages belonging to several different language groups are spoken. In the 20th century, partly because of colonial policies, the Nuba have increasingly moved their settlements down from the mountains onto the plains below.

2. HISTORY

Neither the name nor any certain information about the region appear in the mediaeval Arabic geographical literature; nor can anything very certain be said of the early peopling of Kordofân or of the course or chronology of the Arab immigration. A letter from the ruler of Bornu dated 794/1391 to Sultan al-Zâhir Barḳûk of Egypt may imply the penetration of Djughlîm and other Arab nomads through Kordofân and beyond to the Lake Chad region (al-Kalḥashandî, *Ṣubḥ al-aṣḡar*, viii, 116-18; Yûsuf Faḍl Ḥasan, *The Arabs and the Sudan*, 163), but of the two possible directions from which the original Arab nuclei of the modern Baḥkîra tribes might have come, North Africa seems more likely than the Nile. The Baḥkîra tribes in their present formation probably do not go

back beyond the 17th century. Oral traditions remember the existence of an Arab nomad confederation, the *Fazîra*, in Northern Kordofân in the 10th-11th/16th-17th centuries; recent research has discovered references to Egyptian merchants trading with merchants from *ḥarr al-sūdân jazîra* ca. 1530. The *Kabbîsh* of Kordofân and the *Zayyidiyya* of Dâr Fûr [s.v.] appear to have emerged out of the débris of this confederation. In sum, it would appear that the earliest Arab penetration cannot be dated much before the 8th/14th century, probably following the collapse of the Christian Nubian kingdoms of the Nile Valley.

Fundî, Musabba'ât and Fûr rule. Following the emergence of the Islamised Fundî [s.v.] sultanate of Sinnâr at the beginning of the 10th/16th century, Kordofân experienced a secondary wave of Arabisation and Islamisation through commercial and political influences from the Nile Valley and the missionary activities of itinerant *fakîhs*. The spread of Islam among the indigenous inhabitants is illustrated by the emergence of Takâlf, a small Islamised kingdom, whose foundation at least as a Muslim state is traditionally ascribed to Muḥammad al-Djâ'ali, a *fakîh* who came from the north in about 939/1530. Occasional glimpses of this spread of Islam may be found in the biographical dictionary of Wad Dayf Allâh, in the early 18th/17th century Tâḍî al-Dîn al-Bahârî from Bagdad visited Takâlf. Later in the century the *fakîh* Ibn al-Kaddîf visited Kordofân; he taught a local *fakîh*, Qadwat Allâh, whose son Muḥtâr was killed by Djankal (see below) (Muḥammad al-Nûr b. Dayf Allâh, *Kitâb al-Fahâḥât*, ed. Yusuf Faḍl Ḥasan, Khartoum 1971, 127-9, 87-8, 130, 345-6).

In historic times Kordofân became a "buffer territory, now the prey of its eastern, now of its western neighbours" (MacMichael, *Kordofân*, 5), that is, between Sinnâr and the rising Dâr Fûr sultanate (established ca. 1650). Bâḍ II of Sinnâr (1654-92/1644-5 to 1681) invaded and subdued Takâlf, and Sinnâr and occasionally recruited Nûba as mercenaries. Thereafter Sinnâr exercised an informal hegemony over central and eastern Kordofân through their protégés, the *Ḥudîyyât*, living to the south of al-Ubayyîd, some of whose chiefs appear in Fundî documents with the title *shaykh Kurfudân*.

Sinnâr's overlordship was disputed in the late 17th and 18th centuries by three generations of Musabba'ât (king, Musabba'ât) chiefs, who attempted to carve out a kingdom for themselves in Kordofân. By origin from Dâr Fûr, Djankal, ʿIsâwî and Ḥāḥim, grandfather, father and son, attempted to play off Sinnâr and Dâr Fûr against each other.

Although the Musabba'ât succeeded in ousting the Fundî, in about 1200/1785-6 Ḥāḥim's activities provoked an invasion by Sultan Muḥammad Tayyâb (ca. 1166-1200/1752-3 to 1785-6) from Dâr Fûr. Thereafter, despite Ḥāḥim's attempts at resistance, Kordofân was ruled by Dâr Fûr. Among Dâr Fûr's governors (*maḥdûm* pl. *maḥdûm*) in Kordofân, Muḥammad Kurra and Musallîm al-Tarḥîwî encouraged trade in gum, ostrich leathers and slaves, granted land to *fakîhs* and others around al-Ubayyîd and Bârâ, and curbed the nomads.

Turco-Egyptian rule 1821-85. In 1821, as part of a wider invasion of the Northern Sudan, Muḥammad 'Alî Pasha (p.e.), wâḥî of Egypt, sent an expedition of 3 to 4,000 troops and an artillery battery under his son-in-law, the *daḥardâr* Muḥammad Bey Khuraw, to conquer Dâr Fûr and Kordofân (al-Djibartî, *Adḍi'â* al-d-Dâr, iv, 318). After success-

fully crossing the desert, the *daḥardâr*'s army destroyed the Dâr Fûr garrison and killed the *maḥdûm* Musallîm at Bârâ on 20 August 1821; Khuraw was prevented from invading Dâr Fûr by a fierce revolt along the Nile. Al-Ubayyîd continued as the capital of what was now a province of the Turco-Egyptian Sudan, although the actual administrative arrangements fluctuated greatly (the governors are listed in R. L. Hill, *Rulers of Sudan, 1820-1885*, in *Sudan Notes and Records*, xxxii/1 (1951), 85-95).

Muḥammad 'Alî had conquered the Northern Sudan to obtain slaves and gold; Kordofân yielded both, some alluvial gold from Djabal Shaybîn in the Nuba Mountains and slaves from those owned within Kordofân or captured by Baḥkîra raids upon the Nûba and other southern peoples. As in other parts of the Sudan, the authorities themselves organised slave raids to the south; Rustum Bey (governor 1828-33) on one raid in 1830 seized 1,400 captives. Despite prospecting by W. P. E. S. Rüppell, J. von Russeger and others, the hopes of substantial gold deposits proved largely chimerical. For most of the Turco-Egyptian period neither the Baḥkîra nor the Nûba were ever brought under an effective administration; Djabal Takêl put up a particularly prolonged resistance.

The Mahdiyya 1885-98. Kordofân was the scene of the first and final acts of the Mahdiyya (see *MAHDIYA*, iv. In the Sudanese Mahdiyya) Although its history belongs to the wider history of the Mahdist Sudan, events in Kordofân contributed decisively to the success of the Mahdist Revolution. Thus, among the *Djâ'aliyyûn* settled in the province, a bitter conflict had developed between two factions led by Ilyâs Pasha Umm Birayr and Ahmad Bey Dafa' Allâh al-'Awadî. The former was appointed Governor of Kordofân by C. G. Gordon, but was dismissed following a revolt by the *Ḥudîyyât* instigated by his rivals. It was with Ilyâs and others, embittered with the Turco-Egyptian régime, that Muḥammad Ahmad, the future Mahdî, made contact on a visit to al-Ubayyîd, probably in 1879.

Following his manifestation (*sukûṭ*) on 29 June 1881 and initial successes against the Turco-Egyptian authorities, the Mahdî, following prophetic precedent, made his withdrawal (*hiḡra*) into Kordofân to Djabal Kadîr in the Nuba Mountains. It was in Kordofân that the Mahdî found the support and won the victories that firmly established his rule; on 19 January 1883 al-Ubayyîd finally capitulated and the destruction of the Hicks Pasha relief expedition at Shaybîn, south of al-Ubayyîd, on 5 November 1883 gave the Mahdî complete control over Kordofân. In the context of these victories, Gordon's proposal that the Mahdî be made "Sultan of Kordofân" was derisory.

During the Mahdist period, Kordofân was basically administered from al-Ubayyîd by a deputy-governor (*wakîl*), but for most of the period was combined with Dâr Fûr to form one great province of the West (*ʿimâlat al-gharb*) under 'Uthmân Âdam (1888-91) and Maḥmûd Ahmad (1892-96). Not everyone in Kordofân accepted the Mahdiyya; the *Kabbîsh* under their Shaykh, Sâḥib Faḍl Allâh Sâḥim, who was in touch with the Anglo-Egyptian authorities, resisted until he was killed in May 1887. A revolt of a different nature was the mutiny of the *dhakdiyya*, slave troops armed with rifles, at al-Ubayyîd in 1885; they marched off to the Nuba Mountains killing the provincial governor, Maḥmûd 'Abd al-Kâdir, when he attempted to stop them.

In late 1896, under the threat of the Anglo-Egypt-

tian advance, the *Khalifa* 'Abdallahi ordered Mahmūd Ahmad to march east with the bulk of the forces of Kordofān and Dār Fūr. After the defeat at Karvārī (Cindurman) on 2 September 1898, the *Khalifa* withdrew into eastern Kordofān to Shirkayla; he was hunted down and killed at Umm Dibaykarāt, near Kosti, on 24 November 1899.

Condominium rule 1898-1956 and independence. At the outset of Anglo-Egyptian Condominium rule in the Sudan, Kordofān was in a state of chaos; bands of Mahdist supporters roamed unchecked and the tribal order had largely disintegrated both as a result of the deliberate policy of the *Khalifa* and through the loss of herds and slaves. Order was gradually imposed by punitive patrols, the Nūba under their *maliks* (chiefs) and *kuḍūrs* (ritual experts) forming particularly strong pockets of resistance until the 1920s. By 1921 the railway joined al-Ubayyid to Khartoum and the gum trade was revived.

In the 1920s direct military administration gave way to 'indirect rule', and local administration came to be largely committed to the tribal chiefs. Tribes like the Kabābīsh under a strong leader, Sir 'Alī al-Tūm Faḍl Allāh Sālim (1874-1938), prospered; others, such as the Hamar, were re-assembled from the fragments left by the Mahdiyya. Al-Ubayyid grew rapidly as the centre for the gum trade.

Since independence (1 January 1956) Kordofān has been one of the most prosperous and peaceful regions of the Sudan, although the rapid encroachment of the desert has become a major threat. Provincial and local government reorganisation in the early 1970s has largely transferred power from the tribal leadership to the administrators and locally-elected committees of the Sudanese Socialist Union.

(R. S. O'FAHEY)

KORDOS, the Ottoman Turkish name of the ancient Greek city of Corinth in the Morea (p. 6). It has a naturally fortified citadel ('Ακροκόρινθος) overlooking a fertile plain (whose main product is currants) and dominating the isthmus between continental Greece and the Morean peninsula as well as the two adjacent ports on either side. Corinth remained under Byzantine rule up to 1202, when it was conquered by the Crusaders; it passed to the Florentine family of the Acciaiuoli (1358), to the Greek despot of the Morea (1395), to the Hospitallers of Rhodes (1400) and again to the Greeks (1404). The region of Corinth was attacked by the Turks of Aydin in 1327, and in 1362 it is reported to have been deserted owing to Turkish raids. The city was attacked by the Ottomans under Evrenos in 1395 and conquered after a siege by Mehmed II in 1458. In 1488-9 Corinth had a Christian population of approximately 18,000; after ca. 1400 the existence of Albanian settlements was signalled for the region. According to Evliya Çelebi, it formed a *sandjak* of the *eyālet* of the Morea (*Seydhan-ı meṣrī*, i, 185). In 1624 it was temporarily conquered by the Hospitallers of Rhodes; in 1682 it passed to the Venetians and again to the Ottomans in 1725. Finally, in 1822 (the second year of the Greek War of Independence) it was taken by the Greeks.

(E. A. ZACHARADOU)

KÖRFÜZ, KÖRFÜS (the first spelling in e.g. Piri Re'is and Rāshid, the second in Peñoni), the Turkish name for the island of Corfu off the coast of Epirus. Piri Re'is gives a full account of the island, together with a map, in his *Bahriyye* (ed. Kable, Berlin and Leipzig 1926-7, i, 115-16, No. 54). The Ottomans never succeeded in dislodging from Corfu the Venetians, who controlled it from the opening of the 15th century until 1797, but there were two major Turkish attempts to occupy the island.

The first took place in Rabī' I 944/August 1537 in the reign of Süleymān the Magnificent. The fleet assembled in spring of that year at Awlonya under the great corsair captain Khayr al-Dīn Barbarossa and Lutfi Paşa, then third vezir [g.v.], with the sultan in charge of the land forces. The town of Corfu was besieged for 43 days, but with the approach of winter, the Turks withdrew, the sultan returning to

Edirne whilst the fleet attacked and plundered Cephalonia (see Pečević, *Ta'rih-i İstanbul* 1283/1866-7, I, 194-200; Hâşimî Râfi, *Tuhs-i al-hikr*, tr. J. Mitchell, *History of the maritime wars of the Turks*, London 1851, 35-8, drawing on the *Shamsi-nâma* of Sayyid Murîd, see Bibl. to BÄYAZID-AL-DİN FAHMA, BARBAROSSA). The second and last attempt took place in 1115/1716 under Ahmed III, towards the end of the Ottoman reconquest of the Morea (g.r.v.) from Venice, when the attack was led from the land by the Serasker Kara Mustafa Pasha and from the sea by the Kapudan-ı Deryâ Mehmed Paşa, and was again unsuccessful (Râşid, *Ta'rih-i İstanbul* 1282/1865-6, IV, 126, 129, 246).

Bibliography: given in the article; for a good general account of Körfü's history, see *Encyclopaedia Italiana*, art. *Körfü*, and for the two Ottoman campaigns, Danışmend, *İzâhî osmanî tarihî kronolojisi*, II, 195-6, IV, 9. (En.)

KÖRITZA (see KÖRKA).

KÖRĖD u. BÄYAZİD, ARU 'L-KHAYR MUHAMMAD (874-919/1470-1513), Ottoman prince and eldest of the eight sons of Sultan Bâyezid II (g.u.). He was born in Amasya where his father was governor (La'ifi, *Ta'dkîr*, 66; Nizâmîdî Mehmed Paşa, *Ta'rih-i*, 181; Cf. Kemal-paşa-zâde, *Tawârih-i ilâ-i 'Osmân*, Millet nos. 32, f. 23 etc., and Hüseyin Hüsameddin, *Amasya tarihî*, II, 226). He spent his childhood and had his early education in the Old Palace at İstanbul in the care of his grandfather Mehmed II, after whose death in 886/1483 he was briefly placed on the throne, for some 17 days, by the Janissaries until his father returned from Amasya to assume power. Later, Korkud returned to Amasya and in 896/1491 was appointed governor of Sarukhân. His request to have the governorship of Bergama instead of Manisa was refused by his father, and perhaps upon the suggestion of his brother Ahmed, governor of Amasya now, he was transferred to the governorship of Tekke and Antalya in 907/1502. Shortly afterwards, the *sandaks* of Hamid with a *hâşş* of 243,363 *akçe* and the *akmecl* of Lâzkiye, amounting to 100,711 *akçe*, were added to his personal *hâşş* of 337,091 *akçe* (see the *fermân* of Dhu 'l-Ka'da 908/May 1503 in Topkapu Saray arşivi E. 6356).

The fact that his father and the leading estate dignitaries, headed by the Grand Vizier Khâdim 'Alî Paşa, favoured Ahmed as heir to the throne offended Korkud, and caused him to withdraw into seclusion on Antalya coast (Muharram 914/May 1508; see 'Alî, *Kush al-ahbâr*, İstanbul Univ. Libr., Tich. no. 5059, II, f. 152), despite his *hâşş* being increased to 2,302,755 *akçe* (for the *fermân* dated 5 Sha'bân 914/29 November 1508 and sent to Korkud, see TKSA E. 6357). He obtained permission to go on the Pilgrimage, and left for Egypt with 50 men and 87 slaves in Muharram 915/May 1509, sailing with five ships under the *Ra'is* Ak-bağ. He landed at Damietta after five days and arrived in Cairo on 9 Safar/29 May (for details, see 'Alî, I, 153), but did not feel that he was wholly welcome (details in TKSA, various letters in dossier No. 6684). However, it is clear from the Namlûk sultan's letters to Bâyezid II that he was pleased to welcome Korkud, but after a month was able to convince the latter to return, in the light of "a son's obedience due to his father". Korkud received the promise of restoration to his governorship, and set sail back to Turkey.

Despite an attack by the Knights of Rhodes on his Egyptian escort off the shores of Tekke at the end of 916/beginning of 917, Korkud was able to get

through to Antalya and to send a warning letter to Sayyid Yûnus, who was coming on later from Egypt with baggage, to postpone sailing in order to avoid attacks by the Knights (TKSA, letter in dossier No. 6684). It is recorded that his health deteriorated on his return and that he asked for treatment from the physician 'Alî al-Din (letter to the Viziers in *ibid.*). Meanwhile, he was dissuaded to hear of the appointment of his younger full brother Selim to Sarukhân (TKSA E. 5587 in *ibid.*), and he immediately left Antalya for that province (Dhu 'l-Hijja 916/March 1511). His sudden departure from Tekke brought about the outbreak of a Shi'î-inspired rising under Shâh Kûlt in that province, and the Grand Vizier Khâdim 'Alî Paşa had to be sent to suppress it.

Meanwhile, Korkud was being informed of Selim's movements, and sent a letter to the latter advising him not to act precipitately (TKSA dossier 6684). At the same time, he was aware of Ahmed's ambitions for the throne. Certain of the court officials, aware of Bâyezid's intention to proclaim Selim the heir, invited Korkud to the capital. He travelled to İstanbul in disguise and went to the mosque of the Janissaries, seeking their support in a bid for the throne. Although they held him in respect, they considered him less capable as a potential ruler than Selim. Selim arrived at İstanbul on 22 Muharram 918/19 April 1512 in order to forestall Ahmed (for details, see BÄYAZİD II), and ascended the throne on the abdication of his father. He then gave Korkud the governorship of the island of Midilli, together with Sarukhân again (Sa'd al-Din, *Tâğî al-tawârih*, II 204). But Korkud also demanded the *sandaks* of Aydın, Manisa and Tekke, so that Selim, considering him a threat to the throne's stability, marched secretly to Manisa and surrounded Korkud's palace there. Korkud managed to escape with his confidant Piyâle, disguised, but was betrayed by the governor of Tekke Kâsim Beg and caught near Antalya. He was strangled in his sleep by the *Kapîdî-bağî* Sinân Beg's men at Eğriç on the way back to Bursa, and was buried near Orkhân Ghîzî's tomb in Bursa (Muharram 919/March 1513; Sa'd al-Din, II, 230 ff.).

Korkud was highly educated, and skilled as a poet and musician, being able to play many types of musical instrument (Sehl, *Ta'dkîr*, 18). His verses, written under the pen-name or *takhallûs* of Harimî, were collected into a *divân*. He wrote several works in Arabic, including commentaries and *hâşş*yyat. His extant works include: (1) *Waslat al-ahbâr* (dated 15 Safar 915/June 1509, autograph in Aya Sofya 3529); (2) *Hall 'ahbâr al-ahbâr fî billi amwâl al-kuffâr* (Aya Sofya 1124); (3) *Da'wat al-nafs al-hâlîha ila 'l-mâl al-pâkîha or Kitâb al-Harimî fî 'l-tajawwuf* (thus in the ms. copy of R. Vakkari; in Aya Sofya 1763, this is simply called *Kitâb fî 'l-tajawwuf*); (4) *Sharh al-fîrî hîrî or Hâşî al-insân 'an lîfî al-aymân* (Aya Sofya 2289); (5) *Korubdiyya or Faidah-yi Korukdîniyya* (see *Kashf al-funân*, II, 1228); and (6) *Divân* (Millet 104).

KÖRKÜD DEDE [see DEDE KÖRKÜD].

KÖROĞLU, a rebel of the Anatolian *Djellâli* movement [s.v. in Suppl.] in the 15th/16th century and the hero of a popular romance. The real Köroğlu came from the region of Bolu, and is probably the same person as the soldier-bard of that name who is said to have taken part in the campaigns in the Caucasus and *Âdharbâydjân* of *Özdemiroğlu* Pasha in the years 992-1584-5.

Until fairly recent times, Köroğlu remained a legendary personality, whose exploits were chanted by bards and story-tellers in Anatolia, *Âdharbâydjân*, Turkmenistân and Uzbekistân. Manuscript versions, and later on, lithographs and prints, circulated in Turkish-speaking lands, and more or less extensive episodes of this great epic-romantic cycle even passed into the story-telling repertoire of peripheral Turkish-speaking communities like the *Kurğaz*, the *Kazaks* and the *Tatars of Tobol*, as into that of non-Turkish peoples like the Armenians, Kurds, Georgians and Tadjiks.

The historicity of the figure of Köroğlu was nevertheless asserted by writers as far back as the 11th/17th century. *Ewilyâ Celebi* speaks of him—without giving a precise date—as an honourable bandit whose exploits were still remembered in the mountainous parts of northwestern Anatolia; and *Arakel of Tabriz* cites him as a *Djellâli* chief whose adventures, together with those of his companions, formed the core around the early 11th/17th century of a "romance" chanted by the minstrels of the lands bordering on the Ottoman empire and Persia. Towards the end of the 19th century and at the beginning of the present one several attempts at identifying him were made, some people basing themselves on contradictory local traditions, and others putting forth hypotheses about the hero's historical prototype or about the origin of some feature or other or some legendary motif of the romance concerning him.

The discovery in 1942 of Ottoman archival documents has firstly confirmed *Ewilyâ Celebi's* information, and secondly allowed us to date his exploits as a *Djellâli* rebel. We have here a series of imperial orders from the years 988-90/1580 addressed to the Bey of Bolu and the *hâkîm* of *Gerece* concerning a *Djellâli* called Köroğlu Rûşen. Now Rûşen is also the forename of Köroğlu in several oral versions, Anatolian and *Âdharbâydjân*, of the legend of our hero. Moreover, even in the cultural environments most distant from Ottoman territory, tradition has retained, in versions deformed in varying degrees, the name of Bolu Beyi as one of the hero's opponents, as well as allusions to the Ottoman sultan. Finally, several of Köroğlu's companions are mentioned with the same names in the Ottoman archival documents as in the different versions of the romance.

The ideas evoked by the name Köroğlu "son of the blind one" have contributed to the attracting around the genuine exploits of the bandit-hero legends of diverse origin, some of them going back to a long way in time, on the theme of the "hero, son of a blind father", who rises up against the masters who had mutilated his father.

(P. N. BORATAV)

KORON (Ottoman Turkish *Korön*; Venetian *Coron*; in modern Greek *Κορώνη*), a fortress in the south-west Peloponnæsus (see *MORÆA*) and on the west coast of the gulf of *Korön*, situated some 25 miles by land from the fortress of *Modon* (s.v.; modern Greek *Μεθώνη*), with which, in the period of Venetian and Ottoman rule, its history was linked and which, to some degree, overshadowed it. The Byzantine fortress of *Korön*, "an luogo di maggior difesa... di lorna triangolare, posta in mezzo d'una lingua di terre" (P. Garzoni, *Istoria della Repubblica di Venezia in tempo della Sacra Lega*, Venice 1705, 100-1) passed, with much of the Morea, under Frankish rule in 1204, but was seized by Venice two years later and was ceded to her in 1209. *Korön* remained a Venetian colony for nearly two centuries, serving as a vital provisioning station for the Venetian fleet and becoming, with *Modon*, "the chief eyes of the Republic" (W. Miller, *The Latins in the Levant*, London 1908, 59, 152).

As early as 1218 *Korön* was attacked from the sea and pillaged by the Ottomans, and after 1269, when *Mehammed II* completed the conquest of the Greek principalities of the Morea, its territories were contiguous with those of the sultan. It was not, however, until the Ottoman-Venetian war of 905/1499 to 909/1503 that *Korön* fell to the Ottomans: in 906/1500, after *Modon* had been taken by storm and its defenders massacred, *Korön* and *Navarino* "yielded themselves by composition"—i.e. *pro se*—to *Bayazid II* (Koolles, *General History of the Turkish*, London 1603, 460). This event took place on 15 August 1500, 27 August according to *Bayazid II's* *feât-nâme* for *Modon* and *Korön*, addressed to the inhabitants of *Chios*, and written at *Korön* on 21 August (M. Sanuto, *I diarii*, II, Venice 1890, 827-8). *Bayazid II* installed in *Korön* a garrison of 500 janissaries and 1000 *acemi* troops (*ibid.*, 820-1).

In 935/1533 *Korön* was retaken by the Genoese admiral *Andrea Doria* while *Sulaymân I* was engaged in the *Guns* campaign. In the spring of 939/1533 *Korön* was besieged by the Ottomans by land and sea, but without success, and was once more relieved by *Doria*. It was this setback which precipitated the sultan's summoning the North African corsair chief *Khayr al-Dîn Barbarossa* (s.v.) to Istanbul, from where, having kissed the hand of the sultan and received an appointment as *deryâ beglerbegi*, he was sent with a naval force against *Korön* in mid-*Dhu'l-Ka'da* 940 (*Lutfî Paşa*, *Tevârih-i alî-yâ*, İstanbul 1347, 343-4). *Khayr al-Dîn Paşa's* approach, an outbreak of plague amongst the defenders, and the hardships of the winter of 1533-4, all caused the Spanish garrison under *Mendoza*, which *Doria* had installed there, to abandon the fortress and withdraw to *Naples*; *Korön*, accordingly, was once more reconquered in an uncontested way by the Ottomans (cf. further on the events of 1532-4, *Paolo Giovio, Historiar sui temporis*, Paris 1553, II, 114v. ff., *passim*).

In the reign of Suleymân I, according to a *later defter* utilised by M. T. Gökbilgin (*Belleleten*, x, 280, 327), Koron was the seat of a *kâdî* with a revenue of 150 *akçe* *per annum*, in the *sandjak* of Modon, itself of Mora. The fortress and its dependent territories formed an imperial *hîf* (*hâkîmî hâmedân*) which yielded 162,081 *akçe* of revenue *per annum*; these revenues, according to Th. Spandolino, *Commentarii*, 78, were bestowed with those of Modon by Bayezîd II on Mecca.

Later in the 12th/16th century (by 991/1582: cf. Gökbilgin, *loc. cit.*) the *şahîr* of Koron was annexed to the *sandjak* of Messtres (Mistra). At this time the town contained 300 Christian and 10 Jewish households; the entire Muslim population of garrison officials and some 300 *haife neferdân* must have been what it appears to have remained in succeeding centuries (cf. the testimony of Evliyâ Çelebi for the late 17th century and Leake for the early 19th), i.e. of *askerî* status.

Western travellers apart, Koron was visited in 1040/1630-1 by the Ottoman historian Pelevî (Tâ'rih, İstanbul 1283, I, 172) who recalls the events of a century previously, and, later in the century (1666) by Evliyâ Çelebi, who has left a description of the fortress and its inhabitants (*Seyrâat-nâme*, İstanbul 1314/1896-7 to 1938, viii, 326-33; cf. Ulrich Walfare *Die Reisen des Evliya Çelebi durch die Moren*, inaug. Diss., Munich 1970, 59-66).

In the Sacred Liga War of 1095/1684 to 1110/1699, Koron was the first fortified place to fall to Venice in the course of her reconquest of the Morea, despite a vigorous defence and attempts to relieve the garrison by land. (*Diwanîdâ 'l-âkhar* 1086/15 June to 7 August 1685; cf. Silâhdâr, *Tâ'rih*, İstanbul 1928, ii, 218 ff.; Pietro Garzoni, *op. cit.*, 201, 107-17; Alessandro Locatelli, *Racconto storico della Veneta guerra in Levante* ... 1684-1690, Colonia 1691, 224-38, 138.

Koron was recovered for the Ottomans by the Grand Vizier Çorlulu 'Alî Paşa in Şhe'bân 1127/ August 1715. In this last phase, the town and its trade immensely declined. Leake, in 1805, found that the export of silk and olive-oil, which down to the 1770s had supported four French merchant houses, was no longer flourishing; the harbour, blocked and ruinous already at the time of Bernard Randolph's visit in the late 17th century, offered only an insecure anchorage, while the town itself was much affected by the depredations of the "Janissaries of Koron" [W. M. Leake, *Travels in the Morea*, London 1830, I, 485]. Koron finally passed from Ottoman, and Islamic, rule in the course of the Greek War of Independence.

Bibliography (apart from works already cited in the text): Plans and perspective views of the fortress and town of Koron as it appeared at the time of the Venetian reconquest (1685) are given by P. M. Corbelli, *Memorie istoriografiche del Regno della Morea*, Venice n.d., 56-77; cf. O. Dapper, *Notae curiae Beschryving van Morea*, Amsterdam 1683, 23-30. The most accessible recent description of the fortress is by Kevin Andrews, *Castles of the Morea*, Princeton, N.J. 1955 (= Gennadeion Monographs, iv), 11-23, with extensive further bibliography of western sources. Parmaksioğlu, İstanbul 1960-9, ii/2, 334; Râşid, *Tâ'rih*, İstanbul 1282/1865, iv, 126-7. (C. J. HEYWOOD)

KORYŪREK, Emis Bâşığı, modern Turkish

orthography Emis Bâşık KoryŪrak, Turkish poet (1892-1949). Born in İstanbul, the son of an army doctor, he attended schools in Salmica, Üsküb (Skopje) and İstanbul and graduated from the School of Political Science (*Mekteb-i siyâsiyye*) in 1913. He served as a diplomat in Bucarest (1913) and Budapest (1916-12) and as a civil servant in various ministries. He died in Ankara on 18 October 1949. Like most poets of his generation, Emis Bâşığı wrote poems in the style and manner of the *Şer'at-ı şîvân* school (q.v.) and of its extension, the *Fedâ-ı şîvân* (q.v.) one, in *serâf* metre and with an artificial language loaded with Arabic and Persian elements, and published them mainly in the periodical *Şekbâl* (1912-14) until he came under the influence of Diyyâ' (Ziya) Gökalp (q.v.), who was leading the "national literature" trend (*Millî edebiyâtı şer'atî*). Under Gökalp's guidance, he switched to syllabic metre (*Asiye waznı*), spoken Turkish and "national" themes, and soon became one of the five leading young exponents of syllabic metre known as *hâkimîyâ beş şâ'iri* (the others being Khâlid Fakhrî (Osansoy), Orkhan Seyfi (Orhon), Yusuf Diyyâ' (Ortaç) and Fârik Nâfîh (Çamlıbel)). KoryŪrak was particularly successful, with an original approach and style, in his epic poems (e.g. *Millî neşide*, *Sunmiller*) and in his evocative tales of the exploits of Turkish seamen in the Mediterranean (e.g. *Gemîdler*, *Wenâkîsî şer'atî şîvân*, *Uğursu bîrîş*). He published his collected poems in *Mirâh* ("The legacy", İstanbul 1927). His *Güneşin ölümü* ("The death of the sun"), containing his later, less interesting, poems, was posthumously published, with a new edition of *Mirâh*, by F. Tevetöğlu as *Emis Behçet KoryŪrak'tan, Miras ve Güneşin ölümü*, Ankara 1972. During the last years of his life he was subject to depression and wrote old style pseudo-mystic poems of mediocre quality supposedly inspired by a 11th/17th century *şeyh*, *Parîdât-ı Suleymân*, Ankara 1949.

(FARUK İZ)

KÖSE DAGI, a land-corridor some 50 miles/80 km. to the north-west of Siwa where there took place in 642/1243, probably on 6 Şhe'wvâl/26 June, the decisive battle which opened up Asia Minor to the Mongols and sounded the knell for the Saljûk sultanate of Rûm. The first contacts of the Mongols and Saljûks went back to the last years of 'Alî al-Dîn Kaykubâd I (q.v.), but at that time Anatolia was too well-protected in relation to the conquests already effected by the Mongols for the latter really to have any plans for conquering it. It was only under Kaykhusraw II (q.v.) that the threat took definite shape, without one being able to ascertain how far the invaders intended to advance. However, after the Great Khân Ögedey's death, the new Mongol head of the Caucasian region, Baydju, seized Erzerum in the midst of the winter of 1242, and thus opened up the way into Asia Minor for the following spring.

The sources give few details about the campaign and the battle. Kaykhusraw seems only very late to have fully realised the seriousness and imminence of the danger. He summoned forces together, comprising his allies or vassals, even including Armenians, Greeks and "Franks", anding up with what was certainly a force numerically superior to Baydju's.

But the impatience of his young commanders prevented him from awaiting the complete grouping of the *Saljuq* forces. The Mongols, almost all cavalrymen, had recourse to their customary and invariably successful tactic of a simulated flight and then an unforeseen return to the attack against disorganised pursuers. The sultan lost his head and fled, and only the initiative of his vizier Muḥammad al-Dīn, combined probably with the Mongols' own prudence, allowed him to keep his throne as a vassal. In reality, the process now began which led to a *de facto* Mongol protectorate.

The weaknesses of the *Saljuq* state at the time have often been stressed, this was true, but the Mongols, partly by the terror which they inspired, had overcome many other powers. It is hard to maintain that, even without these weaknesses, the course of history would have been any different.

KÖSE MİKHÂL [see MİKHÂLOĞLU].

KÖSEM WÂLİDE OR KÖSEM SULTÂN, called MÂHPAYKAR (ca. 1589-1651), wife of the Ottoman sultan Ahmad I and mother of the sultans Murâd IV and İbrâhîm I (q.v.). She was Greek by birth, and achieved power in the first place through the harem, exercising a decisive influence in the state during the reigns of her two sons and of her grandson Mehmed IV.

The views put forward concerning her origin and her first name—Nasya being derived from Anastasia (Ahmed Refik, *Kadınlar salnameti*, Istanbul 1332, 47-8, deriving information from Guer, *Mœurs et usages des Turcs*, Paris 1747, II, 474. See also Pétis de la Croix, *Abbrégé chronologique de l'empire ottoman*, Paris 1768, II, 74)—do not seem to be reliable. According to Pietro della Valle, *Voyages*, Rouen 1645, I, 94, she was given the nickname Kösem because of her smooth and hairless skin (*kösa* = "hairless, beardless"). However, the epithet *kösem/kösemân* could also have been given to her on account of her ability as a leader and virtual ruler (for the meanings of *kösem* in Ottoman, see Hüseyin Kâzım, *Türk İlmâi*, Istanbul 1940; iv, 181; B. Kerestedjian, *Quelques malheurs pour un dictionnaire étymologique de la langue turque*, London 1925, s.v. *kusemen* and *kusem*; Radloff, *Verbuch eines Wörterbuchs der Türk-dialekte*, I/2, 1294: "ram, bell-wether, leader; free, without a care, independent").

Through her beauty and intelligence, Kösem Wâlide was especially attractive to Ahmad I, and drew ahead of more senior wives in the palace. She bore the sultan four sons—Murâd, Selâyman, İbrâhîm and Kâsım—and three daughters—Âḡsha, Fatma and Dîvârhâḡhân (Von Hammer, *GOR*, cf. Naḡmâ, *Ta'riḡh*, Istanbul 1280, III, 67 ff.). These daughters she subsequently used to consolidate her political influence by strategic marriages to different viziers.

After Ahmad I's death on 22 Dhu l-Ka'da 1026/13 November 1617, she supported the succession of his brother Muḡaffâ I, under whose feeble rule she was able to exercise effective power in the state. Muḡaffâ's deposition three months later was a setback for her, and she was relegated to the Old Palace (Eski Sarây) at Bayezid under Ahmad's young son 'Othmân II, but she came to the fore again when 'Othmân was deposed and executed and Muḡaffâ briefly restored (9 Radjab 1031/10 May 1622). Her

full influence now became apparent when her minor son Murâd IV ascended the throne in 1032/1623 and she thus became officially the Wâlide Sultân, ruling as regent for five years till her son was old enough to take up the reins of power himself (Kâḡib Çelebi, *Fedâike*, Istanbul 1287, II, 220; Von Hammer, *GOR*, quoting a Venetian report). Even thereafter, Murâd greatly respected his mother's opinions, and she took a close interest in state affairs when he was away from the capital. Thus the *Shayḡh al-Islâm Akḡḡsâde Hüseyin Efendi's* disapproval of Murâd's hanging the *hâḡḡ* of İznik was communicated by her to the sultan, then on his way to Bursa; he immediately returned to Istanbul and hanged Akḡḡsâde Hüseyin—an act which had taken place only three times in Ottoman history (Kâḡib Çelebi, *op. cit.*, II, 160; Naḡmâ, III, 183). She saved the Ottoman dynasty from extinction by preventing Murâd, who had executed his other brothers, including Selâyman and Kâsım, from killing İbrâhîm also (Sagredo, *Histoire de l'empire ottoman*, Amsterdam 1732, VI, 427; Vanel, *Abriégé nouveau de l'histoire générale des Turcs*, Paris 1689, II, 545; *Histoire des grands vizirs*, Paris 1576, 34; Du Loir, *Voyages*, Paris 1654, 117; von Hammer, *GOR*).

Together with the Grand Vizier Kara Muḡaffâ Paḡḡa (q.v.) she became most active in affairs when İbrâhîm succeeded to the throne after Murâd's death on 16 Şawwâl 1040/9 February 1640 (Naḡmâ, III, 419), especially as her son gradually became more and more involved with his concubines, the expenditure involved having disastrous repercussions on the treasury (Kâḡib Çelebi, *op. cit.*, II, 309 ff.). He subsequently came under the influence of other Palace women, and Kösem Wâlide therefore lost her ascendancy and left the *Saray-ı Dîvâd-ı Amire* to live in a summer house outside Topḡkapı. When İbrâhîm learnt that his mother was plotting with the Grand Vizier Şâḡḡ Paḡḡa to dethrone him, he moved her to the Iskânda Çelebi garden in Florya and hanged Şâḡḡ (Wedḡḡh, *Ta'riḡh*, Istanbul Univ. Library Turkish ms. 2543, fols. 29b, 32b). İbrâhîm's weak rule caused a deterioration in affairs, whilst the Cretan war was dragging on and creating feeling against him. The chiefs of the Janissary corps, under Kara Murâd Aḡḡa, Muḡḡḡ al-Dīn and Bekḡḡḡ Aḡḡa, killed the Grand Vizier Ahmad Paḡḡa Hazâḡḡpe and decided to depose İbrâhîm. The new Grand Vizier, Sofu (or Koḡḡa) Mehmed Paḡḡa and the *Shayḡh al-Islâm* 'Abd al-Rahîm Efendi, together with other leading officials, obtained Kösem Wâlide's consent after a meeting with her at Topḡkapı, dethroned İbrâhîm and put in his place his eldest son, the seven-years old prince Mehmed on 18 Radjab 1050/8 August 1648 (Naḡmâ, IV, 314, 319; Kara Çelebi-zâde 'Abd al-'Azîz Efendi, *Konakât al-abḡḡr ḡḡayh*, Istanbul Univ. Library Turkish ms. 2635, pp. 9 ff.; Mehmed Khâḡḡe, *Ta'riḡh-i Çāḡḡmânî*, Istanbul 1340, 21 ff.; Murâd Bey, *Ta'riḡh-i Adnâ l-Fârâḡ*, Istanbul 1329, IV, 48). Ten days later, İbrâhîm was strangled by the executioner Kara 'Alî, for fear that his partisans might attempt a restoration, with the consent of his mother and with a *fatwa* from the *Shayḡh al-Islâm* (Kara Çelebi-zâde, *op. cit.*, 27-30, 57 ff.).

With Mehmed IV's accession, Kösem Wâlide's power started to revive, and she was given exalted titles like Bôydik Wâlide "Grandmother of the Sultan", Wâlide-yi Mu'azzama, Umm al-Mu'mînîn, Şâḡḡḡ al-Makḡḡn, Wâlide-yi 'Adḡḡa, etc. (see Wedḡḡh, *fol. 44b*; Kâḡib Çelebi, II, 367, 376; Naḡmâ, IV, 279, 290, 315, 317-19, 415, 418, 450, v, 208). However, her influence was not unbounded. The

authority of the Janissary *ağas* was wrong, and Turkhân Sultân, Mehmed's mother and Ibrahim's widow, became her rival; this rivalry, and misunderstandings between the state officials and the Janissaries (Na'imâ, v, 7), caused disturbances in Istanbul and Anatolia. Kösem Wälîde and her supporters therefore decided to replace Mehmed with his brother Süleymân, whose mother Dilâğhûb Sultân was regarded as unlikely to interfere in state matters. But Turkhân Sultân learnt of these intentions (Na'imâ, v, 108), took the initiative, and had Kösem Wälîde strangled by a curtain-string by the Palace Janissaries (Na'imâ, v, 111; her executioner was someone called Kûçuk or Kuzhû Mehmed, see Rycant, *Histoire de l'état présent de l'empire ottoman*, Paris 1670, 63; Na'imâ, v, 109, 112, 137; von Hammer, *GÖR*). Her body was taken from Topkapı to the Eski Sarây and then buried in the mausoleum of her husband Ahmed I (Weidh. *ibid.* 438).

Kösem Wälîde had exercised power in public affairs for nearly 30 years. She left much wealth and estates (Na'imâ, v, 112; Kara Çelebi-zâde, 20), and much of her income was devoted to charitable and other humanitarian works, such as a Friday mosque at Üsküdar, completed in 1060/1650 (Ayvânîsarâyî Husayn, *Hadişat al-âşrafînâ*, Istanbul 1281, II, 184-5) and the Wälîde Khân in Istanbul, built in 1058/1646 (Ewilyâ'î Celâli, *Seydi'sal-nâme*, Istanbul 1314, I, 325; Thévenot, *Relation d'un voyage fait au Levant*, Paris 1664, 49) (this latter building collapsed in March 1926). Also from these revenues she financed irrigation works in Egypt and provided relief for the poor in Mecca. In fact, she left behind in the popular Turkish mind a reputation for magnanimity, generosity and high intelligence.

Bibliography: Largely given in the article, but see the general histories of Von Hammer and Zinkeisen, which utilise both Turkish and European sources, e.g. the reports of the Venetian *baili*; Ünüvargılı, *Osmânî tārîkî*; S. J. Shaw, *History of the Ottoman empire and modern Turkey*, Cambridge 1976, I, 190 ff. There is a detailed article in *J* by M. Cavid Bayson, of which the above is a shortened version. See also Mûtebe İğirci, *Kösem Sultanın bir vakfiyesi*, in *Türk Dergisi*, xvi/21 (1966), 83-94. (M. CAVID BAYSON)

KÖSH-BEGI, preferable to *Kosh-Başı*, title of high officials in the Central Asian khanates in the 16th to 19th centuries. There are two different etymologies and explanations of the term: (1) from Turkish *kosh* "bird" and *beg* (g.v.), thus *kosh-beg* meaning, presumably, "commander of falconers"; (2) from Turkish *kosh* "detachment of nomads or troops, esp. on the march", "nomadic and military camp" (cf. Radloff, *Wörterbuch*, II, 635b), thus *kosh-beg* meaning "commander of the [royal] camp", "quartermaster". The first explanation is found in an administrative manual *Maḥma' al-arḥān* compiled in Bukhārā in 1212/1798, where it is stated that the *kosh-beg-i alān* (see below) in Bukhārā was chief of the royal hunt (see footnote in *Fa'menniye pamyatniki vostoka* 1968, Moscow 1970, 56). The etymology, however, remains dubious, because in this case one should rather expect *kush-beg* (or *kush-beg*), from *kush* "falconer" (the latter post actually existed at the Central Asian courts, as well as in Iran, but the chief of the hunt had the title *min-shāh*). Significantly, Iskander Munshi (g.v.) in his *Tārīkh-i Ṣilāmān-i-yi 'Abbāsī* (ed. I. Afshār, I, 486) mentions the post of *kosh-beg* (*manṣab-i kosh-beg-i garī*) and, in another place (II, 1040), the post of a falconer (*khāḍ-mā-i kush-beg-i garī*), who became later the head of the

royal hunt (*ha-manṣab-i min-shāhī sar-āyās khān*). On the other hand, many historical references to *kosh-begs* in the Uzbek period show them as high military commanders, mentioned among the most high-ranking Uzbek *amirs*, which, apparently, makes the second etymology and explanation of the term more plausible. The European Turkologists who visited Central Asia in the middle of the 19th century also transcribe the term as *kosh-begs* and explain it, in the first place, as "Chef des Dîners oder des Beamtensirkels der Fürsten" (H. Vamberi, *Caspaische Sprachstudien*, Leipzig 1867, 318), or "Lord of the household" (R. B. Shaw, *A sketch of the Turki language as spoken in Eastern Turkistan*, Calcutta 1878, 156); see also Radloff, *loc. cit.*

The title *kosh-beg* is not attested in the Golden Horde and its immediate successors in the Eurasian steppes in the 13th century. The *Bābur-nāma* (ed. Beveridge, 174b) mentions a Turkish *amir* as a *kosh-beg* of Sultān Husayn Mirzā (g.v.), but nothing is said about his duties. Frequent references to *kosh-begs* in historical sources appear only in the late 16th century. The *Abd al-lāh-nāma* (MS of the Leningrad Branch of the Institute of Oriental Studies, D 48, ff. 322a, 338a, 339b, 340b etc.) mentions a *kosh-beg* among the chief commanders of the army of Bukhārā. In the 17th century *kosh-begs* did not apparently play an important role in the khānate of Bukhārā. The *Bahr al-arḥān* by Mahmūd b. Wālī (second quarter of the 17th century), in a description of the ceremonial at the court of the Aḥtārkhānids, only mentions the *kosh-beg* among the servants closest to the *khān*, and his place was the second after that of *kurān-beg*, commander of the body-guards (see V. V. Bartold, *Sichuaning*, II/2, 391, 396). The rise of power of the *kosh-begs* in Bukhārā took place at the beginning of the 18th century, with the decline of the Aḥtārkhānids. In 1121/1709 'Ubayd Allāh Khān established the rank of "the great *kosh-beg*" (*kosh-beg-i kullī*), who became first minister. *Kosh-begs* remained the head of the Bukhārā administration also under the Mangits (g.v.), when his official title was *khāl-i kosh-beg* (sic), or *kosh-beg-i yī bilā* "the upper K.", because he had to live in the residence of the *amir*, the *ark* (citadel), situated on a hilltop; there was also "the lower K.", *kosh-beg-i yī pāyān*, whose residence was at the foot of the *ark* and who held the post of *zakhā'ir-i alān* (head of the collectors of *zakhā'* (g.v.)). The "great *kosh-beg*" under the late Aḥtārkhānids and the Mangits were usually of mean origin, mostly former Kalmuk and Persian slaves. Besides the general supervision of the state affairs and, especially, the administration of finance, they were also governors of one or more *wilāyats* (provinces), especially that of Bukhārā itself.

Different development took place in *Khiva* (g.v.), where the local historian Mubīn (early 19th century) mentions for the first time the title *kosh-beg*, without defining his duties, when he tells about the administrative reforms of Abu 'l-Ḥasan Khān (died in 1074/1664 (g.v.)). It seems, however, that *kosh-begs* did not play any important role in *Khiva* in the 17th century. Only under the Kungrat (g.v.) dynasty (from the last third of the 18th century) did the *kosh-beg* become one of the highest officials in the khānate, but he shared power with the *makht* (Pers. *mihtar*) (g.v.). The latter was the head of the civil administration, had the title *masir-i a'yan* and belonged to the hereditary bureaucracy recruited from among the Sarts (g.v.), while the *kosh-beg* always belonged to the Uzbek nobility, the *swirs* (and sometimes was a relative of the *khān*), and was in charge,

mainly, of military affairs. Besides that, the *kosh-begi* governed the northern part of the *khanate* of *Khiva* inhabited by nomadic and semi-nomadic Uzbeks, Karakalpak and Turkmens (that is, he mainly supervised the collection of taxes in this region), while the *mekter* governed the southern part inhabited by sedentary Sarts. This division of authority seems to be a continuation of the administrative practice of the Timurid period.

In the *khanate* of *Khokand* [q.v.] in the 19th century, the title *kosh-begi* is also attested by the local sources, but evidence about his duties is still unavailable; in any case, he had a lower status than in *Bukhara* (the highest official in *Khokand* in the 19th century was the *ming-bashi*); according to V. V. Vel'yaminov-Zernov (in *Trudi Vostochnogo Otdeleniya Imp. Russkogo Arkheologicheskogo Obshchestva*, II [1895], 337), *kosh-begi* was here a honorary title given to the governors of main towns and provinces. In the *Qashgariyid* state of Eastern Turkestan, at least in the 17th century, the *kosh-begi* was supreme military commander or commander of the right wing (*Wai-i durugkhlar*), and had the rank of the senior *amir* (*amir al-umara*), but the civil administration, apparently, was in the hands of a *mufti* (see *Shah Mahmud b. Mirza Faqil Quris, Ta'riqh*, ed. O. F. Alimushkin, Moscow 1976, text, 24, 32, 53, 70, Russian tr. 170, 176, 208, 218). Thus this system was probably similar to that which existed in *Khiva*.

KOSHMA, from Pers. *ashka*, a pavilion in a pleasure which could be merely a modest shelter or have several rooms. The *ghasas* of the rulers of *Samarra* were much larger, and were country houses in the manner of the *qasbs* of Anatolia and the Balkans. The word *basir* (*basir*) could be synonymous, but came also to mean castle and always implied more than one chamber, whereas *kosh* rarely suggested a substantial building, and in oval terminology was even the name given to the after-deck or poop cabin.

Although the Ottomans developed the *ashka* as a pavilion consisting of a single hall, it did occasionally take the form of a suite of rooms. Mehemmed II Fatih modelled the *Chali Kiosk* in the outer court of Topkapisarai on Timurid pavilions. It included two floors of apartments for himself and his officers, for it served as a lodging when he did not wish to return to his residence in the centre of the city. It was a *kosh* in the sense of being a pied-à-terre. Later examples such as the Sand Pavilion at Edirne (*Kum Kasir*) were designated *basir*. But the essential characteristic which governed the transliteration of *ashka* into English as "kiosk" was that of a chamber under a dome with three sofas and a hooded open gate, forming the four arms of a cross with a balcony or terrace overlooking a garden and a pool or other expanse of water. There a day might be passed at any season of the year, enjoying a partly-indoor and a partly-outdoor life. The pavilion was, in a sense, a permanent tent and its portico the uplifted swing on poles common to nomadic life. However, a royal

ashka was tiled, its woodwork gilded, ceilings elaborately painted, doors inlaid with ivory and mother-of-pearl and the sofas covered with silks and velvet roades, the floor with rugs. In this form, they were ideal and intimate drawing rooms, the antithesis of the Napoleonic concept of the Piazza at Venice.

They also served as hunting lodges, like that of Siyavush outside the walls of Istanbul, which is elevated above its own pool in a park. Originally it was a single domed chamber with a vestibule and closet. Similar *ashkas* or *kasirs* were built as royal retiring rooms from which access could be gained to the mosque or *ghami*. Less wealthy citizens built examples so modest that they were little more than bowers with shutters that served as walls in winter but which could be dismantled in the spring. These, rather than the ornate *ashkas* of the rich, inspired newspaper stands and the like in 19th century Paris and other cities in Western Europe.

Bibliography: References to kiosks appear in the descriptive works of travellers, more particularly of Topkapisarai, by pages who escaped from there. Among these are D. Hierosolimitano, Harley mss. 3408, British Museum; O. Bon mss., Biblioteca Marciana, Venice, Cl. VII, cod. 578, 923; (the last in English by R. Withers, ed. Graves, *A description of the Grand Signor's seraglio*, London 1650); also in R. G. Clavijo, *Embassy to Tamerlane, 1403-6*, tr. G. Le Strange, London 1928. Engravings of examples are illustrated in R. Walsh and T. Allom, *Constantinople*, London 1838 and J. Pardoe, *The city of the sultan*, 3 vols., London 1838. Standard historical works on Islamic architecture, tiles, furnishings and the other decorative arts include E. H. Ayverdi, *Fatih devri mimars eserleri*, Istanbul 1953 and *Murad II devri mimars eserleri*, Istanbul, 1958; G. Marçais, *L'architecture musulmane d'Occident*, Paris 1954; A. Wilber, *Persian gardens and pavilions*, Rutland, Vermont 1962.

(G. GOODWIN)

KOSHMA is originally a general term for poetry among the Turkish peoples. In the later usage of the word, it was applied to the native Turkish popular poetry, in contrast to the classical poetry taken from the Persian and based on the laws of the Arabic *arad* [q.v.]. The term corresponding in Eastern Turk to the Western Turk *koshma* is *ashka* or *ashgha*.

In the oldest source, e.g. in the *Kutadghu bilik* (composed in 463/1069-70 [see YÖRÜK KAGİS İNŞAĞI]), *koşma* still has the quite general meaning of "poem, verse", e.g. in Radloff's edition, St. Petersburg 1891, I, 1. 2 from below: *bu kâdîni hoşkûni ayınlık* "has composed this book, this poem"; *ibid.*, I, 1. 4, *bu hoşkûni hoşkûnlar tûstûlûm saña* "I have polished (i.e. composed) these Turkish verses for thee". In Mahmud al-Kashghari (q.v.) also, *Diwân lughat al-turk* (begun in 464/1072), ed. Khalil Rif'at Bey, I, 314, *hoşkuş* is equated with the Arabic *ghayr, radjuz and kâşid*. The Persian musician and scholar 'Abd al-Kâdir of Marâgha (8th-9th/14th-15th centuries, cf. E. G. Browne, *Literary history of Persia*, III, Cambridge 1930, index s.v.), in his work entitled *Mağâsid al-ahân* does not yet discriminate between *hoşkuş* and the quantitative quatrain *tuyuğ* (see Ra'uf Yekti, *Eski türk müziğine dair tefebbülat*, in *Millî tefebbülat mecmu'ası*, I, 462). On the other hand, in a verse by 'Alî Şîrî Nawâ'î (d. 906/1501 [q.v.]) quoted in Pavet de Courteille, *Dictionnaire Turco-Oriental*, 432, s.v., and in Radloff, *Versuch eines Wörterbuchs der Türk Dialecte*, II, col. 640, the *hoşkuş* is definitely contrasted with the *tuyuğ*.

Later, we find poems and songs composed according to the rules of Turkish popular poetry expressly called *koşma*, *hoşkuş*. The characteristic features of this poetry are the following: 1. Strophic structure. The strophes are usually quatrains. The *koşma* poems contain at least two strophes. 2. Syllabic or accented syllabic rhythm, i.e. the lines of the strophe have the same number of syllables and the value of the syllables as regards stress is either a matter of indifference or stronger and weaker syllables follow one another in definite order, which is repeated. In the latter case, after a definite number of syllables, we always have of necessity a caesura in the middle of the line. In the later *koşma* strophes the most popular lines are hendecasyllabic divided into 5-5 with one caesura or 4-4-3 (with two caesuras). 3. There is rhyme or assonance of at least two endings in the strophe. The rhyme is usually grammatical and may extend to several final syllables according to its nature. It usually arises as a result of strict parallelism in the syntactical structure of the two halves of the verse. The rhyming in the *koşma* strophe is usually *âşek* or *anba*. 4. Alliteration of the initial syllables of the lines is not maintained among all Turkish people (cf. T. Kowalski, *Études sur la forme de la poésie des peuples turcs*, in *Mémoires de la Comm. Orient. de l'Acad. Polonoise*, No. 5, Cracow 1922; in Polish with a French résumé, 137 ff.).

In earlier times, the *koşma* songs were usually sung by the bards (*uzan*) to the accompaniment of a musical instrument, especially by the *şahs* beloved of the Turks, at court festivities or in the camp of the army. The *koşma* poetry was always industriously cultivated among the people, in spite of the increasing popularity of the classical quantitative poetry. The popular forms like *kaya başı*, *zeyir*, *erşi*, *ir*, *ürhî*, *waragış* and *turkmanî*, some cultivated among the Ađharbâyđian and some among the Ottoman Turks, all belong to the *koşma*. The songs of popular mystics called *halkî* and *nefes* from the time of Yûnus Emre (7th-8th/13th-14th centuries) are composed according to the rules of the *koşma* (see Köprülüâde Mehmed Fu'ad, *Türk edebiyâtında ilk millîtasavvüflar*, İstanbul 1913, 334-6). The *koşma* popular poetry, which sometimes produces really beautiful lyrics, was mainly cultivated by wandering singers (*âşık*, also called *saz şuhârî* or *öğünçü*).

Many of them, like 'Ashik Ömer, 'Ashik Kerem, 'Ashik Gharith, Durdi and Djewherî, attained great fame, and the collections of their songs or life stories are among the most popular books among the Turks (cf. Köprülüâde Mehmed Fu'ad, *Türk edebiyâtında 'âşık parçaları mengü' ve tekâmülü*, in *Millî tefebbülat mecmu'ası*, I, idem, 'Ashik Djewherîye 'âdî iki wethî'a in the periodical *Yeni Medîmâ'a*, No. 34; G. Jacob, *Türkische Volksliteratur*, Berlin 1903, 17-18). There were even singers of popular songs in the corps of Janissaries; cf. J. Deny, *Chansons des Janissaires turcs d'Alger*, in *Mélanges René Basset*, Paris 1925, II, 33-175.

The term *koşma* (but not the kind of poetry to which it was applied) seems to have fallen out of use, and if the Ađharbâyđian poet Džawid, who died in the first decades of this century, called his collection of songs *koşma*, this is probably simply to be explained by an archaizing popular movement in modern literature. The name has survived in the form *koloi* (*koşoi*) among the Altai Turks (Tatars). The Altai *koloi* (on them, cf. W. Radloff, *Über die Formen der gebundenen Rede bei den altaischen Tatarern*, in *Zeitschr. f. Volkspsychologie und Sprachwissenschaft* [1866], IV, 83-114, and Kowalski, *Études*, etc., 140-51) are very important in so far as from their structure and name we can make a definite deduction regarding the original meaning of the words *koşma*, *hoşkuş*, etc. They are pairs of strophes connected by a close parallelism between the two in form and content. From this we see that *koloi*, from *koş-* "to join together", *kol* "two and two", etc., refers to the parallelism in thought and syntactical structure, which originally formed the essential feature of Turkish popular poetry.

The *koşma* poetry has not been without influence on more artistic forms of literature. The modern Turkish poets, for example, have taken many of their forms from popular poetry.

Finally, one should note that the term *koşma* applies also to a folk musical form, which varies in different parts of Anatolia and Ađharbâyđian, but which contains typically an instrumental introduction, followed by a vocal recitative and melody. This would be the normal setting for the *koşma* as a literary form.

Bibliography: (dealing particularly with *koşma*): Köprülüâde Mehmed Fu'ad, *Koşma parç.*, a comprehensive article in *Yeni Medîmâ'a*, No. 78, 1923 (with references to the literature); idem, *Turkiye tarihî*, İstanbul 1923, I, 31-2; idem, *Türk edebiyâtı tarihî*, İstanbul 1920, I, 93; Kowalski in the above-quoted *Études*, etc., 140; Tahiri'î Mevlevî, *Edebiyat-ı İğatı*, İstanbul 1973, 89-90; P. N. Boratav, *İA art. Koşma* (with many details about the regional forms of the *koşma*), R. R. Arat, *Eski türk şiiri*, Ankara 1965, introd.; Hikmet Dağaroğlu, *Halk şiirinde şiirler*, Ankara 1969. On the rhythmic structure of Turkish popular poetry, cf. Th. Korč, *Drevnyyşig narodnyy shikh turechikh plemion*, in *ZVOIRAO*, xix/3 (1909), 239-57. (T. KOWALSKI)

KOSOWA, KOSOVO, the name of an upland plain of the Balkans, in upper Macedonia or southern Serbia, and the scene of two significant battles in the struggles of the Ottomans and the Christian powers of the Balkans for hegemony there. In the last quarter of the 19th century, it also became the name of an Ottoman *vilâyet* or province.

The South Slavonic expression *Kosovo polje* means "plain of the blackbirds" from *kos* "blackbird" in Old Slavonic, Czech and Bulgar. Ottoman Turkish

sources give various less convincing etymologies. For those sources which derive the *Koşova* from Turkish *koca* or *köse ova* "bare, treeless plain", etc., see 'All Haydar, *Koşova müayyid mahdubesi*, Istanbul 1326, Bursalı Mehmed Tahir's preface. The name is spelt as *Küs ovası* in 'Aşhıpaşazade, *Ta'rih*, Istanbul 1332, 62, 134, Nesheri, *Üşşünümâ*, ed. F. Taeschner, Leipzig 1951, 70, 139, 174, and Sa'd al-Din, *Tağî al-tawârîkh*, i, 117, and as *Küs ovası* in 'Orûdî h. 'Adû, *Tawârîkh-i il-i 'Othmân*, Hanover 1925, 25. Sa'd al-Din's explanation that the name means "plain of the kettle-drums" is, of course, yet another folk etymology.

The *Koşova* plain lies at an altitude of some 500-600 km., and is 24 km. wide and 84 km. long, covering an area of 302 km.² It is surrounded by high mountains, and has a north-west to south-east orientation. From this region, streams flow westwards to the Adriatic via the Drina, southwards to the Aegean via the Vardar, and northwards to the Danube via the Ibar and Morava. During mediaeval times, it was a meeting-point of several trade routes; today it forms part of the Novo Brdo-Kopavnik mining region in Yugoslavia.

The *Koşova* plain originally formed part of the Byzantine dominions, and Slav peoples were settled there at the beginning of the 7th century. During the 10th century it changed hands between Serbs, Byzantines and Bulgars (for the names of the Serbian *kans* who were active in the *Koşova* region, see V. Radovanović, *Kosovo Polje, in Narodna Enc. Srpske Republike-Slovenacka*, Zagreb 1926, ii, 434-8). After the victory gained over the Byzantines in 1168 by Stephen Nemanja, prince of eastern Serbia, *Koşova* passed under Serbian control, and the name became applied to the whole plains region. It now remained within the resurgent Serbian empire, with its zenith under Stephen Dushan (d. 1355), but Serbian grasp on the region became relaxed under his weaker son and successor Uroš V (1355-71), and thereafter, the Serbian princes were unable to offer any united opposition to the increasing Ottoman Turkish pressure.

The defeat of Serbia at the hands of the Ottomans at *Koşova* took place according to the Serbian and the western sources on 15 June 1389 and according to the Ottoman ones, on 4 Ramaçân 791/27 August 1389. The Turkish army was commanded by Sultan Murâd I b. Orkân, and included his two sons Bâyezîd from Kutahya and Ya'kûb from Karasi and contingents from the vassal *begs* of Şarîkhân, Mentşeh, Aydin and Hamid. They were opposed by the Serbian prince Lazar Gresiñanović, with contingents from the Bosnian King Tvrtko I. On the dawn of the battle, a Serbian noble, Miloş Kobilić, Lazar's son-in-law, gained access to the Ottoman camp by posing as a deserter and stabbed Murâd to death. But Bâyezîd immediately assumed command, and in the ensuing fighting—the details of which are little known—the Turks gained the eventual victory. Lazar was taken prisoner and executed after the battle; a mausoleum was built on the spot where Murâd had died, but his body was buried at Bursa. The death of Murâd and the withdrawal of the Turkish army immediately after its victory caused false rumours to spread in Christian Europe of a Serbian victory; in fact, the consequence of the battle was that Serbia became an Ottoman vassal state, and Lazar's successor, his son Stephan Lazarević, had to pay tribute and supply an army under his personal command to the Ottomans. *Koşova* also gave rise to a great cycle of popular

ballads among the Serbs, expressive of national feeling. For the Turkish sources on the battle, see Sa'd al-Din, i, 123; 'Orûdî, 25; 'All Haydar, 67-32; 'Aşhıpaşazade, 63; Nesheri, 82 ff.; Solakzade, 30; and also Von Hammer, *GÖR*, i. After this first battle of *Koşova*, Bâyezîd I appointed Yagıt Paşa as *beg* of Üsküb/Skopje and the southern district of *Koşova*, and this region was now settled by Turks from Menemen and Tatars from Anatolia.

The second battle of *Koşova* took place on 17-19 October 1448, when a Hungarian army under John Hunyadi, and including also Wallachians and German Bohemian arquebusers, met an Ottoman army under Murâd II; the struggle was at first indecisive, but was gained by the Turks through the treachery of the Wallachians and the flight of the Hungarian king. During the reign of Mehmed the Conqueror, the northern part of the *Koşova* plain also came under Ottoman control. In the 16th/16th century the town of Vuçitrn became the administrative centre of the *sandjak* of *Koşova* in the *eyâlet* of Rumeli. When Ewilyâ Celebi passed through the *Koşova* plain in 1070/1659-60, he found that Vuçitrn had a Turkish and Albanian population and contained 2,000 households (*Seyâket-nâme*, Istanbul 1315, v, 550). In 1688-9 the region was invaded by an Austrian army under Piccolomini, but driven out in the following year by Kodja Khân Paşa and Selim Giray Khân (Fındıklı Mehmed Agha, *Silahdar ta'rihi*, Istanbul 1928, ii, 269-70, 352-4, 423 ff.; Râşidî, *Ta'rih*, Istanbul 1882, ii, 95-112; V. Corović, art. *Kosovo*, in *Narodna Enc. Srpske Republike-Slovenacka*, ii, 433-4).

During the last quarter of the 18th century and the first decades of the 19th, the *Koşova* district was involved in various attempts by local governors, such as the Bushatli governors of Scutari or Ishkodra, Mehmed Paşa and his son Kara Mahmûd Paşa, to break away from control by the Porte; the region was only firmly reattached to Istanbul after the defeat of the last Bushatli, Mustafâ Paşa, by Mahmûd II's new western-style army (see ARAMAWUTU, 6. History). After the Russo-Turkish War of 1877 a new *vilâyet*, called specifically that of *Koşova*, was formed consisting of the regions of Niş and Prishtine and with Scutari as its centre (see Sami Bey, *Kâimûr al-âliyya*, Istanbul 1314, v, 376-8; 'All Haydar, *Muhtat Paşa*, Istanbul 1329, 13-24). In 1888 its centre was moved to Üsküb/Skopje, and in 1896 its boundaries widened to include six *sandjaks*, sc. Üsküb, Prishtina, Scutari, Ipek, Tashlidja/Fevlie and Prizra (see M. Rûşidî and M. Eşref, *Muhammed ve müfâssal âliyya*, Istanbul 1315, 21-4; *Sâidme-yi vilâyet-i Koşova*, year 1314). The region was meanwhile considerably disturbed, for in 1875 a congress had been formed to protect the rights of the Albanians and to establish an autonomous *vilâyet* of *Koşova*, with its centre at Monastir. Albanian volunteers under the leadership of Süleyman Vokshi captured Üsküb, Prishtina and Mitrovitsa early in 1881, but in April of that year, were defeated by an army sent out from Istanbul under Darwish Paşa. However, the Albanians subsequently took advantage of the erratic policies of repression alternating with indulgence practised by 'Abd al-Hamîd II, and gradually captured all the villages extending up to the *Koşova* plain, until the restoration of the Constitution in 1908. Eventually, a Serbian army under General Janković captured Lab during the Balkan War of 1912, and by 23 October of that year the whole of the *Koşova* region passed into Serbian hands permanently, a state of affairs confirmed by the Treaty of London of 30 May 1913 which ended

the war. It was estimated that the population of the province at that time was one million, three-quarters of this being Muslim Turks and Albanians, and the rest Christian Serbs and Bulgars.

After the First World War, the region came of course within the new Yugoslavian state, and a policy of slavification was followed, so that the Muslim population shrank with the census to Albania and to Turkey. Today it is an autonomous unit of the Yugoslavian People's Republic under the name of Kosovo-Metohija and with its centre at Priština.

Huart, and for the first battle of Kosovo, *The Cambridge Medieval History*, iv, *The Byzantine Empire*, Part 1, Cambridge 1966, 550-1. (M. MÜNIR AKTEPE)

KÖSTENDJE (in Rumanian, Constanța), a port on the Rumanian shore of the Black Sea, situated on the ruins of the Milesian colony of Tomes (Ovid, *Tristia*, I, 10, 41; III, 9, 5) founded at the beginning of the 6th century B.C., and the place of exile of the Roman poet Ovid (9-18 A.D.). Mentioned in 260 A.D. (Memnon, *Fragmenta historicorum graecorum*, ed. C. Müller, III, Paris 1849, 537). Tomes enjoyed great prosperity in the Greek and Roman period and earned, under the Antonines, the title of metropolis of Western Pontus (μετροπολις τῷ Ὠκεανῷ Πόντῳ). Under the later Roman Empire, Tomes became the capital of Scythia Minor, being designated in the epigraphic and literary sources by the name Constantia or Constantiana after the emperor Constantine II (337-61 A.D.), who contributed to its development. Sacked by the Huns (456 A.D.), the town was fortified by the Byzantine emperor Anastasius (491-518) and Justinian (527-65) (Procopius, *De aedificiis*, Bonn, 1810, 307) and resisted attacks by the Avars. In 679 it was destroyed by the Bulgars of the *ἑξῆς* Asparukh.

The fishing station set on the ruins of the ancient city continued to bear the name *Kosovavria*, in the writings of Byzantine authors of the 9th and 10th centuries, while the map drawn up in 1548/1554 by al-Idrisi (q.v.) calls it *Tamākhā* (P. A. Joubert, *Géographie d'Idrisi*, II, Paris 1840, 382). In the 14th century, Italian nautical maps give the name *Costanza*—derived from the Rumanian *Constanța*, Turkish *Köstendje*—to the Genoan trading mission used as a harbour by Genoese ships. When Dobruđa was joined to Wallachia (Edik) by Mircea the Old (1386-1418), the town followed the same destiny as the rest of the province. According to Evliya Çelebi, *Köstendje* was reportedly conquered by Bāyazid I (q.v.), who ordered the dismantling of its walls. This event seems to have taken place during the reign of Vlad the Usurper (1394-6) in the province of Wallachia. Taking advantage of the fact that Bāyazid was detained in Anatolia, Mircea recaptured *Köstendje*, which he retained after the Ottoman defeat of Ankara (1402) under the reigns of the amir Süleyman (1403-10) and of his protégé Mîrî Çelebi (1410-13) in Thrace and Macedonia. But in the course of the expedition of Mehmed I (1413-21) dated by N. Iorga to 820/1417 (GOR, I, 375), and more plausibly by H. İnalcık to 822/1419 (*İbn Hacer'de Osmanlılara dair haberler*, in *AUDTCF Dergisi* vi, 225; O. Turan, *Tarihî tahrîmler*, Ankara 1954, 90, 36), the town was once again captured by the Ottomans. Its annexation did not become definitive until after 1445, since the captain of the Burgundian fleet, Walterand de Wavria, met no Ottomans at Mangalya, on the coast

of the Black Sea to the south of *Köstendje*, when he landed there. In the 16th century, it was a fairly prosperous town, leased to a *şahzâdî* and with a harbour and a market which, dealing in the major products of Dobruđa (Ankara, *Tapu ve Kadastro* collection, 483, 30-31), played an important role in the supplying of cereals, fish and timber to Istanbul. The harbour was also used for the exporting of Wallachian products (hides, wax, honey, salt) which were much in demand by the merchants of Ragusa and Ancona.

At the beginning of the 17th century, *Köstendje* suffered devastation at the hands of Polish Cossacks (1602, 1616). Although this port was not included in the list of towns (M. Tıyyib Gökbelgin, *Kennel Sultan Süleyman derri baharında Rumeli eyaleti, ihvaları, şehr ve kasabaları*, in *Belleken*, 12, (1956), 254-5, 266-7), the Ragusan traveller Paolo Giorgi regarded it as such. According to Evliya Çelebi, it was a town of small prosperity belonging to the *eyalet* of Silistre (Istanbul, *Bağbakanlık Arşivi D-BMK-SLM, Silistre ve Rusçuk mülkânları*), comprising one hundred and fifty houses, between forty and fifty granaries, some shops, a *şahân* and a mosque, and serving as the residence of a *şâhî*. Though possessing the status of a *şâhî*, in the 18th century *Köstendje* had the appearance of a large market-town whose *şâhî* ağası (i.e. *şahbâsh*) was in charge of the supplying of grain to Istanbul. Devastated and depopulated during the Russo-Turkish wars (1711, 1718-39, 1768-74 and 1787-92), *Köstendje* was fortified by the Ottomans, who considered its port one of the most important in Dobruđa for the purpose of supplying their capital with cereals, cattle, sheep, hides and wool.

During the Russo-Turkish war of 1805-12, *Köstendje* was captured by the Cossacks (1809), who destroyed the fortress and the town, reducing it to the status of a village. Returned to the Ottoman Empire by the Treaty of Bucharest (1812), *Köstendje* was surrounded by a line of fortifications. In 1829 the town surrendered to the Russians without a struggle and its defences were dismantled. During the Crimean War the French troops of General Canrobert, in alliance with the Ottomans, disembarked at *Köstendje* (July 1854) but remained there only for a short time. In 1857, a British company, The Danube and Black Sea Railways Company, obtained from the Ottoman government a concession for the reconstruction and development of the port and of a new railway linking Boğaz-köy (Cernavoda) with *Köstendje*, which as a result of this enjoyed a new period of prosperity. In 1877 the troops of the Russian general Driov Denisov occupied the town, which was ceded to Rumania on 23 March 1878. At this time it was a *şâhî* of the *vilâyet* of Tuna, created in 1864/1864. The Treaty of Berlin (13 Rajab 1295/13 July 1878) recognised this union. *Köstendje* then possessed two *şâhî*s: the *Mahmûdiyya* (1822) and the *Asiyya* (1822). It was at Constantia that the first newspaper of the Dobruđa was published, the *Dobruđa gazetesi* (1888-94), as well as the newspapers *Dobruđa* (1901) and *Dobruđa şâhîsi* (1910-14) published by Mehmed Niyâzi.

(MARIE M. ALEXANDRESCU-DIERSEA BULGARU)

KOTA KOTA, An Arabic corruption of the Chihya place name Ngotaogota, a town in East Africa, situated in lat. 14° S. on the west side of Lake Malawi (Lake Nyassa). It was the seat of four Jumbes, or Walls, subject to Zanzibar between ca. 1845 and 1893. The first Jembe, Salim b. 'Abd Allāh, came to Lake Malawi via the Arab settlement of Tabora in the present Tanzania, and built up an ivory and slave-trading state, and at the same time made Kota Kota an effective centre for the dissemination of Islam. He was succeeded by another Swahili, Mwinyi Mguzo (? Nguzo), who ruled from about 1860 to ca. 1875-6. Under his successor, Mwinyi Kisutu, a member 'of a good Zanzibar family', the town was visited by H. B. Cotterill in 1876. It had many handsome square houses and numerous oil palms; the Zanzibar flag flew over the Jembe's house. Although a slave-trader, when the British took power in Nyasaland in 1891, he co-operated with them until his death in 1894. His successor, Mwinyi Kheiri, the son of his predecessor, ruled from 7 September 1894 until May 1895, when he was deposed for conspiring to overthrow the British administration. Kota Kota remains an important Islamic centre in Malawi.

Bibliography: H. B. Cotterill, *On the Nyassa and a journey from the north end to Zanzibar*, in *Proc. Royal Geogr. Soc. London*, xiii (1878); G. Shepperson, *The Jumbes of Kota Kota and some aspects of the history of Islam in British Central Africa*, in L. M. Lewis, ed., *Islam in Tropical Africa*, 1966, 193-207, gives a detailed bibliography and references to public records.

(G. S. P. FREEMAN-GRENVILLE)

KOTOKO, a people of Black Africa. The Kotoko live south of Lake Chad on the lower Shari and Logone rivers. Most of their territory is presently in the Republic of Cameroon, but there are villages of the Kotoko also in Chad to the east and in Nigeria to the west.

The Kotoko (whose number was estimated at 50,000 in 1950) are a minority in their own territory. They are outnumbered by the Shuwa Arabs, who penetrated into these lands since the 18th century. Smaller groups of Kanuri, Fulbe and Hausa moved in later. Each of these ethnic groups, however, lives separately in homogeneous villages. The Kotoko live on fishing and hunting, supplemented by agriculture. The grassland between the rivers is left for the Arab pastoralists.

The etymological origin of the name Kotoko is obscure. Some authors referred to them as Makari,

which is in fact the name of a northern group of Kotoko, first known to visitors coming from Bornu. Makari is the most important dialect among the northern Kotoko, as Lagwana (often spelled Logone) dialect is in the south. The linguistic diversity of the Kotoko reflects their political division, as the extent of each dialect is almost identical with the area of one principality. The particularism of each group is so strong that even under modern conditions no one dialect prevails, and almost all the Kotoko now speak the Arabic dialect of the Shuwa. The Kotoko dialects belong to the central sub-group of the Chadian languages. They are distantly related to Hausa, which is classified in the western sub-group of the Chadian languages (J. H. Greenberg, *Studies in African linguistic classification*, New Haven 1955, 43-62).

The Kotoko are considered direct descendants of the Sao or So people, to whom the historical traditions of Kanem [q.v.] and Bornu [q.v.] refer as the early inhabitants of the area around Lake Chad. Those Sao who had not been assimilated or exterminated by the Kanembus and the Kanuris sought refuge in the less accessible flooding area of the Shari and Logone rivers, where they gave rise to the Kotoko. In the second half of the 16th century, Bornu under Idris Aléna expanded to the south. The northern Kotoko principalities, Makari and Afade, were brought within the political ambit of Bornu and under the cultural and Islamic influence of the Kanuri. Because of the imperial and dynastic connections with Bornu, Islamisation among the Kotoko began chiefly in the courts. The southern Kotoko had been for a long period subject to the harassment of Bagirmi [q.v.]. Towards the end of the 18th century, the south was consolidated under the authority of the ruler of Logone-Birni, who was converted to Islam at about that period. Logone was visited by Major Denham in 1824 and by H. Barth in 1852. In between these two dates, probably ca. 1830, Logone became a tributary of Bornu. The Kotoko often saw their territory invaded by their more powerful neighbours. It was the battleground for Bornu's wars with its rivals Waday [q.v.] and Bagirmi. Between 1893 and 1900 it was overrun by Rābīh [q.v.] and his warriors.

The authority of the Kotoko chiefs was circumscribed by a council of high officials and by Bornu's representative, the *shif* (from Ar. *shāif*). The chiefs were also bound by pre-Islamic taboos and by the obligation to consult "the protecting animals" through their priests. The Kotoko chiefs, referred by the colonial administration as *sultans*, are Muslims but they must respect old traditions. Muslim *imāms* live in their courts with traditional priests. Mosques were built near traditional shrines, whereas pre-Islamic customs and rituals are performed during Muslim festivals. Most of the Kotoko are now considered Muslims, and the number of those more fully committed to Islam grows steadily. Thousands of Kotoko are to be found in the towns of Chad and in the Sudan along the routes to Mecca. The Kotoko, who had emerged as people in refuge, away from the Muslim states of the Central Sudan, are gradually becoming integrated into the world of Islam.

(N. LEVITZON)

KOTONOU or Cotonou, capital of the People's Republic of Benin (formerly Dahomey). It had long been the economic capital and rival of the administrative one Porto Novo, and since independence Cotonou has established itself definitively as the capital of the republic, even if certain services still remain at Porto Novo.

The village founded by the Alao of Allada was called Dokuks ("near the hole", i.e. "near the lagoon"). An envoy from Abomey was struck by the reddish colour of the trees growing along this lagoon and thought that this was the result of blood. It was then believed by the Fon of Abomey that the spirits of the dead came down to Ouémé towards the lagoon and the sea; each dead person crossing the lagoon left behind a little blood which reddened the tree bark, whence the name of Ku Toku (ku "dead person", toku "lagoon") given to the village. However, the passage of armies from Dahomey in the 18th century led to the evacuation of this latter village. It was Yekpé Zinsou, a slave dealer, who found this spot favourable for loading up slaves away from the eyes of European control shipping, and with the help of a half-breed Portuguese interpreter Sangronio he founded this Fon village. Once he had become Jévoaga of the king of Dahomey (i.e. the minister charged with relations with the white men), Yekpé settled there with his family. The place became prosperous through the trade in palm oil and through anchorage rights (payable in cowrie shells and in goods) which the Europeans had to pay. A Brazilian half-breed, Domingo Martins, settled now at Cotonou and developed the cultivation and trade in palm oil. It developed further during Gléfié's reign and at the time of the French appearance there (treaties of 1864 and 1878). But Behanzin refused France any rights over Cotonou, and two attacks on the 23 February and 4 March 1878 were repelled by the French garrison. A wharf was built between 1891 and 1896, bringing about a growth in trade, and the town's importance grew. In 1903 the population comprised 75 Europeans (including seven women and a child) and 1,100 Africans. It became a *commune* *mairie* in 1912 and grew especially in importance after 1928.

In the 1920s it had 8,500 inhabitants, including 300 Muslims, who were distributed in the following manner. There were 100 or so Seagalese who had come as infantrymen, officials and above all as railway workers; 100 or so Heusa from northern Nigeria, functioning as butchers or as traders in cloth and beads; and 100 or so Nago (Yoruba), mainly coming originally from Porto Novo and working in the trading houses.

The first *imam* of Cotonou was Moussé Col Pogo of

Agoue, born in ca. 1845 and initiated into the Kádîrî order by Souldou Collou of Nigeria. Being worn-out and hardly capable of delivering the sermon or *khutba* in Arabic, he was replaced in October 1920 by Soultou Mamadou, born at Lagos in ca. 1870 and living in Cotonou since the French occupation. Since he had received the Kádîrî *wird* from Shaykh Ismaïla of Zaria, it seems that he was an adherent of the mystical path of the Futu of Sokoto. After having given the *khutba* in literary Arabic, he himself translated into Hausa this sermon; then his *ahle* or deputy translated it into Nago. After these two Yoruba *imams*, there followed a Sarakolé, al-Hajjîdî Sakaba, born at Bakel in 1875, an educated and likeable trader who had made the Pilgrimage to Mecca in 1906 via Lagos, Las Palmas and Marseilles. He had connections with the Arab bookseller of Algiers, Kaddow Roudouci (Kaddûr Radassi). He was succeeded by a Hausa, Malam Bako, but after the latter's death there was a division between the two main Muslim communities, the Yoruba and the Hausa, with the latter reproaching the Yoruba for retaining animistic practices, of drinking alcohol, of having more than four wives and of not fasting at the same time as other people. On 31 August 1966 the Muslim Union of Dahomey was formed, bringing about the pre-eminence of the Muslim community of Porto Novo; the President of the Union was in fact al-Hajjîdî 'Alî Parado. If the meetings of the Muslim community of Benin take place at Cotonou, it is nevertheless the Islamic north and Porto Novo who have benefited from these arrangements and from aid coming from the Arab world's communities.

KÖTWÁL (Persian orthography, *kawtāl*), commander of a fortress, town, etc. The word is used throughout mediaeval times in the Iranian, Central Asian and Muslim Indian worlds, and has spread westwards into the regions of 'Irāk and the Persian Gulf, where we find it, for instance, as a component of place names like Kūt al-'Amra (p. 1), and given an Arabic-pattern diminutive form in al-Kuwayt (p. 1).

Although the word appears from the Mongol period onwards in Turkish, including Çaghatay, in such versions as *katañ*, *küñdül*, etc., so that many native authorities (and following them, western linguists and lexicographers such as A. Vambery, Pavet de Courteille and W. Radloff) assumed that it was a Turkish or even a Mongol word, G. Doerfer is undoubtedly right in tracing it back to an Indian origin, from *kṣṭ* "fortress", whence *kṣṭāl* "castellan, keeper of a stronghold", and frequent north Indian place names like Nagarkṣṭ, Lokkṣṭ, etc. The earliest attestations of the word in Islamic sources are all in an Indo-Muslim context, e.g. Mahmūd of Ghazna's bestowal of the *khutba* of Nandana in the western Panjāb on one of his commanders in 405/1015 (Gardizi *Zayn al-ahbār*, ed. Nāṣir, 72, ed. Habibi, 181), and the frequent appearance in Bayhaqi's *Ta'rikh-i Mas'ūdi* of a commander Bū 'Alī Kōtwāl, the local governor of the capital Ghazna. On the other hand, it does not appear in Kāshghari. Gradually, the word became general throughout the eastern Islamic world, passing into Turkic languages, into Pashto, and into Indian vernaculars like Panjābī, Bengālī and Urdu. In Persia of the Mongol, Thirid and Safawid periods it was the term used for the local governor of a town or citadel, as is attested by western travellers like du Mans (1666). Cf. Doerfer,

Türkische und mongolische Elemente im Neupersischen, iii, 628-22, No. 2636.

The term *kōhwāl* was especially used in Muslim India under the Mughals and, after the collapse of their empire in the mid-18th century, in British India for approximately a century more. But in fact, this office, in the sense of "official responsible for public order, the maintenance of public services etc., in a town" (something like the *Ṣāḥib al-Ṣhūrā* [q.v.] of the earlier caliphate), existed before the Mughals, e.g. in the territories of the Dillī sultanate and in the provincial sultanates which arose in South India and eastern India during the post-Tughlukid period, cf. L. H. Qureshi, *The administration of the sultanate of Dillī*, Karachi 1958, 273-4, and Majumdar, ed., *The history and culture of the Indian people*, vi, *The Dillī sultanate*, Bombay 1960, index s.v. The accounts of Portuguese adventurers in India, from Vasco da Gama onwards, speak of encounters with the *Casal* or royal representative in the towns where they disembarked (thus also in Camoëns, *The Lusads* [completed 1572], vii, viii, *passim*).

In the *Ḍin-i Akbari* of Abu 'l-Faḍl 'Allāmi (q.v.), we find a classic exposition of the duties of the *kōhwāl*. His multifarious responsibilities included the maintenance of law and order, with the pursuance of criminals and robbers (for the recovery of whose depredations the *kōhwāl* was personally responsible); the keeping of a register of houses and streets; maintaining an intelligence system in the town, including observations of the incomes and life-styles of the populace, the results of which espionage to be reported to the central government; the enforcement of a curfew; the supervision of weights and measures and fair market practices; the upholding of the standard of coinage and the calling-in of bad coins for re-minting; the oversight of public water supplies; the appropriation for the state of intestate properties; the care that widows did not make the sacrifice of *saḥ* against their wills; the allocation of separate quarters in the town for noxious and despised trades like those of butchers, corpse-washers [see *BAZĀR* and *GHARĀL* in Suppl.] and sweepers; etc. One notes the correspondence of many of these duties with those of the classical Islamic *mukhtasib*, whose office was certainly known in pre-Mughal India under the Dillī sultans and their epigoni [see *qisṣa*, iv, *The Indian subcontinent*]; it seems that the purely secular, semi-military *kōhwāl* now largely replaced the *mukhtasib*. But in many ways, the wide range of the *kōhwāl*'s responsibilities is an echo of those of the *nagarak* or Town Prefect of Mauryan times; cf. Kautilya's *Arthashastra*, ch. xxxvi. Abu 'l-Faḍl's whole exposition has, however, a somewhat theoretical cast, and should probably be interpreted as a blueprint for the ideal administrative system for Akbar, rather than a delineation of actual practice; amongst other duties of the *kōhwāl* mentioned is responsibility for seeing that the festivals of Akbar's *Ḍin-i ʾIlāhī* and the new *ʾIlāhī* era (see *ANWĀR*) were observed (*Ḍin-i Akbarī*, ii, tr. H. S. Jarrett², Calcutta 1949, 45-5; cf. also Mirzā Muḥammad Ḥasan, *Mirzā-ʾi Aḥmādī*, ed. Syed Nawab Ali, Baroda 1947-8, i, 163 ff. [compiled in Gujjarat, 1575/1761], section on the duties of officials charged with the safety and good governance of the state).

More definitely in accordance with contemporary Mughal practice are the reports of European travellers within India at this time. Thus F. Bernier speaks of the *Cotoial* or "grand Prevost de la campagne" as sending soldiers all through his town when the Mughal court passed through it, and these blew

trumpets in order to scare away malefactors (*Travels in the Mogul empire A.D. 1656-1668*, tr. A. Constable 1891, repr. Delhi 1972, 288, 369). N. Manucci's personal observations are especially valuable. Describing the situation in the latter part of Aurangzib's reign, he tells how the *kōhwāl* stopped the illicit distilling of arrack and spirits, and the practice of prostitution, and how he sent intelligence reports to the court based on the information gathered in private houses by the scavengers, *alacor* (= *ḥaldī-āḥor*). He also saw that ferry tolls, abolished by the Emperor, were not illegally exacted. At his disposal, he had a force of cavalry and infantry, with detachments for each quarter of the town. In the administration of justice, on the other hand, he was under the orders of the *kāfi*, and carried out his written orders, such as sentence of death (*Ṣiṣṣa do Mogor, or Mogul India, 1653-1708*, tr. W. Irvine 1907-8, repr. Calcutta 1965-7, ii, 420-1). In fact, we know that towards the end of Aurangzib's reign, *kōhwāls* in the newly-conquered, peripheral regions like South India, managed to achieve considerable freedom of action, away from the central government's control; this was the case with the *kōhwāl* and *faḥḥāḍ* (q.v.) of Haydarābād, the most important city of the eastern Deccan, see J. F. Richards, *Mughal administration in Golconda*, Oxford 1975, 83-5.

When a new police system was introduced into British India after 1861, the office of *kōhwāl* disappeared from most of the subcontinent, and his duties were taken over by Inspectors or Sub-Inspectors. In the North-West Frontier Province, however, the term continued in use to designate the chief police officer of the larger towns and cantonments.

(G. E. BOSWORTH)

KOUANDÉ, et present a regional capital of the People's Republic of Benin, was founded by a clan of Bariba hunters, the Toso, specialists in the hunting of elephants, who provided a tribute of Ivory tusks to the sovereign of Nikki. This settlement of hunters must have been ancient (perhaps in the 16th century), but a prolonged dynastic quarrel at Nikki brought to Kouandé considerable numbers of young warriors who must have used this city, every dry season, as a raiding base.

The prince Chebi Gada of Nikki, having killed one of his pregnant wives, was expelled and took refuge at Birni Maro at the court of the Tossomon (chief of the Toso) who offered him in marriage his eldest daughter, Gnon Birsī (in about 1762). Accepting succession to the throne of his father-in-law, he renounced all allegiance with regard to Nikki. He had, moreover, carried off with him some of the ritual objects that were the property of the king: six *kakati* (trumpets), silver and bronze stirrups, ceremonial sabres and lances, harness and bridle-bits as well as the ritual scissors which were used to cut the hair of young princes on the day of the ceremony of *Gnon Kogon*, which marked the passage from childhood to adolescence.

The death of Gada (in about 1789) led to a quarrel over the throne between Onorou Ouari, known as Tabouroufa ("wearer of the ear-ring"), a prince born at Nikki, and Onorou Kpassi, son of Gnon Birsī, princess of Birni. The latter was victorious and took

the title of Tassouan while Ouorou Ouari moved from Bami to Kouandé.

The foundation of Kouandé. With an army of sixty-six horsemen Ouorou Ouari arrived in the region of Kouandé where the Bariba Seko had been installed for several generations. Ouorou Ouari was well received by the Kouandé Soumon, who gave him a vast area of land at the foot of the hill and died soon afterwards. A few days later he received the regalia brought from Nikku by Gada, and the following Friday, to the sound of the six royal trumpets, he accepted the homage of the Bariba and Somba chiefs. He took the title of *Bangana* ("buffalo") and appointed another Kouandé Soumon as his colleague and chief minister, and extended his authority over Bami, Faby, the region of Ouassa (Tobré and Péloumou), an area of some 18,000 km².

On his death, his brother Simé Yerima succeeded him, taking the name Ouorou Sourou ("the Saint"). He took the young princes to task, demanding that they abandon their extortions "at once", thereby acquiring the nickname of *Baba Taniama* ("Papa at once"). To provide a diversion for the troublesome young princes, he mounted expeditions against the Berba, the Tanaka, Pila-Pila, Somba, etc.

Dafia, eldest son of Ouorou Ouari, took the name Sourou ("the mortal that receives the blows of the pestle without being affected"). Tradition is reticent concerning his reign. All that is known is that the king authorised volunteers from his kingdom to take part in the campaign against the Peuls of florin (1830). After these contingents were defeated and returned in disarray, king Sourou died as the result of being bitten by a dog; his sister, princess Ganigul, saw in this a conspiracy on the part of the successor and on the day of his coronation predicted an early death for him. In fact the *Bangana* Bio Diko ruled for only three months.

Sero, the eldest son of Baba Taniama, was elected king (1833) and took the name *Bouho Ya Dars* ("stormy cloud"). He was obliged to suppress the intrigues of his younger brother Mora N'Gobi, who after two attempts on the throne, with the aid of the Natinba, was defeated. He obtained pardon for himself but not for Sinkoni, king of the Natinba, who, on coming to pay homage on the day of the Gani, was thrown into a ditch and crushed under a heap of stones, whence the king's nickname *Gani-moussekou* ("he who buries alive"). This king mounted expeditions against his neighbours the Berba, the Akpéna, the Cotokoli and the Anigan of the valley of the Anlé.

The *Bangana* Séké (1832-33) continued in similar circumstances the campaign against the Cotokoli of Kikiri (1866-8) and against Bafilo. He was also obliged to deal with civil wars.

Ouorou Ouari II (1883-97) was removed from office by Commandant Ganier in 1897 after the revolt of the Bariba. He withdrew to the village of Doh (30 km. to the east of Kouandé) and poisoned himself so as not to survive the surrender of the tombs of his ancestors. Since then the traditional sovereigns have been confined to their roles as regional chiefs.

Rules of investiture. Theoretically Islamised, the Bariba observe strict rules of investiture. After the funeral ceremonies which last three months, the council of ministers choose a new king. The choice having been made, the princes who are candidates for the throne kneel and the chief minister, Baba Agban, passes a white loincloth (*bikou Kpikourou*) over the heads of the candidates.

In passing along the line for the third time, Baba

Agban stops in front of the prince who has already been chosen as if held by an invisible force, then unfolding the *bikou Kpikourou*, he wraps it round the body of the newly-appointed king. All those present kneel before the new king to wish him well, while the trumpets sound.

The festival of the Gani which takes place throughout the land of the Bariba is the occasion where the princes and senior officials assemble in the presence of the king to the sound of the ritual drums. At Kouandé, the Gani includes a special rite. The *Bangana* goes to the tree on the path where his ancestor used to rest. This tree lies at the southern end of the village of Kouandé and is called *Bouroa* ("good luck"). The king dismounts from his horse, leans against the throne and appeals to his ancestors for aid and protection.

A superstition holds that the man who picks up the pebbles under the tree will have his wish granted if the pebbles are of even number.

The Islamisation of Kouandé, at the beginning of the century, was very superficial. Only the community of foreign merchants was Muslim. Alfa Sabi, known as Aloula, who was born in Kouandé in about 1863, supervised a Qur'anic school attended by a number of pupils. Since then, the influence of the Tijāni order has developed considerably.

(R. CORNEVIN)

KÖY, the word used in western Turkish (e.g. in Ottoman and Crimean Tatar cf. Radloff, *Versuch eines Wörterbuchs der Türk-Dialecte*, II, 1216) for village. It is the form in which Turkish has borrowed the Persian *kāy* (cf. Bittner, *Der Einfluss des Arabischen und Persischen auf das Türkische*, in *SB Ak. Wien*, cxlii, No. 3, 103), or perhaps more correctly *kāy* (Vollers, *Lexicon: Burhān-i kāfī*, 759) meaning originally path, street. In the toponymastic of the Ottoman empire we find many place-names compounded with *kāy*, like Boghaz Kāy, Ermeni Kāy, etc. It seems that these names are not found before the end of the Seldjūq period; the word does not occur, for instance, in Kāşgari. *Kāy* in the sense of an open village is opposed to *hāṣaba* meaning a small town. In eastern Turkish place-names we always find the word *kend* (itself a loan-word from Soghdian) used for a village. Sometimes this last word seems to have been replaced by *kāy* (cf. e.g. Ritter, *Erdkunde*, xi, 221 ff.; Kāşgī Kend, near al-Mawṣil, becomes Kāşī Kāy).

(J. H. KRAMERS)

KÖY ENSTİTÜLERİ (T. "village institutes"), a Turkish educational institution of 1940-54, founded to combat the high illiteracy in rural areas by training and equipping village boys and girls for the special requirements of each region and using them as teachers in distant or under-developed areas where city-born teachers have been reluctant to work. They were the brain-child of İsmail Hakkı Tonguç (q.v.) a prominent educator, and were put into operation by Hasan Ali Yücel (q.v.) the reformist Minister of Education (1938-46) under President İsmet İnönü (see *İSMET PAŞA İNÖNÜ* in Suppl.).

From the early years of the Republic the problem

of mass education, particularly that of village children, was of great concern to Mustafa Kemal (Atatürk) and Turkish educators. During this period, nearly 80% of the population of over 13 million (1927 census) lived in some 40,000 villages unevenly scattered throughout war-devastated Anatolia and Eastern Thrace. Less than 20% of village children (mostly boys) attended for the most part inadequate schools, where the majority of teachers had had little or no proper training. Early experiments in setting up village teachers' training colleges, first under the young pioneer minister of education Mustafa Nâzîkî (1894-1929), and later during an attempt at collaboration between the Ministries of Education and Agriculture, failed owing to poor planning and inadequate funds. In 1936, during the ministry of Saffet Arıhan (1935-8), a new project was developed. A selected number of villagers who had served in the army as corporals and sergeants were sent to special courses called *şifmen kursu* (*şifmen* "instructor, educator" from the newly-coined neologism *şifmek* "to educate" and *şifme* "education"), trained as teachers and appointed to village schools. To facilitate their settlement there, the *şifmen* were given land, agricultural equipment, tools, seeds, young plants, etc. In the meantime, I. H. Tonguç had been appointed Director-General of Primary Education in the Ministry (1936). In 1937 the idea of village-teachers' training colleges was revived, and three colleges were set up in the İzmit, Eskişehir and Kastamonu areas (in Kizilirmak, Mahmediye and Göközü respectively). The new minister, Hasan Ali Yücel, gave Tonguç full authority, and the latter was able to put into practice extensively his long-cherished project, elaborated to his many works (particularly in *Canlandırmak köyü*¹, İstanbul 1947). On 17 April 1940 the law No. 3603 on Village Institutes was passed, and with the law No. 4174 on 19 June 1942 they were fully organized (for the texts of these laws, see *Düster, öpüncü terfidi*, xxi Ankara 1940, 692-7 and xxi, 1942, 1275-6 respectively). The Institutes were put under the direct control of Tonguç and after a survey of local conditions and requirements, 20 of them were set up in the following regions of Turkey (the nearest provincial centre is shown in brackets): South-East: Diyar (Diyarbakır); East: Pazar (Erzurum), Cilavuz (Kars), Akçadağ (Malatya); Eastern Black Sea: Beşköprü (Trabzon), Akpınar (Samsun); Western Black Sea: Göközü (Kastamonu); Marmara and Thrace: Kırpaş (Kırklareli), Arifiye (İzmit), Savatepe (Balgözü); Aegean: Kızılcı (İzmir), Ortaklar (Aydın); Mediterranean: Aksu (Antalya), Düzce (Adana), Gönen (Isparta); Central Anatolia: Hasanoglan (Ankara), Pamukpınar (Sivas), Pazarören (Kayseri), Çifteler (Eskişehir), Ivriz (Konya).

The village Institutes were co-educational, admitting students with five years' village schooling (or three years' village schooling with two years' extra training) and giving a five-year course of instruction. The syllabus, which allowed great freedom of variety according to local conditions and requirements, consisted mainly of "cultural subjects" (Turkish, history, geography, civics, mathematics, physics, chemistry, a foreign language, military science and art) for 32 hours per week; agricultural subjects (farming, gardening, fruit growing, poultry farming, bee-keeping, fishing, etc.) for 11 hours per week; and technical subjects (metal working, carpentry, building, tailoring and dress-making, etc.) for 32 hours a week. The curriculum was mainly functional and was based on the essentially con-

crete and practical, with special emphasis on skills needed in the peasants' daily lives in a particular region. The aim was not merely to train village school teachers, but also to equip them to participate in the leadership of the community by developing their sense of personal responsibility and their ability to co-operate with villagers (specific aims which so far most city-born and trained teachers had been unable to realise). In 1943 a special teachers' training college was set up in Hasanoglan near Ankara (*Hasanoglan Yüksek Köy Enstitüsü*) with a three years' training programme. Up to the school year 1946-7 these Institutes trained more than 3,000 village teachers and 300 health officers.

With the ending of the single party régime (1945) and the authoritarian rule of the Republican Peoples Party (RPP, see *YUNUSRETTİ OKAL PARTİSİ*), the Village Institutes began to be subjected to violent attacks both by the conservative wing of the RPP and the newly-founded (January 1946) liberal Democrat Party (DP, see *DEMOKRAT PARTİ*). They were accused of fostering as unruly, subversive, anti-traditional generation and being the hotbeds of Marxist indoctrination. This campaign was waged mainly by the great landowners in and outside Parliament, and their mouthpieces in the press. The campaign reached such dimensions that President İnönü replaced the Minister of Education, H. A. Yücel with the conservative Reşat Şemsettin Sıral (1946), who in turn removed I. H. Tonguç, the brain behind the Institutes, from office, closed the Hasanoglan Teachers' Training College and changed most of the staff of the Institutes. Under the ministry of Tahsin Banoğlu (1948-50), the gradual liquidation of the Institutes continued and was completed by Tervile İleri (1952-61), the second Minister of Education (appointed August 1950) of the Democrat Party, which came to power in the general election of May 1950. İleri put an end to the co-educational system in the Institutes (1952) and reformed their curriculum to bring it into line with classical teachers' training colleges of the cities. Their abolition was officially registered when their name was eventually (1954) changed to *ilk öğretmen okulları* ("Primary Teachers' Training Colleges"). The heated controversy over village Institutes continued and still (1976) continues without abating between their supporters and accusers, and is a strong social, political, economic and emotional issue. In spite of the rapid industrialisation of Turkey since 1950 and subsequent migration of great numbers of villagers to the cities, which has considerably altered the rural and urban scene, leading intellectuals, particularly noted writers with Village Institute backgrounds, such as Mahmut Makal (b. 1930), Fahir Baykurt (b. 1929), Talip Apaydın (b. 1926), Durmuş Aliçam (b. 1930) and Mehmet Başaran (b. 1926), celebrate each year the date of April 17, the anniversary of the founding of these Institutes, and demand their re-opening.

The only notable objection to the conception of Village Institutes among non-conservatives was raised by Kemal Tahir (p.w.) in his novel *Başkurdak çekirdek* ("The Seed in the Steppe", İstanbul 1967), who maintained that the Institutes were planned to train a conformist generation in rural areas in order to postpone a real social revolution.

KOYL, KOIL, a town of northern India situated 75 miles south-east of Delhi and coming within the United Provinces in British India, now Uttar Pradesh in the Indian Union. The more modern town of 'Allgath' (q.v.) has expanded out of a suburb of Koyl. In 590/1194 the commander of the Ghaznids, Kuşb al-Din Aybak (q.v.), captured Koyl on a raid from Delhi, and henceforth there were usually Muslim governors over local Rājput rulers, such as Kucuk 'AlI under Bābur (932/1526) (*Bābur-nāma*, tr. Beveridge, 176). İbu Battūta visited Koyl on his way southwards from Delhi to the Deccan and Malabar, and speaks also of a noted *şaykh* of Kuyul (as he writes the name), one Şahms al-Din b. Tāğl al-'Arifi, whom Sultan Muḥammad b. Tughluk dik to death (*Rihla*, iii, 307-9, tr. Gibb, iii, 704-5, and iv, 6-7). The minaret of Koyl (now destroyed) had on it an inscription of the Slave King Nāsir al-Din Mahmūd Şah from 652/1254 (see G. Yazdani, *The inscriptions of the Turk Sultans of Delhi* . . ., in *Epigraphia Indo-Islamica* [1913-14], 22-3). Koyl is listed in the *Aḥw-i Akbari*, tr. Blochmann and Jarrett, Calcutta 1859-68, ii, 197, as a *sarkar* in the *Āgra sūba* of the Mughal empire, with a revenue of 55 million dams.

In ca. 1757 Koyl was captured by the Jhāt leader Sūrādī Mal and then in 1759 by the Afghāns, its strategic position on the Delhi-Āgra road giving it importance. It was re-named 'Allgath "the high fortress" by Nadīf Khān in 1776, when he rebuilt the citadel. All the upper Dōib passed into British hands in 1803, but with Koyl-'Allgath only captured from the Marāṭhas after a prolonged siege. Native troops there mutinied in May 1857, but order was restored in August by a British force after internal strife between the Jhāts and Rājputa. For the town's subsequent history, see *ALIGATH*.

Bibliography: *Imperial gazetteer of India*, v, 209-11, xv, 354; and see *GHANĀ, SHAYES*, in Suppl. (G. E. BOSWORTH).

KOYLU HİSAR (KÖYÜKLÜ HİSAR), modern Koyulhisar, centre of an *ilçe* of the province (İL) of Sivas in the valley of the Kelkit River along the old route from Niksar to Şiddet Karahisār and Erzurum in the so-called "left wing" (sol kol) of Anatolia within the framework of the Ottoman road and postal system. The site has changed a few times because of earthquakes (most recently in 1939). Before ca. 1850 the township probably lay on the site of the actual Yukarı Kale.

The town and fortress were lost by the Byzantines after the battle of Manzikert (Malazgirt). After direct Saljuḳid rule, it became part of the amirate of Erzrūn (q.v.), then possession of the semi-independent Turcoman ruler of Kara Hışar-l Şarkī (= Şahin Karahisār). In ca. 763/1361 it was part of the domains of Kādī Burhān al-Din (q.v.) of Sivas, whose government was succeeded by that of the Ak-Koyunlu (q.v.). Uzun Hasan (q.v.) lost the place to Sultan Mehmed II in 855/1461, upon which it became part of the *eyālet* of Erzurum as a subdivision of Kara Hışar-l Şarkī. In 1864 its status became that of a *hazret* in the *vilāyet* of Sivas. In the 19th century its population was only half Muslim, and V. Guinet (*La Turquie d'Asie*, Paris 1892, I, 237, 793) enumerated a population of 1,809, of whom 903 were

Muslims, 604 Greeks and 300 Armenians. In 1927 the census indicated a total Muslim-Turkish population of 1,800. In 1970 the town numbered 3,524, with 28,887 in the *ilçe*.

KOYUL HİSAR (KÖYÜKLÜ HİSAR), more properly Koyun Hışar, the name for two Byzantine fortresses: 1. identical with Baphaeon, to the north-east of İznik, the site of the first battle won by 'Othmān I against the Byzantines in 1302; 2. a fortress on the Sakarya river (q.v.) to the north-east of Bursa near Dinboz, taken by Orkhan during a campaign in 1324-5.

Fitcher, *A historical geography of the Ottoman empire*, London 1972, 37; I. H. Uzunçarşılı, *Osmanlı tarih-i*, Ankara 1973, 104 ff., map 2. (A. H. DE GAOR)

KOYUN BABA, lit. "father of sheep", a Turkish saint. He is thought to have been a contemporary of Hādīdī Bektāsh (see Bektāshīyya) and is said to have received his name from the fact that he did not speak, but only bleated like a sheep five times a day at the periods for prayer. Sultan Bāyezīd II, called *Wālī*, built a splendid tomb and dervish monastery on the site of his alleged grave at 'Othmāndīk (near Amasya, in Anatolia) which was one of the finest and richest in the Ottoman empire. Ewliyā Çelebi in his *Travels* (*Seydiat-nāme*, II, 180 ff.) describes very fully the great Bektāshī monastery there, at which he was cured of a malady of the eye and was initiated into the order (cf. J. von Hammer, *GOR*, I, 608, on Ewliyā's pilgrimage to the tomb of Koyun Baba). Nothing is known regarding the life of this remarkable saint, nor even whether he really existed. That he is represented as a disciple and contemporary of Hādīdī Bektāsh means nothing, as almost all early Ottoman *asids* are credited with having enjoyed this privilege. The sanctuary itself does not seem to have been examined; but see Maerker in *ZGE*, xlv (1899), 376.

Bibliography: Hādīdī Khallāf, *Dīshān-nūm*, 525 (brief mention of the tomb); Ewliyā, *Seydiat-nāme*, II, 180 ff.; cf. also J. von Hammer, *GOR*, I, 230, 608 (extracts from Ewliyā). (F. BAMNGAN)

KÖZAN, (1) a town in southern Turkey, formerly the Armenian town of Sīs (q.v.), and now administrative centre of Közön district (*Kosa*) in the province of Adana.

(2) In Ottoman times, that portion of the Taurus Mountains comprising the present districts of Kadiri, Közön, Fekke and Saunbeyli. This name originated with the Közön-oghlu *derbeşes* [see below] who controlled the area during the 18th and much of the 19th centuries.

The origin of the Közan-oghlu dynasty and its name is uncertain. According to Ahmad Djewdet Paşa, the family came from the Arık tribe, one of the Wärsäk (Färsäk) tribes which settled the Taurus Mountains in the 13th century A.D., and its name originated with an ancestor from the village of Közan near 'Ayntab (*Tedükür*, II, 108-g). The family had gained leadership of the tribe by 1589 (Ahmet Refik [Altınay], *Anadolü'da Türk aşiretleri*, 89) and went on to control the entire area and exercise the functions of government in virtual independence of Istanbul. Only in 1865 were the Ottomans able to defeat, capture and exile the *derebey*, settling the tribes on which their power had depended and establishing normal administration. Közan was of concern once again in 1878 when Közan-oghlu Ahmad Paşa tried to re-establish his control, but with his defeat the area ceased to be of special importance.

Bibliography: The most detailed accounts of Közan and the Közan-oghlu are those of Ahmad Djewdet Paşa in *Me'sâidü'l*, in *TTEM*, x (87), 278-82 and *Tedükür*, II, ed. David Baysun, Ankara 1953, 107-15, 117-19. A general description of the area as it was in 1890 is given in V. Culnet, *La Turquie d'Asie*, II, Paris 1892, 90-7. Selected documents concerning the Közan-oghlu are found in Ahmet Refik [Altınay], *Anadolü'da Türk aşiretleri*: 916-2200, Istanbul 1930. On the Wärsäk tribes, see Faruk Sümer, *Çukurova tarihine dair araştırmalar* (*Fethiden XVI yüzyıla ikinci yarısına kadar*), in *AÜDİCFD*, I, 70-93. The most recent study of this area in the nineteenth century is A. G. Gould, *Pashas and brigands: Ottoman provincial reform and its impact on the nomads of Southern Anatolia, 1840-1885*, Ph.D. thesis, University of California, Los Angeles 1973, unpublished.

(A. G. Gould)

KÖZAN-OGHULLARI, a family of *derebey*s [p.v.] in Ottoman southern Anatolia, with their centre of power in the 19th century in the *sandjak* of Közan [p.v.] (i.e. western Közan) and the *hüdud* of Közan (i.e. east Közan), in the piedmont area where the Taurus Mountains come down to the Cilician Plain or Çukurova. They were thus in a good position, during the 19th century, together with other local *derebey*s, to dominate the plain and at times to exert influence in Adana itself.

The Közan-oghulları claimed descent from a Türkmen tribe which had entered Cilicia in Saldjuk times, and which is certainly heard of in historical sources for the 17th century. From the beginning of the 19th century onwards, they were able to beat off several military attacks by the Porte in Istanbul and to act as virtually independent local rulers, levying taxes, but acting nominally as officials, *ka'immakams* or *midürr*s, of the Ottoman government. Their position locally was strengthened by an informal alliance with the Armenian clergy and notables of Közan (the Armenian Catholics or Patriarch had his seat in a monastery at Sfs in the Közan district, the ancient capital of mediaeval Little Armenia [see V. F. Büchner, art. *Sis*, in *ETI*]), who were also concerned lest the Sultan's direct influence be extended into the region. The Közan-oghlu family was, however, rent by internal rivalries in the middle years of the 19th century. In 1865 the central government was able to reduce the power of the Cilician *derebey*s by the despatch of the military 'Reform Division' (*Firka-yi Islâhiyye*) to Iskenderün; various members of the Közan-oghulları went over to the government side, and after some attempts at resistance, the family finally submitted. Several of

them were given official posts in the Ottoman administration, and others brought to honourable exile in Istanbul; after a final local rising in 1878 just after the Russo-Turkish War, the region of Közan was substantially pacified.

Bibliography: see A. G. Gould, *Lords or bandits? The derebays of Cilicia*, in *JMES*, VII (1976), 491-505, with references to the sources, and a kinship table of the family as it was in 1865 at p. 492.

KRÂN [see SINKA].

ERİM [see KINLE].

KRİZ (Russian designation, Kriz' [from the *sud* Kide]), a small Caucasian ethnic group, forming with the Khatut [p.v.] and Dehek the Dehek subdivision of the Samurian group (Lezghin, Agul, Rutul, Tsakhur, Tabasaran, Budukh, Dehek), of the north-eastern Thero-Caucasian language family.

According to the 1926 Soviet census, ethnically there were 5 Kriz, and linguistically 4,345 (including speakers of Dehek and Khatut dialects). According to a 1954 estimate, there were some hundreds of Kriz living in a single *sul*, that of Kriz, located in the basin of the upper Kudalchay, in the Shakhdash area (Konakikend district, Azerbaijan SSR). The Kriz are Sunni Muslims of the Shâfi'i rite. The traditional economy of the Kriz was based on sedentary animal husbandry, agriculture, and horticulture.

The Kriz language is only a variant of Dehek (as is Khatut), which is a purely vernacular language; Azeri is used as the literary language. The Kriz are being culturally and linguistically assimilated by the Azeris.

(R. WIKMAN)

KRUJË, a town in northern Albania, lying around the foot of a precipitous rock, a spur of the steep Kruijë Range, with the fertile plain of the Ishm river to the south and west.

Under the Ottoman administration the town was officially known as *Alı Hıdır* [p.v.]. It was the chief administrative centre of the *vilâyet* and after 1466 of the *hüdud* of this name. For most of the second half of the 19th century the *hüdud* was part of the *vilâyet* and of the *sandjak* of Skutari (cf. Th. Ippen, *Beiträge zur inneren Geschichte Albaniens im XIX. Jahrhundert*, in L. von Thallóczy, *Illyrisch-Albanische Forschungen*, Munich-Leipzig 1916, I, 363). The *hüdud* comprised a *nâhiye*, an area north of the river Mat, known as Obiri I vogël (cf. F. Seiner, *Die Gliederung der albanischen Stämme*, Graz 1922, 6), which was inhabited by the Kthella tribe (cf. *Detajl-beskrëbënie von Albanien*, 2. Theil: *Nord-albanien mit den angrenzenden Theilen Dalmatiens und Montenegro*, Vienna 1900, 110 ff., 130 ff.). At the time of the Austro-Hungarian occupation of Northern Albania in 1916, the *hüdud* of Kruijë functioned as part of the *sandjak* of Kruijë, together with the *hüdud*s of Metja and Obiri (cf. F. Seiner, *Ergebnisse der Volkszählung in Albanien in dem von den österreichischen Truppen 1916-1918 besetzten Gebiete*, Vienna-Leipzig 1922, 24). In the independent Albanian state the area of Kruijë became a sub-prefecture of the prefecture of Durrës (cf. *Albania. Geographical Handbook Series*, Naval Intelligence Division, Oxford 1945, 146). After 1949, the position of the town was affected by various administrative changes; cf. *Die*

Verwaltungseinstellung und die Entwicklung der Bevölkerung in Albanien, Wissenschaftlicher Dienst Südosteuropas (München: Südost Institut), III, No. 10 (1934), 211-26, *passim*. In present-day Albania the district (*rrethi*) of Kruijë covers an area of 607 sq. km. and had a population of 70,700 in 1971 (cf. *Vjetari statistikor i R.P.S.H. 1971 dhe 1970*, Tiranë 1973, 24). The number of inhabitants of the town itself, which is known for the characteristic architecture of its buildings (cf. Koco Zheku, *La Kullë (manoir) de Kruijë*, in *Douzième Conférence des Études Albanologiques*, II, Tiranë 1970, 263-8 (text), 269-89 (illustrations)), amounted to about 7,000 souls (cf. Zheku, *ibid.*, 263).

Throughout the 19th and early 20th century, the region of Kruijë was the scene of various anti-Ottoman rebellions, mainly in response to the imposition of new taxes (cf. Luan Bajo, *Faqe nga Lufta e kacakëve në rrethin e Kruijës (fundi i shekullit XIX—fillimi i shekullit XX)*, in *Studime Historike*, VI (1969), II, 65-74). During one of the last of these rebellions in 1906-7, the so-called battle of Talla-jbë—named after the quarter of the town of Kruijë where it took place—was fought between peasants from the Kruijë area and Ottoman forces under Shemsî Paşa (cf. Luan Bajo, *Mbi "Luftën e Talla-jbës" në rrethin e Kruijës në vitet 1906-1907*, in *Studime Historike*, VI (1969), III, 147-38).

Accounts of these events as well as of the revolts against local landlords belonging to the Teptan family, within which the office of *sandjak-beg* (g.v.) had become a hereditary position, are preserved in local oral tradition and were collected, studied and analysed by G. Komnino, *Expedita folklorike e Kruijës*, in *Buletin për shkenjet shoqërore*, III (1955), 235-61. During the general insurrection of 1912, which led to the proclamation of Albanian independence, the region of Kruijë was one of the major centres of anti-Ottoman activity (cf. P. Barli, *Die Albanischen Muslime zur Zeit der Nationalen Unabhängigkeitsbewegung (1878-1912)*, Wiesbaden 1968, 180, and for a more detailed account, L. Bajo, *Mbi kryengritjen e përgjithshme në vitet 1912 në rrethin e Kruijës*, in *Studime Historike*, VIII (1971), I, 132-54); and in 1914 it was the centre of the Essadist movement, which was partly pro-Turkish and directed against the Albanian sovereign Wilhelm von Wied. The town was captured by anti-Essadist troops of Mati tribesmen under Ahmet Zogu (cf. C. A. Dako, *Zogu the First, King of the Albanians*, Tiranë 1937, 61).

The population of the *hadër* was predominantly Muslim and the town of Kruijë was inhabited by Muslims exclusively (cf. Seliger, *Völkzählung*, 14). The majority of its inhabitants belonged to the Bektaşî order (see *ΒΕΚΤΑΪΣΜΟΣ*) which had several sanctuaries in and around the town and a *tekke* in the plain below Kruijë (Fushë e Kruijës), which was visited and described by F. Babinger in 1928 (F. Babinger, *Bei den Dervischen von Kruija, in Mitteilungen der Deutsch-Türkischen Vereinigung*, IX (1928), Heft 8/9, 148-9; Heft 10, 164-5; and *idem*, *With the Dervishes of Kroyia, in The Sphere*, cxviii (1929), no. 1253, 63. For photographs of the *tekke*, see E. Rossi, *Credenze ed usi dei Bektaşî, in Studi e materiali di storia delle religioni*, xviii (1942), 60-80). Until 1967, the *tekke* was the seat of a *çifçi* (grandfather) who had under his jurisdiction the prefectures of Tirana, Durrës and Shkodër. These constituted one of the six zones into which Albania had been subdivided by the order for administrative purposes (cf. S. Skendi, *Albania*, New York 1958, 294).

KUBAČI, self-designation, Urbuġ; Russian, Кубачинц, Arabic and Persian, Zibzharān; a people of the eastern Caucasus. The Kubači inhabit the single end of Kubači, located in Dakhdaev rayon, Dagestan. They are a Caucasian people whose language belongs with Kaytak and Dargin to the Dargino-Lak (Lak-Dargwa) group of the Ibero-Caucasian language family. Kubači is now regarded as a dialect of the Dargin language, and they are considered in the Soviet Union as a sub-group of Dargins rather than as a distinct ethnic group. The Kubači use the Dargin literary language, and they are being assimilated by the Dargins. In 1926, according to the Soviet census, there were 2,322 Kubači.

The first mention of the Kubači appears in Arabic sources of the 4th/10th century from Darband (see *al-Balawān*). Although the Kubači maintained patriarchal clan divisions and had a strong self-ruling free society, they paid tribute both to the Shamkhāl of Karkumukh (4th-8th/10th-14th centuries) and the Ugmāt of Kaytak (9th-10th/15th-16th centuries). The end of Kubači was part of the Gargah free society, a division of the Ugmāt-Dargwa, a Dargin federation. The Kubači are Sunni Muslims of the Shafī'i school. They, along with the Dargins, accepted Islam in the 6th/12th century.

Since the middle Ages, Kubači artisans have been renowned as gold, silver, and coppersmiths, and as makers of fine jewelry and weapons. So famed were they as makers of daggers, sabres, and chain-mail that they were, and are, called Zibzharān ("makers of mail") by the Arabs and Persians. Even under the Soviets today, the Kubači masters are still famous for their fine jewelry, gold and silver smithing.

KUBĀDĀBĀD, a residence of the Rūm Salḡūk 'Alī al-Dīn Kaykubād I (616-34/1229-37) (g.v.) on the west bank of the Lake Beyşehir, ca. 100 km. south-west of Konya. On the spur of the Güllüce Dağları, probably in 624/1227 chosen by Kaykubād I as a site for its scenic qualities, a palace-city was constructed under the direction of Sa'īd al-Dīn Köpek, his Court Architect and Master of the

Royal Hunt (*avâr-i ghîdâr â av'mâr*). The first palace is said to have been erected in the presence of the ruler according to his detailed indications. But it may have taken longer to erect the buildings of the area, which measures ca. 430 x 200 m. and on which until now there can be identified the ruins of 15 constructions, as well as the outline of a quay and a fenced enclosure perhaps to be identified as an enclosure for animals. Unambiguous evidence for continued building activity is provided by an inscription, dated 633/1236, commemorating the foundation of a mosque by Badr al-Din Sütlüsh, governor (*valî*) of Kubādābād, later transferred to the mosque at Kürtler Köyü, at a distance of ca. 3 km. to the south. The palace-city was inhabited temporarily by Çhiyāsh al-Din Kaykhusraw II (634-44/1239-46) too and finally also by 'Izz al-Din Kaykā'ūs II [c.v.] (during his second reign 655-9/1257-61), but its importance must have declined sharply after the occupation of Anatolia by the Mongols (641/1243).

The ruins were identified in 1949 by M. Zeki Oral, who made limited, trial excavations up to 1951. The systematic excavations in 1965 and 1968 by Katharina Otto-Dorn and Mehmet Önder included a topographical survey of the area, but remained restricted to clearing the two main buildings located at the lake shore. Both buildings are characteristic palaces with central double rooms; a raised *hün*, probably a throne-room, preceded by a barrel-vaulted entrance hall. The smaller building of 30 x 29 m. of dressed stone, by a quay and associated with a dockyard, is probably the older one of the two palaces. This is indicated by the stone blocks of the porch, which have been excavated; with its simple, angular, intersecting bands it points to the early years of the reign of Kaykubād I. The greater palace of 30 x 35 m., erected probably only slightly later in an isolated position on the northern side of the building area, is a rubble construction clearly less pretentious as far as masonry is concerned. It is, however, distinguished by an outer court and a terrace which border upon the shore of the lake.

The rubble walls of the greater palace, not very notable by themselves, were originally richly decorated. Up to a height of 1.75 m., the inner walls of the main rooms bore a revetment of underglaze-painted tiles mostly arranged in an all-over star and cross pattern, the eight-pointed stars bearing figural subjects and the crosses floriate ornaments. The tiles, datable ca. 627/1230 or a little later, show a variety of iconographic themes side-by-side, apparently reflecting the multiple functions of the building, as a Royal residence and as a hunting lodge; on the one hand, there are symbols of power like the sovereign enthroned, eagles bearing the inscription *al-sultān* on their breasts or lions; and on the other, astrological symbols and fabulous creatures, or trees of life which may well be allusions to paradise. Finally there are stylised animal figures, with falcons or horses together with game animals like foxes, hares, deer, bears, etc. The fragments proved that the smaller palace was also covered with tiles, bearing similar iconographic themes. This revetment, however, is possibly datable to a later phase of decoration.

In addition to these considerable series of tiles, which are particularly important as one of the earliest known examples in architecture of tile-decoration with figural subjects, there were also excavated in the greater palace fragments of window-screens of mosaic faience, as well as vestiges of moulded stucco, decorated with peacocks and riders, and some figural stone reliefs. Together with numer-

ous smaller finds, which included fine glazed pottery and in particular, a glass dish bearing the names and titles of Çhiyāsh al-Din Kaykhusraw II, the son of the imperial founder of the site, the richly-decorated palaces of Kubādābād represent impressive evidence for the artistic splendour of the court of the Rüm Saljuqs which reached its zenith under Kaykubād I.

KUBĀDHIYĀN. KUBĀDHIYĀN, in mediaeval

Islamic times a small province situated on the right bank of the upper Oxus, and also a town, the chief settlement of the province. The latter comprised essentially the basin of the Kūbādhiyān (modern Kalirabān) River, which ran down from the Buttāmān Mountains and joined the Oxus at the fording-place of Awwājī or Awzājī (modern Aywājī); accordingly, it lay between the provinces of Caghāniyān [g.v.] on the west and Wakhsh and Khuttal [g.v.] on the east. Administratively, it was most often attached to Khuttal. It now falls substantially within the Tadzhikistan SSR.

The name Kūbādhiyān/Kawādhiyān seems to appear in the Chinese Buddhist pilgrim Hsueh-Tsang's travel account as Kio-ho-yen-ai, according to Marquart, *Erasmia*, 226, 233. The 4th/10th century geographers describe it amongst the upper Oxus provinces of Transoxania. Its chief-town was the town of Kūbādhiyān itself (modern Kabadān), also called in Ibn Hawkal Faza, but in Mūkaddasī B.y.z. (7); this was a strongly-fortified town on the Kūbādhiyān River, smaller however than Tirmidh [g.v.]. In the north, on the upper course of the river, lay the fortresses of Waghird and Shūmān, frontier posts against such predatory peoples of the Buttāmān Mountains as the Kundūts [g.v.]; indeed, the whole province was well-supplied with ridges and defensive posts. According to Ibn Hawkal, the *Sāḥib-Bardī* or postmaster and intelligence agent (see *naṣir*) for the Sāmānids in Kūbādhiyān received the salary for each three months (*ḥisriniyya*) of 200 *dirhams*. The chief products for exports from the province were saffron in the north and madder in the south, the latter being a crop whose marketing was strictly controlled by the Sāmānid government (see Ibn Hawkal, ed. Kramers, II, 434, 470, 474-7, tr. Kramers and Wiet, II, 439, 453, 456-9; Mūkaddasī, 284, 289-90; *Ḥudūd al-ʿĪlām*, tr. Minorsky, II:15, § 25; R. B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, 102-3). Sam'ānī, *K. al-ʿAnādī*, I, 440b, gives "al-Kūbādhiyān" as the best-attested form of the *nisba*, and accounts kūbādhiyān as belonging administratively (in the Sāldjūq period) to Balḥ.

In Islamic history, we hear little of Kūbādhiyān under this very name. It was a dependency of the Sāmānid empire, passing with Khuttal and Caghāniyān to the *ghaznavids* in the early 5th/11th century (whence several mentions of it in Bayhaḳī's *Ta'rikh-i Mas'ūdī*), and then to the Sāldjūqs; in Tirmidh times it was often controlled by the rulers of Harāt. See further for the historical aspect, CAGHĀNIYĀN and KHUTTALĀN.

KUBAFOLO or **BAFILO**, the centre of the administrative region of Northern Togo, situated in lat. 8° 40' N. and long. 1° 30' E., 73 km. north of Sokodé. It owes its origin to the unforeseen halting of a column of Gonja warriors led by Mama, ruler of Pemba, and which was returning from a campaign against Djougou at the beginning of the 19th century. They stopped at Séméré (now in the People's Republic of Benin), and a group settled there. The warriors were tired by a long march through the mountain regions, but did not dare to ask their chief to stop; however, the latter's horse stopped to urinate, and the warriors seized the opportunity to halt. Finding

the spot pleasant, they set up an encampment which they named Gobangafol (from bang "horse" and wofol "urine"). These Gonja warriors settling there married Tem women and adopted the Tem language. The traditions vary concerning this expedition; according to Goody, it was probably commanded by Soumaila Ndewura Jalpa, king of Pemba, and according to others, by Mama, with Séméré and Bafilo being founded by rebellious dissidents rather than by disciplined soldiers.

At present, representatives of the main clans are to be found at Bafilo: the Touré, originating from the Niger banks under the leadership of a certain Boulari; the Fofana, descended from Sabani (of the royal family of Fada N'Gurma); the Kenta of Kabara; and the Tarsare. The Fofa who are said to have arrived in Nigeria between 1840 and 1875 (the Sakara and Dabo clans) allegedly initiated the Temba into stock-raising. When the Germans arrived, there were already several mosques. Islamisation has continued, and at the present time, there are 27 mosques in the town, divided between its two component quarters, 18 in the Agodadi one and 9 in the Central one. The chief mosque is 25 years old; a Kur'ān school with three grades is attached to it, with a Libyan teacher giving instruction there since 1977. About 100 men and some 50 women have made the Pilgrimage to Mecca. Until the Second World War there existed a small minority of the Kādhiyya order, but with the death of the last Alifā then, these adherents have rallied to the Tijāniyya. Bafilo is an important centre for the spread of Islam, since several of the Muslim missionaries in Togo have received their religious education there.

KUBAN (called in Noghay Turkish, KUBAN, in Cerkas, *Кубань*), one of the four great rivers of the Caucasus (Rion, Kura, Terek and Kuban). It is about 450 miles long. It rises near Mount Elbrus at a height of 13,950 feet. Its three constituents (Khur-zuk, Ulu-Kam, Uč-Kulan) join together before reaching the delta through which the Kuban enters the plains (at a height of 2,075 feet). The Kuban at first runs through the wooded outer spur of the mountains and then, taking a westerly direction, flows through the plains with forests on either bank. Its left bank tributaries are the De'ut, Tebedoré, Zelenouk, Urup, Laba, Bēlala, Fāhish, Psekups, Afips, Adagum, etc. Its lower course breaks into two branches, one of which (Prokopa) flows into the Sea of Azov and the other (the main one) into the Black Sea (although it also sends off a channel to the Sea of Azov). The lower course of the river frequently changes its bed. As late as the 15th century for example, it discharged the bulk of its waters into the Sea of Azov. The Kuban with its tributaries drains an area of 20,000 sq. miles.

The administrative district of the Kuban—before 1918 the province (*oblast'*) of the Kuban Cossacks—also included the valleys, further north of the Baisangh, Celbasz, Sacka and the left bank of the Yeya, all flowing towards the Sea of Azov or ending in lakes and marshes. This territory between the chain of the Caucasus and the sea stretched to the north as far as the province of the Don Cossacks and to the east as far as that of the Terek Cossacks. The area of this

great provinces, which is divided into 7 districts (Voya, Temrik, Kavkazskii, Ekaterinodar, Maykop [in Turkish: "much oil"], Lapa, Bat'lapshinsk), was estimated at about 32,000 sq. miles.

Klaproth, *Tableau du Caucase*, Paris 1827, 89, estimated the tribes of the Kuban at about 200,000 families. According to the *Russian Encyclopaedia*, the native population in about 1861 was 200,000 men (?), but as a result of expatriations en masse, this number had fallen to 90,471 by about 1883. Russian colonisation, which was begun by the Cossacks in about 1861, had reached 1,300,000 by 1894. In 1926, official statistics put the whole population of the province at over 3,000,000. The number of "highlanders" and "Sunnis" included in this total had also increased and reached 139,000. The native elements indicated by these official terms, which lack precision, included the remainder of the Cherkes and Abaz tribes (s.v.) (related to the Abkhaz, s.v.) and Turks of Kara-Cay. The latter (about 15,000 in 1900) lived in the villages (and) of Kart-Dzurt, Ut-Kulan and Khurruk, etc. in the upper waters of the Kuban and spoke a northern Turkish dialect (Noghai). They were at one time under the Cherkes princes of Kabarda and in 1822 submitted to the Russians.

After 1920, the territory of Kuban was re-organised on an ethnic basis; besides the Kabarda-Balkar region (on the Terek) (now an Autonomous SSR) two autonomous (within the Soviet system) areas were created on the Kuban: first, the Kara-Cay-Cerkes, east of Urup with its capital Bat'lapshinsk; it has about 250,000 inhabitants of whom 45% are Turks, 25% Cherkes and 13% Cossacks; and second, the Adighe, a strip of territory along the Kuban and Lapa; its capital is Tokhtemukay and it contains about 70,000 Cherkes. Both these are now Autonomous Regions.

The basin of the Kuban has been inhabited since the bronze age. The oldest tombs at Maykop go back to the second (according to Rostovtseff, to the third) millennium B.C. Scythian tombs of the 4th-5th centuries B.C. are very numerous (Kelsmae, Voronezhsk) and Sarmatian tombs from the 2nd century B.C. to the 1st A.D. The Greeks called the Kuban Hypanis, Vardanae and Anticites. In Byzantine authors we find Κοῦβις, Κούβις (Marquart, *Ost-europäische Streifzüge*, 32). The spread of Christianity among the Adighe (Cherkes), according to local legends, dates from the emperor Justinian (527-65); cf. Shora Nogmov, *Istoria adigheiskogo naroda*, Tiflis 1861, 43.

The Arabs were not well acquainted with the district. According to a bold conjecture of Marquart, *ibid.*, 37, 161, 164, Kuban is to be read for Dūbā ('Kūbā), which according to Gardiz (quoting Dayāhān, cf. 302/914) formed the southern boundary of the Magāfir (Magyars) and to the south of which (on the left bank) lived (Ibn Rusta, 139) the Tūlās, probably an Alān (s.v.) tribe (cf. the southern Ossete tribe of Tual-tā and the name of the Alāns: Āl). On the other hand, Mas'ūdī (*Murūdj al-ahbāb*, II, 45-6) says that the immediate neighbours of the Alān were the Kasak living between the Caucasus and the Black Sea. The Kasak (a parallel form is al-Kasakīya, Mas'ūdī, *Tanbih*, 157) are the Cherkes, whom the Russian chronicles call Kasogi and with whom the Russian principality of Tmutarakan (on the peninsula of Tamax in the 9th to the 11th century) had continuous relations.

The later history of the territory of Kuban is at first the story of the struggle between the Russians and Ottomans, and more particularly the Khāns of the Crimea, for the possession of the fertile plains

southeast of the Sea of Azov and later of the struggle of the Russians with the warlike tribes of the left bank of the Kuban.

In the 16th century, Moscow's interest in the northern Caucasus was stimulated by the marriage of Ivan the Terrible with the Kabardian princess, Maria Temrikovna, in 1561. Soon afterwards Sultān Selim II sent Gāsin Pasha to Astrakhan, and Dewlet Giray of the Crimea invaded Kabarda.

In 1589 the Cossacks appeared before Azov, a former Venetian and Genoese colony, which the Ottomans had taken in 1580/1473. A long series of struggles began for the possession of Azov (cf. *ASAX*) and the Cherkes principality of Kabarda (to the east of the Kuban on both sides of the middle course of the Terek). Down to the beginning of the 18th century the Khāns of the Crimea had the upper hand, and by about 1717 the Cherkes had been converted to Islam (Nogmov). By the Russo-Turkish treaty of 1739 the two Kabardas were proclaimed independent to constitute a buffer state between the two powers. By the treaty of Küçük-Kaynardji (s.v.) in 1774, Great and Little Kabarda were placed under the suzerainty of the Khān of the Crimea, whose independence was recognised. In 1782 the Turks occupied Tamax, but by the edict of 8 April 1783, Catherine II proclaimed the annexation by Russia of the Crimea, Tamax and the "Tatars of Kuban". On 28 December 1783, the Porte recognised the course of the Kuban as the frontier. Between 1787 and 1791, the movement in the western Caucasus led by the religious leader Shaykh Mansūr caused the Russians considerable trouble, but the Russo-Turkish treaty of Yassi (a town which owes its name to the Ās = Alān; cf. Tomaschek, in Pauly-Wissowa, 4, 1282-4) confirmed the frontier of 1783. The treaty of 1829 moved it southwards to the roadstead of St. Nicola (between Poti and Batumi), but the territory within these bounds was only effectively occupied 32 years later after a stubborn, and heroic resistance by the tribes of the Kuban.

The line of defences of the Caucasus had been planned under the Empress Anna (1730-40). In 1777, the line started from Azov and went by Stavropol, Georgievsk to Ekaterinograd (on the Terek). In 1792, it began at Bughaz (north of Anapa) and following the Kuban for a while, left it to go to Georgievsk (1794) and then 1798 to Ekaterinograd (cf. the map in the *Atk' hayk. arkhivogr. komissii*, Tiflis 1868, 1). In 1834 General Veliaminov established a military cordon on the left bank of the Kuban as far as Gelendjik on the Black Sea. In 1838 Novorossiisk (Tsiman) was founded on the site of the old Turkish fortress of Sudjuk-Kal'a. After risings provoked by the operations of the allies in the Crimean War, General Yevdokimov in 1866 carried out an enveloping manoeuvre with the object of making the highlanders descend into the plains and of driving the rebels towards the coast to force them to migrate to Turkey. According to native sources (H. Barmaev, in the *Revue Politiques Internationales*, Nov. Dec. 1918), 75,000 (?) refugees left the Caucasus in 1864; Russian sources give the number of emigrants at 23,386 from 1871 till 84. In 1864, the Russians reached the passes of the chain of the Western Caucasus.

(V. MINORSKY*)

KUBBA, the Arabic name used throughout the whole Muslim world for a tomb surmounted by a dome.

Purpose and significance. The term is applied to the thousands of simple local domed tombs of *shaykhs* and saints made by the people as well as to great mausoleums. The term *kubba* became established as a *pars pro toto* abbreviation for the domes of tombs, for which it is exclusively reserved. All the special names for sepulchral buildings, which vary with country and language as well as with the style of building and person interred, come under the generic name of *kubba*. The classical word *turba* was driven out of use by *kubba* not only in Arabic but also by the Turks. Just as we have *gumbaz* for *kubba*, so we occasionally have *turbat* for *turba* in Iran. Tombs of saints which, along with tombs of princes, are almost the only material with which the history of art has to deal, have different names in different countries, and these usually also indicate different grades. The highest is the *mağhad*, which according to its etymology means a place where a *ghali* is buried. "As a rule a *mağhad* is found only at the tomb of a martyr held in particular esteem, indeed of a saint endowed with a semblance of divinity; but then the *mağhad* is not only a grave, but a memorial in the wider sense, which as a place of pilgrimage (*maṣṣad*) attracts numerous visitors and has certain rites associated with it, that is to say, it is not a burial-place for any Muslim, but a tomb and also a place of worship for saints" (M. van Berchem, in E. Diez, *Chirasanische Baudenkmäler* (to be quoted as *Ch. Bdkm.*), 89). The general term in *Shi'i* lands for the tomb of a saint is *imām-āda* or *ghāh āda*. In lands where Arabic is spoken, these domed tombs are called *marbūṭ*, *ḥayyā*, *waṭi*, *nāṭi*, and as places of pilgrimage, *maḥṣan*.

Form, evolution and embellishment. The original form of the *kubba* is a square building covered by a dome, which evolved from the domed house of the peoples of the desert and became stereotyped as a monumental form. In the process, the very low-lying vaulting of the dwellinghouse, which is only a flat
